Being Letters from the Vatican in 1889. By WILLIAM T. STEAD, author of "The Truth About Russia," late editor of the *Pall Mall Gazette* and editor and founder of *The Review of Reviews.* 1 vol., 12mo, $1.50.

Mr. Stead says in his introduction: "There is much in these letters, I fear, which will give pain and offence to those within and those without the Catholic Church. That, however, was inevitable from the standpoint which I occupy."

New Edition in Paper, 50 Cents.

The People I've Smiled With.

RECOLLECTIONS OF A MERRY LITTLE LIFE.
By MARSHALL P. WILDER. With portrait. Paper covers, 50 cents; fine edition, with portraits, cloth, gilt top, etc., $1.50.

This book has been one of the great successes of the past year. At the reduced price of 50 cents it is bound to have an enormous audience, to whom the author's name is synonymous with amiability and fun.

New Editions at Reduced Price of the Great Success of 1889.

Marie Bashkirtseff.

For Sale by all Booksellers.

Cassell Publishing Co.,
104 and 106 Fourth Ave., New York.

What About Your School?

A glance at any leading newspaper or magazine will show that proprietors of colleges and schools are becoming convinced of the importance of advertising as an essential adjunct to the successful management of their institutions.

Would it not be well for you to give the matter consideration?

Our constant study is how to make advertising pay the advertiser, that is, to secure the largest return at the least cost, for we know our success depends upon the success of our customers. This kind of service has brought to us the largest amount of business ever handled by any advertising agency.

We give small orders the same careful attention that is accorded larger ones.

We offer no "Special Lists," as papers that would be profitable for one line of business would be unprofitable in another. We recommend only such papers as we believe are best adapted to each particular case.

If previous expenditures in this line have not been profitable, we would like an opportunity to prove that we can render the best service at the lowest prices consistent with such service.

An estimate upon the advertising you may have in mind, also a copy of your advertisement set in the least space to produce the best effect, will cost you nothing.

N. W. AYER & SON,
Newspaper Advertising Agents,
Times Building, PHILADELPHIA.

NEW BOOKS.

Pastels in Prose. Illustrated.

[illegible]slation (from the French) by STUART MERRILL. 150 drawings [illegible] color) by H. W. MCVICKAR. The Introduction by W[illegible] 16mo, cloth, ornamental, $1.25. (Uniform with 'Maria [illegible]dd Number.')

"A work so charm[illegible]g that the reader will need to set a watch on his enthusiasm. It suggests many a nebulous and dainty possibility that fascinates the imagination."—*Boston Daily Traveller.*

Delicate Feasting.

A BOOK FOR COOK AND EPICURE. By THEODORE CHILD. Post 8vo, cloth, ornamental, $1.25.

"A more sensible and delightful book of its kind it would be difficult to name. . . . Mr. Child is a born gourmet, thoroughly safe to follow."—*N. Y. Sun.*

By the Same Author.

SUMMER HOLIDAYS. Travelling Notes in Europe.

Post 8vo, cloth, ornamental, $1.25.

The Red Mustang.

A STORY OF THE MEXICAN BORDER. By W. O. STODDARD, author of 'The Talking Leaves,' 'Two Arrows,' etc. Illustrated by H. F. FARNY. Square 16mo, cloth, extra, $1.00. (*Harper's Young People Series.*)

"A glowing story of life on the Mexican border, in which Apaches, cowboys, and ranchmen are the chief characters, and the picturesque and the marvellous meet on nearly every page."—*N. Y. Sun.*

Hearn's French West Indies.

TWO YEARS IN THE FRENCH WEST INDIES. By LAFCADIO HEARN, author of 'Chita,' etc. Copiously illustrated. Post 8vo, pp. 517. Cloth, ornamental, $2.00.

"This is a book over which the fascinated fancy of a Northern reader may linger for days together, run the whole gamut of the emotions, and revel in experiences so wholly unfamiliar as to constitute a new and entrancing world. . . . It inspires an interest that is insatiable."—*Boston Beacon.*

God in His World.

An Interpretation. Book I. From the Beginning. Book II. The Incarnation. Book III. The Divine Human Fellowship. Pp. xli., 270. Post 8vo, cloth, uncut edges, gilt tops, $1.25.

"A book which, if we mistake not, has a work to perform in the spiritual field not unworthy to be compared with that which 'Ecce Homo' wrought in the sphere of practical Christianity."—*Evangelist, N. Y.*

"A book of ideas, a thoroughly honest book—a book, in short, such as does not appear every day, and one which becomes the more inspiring, helpful, and comforting the more one enters into it."—*Churchman, N. Y.*

GILMAN'S HISTORICAL READERS.

Commended by the Highest Critical Authorities in the Educational World.

"A well-planned and executed series."—*N. Y. Independent.*
"Well adapted for family reading and for school lessons."—*Boston Post.*
"We heartily commend these instructive and en ertaining volumes."—*Zion's Herald, Boston.*
"The idea involved in the series is a very happy one."—*Cambridge Tribune.*
"Mr. Arthur Gilman is one of our most accomplished *littérateurs*."—*Boston Herald.*
"Convey all that a child ought to know about his country."—*Boston Herald.*
"A simple and clear account of the growth of our nation."—*The Student, Philadelphia.*
"The author's style is simple and clear, without being undignified."—*Science, New York.*
"Mr. Gilman has solved a difficult problem, and solved it well."—*Literary World, Boston.*
"No writing down for children."—*N. Y. Nation.*
"Told in a graphic and entertaining manner."—*Evangelical Messenger.*
"Girls and boys will take to them like hot cakes."—*Michigan Christian Advocate.*
"An admirable, simple, and interesting narrative."—*Wisconsin Journal of Education.*
"So captivating that they will absorb and retain the facts."—*Evening, Wisconsin.*
"As history, literature, and text-book, these Readers are admirable."—*Sunday School Journal.*
"We hope these Readers, and others like them, will partially supersede the popular readers."—*New York Evening Post.*
"Admirably adapted for school use."—*The Universalist Quarterly.*
"Mr. Arthur Gilman has the trick of telling ancient history as he would tell an untold tale."—*Philadelphia Press.*
"Portions of them would furnish excellent studies of simple Saxon style."—*Christian Herald.*
"Far superior to the average reader or history."—*Boston Popular Science News.*
"An ideal book."—*Boston Beacon.*
"Difficult to conceive a series of books better suited to the purpose."—*Indianapolis News.*
"One of the finest works of this kind we have ever seen."—*Public School Journal.*
"Mr. Gilman uses the purest English."—*School Education.*
"His idea of making children's readers the nurse of patriotism cannot be too highly praised."—*The Advance, Chicago.*
"Among the very best of young people's books on history."—*Christian Union, New York.*
"He believes in the future of the nation."—*Literary World.*
"Mr. Gilman is eminently fitted by previous studies for this undertaking."—*Boston Herald.*
"The author's style is exceedingly attractive."—ABNER RICE, *Principal of High School, Lee, Mass.*
"At last American history is to be made interesting to American children."—PROFESSOR A. S. COOK, *Yale College.*
"The name of the author is a guarantee of faithfulness."—F. A. HILL, *Head-Master of Cambridge High School.*
"I can only express warm admiration."—PROFESSOR J. B. SEWALL, *Principal of Thayer Academy, South Braintree, Mass.*
"The author's style is simple and clear without being undignified."—*Science, New York.*

The above are samples of many testimonials to the superior merits of Gilman's Historical Readers. Seldom, if ever, has a series of School Readers received commendations so hearty and so many.

"Nothing could be better."—*New York Nation.*

HEROES OF THE NATIONS.

Ready May 1. Volume I.

Nelson, and the Naval Supremacy

OF ENGLAND. By W. CLARK RUSSELL, author of 'The Wreck of the Grosvenor,' etc. With the collaboration of Wm. H. Jaques, late U. S. N.

A series of biographical studies of the lives and work of certain representative historical characters, about whom have gathered the great traditions of the nations to which they belonged, and who have been accepted as types of the several national ideals.

The narratives are the work of writers who are recognized authorities on their several subjects, and, while thoroughly trustworthy as history, will present picturesque and dramatic "stories" of the men and of the events connected with them.

The Series is under the editorial supervision of Evelyn Abbott, M.A., of Balliol College, Oxford, and the volumes will be issued by Messrs. Putnam simultaneously in New York and London. The volumes will be beautifully printed in large 12mo, and are fully illustrated, selling, in different styles, for $1.50, $1.75, and $3.50 per volume. A full prospectus sent upon application.

The 'Nelson' will shortly be followed by:

Pericles, and the Golden Age of

ATHENS. By EVELYN ABBOTT, M.A., Fellow of Balliol College, Oxford.

Gustavus Adolphus, and the

STRUGGLE OF PROTESTANTISM FOR EXISTENCE. By C. R. L. FLETCHER, M.A., late Fellow All Souls College, Oxford.

Alexander the Great, and the Ex-

TENSION OF GREEK RULE AND OF GREEK IDEAS. By Prof. BENJAMIN I. WHEELER, Cornell University.

Theodoric the Goth, the Barba-

RIAN CHAMPION OF CIVILIZATION. By THOMAS HODGKIN.

Charlemagne, the Reorganizer of

EUROPE. By Prof. GEORGE L. BURR, Cornell University.

Henry of Navarre, and the Hu-

GUENOTS IN FRANCE. By P. F. WILLERT, M. A., Fellow of Exeter College, Oxford.

William of Orange, the Founder

OF THE DUTCH REPUBLIC. By RUTH PUTNAM.

Cicero, and the Fall of the Ro-

MAN REPUBLIC. By J. L. STRACHAN DAVIDSON, M.A., Fellow of Balliol College, Oxford.

Louis XIV., and the Zenith of

THE FRENCH MONARCHY. By ARTHUR HASSALL, M.A., Christ Church College, Oxford.

Sir Walter Raleigh, and the Ad-

VENTURERS OF ENGLAND. By A. L. SMITH, M.A., Fellow of Balliol College, Oxford.

Bismarck. The New German

EMPIRE: HOW IT AROSE; WHAT IT REPLACED; AND WHAT IT STANDS FOR. By JAMES SIME.

STORY OF THE NATIONS.

XXVIII.—The Story of Russia.

By W. R. MORFILL, of Oriel College, Oxford. (Ready May 1st.) 12mo, illustrated. $1.50.

XXVII.—The Story of the Bar-

BARY CORSAIRS. By STANLEY LANE-POOLE, author of "The Story of Turkey," "The Moors in Spain," etc. With the collaboration of Lieut. J. D. JERROLD KELLEY, U. S. Navy. 12mo, illustrated. $1.50.

"It is scholarly, accurate, finished in style, abounding in graphic description, and is, in short, a thrillingly interesting history."—*Boston Traveller.*

XXVI.—The Story of Early Bri-

TAIN. By ALFRED J. CHURCH, author of "The Story of Carthage," etc. 12mo, illustrated. $1.50.

"A better volume than 'Early Britain' will scarcely be found, and when we say that about it, we mean to praise it very much indeed, for the series is a most admirable one. Prof. Church has succeeded not only in gathering an enormous amount of information into little compass, but he has also succeeded in making it read like a story book."—*Civil-Service Gazette.*

XXV.—The Story of the Hansa

TOWNS. By HELEN ZIMMERN. 12mo, illustrated. $1.50.

"Unique in the series and unique in itself, . . . Miss Zimmern's work is admirably done. . . . It will be read with an unusual interest and profit by many students of history who have hitherto had to deplore the lack of any book of the kind."—*Scotsman.*

BOOKS FOR TAXPAYERS.

The Industrial Progress of the

NATION; Consumption Limited, Production Unlimited. By EDWARD ATKINSON. 8vo. $2.50.

"The problems presented are treated with skill and force, and will interest even those who do not agree with the conclusions reached by the author."—*N. Y. Journal of Commerce.*

"Whether the reader fully agrees with his reasoning or not, he always finds something worth reading and thinking about."—*N. Y. Independent.*

"The author has gone over a most extensive field, and touches upon so many interesting topics that the reader of this book has sufficient food for thought for a considerable period."—*Financier.*

The Distribution of Products; or,

THE MECHANISM AND THE METAPHYSICS OF EXCHANGE. By EDWARD ATKINSON. Three Essays: What Makes the rate of Wages? What is a Bank? The Railway, the Farmer, and the Public. Fourth edition, much enlarged. 8vo. $1.50.

"Facts of general interest and declarations of scientific value. . . . Clear and cogent method."—*Republican, Springfield, Mass.*

"A book we should like to put into the hands of every young man in the country, and make him read it and understand it."—*The Million, Des Moines, Ia.*

The Tariff History of the United

STATES, 1789–1888. By Prof. F. W. TAUSSIG. Comprising the material contained in "Protection to Young Industries" and "History of the Present Tariff," together with the Revisions and additions needed to complete the narrative. Third edition. 12mo, $1.25.

"The value of Prof. Taussig's book is that its conclusions are founded on a careful study of a wide range of facts, covering our whole national history."—*Christian Register.*

"Discusses with singular clearness the different changes in the tariff from the very beginning of our national existence down to the last one, made by the Commission of 1883. It is a volume that relieves the study of much of its complexity and difficulty, which frightens so many away, by confining consideration to a few salient features in each change and to the few articles about which, like the wool clauses in the Mills tariff, the controversy settles."—*Waterbury American.*

Monopolies and the People. By

CHARLES WHITING BAKER, C.E., Associate Editor of *The Engineering News.* (No. 59 in the "Questions of the Day Series). 12mo, $1.25.

"The book is an eminently successful one, and one which can be read with profit and advantage."—*Boston Times.*

"This is a comparatively fresh theme, and whether or not we agree with the author's views, it is worth while to read what he says, as very much can be learned from any timely discussion of the subject. Trusts have suddenly grown into giants, and it is well for every one to have some idea of their shape and proportions."—*N. Y. Journal of Commerce.*

American Farms, their Condition

AND FUTURE. By J. R. ELLIOTT. (No. LXII. in the Questions of the Day Series.) 8vo, $1.25.

"He has studied the problem in all its lights and shadows, and has given the public a book which should excite inquiry, and produce healthful agitation. It should be read especially by those who are in public life and by all those who wish to know whither the country is drifting."—*Charleston News.*

*** Lists of the Questions of the Day Series and of other important publications on the Tariff Question and in Economic and Political Science (including late books and pamphlets by Wells, Sumner, Schoenhof, Moore, Philpott, and others) sent on application.

G. P. PUTNAM'S SONS, 27 and 29 West 23d Street.

Charles Scribner's Sons'

NEW BOOKS:

Little Saint Elizabeth,

And Other Stories. By FRANCES HODGSON BURNETT. With 12 new full-page Drawings by Reginald B. Birch. Handsomely bound, uniform in size with 'Little Lord Fauntleroy.' Square 8vo, $1.50.

Elizabeth is a lovable little maid of French birth, and her adventures after she is brought, under peculiar circumstances, to New York and is placed in care of a bachelor uncle, form the theme of the fascinating story. The other tales, "The Story of Prince Fairyfoot," "The Proud Little Grain of Wheat," and "Behind the White Brick" are, like the title story, full of the delightful humor and tenderness of feeling characteristic of Mrs. Burnett.

"Delightful juvenile fiction, as full of charm for the older people as for the youngest. Mrs. Burnett is always peculiarly felicitous in her portrayal of child character, and in this volume her gifts in that direction are developed in their affluence."—*Boston Saturday Evening Gazette.*

"Beautiful stories in Mrs. Burnett's best vein, and all of them beautifully illustrated."—*N. Y. Journal of Commerce.*

The Lawton Girl.

By HAROLD FREDERIC. 12mo, cloth, $1.25; paper, 50 cents.

Mr. Frederic's book is a study of character and manners in Central New York, which is as powerful as it is artistically drawn. The social atmosphere of Thessaly, the traits of its people, the pathetic interest attaching to the central figure of the girl, the movement and culmination of the story—these are qualities that make the novel noteworthy.

English Lands, Letters and Kings.

Vol. II.—From Elizabeth to Anne. By DONALD G. MITCHELL. 12mo, $1.50.

The second volume of Mr. Mitchell's talks about historical and literary England covers the period from James I. to Queen Anne, Shakespeare being the first and Swift the last personage of importance who passes under review of the sympathetic commentator and critic. The suggestiveness of the author's portraits and pictures, and the unique charm of his style make the book as entertaining as the first volume, "From Celt to Tudor."

Vol. I.—From Celt to Tudor. 12mo, $1.50.

Expiation.

By OCTAVE THANET. Illustrated by A. B. FROST. 12mo, cloth, $1.00; paper, 50 cents.

"A masterly sketch of life in Arkansas during the war of the rebellion, when the rural population were plundered in turn by Confederate or Union troops, and by bands of marauders. The interest never flags. It is one of the strongest stories of the season."—*N. Y. Sun.*

Bright Skies and Dark Shadows.

By Rev. HENRY M. FIELD, D.D. 8vo, $1.50.

A charming narrative of the author's recent journeyings in the Southern States, not only descriptive and pleasantly historical in its pictures, but containing much that is instructive and suggestive in its examination of social and political problems.

NEW AND REVISED EDITION.

The Index Guide

To Travel and Art Study in Europe. By LAFAYETTE C. LOOMIS, A.M. With Plans and Catalogues of the Chief Art Galleries, with New Maps, Tables of Routes, and 160 Illustrations. 16mo, Leather, *Revised Edition* for 1890, $3.00.

"The value of the guide is incontestable. It would be worth purchasing if only for the abundant maps of cities, plans of galleries, and charts of railway and river routes, to say nothing of the art illustrations."—*N. Y. Evening Post.*

OF INTEREST TO ALL.

What is Said of the AMERICAN ARCHITECT.

EDMUND CLARENCE STEDMAN *says:*

"*It is a liberal education* to have your wonderful INTERNATIONAL EDITION reach me weekly with its rich variety of illustration, gathered from the round world's latest achievements in the art which most of all represents man's *needs*, and which, out of his necessity, has created so much beauty. If your noble magazine appeals so strongly to a layman like me, I am sure it must be indispensable to every architect and every builder."

MISS MARY EVANS, Principal of the Lake Erie Seminary, *says:*

"In renewing my subscription I cannot refrain from expressing my appreciation of the value of the *American Architect* to the principal of a seminary for young women. . . . For the nearly ten years since I have been a subscriber I have studied plates, reading matter, and pages of advertisements to prepare myself for the time when new buildings would be added to the Seminary. . . . And we have now the foundations laid of the most important of a group of buildings for which the *Architect* has furnished both information and inspiration."

N. CLIFFORD RICKER, Professor of Illinois Industrial College, *says:*

"I have been a subscriber to the best edition of the *American Architect* from the beginning, and have always found it worth to me much more than the subscription price."

ALBERT F. D'OENCH, late Inspector of Buildings, New York, *says:*

"Your publication has been of such a high standard, has given so much pleasure and been of such service to architects that its further development must be hailed with satisfaction by the entire profession."

JOHN M. VAN OSDEL, Architect, Chicago, *says:*

"I am pleased with your INTERNATIONAL edition and prize it highly. You have struck a long-felt want in giving us the best work of the world as well as of our own country."

SILAS McBEE, Principal of Fairmount College, *says:*

"I consider it invaluable."

Published weekly in three editions. Send stamp for Specimen Copy and Prospectus for 1890, to

TICKNOR & COMPANY, Publishers,
211 Tremont Street, Boston.

"The best text-book for beginners in Art History."

A Short History of Art.

Octavo, with 253 illustrations, a chart in colors, giving the relative chronological position of the principal artists, a Full Index, giving the Pronunciation of the Proper Names by Phonetic Spelling, and a Glossary.
By Julia B. DeForest.
$2.00.

Copies for examination will be mailed, postpaid, on receipt of $1.50, which is the price to schools. If not approved, these may be returned and the money refunded.

"It is a library of art histories crystallized into a most useful hand-book. The author has made by far the best text-book for beginners in art history that has yet appeared. The book is clear and vigorous in style, and written with a firmness that comes of sure knowledge."—*Literary World.*

"This work is one we cordially commend to all American teachers and students. It contains a brief outline of the origin and development of art, and is the best possible introduction to the many comprehensive standard works on the subject, and specially of Dr. Wilhelm Lubke's well-known 'History of Art,' published also by Messrs. Dodd, Mead & Company."—*N. E. Journal of Education.*

"The author of 'A Short History of Art' has done her work exceedingly well. She has judiciously culled facts and suggestions from the best standard works on the subject, which give a succinct view of the great epochs, schools, and masters, carrying forward in a clear and comprehensive manner the account of the progressive development of art. There is a great deal of information lucidly arranged, and especially adapted as an introduction to this whole department of education."—*Prof. J. M. Hoppin, Yale University.*

The Nation.

NEW YORK, THURSDAY, APRIL 24, 1890.

The Week.

THE Tariff Bill of the Committee of Ways and Means has been reported at last, after throes and spasms the like of which have never been seen or felt in the construction of any similar measure. Nobody could have imagined beforehand that the principle of bounties from the Treasury would be admitted into the bill. The duty on hides has been juggled with to such an extent that one juggle more or less could not cause any surprise. But that it should be seriously proposed to pay a bonus of two cents a pound to anybody who chooses to grow sugar, and one dollar a pound to anybody who chooses to grow raw silk, would not have been believed had not the bill been actually presented in that form. Alongside of these propositions we have an increased duty of 120 per cent. on tin-plates, of which none are produced in this country, and of 200 per cent. on carpet-wools, of which practically none are produced. The argument for bounties applies to both these things with as great force as to sugar or silk. The encouragement given to the production of those articles by a bounty would be equally as great as by the tariff, and the consumer would not be taxed in the unconscionable manner proposed. One feature of the bounty on sugar is, that it commits the Government for fifteen years, regardless of the complexion of future Congresses. In other words, it appropriates public money for half a generation in advance of the occasion for using it.

Publishers of newspapers and of books, and the printing trade in general and paper-manufacturers, should take notice that the McKinley Tariff Bill more than doubles the duties on blankets and felts for printing and paper-machines. The present rate, reduced to ad valorem, is 52.87 per cent. The bill raises it to 108 per cent. This is done by the cunning device of striking out section 379 of the present tariff, which reads as follows:

"379. Endless belts or felts for paper or printing machines, 20 cents per pound and 30 per cent. ad valorem."

By striking out this section these articles are thrown into the category of manufactures of wool and hair not specially provided for, the duty on which is advanced to the following rates:

"Valued at not more than 40 cents per pound, the duty per pound shall be three and one-half times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto 40 per centum ad valorem; valued above 40 cents per pound, the duty per pound shall be four times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto 50 per centum ad valorem."

In order to ascertain what the duty is, reference must be made to the duty on unwashed wool of the first class. This is fixed in the bill at 11 cents per pound, the present rate being 10 cents. The duty on blankets for printing-machines is therefore a "triple expansion" tax, amounting to 38½ cents per pound and 40 per cent. ad valorem if valued at not more than 40 cents per pound, and 44 cents per pound and 50 per cent. ad valorem if valued at above 40 cents. Who conceived this intricate device for increasing the taxes on knowledge and adding to the cost of every school-book, newspaper, and Bible, and every scrap of printing or writing-paper and envelope in the country, we do not know, but we think that it is the duty of the press to find him out. When found, he will probably say that the duty will only amount to a few cents per head of the population, and therefore ought to be disregarded.

The theft of two Senatorial seats from the new State of Montana was consummated on Wednesday week, when the Republicans of the Senate voted solidly in favor of seating the two Republican contestants who were never elected by any legally constituted Legislature. The Republican Senators have confessed judgment by their conduct during the so-called debate which preceded Wednesday's vote. They were unable to meet the Democratic arguments against the committee report in favor of the Republican contestants, and their spokesmen, including Messrs. Sherman, Hoar, and Evarts, cannot be said to have done anything more than quibble over the points at issue. The simple fact is, that the Republican majority decided to seat the Republican contestants before the committee had reported, or before even an inquiry had been held, in accordance with the Republican "plan of campaign" to secure so large a party majority in the Senate as to make it impossible for the Democrats to gain control of that body for five and possibly ten years to come. If the party can thus get the means for blocking legislation for an indefinite period, its leaders do not care how many States they may lose in the meantime because of their partisan course.

The Republican majority in the upper branch is now ten, that party having forty-seven Senators against thirty-seven for the Democrats. If Wyoming and Idaho are admitted and elect Republican Senators, according to the party programme, the majority will be increased to fourteen. As matters now stand, the majority is larger than either party has had for a number of years, the upper branch having been very close ever since the Republicans recovered it, through the help of Mahone, in 1881, after the Democrats had held control for the two previous years, by ten majority when David Davis voted with them, and eight when he cast his vote with the Republicans. From 1861 to 1879 the Republicans had held uninterrupted control of the Senate, and for much of the time by at least a two-thirds vote. The "tidal wave" of 1874, which wiped out the Republican majority in the House, left the party still with a good working majority in the other branch, and it was four years later before the change in popular sentiment was fully reflected in the Senate. In like manner the Democrats may sweep the country in the elections for Representatives next fall, and yet leave the Republicans from 1891 to 1893 with a good majority in the Senate. Indeed, it will require almost a revolution in public sentiment to shake Republican control of the Senate before 1895, so strongly is that party now intrenched.

The closing scene of the Pan-American Conference is said to have been extremely affecting, Mr. Blaine being almost moved to tears when he gave the word of parting. If the emotions of the conferees were due to the small results achieved, they were fully justified. The ostensible object of the Conference was to promote reciprocity in trade. Its real object was to enable a few steamship-owners to get their hands into the United States Treasury. Reciprocal trade relations have not been advanced an inch. Steamship subsidies have been advanced an inch or two, but are yet far from attainment. When the South Americans get home and recover from the effects of Mr. Blaine's benediction, they will probably perceive that there is not much to be gained by voting *their* money to carry on trade in the face of a tariff that increases the duties on their coarse wool about 200 per cent.

Whatever may have been Mr. Blaine's connection with the bejuggled duty on hides, it is certain that he has had nothing to do with the proposition to make raw sugar free. If that proposition becomes law, it will destroy all his chance of concluding a treaty of reciprocity with Brazil. With that country alone of all the South American nations has he made a serious and persistent attempt to negotiate such a treaty. The negotiations are now pending, and it is no great secret that their success depended upon Mr. Blaine's ability to induce the Senate to ratify a treaty giving Brazil the privilege of free raw sugar. That is the only trade concession we can grant to Brazil, and the only one she asks. In return for it she would abolish or lower duties now affecting American exports. But if Congress makes all raw sugar free, it takes the last card from the Secretary of State's hand, and gives the Brazilians all they want with no need of paying anything for the new advantage. As it is not to be supposed that Mr. Blaine has been insincere in his approaches to the Brazilian Commissioners, the conclusion is inevitable that he must look with extreme displeasure upon the free-sugar clause of the McKinley bill. This lends plausibility to the theory that the Committee on Ways and Means has treated him as cavalierly as it has the rest of the Cabinet, and that he really had no hand in the affair of the duties on hides. Indeed, why should a

committee that deliberately declares its intention of destroying our foreign commerce, go out of its way for the sake of a beggarly treaty of reciprocity?

Secretary Windom has written a letter for publication defending his Silver Bill, in which he enumerates "the extraordinary concessions which are offered to the silver sentiment of the country." These constitute exactly the reason why the bill ought not to pass. The Secretary of the Treasury is the very last man who ought to make such concessions. He, of all others, ought to set the example of rigid adherence to correct principles of finance, because any bending, any fluctuation, in that quarter will be taken (as it has been) by the silver fanatics as proof that they are wholly right. Regarded as a "back fire" to the silver craze, the Windom Bill has been a failure. The true policy of the friends of sound finances is to fight on the front and not on the flank. If the silvermen are the stronger party, let them have their way, after the best resistance that can be made. They will be cured of their folly after they have had a taste of it. If the American people want to see all the dollars in their pockets turn into 70-cent pieces, it is much better to let them try the experiment than for the Secretary of the Treasury to make the "unparalleled concessions to the silver interest" which he so plumes himself upon.

Another pension job was all but carried through the House of Representatives on Monday, in the shape of a bill proposing to put on the pension-roll every Union soldier who was made prisoner during the war. This would be equivalent to a proclamation to soldiers in any future war that the surest pathway to the financial gratitude of their countrymen lay through surrender to the enemy. Nevertheless, this absurd proposition almost secured the two-thirds vote required to carry it under a suspension of the rules, and would have gone through without opposition if there had been no Democratic members.

It took only five minutes' time for an impartial jury, after hearing evidence and arguments on both sides, to decide that worsteds are not woollens under the tariff laws of the United States. The verdict is that Secretary Windom's decision on this question, whereby worsted coatings and suitings were lifted out of one section of the Tariff Act and put into another section, was contrary to law, and that the Government must pay back the money wrongfully extorted from importers of worsted goods together with interest at 6 per cent. It is to be assumed that the Administration will say all kinds of things now of the counsel for the importers, the jury, and the judge, and will, on some pretence or other, carry the judgment to the Supreme Court on a writ of error. Anything for delay, and a concealment of the Treasury nakedness, and a warding off of the sharp condemnation, by removal from office, which should, by an honest President, be visited on Windom, Tichenor, and Hepburn.

The result will be used as an argument for McKinley's Administrative Bill, on the plea that Government judges and New York jurymen cannot be trusted; but the truth is, that if the worsted case had been tried under the fourteenth and fifteenth sections of that bill, the importers would have been beaten, and for the simple reason that they could not have got out the facts. There could not have been an adequate application of that tremendous corkscrew of cross-examination of witnesses, and no compulsory attendance of witnesses before the general appraisers. There could not have been the exclusion of incompetent and illegal evidence, and the inclusion of that of an opposite character. What general appraiser, likely to be appointed, could have fitly presided over such a trial, as did Judge Lacombe, ruling under the peril of a humiliating wigging by the Supreme Court if he erred? There is no especial moral victory for anybody in this decision, excepting for those who pointed to the Treasury decision as evidence of a corrupt bargain for votes for Harrison.

In so far as the organs of the Administration notice the charges against Quay at all, they treat them as an attack of British free-traders on a great American protectionist, and they rely for "vindication" on the fact that Quay has been elected to various high offices since the date at which he committed his offences. The steady reliance of organs on this line of defence for criminal politicians is one of the most curious phenomena of our time. In fact, it furnishes a study in morbid psychology. You say to a man, "On such a day, in such a place, in the presence of such and such witnesses, you stole a thousand-dollar note. You were pursued and captured, and the money was found in your boot."

Ans. "I know very well what your views are about the McKinley Bill regulating the administration of the customs, and, therefore, your accusation makes no impression on me whatever. After hearing what you say about Maj. McKinley's mode of appraising goods, I feel sure I cannot have committed the offence which you describe, and decline to put in any defence."

Accuser. "Is it possible this is all you have to say to the witnesses who saw you in the act, and to the officer who found the money in your boot?"

Ans. "By no means. I have also to say that since they caught me I have been elected to more than one place of trust and emolument, which could not have happened if what these witnesses said about me was true."

Acc. "But why could it not have happened? Did the voters who elected you know anything about the charge? Had they heard the proofs and your defence?"

Ans. "No, they knew nothing about it whatever, which shows that it was a lie. Vindication at the hands of persons who have examined your case is of very little importance compared to that of persons who have never heard of it, or have heard only your own story. Hearing both sides confuses the mind and destroys the judging capacity."

To say that the Working-Girls' Convention held last week was one of the most remarkable we have ever had in this city, would be saying something very commonplace. It is in reality the outward and visible sign of an extraordinary change in the outlook of a class which was, perhaps, less considered and in many ways more helpless than any other portion of the community—the young girls dependent on the work of their hands for their own support. That they should have come up out of the dull and dreary and lonely obscurity of their homes, have organized themselves into clubs for mutual assistance, enjoyment, and improvement, have provided themselves with comfortable club-rooms, where they get hopeful and elevating glimpses of all that is going on in the great world outside the humble sphere in which they live, assurances of sympathy, hints about life, manners, dress, and cultivation, from women more fortunately situated, and possessing a larger experience—that this movement should have spread widely, and should have resulted in the meeting of several hundred delegates to talk over common interests and experiences—is certainly a very singular and most hopeful phenomenon. Most of the large cities were represented in the Convention, as, Boston, Philadelphia, Baltimore, Pittsburgh, Chicago, San Francisco; and many smaller places. The movement, we believe, originated in New York, and was due to the initiative of Miss Grace Dodge and Miss Clara Potter; and it is a movement which of course could not have succeeded without the display by these ladies of extraordinary tact as well as practical wisdom in winning and justifying the confidence of the girls in their sympathy and coöperation.

The three things which a Tammany leader most dreads—we give them in the order of repulsiveness—are the penitentiary, honest industry, and biography. It is not always in the power of decent people to condemn him either to the penitentiary or honest industry; but painstaking and courageous reformers can always write his biography. In fact, the rise into power of the gang who now have possession of the city government is due solely to the fact that their biographies had not been published. Grant never could have been elected had the lives of himself and his companions been laid before the public by careful and competent hands. It is the obscurity which veils the earlier portions of their career which enables these men to live on the city. Public spirit in New York is not very strong nor active; but that portion of the community which follows honest callings is not so bereft of self-respect, of love of country, and of reverence for the moral government of the world, as to accept with eyes open a municipal administration composed of men taken largely from the class of criminal or shiftless

adventurers. Therefore we say that anybody in this city who has heart or energy or time for the work of reform cannot do better than get up the record or biography of each Tammany politician as he comes to the surface of affairs and either gets an office or becomes entitled to "divvies" from the party funds. Of course he must be watched for, and have his portrait taken the minute he rises out of the slime of crime and lawlessness in which he is apt to be originally bred, and the work is not pleasant; but we fear it must be done steadily and persistently, if this city is to be saved from becoming a disgrace to American civilization, and an aid to the enemies of popular government all over the world. Considering the frightful demoralization of the poor foreign population which our present city government works as soon as they come in contact with it, the standing denial of God and the mockery of justice, of truthfulness, honesty, and purity which it seems to represent to them in all the branches of it which touch them, the indifference of the religious and well-to-do class in this city to what is called "politics," and their frequent readiness to sacrifice the city to the Federal questions, are both painful and astonishing.

Mr. Dana, the editor of the *Sun*, is laboring to prove that somebody called him "a dirty liar and thief." Indeed, he is hardly satisfied with that. If there are any words more vituperative, he wants the public to understand that they were applied to him. Paul Pry solicited the favor of a booting. Dana insists that he has already received one, and he implies that he would like to have another. It all grows out of the interview with ex-President Cleveland in the *World*, which that paper acknowledged was fictitious. Most people who had been led to believe that they had been called "dirty liar and thief," would be glad to know that no such terms had been applied to them. Not so Dana! He rejoices to believe that they were applied to him. He hugs them. He glories in them. They are a decoration to him provided only that Mr. Cleveland applied them to him. Anybody who can prove that Mr. Cleveland said that Dana was a dirty liar and thief, will hear of something to his advantage by applying at the office of the *Sun*.

Mr. Goschen's budget speech shows that the British finances are in a flourishing condition, and that although the laboring classes have been relieved of all taxes on the necessaries of life except tea, there is a surplus in the treasury of more than $15,000,000. It is proposed to reduce the duties on tea (now 6d. per pound) to 4d. What a contrast this budget presents to our tariff, with its monstrous exactions on the clothing and other necessaries of the people, which the McKinley bill proposes to increase instead of diminish! Among other items in Mr. Goschen's speech of present interest to us is his statement that the postal receipts exceeded the estimates by $500,000. Included in the estimates of expenditure are all the so-called "subsidies" for ocean mail service. The receipts for mail service have exceeded the payments for all such service, including ocean mail-carriage, every year for a very long time past, and now we are told that there has been a net gain in one year of half-a-million dollars. What will the sagacious Farquhar and the subsidy-beggars at Washington say to this?

Affairs in East Africa have taken a very curious turn. Emin Pasha, whom Stanley went to rescue, has turned his back on his rescuer and gone back, or is trying to go back, to his old dominions, in the service of Germany, whereat there has been a good deal of excitement in England. They say there that Emin is ungrateful, after so much pains was taken to rescue him, to go back to the place from whence he came without as much as saying thanks to his rescuer, and in taking service with the Germans, who have now become England's rivals in East Africa, after England had furnished the expedition which went to his aid. The truth seems to be that nothing has ever been truly known about Emin's views in the whole matter. There can be little doubt that he enjoyed his pashalik in the Sudan mightily. He ruled over a large extent of territory and a submissive, if not attached, population. He had a small standing army, and lots of ivory, and was able, like the German Emperor, to receive any one who wished to help him with open arms, and smash to pieces any one who tried to hinder him. He held his ground very well until the Mahdi, away down at Khartum, got his power sufficiently consolidated to send a force up to reduce Emin to submission and to defeat him in several encounters. Emin then not unnaturally began to sigh for civilized life, and probably heard with relief that Stanley was coming. But as soon as he got out of the Mahdi's clutches, and reached Stanley, and found himself as it were under another man's orders, and on the point of becoming a simple doctor, or literary man, or returned traveller in Europe, his feelings naturally underwent a change. He found he would sooner be a prince in the desert than a short-lived lion in London or Berlin drawing-rooms. So he wavered and doubted, and provoked Stanley by his vacillation, and was not very grateful for being rescued, and finally decided to take service under Germany and go back to his old throne if he could get there under German auspices. All this is very natural and innocent, and why the British public should be provoked over it it is hard to see.

A lively turn was given to Spanish politics in the last days of March, by the case of Gen. Daban. A member of the Senate, as well as a General in the army, that gentleman wrote a circular letter to all his brother officers severely criticising the military policy of the Government, and asking for information which might be used against the Minister of War in the coming debate in the Senate. The letter leaked out, of course, and the Minister of War considered it a grave breach of discipline. He at once issued an order for the General's arrest and imprisonment for two months on the charge of insubordination. Notice of the order was transmitted to the Senate, that the acquiescence of that body in the punishment of one of its members might be secured. A great cry was immediately raised that the Government was overriding parliamentary privilege and going in the teeth of the Constitution, which expressly declares the inviolability of members of the Cortes. But the Minister of War maintained that he was proceeding not against a Senator, but against an insubordinate member of the army, and that if it came to a question of the relative importance of army discipline and a strained parliamentary privilege, he should decide for the former. The heated debate which followed left the Government with a comfortable majority, and when Gen. Cassola took the matter up in the Chamber, in the hope of making a point against the Administration, he had no success whatever. Spain has suffered too much from insurrectionary military men not to have a wholesome prejudice against them, and Sagasta's fervent assertion of the supremacy of the civil power, and his declaration that insubordination in the army must be punished at all costs, have won him new popular favor.

A highly valuable report on the economic movement of Mexico since 1885 has been sent to the Foreign Office by the British Minister to Mexico, Sir Francis Deny. He records the gratifying increase of revenue which has gone steadily on, even with the remission of some taxes, and notes the march of public improvements with which we are so familiar in this country. A fact of special significance is the falling-off in the proportion of silver to the general body of exports. Though still the principal article of export, it now constitutes but five-eighths of the total exportations, whereas not long ago it amounted to seven-eighths. This fact implies a considerable quickening of agricultural production of various sorts. Sir Francis calls attention to the chronic deficit in the budget —an element of the financial situation which somehow never gets telegraphed from Mexico —and says that the swelling railway subventions are the sword of Damocles hanging over the Mexican Treasury. He is decidedly of the opinion that railroad building has been overdone, at least in comparison with other public improvements. He thinks that the pressure on the Treasury caused by the service of the present foreign debt and the increasing payments to railroads will make a new and larger foreign loan necessary. This prediction is borne out by the presentation, in this very session of Congress, of a proposal for a new loan of $40,000,000 to fund all outstanding debts. Still, it is gratifying to know that this cautious Englishman, who looks on all sides of the question, believes that the country is in a sound and progressive condition, and that its financial future is secure.

A FARMER'S TARIFF BY R. P. PORTER.

THE governing principle, we are told, of the McKinley Tariff Bill is protection for the farmer. At least this was the talk while the duty on hides was retained. To support this doctrine various misleading statements have been published lately, the most deceptive being one which we find in the *American Economist* of April 11, signed by Robert P. Porter, who seems to find time, amid his duties as Superintendent of the Census, to do a good deal of falsifying outside of his own bureau in behalf of those who put him there. In this statement Mr. Porter, in order to show the farmer how much he is protected by the tariff, says that "last year the agricultural products imported on which duty was levied, aggregated in value over $250,000,000." Then he gives a list of what he calls "imports of important agricultural products," as follows:

Sugar	$93,000,000
Animals and products, except wool	41,000,000
Fibres, animal and vegetable	60,000,000
Fruits	19,000,000
Barley and cereals	9,000,000
Tobacco leaf	11,000,000
Total	$233,000,000

It will be a pleasant surprise to the farmer to be told that the duty on sugar is for his benefit. It will be a valuable instruction to him and to his representatives in Congress who have been clamoring to have sugar put on the free list, and have succeeded so far as raw sugar is concerned, to be told by Porter that they have been mistaken all along, and that they ought to consider the duty on raw sugar an advantage to themselves and not a tax on their earnings. If the farmers and their representatives in Congress really understand their own interests in this matter, we may safely begin the task of pruning Mr. Porter's table by striking out "sugar, $93,000,000," and leaving his total for the present at $140,000,000.

The next item is "animals and products except wool, $41,000,000." The word "products" is rather vague, but we suppose it means animal products. Of animals dutiable we imported in the year ending June 30, 1887, $4,677,997 worth. Of animal products, dutiable, not including wool, we imported bristles $1,174,333, ivory (we do not produce elephants in this country) $485,508, meat products $434,853, dairy products (principally foreign varieties of cheese not produced in this country) $1,371,386; total animals and animal products dutiable, $8,144,077. But of this amount we must subtract bristles, ivory, and foreign cheese ($874,261) as non-competitive products, leaving only $5,609,975 upon which the American farmer gets any protection, instead of $41,000,000, as stated by the Superintendent of the United States Census.

His next item is "fibres, animal and vegetable, $60,000,000." Even this large item does not include wool, for Mr. Porter says in the next paragraph:

> "With such an array of important products protected, to say nothing of wool, of hops, of hay, of eggs, of vegetables, of seeds, and of a score of minor products, is it likely the American farmer will give up the tariff because the free-trade shouters are loudly proclaiming against the iron and woollen barons?"

The principal items in this list are flax $1,922,182, hemp and all substitutes $4,041,522, jute $2,616,128, sisal grass and other vegetable fibres $3,733,001, rags, shoddy, and waste $1,843,823; total $14,156,656. If we have omitted any "important" dutiable fibres, Mr. Porter will favor us by stating what they are. It is well known that flax is not raised in this country as a fibre, although there is a duty of $20 per ton on it. Therefore the duty is not protection to the farmer. On the contrary, it is an injury to him as a consumer of linen goods. The same may be said of jute and sisal grass. As for hemp, we have had a protective duty on it ever since 1824, and what has been the result? According to the late Judge Kelley, there are 24,000 acres of land in Kentucky on which hemp is grown, and that is all. Is the American farmer protected by a duty on woollen rags? Most of his woollen clothing is either in that form now or fast going that way, but he would scorn the suggestion that he was protected by a duty of ten cents a pound on his clothes after they will no longer hold together. In short, in the whole $14,000,000 of imported fibres the farmer does not get a cent's worth of protection, except possibly in the little item of Kentucky hemp. As to Mr. Porter's $60,000,000, it is mere coinage and invention.

What about "fruits $19,000,000"? The dutiable fruits are figs, oranges, lemons, limes, prunes, raisins, Zante currants, dates, and pineapples. How much is the American farmer protected by a duty on pineapples or on anything in the whole list? The California and Florida fruit-growers are not usually classed as farmers, although they do cultivate the soil, as the vine-growers of the former State do also. It would be just as proper to put in Mr. Porter's list all the foreign wines imported as the foreign fruits, since some few of our agriculturists grow grapes.

There remain the items of barley and cereals and leaf tobacco, amounting together to $20,000,000. On neither of these is the duty protective to any appreciable degree, because the kinds of barley and of tobacco imported are different from those grown in this country. But we will give Mr. Porter the advantage of these in the summing up. It appears that the table, if truthful, would have been constructed as follows:

Animals and animal products, except wool	$5,609,975
Fibres, animal and vegetable (hemp)	4,041,522
Barley and cereals	9,000,000
Tobacco leaf	11,000,000
Total	$29,651,497
Porter's statement	233,000,000
Difference	$203,348,503

The fact is, as everybody knows, that the only farmers who are protected under the tariff are a few on the Canadian border in New England and northern New York. The wool imports are not included in Porter's table. There is good protectionist authority for saying that even the wool duties are a damage to the farmer, and this is our opinion; but we will allow that the importations of clothing and combing-wool (but not carpet-wool) are competitive. These amount to about $6,000,000 in value, hops about $4,000,000, hay (what an absurdity is a duty on hay!), about $800,000, and seeds, including flaxseed, about $850,000. Add all these to the total above, and we have $41,000,000 in place of the $250,000,000 with which Mr. Porter seeks to bamboozle the American farmer. What confidence can be put in the forthcoming census in the hands of such a falsifier?

THE VOTE OF THE FARM.

THE present year is the year of the Federal census. Evidently it is also a turning year of the tariff controversy—a year when the minds of voters are swiftly changing on the subject of our "protective" tariff policy, and changing in the direction of tariff reduction. The coincidence is peculiarly opportune for a condensed review of the absolute strength of the vote which comes from the American farm. No doubt, the coming few years will show great changes for the good in the old manufacturing States, particularly among that class of factory producers which each day grows more and more clearly defined as the "raw material" group. But, highly important as that class is, it is relatively small compared with the farmers, among whom, unless all signs deceive, the richest fruits of the reform are to be harvested very soon.

Although most persons have a general notion of the great strength of the farm vote, yet few have a clear conception of its real dimensions and relative importance in the country both as an industrial and political factor. The census of 1880, which on this point must be nearly accurate, fixes the male population engaged in all occupations at 14,744,942 out of the total working population, male and female, of 17,392,099. Of the last-cited number, 7,670,493 were classed as agricultural, and of the males in that vocation there were 7,075,983. That is to say, if we carry out the ratios, nearly one-half of the population of the whole country was agricultural, and, consequently, one-half of its vote came in 1880 from the farm. The total population of the country is now approximately 65,000,000. During the last decade it is probable that the growth of the farm class has at least kept pace with that of the other industrial groups. While farming has relatively declined at the East, the decrease has been made good in the newer States of the West and Northwest. Out of our whole present population of, say, 65,000,000, we may assert with confidence that at least 32,000,000 are agricultural. Our total vote for President in 1880 was 9,218,550, or about 1 to 5.4 of population. This ratio would give about 12,000,000 as the total vote that would reach the polls if a hotly contested Presidential election were to be held to-day. The number is probably a little too small, since the ratio of 5.4 is that for the Hancock-Garfield campaign, which did not draw out a very full vote. But, accepting the figures, the agricultural part in this vote would be, say, thirty-two sixty-fifths, or about 5,900,000.

This, then, is the vast group of voters

whom no sophistry of the protectionists ought for an instant to delude into the belief that a high tariff is for their benefit. They are *a priori* "unprotected," the victims of a system of free-trade selling and "protected" purchasing—in their economic relation as consumers paying heavy prices for high-tariff goods, and as producers most of them selling against the competition of the world's markets.

Let us pass from this analysis of the farmer vote of the whole country to a more critical survey of its dimensions in particular States. We select for this twelve States, of which all but one (Connecticut) voted for Harrison in 1888. They are chosen with especial reference either to the already observed tariff changes among the farmers, to the narrow margins of party majorities in them, or to both:

	All occupations (male).	Farmers (male).
California	348,303	78,785
Connecticut	192,663	43,936
Illinois	893,679	433,796
Indiana	583,658	329,614
Iowa	483,457	302,171
Massachusetts	546,591	64,746
Michigan	514,191	239,346
Minnesota	230,048	130,817
New Hampshire	112,340	44,299
New York	1,524,264	375,213
Ohio	881,836	396,120
Wisconsin	371,062	194,380
Total	6,682,092	2,633,223

The twelve States named are doubtless to be the pivotal farm States in the near future of the tariff conflict. It will be seen how the relative size of the farming workers in them as compared with the whole country is lowered by such States as New York, Massachusetts, California, Connecticut, and New Hampshire, with their large comparative population of workers outside the farm. Nevertheless, about five-thirteenths of all these workers are males upon the farm, and of these probably three out of five are Republicans whose votes thus far have been cast under the party momentum to sustain a high tariff. Using the proper ratios derived from the election and census returns for 1880, we find that the farm vote of the twelve States is now about 2,200,000, probably divided as about 880,000 Democratic and 1,320,000 Republican. Certainly the Republican farm vote of the twelve commonwealths does not fall at the present time below a round million and a quarter of votes. Of the twelve, Connecticut went for tariff reform in 1888, New York went Democratic last year, and with her Ohio and Iowa gave their sharp signals of the great tariff change that is coming by registering their Democratic majorities. And the local elections which have been held since in nearly all of them show the strong political trend in the same direction.

Thus, from whatever point of view we observe it, the size and drift of the farm vote are deeply significant. They indicate the direction in which the labors of the tariff-reformers must be most strenuously pushed; they show the magnitude of the political convulsion that is surely coming so soon as the farm movement against the tariff gets fairly under way; and they move our wonder to think of the length of time that it has taken such an immense body of sincere voters, ground down under tariff impositions, to awaken to the national evil which has been "loaded" upon them like patient beasts of burden by the Republican protectionists. This long patience is the more amazing from the fact that in so large a number of the "pivotal" States of the past the change of votes needed to rebuke the high-tariff policy could have been reckoned in fractional percentages of the total farm vote. However, when the impending recoil of the farm vote comes, we do not believe it will be a matter of small percentages.

A VERY QUEER BILL.

THE fact is familiar that with the assembling of the Legislature of New York begins a time of anxiety for all honest men who care for the public welfare. One never knows what objectionable bills, under the most innocent appearance, may be voted through. Instead of using their power to forward wise schemes for the benefit of the city and State, citizens therefore are forced to spend it in detecting the presence of danger and in preventing the fulfilment of unwise or corrupt designs. The present Senate bill No. 568, introduced by Mr. McNaughton, which is so peculiar that it would seem to mean more than it shows on the surface, provides for the creation of a board of five persons whose duty it shall be to "designate the text-books to be used in all the public schools of the State." On and after September 1, 1891, no text-books are to be used in any public school of New York except those designated by this Board, which "may adopt any books already published, or prepare or cause to be prepared by experts suitable text-books." This experiment has already been tried since 1883 in California with disastrous results, and New York had better profit by California's experience in this case as in the case of the code. One trouble with our whole system of public schools is that we have already too many boards, too much dictation, and too much machinery. The protective and paternal system works evil in education as well as in law or in trade.

But a more curious provision follows. The State is to own the copyrights of all books thus prepared by its "experts." But if the Board shall prescribe the use of any books the copyright of which is held by a publisher, "the owner of the copyright shall grant, through contract with the Board, to any other publisher the privilege of competing for its production and supply on payment of a royalty not to exceed 10 per cent. of the selling price." Four of the largest publishers of school-books have just formed a combination—a sort of league, offensive and defensive—which will control the production of three-fourths of all the school-books published. In case, therefore, that any book belonging to one of these firms should be designated for use by this supreme Board, that firm, under the terms of this "privilege," would be protected from competition of the other three, while all other publishers would have no such advantage. The two facts of the Text-book Bill at Albany and the combination fit curiously together, whatever doubt may be entertained as to any power of taking away copyright under a New York statute. In any case, it is improper that five men should have power to impose text-books of their selection upon all the public schools of the State. In fact, the agreement of only four of these men could bind all the schools to the use of the books for four years, without possibility of change within that time except by a unanimous vote of the Board. The education of live human minds cannot be carried on by any such cast-iron system as this. What is required is more flexibility, not less—more wisdom and experience than is contained in any five heads, and more opportunity for open and free competition with regard to school-books, if the best are to be had.

All this on a general consideration of the bill. But when we come to specific points, it seems still more objectionable, and the conviction is irresistible either that it intentionally covers much more than it shows, or that it has been so carelessly framed as to be in fact very dangerous in its possibilities. In the abolition of all local authority, it presents one manifestation of the paternal principle which in so many forms threatens the maintenance of any real vigorous life in the country. The tendency will be to produce an apathetic feeling towards the school in all the country towns, whereas the only safeguard of the schools is a living interest concerning them in the minds of all good citizens. The clumsy construction of the bill makes it impossible to determine whether the Board to be created may not prescribe a different set of text-books for every individual school. It says only that "it shall be its duty to designate the text-books to be used in all the public schools of the State." Apparently the intention is that they shall designate one set which shall be uniform everywhere. The very fact that the bill is so carelessly worded that it is capable of two such different interpretations should be enough to condemn it. It is not said that the Board shall designate *one* set of text-books, but simply that they shall designate text-books. If we accept the apparent intention of the bill, we must dissent from the opinion that it is desirable to have the same text-books always used in bucolic communities and in cities. Books which may be the best for the city will not be the best for country children, and a text-book is a thing absolutely of no value except in its adaptability to the pupils; if it be considered abstractly, and apart from this relation, it has the same significance as Emerson's umbrella considered as alone by itself, in a universe without men or rain or sun.

Then another point: The five who are *ex officio* to constitute this autocratic Board may

be to-day men who are capable of assuming its duties; but what are they to be to-morrow? Some of them hold their offices by appointment of the Governor, and the Governor of the State of New York, we know, does not always necessarily belong to the most judicious, intelligent, trustworthy, and conscientious class of citizens. The State Association of Teachers may elect one of their number for President out of personal favoritism or for other motives than their respect for his professional excellence, and, moreover, they may, and probably will, elect a new man every year. Our immediate acquaintance with school superintendents does not warrant us in resting with assured confidence on the man whom the Association of Superintendents may annually select for their President, and the Principal of the Albany Normal School holds his place virtually under the authority of the State Superintendent, who is one of the Executive Committee of that school. It is well known, so profitable is the sale of text-books, that there has always been a lively competition among rival firms to secure the supply for any one large city. The agents of these firms have not scrupled to approach members of city school boards with tempting inducements to secure their votes for the adoption or retention of their particular book or books. Where the principals of schools have had any influence in the selection of books, they too have been subject to pressure. The agents have even gone further than this, and have actually become wire-pullers in the election of city superintendents, so that a superintendent of schools in some large city may be and actually has been elected or deposed through the influence of men whose only interest in the matter is the pecuniary gain of the publishers whom they serve. This is bad enough. But now it is proposed to put this enormous patronage of the school-books for the whole State of New York—containing nearly 2,000,000 children—into the hands of five, or, as we have noted, perhaps of only four men. Without personal disrespect to any one of the five men who fill at present the offices which would constitute them members of this Board, we say that it is far safer for the public schools to have the pressure which comes from school-book politics distributed over a greater area. The bill, if allowed to become a law, will introduce school-book politics not only into the matter of appointments, but also into every meeting of the State Association of Teachers and of the State Council of School Superintendents.

We greatly mistake the temper of the Town Committees, of the Boards of Education of the cities, and of the Principals of the large schools, if it shall prove that they will not oppose such a despotic measure as this bill, which practically impeaches and overrules their ability and judgment. It is time that the intelligent teachers and the parents of the children in the schools should see in what direction all these things point, and should express their convictions in some voice that will be audible at Albany.

THE MARRIAGES OF WOMEN COLLEGE GRADUATES.

THE *Overland Monthly* for April contains an interesting study and classification of the statistics of marriage of women college graduates. The statistics are derived from the Register of the Association of Collegiate Alumnæ, and in some small part also from the Register of the University of California. The most striking point brought out by the statistics is the marked difference, in the ratio of marriages to graduates, between the coeducational colleges and the colleges devoted exclusively to women; and as regards the comparison between college graduates and other women, it seems to be made plain that the marriage-rate for women who are graduated at coeducational colleges is not distinctly lower than that of the population at large.

A close study of the data in question gives rise to considerations some of which appear to us to be not without interest in themselves, while others are instructive as showing the pitfalls to which even careful and conscientious reasoners from statistics are exposed. First, then, as to the main point discussed by the writer, the difference in marriage-rate between the graduates of coeducational and those of women's colleges. Taking the whole mass of graduates, without distinction of time or locality, the percentage of marriages among the "coeducational graduates" is far greater than that among the "separate graduates." But the writer justly points out that this is not a fair comparison, since the separate colleges are all in the East, while the coeducational ones are mainly in the West, where the marriage-rate is higher than in the East. He therefore proceeds to make comparisons between the two kinds of colleges in the same section. He finds that among the women who have been graduated in the New York colleges during the last twelve years, the married ones comprise 25.7 per cent. of the coeducational graduates and 20.6 per cent. of the separate graduates; while in the New England colleges the corresponding percentages are 24.7 and 14.8 respectively. These last figures seem to show an overwhelming difference in favor of the coeducational graduates, and the *Overland* writer thinks they afford a more trustworthy basis of comparison than the New York colleges do, because the clientèle of the New England colleges is the more homogeneous.

It struck us, however, that there was probably something wrong about the matter, and, in fact, there is a grave oversight. The coeducational colleges run through about the same years as the women's colleges, but the number of graduates from the latter has been growing much more rapidly than that from the former, so that the proportion of recent graduates is much greater in the women's colleges than in the mixed colleges. We have taken the trouble to ascertain the mean date of graduation in both classes, and the result is that the coeducationals were graduated, upon the average, 6.9 years before the date of the Register, while the separates had had, upon the average, only 4.6 years of post-graduate life. If allowance be made for this difference, the superiority of the coeducational marriage-rate in New England would seem nearly, if not quite, to disappear, and with it the main support of the writer's conclusion, that there is a very marked difference between the probabilities of marriage for women educated in coeducational colleges and those educated in women's colleges.

Upon the whole, taking as a basis graduates prior to 1876, the figures given in the *Overland* seem to indicate that about 50 per cent. of the women graduated from Eastern separate colleges marry sooner or later, and about 70 per cent. of those graduated from Western coeducational colleges; and that the difference is due in about equal parts to difference of residence and to difference in the nature of the college. This result is not to be looked upon as conclusively established, for a variety of reasons, the chief of which are that the number of cases is too small (although the *whole* number of members of the Association exceeds one thousand), and that it is not certain that the married and unmarried graduates are equally likely to become and remain members of the Association.

Assuming that the marriage-rate of college-bred women is distinctly below that of other women in the same classes of society, does this justify the inference usually drawn from it? That inference is that a college education either makes women less inclined to marry, or makes men less inclined to marry them. We say without hesitation that the inference is unwarranted; the making of it involves that most usual — though perhaps most easily avoidable — error in reasoning from statistics, the overlooking of the part played by selection. There is, in every modern community, a very considerable number of women who are still young, but who, for one reason or another, do not expect to marry. Is it not obvious that these women have special incentives to seek a college education over and above those that apply to other women, and that consequently they will be disproportionately represented among college graduates? In point of fact, one might reasonably expect from this consideration alone a greater lowering of the marriage-rate than can possibly be deduced from the statistics, so that there is standing-ground for the contention that going to college actually promotes marriage. At all events, it may be confidently assumed that whatever deficiency there may be in the marriage-rate of women college graduates shows rather that women who will not marry go to college, than that women who go to college will not marry.

But, waiving now all these questions of accurate determination, one cannot leave the subject without commenting on what would have been considered a generation ago so astonishing a phenomenon as is presented by the little difference that exists—if any exist—between the college woman and the non-college woman as a candidate for matrimonial happiness. That there is no startling difference is shown not only by statistics, but still more conclusively by the experience of every one whose circle of

acquaintances includes college-bred women. One would naturally have expected that these bold innovators would have to go through a long period of probation, during which they would be looked upon as *lusus naturæ*, and any man so infatuated as to seek marriage with one of them would be held an object of compassion by his normal male friends. But no such thing has taken place. The "sweet girl graduates" who, forty years ago, existed only in Tennyson's prophetic fancy, have quietly glided in among us and become familiar figures; they seem to find lovers and husbands in the ordinary course of nature, and among men who are not looked upon as visionary or eccentric; and as to the happiness of the unions which they form, we feel sure that no one who has observed many instances of them, needs any statistical evidence to convince him that there is no class of marriages more uniformly happy than are those of women college graduates.

PALÆOLITHIC MAN IN OHIO.

OBERLIN, O., April 14, 1890.

Two or three weeks ago, Mr. W. C. Mills, Secretary of the Archæological Society of New Comerstown, Tuscarawas County, Ohio, sent to me a flint implement which, according to his description, seemed to have been found in the undisturbed gravel of the glacial terrace which everywhere lines the valley of the Tuscarawas River. In order the more fully to judge of the significance of the discovery, I visited the locality last week, together with a small party of Cleveland gentlemen. The result of the investigation cannot fail to be of considerable public interest.

The flint implement referred to is a perfect representative of the palæolithic type found in northern France and southern England. It is four inches long, two inches wide, and an inch and a half through at its larger end, tapering gradually to a point and carefully chipped to an edge all around. Fig. 472 in Evans's 'Ancient Stone Implements of Great Britain' would pass for a very good representation of it. The material is black flint, or chert, such as occurs in the "Lower Mercer" limestone strata not many miles away, and has upon all the surface that peculiar glazed appearance which indicates considerable age.

New Comerstown is situated upon the right bank of the Tuscarawas River, about one hundred miles directly south of Cleveland and forty miles south of the glacial boundary in Ohio. The latter part of the journey from the north to reach the place is such a complete demonstration of the now accepted theory concerning the origin of the terraces along this river, and others similarly situated, that a brief description of it will be profitable.

The headwaters both of the Tuscarawas itself and of the several branches which unite with it before reaching Canal Dover are all within the glaciated area, thus affording access to an unlimited quantity of débris brought by the continental ice-sheet from the Laurentian region in Canada. Immediately below the glacial boundary, all these streams are bordered with extensive terraces, the material of which consists of assorted matter from the glacial drift such as would naturally have been carried down during the closing floods of the glacial period.

From Canal Dover to New Comerstown the Tuscarawas River makes a long bend to the east, but the railroad cuts across the elbow, and for twenty miles or more finds its way through two small valleys tributary to the main line of drainage. The course of the railroad first strikes up the valley of Stone Creek, following it for several miles. But no sooner does it enter this tributary valley than it leaves behind the terraces and other gravel deposits which mark the main valley and every tributary further north. At length the road, after passing through a tunnel, strikes into the headwaters of Buckhorn Creek, which runs southward to join the Tuscarawas at New Comerstown. Here, too, for several miles, there is a total absence of terraces or of any deposits of gravel. On approaching the mouth of the creek, however, a vast gravel deposit derived from the northern drift is encountered, in which the railroad company is making extensive excavations to get material for ballasting their track. Thus, in this short journey, there was demonstrated before our eyes the limitation of these peculiar gravel deposits to the main valley of the river, and so, by consequence, their glacial age and origin.

It was in this last-named gravel-bank, on the 27th of October, 1889, that Mr. Mills found the palæolith above described. The surface of the terrace is at this point thirty-five feet above the flood-plain of the Tuscarawas. The valley of the river is about a mile wide. This gravel had been deposited in a recess at the mouth of Buckhorn Creek, where it was protected from subsequent erosion, and extended up the creek about a quarter of a mile, but, according to the law of such deposits, with gradually diminishing height as one recedes from the main line of deposition. The implement was found by Mr. Mills himself, in undisturbed strata, fifteen feet below the surface of the terrace; thus connecting it, beyond question, with the period when the terrace itself was in process of deposition, and adding another witness to the fact that man was in the valley of the Mississippi while the ice of the glacial period still lingered over a large part of its northern area.

The importance of this discovery is enhanced by the fact that this is only the fifth locality in which similar discoveries have been made in this country, the other places being Trenton, N. J., Madisonville, Ohio, Medora, Ind., and Little Falls, Minn. But in many respects this is the most interesting of them all, especially as connected with previous predictions of my own in the matter, though it is proper to say that Mr. Mills was not, at the time he made the discovery, aware of what had been written upon the subject.

When, in 1882, after having surveyed the glacial boundary across Pennsylvania, I continued a similar work in Ohio, I was at once struck with the similarity of the conditions in the various streams in Ohio flowing out of the glaciated region (and especially in the Tuscarawas River), to those in the Delaware River, where Dr. C. C. Abbott had reported the discovery of palæolithic implements at Trenton, N. J. Attention was called to this similarity in various periodicals at the time, as well as in my Report upon the Glacial Boundary made to the Western Reserve Historical Society in 1883 (pp. 26, 27), where it was said that the Ohio abounds in streams situated similarly to the Delaware with reference to glacial terraces, and that "the probability is that if he [man] was in New Jersey at that time [during the deposition of the glacial terraces], he was upon the banks of the Ohio, and the extensive terrace and gravel deposits in the southern part of the State should be closely scanned by archæologists. When observers become familiar with the rude form of these palæolithic implements, they will doubtless find them in abundance." Whereupon a dozen streams, among them the Tuscarawas, were mentioned in which the conditions were favorable for such investigations. The present discovery, therefore, coming as it does in addition to those of Dr. Metz in the Little Miami Valley and of Mr. Cresson in the valley of White River, Ind., has great cumulative weight, and forces, even on the most unwilling, the conviction that glacial man on this continent is not a myth, but a reality.

A glance at the physical features of the region in Ohio and Indiana where these palæoliths have been found, shows their eminent adaptation to the primitive conditions of life indicated by the implements themselves. The Tuscarawas valley has been formed by erosion through the parallel strata of sandstone and limestone here composing the coal formation The summits of the hills on either side rise to heights of from 300 to 500 feet, and their perpendicular faces abound even now with commodious shelters for primitive man. But in pre-glacial times the trough of the Tuscarawas was 175 feet deeper than at present, that amount of glacial gravel having been deposited along the bottom, thus raising it to its present level. Hence in pre-glacial times the opportunities for shelter must have been much superior even to those which are now in existence. The present forests of the region consist of beech, oak, tulip, maple, and other deciduous trees. Evergreens are now totally absent, but the advancing ice of the glacial period found here vast forests of evergreen trees. Not many miles distant, terraces of the same age with this at New Comerstown have, within recent years, yielded great quantities of red-cedar logs, still so fresh as to be manufactured into utensils for household use.

The relation of glacial man to the mound-builders is so often made a subject of inquiry that a brief answer will here be in place. The above relic of man's occupancy of Ohio was found *in* the glacial terrace, and belongs to a race living in that distant period when the ice-front was not far north of them, and when the terraces were in *process of deposition*. Thus this race is unquestionably linked with the great ice age. The mound-builders came into the region at a much later date, and reared their imposing structures *upon the surface* of these terraces, when the settled conditions of the present time had been attained, and there is nothing to show that their occupancy began more than one or two thousand years since, while their implements and other works of art are of an entirely different type from the rude relics of the palæolithic age. If, therefore, interest in a work of art is in proportion to its antiquity, this single implement from New Comerstown, together with the few others found in similar conditions, must be ranked among the most interesting in the world, and will do much to render North America a field of archæological research second to no other in importance.

G. FREDERICK WRIGHT.

ANTIQUITIES IN EGYPT.

CAIRO, March 6, 1890.

THE Egyptian Government, and especially the Egyptian newspapers, are somewhat disquieted on the subject of antiquities. The condition appears more serious since the recent removal of the Bulak Museum to Gizeh, and it may be worth the while to note some of the causes therefor. It is natural that the interest which foreigners show in discovering and removing the antiquities of a country

should awaken the Government of that country to the importance either of taking the matter into its own hands, or of at least retaining what may be found. Persia—a comparatively new field—still grants leave to excavate with possession of the objects found, whereas the jealous and repellent attitude of Turkey is well known. The monuments of Italy and of Greece have been brought thoroughly under Government control. The defence of Egypt against plundering and harvesting of the kind implied was undertaken, not by the natives against foreigners, but by the French in the person of a noted Egyptologist, Mariette, who aimed to serve the highest interests of science. He was amply supported by the Khedive Ismail, and from 1861 until his death in 1881 he was the chief of the new Department of Antiquities.

It was Mariette who put an end not merely to the most ruthless destruction of architectural monuments, which had been wrought by natives and by tourists, but especially to the indiscriminate sale and exportation of antiquities of all kinds. The soil of Egypt was replete with material relics of a remote past, which, when once beyond the reach of air and water, seem as permanent as the sand that covers them; but they were fast being exhumed, and were here represented in no collection, nor protected by any laws. Before the time of Ismail, foreign explorers—Minutoli, Lepsius, De Rougé, and others—removed to European museums whatever portable object they thought worthy, rejecting, however, much that is now greatly prized. Individuals bought without hindrance, and native diggers had full right to what they found. When, therefore, Mariette took his official position, his influence with the Government soon effected a new branch of legislation. A national museum was created. The exportation of antiquities became illegal; only under the Museum seal, which might be granted for duplicates, could a package containing antiquities pass the customs; only by order of the Museum could such a package be received at any railway station, and the classification as freight brought it under the highest special tariff. The Government claimed the first right to purchase at one-half of its estima'ed value all antiquities by whomsoever found, and any native caught offending was liable to fifty blows with the kurbash—to be repeated after a week unless full surrender had been made. This law was frequently enforced. Beyond the limits of their private lands the natives had no right to dig at all, and many ancient sites came directly under Government control. For it should be noted here that all *tells* (that is, all mounds of ruined villages) are inalienable Government property. The Nile-mud bricks composing them afford, when pulverized, a valuable dressing for the fields, and so the tells are kept to serve this purpose freely. For the rest, no excavations were to be made even by competent persons, except as undertaken by Mariette, representing his department in the Government service. The police still have permanent orders to stop excavations wherever seen.

It would be an error to suppose that all of these rules were rigidly enforced, or that they could be, although Mariette was keen to detect offenders, whom he treated with the utmost sternness. An excellent museum was built up; the grossest forms of desecration were checked; the trade of the town-dealers was for the moment almost destroyed. The notion spread among the native population, and possessed the minds of persons of high rank, that all "antikas" have a high money value, increasing with their size. On the other hand, free exportation was replaced by the smuggling of objects of no great bulk, which still exists for the benefit of foreign museums and of individuals who dare not comply with the rule.

During the decade that has passed since Mariette's death, the laws have been relaxed, not tightened. Whipping as a punishment for crime has been abolished under the British occupation, and, no substitute having been provided, the natives risk only the confiscation of their finds. It results that the dealers, all of whom are foreigners, are quite beyond the control of the Museum authorities, who, moreover, are no longer too zealous to make their collection as complete as possible; and many probably unique objects pass for ever out of the country. Architectural monuments when no longer protected by the sand often tend rapidly to perish or to fall. Variation in the temperature and humidity of the air and of the contiguous soil is often distinctly harmful to what has been long under the surface. Further, these monuments being scattered over a vast extent of territory, constant effort must be made to protect inscriptions, statues, and paintings from wanton and often superstitious defacement. Formerly the mudirs, or provincial governors, were personally responsible to the general Government for the detection and arrest of criminals within their respective provinces, but increased centralization under British influence has made it often impossible to trace an act of depredation to its source. A few incidents will show what power the Government really has, or what attitude it maintains.

(1.) The mutilation, demolition, or displacement of Muslim tombs is not only a grievous offence against the Faith, but is further punishable by imprisonment according to the civil law. No human hand may disturb this final rest of a follower of the Prophet. The archæologist has explored many cemeteries of the ancient civilization, but none of the purposes of science can get for him the right to excavate a Muslim grave. It is not the customary chronological line that is here drawn, but a purely religious one. I went the other day to a burial-place of the old town almost in sight from the roofs of the modern one, which is now traceable only by the burrowing of a few Arabs for inscribed tablets of marble. They know the nature of their offence against their religion and the law, for the work is done most secretly, and the workers are off when any one approaches. It appears that these are Kufic monuments of the ninth century, of a type that is rare and not well known. These hunters are of course incapable of such considerations; but they have worked for months, and so barbarously that it is next to impossible after them to make out the construction of the vaults or to get certain details which might add much to our knowledge of the art and customs of the people there interred. The case has been reported, and perhaps the work will stop. The bones show white where the sand is broken down, and I am told that many of them have been sold to a sugar refinery. But the marble slabs—the output of this vandal industry—to the number of several hundreds have for months been quietly bought through a middleman by the director of the Museum, who admits that he has not once paid a visit to the spot, which is only half an hour distant from the Museum!

(2.) It is only about two years since Riaz Pasha, the Prime Minister, made a contract with an English firm allowing them to dig *for bones* in ancient cemeteries, bringing to the Museum any other antiquities that might be found. But that provision of a Khedivial decree was cited forbidding the excavation of any site supposed to contain relics of antiquity, except by consent of the Director of the Museum, which in this case being withheld, the contract was abandoned. The report is confirmed that many tons of bones from the great cat cemetery have lately gone to Liverpool to be used as manure.

(3.) A permanent guardsman is stationed at an important site only to be presently convicted of thieving for himself.

(4.) A town policeman goes repeatedly to a place of excavation, seizes the person in charge, who holds a formal permit, and takes him before the mudir. The person thus annoyed finds the policeman one day boldly at work there with a dealer.

(5.) Certain stones which were reserved among the discoveries of the Egypt Exploration Fund, presently appeared in the garden of an Italian consul, en route, no doubt, for Turin.

A number of temples and tombs have either been placed under guard or walled about and so put under lock and key. Less than two years ago a Society for the Preservation of Ancient Monuments of Egypt was formed in England, and it has already offered to the Egyptian Government both counsel and funds to effect its purpose. In November, 1888, a Government tax of one pound Egyptian (£E1) was levied upon travellers visiting the monuments of Upper Egypt, and the sum of more than $5,000, accruing up to July, 1889, has been devoted to the further excavation and repair of temples, especially those at Thebes. But the inadequateness of present methods is apparent.

In the Museum, Mariette as Director was succeeded by Prof. Maspero, now of the Collège de France, who, knowing the country, the people, and their language, continued an excellent administration. In the excavations which he completed, and in the works which he published, he was, as he is now, one of the chief contributors to Egyptological knowledge. He permitted excavations to be conducted by outsiders under such conditions as best to serve the interests of the Museum. The Egypt Exploration Fund and Mr. W. M. F. Petrie have been granted this privilege, but the enjoyment of it is attended with great difficulties, which do not arise merely from the limitations and restrictions at present imposed. The native officials are extremely reluctant to allow such work to go on, or to see any "antikas" taken publicly out of the country. It matters not how many duplicates may remain, for even the Prime Minister asserts that all antiquities are unique. The officials are thus led into an elaborate system of intriguing—creating obstacles at every point. Prof. Maspero also greatly increased the usefulness of the Museum collection to visitors and others by publishing a descriptive guide.

The present Director, M. Grébaut, has expressed himself as personally opposed to admitting foreigners to make excavations, although he has granted the permission to certain resident dealers; and he has made no extensive excavations himself, nor even reported upon what little has been done. But important excavations have been carried on for many months under his authority without his having knowledge of them by a moment's personal inspection. One is reminded of the idea urged in ministerial quarters that the work should be kept in native hands, following the example of Italy and Greece. In fact, a school of Egyptology for native students was kept alive for a few years while Henri Brugsch was in Egypt, being generously supported by Ismail Pasha; and when it expired there was left, it is said—a pupil. Few objects in the Museum are labelled in any way, and no progress has been made in

this respect, nor in the making of a catalogue, since Maspero's day. Even the visitor's 'Guide' cannot be used in the new quarters, and one who seeks for information gets therefore little help.

The authority of the Director was supplemented two years ago by the appointment of an advisory commission for antiquities; and it has lately been in the air that there is to be appointed from England an Assistant Director, with administrative power.

FARLEY B. GODDARD.

THE LOWER AND MIDDLE AMAZON.

TABATINGA, BRAZIL, January 10, 1890.

IT is usual to think of the Amazon as a single splendid river wending its way through a level, half-marshy plain reaching from the Andes to the sea. Instead of this it drains a basin possessing features which vary so conspicuously in different parts that it was regarded by the Indian, and is likewise considered by the white, as consisting of three separate rivers. The Indian names for these have been retained, so that to-day the ancient designations of Amazonas, Solimões, and Marañon, are applied as they have been for ages past. The title of Marañon is restricted to the river from its source in Lake Lauricocha, sixty miles from the Pacific Ocean, on the western or Pacific slope of the main cordillera of the Andes, to its junction with the Rio Napo, three hundred miles from the Brazilian frontier. Within this distance it is augmented by the waters of twenty-two tributaries, the chief of which are the Rios Huallaga and Ucayali. From the Napo to the Rio Negro, a distance of a thousand miles, the river is known only as the Solimões, and receives contributions in this portion of its course from fourteen tributaries, several of which themselves exceed a thousand miles in length. From the Rio Negro it becomes in very truth the mighty Amazon, expanding now with the floods of twenty affluent streams, until at last, instead of a river, it resembles more a great brackish sea, studded with innumerable islands. This is often called the Amazon delta, an appellation given in ignorance of the rock-ribbed foundations of many of these islands. Hills fringe, or lie close to, the northern shore for several hundred miles from the sea, and it is useless to seek an analogy between the mouth of the Amazon and the Missi sippi. There is much land on the lower reaches of the river subject to annual overflow, but it is not marsh, for gigantic forests hold possession here instead of grass and rushes.

It is not until you have passed Gurupá and the Island of Tucuyús that the archipelago is fairly left behind. Here are high banks. Gurupá itself is high and dry on a hill of sandstone; has a crumbling old fort built of this brown-stone; has also a church, and pretty houses, and a dock. Beyond Gurupá for sixty miles the country is flat, resembling traditionary pictures of the Amazon. The trees are lofty and weighted down with vines and orchids. Strange trunks have many of these trees; indeed, because of some tropical danger, perhaps that of hurricanes, it is quite universal for them to throw out buttresses on three sides —mere flat projections of the wood of the tree, and of so firm a texture that they are utilized for making table-tops, a single round slab being often seven feet in diameter.

Suddenly now the country becomes hilly. The land to the northward is traversed by a succession of low-lying ridges, level on top and dropping down at singularly regular angles into the surrounding plain. For a hundred miles there is little change. Settlements are few, and the *fazendas*, or plantations, are inferior. The little huts contain amazing populations of children; seldom are there less than six or seven naked babies to be seen in one of them, and often more. The absence of larger children and the enormous protruding stomachs of the infants cannot but excite surprise. This leads to an explanation of the fact that the population of the Valley of the Amazon does not increase. It is only the strongest, the *very strong*, who can reach maturity through the evils of hunger and hardship, exposure and recklessness, which compose existence here. Out of a family of ten children the Cabucla, or half-breed Indian, does well to raise one. It is phenomenal for him to raise two. There is nothing to eat but bananas and fish and a bit of farina. There are no clothes to protect against chilly winds, which do actually blow in the tropics as well as in more rigorous climes. The roof of the hut is leaky. Often there is no hammock for the unclad little creature—nothing but a cold clay floor to lie on, with no covering at night. The whole refuse of the household, the dirt and filth, which in other lands is hurried out of sight and smelling distance, is allowed to accumulate outside the door. The damp forests hug close and even overhang the huts, breeding other germs of disease. Who dares wonder that the most common words on the tongues of Amazonians are *febre, sezões; sezões*, dread fever and ague, repeating its attacks at regular intervals for a month or two, until the patient grows bloated, and bluish-white, and dies? The starved child, to satisfy its hunger, eats the clay on the banks of its river home, grows large-paunched, wastes away from poverty of blood, and dies. Even the adult at last, enemic from want of food, takes to earth-eating, and meets a like end. It is pitiful, and yet the native will loaf in his canoe day after day, too lazy to catch sufficient fish for himself and his family from a river teeming with them; too lazy to plant bananas and mandioca, or to cut down a few trees and let in sunshine upon his hut. Instead of this he will work in an indolent sort of way for a few months gathering rubber with which to buy the farina he should raise himself, and the cachaça, or native rum of sugar cane, which he should do without.

At a distance of somewhat less than two hundred miles above Gurupá begins one of the pleasantest portions of the Valley of the Amazon. Mountains rise high above the plain, and curve away to the northward until lost in the distant blue. A grassy plateau bounds their bases, offering wonderful pastures and splendid sites for towns. The peaks of Paytuna, Errere, and Jaury stand abruptly out of this plateau, their mammoth heads upheld, like the roof of an Egyptian temple, on clustered basaltic columns. These columns are so large as to be clearly distinguishable with the aid of a glass at a distance of twenty miles. Conspicuous and remarkable as these mountains are, it is said that no one has ever been known to ascend them, or even to approach so near as the open plateau at their bases. From this point the country immediately improves. Fields with cattle and horses grazing become frequent. Thrift is apparent in the fazendas, in the people themselves, in the use of whitewash on the houses, and in the cultivation of pretty gardens. This is in the vicinity of Montalegre. The efforts at husbandry, which had confined themselves to the north shore, soon become transferred to the south side, following the hills, which there form a series of ridges and valleys reaching to the Rio Tapajóz. It is worthy of remark that throughout the Valley of the Amazon it is precisely where Nature is least prodigal of her bounty, where hills, and clay, and rock raise obstacles in the way of man, that he exerts himself and prospers most.

The country drained by the Tapajóz is a favored region. It has a foundation of solid rock. It has fertile valleys and rich uplands. Rice, sugar-cane, cotton, corn, the best of the Northern vegetables, and all the tropical fruits constitute a portion of its productions. When certain disaffected Southerners fled to this spot after the fall of Richmond, rather than struggle with poverty in their devastated Northern homes, they evinced good judgment in their choice of land. They chose one of the garden spots of South America, but they reckoned with undue haste upon the possibility of enjoying it. Man is ever too prone to believe that the stubbornness of his fellows will yield to persuasion, and that to facilitate the development of a region he has but to call a mass-meeting and arouse enthusiasm with some stirring oratory, after which the matter will quickly get itself adjusted through the proper official channels. This is well enough in the United States, but it fails with a completeness, and man remains stubbornly opposed to progress with a persistency, in Brazil, which utterly confounds an American. It not only confounded, but handicapped and ruined, the unlucky emigrants to the Tapajóz. The city of Santarém, standing at the junction of this river and the Amazon, bears evidence of their presence in such things as the construction of a house heterodox in plan according to Brazilian standards; in a cart of improved design; in a Yankee windmill; in a man *on horseback;* and in certain other hints of a remembrance of whilom comforts in imitations and excuses for the originals exposed in the stores for sale. The new-comers tried to ship produce, but the export duties proved prohibitive; they tried to procure machinery for their own use, and the import taxes broke their purses. Goods were not allowed to go to Santarém in bond, and were pillaged by unscrupulous authorities of the Imperial Custom-house in Pará. Those who could, fled back again, preferring Northern poverty with the blessing of deliverance from such a Government. Those who could not flee have struggled on, seeking, if not to increase in riches, at least to build up homes where nature should yield plentifully, and distinguish them by their abundance from the shiftless race around them. There are said to be about sixty families of these Southerners and their descendants still living in the neighborhood of Santarém.

The country continues high on the northern shore, with an occasional broad, treeless savanna, all the way from here to the Rio Negro. The southern shore varies, now being hilly and having fine plantations, and again low and densely wooded. The whole region is underlaid by a brown vesicular sandstone, which strongly resembles lava on a first glance. It is so very rich in iron as to lead, together with other indications, to a suspicion that iron ore might be found if looked for, and if so it might be smelted by the coal said to exist along the Rio Tapajóz.

At present the towns of Obidos and Serpa, the chief settlements between Santarém and Manáos, depend upon cattle which are raised for the Pará market. The beeves are small, but very fat, and the meat is tender and good. Midway between Serpa and the Rio Negro the Rio Madeira enters the Amazon, a broad stream, flowing down between low, marshy islands. This is one of the most im-

portant rivers in South America, already famous for its rubber and tobacco, and destined to be the avenue to the fertile plateau of Bolivia, when a railroad or a canal shall have been constructed around the rapids which now interrupt its channel. Thus will communication be established with the Rio Beni, a tributary of the Madeira, navigable for steamers far into that land-locked republic. The Rio Negro, about sixty-five miles west of the Madeira, comes down from the north, between hills of no mean height. Its waters, the color of strong Oolong tea, refuse at first to mingle with the yellow Amazon, and the two tides roll for some distance in alternate patches. This river also offers possibilities for future development. Its bounding forests produce the sweet, refreshing guaraná, so highly prized in Matto Grosso, the sarsaparilla, the native nutmeg, vanilla and tonka beans, piassaba, a strong elastic brown fibre from the palm Piassabeira, rubber, and infinite fruits, together with the Marapinima, or snake wood, and many of the finest timbers for nautical and cabinet purposes in the southern continent. The Rio Branco, descending to the Negro from the northeast, opens up a means of navigation almost to the Rio Essequibo in British Guiana. It has been suggested that, by means of a canal for barges of eight feet draught, goods could be sent from Georgetown via the Essiquibo and Branco into the Negro to Manáos, and thence up the Madeira into Bolivia, and also up the Amazon, or Solimões, into Peru. Along the Branco are extensive grassy plains where cattle are already raised, and these plains also strike southward in a broad belt through the interior, to within so short a distance of Manáos that there would be no great difficulty in constructing a railroad from ports in the Guianas to that city. The distance would be probably eight hundred miles, and the road would open up a region which might vie with the Argentine pampas for cattle, as well as affording access to the Mond and Tumac-Humac Mountains, whence much of the gold found in the sands of the rivers of Guiana is supposed to come. An English company had at one time subscribed capital for the initiation of this enterprise, but, failing to secure a favorable concession from the Imperial Government, the project was abandoned.

As previously stated, the Amazon above the entrance of the Rio Negro is called the Solimões. This part is properly the "basin" of the Valley of the Amazon. The land is submerged during several months of each year, causing a stunted growth of timber, and a considerable change in the aspect of vegetation in general, the prevailing tint of the forests here being a pale grayish green. The tributaries, however, descend from higher ground where conditions are more propitious. On the north side the Solimões receives the Japurá, a river fifteen hundred miles in length, and the Içá, or Putumayo, of eight hundred miles. From the south enter the Purús, fifteen hundred miles long, the Juruá and the Jutahy, each between five hundred and eight hundred miles, and the Javary, which for more than five hundred miles forms the boundary line between Brazil and Peru. All are great rubber-producers, and the output from the Purús is uniformly the best of all the rivers of Brazil. Formerly large quantities of sarsaparilla and salt fish were exported also from this region, but these industries have ceased. The bulk of all the rubber of Brazil comes from the Madeira and from these tributaries of the Solimões, and large quantities of it pass through the hands of Manaenses before reaching Pará. It will be perceived that Manáos is situated so as to command the choicest trade of the Valley of the Amazon, and according to that law of the growth of cities which affirms that it is the port admitting ocean-going vessels—and vesels of twenty-four feet draught can ascend to Manáos at all seasons of the year—which is at the same time nearest to the objects of trade, rather than the one nearest the foreign market, which naturally takes the lead, it was to be expected that Manáos would wrest the supremacy away from Pará. The only obstacle to the actual accomplishment of this is the lack of telegraphic connection with the outer world, and Pará, foreseeing the danger to her own interests, has determinedly refused to permit the laying of a cable The Amazon, however, is open to the flags of all nations. Pará may prohibit a cable, but she cannot hinder a ship from the free use of the river. The chance Manáos has, then, is for some enterprising company to run a line up the Rios Negro and Branco, or across the plains into Guiana, and perhaps construct a railway for the sake of protecting the telegraph as much as for the trade the road would obtain. A cable, however, following the rivers Essequibo, Branco, and Negro, would require guarding for only a few miles across the mountains, where there are already many settlements. It would require less courage to carry this into execution than capitalists are now displaying in Peru, and the prospects of profit are almost, if not quite, equally tempting With daily market reports from the great commercial centres of the world, Manáos would become one of the most important of the great cities that are certain to arise in the new era which is dawning upon South America.

Correspondence.

TO THE VOTERS BELONG THE SPOILS.

To the Editor of The Nation:

Sir: Christopher Mamer, President Harrison's Collector of Internal Revenue for Chicago, recently discharged three women clerks from his office. Several friends of these women, knowing them to be competent and efficient clerks, went to Mr. Mamer to inquire the cause of the dismissal. The reply was that the women must all go; that the places were wanted for voters who could help the party. President Arthur's Collector left three women in the office; President Cleveland's Collector left eight; President Harrison's Collector has already discharged three of these, all of whom are Republicans in sympathy, and has declared to several well-known citizens his determination to send them all away, as he wanted the places for voters.

These facts coming to the knowledge of the Chicago Women's Club, a society of more than four hundred women, a delegation was sent to President Harrison with a remonstrance against Mr. Mamer's policy of excluding women from Government offices because they could not assist their superior officers with votes. The delegation was introduced by Congressman George Adams. President Harrison promised to give the subject careful consideration, but declined to state his own principles in regard to the matter. X.

Chicago, April 14, 1890.

THE DIME NOVEL AND THE POST-OFFICE.

To the Editor of The Nation:

Sir: Permit me to say that all fair-minded men rejoice with you to see the alarm expressed by the manufacturers of so-called yellow-backed literature on account of the House Bill No. 7558, and Senate Bill No. 2747, mentioned in your issue of April 17, "taking away the postal premium on the manufacture of dime-novel literature."

It is a well-known fact that the publication and distribution of this kind of cheap trash literature is the worst temptation and curse to which the youth of America are at the present time exposed. Nearly all their crimes may be directly or indirectly traced to its subtile and corrupting influences. I have before me an article clipped from Wednesday's issue of a Chicago daily, that bears the heading, "In Search of Adventure." It is the case of a bright, energetic youth of twelve leaving his home in Rochester, N. Y., and starting for Montana to kill Indians, rescue fair maidens, and to find gold nuggets. When intercepted by an officer at Chicago, and searched, there were found the usual equipments for such an enterprise: a 38-calibre revolver, a box of cartridges, and *four yellow-backed novels* with thrilling titles, only one of which I will give here: "Old Kit Brandy's Deliverance; or, Banner Ben, the Wildfire of the Prairie." It is needless to add, the boy was speedily returned to his parents.

This is but a mild case among the hundreds that occur constantly. It is to be regretted that your notice of the action of Congress on the matter of dime-novel literature is so brief. It certainly deserves a larger share of your attention than you have given it thus far. May we hope to hear more from you through your columns on this matter soon?

Yours very truly, Fred C. Clark.

Ann Arbor, Mich., April 18, 1890.

"A LESSON IN PHILOLOGY."

To the Editor of The Nation:

Sir: Dr. Klemm's 'European Schools,' already reviewed, I think, in the *Nation*, is a very stimulating and suggestive book. There are American teachers who, in comparing methods and results set forth in the book with our own—at least in less favored parts of our country—will doubtless feel the chill of discouragement. To any such readers there is a crumb of comfort to be got out of "A Lesson in Philology" (p. 416), in a school of Alsace. More lessons than one might be gathered from this chapter.

The word in the sentence that called out the German teacher's display of philological learning was *Kleinod* (jewel). With the first part, *klein* (little), there was no difficulty. To explain the last part, the pupils were led, by a skilful use of the Socratic method, to *Odin*, the greatest god in German mythology, from whose name *od* was derived. To make plausible the connection of ideas, they were next made to see that *God* (*Gott*) and *good* (*gut*) were originally the same word; that *good* meant also a possession, as *Landgut*—from all which it was easy to see how *Kleinod* came to mean "a little possession."

Such guessing as this calls to mind Carlyle's derivation of *king* from "*kŏnning*, which means canning, able-man"; or his half-hour discourse, as related by Mr. Conway, on "*fee* as derived from Latin *fides*."

The last syllable of *Kleinod* is, in fact, the old Saxon or Low German *ôd*, meaning, 'property, wealth.' In Anglo-Saxon it appears in the form *ead*, as in *Eadweard* (Edward), the guardian of property. *Eadig* means wealthy, as in 'Beowulf,' line 2472, where it is said that Hrethel to his sons "laefde, swa deth eadig man, lond," etc. (left, as doth a wealthy man

land, etc.). Another Low-German word in which this form appears is *allod* (all+od), in Med. Latin *allodium*, whence the adjective *allodial*, "held in absolute possession." The etymology of both these words is disputed, I know; but the derivation here given has the support of such high authority as Dr. Murray's New English Dictionary.

Of course, an inspiring teacher can make anything interesting, but the surprise is in this case that, almost in the very home of modern philology, popular etymology should have lingered so long in class-room instruction. A comparison of the forms in the various Teutonic tongues will show that *god* and *good* are quite different words. The word *god* was in use long before the conversion of our forefathers to Christianity, and in their primitive conception of a god or gods the quality of goodness was not conspicuous; in fact, the adjective *good* had not, at that early time, its present ethical sense.

If this friendly criticism, by calling attention to the book once more, will induce teachers to get it and read it, the lesson in philology will not be altogether without value.

THE ACADEMIC SURPLUS OF GERMANY.

To the Editor of The Nation:

Sir: It has for years been universally known that Germany is encumbered with an academic surplus from which she apprehends serious danger. The question has been before the eyes of the public for the last fifteen years, but not until recently has it been subjected to a thorough examination by competent authorities. The Allgemeine Deutsche Realschulmännerverein, after having offered, a few years ago, a prize for the best essay on "The Afflux to the Learned Professions, its Causes and Possible Remedies," divided the prize between two papers, one by Fr. Pietzker and the other by P. Treutlein, both of which have now appeared in print (Brunswick: Otto Selle).

We learn from them that the number of students in the German universities was, in 1870, about 14,000, a number which had, in 1888, risen to 29,267. Considering that the population had, in the interval named, grown from 100 to 115 per cent., the number of students rose from 100 to 212 per cent. The number of available positions having practically remained the same, this caused a great excess of the supply over the demand in all the learned professions except the clerical. There are now barely enough Protestant clergymen, whereas it has been, down to the present day, impossible to supply the demand for Catholic priests. Most overcrowded are the *juristische* and the *philosophische Fakultäten*. The number of *Referendare* was 3,937 in 1883, and fell to 3,554 in 1887. Nevertheless, the number of *Assessoren* has been steadily growing. The Kultusminister von Gossler said, two years ago, in a session of the Prussian Chamber, that the Prussian State had at its command the "stately army" of 3,985 *Referendare* and 2,185 *Assessoren*. Treutlein calculates, with the aid of these figures, that every assessor has to wait at least six years for an appointment as judge, which makes a total of fifteen years from the day on which he graduates from the university!

Still worse off are, however, the candidates for positions in the higher schools. There were examined in 1879 384 candidates *pro facultate docendi*, in 1885 628, and in 1888 469. In 1887 there were, still according to Minister von Gossler, 1,834 candidates available for positions in the higher schools who had been duly on trial for a year, but were not appointed; of whom only 551 were regularly employed as assistants, 517 temporarily, and 769 not at all!

Both authors name as the first reason for the afflux to the learned professions the security of existence guaranteed by them even in cases of illness or disability to serve, and, after death, by virtue of pensions paid over to the families. Besides, the learned professions are, in Germany, a really privileged class, offering ranks and titles, and enjoying such consideration as is never bestowed upon the merchant or the manufacturer. The higher schools, our authors contend, are monopolized by the State. They have practically no other end than supplying the State with its officials. The State refuses to admit others to the universities than the graduates of the *Gymnasien*. Every ambitious youth desirous of acquiring the highest education his country affords is thus systematically driven to the gymnasium. There were in Germany, in 1886, 339 *Gymnasien*, 47 *Progymnasien*, 136 *Realgymnasien*, 107 *Realprogymnasien*, against only 16 *Oberrealschulen*, 67 *Realschulen*, and 87 *höhere Bürgerschulen*. It is only natural that many students enter the gymnasia, not for the love of study, but on account of the social and material advantages offered to the graduate of these institutions. The number of bona-fide students, of young men who bring to the school a disinterested love for study, is, besides, steadily increasing in this age of scientific research. It is, therefore, not astonishing that the higher schools should be overcrowded.

Both Pietzker and Treutlein deem a reorganization of these schools upon a different basis the only effective means for the prevention of a further growth of the "learned proletariat." Although differing as to minor details, they contend in the main for an abolition of the monopoly of the gymnasium, and a coördination of the "realistische" with the "humanistische" education. This, the authors think, would deprive the humanists of their prestige, encourage technical studies, and put an end to the odious classification and gradation of culture into "humanistisch" and "realistisch." It is, however, necessary to note that neither Pietzker nor Treutlein cherishes any hope for a realization of his plan in the near future, the Government standing tenaciously by the "alleinseligmachende" humanities.

Boston, April 17, 1890.

THREE MODERNISMS.—II.

To the Editor of The Nation:

Sir: *Ever* is a word which would call for a long disquisition, if it were undertaken to treat of all its various uses, and to bring out how, originally importing time only, it got to import ideas having no obvious connexion with time. These matters being here waived, notice may, however, be taken, incidentally, of *ever now and then*, dating at least from the fifteenth century. For, from this, by corruption, came *every now and then;* and, in the wake of *every now and then*, followed *every here and there*, which has no support from *everywhere*, whose etymology, as is well known, is indicated by *ever-ywhere*—that is to say, if we trace its constituents back to Anglo-Saxon, 'continually in every place.' And bare mention may also be made of occasional obsolete substitutes for *whoever* and *whatever*, namely, *who that* and *what that*, the former of which is found as late as 1612.

But my present concern is with *ever* as circumstanced in the sentences subjoined:

"*How ever* should I be able . . . to make room?" Sir G. W. Dasent, *Popular Tales from the Norse* (1859), p. 263.

"The Troll began to wonder . . . *how ever* they could be rid of the lad." *Ibid.*, p. 163.

"*What ever* has become of my eye?" *Ibid.*, p. 129.

"I wonder now *what ever* there can be inside this chest." *Ibid.*, p. 215.

"*Where ever* in the world have you been?" *Ibid.*, p. 12. Also at pp. 134, 269.

"The kitchen-maid clapped her hands in wonder, asking *where ever* he got all that gold and silver from." *Ibid.*, p. 136.

The idiom thus exemplified is a very modern one, and has, as yet, little currency other than conversational. In England it is freely employed, orally, by the educated, especially women, and even more freely by the uneducated, among whom, most likely, it originated. Its differentia consist in attaching to *ever*, after *how*, etc., the force of "indeed," "to be sure," or the like. That, in other contexts, as in the old "*or ever*, or *ere ever*, he came," and in "go as soon as *ever* you can," *ever* has this equivalence, is a point which it is needless to dwell on.

How ever, etc., and also *when ever*, *which ever*, and *who ever* (where *ever*, implying enforcement, is adjoined to principal or subordinate interrogatives), evidently are not compounds. Consequently, for distinction, it is advisable not to write them as if they were of that character. In putting *how ever*, I have followed Sir G. W. Dasent; and elsewhere, though deviating from him, I may appeal to his *what ever*, in *Gisli the Outlaw*, p. 95, and in *Tales from the Fjeld*, p. 305. We do not write *into*, where *in to* is meant, or *upon* for *up on*. On the other hand, the new preposition should be *onto*, not *on to*. In passing, *forever*, instead of *for ever*, is now peculiar to Americans; the old *can not* would well be reestablished; and the Scotch *daresay*, a reminder of the *shalbe* of former days, deserves no favour.

To, as in "I have not spoken to him, but I mean *to*," admits of being despatched at the expense of a very few lines.

The elliptical style of expression thus instanced, which does not seem to have been at all common until within the last generation or two, is perhaps traceable to a misunderstanding of constructions like those in the passages following:

"I intreated Aristides and Ariana to give leave that I might returne to succour you, *which they were very willing to*." Anon., *Ariana* (1636), p. 122.

"Having enquir'd of me *all he had a minde to*, I satisfied him with the most respect I could." *Ibid.*, p. 218.

"There are a thousand artful ways by which subtle orators may prepossess men, raise their pity, anger, jealousy, or *any passion they have a mind to*," etc. Bernard Mandeville, *Free Thoughts on Religion*, etc. (1720), p. 322 (ed. 1729).

In these quotations we have obsoletisms, but, in those now to be given, mere slovenliness:

"And look you, continues he, how those Gypsies manage the People that came in first, and lead them whither they have a mind *to*." Rev. Jeremy Collier, *Marcus Antoninus*, etc. (1701), p. 246.

"Going no oftener in to the shore than we were obliged *to*, for fresh water," etc. Daniel De Foe, *Robinson Crusoe* (1719), vol i., p. 33 (ed. 1840).

"Certain it is that I compose much more slowly than I was wont *to*, when younger." Southey (1823), *Letters* (1856), vol. iii., p. 385.

"You may laugh, if you want *to*, very much, John." Charles Dickens (1836), *Plays and Poems* (1882), vol. i., p. 187.

"You may keep it; I don't expect *to*."

Anon. (1839), in Miss Caroline Fox's *Memories of Old Friends* (1882), p. 38.

"It is my firm belief she cried nearly twice as much as she really wanted *to*." Charles Reade, *Christie Johnstone* (1853), p. 97.

"As for human beings outside of them, I never see any, and don't want *to*." Lord Strangford (1866), *Selection*, etc. (1869), vol. ii., p. 319.

"The only satisfaction I have for my wrong is knowing that nobody else can look at it; and, if nobody else wanted *to*, I shouldn't even have that." Mr. John Ruskin, *Fors Clavigera*, i., p. 10 (1871).

"I know nothing which members of Parliament kill, except time, which other people would not kill, if they were allowed *to*." *Id.*, *ibid.*, xxv., p. 31 (1873).

"My correspondent will perhaps be surprised to hear that I have never in my life voted for any candidate for Parliament, and that I never mean *to*." *Id.*, *ibid.*, xxix., p. 27 (1873).

"I was altogether responsible for taking care not *to*." *Id.*, *ibid.*, xxxvii., p. 3 (1874).

"Papa and mamma and aunt Davilow all wish her not *to*." "George Eliot," *Daniel Deronda* (1876), vol. i., p. 115.

I have here been dealing with what Prof. Schele de Vere, in his *Americanisms*, calls, every way erroneously, "the American use of *to* as a kind of *expletive*. In England, "I don't wish *to*," or the like, is heard constantly, and from persons of all classes of society.

Your obedient servant, F. H.

MARLESFORD, ENGLAND, October 30, 1889.

P. S. With Lord Beaconsfield's "I *have* never *been* back *to* the old place," spoken of at the beginning of this letter, consistent headlongness has bracketed, as an object of derision, his: "I would never leave him for a moment, *only* I know he would get wearied of me." *Only*, where, as here, made almost convertible with *but that*, *were it not for the fact that*, is, however, no more a solecism than it is a novelty, as a few quotations, culled from a large number collected, will suffice to make evident:

"It hath not beene knowne that they haue practised any treason against them, *onely* their Histories report that they sought to poison their king called Ticocic." E. G[rimstone ?], *Naturall and Morall Historie*, etc. (1604), p. 484.

"Thus, like the Children of Israel, we are come out of Egypt into the Wildernesse, *onely* we have the flesh-pots still, and, therefore, none of the Manna." Robert Loveday (about 1650), *Letters* (ed. 1663), p. 264.

"It was of a Vermilian colour like blood, *onely* in some places there was a mixture of white streakes like milke." *Comical History of Francion* (1655), I.-III., p. 56.

"But the truth is, these things do not much trouble me, *only* I am offended with the Kenopistians." Nathanael Ingelo, D.D., *Bentivolio and Urania* (1660), vol. i., p. 126 (ed. 1682).

"He much resembled his Father in Manners, as also in his Countenance, *only* he was not so curled, nor so flat nosed." Rev. Obadiah Walker, *Greek and Roman History Illustrated* (1692), p. 291.

"The duke, after some ceremony, entered the castle in complete armour, *only* his head was bare in compliment to the fallen king." Oliver Goldsmith, *History of England, in Letters* (1764), vol. i., p. 154 (ed. 1772).

"She is a sweet lady, *only* she was so glad to see me go, that I have almost a mind to come again, that she may again have the same pleasure." Dr. Johnson, *Letter* (March 5, 1774).

"My fellow-travellers were the same whom you saw at Lichfield, *only* we took Baretti with us." *Id.*, *Letter* (November 16, 1775).

"Every narrative of events digested according to years may admit of this title in the larger sense, *only* it does not follow, from this, that a history like that of Tacitus should not observe the same arrangement," etc. Bp. Connop Thirlwall, in the *Philological Museum*, vol. ii., p. 662 (1833).

Possibly, in some of these passages *only* might rather be replaced, approximately, by *but* simply: I say approximately, because *only* is more distinctly limitative. Passages, dating from 1599 downwards, in which *only* is equipollent to *but* qualified are at hand in abundance; and passages from Southey, Prof. F. W. Newman, and others, are producible in which *only that* signifies nearly the same as *but that*, *if it were not that*.

Only employed conjunctionally will, of course, be recorded by Dr. Murray. As having escaped Dr. Johnson and all his other predecessors, it is no great curiosity.

Among the items of phraseology which the criticaster on whom I have been animadverting impugns, is Miss Yonge's "Theodora *flung* away and was rushing off," written, we are told with an air of surprise, "as long ago as 1854." With this supposed atrocity he also cites Mr. Charles Reade's "Wardlaw *whipped* before him," and "[Little] *flung* out of the room." "These and similarly incomplete sentences," he goes on to comment, "certainly strike the American ear as decided innovations, and constitute a peculiarity of diction very rarely to be observed on this side of the water." Leaving undiscussed what is here assumed as a grammatical fact, and what is stated as a historical, I would merely ask whether, in reason, an English expression which has not been countersigned by Americans is, on that account, to be condemned. For the rest, the venerable age of what, at least to one abnormally deaf "American ear," are "decided innovations," on the part of Miss Yonge and Mr. Reade, those whom it may concern shall be put in the way of knowing:

"Metellus . . . came *flyngyng* home to Roome again, as wyse as a capon." Rev. Nicholas Udall, *Apophthegmes* (1542) fol. 397*v*.

"Cecropia grew so angry, . . . and so *flang* away from her." Sir Philip Sidney, *Arcadia* (1580), p. 275 (ed. 1613).

"Unnaturall and rebellious Children, who have *flung* out of the Church." Sir Edwin Sandys, *Europæ Speculum* (1599), p. 218 (ed. 1637).

How often the intransitive *fling away*, *fling out*, etc., must have occurred between 1600 and the beginning of this century, may be inferrible from a few references, here necessarily particularized only in part:

Fling, without adjunct. Rev. Thomas Vaughan (1650).

Fling away. Lady Mary Wroth (1621), Rev. J. Carter (1627), William Browne (1647), Samuel Holland (1656), Dr. Henry More (1672), Oliver Goldsmith (1760). "The Chancellor . . . *flung away* in a rage, and was followed by some of the minority." Lord Macaulay, *History of England*, ch. viii. (1848).

Fling down. Rev. James Beresford (1792).

Fling from. Lady Mary Wroth (1621), W. D. (1627), Dr. Henry More (1672), Mrs. Frances Sheridan (1761), Mrs. A. M. Bennet (1786).

Fling into and *fling on.* William Browne. (1647).

Fling out. Lady Mary Wroth (1621), W. D. (1627), *Francion* (1655), Rev. Nathanael Ingelo (1660). "She *flung out* of the room," etc. Mrs. Eliza Heywood, *The History of Miss Betsy Thoughtless* (1751), vol. i., pp. 34, 192, 269; vol. ii., pp. 61, 153; vol. iv., pp. 156, 224. Mrs. Charlotte Lennox (1758), Mrs. Frances Sheridan (1761), Charles Johnston (1763), Mrs. Eliza Parsons (1793).

Fling round. Charles Cotton (1665).

Fling through and *fling up.* William Browne (1647).

Respecting the intransitive verb *whip*, which can be unfamiliar to scarcely any one, I confine myself to proving that already in the days of Queen Elizabeth it was no upstart:

"Rennyng and *whippyng* about from place to place." Rev. Nicholas Udall, *Apophthegmes* (1542), fol. 69 *v*.

"At the length he *whippeth* out of the coffyn." Rev. Thomas Key (before 1547), *Erasm. Paraphrase* (1548), *Mark*, fol. 41 *r*.

"*Whips* backward." Rev. Richard Stanyhurst, *Aeneis* (1582), p. 45 (ed. 1836).

This verb has, indeed, been in our language ever since the thirteenth century. See Nicolas de Guildford's *Owl and Nightingale* (ed. 1843), v. 1064.

Notes.

LEA BROTHERS & CO., Philadelphia, have in press a volume of essays by Mr. Henry C. Lea, entitled 'Chapters from the Religious History of Spain.' They are upon subjects connected with the Spanish Inquisition, and meriting a more elaborate treatment than could be accorded them in the continuous narrative of the Inquisition which Mr. Lea has in preparation.

Houghton, Mifflin & Co. make the welcome announcement of a new and complete edition of the works of James Russell Lowell, which the public, however, must accept in a large-paper edition in ten volumes limited to three hundred copies for America. The prose works fill six of the ten, and are thus distributed: Literary Essays (4), Political Essays (1), Literary and Political Addresses (1). These will contain some matter hitherto uncollected. As for the Poems, they too have been carefully revised, and the Biglow Papers annotated for the benefit of a posterity too remote from their allusiveness. An index to the prose, and a table of first lines to the poetry, complete the scheme of this *monumentum ære perennius*. The issue will be effected during the present year.

Under the advisory editorship of Mr. Hamilton W. Mabie, Messrs. Dodd, Mead & Co. announce a new biographic-historic series on the "Makers of America." The obvious first maker, Columbus, will be portrayed by President Adams of Cornell. The sixteenth century is entirely passed over in the list thus far decided upon, and the Puritan leaders come next in order. The founders of New York, of Maryland, of Georgia, with La Salle and Bienville, mark the extension of civilized government over the continent. The following names speak for themselves: Jefferson (by James Schouler), Hamilton (by Prof. Sumner), Charles Sumner; Bishop White of Pennsylvania, Bishop Hughes of New York, Robert Fulton. It will be seen that the term "makers" has a wide scope; will it perhaps include some "unmakers"?

Fourteen representative public men of the South, most of them members of Congress, and each speaking for the State with whose history he is most familiar and of whose history he is a part, have joined in writing a book, now in press, styled 'Why the Solid South? or, Reconstruction and its Results.' Since the publication of 'The Prostrate State,' no book, we believe, has appeared detailing the *post-bellum* measures and practices adopted in the Southern States. In order to avoid even the appearance of a campaign document, the various writers have, it is said, been urged by Representative Herbert of Alabama, who is the general editor, to take special pains to verify every important piece of testimony, and to bear in mind the power of understatement. Virginia is represented in this book by Mr. Robert Stiles, West Virginia by Mr. O. S. Long and Representative Wilson, North Carolina by Senator Vance, South Carolina by Representative Hemphill, Georgia by Representative Turner, Florida by Senator Pasco, Alabama by Representative Herbert, Mississippi by ex-Representative Barksdale, Louisiana by Mr. B. J. Sage, author of 'The Republic of Republics,' Tennessee by Mr. Ira P. Jones, Arkansas by Mr. W. M. Fishback, Texas by Representative Stewart, Missouri by Senator Vest.

Henry Holt & Co. have undertaken a series of small volumes of representative selections from the leading philosophers, from Descartes down. Each volume will contain a biographical sketch of the author, a statement of the historical place of his system, and a bibliography. Dr. E. N. Sneath of Yale, the projector of the series, will treat of Hume, Prof. Ladd of Descartes, President Porter of Berkeley, Prof. Royce of Hegel, etc.

Ginn & Co. have in press 'Political Science and Comparative Constitutional Law,' by Prof. J. W. Burgess of Columbia College.

A manual on the 'Reproduction of Geographical Forms,' by Jacques W. Redway, is announced by D. C. Heath & Co.

Zola's country house is at Médan, and there his followers gathered about him, and sent forth, nearly ten years ago, 'Les Soirées de Médan,' a volume containing six stories by Zola himself, and by J. K. Huysmans, Henry Céard, Léon Hennique, Paul Alexis, and Guy de Maupassant—whose contribution was the extraordinary tale of 'Boule-de-Suif,' not translated by Mr. Sturges in 'The Odd Number,' for reasons by no means odd. An illustrated edition is now announced, with portraits of the six authors etched by M. Desmoulins, and with an illustration to each story by M. Jeanniot, etched by M. Muller (Paris: Charpentier; New York: F. W. Christern).

The first of six volumes illustrating the relief sculpture of ancient sarcophagi, undertaken by the Imperial German Archæological Institute, is about to appear, under the title of 'Die Antiken Sarkophag-Reliefs' (Berlin: G. Grote; New York: Christern). It stands second on the list, which runs as follows: Human life; mythologic cycles; separate myths; Bacchic round; muses, nereids, etc.; decorative motives. It will have sixty-five full-page illustrations on copper and in photogravure, besides many others in the text, and will cost 225 marks.

To cope with all the text-books which are presented to us is out of the question. To enumerate merely is difficult, even if we deal with series. Take French texts, for example. We have from W. R. Jenkins his "Romans Choisis," among which we cite No. 13, Jules Verne's 'Tour du Monde,' and No. 15, Jules Sandeau's 'La Maison de Penarvan'; the same publisher's annotated "Classiques Français," as, Racine's 'Andromaque,' Corneille's 'Horace,' and Molière's 'Bourgeois Gentilhomme'; Carl Schoenhof's monthly "Édition Berlitz" of comedies, novels, monologues etc., as, A. Dreyfus's one-act comedy, "La Gifle," and Delacour and Erny's "Le Retour du Japon"; D. C. Heath & Co.'s issues of Lamartine's 'Jeanne d'Arc,' Piron's "La Métromanie," and 'Sept Grands Auteurs du Dix-Neuvième Siècle,' by Prof. Alcée Fortier (lectures in French, rather expository than critical, on Hugo, Musset, De Vigny, etc.), with a 'Primer of French Literature,' by F. M. Warren (a syllabus of lectures, and frankly criticised by the author himself in his preface). There remain a condensation of Dumas's 'Trois Mousquetaires,' edited with notes by Prof. F. C. Sumichrast (Ginn & Co.); and 'Les Poètes Français du XIXe. Siècle,' by C. Fontaine (W. R. Jenkins), consisting of selections with biographical introductions and explanatory footnotes.

The German list is but a little shorter, beginning with "Heath's Modern Language Series," which embraces Lessing's "Minna von Barnhelm," Goethe's 'Sesenheim' (from 'Dichtung und Wahrheit'), Freytag's 'Aus dem Staat Friedrichs des Grossen,' Hoffmann's 'Historische Erzählungen,' Holberg's 'Niels Klim's Wallfahrt in die Unterwelt,' etc.—all these more or less annotated. Chr. von Schmid's 'Heinrich von Eichenfels' belongs in "Macmillan's Series of Foreign School Classics," Chamisso's 'Peter Schlemihl's Wundersame Geschichte' in the Clarendon Press Series (Macmillan), as does also, under the editorship of Emma S. Buchheim, a graduated collection of 'German Poetry for Beginners.'

By chance "Macmillan's Classical Series" brings together on our table three of the most companionable of Latin authors — Plautus, "Amphitruo," Pliny, Books i. and ii. of the Letters, and Tacitus, Books iii., iv., v. of the Histories—in handy form. From the same publishers come 'Legends of Ancient Rome, from Livy,' by Herbert Wilkinson, with notes, a vocabulary, and exercises upon the text; 'A First Latin Verse Book,' by W. E. P. Pantin, which must be lonesome on this side of the Atlantic; the second part of a 'Latin Course,' by A. M. Cook, of which the plan of prose composition is worth examining; and 'Roman Literature,' by Prof. A. S. Wilkins, one of a line of Literature Primers, and to be commended for its readableness and skilful presentation of biographic data. Another play of Plautus's, the "Menæchmi," has been edited with very copious notes by Harold N. Fowler for the "Student's Series of Latin Classics," published by Leach, Shewell & Sanborn, who place in the same series Part ii. of Daniell's 'Exercises in Latin Prose Composition,' in connection with the authors read—a sound principle. Finally, we must mention 'Gradatim,' an easy Latin translation book for beginners, by English masters, edited for American use (Boston: Allyn & Bacon).

The 'Birds' of Aristophanes, edited for the Clarendon Press Series by W. W. Merry, and the oration of Æschines against Ctesiphon, edited by Prof. R. B. Richardson of Dartmouth, for the "College Series of Greek Authors" (Ginn & Co.), form part of our Greek contingent. In the American series the notes are on the same page with the text, both in very clear print; but the text by itself is furnished with the annotated volume. The title of Mr. J. Y. Sargent's 'Models and Materials for Greek Iambic Verse' (Macmillan) conceals, first, an anthology from the Greek, classified alphabetically, without indication of the source; second, an equally unindicated English anthology, with references to corresponding passages in the Greek poets; and finally a general index of reference to the several themes, Absence, Age, Anger, Dreams, Love, Native Land, etc. The collection is more likely in this country to find favor intrinsically, among those who have mastered Greek, than as an instrument of instructing schoolboys. For prose composition, the method of the same author's 'Exemplaria Græcia' (Macmillan) is to be commended; and much may be learned from Mr. F. G. Allinson's 'Greek Prose Composition' (connected and not fragmentary), published by Allyn & Bacon. The same house have issued a revised edition, entirely rewritten, of Robert F. Pennell's 'Ancient Greece,' with maps, a chronology, and lists of examination papers in Greek history.

We have already noticed the first part of Mr. Donald G. Mitchell's 'English Lands, Letters and Kings' (Scribners), of which a second volume is now received. The period covered is from Elizabeth to Anne, including both reigns, and it is treated with competent knowledge and discriminating taste; but the text is most attractive from its agreeable and cultivated tone. Mr. Mitchell is less a critic than a lover of literature and of England, and he succeeds, therefore, in avoiding the severer matter which makes hard reading, and in narrating pleasantly the main story of the men and their days. It is preëminently a volume for the general and unlearned reader to use in making acquaintance with English literature, though it needs to be supplemented continually by some reading in the original authors mentioned.

A notable example of careful bookmaking may be found in Bulletins 48 and 50 of the United States Geological Survey. All these bulletins are carefully edited, but the above are particularly successful in saving trouble to the reader. No. 50, on 'Formulas and Tables to Facilitate the Construction and Use of Maps,' by R. S. Woodward, is a model which many authors of tabular publications may pattern after. Every table is headed by reference to the section in which its derivation is stated, and to the page on which its use is explained. No. 48, on 'The Form and Position of the Sea Level,' by the same author, actually opens with a key to the mathematical symbols used in it; these symbols being arranged alphabetically, with brief definition and reference to the page where each one is first introduced. This is an evidence of regard for the user of the book that we have never seen equalled. The difficulty of making reference to mathematical essays is greatly increased by the general absence of such a key. Contents and index are, of course, included also. The essay itself is of particular value in regard to the discussions of recent years concerning the possible deflection of sea level by the lateral attraction of continental masses or of glacial sheets.

The 'Geology of the Island of Mt. Desert, Maine,' by Prof. N. S. Shaler, is a paper of some sixty pages, reprinted from the eighth annual report of the Director of the United States Geological Survey. It is furnished with two maps and thirty-four illustrations, full page and other. Besides its scientific importance, it has an interest for the general reader, and, dealing as it does with a place of popular resort, should be made easy of access as well to the summer visitor as to the student.

Students of morphology will find an excellent piece of work in 'Studies on Lepidosteus,' by Prof. E. L. Mark. It forms No. 1 of Vol. xix of the Bulletin of the Museum of Comparative Zoölogy, and itself makes a pamphlet of 127 pages with nine plates. The researches on the structure and growth of the egg membranes are especially important. This paper forms a valuable addition to the series on the Gar Pike begun by Prof. Alex. Agassiz, and continued by Balfour, Parker, and others. The most acceptable food for the young gars was young mosquitoes. As is well known, the latter form one of the most valuable food supplies for young fishes generally; the mosquito thus being to the fisherman a best friend and a greatest annoyance.

The late W. J. Thoms, an English writer, sceptical as to cases of extreme longevity, published a book designed to prove a negative, namely, that there was no authentic case of a century of human life, at least within modern times. Now comes another Englishman, Dr. George M. Humphry, in his book on 'Old Age' (Cambridge: Macmillan & Bowes), with an account of seventy-four recognized centenarians included among nearly nine hundred persons who had attained the age of eighty. The information concerning all these is derived from a collective Investigation Committee of the British Medical Association, and the interesting physiological comments are made by Dr. Humphry as editor. He looks upon those most likely to live long as thus qualified: (1) by inheritance, (2) by being well developed and of good proportion, and hence (3) by degenerative

changes occurring slowly, and (4) by temperance in all things. Dr. Humphry is of opinion that the reparative power of the aged is much greater than is generally supposed, and that old age is usually accompanied by serenity of disposition and happiness. All this points in confirmation of the comfortable theory broached by Mr. Hale some years ago, that the three score and ten of the Psalmist indicated not the extreme limit of years for the individual, but an average of vigor which any generation might reasonably expect to attain.

We record with pleasure the completion of the tenth volume of the *Dial* (Chicago: A. C. McClurg & Co.). Among our literary journals it is unique in being wholly devoted to critical reviews, partly signed, partly unsigned, and in being a monthly. It has been well conducted from the start, with a serious purpose, and with much learned and intelligent collaboration, and we have had frequent occasion to praise it and to wish it a long life. Of generally even quality, in the department of the minor notices there is a falling off in carefulness and weight, as is apt to be the case. The *Dial* is handsomely and correctly printed.

Recent numbers of the *American Meteorological Journal* contain accounts of the meteorological instruments at the Paris Exhibition and of the International Hydrological and Climatological Congress at Paris last year, by A. Lawrence Rotch. Notes are added on the observations of temperature taken on the Eiffel Tower during the summer, which prove to be of much value in meteorological theory.

Part 20 of "Stieler's Hand-Atlas" (Westermann) contains plates of South Africa, Australia, and Mexico; most interesting, all, to compare with the corresponding maps issued in 1880, especially for the development of the railroad systems of the respective countries.

A portion of the field of Gettysburg denominated "The Slaughter Pen" is the most interesting plate in *Sun and Shade* for March (Photo-Gravure Co.), and is quite as picturesque as any. An appropriate companion is the plate of Gatling guns.

The *Southland*, published monthly at Salisbury, N. C., was begun in February, and as an organ of colored Americans should be favorably regarded. The editorial portion is creditable in spirit and in style; the contributed matter is exuberantly rhetorical and imaginative. *Southland* says that a National Colored Chautauqua is under consideration.

The index to volume one of the daintily printed *Lincolnshire Notes and Queries* (Horncastle, England), accompanies the April issue, which is the second part of volume two. Amid much purely local matter one is likely to find something possessing a cis-Atlantic interest, and the April number begins a summary account of Capt. John Smith, a Lincolnshire worthy, whose well-known portrait from 'A Description of New England' serves as a frontispiece.

The University of Toronto certainly merits all the generous aid it is receiving to repair its recent losses by fire, but the Italian *Riforma* goes a step too far in making it the polishing-off institution for North American culture, owing to the defects of the higher education in the United States ("L'Università canadense di Toronto era la più frequentata, corrispondeva a molti bisogni, e colmava una lacuna nell' educazione superiore nord-americana").

— A new work by an author so long dead as De Foe is an unusual occurrence, yet the belated volume has come at last, 'The Compleat English Gentleman' (London: David Nutt), edited by Dr. Karl D. Bülbring from the British Museum MS. It was written in the last years of De Foe's life, and a few pages were printed off in proofs, and, after passing from collector to collector, it is now given to the public. The work was conceived in two parts, one treating of the gentleman by birth, the other the gentleman by breeding; of these only the first and one chapter of the second were completed. The editing has been done with great care, the MS. being followed almost letter for letter, with the few corrections made noted at the foot of the page; an excellent introduction and some notes with an index are also furnished. The work itself is not at all an account of what constitutes a gentleman, but is, in fact, a plea for the education of the eldest sons of the gentry. Its value now is mainly historical, and in this regard it supports powerfully the picture of the illiteracy of the upper class as described by Macaulay. The younger sons were educated because they were to make their way; the heirs were abandoned to the estate, the dogs, and the company of one another, partly because learning was still thought unbefitting a gentleman, and partly for the curious reason that education might pave the way for public employment, tempt the sons into politics, and so ruin the families in the changes of affairs. A better spirit, however, was already beginning to prevail. The charge brought against the English gentry is heavy enough in De Foe's hand, but he also attacks the schools and universities for their pedagogic character and their attachment to mediæval methods and the cult of the ancient languages. The unpractical character of education was one reason why it was thought unnecessary except for a profession. De Foe was also far from admitting that a man could be a gentleman by merit. He required money and freedom from lucrative employment, in case the man had not birth, before he would allow him to be a gentleman, or else the calling of an officer in the army or navy or of a clergyman. Trade must stand at a remove of one or two generations. This comes out more particularly in the one interesting chapter on the new families lately entered among the landed gentry. The style is admirable in diction, of course, and, though often involved and always diffuse, is refreshing. The volume was well worth publication merely for its view of English manners and morals in the upper class of that time.

—The Geological Society of America, organized a year ago, held its first regular meeting at Toronto last summer in connection with the annual gathering of the American Association for the Advancement of Science, from whose geological section the Society is in a sense an outgrowth. A more serious and very successful meeting of the Society was held in New York in Christmas week, well attended and of much value from the high quality of the papers presented and the pleasant association that it afforded. The proceedings of both meetings are now in course of publication and in a form that merits the attention of scientific men in general. Prompt appearance is a prime consideration in such matters, and this is secured by issuing each paper singly as soon as it can be completed. An author whose manuscript and illustrations are in good form when presented to the Council of the Society, does not have to wait for the completion of the unfinished or elaborate work of another. Each part is issued in uniform style, with complete statement as to its place in the volume which the whole will ultimately form. The additional expense of separate covers and postage for the several parts is a small matter compared with the gain ensuing from their speedy appearance. The quality of the essays thus far published is notably good. The orographic movements in the Rocky Mountains are discussed by S. F. Emmons of our Geological Survey, and the vast amount of material gathered in that field during the last thirty years is here presented in compact form, of great value to the student and explorer. Glacial phenomena in Canada are described by Robert Bell, assistant director of the Geological Survey of Canada; this is distinctly the most valuable paper on the subject that has yet been published. Others of similarly high quality might be referred to. The next meeting of the Society will be held with that of the American Association in Indianapolis next August.

—The current number of the *Historische Zeitschrift* contains a long article by Dr. Von Holst upon Bryce's 'American Commonwealth.' With some qualifications, which we summarize, the verdict is warmly favorable. "I do not hesitate to express the conviction," says Von Holst, "that the 'American Commonwealth' is one of the most remarkable and valuable works in the field of political science which the nineteenth century has produced." Mr. Bryce's method is criticised as better adapted for analysis than for conveying a clear, well-defined impression of the whole range of phenomena. The picture would have gained in life, clearness, and plasticity by a freer treatment of the material. To express it with some exaggeration, we have a series of anatomical preparations, rather than a living organism, before our eyes. The effect upon the reader is something like that of a kaleidoscope. If the great ability of the author has failed to produce a good combination of effects, how will the ordinary reader fare in the task of making up his judgment? The difficulty becomes serious in the chapters on "Public Opinion," when, properly to grasp the bearing of the matters discussed, one has to keep in mind a vast mass of facts previously stated. Von Holst thinks Mr. Bryce ought to have gone more thoroughly into the legal aspects of the Constitution, at least in his work of preparation. In that case he would hardly have ventured the conjecture that a European cabinet might have solved the slavery question, whereas, in the American Congress, "it was the function of no one authority in particular to discover a remedy, as it would have been the function of a cabinet in Europe." Under the social, economic, and legal conditions, says Von Holst, no cabinet, though made up of statesmen of genius, could have essentially changed the course of events. This and some other expressions of opinion give Von Holst a haunting feeling that Mr. Bryce has not bestowed adequate study upon the political history of the United States. He is evidently familiar with it to a certain degree, but it has not been so wrought over, meditated upon, and digested that the whole, with its variety of details, has a flesh-and-blood vitality that guides and controls his judgment of American political life. This is asking a good deal, but not too much of one who would perform the task which Mr. Bryce has set himself. Von Holst regrets that Mr. Bryce has avoided a discussion of the negro question, and feels that the real reason is not restriction of space, but because he has not thoroughly studied it.

—The latter portion of the article protests against the rather cavalier treatment of the foreign element in the United States. The causes are, inadequate knowledge and race bias. Mr. Bryce wholly underestimates the influence of the foreign population on the American character. For example, according

to Mr. Bryce, the German influence has done little more than to stimulate brewing, retard prohibition, increase outdoor life, the taste for music, and to relax Sunday observance. Von Holst affirms that the German-Americans are contributing most valuable elements to the national life. In the feverish intensity of American activity, they, with their moderate and sober ideals, quiet and steady energy, and modest self-confidence, act as a wholesome leaven. The American spirit of enterprise is unique, but it easily verges into unrestrained venturesomeness; the elasticity of spirit and temper displayed by the Americans in changes of fortune is impressive, but it runs great risk of degenerating into mere lightheartedness or even frivolity. The attitude of the Germans towards prohibition is based on principle, and is a wholesome stand against the tendencies of majorities to dictate to the minority in matters properly belonging within the field of personal rights. The cause of true temperance has not suffered from German example. The religious influence of the Germans has been marked. It is true they are breaking down the Sabbath; but as they are a people of a morally sound nature, the Americans are brought face to face with the fact that a developed sense of moral responsibility is not exclusively derived from belonging to a church, and that church membership and morality are not identical terms. That expands their outlook. The rigidity of Puritan ecclesiasticism is giving way. A general transformation in popular religious thought and feeling is in progress. Life is becoming fuller and freer. Mr. Bryce also totally fails to appreciate the political influence of the Germans in the years preceding and during the civil war. Mr. Bryce thinks the Germans are Republicans because the Irish are Democrats. He seems never to have heard that the Germans were usually Democrats until about 1850. When the slavery struggle took on its final shape, their love of freedom, not hostility to the Irish, led the Germans, and particularly the "Forty-eighters," to desert the Democratic party. In Missouri their influence was probably decisive against secession. This failure to appreciate the foreign element, to discuss the negro, Mormon, tariff, and civil-service reform questions, the relations of capital and labor, such phenomena as the Pittsburgh and Cincinnati riots, the Chicago Anarchists, the Knights of Labor, and the George movement, deprive Mr. Bryce's picture of American society of completeness. Greatly as his book has enriched the literature on the United States, there still remains to be written a more complete and penetrating presentation of American life, which shall of full right bear the title of 'The American Commonwealth.' The key to the American Commonwealth is not to be found in its political life, but in its social life. With Americans the State is thoroughly subordinated to society. Mr. Bryce has not fully grasped this fact.

— One of the most eminent, as well as one of the last, of the critics of the generation of 1830, disappears in the death of M. Armand de Pontmartin, which took place at Avignon in the last days of March. M. de Pontmartin was born at Avignon in 1811, and came back to live in his province after the Revolution of July. He made his débuts as a writer in the *Gazette du Midi*, in the *Quotidienne*, and in the *Mode*, a queer journal in which fashion-plates, political epigrams, and ardent Catholicism were strangely mingled. From these he proceeded to the *Revue des Deux Mondes*, in which for forty years his contributions have been marked by their caustic wit, and elegance and distinction of style. For the last twenty-three years he has written the weekly *feuilletons* in the *Gazette de France*, one of which appeared on the day on which his death was announced. It was his habit, the *Temps* says, to keep well ahead of his work, and the *Gazette* has now in store enough of his articles to furnish the *feuilletons* of the next three months. At the time of his death it had already printed 1,153 of the series. Besides his newspaper work, M. de Pontmartin wrote several stories and novels, none of which were ever famous. Perhaps the best known of these was his 'Jeudis de Mde. Charbonneau,' in which he drew the portraits of several of his brothers in literature, who appeared under transparent pseudonyms. He was by birth and education an intense royalist and aristocrat, and in his personal appearance is said to have presented the singular combination of the almost gigantic stature and harsh face and enormous moustache of a musketeer with a voice of more than feminine delicacy and weakness.

RECENT MATHEMATICAL WORKS.

Treatise on Analytical Mechanics. By Bartholomew Price, Sedleian Professor of Natural Philosophy in the University of Oxford. Vol. II. 2d ed. Oxford: Clarendon Press; New York: Macmillan.

Graphical Statics. By Luigi Cremona, Foreign Member R. S. London, etc., etc., Professor of Mathematics in the University of Rome, Italy. Oxford: Clarendon Press; New York: Macmillan.

An Elementary Treatise on the Method of Least Squares, with Numerous Examples of its Applications. By George C. Comstock, Professor of Astronomy in the University of Wisconsin, and Director of the Washburn Observatory. Boston: Ginn & Co.

Prof. Price's second volume of his 'Analytical Mechanics' is also the fourth volume of his 'Treatise on Infinitesimal Calculus.' The four volumes together constitute the most extensive and profound treatise on the Calculus existing in the English language. The only work to be compared with it is that of De Morgan; but the spirit, the methods, and the construction of the two works are so entirely dissimilar that they can never be regarded as rivals. For those students who wish to sound the profoundest depths of the Calculus, the desirability of each work is enhanced by the existence of the other.

There are certain characteristics of Prof. Price's treatise which it possesses in a higher degree than any mathematical work of equal extent with which we are acquainted, in any language. A more uniform, self-consistent work was never written. Its sub-title is "Dynamics of a Material System"; and whether he is treating of the "precession and nutation of the earth" (p. 407), or of the "initial motion of a billiard ball when struck by a cue" (p. 470), the method and the form of the investigation are always, so far as it is possible, the same. He starts out in his first chapter with a certain form of the equations of motion according to D'Alembert's principle, and all subsequent processes are but examples of their application, and all subsequent purposes are accomplished by their application. Short methods for abridging work, special artifices, however ingenious, unusual demonstrations, however "elegant," are all thrown aside, and with the measured tread of a giant along one straight road he strides through his six hundred pages of dynamical science. As in the substance, so in the form, there is the same uniformity and consistency. So far as it is possible, the same symbols are invariably used to express the same ideas. If we open the book in its last quarter and see a formula expressed in certain letters of the Greek alphabet, we may be pretty sure that those letters mean the same thing that they did the first time they were used in the first quarter of the book. We have no room to point out the immense advantages of such a system. After reading several extended portions of the work, we have been at each step more and more astonished—we can find no other fitting word to express our meaning—at the success of Prof. Price in realizing his ideal, which, in his own words, was "the construction of a uniform scientific treatise, pervaded by one idea, and applying one principle."

A word as to this second edition. The principle and arrangement are the same as in the first edition, but it has been thoroughly revised and corrected, and considerably enlarged. This revision was aided by a somewhat remarkable circumstance. Prof. Price says: "The late Mr. Isaac Todhunter, M.A., F.R.S., Fellow of St. John's College, Cambridge, most carefully commented on the former edition from beginning to end." That a mathematician of such vast attainments as Mr. Todhunter, and so constantly engaged in the production of his own works, should have thought it worth while to bestow so much time and labor upon the work of a contemporary mathematician, is the strongest guarantee of its excellence and importance. On the other hand, the cases are very rare where so able an author has had the opportunity of availing himself of the criticisms of so able a commentator.

There is at present a large and constantly increasing class of young men who are pursuing post-graduate courses in mathematics, mostly with the intention of becoming professors of that science, or of using it in astronomy and the highest departments of engineering. We believe they would find it to their account to go through the four volumes of Prof. Price's great work, and then to take up and go through the work of De Morgan. Prof. Price will give them the 'Infinitesimal Calculus' in its purest, most uncompromising form, and De Morgan will make them acquainted with its metaphysical and philosophical difficulties, and with much of its history. At any rate there is a very large gap in any mathematical library which does not possess both these great works.

Prof. Cremona is one of the most learned mathematicians, perhaps we should not go wrong in saying the most learned mathematician, in Europe. He is also the author of several mathematical works the excellence of which is attested by the fact of their having been translated into German, French, and English. In his prefaces Prof. Cremona is careful, sometimes it seems to us over careful, to disclaim all pretence to originality. In his foot-notes he is very scrupulous in pointing out the sources of what is contained in his text. He seems to take a special pleasure in pointing out the origin of a proposition by tracing it to Apollonius or Pappus, and then giving references to some modern mathematician who revived or, perhaps, rediscovered it. Often, in regard to some new discovery by a modern mathematician, he not only gives a reference to the book, paper read before some learned society, article in some mathematical journal, or other medium through which it was first announced to the world, but also the volume and page of the discoverer's collected works where it will be found in the form which he finally gave it. His books thus become a pretty full bibliography of the subject which he treats.

Prof. Cremona is, however, no mere compiler. An accomplished linguist, he gathers his materials from the whole field of mathematical literature, ancient and modern, and then presents them in a form which is all his own, a simple, symmetrical, and artistic whole which appears to the reader as the product of a single brain. Had he devoted himself to original investigation in some special department, he would undoubtedly have enlarged the domain of mathematics by the discovery of new and original theorems. The two small works which lie before us in an English translation deal with "Graphical Statics," a subject which has awakened so much enthusiasm among engineers during the last decade. The first treatise is an introduction to the graphical calculus, the second treats of reciprocal figures. They had already been translated into French and German. The English translation is by T. H. Beare, Professor of Engineering and Applied Mechanics, Heriot-Watt College, Edinburgh. He has been aided throughout by Prof. Cremona himself, who has taken the opportunity not only to revise the work, but also to add considerable new matter not found in the Italian original, so that the English translation may be regarded as its most finished form. To those who wish to begin the study of "modern geometry" with a model book, and at the same time to learn where to look for fuller developments, this little work cannot be too highly recommended.

As to Prof. Comstock's thin octavo of sixty-eight pages, it will, perhaps, be not out of place to remind our readers of one or two facts. Those persons who are engaged in the practical operations of astronomy, engineering, chemistry, and many other departments of science, often wish to ascertain with the utmost attainable precision certain facts which depend upon exact measurements. Experience has demonstrated that where the utmost exactness is aimed at, no matter how skilful the expert and how perfect his instruments may be, a single measurement of a quantity is of little value. The expert endeavors to get a large number of measurements of each of the quantities involved and then to "adjust," or, in the language of Prof. Newcomb, to make a "combination of observations so as to obtain the best result." This is a mathematical process often of great labor and complexity. The mathematical rules and formulæ according to which this process is, in practice, usually conducted, form a "body of principles which treats of the combination and discussion of observed data," and is called the "Method of Least Squares." It takes its name from the fact that certain numbers called *residuals*, differing in each particular investigation, are developed, and "the most probable values of the unknown quantities are those which make the sum of the squares of the residuals a minimum."

Prof. Comstock's little book is a wholly practical exposition of the subject. For analytical demonstrations and developments, he refers to more extended treatises. He states the principles with the utmost clearness, and shows by examples taken from actual work how they are to be applied. We have read the book through with great pleasure and admiration. We do not remember ever to have read a mathematical work in which the somewhat antagonistic qualities of condensation and clearness were more completely reconciled. Of course those who wish to go deeply into the theory and philosophy of the whole matter will read such works as Mr. Wright's elaborate 'Treatise on the Adjustment of Observations,' which was somewhat fully reviewed by us soon after its publication, and Prof. Newcomb's profound essay in the *American Journal of Mathematics* (vol. viii., p. 343). But we are quite sure that every one preparing for a profession in which observation and experiment come largely into play, will find it to his advantage to read this little book first. He will then study the larger works with less labor, more pleasure, and greater profit.

The Republic of Costa Rica. By Joaquin Bernardo Calvo. Translated from the Spanish and edited by L. de T. With introduction, additions, and extensions by the editor. Map and illustrations. Chicago: Rand, McNally & Co. 1890.

THE first thing to be said about this translation is that it is carelessly done and full of mistakes. To go no further than the rendering of the author's letter asking the official sanction of the Costa Rican Government for his work, we find three bad blunders in the single page. "Mientras aparecen" is translated "although may soon appear," instead of "while awaiting the appearance"; "si para ello no hubiere inconveniente" is made to read "and hoping that those composing it [a committee to examine the work] may not find their task distasteful," instead of "if there is no obstacle in the way of it [the naming of such a committee]"; and "en espera de una justa resolución del Ministerio de su digno cargo" appears as "with the hope of a just decision of the Ministry upon its merits," instead of "a just decision by the Ministry worthily filled by you."

These samples are of course sufficient to show the utter carelessness or incompetence of the translator—his name, we believe, is L. Tyner—and there is no need of adducing more, though the material is ample. But one blunder is so astounding, and it seems so incredible that even a proof-reader should not have headed it off, that we cannot forbear citing it. This is the translation of "amortización" by "mortmain." It is repeated several times in treating of Costa Rica's foreign and domestic debt—as, for instance, on p. 176, "mortmain at 1 per cent." This is such obvious nonsense that it is at once clear that the translator knows nothing of financial technical terms in Spanish, and still less of the meaning of "mortmain" in English. But of course he thought he was speaking by the book—the book being his rather antiquated Spanish-English dictionary; this gave him "mortmain" as the only meaning of "amortización," and so down it went. If he had taken the trouble to glance along a couple of words further, he would have found a useful hint under the definition of the verb "amortizar," and if he had done such a daring thing as to consult any recent edition of the Academy's dictionary, he would have found that "the most common use of the word now relates to the extinction of a public debt," and so would have freed himself from the weight of the "dead hand."

The editor's "extensions" are mostly to be found in his Part III., a traveller's guide in condensed form, unaccountably mixed up in the printing with some biographical notes left over from the preceding section. This is useful and well done for the most part. We suppose that his conversion of Señor Calvo's 23° to 26° Centigrade into 65° Fahrenheit should be set down under the head of his "additions"; certainly it would require only slightly more complex arithmetical operations to solve the problem correctly. Equally wide of accuracy are his attempts to turn kilometres into miles. He omitted to notice the list of errata appended to Señor Calvo's book in the original, and so does that gentleman a wrong in making him responsible for misstatements which had been duly corrected. In his introduction he calls attention to the fact that he has occasionally abridged the Spanish text. This is, of course, his right, and as the abridgments fall chiefly in the historical portions, they do not seriously impair the value of the work; but in the condensed biography of President or Dictator Guardia, there surely should have been found room for one or two of Calvo's calm but severe sentences in condemnation of that figure in Costa Rican history. In justice to his publishers, finally, the translator ought not to have omitted Calvo's own preface, especially that part in which the intention of bringing out an enlarged and improved edition of the "Notes" is declared. We are informed by Señor Calvo that such an edition is now well under way, and will soon appear.

After all, the shortcomings of the translator upon which we have thus far had to dwell, do not too seriously affect the value of the book. We get the main results of Calvo's labor, and they are of real importance. At the time of its publication the volume was the only thing of its kind; it has since been supplemented and, in some particulars, amended, by Prof. Biolley's book on Costa Rica, now also done into English. The two together give almost all that is needed for a good understanding of Costa Rica. In the line of natural history particularly, full information is yielded, the labors of German scientists and of Prof. Cope having been freely drawn upon. Commercial and financial statistics are full and brought well down to date, while the resources of the country, with its expanding development and equipment with railroads, telegraph systems, and the like, are clearly stated. One feels as if the impartial foreigner were needed to give all sides of some questions, but on the whole the exuberance of Spanish-American patriotism is kept within limits. Even in its faulty English dress, the book is a welcome addition to the conveniently accessible sources of information about Central America. In his new edition Señor Calvo ought not to forget Guatemala by saying that the only Protestant church in Central America is in San José.

The illustrations are about half portraits of Costa Rican notabilities, and half the inevitable process-reproductions of photographs of scenery, buildings, etc. The publishers have added two maps from their collection. One is a fair map of Central America, the other is a large map of North America, showing Costa Rica like a microscopic object. It is a pity they could not have secured Montesdeoca's beautiful map of Costa Rica, on the scale of eighteen miles to the inch, which adorns Prof. Biolley's book. The lack of an index is woful and inexcusable.

Captain Cook. By Walter Besant. [English Men of Action.] Macmillan & Co. 1890. 8vo, vi., 191 pp.; portrait.

IN these days of newspaper "explorations" and multitudinous books of travel, the average reader of current literature is in a fair way to be left without any standards of proportion. If a Stanley towers above the throng, or the successful venture of a Nordenskiöld challenges attention, nevertheless it must be admitted by the student of historical geography that the present is the day of small things. There was and is but one Capt. Cook, yet who, among the rising generation, has read those volumes which describe how his strong hand tore away the veil from half a world? Once they held the place of honor on the shelf of every enterprising boy. Is it too much to hope

that a discreet abridgment may, in the not distant future, enter the field again? With the earlier volumes stripped of the verbiage of Hawkesworth, and with the elimination of some technical detail, we believe a publisher might find his profit in it.

Mr. Besant passes by the Voyages, for the most part, to sketch for us the portrait of the man. This he has done with clear and just yet kindly touches, as was fitting. James Cook was born at Marton in Yorkshire, October 27, 1728. He was the second son of James, a farm laborer, and Grace, his wife, who had a large family. The boy learned his letters from Mary Walker, whose husband, a wealthy yeoman, gave him work. Later the Cooks moved to Great Ayton, where the father became farm-bailiff to Mr. Skottowe, lord of the manor, who, it would seem, became interested in young James, helped him to some parish schooling, and later to promotion in the naval service. At thirteen the lad was apprenticed to one Sanderson, a shop-keeper of Staithes, a place frequented by seafaring men. A year later he ran away to sea, becoming during the ten years following a practical seaman, and rising to the position of mate. In 1755, the French war impending, Cook volunteered as an able seaman on board H. M. S. *Eagle* of sixty guns. Little is known of his life from 1757 to 1759, but it is certain his capacity was recognized, and that he made use of all his opportunities for acquiring knowledge. At the age of thirty-one, he was made master in the navy and appointed to command the *Mercury*, which joined the fleet engaged with Gen. Wolfe in the reduction of the fortress of Quebec. He surveyed and charted the St. Lawrence with an accuracy which left little to be desired. He devoted himself with ardor to the study of mathematics and astronomy in their relation to navigation, and was transferred to the flagship, which returned to England in the autumn of 1762. On December 21 of the same year he married Elizabeth Batts of Essex, a lady of highly respectable family and much personal beauty. After a few months he sailed on surveying duty on the Canadian coast, and for four years was so employed, his winters being spent in England. In 1766 he communicated his observations on an eclipse of the sun at Newfoundland to the Royal Society. In 1767 his work on the American coast was completed. In the following year the petition of the Royal Society for an expedition to observe the transit of Venus in 1769 from some point in the Pacific was granted, and Cook appointed to command it. The events which followed, culminating in the death of Cook at the hands of the Hawaiians, February 14, 1779, are a matter of history too well known to need repetition. None of his descendants survive.

Mr. Besant's little book is worthy of the great explorer of his century and the sanitarian who drove the scurvy from the navies of the world. That it may call renewed attention to the fascinating story of his voyages is to be hoped and expected.

Shakespeare's True Life. By James Walker Illustrated by Gerald E. Moira. Longmans, Green & Co. 1890.

THIS large and plentifully illustrated volume is a diffuse and rambling account of the country about Stratford-on-Avon, with some chapters at the end upon old London and Richmond. The author has an affectionate veneration for Shakspere, and his "true life" of the dramatist is an inference largely from the conditions of the soil and people in Warwickshire, which he knows with the familiarity of the local antiquary. He will not allow that there was any truth in the legends derogatory to Shakspere which have gathered about his memory: the deer-stealing, the drinking, the "black" woman, and all such matters are apocryphal, and the financial difficulties of Shakspere's father are susceptible of an explanation in which there is no loss of respectability. In the author's eyes, Shakspere was well-born, well-bred, studied law at Stratford, was married at the proper time, went to London with the advice and consent of his family, was a devoted husband, and, after a successful and honorable career, ended his days as a country gentleman should. Specifically he believes that a "hand-fast ceremony" united Shakspere with Anne Hathaway in the old Manor House at Shottery, prior to the public and Protestant marriage of which we know at a later date; and his second contribution to the biography of the great poet is the suggestion (and according to him the tradition) that the young Shakspere acquired his knowledge of books by reading in the library of an old Catholic family in the neighborhood. He gives us a picture of the library and of Shakspere's room. These matters are all of interest, and if the researches among the old Catholic records in the county are more thoroughly pushed in consequence of the suggestions here made, important facts may be elicited. At present the author's argument is not conclusive.

The more valuable portion of the work lies in the full and detailed view it gives of old Warwickshire and the characteristics of Shakspere's county as he saw it. The town of Stratford, with its church and school and the Shakspere houses, the field about Snittersfield, Shottery, Aston Cantlow, Wilmcote, Luddington, the Avon, are all described by the hand of a lover of the old houses and pathways, and everything ancient is reproduced in the illustrations that accompany the text. One sees as well as reads the sort of physical surroundings amid which Shakspere's early life was passed, and the antiquarian knowledge of the writer reproduces the ancient conditions of life with much picturesqueness and reality. The extent of the tradition of Shakspere over the country near to Stratford may be surprising to those who have limited their observation to the town itself, but here it is to be found in a text which lends as much probability to such traditions as can be done without abandoning the semblance of modern methods of history and biography.

Whether one agrees or not with the view of Shakspere here set forth, he will derive both knowledge and pleasure from the topographical and antiquarian portion of the work, and recognize the great labor and care which the author has spent upon his story; and however doubtful the facts of Shakspere's youth may remain, the general course of his early years in the Warwickshire country receives illumination of a most welcome kind from the pages of this volume.

A Short History of the Roman People. By William F. Allen, late Professor of History in the University of Wisconsin. Boston: Ginn & Co. 1890. Pp. vii., 370. 8vo.

IN what we had to say of Prof. Allen soon after his too early death, we observed that a work of his on Roman history was soon to be published. It has now appeared, and its excellence leads us more than ever to lament the fact that he will write no more. Although the book is not a large one, and is intended for use in colleges and high schools, yet it is free from the two faults to which such manuals are exposed. It is neither a cram-book, full of names and places, foot-notes and dates, nor is it, on the other hand, a mere epitome of events loosely strung together into a bald and uninviting tale. It is written with a definite purpose, well formulated and kept in mind throughout. That purpose was to show the forces by which Rome's greatness under the Republic was attained, and how and why those forces, passing through a period of decay, failed utterly under the Empire to retain what they had been able to secure. No mere political outline had sufficed to form this picture: economic, literary, but, more than all, social and religious elements, not isolated, but kept constantly in touch with one another, are so naturally displayed before the reader as to present the history of the Roman people in a manner intelligent and therefore intelligible.

For the book is rightly named a history of the people. It tells not so much what they did as what they were and how they thought. We had deemed it well-nigh impossible that in so brief a work the real life of a past civilization could be so clearly described and its strength and weakness portrayed. These are the aspects in which the study of the past is of any real usefulness to us, for, as Professor Allen says, "No historical fact is of any value except so far as it helps us to understand human nature or the working of historic forces." On these lines Roman history is probably harder to write than that of any other nation, because Roman historians themselves had no conception that posterity would be interested, not so much in the actual enterprises of their armies as in the analysis of the conditions which made those enterprises possible. We speak of armies, because the history of Rome is largely one of military campaigns. But Professor Allen knew how to read between the lines of the Annalists, and his chapters on foreign conquests form no mere summary of despatches, with lists of killed, wounded, and taken, but we find in them broad statements of the causes and results of the campaigns themselves. On the political and social side of the history he is more particular, and we have marked as especially excellent his explanations of the classes of the citizens, his distinguishing of the different kinds of *comitia*, and his statements of the colonial and provincial systems. His treatment of the struggle between the patricians and plebeians, and of the public-lands agitation, is also admirable.

The original Roman religion is well separated out from the Greek and barbarian influences which encroached upon it, although the obligation to be brief has sometimes led to the omission of necessary particulars. The mad race of the thong-armed *Luperci* would never have been kept up for so many years had it not been that a practical good was supposed to come from the blows they dealt; yet that good is not stated in the text. Again, it is not explained what were the vows of the Vestals. But perhaps such omissions only show that the author's wish was that this should be a book from which history should be taught, not merely recited. The fashion of "hearing" recitations in our high schools and colleges is happily passing away, and there will be little room in the future for the sort of teacher who knows only the book which he has in hand and keeps only about a yard ahead of the boys. Prof. Allen provided material for the amplification of the story in the text by frequent references in foot-notes to essays and works upon special periods of history, and to scholarly historical novels. Drawing from these sources, a good teacher cannot fail to awaken in his pupils that lively

desire to know more than "the book" tells which should be one of the chief objects of all education.

It was an excellent thought to associate the events of the last century of the Republic closely with six names of contemporary Romans. Biography is among the most interesting as well as trustworthy ways in which history can be studied, and the student who has read carefully the lives of the Gracchi, Marius, Sulla, Pompey, Cæsar, and Octavian will have the best conception of the times in which they lived. We could wish that ancient and modern sources for the study of these lives had been indicated in notes for the sake of teachers. In another direction the book needs supplementing: we mean in the traditions of the early history. Surely our knowledge that they are but fables is not to lead to an utter abandonment of all those beautiful legends, and to a consequent incomprehension of countless allusions to them in the literature of every modern nation. Doubtless, had Prof. Allen lived to write the preface to his book, he would have pointed out what he thought the best means of studying these romances of history.

There are a dozen good maps in the book and over fifty illustrations of all sorts of subjects, taken from antique sources and generally well chosen and executed. We do not, however, think that the picture (from a coin) of the curule chair would give the uninitiated much light on its construction. This is the fault of the coin itself, not of the cut, and a better model might easily have been found. Of actual errors we have observed only a few, and these doubtless due to oversight. The elder Antonia was the wife, not the mother, of L. Domitius (p. 244). There is no evidence that the Vestal fire was ever lighted by striking a spark from a flint (p. 25). The *imagines* were masks, not busts (p. 63), and the famous words, *Veni, vidi, vici*, were not sent home in a despatch (p. 216), but, according to Plutarch, in a private letter to a friend, or, as Suetonius says, inscribed on a tablet carried in Cæsar's triumph. We suppose that "Japygians" (p. 5) is a misprint. The book has two excellent indexes, and the author dedicated it to Prof. Torrey of Harvard, "who first awakened me to an interest in historical study." That gentleman, in his retirement, may well be proud of these fruits of his teaching.

Pastels in Prose. Translations from the French by Stuart Merrill. With a preface by W. D. Howells, and illustrations by H. W. McVickar. Harper & Bros. 1890.

THIS collection of the "prose poems" of some two dozen modern French authors is the third of the series of translations which the Harpers are now issuing, Maupassant's 'Odd Number' having been the first. The "prose poem" (as Mr. Howells says in his capital little preface, which might very well itself come within the vague limitations set for "prose poems") is a purely modern thing, though many prose writings, especially the Scriptures, have passages which conform to its requirements. Judged by the most labored examples, it is an attempt to develop fully and passionately, in the smallest possible space, one idea or picture or emotion, the restraints of poetry being changed for the equally severe but less cramping restraints of prose. To add to the rhythmic effect, some of the writers in this collection have affected a phrase which recurs after each paragraph like the refrain of a ballade; but, luckily, this not always happy device is adopted by but few, the greater part of them developing their idea with the greatest simplicity and directness. The translation is as well done as one could wish, which is saying a good deal; for these are really untranslatable things, and the bloom of the pastel which Mr. Howells still seems to see on them has disappeared to a large extent beneath the rude Saxon touch. Some of them, indeed, like Daudet's "Little Dauphin" (which is rather a *conte* than a "prose poem," though infinitely poetic), lose little; but a *tour de force* like Huysmans's "Camaïeu in Red," an opalescent, refulgent picture in the original, seems almost silly in the inadequate English rendering of its strings of adjectives and participial construction.

The intellectual result of the selections goes for but little, though the range of authors runs from Baudelaire to Catulle Mendès. There is a monotony in their mundane philosophy which is disappointing. The hope of the book lies in the familiarizing of English writers with a possible daring use of language which so few have any conception of, and which, when rightly employed, can be so beautiful an ornament to a powerful thought.

Mr. McVickar's illustrations are not in bad taste exactly, but, with all their precision of line and eighteenth-century prettiness, they are so unimaginative and meaningless that they belittle the great fancy pictures they were meant to typify.

BOOKS OF THE WEEK.

Archer, W. William Charles Macready. Longmans, Green & Co. $1.
Bülbring, K. D. The Compleat English Gentleman, by Daniel Defoe. London: David Nutt.
Clouston, W. A. Flowers from a Persian Garden, and Other Papers. London: David Nutt; New York: Scribner & Welford. $1.75.
Cook, A. M. Macmillan's Latin Course. Part II. Macmillan & Co. 60 cents.
Edmonds, C. Poetry of the Anti-Jacobin. G. P. Putnam's Sons. $2.50.
Eimer, Prof. G. H. T. Organic Evolution as the Result of the Inheritance of Acquired Characters. Macmillan & Co. $3.25.
Freeman, A. C. The American State Reports. Vol. XI. San Francisco: Bancroft-Whitney Co.
Hale, H. Chinook Jargon. London: Whittaker & Co.
Harris, J. C. Life of Henry W. Grady. Cassell Publishing Co. $3.
Hittell, J. S. A Code of Morals. 2d ed. San Francisco: The Bancroft Co.
Lee, Vernon. Hauntings. Frank F. Lovell & Co. 50 cents.
Mantegazza, P. Physiognomy and Expression. Scribner & Welford. $1.25.
Martineau, Rev. J. The Seat of Authority in Religion. Longmans, Green & Co. $4.50.
Masson, Prof. D. The Collected Writings of Thomas De Quincey. Vol. VI. Macmillan & Co. $1.25.
McGuire, Mrs. J. W. Diary of a Southern Refugee during the War. 3d ed. Richmond, Va.: J. W. Randolph & English. $1.
Memorial to Robert Browning under the Auspices of the Browning Society of Boston, Jan. 28, 1890. Boston.
Merrill, S. Pastels in Prose. Harper & Bros.
Milton, J. Comus. Macmillan & Co. 50 cents.
Mitchell, D. G. English Lands, Letters and Kings. Charles Scribner's Sons. $1.50.
Montgomery, Rev. M. W. The Mormon Delusion. Boston: Congregational Sunday-School and Publishing Society. 75 cents.

THE REFORMED PRIMER AND FIRST READER is a new departure in teaching. It presents to the pupil 40 pages of lessons composed of words whose *pronunciation corresponds to the names* of the component letters. That stumbling-block, the discrepancy between the names and the sound values of letters, is avoided at the outset, so that the child makes an easy start. Part II. (80 pages) fits the pupil for any "Second Reader." The book is compiled by the author of the article "The Reformed Primer," which appeared in BABYHOOD for February, 1889, and is the outgrowth of the interest which that article inspired among a number of educators and other critics. Price (Parts I. and II. bound together) 30 cents. To schools, 20 per cent. discount. Every teacher should examine it. Ready May 15.

BABYHOOD PUBLISHING CO., 5 Beekman Street, New York.

Seashore Lands.

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchasers and for sale. A number of beautiful shore, island, and peninsular properties on Penobscot Bay and other parts of the coast. These ranging from 10 to 1,000 acres, of the best selected frontages of high land, have beautiful rocks, trees, beaches, harbors, and mountain and sea views, and in the rapidly increasing movement to this coast, are almost the only remaining shore lands still purchasable at very low prices and offer exceptional advantages for gentlemen wishing independent estates for summer occupancy or for local colonization or investment. For details address

J. Murray Howe, 27 School St., Boston.

Specimen Copies Free.

PHILOSOPHY, PSYCHOLOGY, ETHICS, AND GENERAL SCIENCE. These topics are discussed in *The Open Court* by the most eminent investigators of the United States, Great Britain, Germany, and France. Questions of Ethics and Religion from the standpoint of Science, form the chief features. Correspondence from Continental critics.

The Open Court, { Subscription one year $2.00. Chicago, 1734 La Salle St.; Brentano's, N. Y. and London.

S. Davis, Jr.'s Cincinnati

Diamond Hams.

For 49 years this brand has given satisfaction for the evenness and richness of its curing. Sold by leading Grocers, from whom obtain circulars "How to Cook the Diamond Ham."

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, or to Mr. A. S. Clark, 34 Park Row.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XLIX. comprising the last half-year of 1889.]

MACMILLAN & CO.'S

PUBLICATIONS.

New Mathematical Text-Books.

COCKSHOTT and WALTERS. A TREATISE ON GEOMETRICAL CONICS. In accordance with the Syllabus of the Association for the Improvement of Geometrical Teaching. By ARTHUR COCKSHOTT, M.A., and F. B. WALTERS, M.A. 16mo. $1.25.

HALL and STEVENS. A Text-BOOK OF EUCLID'S ELEMENTS. Books I.–VI. For the use of Schools. By H. S. HALL and F. H. STEVENS, M.A. Globe 8vo. $1.10.

Also sold separately: Book I., 30 cents; Books I. and II., 50 cents; Books I.–IV., 75 cents; Books III.–VI., 75 cents.

"We think it the most usable edition of Euclid that has yet appeared."—*Nation.*

"This is a good Euclid. We predict for it a very favorable reception."—*Academy.*

"The most complete introduction to plane geometry based on Euclid's Elements that we have yet seen."—*Journal of Education.*

HALL and KNIGHT. Element-ARY ALGEBRA FOR SCHOOLS. By H. S. HALL, M.A., and S. R. KNIGHT, B.A. Fourth Edition, revised and enlarged. 16mo. 90 cents. *With answers*, $1.10.

"This is, in our opinion, the best Elementary Algebra for school use. It is the combined work of two teachers who have had considerable experience of actual school teaching . . . . and so successfully grapples with difficulties which our present text-books in use, from their authors lacking such experience, ignore or slightly touch upon. . . . We confidently recommend it to mathematical teachers, who, we feel sure, will find it the best book of its kind for teaching purposes."—*Nature.*

HALL and KNIGHT. Higher ALGEBRA. By H. S. HAEL, M.A., and S. R. KNIGHT, B. A. A Sequel to Elementary Algebra for Schools. Second Edition, revised and corrected. 12mo. $1.90.

LOCK. Trigonometry for Be-GINNERS, as far as the solution of Triangles. By the Rev. J. B. LOCK, M.A., Fellow of Gonville and Caius College, Cambridge; formerly Master at Eton. 16mo. 75 cents.

SMITH. Elementary Algebra. By CHARLES SMITH, M.A. 16mo. $1.10.

"The examples are numerous, well selected and carefully arranged. The volume has many good features in its pages, and beginners will find the subject thoroughly placed before them, and the road through the science rendered easy in no small degree."—*Schoolmaster.*

SMITH. A Treatise on Alge-BRA. By CHARLES SMITH, M.A. 12mo. $1.90.

"Your Smith's 'Treatise of Algebra' was used in our University Classes last session and with very great satisfaction. . . . The general adoption of these texts would mark an epoch in mathematical teaching."—Prof. W. B. SMITH, University of Missouri.

SMITH. Elementary Treatise ON CONIC SECTIONS. By CHARLES SMITH, M. A. New Edition, 1888. 12mo. $1.60.

"We can hardly recall any mathematical text-book which in neatness, lucidity, and judgment displayed, alike in choice of subjects and of the methods of working, can compare with this. . . . We have no hesitation in recommending it as *the* book to be put in the hands of the beginner."—*Journal of Education.*

New Books on Teaching.

NOTES ON AMERICAN SCHOOLS AND TRAINING COLLEGES. Reprinted from the report of the English Education Department for 1888–'89 with the permission of the Controller of H. M. Stationery Office. By J. G. FITCH, M.A., LL.D. 16mo. 60 cents.

LECTURES ON TEACHING, Delivered in the University of Cambridge. By J. G. FITCH, M.A., LL.D., with Introductory Preface by THOMAS HUNTER, Ph.D., President of Normal College, New York. 16mo, cloth. $1.00.

"This is eminently the work of a man of wisdom and experience. He takes a broad and comprehensive view of the work of the teacher, and his suggestions on all topics are worthy of the most careful consideration."—*New England Journal of Education.*

REPORTS ON ELEMENT-ARY SCHOOLS, 1852-1882. By MATTHEW ARNOLD, D.C.L., LL.D. Edited by the Right Hon. Sir Francis Sandford, K.C.B. 12mo, $2.25.

THRING.—A Memory of Ed-ward Thring. By J. H. SKRINE, M.A., Warden of Trinity College, Glenalmond. With Portrait. 12mo. $2.00.

"It is a worthy memorial of a worthy master—a book not exclusively devoted to eulogy, but one which delineates all aspects of the man's character as they appeared, first to an admiring pupil, and afterwards to a devoted colleague."—*Scotsman.*

THRING. Theory and Practice OF TEACHING, By the Rev. EDWARD THRING, M.A. 12mo. Cambridge University Press. $1.60.

"We hope we have said enough to induce teachers in America to read Mr. Thring's book. They will find it a mine in which they will never dig without some substantial return, either in high inspiration or sound practical advice. Many of the hints and illustrations given are of the greatest value for the ordinary routine work of the class-room. Still more helpful will the book be found in the weapons which it furnishes to the schoolmaster wherewith to guard against his greatest danger—slavery to routine."—*Nation.*

CALDERWOOD. On Teaching. By Prof. HENRY CALDERWOOD, LL.D. New edition, with chapter on Home Training. 12mo. 50 cents.

"For young teachers this work is of the highest value. . . . It is a book every teacher would find helpful in their responsible work."—*N. E. Journal of Education.*

"We have rarely met with anything on the sublect of teaching which seems to us to appeal so directly both to the teacher's head and heart, and give him so clear an insight into the true nature of his calling."—*Monthly Journal of Education.*

OCCASIONAL ADDRESSES ON EDUCATIONAL SUBJECTS. By S. S. LAWRIE, A.M., LL.D., Professor of the Institute and History of Education in the University of Edinburgh. 12mo. $1.25.

"The whole lecture on this subject ought to be carefully read by American educators. . . . The whole book is very suggestive, and we trust will not be overlooked by any one interested in education.—*Science.*

LECTURES ON MENTAL FACULTY: being lectures delivered in the University of Cambridge during the Lent Term 1888-9, on the Growth of Intellectual Faculty and Means of Training It. By FRANCIS WARNER, M.D., Physician to the London Hospital. [Shortly.]

*** *Macmillan & Co.'s Catalogue of Publications will be sent free by mail to any address on application.*

MACMILLAN & CO., 112 Fourth Avenue, New York.

WORCESTER'S UNABRIDGED DICTIONARY.

The great Dictionary of the language. Contains thousands of words not to be found in any other quarto Dictionary. It includes a *New Supplement of 12,500 Words, New Pronouncing Biographical Dictionary* of nearly 12,000 personages, *New Pronouncing Gazetteer of the World,* noting and locating over 20,000 places, *Table of the Synonymes of 5,000 words* in general use. *Illustrated with woodcuts and full-page plates.*

Worcester's Dictionary is the standard authority in use among American schools and colleges; American orators, writers, poets, and statesmen, people of education, and all the leading American newspapers. It is the authority used by every large newspaper in New York city. James G. Blaine, Garfield, Holmes, Longfellow, Bryant, Phillips Brooks, Spofford, the Librarian of Congress; and scores of the most brilliant men of the day can be named who make or who, while living, did make use of *Worcester's Unabridged Dictionary.* The *Tribune* of March 26, 1890, says:

"The *Tribune* has itself for fifteen years used Worcester's as its own authority in spelling and pronunciation. Every other large New York paper, as well as a great multitude of other publications, makes use of Worcester's Unabridged, and as the latter is the largest American dictionary in existence, we offer it to our readers unhesitatingly. One word ought to be said about the cheap reprints of old dictionaries, on which the copyrights have expired. No American citizen would want one of those antiquated volumes in the house. They contain a great number of errors in spelling. They do not have the new words or the new definitions. The only dictionary worth having is the unabridged (Worcester) of 1890."

From the New York World.

"The office of a Dictionary is, of course, not to make innovations, but simply to register the best usage in spelling and pronunciation. This Worcester does, and this its rival conspicuously fails to do."

For sale by all booksellers. Circular of testimonials and specimen pages sent free to any address on application.

PUBLISHERS,
715 and 717 Market St., Philadelphia.

The Cheapest and Most Complete French Dictionary Published.

Cassell's French Dictionary.

(FRENCH-ENGLISH AND ENGLISH-FRENCH.)

New and Enlarged Edition. 1,150 pages. Price, $1.50.

Among the special features of the new and enlarged edition are the following:

It has been enlarged by the addition of 200 pages. New words to the number of 3,000 have been added. It has been revised by the latest edition of the Dictionary of the French Academy. It has been corrected by Professor Roubaud, B.A. (Paris). It is the cheapest, the most complete and extensive, and, so far as modern spelling is concerned, the only accurate Dictionary of the French language published in this country. *Specimen pages sent free on application.*

Cassell's New German Dictionary.

In Two Parts. German-English—English-German. By Elizabeth Weir. 1 volume, about 1,120 pages, 8vo, Price, $1.50.

Specimen pages sent free on application.

Cassell's Latin-English Dictionary.

Revised, enlarged, and in part rewritten by J. R. V. Marchant, M. A., formerly Scholar of Wadham College, Oxford. 12mo, cloth, 896 pages. Price, $1.50.

Dictionary of Phrase and Fable.

By the Rev. Dr. Brewer. Giving the Derivation, Source, or Origin of about 20,000 Common Phrases, Allusions, and Words that have a Tale to Tell. Extra crown 8vo, 1,070 pages, one-half morocco, gilt top. Price, $2.25.

The Reader's Handbook of Facts, Characters, Plots, and References.

By the Rev. Dr. Brewer. Extra crown 8vo, nearly 1,200 pages, one-half morocco, gilt top. Price, $3.50.

Dictionary of English Literature.

Being a Comprehensive Guide to English Authors and their Works. By W. Davenport Adams. 776 pages, extra f-cap, 4to, cloth. Price, $2.50.

The Young Idea;

Or, Common-School Culture. By Caroline B. LeRow, compiler of 'English as She is Taught,' etc. Boards, new style, 50 cents. Extra cloth, $1.00.

"One of the brightest and most amusing of educational arguments."—*Commercial Gazette, Cincinnati.*

The Coming School.

By Ellen E. Kenyon. A Sequel to 'The Young Idea,' by Caroline B. LeRow. Boards, new style, 50 cents. Extra cloth, $1.00.

"We heartily commend the book as a most valuable contribution to the cause of educational reform."—*The School Journal.*

A Few Facts About THE CENTURY DICTIONARY

The Century Dictionary combines in one a complete dictionary of English words and etymologies; a standard of spelling and pronunciation; a vast collection of quotations and synonyms; a reference book of grammar and pronunciation; an encyclopedia of general information (it does not stop at defining a word but goes into particulars about the object of which the word is the name); and a most complete and accurate dictionary of scientific terms. The words peculiar to the trades, commerce, finance, law, medicine, theology, music, art, etc., have been defined by specialists, thus assuring the utmost accuracy. The Dictionary has been in preparation eight years, under the direction of Prof. Wm. D. Whitney of Yale, assisted by 40 editorial contributors and a large force of readers, copyists, etc. One-half the work (3 volumes) is now ready. The remaining volumes will be issued at regular intervals and the Dictionary completed in 1891. An estimate based on the three volumes now ready shows that the completed work will contain nearly 7000 pages; over 200,000 separate words; about 50,000 technical, idiomatic and colloquial phrases; over 300,000 definitions; about 250,000 illustrative quotations; a large number of abbreviations and foreign phrases, and more than 6000 pictorial illustrations.

The Century Dictionary is sold only by subscription. A large pamphlet containing full-size sample pages, with a complete list of editorial contributors and a full description of the work itself, will be sent to any address upon receipt of ten cents in stamps. Descriptive circulars sent free upon request. Please mention *The Nation*. For terms, etc., address

THE CENTURY CO., 33 East 17th Street, New-York.

THE

AMERICAN ACADEMY

OF

POLITICAL AND SOCIAL SCIENCE.

Organized at Philadelphia, December 14, 1889.

President.
EDMUND J. JAMES, Ph.D.

Corresponding Secretary, R. P. FALKNER, Ph.D., Station B, Philada.
Treasurer. STUART WOOD, Esq., 400 Chestnut St., Philada.

General Advisory Committee.

Pres. Adams, Cornell; Pres. Andrews, Brown; Pres. Angell, Michigan; Prof. Ashley, Toronto; Prof. Blackmar, Kansas; Dr. Bourinot, Ottawa; Prof. Burgess, Columbia; Prof. Ely, Baltimore; Prof. Follwell, Minn.; Prof. Goodnow, Columbia; Judge Jameson, Chicago; Prof. Jenks, Indiana; Pres. Johnston, Tulane; Prof. Moses, Cal.; Prof. Peabody, Harvard; Simon Sterne, New York; Hannis Taylor, Ala.; Prof. Thayer, Harvard; Prof. Thorpe, Phil.; Gen. F. A. Walker, Boston; Prof. Wilson, Wesleyan; Prof. Ward, Washington.

The Academy is a national association for the advancement of Political and Social Science. All persons interested in the promotion of Economics, Public Law, and Politics are eligible to membership, and should join the organization. It has already over 300 members. The annual fee is $5.00.

The Proceedings of the Society will be published in the form of a quarterly periodical, which, together with other publications, will be sent to all members of the Academy. It will be called the

Annals of the American Academy of Political and Social Science.

The first number will appear in June next.

All applications for membership, and all papers and communications which the writers wish to submit to the Academy for publication should be sent to

AMERICAN ACADEMY OF POLITICAL AND SOCIAL SCIENCE,
Station B, Philadelphia, Pa.

RECENT ENGLISH PUBLICATIONS.

The Poetry of the Anti-Jacobin. Comprising the celebrated Political and Satirical Poems, Parodies, and Jeux d'Esprit of Canning, Frere, Wellesley, Ellis, Gifford, Pitt, and others. With explanatory notes, biographical and historical notices, complete list of the authors, and an index. Edited by CHARLES EDMONDS. Illustrated from the original plates by GILLRAY. To the poetry has been added a number of the prose selections, including the papers on American Affairs, the personal and abu ive indexes, etc. Limited edition. Crown octavo, $2.50.

Modern Horsemanship. A New Method of Teaching Riding and Training, by Means of Pictures from Life. By EDWARD L. ANDERSON. Fourth edition, revised and enlarged, with forty photogravure plates, $5.50.

"The rules and directions are so plainly stated and are so admirably illustrated by photographs from life that an intelligent reader will have no difficulty in putting them into practice."—*N. Y. Tribune.*

English Wayfaring Life in the MIDDLE AGES (Fourteenth Century). By J. J. JUSSERAND. Translated from the French by LUCY TOULMIN SMITH. New and cheaper edition. Octavo, pp. 451, fully illustrated, $3.50.

"We can heartily recommend this book as one of the pleasantest and most carefully executed pictures of a side of English mediæval life that we have met with for a long time."—*Saturday Review.*

ALSO NOW READY:

A Romance at the Antipodes. By MRS. R. DUN DOUGLASS. 16mo, cloth, $1.00.

A clever story of Australian life.

READY NEXT WEEK:

The Story of Russia. By W. K. MORFILL of Oriel College, Oxford. Very fully illustrated. 12mo, $1.50.

This volume (No. xxviii. in the Story of the Nations Series) is particularly pertinent at the present time, when the attention of the civilized world is directed to the mighty Empire of the East and its Eastern Questions. The narrative covers the history of the development of the country from the little Grand Duchy of Muscovy, in the fifteenth century, to the present Empire with its hundred million inhabitants.

4 Trafalgar Square, Charing Cross, London, England.

LONGMANS, GREEN & CO.

HAVE NOW READY:

WHEN WE WERE BOYS. A Novel.

BY WILLIAM O'BRIEN, M.P.

Crown 8vo, cloth extra, 556 pages, $1.50.

*** The volume contains the following letter from Mr. O'Brien, reproduced in facsimile:

"I desire respectfully to acquaint the American public that Messrs. Longmans, Green & Company are the only authorized publishers of this novel in America, and that editions issued by them are the only ones from which I derive any profits."

Dublin, April 12, 1890. WILLIAM O'BRIEN.

With the exception of four chapters only, 'When We Were Boys' was written by Mr. O'Brien while confined in Galway Jail under the Coercion Act. It is a tale of the Ireland of a recent period, dealing with the movement of 1867 and illustrating forcibly every phase of the social as bearing upon the political condition of the country. As a story it is interesting, varied in incident, and enlivened with easy humor, while the author's individuality gives it an unusual value.

NEW BOOKS.

FRANCE AND THE REPUBLIC:

A RECORD OF THINGS SEEN AND LEARNED IN THE FRENCH PROVINCES DURING THE CENTENNIAL YEAR, 1889.

By William Henry Hurlburt, author of 'Ireland Under Coercion.' With a map. 8vo, cloth, 620 pages, $5.00.

OLD FRIENDS: Essays in EPISTOLARY PARODY.

By Andrew Lang. Crown 8vo, $2.00. [In a few days.]

*** "The scheme of this volume is to describe, in letters parodying the style of a character in a famous book, the meeting of that character with somebody out of a book by somebody else. Thus, for example, the circumstances are related under which M. Lecocq sought the aid of Mr. Inspector Bucket to arrest Count Fosco, and how it was that the person arrested turned out to be Mr. Pickwick."

WILLIAM CHARLES MACREADY.

By William Archer. Crown 8vo, 224 pages. Half cloth. $1.00.

*** This forms the first volume of a series of biographies of EMINENT ACTORS which is intended eventually to cover the whole history of the English stage from the Restoration down to our own time.

NEW EDUCATIONAL WORKS.

PHYSIOGRAPHY.

By JOHN THORNTON, M.A. With 180 Illustrations, 6 Maps, and a Colored Plate of Spectra. (Longmans' Advanced Science Manuals.) Crown 8vo, 350 pp. $1.40. [Immediately.]

THE ELEMENTS OF LABORATORY WORK.

A Course of Natural Science for Schools. By A. G. EARL, M.A., F.C.S., late Scholar of Christ's College, Cambridge; Science Master at Tonbridge School. With over 50 Figures in the Text. 12mo, $1.40.

LONGMANS' SCHOOL COMPOSITION.

By DAVID SALMON. Crown 8vo, 310 pp., 80 cents.

". . . Its direct sensible method is to be praised almost without reserve. The notes for teachers at the end of the book are excellent in conception and as practical instructions."—*N. Y. Nation.*

LONGMANS' JUNIOR SCHOOL COMPOSITION.

School Trustees, Principals, Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Rate per year for 3 lines, $23.40; 4 lines, $31.20; 5 lines, $39.00, etc. Any term less than one year at same rates —15 cents per line per week.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

Houghton, Mifflin & Co.'s New Books.

Over the Teacups. VI. Oliver Wendell Holmes.

35 cents; $4.00 a year.

Houghton, Mifflin & Co.,

Boston and New York.

WEBSTER'S UNABRIDGED.

Ancient Edition.

A so-called 'Webster's Unabridged Dictionary' is being offered to the public at a very low price. The body of the book, from A to Z, is a cheap reprint, page for page, of the edition of 1847, which was, in its day, a valuable book, but in the progress of language for over FORTY YEARS, has been completely superseded. It is now reproduced, broken type, errors, and all, by photo-lithograph process, is printed on cheap paper, and flimsily bound. A brief comparison, page by page, between the reprint and the latest and enlarged edition will show the great superiority of the latter. These reprints are as out of date as a last-year's almanac. No honorable dealer will allow the buyer of such to suppose that he is getting the Webster which to-day is accepted as the standard and THE BEST—every copy of which bears our imprint as given below.

☞ If persons who have been induced to purchase the "Ancient Edition" by any misrepresentations will advise us of the facts, we will undertake to see that the seller is punished as he deserves.

THE EVENING POST,
NEW YORK.

REORGANIZATION
OF
The Denver Land & Security Company.

This company, originally organized in December, 1887, with a capital of $250,000, for the principal purpose of buying, improving, and selling the Denver real estate known as "Berkeley," has paid 13 per cent. in cash dividends and has capitalized $500,000 of its surplus. The stockholders have voted to issue $250,000 additional stock, making a total of One Million Dollars. The surplus shown on the books February 1, 1890, was $330,287.59, which is likely to be greatly augmented during the year unless reduced by increased dividends. The new stock participates with the old in this surplus, and is, therefore, worth at least $130 per share. Inasmuch as the Board of Directors have authorized its offer at par ($100 per share) for a quick sale, it is deemed only just to the old stockholders that they should have the first opportunity to subscribe for the new issue, and the books will be open for subscriptions by stockholders only until March 1, 1890, and after that date to all who may desire to subscribe.

It is proposed to further amend the Articles of Association so as to change the name of the corporation to

The Continental
Land & Security Company.

Stockholders may send their subscriptions on the blanks furnished them to Jno. C. Avery, President, 115 Broadway, New York, or to S. B. Carter, New England Manager, 209 Washington Street, Boston, Mass. On and after March 1st, 1890, subscriptions will be received at the offices of the Company, 115 Broadway, New York, 209 Washington Street, Boston, and 1700 Curtis Street, Denver, Col., or at the offices of any of its agents, from whom also further information may be obtained.

☞Finely illustrated catalogue of 70 colored studies, 4c.; with specimen copy and two colored plates, 25c.

HOSSFELD'S METHODS FOR THE Study of Modern Languages: A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN. For the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations, with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 360 pages, $1.25). Especially adapted to the needs of those contemplating European travel. KEYS and TASKS for self correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," No. 65 Duane St., New York.

W. BAKER & CO.'S

Breakfast Cocoa

Is absolutely pure and it is soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

MENTAL INVALIDS OF A MILD type, especially those afflicted with Melancholia, sufferers from abuse of alcohol, and victims of the opium habit are offered superior advantages in private treatment and care at the STOCKTON SANITARIUM, in the beautiful village of Merchantville, N. J., five miles by train from foot of Market St., Philadelphia. Absolutely no suggestion of an asylum. The spacious, veranda-surrounded houses in the outskirts of the village, with their twelve acres of grove, garden, and lawn, are precisely like the better class of private country villas. The utmost freedom consistent with security is allowed. Pleasant surroundings, open-air exercise, country drives, cheerfulness, comfort, quiet. These conditions are *demonstrated* by experience to have marked effect on curable cases, and they contribute largely to the comfort of confirmed cases who here find a home, combined with the safeguards of skilled attendance. The proprietor (who was for 20 years in charge of Male Department of Pennsylvania Hospital for Insane) refers to many eminent alienists. Illustrated Circulars by mail. Address, DR. S. PRESTON JONES, Merchantville, N. J.

TRADE MARKS
ON
SOLID SILVER WARE.

There is no branch of industry, except the manufacture of Silver ware, where the maker's name is not used by the merchant as a sure guarantee for good quality of the merchandise bearing the mark; but there has been inherited by the silversmiths of our time a pernicious system of stamping the name of the dealer in the place that properly belongs to that of the manufacturer, as the maker is the only one that can absolutely guarantee the quality of the goods, as that is the important use of any stamp used on silver ware, so that purchasers will do well to look for the Trade Mark of the maker, in addition to the name of the dealer; and if that mark should be the STERLING which is the trade mark of the Gorham M'fg Co., it can be relied upon as representing English Sterling **925/1000** fine, as no other quality is used by this firm.

Every first-class jeweller in the United States has the Gorham Solid Silver Wares, and by inquiring for these goods purchasers may be absolutely sure of obtaining reliable goods at no extra cost.

GORHAM M'F'G CO.
SILVERSMITHS
BROADWAY AND 19TH STREET.

POET-LORE.

A PURELY LITERARY MAGAZINE, WORKING FOR WIDER APPRECIATION OF THE BEST LITERATURE OF ALL TIMES, AND THE ALLIANCE OF SPECIAL STUDY WITH THE STUDY OF COMPARATIVE LITERATURE.

Issued on the 15th of each month.

"POET-LORE contains a line of matter not to be confused with that of any other periodical."—*New York Press, March* 20, 1890.

POET-LORE is distinctive in Contents, Manner, Size, and Shape.

Shakespeare as Citizen, by J. S. STUART GLENNIE, author of 'Isis and Osiris,' 'Arthurian Localities,' etc.;
The Russian Drama, by NATHAN HASKELL DOLE, translator of 'Anna Karenina,' etc.;
German and English Literature in the Eighteenth Century, by Professor O. SEIDENSTICKER (Two Papers);
Personal Recollections of Browning, by WM. G. KINGSLAND, have recently appeared.

Browning's New Poetic Form, by Dr. DANIEL G. BRINTON,
Shelley's 'Epipsychidion,' an Autobiography, by FREDERICK GARD FLEAY, will appear shortly.
Dr. W. J. ROLFE'S Notes on Shakespeare Plays; ANNA ROBERTSON BROWN'S series of translations from Anglo-Saxon Poetry; Queries and Answers by specialists on Technical Allusions; Criticism of high-class drama only; Review of noteworthy literary books only, and a variety of miscellaneous Editorial Notes, are characteristic of POET-LORE.
Volume I., with Index by Mr. JOHN H. WOODS, sent postpaid for $3.50.

"POET-LORE for 1889 makes a solid volume of 592 pp., handsomely bound in white and light blue. Its contents embrace an amount of good and useful matter for the serious student of Shakespeare and Browning and poetry in general."—*Literary World, March* 29, 1890.

Yearly subscription, $2.50. Single number, 25 cents.

WOLCOTT & WEST, Publishers,
SYRACUSE, N. Y.

Educational Institutions

are of special interest to those parents who desire to send their children from home to obtain an education.

Naturally the parent seeks information regarding all such institutions before deciding which to patronize.

Such parents are readers of newspapers, and therefore Newspaper Advertising may be made of great value to the proprietors of schools and colleges.

The question is not, does Newspaper Advertising pay? but rather, how can the advertisement be displayed to attract attention; worded to convey a correct idea of the advantages offered, and in what papers can it be inserted to reach the class of persons sought for.

These are the problems we have been studying for the last 20 years, and because of this study, and the experience gained from the handling of the largest business in our line in the world, we ought to be able to render valuable service to intending advertisers.

Perhaps the character and value of the service rendered by us, accounts for the amount of business entrusted to our care.

Correspondence solicited.

Charles Scribner's Sons'

NEW BOOKS:

Little Saint Elizabeth,

And Other Stories. By FRANCES HODGSON BURNETT. With 12 new full-page Drawings by Reginald B. Birch. Handsomely bound, uniform in size with 'Little Lord Fauntleroy.' Square 8vo, $1.50.

"Delightful juvenile fiction, as full of charm for the older people as for the youngest. Mrs. Burnett is always peculiarly felicitous in her portrayal of child character, and in this volume her gifts in that direction are developed in their affluence."—*Boston Saturday Evening Gazette.*

"Beautiful stories in Mrs. Burnett's best vein, and all of them beautifully illustrated."—*N. Y. Journal of Commerce.*

The Wife of the First Consul.

Translated from the French of IMBERT DE SAINT-AMAND by THOMAS SERGEANT PERRY. With Portrait. 12mo, cloth, $1.25.

"A charming and valuable book. It gives a gossipping and entertaining picture of life at the French capital in what the author regards as Napoleon's best days. It is a social sketch, and deals with the hidden springs of action."—*Brooklyn Times.*

Bright Skies and Dark Shadows.

By Rev. HENRY M. FIELD, D.D. 8vo, $1.50.

"Whatever he puts his hand to Dr. Field is sure to render interesting, and this volume of observation, descriptions, and reflections, based upon a trip to and through the South to Florida, is characterized by his best literary qualities."—*N. Y. Tribune.*

The Nature and Method of Revelation.

By PROF. GEORGE P. FISHER, D.D. 12mo, $1.25.

Prof. Fisher sets forth the relation of the Scriptures to the historical process of Divine Revelation, explaining the groundwork of historical reality which forms the basis of the Scriptures, and dealing also with important topics in New Testament criticism.

The Broughton House.

By BLISS PERRY. 12mo, $1.25.

In this story Mr. Perry has presented an artistic and extraordinarily vivid picture of a New England town in summer, with close, shrewd, sympathetic, and wonderfully observant studies of the quartette of persons at the hotel, "The Broughton House," with whom the story is chiefly occupied, and the villagers.

The Philosophy of Preaching.

By A. J. F. BEHRENDS, D.D. 12mo, $1.00.

Dr. Behrends's book consists of eight lectures delivered at Yale University last February. The volume aims to expound the spirit, rather than the mechanism, of all effective pulpit discourse, and to set forth the qualities, personal, ethical, Biblical, spiritual, and practical, which give preaching its power and influence.

The Nation.

NEW YORK, THURSDAY, MAY 1, 1890.

The Week.

THE Senate Republicans have brought forward their scheme for a Federal election law in a bill presented by Mr. Hoar on Thursday. Briefly summarized, it takes entire control of Congressional elections from the State authorities, with whom it has rested ever since the Government was established, and vests it in men to be appointed by the judges of the Federal courts. This is contrary alike to all our traditions and to the spirit of our institutions; indeed, it is the largest step towards centralization yet proposed. Objectionable thus in principle, it would inevitably work only harm in practice, and we do not think that Senator Pugh of Alabama exaggerated when he said: "If the bill becomes a law, its execution will insure the shedding of blood and the destruction of the peace and good order of this country." The favorable report of such a measure from a Senate committee is another sign of the dangerous tendencies in the Republican party.

The correspondence published regarding the enforcement of Federal laws in Florida illustrates the disastrous consequences of lowering the standard of the United States judiciary. The President directs the Attorney-General to instruct the new United States Marshal in Florida that the resistance which has been made to the execution of the process of the courts in certain counties "cannot be longer tolerated," whereupon the editor of the Jacksonville *Times-Union*, the leading newspaper of the State, addresses Mr. Harrison an open letter, defending the people from the charge brought against them, but pointing out that officers of the court have been so open and loud in their threats to prostitute their power to partisan advantage—the Marshal ordering his deputy, in defiance of the United States law, to select for jurors only "true and tried Republicans"—that it is not strange that in some instances men have been rendered desperate. "The people of these four counties," he says, "do not desire to offer any obstructions or any resistance to the execution of the laws; it is their wish to aid you in bringing wrong-doers to punishment; but I know that I voice their sentiments when I assure you that they cannot respect the United States Court for this district if it is to continue its policy of the last nine months. If it is purified, if it is cleansed of all suspicion of partisanship, of designed oppression, of injustice, its officers will encounter no resistance, no obstruction, no evasion in Leon, Gadsden, Jefferson, and Madison Counties. Constitute a district court to mete out justice, not injustice, and the people of Florida will hold it in as high respect as do the people of any State in the Union." If any further argument were needed against the passage of a Federal election law, it would be found in the fact that it is proposed to vest the control of elections in courts presided over by partisans like Judge Swayne of Florida, which it is impossible for the people to respect.

The dinner of the Americus Republican Club in Pittsburgh on Saturday evening was rendered notable by the presence of Speaker Reed and Assistant Postmaster-General Clarkson, and by their foreshadowings of the policy adopted by the party leaders at Washington. Briefly summarized, this policy is to stand by Quay and maintain him as Chairman of the Republican National Committee, and to pass a Federal election law, under which, to use Mr. Reed's words, the Republicans will "do our own registration, our own counting, and our own certification." Apparently the managers expect to lose a good many seats in the next House of Representatives from Northern States, and have made up their minds to try and secure enough seats from the South to give them a majority. In order to bring about this result, sectional strife is to be stirred up, and the negro is to be sacrificed, since nothing worse for the negro can be imagined than to revive in all its intensity race animosity. The idea that good relations between whites and blacks are to be promoted by interference from Washington is of course too absurd for anybody to entertain; and, to do them justice, the Republican managers make small pretence of believing any such thing. Good relations between the races are the last thing in the world that they want, so long as they believe that trouble between whites and blacks brings votes to their party. It is a reckless game which they propose to play, and they may find that they are presuming too much upon the stupidity of the patient partisans on whom they rely.

The most extraordinary feature of the Pittsburgh speeches was Mr. Clarkson's frank confession that the press of the country, and by consequence the readers of the country, are becoming Democratic. Here are his words: "The campaign of 1892 will be largely a newspaper campaign, and it has already begun. Let us be frank and say that the Democrats saw this before the Republicans; for any close observer must have seen with interest, and almost astonishment, the marvellous manner in which the Democratic party has been strengthening its lines in the newspaper or the magazine. It did not use to care as much as the Republican party for the newspaper and the magazine. In latter days it has been beating us in our own game. In the large cities of the East they have captured nearly all the magazines and illustrated papers." Mr. Clarkson went a step further, and showed how the people who read newspapers are taking Democratic in preference to Republican journals, telling of a canvass which he has had made in a county near Chicago, where 680 Republican families are taking Democratic papers, and only 95 Democratic families taking Republican papers. Mr. Clarkson professed to be surprised at these developments; but what else could he expect when he himself, after conducting a Republican newspaper during the last Presidential campaign, and pledging his party to support civil-service reform, removes 30,000 postmasters within a year, and then goes to Pittsburgh to denounce the reform, and to declare that "no real American sympathy attends the present experiment"—by which expression he refers to the Civil-Service Law?

The long-threatened assault upon the Civil-Service Commission was made in the House a week ago, and proved a complete failure. The spoilsmen in both parties were vociferous in denunciation of civil-service reform and in abuse of the Commissioners, seven Republicans and seven Democrats taking the floor on that side of the question; and among those representing the majority were Grosvenor, one of the most prominent Republican members from Ohio; Houk of Tennessee, the leading Southern Republican; Dunnell of Minnesota; and Perkins of Kansas. The Democrats who supported Houk's motion to "starve out" the Commission, by striking from the Appropriation Bill the item providing for its support, were of the type fitly represented by Spinola, the Tammany statesman of this city, and Biggs, an old fogy from California. Mr. Blount, one of the ablest Democrats from the South, and Mr. Tracy, from the Albany district in this State, sustained the law and the Commission, as did also several members on the Republican side, notably Mr. Moore of New Hampshire and Messrs. McKinley and Butterworth of Ohio. Mr. McKinley pressed home upon his party colleagues the faithlessness to their platform pledges involved in the Houk proposition, and told them plainly that "the merit system was here, and here to stay." When a vote was finally reached, 61 Representatives voted to strike out the appropriation for the Commission, while 120 favored its retention. Unfortunately, the vote was taken in Committee of the Whole, where the roll is not called, so that it is impossible to place the responsibility for the affirmative outside of those who made speeches on that side. The *Tribune's* correspondent estimates that the affirmative was about evenly divided between the two parties, while the negative was made up of about eighty Republicans to forty Democrats. So far as the discussion went, however, the Republicans made the poorer showing, as the men who sustained the "starving-out" scheme on that side of the chamber were far more prominent than the Democrats who championed the cause of the spoilsmen.

This vote settles the question as to a re-

peal of the Civil-Service Law On a yea-and-nay vote in the House it is not probable that sixty members could be found who would record themselves on that side. So far as the Republican opponents of the reform are concerned, their position is most shameless, for every one of them sustained the party in 1888 upon a platform which reproached the Democrats with having broken their pledges regarding the cause, affirmed generally that "we will not fail to keep our pledges because they have broken theirs," and declared explicitly that "the reform of the civil service, auspiciously begun under the Republican Administration, should be completed by the further extension of the reform system, already established by law, to all the grades of the service to which it is applicable." Grosvenor, Houk, Dunnell, Perkins, and the rest of them were thus pledged, not only to sustain the Commission, but to vote it such larger sums as it needs for "the further extension of the reform system." Mr. McKinley took the right ground when he said that his only regret was that the Appropriations Committee did not give to the Civil-Service Commission all the appropriation it asked for such enlargement of its operations. However, it is something to be thankful for that under an Administration which is dominated by Quay the Commission is not "starved out."

The vast power which is possessed by the Supreme Court of the United States receives a fresh and striking illustration in its decision regarding prohibition on Monday. After Iowa enacted a prohibitory law, a firm of brewers in Peoria, Ill., sent some of their beer in sealed kegs and cases by railroad to Keokuk, where their agent, a non-resident, offered it for sale in the original packages. The liquor was seized by the City Marshal, and the brewers brought suit against him, alleging that the seizure was unconstitutional and void, as in violation of the clause of the Federal Constitution which gives Congress the exclusive right to regulate inter-State commerce. The local court decided in favor of the brewers, but the Supreme Court of Iowa reversed its decision, and an appeal was then taken to the highest tribunal in the country. The Supreme Court at Washington now overrules the Supreme Court of Iowa, and decides that the transportation of liquor from one State to another is a matter of inter-State commerce which Congress alone can regulate, and that the right of transportation of an article of commerce from one State to another includes by necessary implication the right of the consignee to sell it in unbroken packages at the place where the transportation terminates. The decision was concurred in by six judges, the other three dissenting, and it carries the weight of authority, as well as of numbers, inasmuch as the majority includes Justice Miller, the generally recognized leader of the bench, as well as Justices Bradley and Field and the Chief Justice, while the dissenters are Justices Gray, Harlan, and Brewer. It will be observed that the Republican judges were evenly divided, three for and three against the position taken, while the three Democrats stood together. It is also worthy of note that the Iowa member of the court, Justice Miller, decides against the claim of his State.

This decision virtually breaks down prohibition by State law. No matter how rigorous a law Iowa may enact against the sale of liquor, Illinois brewers can send beer into the State and sell it, and in like manner Boston liquor-dealers can defy the Maine law by importing their wares into Neal Dow's city. The only condition is that the "original package" must not be broken before the sale; but as this package may be a keg, a bottle, or a flask—any receptacle, so long as it is sealed—there is practically no restriction upon the traffic. Moreover, it would appear as though the decision were almost as fatal to license as to prohibition, for the dissenting opinion, delivered by Justice Gray, says: "If the statutes of a State, restricting or prohibiting the sale of intoxicating liquors within its territory, are to be held inoperative and void as applied to liquors sent or brought from another State and sold by the importer in what are called original packages, the consequence must be that an inhabitant of any State may, under the pretext of inter-State commerce and without license or supervision of any public authority, carry or send into and sell in any or all of the other States of the Union intoxicating liquors of whatever description, in cases or kegs, or even in single bottles or flasks, despite any legislation of those States on the subject, and although his own State should be the only one which had not enacted similar laws." The Philadelphia *Press* interprets this to mean that liquor may be sent from Camden to Philadelphia in bottles and flasks, and sold freely and indiscriminately without a license, and it certainly seems as though this theory were correct. If so, the consequences of the decision will be far-reaching and enormous, and the whole problem of dealing with the liquor traffic is involved in new and great difficulties.

The signs of "getting ready" to pass a Silver Bill multiply at Washington, but there is as much doubt as ever what kind of a bill it will be. The latest discovery made by the true-blue silverites is that the caucus bill enables the Secretary of the Treasury to sell silver bullion as well as to buy it. Any holder of the Treasury notes issued in payment for silver bullion may present them to the Treasury and ask to have them redeemed in bullion, and the Secretary may, if he chooses, redeem them in bullion at the market price of the day. Now these notes will drift to the Treasury in payment of Government dues to exactly the extent that they are not wanted for circulation. The Secretary may deposit the notes with any national bank that is willing to receive them, and the bank may present them at the Sub-Treasury and call for bullion. In this way the Secretary would have an equal chance with the bullion-speculators to manipulate the market. Of course that will never do. What is wanted is a steady market for 4,500,000 ounces of pure silver each month at the expense of the taxpayers. No measure which allows the Secretary to sell as well as to buy will ever get the support of the silver-mine owners.

A preposterous proposition, which not only is bad in itself, but constitutes a vicious precedent, has just been carried through the Senate by Mr. Blair, in the shape of a bill appropriating $50,000 for the erection of an equestrian statue of Gen. Stark, the Revolutionary hero, in the city of Manchester, N. H., "and for the proper preparation, grading, and enclosing of the lot and foundation upon which said statue shall be erected." In other words, the taxpayers of the whole country are to furnish $50,000 to beautify a New Hampshire city with a park and a statue. Mr. Moody of South Dakota made an earnest protest against the scheme, saying: "There is no just right to expend the money of my constituents for such a purpose; and now, when it is before the country that the low price of farm products in the West and in many cases the failure of crops have brought many people to the verge of pauperism, it is not just or right, and cannot be justified, that money shall be taken from the Treasury and expended for such a purpose." Gen. Hawley of Connecticut took even stronger ground against the proposition, saying: "I do not see how we can embark in this business. I do not see why New Hampshire has been guilty of avoiding the duty of erecting a statue in memory of that gallant hero; but if we are to enter upon this business, if this is to be regarded as a fair and just course on the part of the Federal Government, all the States will be clamoring to have all their heroes taken care of in a similar way by the national Government. If they are proud, as they ought to be, they should put up such monuments themselves." In the course of the discussion it came out that New Hampshire herself has at last recognized the long-neglected duty of erecting a statue to Stark, and that steps have already been taken to place such a memorial in the State-house Park at Concord. Nevertheless, the Senate passed the bill by a vote of 37 to 15.

"Senatorial courtesy" probably forbade telling the truth about the scheme, which is simply that Mr. Blair's term is approaching its close, and that he wants to "make himself solid" with his constituents by giving them a fine park, ornamented by a statue, without their being obliged to pay for it. A New Hampshire paper, the Concord *People and Patriot*, sums up the case forcibly when it says: "No such bill ought to pass. In the first place, the General Government should build statues and monuments to no man anywhere else than at the national

capital. In the next place, $50,000 is twice the amount necessary for the purpose whenever and wherever it may be carried out. Again, the State of New Hampshire is about to erect a suitable statue of Stark in the State-house Park in this city, which will answer for all practical purposes. If Manchester wants one, let her enterprising Board of Trade get up a subscription to pay for it." There is some reason to hope that the House may not be as complaisant to the New Hampshire Senator as his colleagues have been. The *Tribune's* correspondent says that "several other similar measures are pending in Congress, and, though the Senate may be disposed to pass them, the House has shown a commendable disposition to economize on such miscellaneous and by no means necessary appropriations, and thus keep down the sum total of the expenses of this session, which are sure to be swollen in any case by demands of the most imperative and legitimate sort." If the nation should once enter upon this policy, the statue scandal would soon be greater and worse than that of the public-buildings grab-game.

An apt comment on the McKinley Administrative Bill is supplied by the following advertisement extensively published by a Chicago firm dealing in crockery and glassware:

> The McKinley Tariff Bill (for the reduction of the revenue), if it becomes a law July 1, 1890, will cause an advance in prices about as follows:
>
> Imported blown flint, cut top, table tumblers, 500 dozen just received—Our price, 75 cents dozen; McKinley price, $1.15 dozen.
>
> Haviland & Co.'s decorated china dinner sets, in thirty-five new decorations, now arriving—Our price, $30 to $250; McKinley price, $40 to $315.
>
> English printed dinner sets, in a large variety of decorations and patterns—Our price, $8.50 to $100; McKinley price, $11.50 to $135.
>
> Retail department, French & Potter Co., Wabash Avenue and Washington Street, Chicago.

It is obvious that the French & Potter Co. are not paying large sums of money in advertising merely to bring the McKinley bill into discredit. They are seeking to attract buyers by showing how much cheaper they can get crockery and glassware for their tables now than they can after the McKinley bill passes. A decorated china dinner set now costing $30 will be advanced to $40, and a printed one from $8.50 to $11.50. This is to be accomplished by adding to the dutiable value of the things imported the cost of crates, packing, inland freight, commissions, port charges, and all other expenses connected with the shipment, which are disproportionately heavy for such bulky and fragile goods as crockery and glassware. The duty on this kind of crockery is 60 per cent. It is proposed to increase this exorbitant tax by requiring the importer to pay 60 per cent. duty on the crates and straw in which they are packed, and which are worth nothing afterward, on the labor of packing and carting, on the foreign railway and insurance charges, etc. In every case where any such thing now costs a dollar, it is to cost hereafter a dollar and sixty cents.

Mr. Darlington of Pennsylvania is a worthy member of the Republican party in that State. In the House on Tuesday, he made the following curiously vulpine statement about the charges against Quay:

> "Mr. Darlington (Rep.)—I move to strike out the last word. I do not take very much interest in the kind of discussion that we have had here lately on this bill, but, as an act of justice to the Chairman of the Republican National Committee, I wish to make a brief statement. Mr. Quay, the gentleman to whom allusion has been made here, was State Treasurer of Pennsylvania, and I was on his bond for the sum of $50,000. When he was elected Senator, he resigned the office of State Treasurer. There was no defalcation nor anything of the kind. I never was called upon as bondsman to pay one dollar. I never heard of this ridiculous story until to-day, and I here pronounce it false in every particular so far as Mr. Quay's connection with the State of Pennsylvania as State Treasurer is concerned."

Now, observe how easy it is to expose this man. Quay was *Secretary of State* when he took $260,000 from the State Treasury and lost it in stock speculation. When he was State Treasurer, and Darlington was his bondsman, he took $400,000 and speculated with it and made money, and restored what he had taken. Consequently there did not appear to be any defalcation when he went out of office, and of course Darlington had nothing to pay on his account. So that in all that Darlington says there is not one word of real answer to the charge, but he tried to impose it on his hearers as a "vindication."

The Republican moralists are covering themselves with glory in this Quay matter. Here comes Prof. D. H. Wheeler, LL.D., of Alleghany College, to excuse Quay in the *Christian Advocate* for not answering the charges recently made against him. According to the Professor, the Senator's refusal to notice them "is a good example to us all." The reason of this is, that "a libel suit would be worth more than the highest possible cost to the *World*. At the end of it, no one's judgment would be changed. The only way to test the truth of the charges is for some one of his numerous and powerful enemies to prosecute him in the courts of Pennsylvania. If the charges are true, they can be legally proved." But how could people's judgment remain unchanged if Quay disproved the charges in the courts of New York by sworn testimony? Surely a LL.D. knows that the procedure in the courts of New York is substantially the same as in the courts of Pennsylvania. Witnesses on each side are sworn, examined, and cross-examined; documentary evidence, if any there be, is produced. The judge charges, and the jury deliberates and finds a verdict, in this city just as in Philadelphia. What kind of man would he be who, after hearing Senator Quay's evidence showing that the whole story about his robbing the Treasury was a baseless slander, would refuse to change his judgment? Nobody except a knave or a fool could go on believing, or even pretending to believe, the charge after Quay had in open court exposed its falsity. Can it be that the Professor is drawing this inference about people in general from his own secret determination to disbelieve the charge, no matter how strongly proved? The rest of his reasoning makes this look probable. His contention is, that it cannot be true that Quay robbed the Treasury, because the Professor has himself become case-hardened against newspaper attacks; because John Field was a good appointment; because Wanamaker is a religious man; because a great many false charges are made in newspapers; because newspapers are reckless and filthy; because Dravo is a good man; and so on. Most sensible people, after reading the letter, will ask with amazement, Can it be possible that this man is a Doctor of Laws, and an instructor of youth, and a welcome contributor to a religious newspaper?

We commend the recent developments at Albany to the thoughtful attention of those political commentators who are in the habit of attributing all our worst legislative, municipal, and governmental abuses generally to our "immense ignorant foreign population." Who are the most active friends of undesirable legislation at Albany? They are Robertson, Erwin, Coggeshall, Vedder, Ives, and Cantor in the Senate, and Husted, Fish, Gibbs, and Sheehan in the Assembly. Are these foreigners? Every man of them was born in this country, and the majority of them are of American parentage. Some of them, like Mr. Fish, are of illustrious and honorable stock. Is it the fault of the "ignorant foreign population" that these men pursue the course that they do? Is it any wonder, when they misuse public office, that ignorant foreigners who happen to get into other offices imitate their bad example? Our worst governmental troubles do not come from the ignorant voters, foreign or domestic, but from educated Americans, who misuse the power which those voters are induced to place in their hands. That is as true of Congress as it is of our Legislature.

New England complains that her farms are being deserted, and that the population of her agricultural districts is dwindling. So serious has the situation become that more than one State has instituted measures to promote immigration and thus fill up the waste places, Vermont even sending across the Atlantic and bringing people all the way from Sweden. Yet at the same time the leading journals of New England contain flaming advertisements of land companies, organized with New England capital and officered by New England magnates, which urge New England people to abandon their present homes and settle in the South. An ex-Governor of Vermont is President of one of these companies, and another ex-Governor is prominent in another such company. In this way one may sometimes read in one column of a newspaper an article describing some movement to resettle deserted farms in a New England State, and in another column of the same issue find an advertisement which holds out the strongest inducements for the desertion of farms that are still cultivated.

THE LATEST SILVER BILL.

ALTHOUGH a joint caucus of the Republican members of the House and Senate Committees having the subject of silver money in charge have agreed upon a bill, it would be unsafe to predict that the bill, or indeed any bill, will be passed at this session of Congress. Whatever may be said by interested parties in Wall Street or elsewhere, the fact that business goes on without any hoarding of gold to speak of, or any rush to buy sterling exchange, proves that business men do not take the bill or bills seriously, no matter what juntas of Congressmen may have agreed to them.

The latest bill agreed upon provides for the following things:

(1.) The purchase by the Treasury of 4,500,000 ounces of "free silver" per month. What is meant by free silver we do not know. As there is no silver in prison except that in the Government's vaults, we conclude that it means pure silver as distinguished from standard silver nine-tenths fine. If this is the meaning, the bill requires the purchase of about 5,000,000 ounces of standard silver per month, which, at one dollar per ounce (the present quotation is 105), would add $35,000,000 per annum to the public disbursements.

(2.) The bullion is to be paid for by a new kind of Treasury notes of denominations of $1 to $1,000.

(3.) These Treasury notes are not to be legal tender. They are to be redeemed, however, on demand, in lawful money of the United States, are to be receivable for all Government dues and available as reserves of the national banks.

(4.) "The Secretary of the Treasury *shall* coin such portion of the silver bullion purchased as may be necessary to provide for the redemption of the Treasury notes herein provided for." This is a legal definition of the phrase "lawful money of the United States," as used above. It commands the Secretary to redeem the notes in silver dollars, and not otherwise, except where the holder of the notes calls for bullion instead, in which case the Secretary may, if he chooses, weigh out to him an amount of bullion equal, at market value, to the face of the notes.

(5.) The bullion not required for redemption of the notes is to remain in storage as bullion, and the existing two-millions-per-month law is to be repealed.

The bill is rather more complicated and harder to understand than the Windom bill. It is the most obscure and involved of all the bills that have been talked of, and therefore is the one least likely to pass. Congress will hardly pass a measure which the public in general cannot understand. There are three things which common people can understand: they can understand the present law, and any enlargement of coinage under the present law, and they can understand free coinage. Anything more involved they cannot understand. It is doubtful if fifty members of Congress, taking House and Senate together, can form a clear opinion of the workings of this bill, or will ever take the pains to do so.

Is it desirable that such a bill should pass as an alternative to the present law? Clearly not, for the reason that it adds thirty-five millions per annum to the Government expenses at one stroke, and for no value received. The present burden upon the Treasury is exactly the amount of bullion purchased, over and above the amount of silver certificates bought and paid for by the public. The amount of certificates so bought has thus far been equal to the bullion purchased. If we count the seignorage, there has been a gain to the Treasury of $56,000,000 in all. But we have to reckon on the other side the declining value of silver since the Government began buying, which in case of a liquidation would wipe out the apparent profit and a good deal more.

Experience teaches that the present coinage rate of two millions per month is all that the public will take off the Secretary's hands. Any excess of purchases will, therefore, be an addition to the public expenses, exactly the same as a new pension bill or any other unproductive expenditure. It is the same thing as buying any kind of property not wanted for use, as, for example, iron, or cotton, or coal. But the consequence of a great increase of the public expenses is to create a Treasury deficit, and, whenever this happens, and however it may come about, the Treasury will no longer be able to maintain the parity been gold and silver. Not only will the silver crisis then begin, but another kind of crisis will begin at the same time. A Treasury deficit does not exhaust itself with silver payments. Unless taxes are increased, so as to choke the deficit, bonds must be issued to meet current expenses. This is what we have to look forward to if any such insensate measure becomes a law.

THE TAMMANY BIOGRAPHIES.

Two of the members of the Tammany Executive Committee whose portraits were recently sketched by the *Evening Post*, and only two, have had the audacity to exhibit their resentment by obtaining warrants of arrest for criminal libel. One of them, Peter Mitchell, did this, we think, out of his own head. The other, "Barney" Martin, was, we feel pretty sure, impelled thereto by the "Big Four," as they are responsible for him more directly than for Mitchell. They have made him their Deputy-Commissioner of Public Works, while Mitchell is simply a civil justice by appointment of Gov. Hill. How either of them screwed up his courage to go to a police court to get protection for his character, it is difficult to explain except on the theory that the toleration they have so long enjoyed has caused them to lose their heads and forget their antecedents.

The *Evening Post* is now able to add positively in regard to Mitchell that he was a receiver of stolen goods when he kept the rum-shop at the corner of Bleecker and Greene Street, and that he was in partnership with Sharkey, the murderer, in another rum-shop at 202 Broadway, when Sharkey tried to get a stolen gold certificate cashed and was arrested. Mitchell exerted himself vigorously and successfully, both by political influence and swearing to an alibi, to secure his "pal's" deliverance. His alibi affidavit bears the following significant endorsement by Oakey Hall, who was then Mayor:

> I recommend a *nolle prosequi* in the case referred to within. A. OAKEY HALL,
> Ex-District Attorney.
>
> DECEMBER 20, 1869.

The *nolle prosequi* was entered finally October 7, 1870. It was altogether an artistic piece of work, beginning with a dexterous indictment for grand larceny, which was not provable, instead of an indictment for receiving stolen goods, which would have been provable. Sharkey got off, and subsequently committed a murder and made his escape while under sentence of death in the Tombs, by exchanging clothes with a dissolute woman, who, after the fashion of those old Tammany days, was allowed to visit him in prison.

In December, 1870, Mitchell was admitted to the legal bar after having, according to his own story, studied law behind the liquor bar, at the same time with Tweed's son Richard. The manner in which the Committee on Character performed its duty in those days may be inferred from the foregoing account of Mitchell's previous career. He has since then practised at the criminal bar of this city, he says himself, in a creditable manner, and we have been informed by competent observers that he is superior to his brethren in that branch of the profession, in that he does not strip his clients of everything they possess and subsequently sell them out to their enemies. About this, however, we know little but what he tells us. But we do know that he has all the while been doing his regular stint of work in the field of politics covered by Tammany Hall, and that we now find him a leading spirit in the corrupt and criminal gang known as "the Executive Committee" of that institution.

With regard to Barney Martin, it was an overstatement to say that "he kept" the "Burnt Rag." We believe that he simply had an interest in it, and made it his headquarters or "boosing-ken." Nor was it quite accurate to say that Mr. Moir, the jeweller, put bars on his windows when Barney, "Red" Leary the famous burglar, and his wife Kate the famous pickpocket, had set up a rum-shop next door to him. The bars, it seems, were there already when they arrived, but Mr. Moir would testify that he considered them very dangerous neighbors, and Mr. Coogan, the landlord of the premises, that he went to collect his rents of them with fear and trembling.

The point with regard to both Mitchell and Martin to be borne in mind by the public is, not simply that they are men whose lives have been vicious or infamous, but that they are members of an organization which at this moment charges itself with the duty of dividing the money of the taxpayers and the public offices of the city as booty among a parcel of criminal or semi-

criminal adventurers. What is far worse is that they fill places of trust in the city government. For Mitchell is one of our judges; not in one of the superior courts, it is true, but still in a court in which the justice of the People of the State of New York is administered, and on which the poor and lowly are dependent for the assertion of their just claims and the protection of their small rights. It would be an insult to the intelligence of our readers to explain the horror and indecency of this.

"Barney" Martin, too, holds an office the administration of which greatly concerns the health, comfort, and property of the taxpayers. In the absence of the Commissioner of Public Works, Martin, as his deputy, fills his place and exercises his powers. Consider for one moment the light which this fact throws on the notions of public duty held by the Commissioner, "Tommy" Gilroy. He appointed Martin with full knowledge of his antecedents. In all the politico-criminal circles of this city Martin has long been a prominent man. He was fully exposed in 1886 by a rising against his leadership in the Seventh District, on account of his vicious life, by the more respectable members of his own party, headed by Mr. Knox, the well-known hatter. Their movement was reported and commented on by the New York *Times* of September 21, 1886, in as strong language touching Martin's career as we have employed. It proved beyond question that Gilroy knew him well when he drew him out of the haunts of vice and crime and gave him a place of trust in the public service with a salary of $6,000 a year. And yet this same Gilroy had the brass to lament last winter over his and Croker's inability to do great things for the city, owing to the cruel suspicions and aspersions of a licentious press.

The work the *Evening Post* has been doing about these men and their kind is work which ought not in any highly civilized community to devolve on a journalist at all. We do not believe any civilized community has heretofore left it to its journalists. The way in which such men usually come under the notice of the press is in comment on the efforts of the police to watch them and catch them, or on the sentences passed on them by the criminal courts. Writing their history with the view of keeping them out of places of civic honor and trust is surely an unprecedented editorial experience in a great capital; and yet this is the task which New York to-day imposes on its newspapers. It is a task which, it seems, has to be performed, but it is one which no respectable journalist can perform without some shame and indignation.

MR. WARNER ON COPYRIGHT.

THE Senate has recently ordered printed, as Executive Document No. 57 of this session, "Sundry reports, prepared for the use of the International American Congress." The subjects reported upon in this pamphlet of 118 pages are weights and measures, patent laws, trade-marks, copyright (pp. 61-70), and a uniform system of customs regulations; while there is added a useful list of the treaties of the United States with foreign Powers from 1776 to 1889, prepared by the Universal Peace Union of Philadelphia. The report on copyright is from the pen of Mr. Charles Dudley Warner, and it might easily be supposed that he had written it fresh from a reading of the chapter in Mr. Spencer's 'Social Statics' which treats of "The Right of Property in Ideas." Mr. Warner shares with Herbert Spencer the feeling that modern legislation fails to give due protection to this species of property; but he is hardly just to the real advance which has been made in copyright legislation during the last twenty-five years when he says:

> "Copyright laws, as now existing in the countries most advanced in civilization, are of ancient and crude form, and indicate little of the increased wisdom and aggregated experience which have made modern statute-books admirable illustrations of an enlightened age. Regarding literary products as property, they nevertheless afford it a very limited protection, punish mildly or not at all the theft of the property, and grant to the owner and his heirs that protection for only a short time. But the most glaring relic of ancient times of ignorance and exclusiveness, when governments little considered the broad principles of universal justice, is copyright laws which protect only the owner or resident in a country, and permit its citizens to appropriate to their own profit in their factories the property of aliens. . . . In our enlightened time no one who is not interested in appropriating such property can be found to defend the semi-barbarous character of the modern copyright legislation of some countries on both sides of the Atlantic."

These words can appropriately be applied to our own copyright laws, but the implication that they are also true of the copyright legislation of the other American States is, we think, an injustice to the latter. Perhaps Mr. Warner is not aware that three of these States, Mexico, Guatemala, and Venezuela, grant, by comparatively recent legislation, copyright in perpetuity. So, also, when, in speaking of the Berne International Union, Mr. Warner says that "from this arrangement the republics of the Western Hemisphere stand aloof, presenting the anomaly to the world of communities founded upon the acknowledgment of the rights of men lagging behind in one of the essentials of liberal and enlightened government," he fails to point out the very different attitude towards the Berne Convention assumed by the United States and the South American republics. The United States, in plain language, refuses to pass such legislation as will permit it to enter the International Copyright Union, for the sole reason that it is reluctant to give up the material advantage of possessing and using the power to plunder the citizens of foreign countries of their literary property. The States of South America, on the contrary, have promptly formed an International Copyright Convention among themselves, modelled upon the Berne Convention, and apparently more liberal even than the latter as regards some of its provisions. These States are, therefore, eligible to membership in the International Union, and it is probably only a matter of time and convenience as to when they will become active members, whereas the United States is not eligible, and cannot be until there is a more thorough reform of our copyright statutes than our people seem yet sufficiently aroused to demand of Congress.

Further on in his report Mr. Warner says: "It has been suggested that an American author ought not to have a foreign ownership of his work unless he make a contract giving a foreign publisher an interest in his copyright. The suggestion is so grossly unjust that it needs but to be heard to be rejected. There is no existing relationship between authorship as a business and publishing as a business, except what may arise from contract between author and publisher. To create one by giving the publishers of one country a perpetual lien on the authorship of all other countries would be a degradation of the law-making power." We think so too, but we wish Mr. Warner had given the source of this suggestion, for we have never heard of it before, and we doubt if it originated with any South or Central American State. Indeed, we had supposed that this idea of providing for the publishers at the expense of the authors, in copyright legislation, was also peculiar to the United States. It was a provision in the Clay bill of 1837, the report on which Mr. Warner recommends to the Commission and prints as an appendix to his paper; and it may be said to be the central idea of the Chace bill now—fifty-three years later—before Congress. When Congress put copyright upon the list of subjects to be considered by the Pan-American Congress, it was an opportunity which should have been seized upon by the friends of international copyright to present to members of Congress and the delegates to the Conference a practical document in comparative jurisprudence. A report containing a careful study of the existing copyright legislation of the Latin nations of America, supported by the complete texts of all the copyright statutes of these countries, and the text of the South American Copyright Convention, properly translated and set over against our own inadequate copyright laws, would have forced upon the attention of Congress and the people the backward and discreditable position occupied by our own country in relation to this subject, and could hardly have failed to produce good results. Such a document would have pointed out the proper and dignified action which the Conference could have recommended and Congress could have taken, and it might very possibly have resulted in the first and most important step towards putting the copyright legislation of the United States in line with that of the legislation of other civilized countries upon this subject.

THE INFANT PRODIGY.

A VETERAN entered at my gate
With locks as cherry-blossoms white;
His clothes proclaimed a prosperous fate,
His boots were arrogantly bright.

The hat was glossy on his head,
Gold-rimmed his eye-glass, gold his chain,
In genial curves his waistcoat spread,
And golden-headed was his cane.

Without a preface thus he spoke,
"I've called to get my annual due";
Whereat I too the silence broke
With, "Who, respected sir, are you?

"What is your claim against me, pray?
A many-chilled man am I,
Hard-pinched my monthly bills to pay,
And prices rule perversely high."

"Not know me? Everybody knows
And gladly gives his mite," quoth he,
"Why, I'm a babe in swaddling clo'es,
I am an Infant Industry."

"Forgive me, Reverend Shape," I cried,
"You set my faith a heavy task;
This infancy which seems your pride,
Is it your *second*, may I ask?

"Or have you, where so many failed,
The key to life's Elixir found?
You look like one who never ailed,
In wind and limb sedately sound."

"You doubt my word? (Excuse these tears,
They flow for you and not for me;)
Young man, for more than seventy years
I've been an Infant Industry.

"Your father rued my helpless lot,
Lifelong he handed me his fee
Nor ever asked himself for what;
He *loved* an Infant Industry."

Quoth I, "He paid my ransom then
From further tribute, small or great;
Besides, if I can judge of men,
Since that, you've grown to man's estate."

He murmured, as I bowed him out,
"The world is getting worse and worse;
This fellow almost makes me doubt
Whether I've not been changed at nurse.

"But no, this hat, this cane, these boots,
This suit in London made by P.,
Convince me to the very roots
I am an Infant Industry."

Until he vanished from my sight
These words came floating back to me:
"Yes, 'spite of Time, in Reason's spite,
I *am* an Infant Industry!"

F. DE T.

GOVERNMENT AND TARIFF IN CANADA.

OTTAWA, April 3, 1890.

EARLY spring is the most unattractive time of the year in Ottawa. The clean hard snow of winter gives place to a slush containing in a thin stratum a season's accumulation of refuse. The city is at no time handsome, and is now untidy and confused; the country about is rusty; and from the towers of the Parliament buildings one sees little but sombre forests and dark rivers. In striking contrast are the Government buildings, grouped about the trim terrace, with its Parliamentary cricket-ground for late summer sessions; there is about them an air of British solidity and British comfort, and the most recent department building is a beautiful example of the Romanesque as applied to public purposes. Perhaps the contrast between the capital and the Capitol is not an unapt parallel to the social and political condition of the Dominion of Canada. On the one hand, the rawness of a new organization; on the other hand, a government of extraordinary precision and smoothness of operation. One cannot rid one's self of the feeling of incongruity.

The unfamiliarity of Americans with Canada is astonishing. Many thousands of us every year pass down the St. Lawrence, admire Montreal, and enter Brittany or Languedoc through the gates of Quebec; but we are hardly more ignorant of the institutions of Mexico than of those of a neighbor having thirty-five hundred miles of common boundary and a reciprocal annual trade with us of nearly forty millions. This ignorance is the more unfortunate because the Canada of 1890 in many respects closely resembles the United States of 1820. The population is, to be sure, much less, being but 5,000,000 against the 10,000,000 shown by the census of 1820; but the Canadian cities are in numbers and wealth greater than the American cities of that time. Territorially the comparison is very close. Canada has both well-organized provinces and dependent but reckless and insubordinate territories. Immense quantities of wild land still exist throughout the Dominion, and stimulate immigration and a large sense of future development. As I have watched the operation of the Government, I have even seemed to discover a division into sections not unlike that at the time of the Missouri Compromise. The maritime provinces occupy in Canadian politics much the same commercial position that New England had; Quebec, with its unique traditions and its fiery race of statesmen, resembles the South in American politics; Ontario well represents the Middle States; and Manitoba and the Territories stand for the West. The parallel is by no means fanciful. No one who looks about him in Canada can fail to see that it is a sinewy young nation, in spirit very like the early United States. The same imperfect but increasing consciousness of a place in the future history of the world animates it. The same questions arise of the development of a Federal system. The parallel is most striking in commercial and financial matters. Just now Parliament is engaged upon the tariff, and the discussion of that question is especially instructive to us; for the so-called national policy of Canada seems to be nothing more nor less than Clay's American system applied under very similar conditions.

Nevertheless, the machinery by which legislation is secured is so different from ours that it is difficult to recognize the familiar principles and arguments. Within, as without, the Parliament buildings singularly combine beauty with adaptation to their purposes: the corridors, the committee-rooms, are less magnificent than those in the Capitol at Washington, but are decidedly more convenient, and the chambers of the Senate and House of Commons are models of lightness and solidity. The Canadians understand the art of public building better than their southern neighbors. The people of Quebec, for instance, shake their heads over the three millions put into their new Provincial Parliament buildings; but for that three millions they have a Capitol far surpassing in effect the Albany State House. One of the most attractive parts of the Houses of Parliament at Ottawa is the library, housed in a most beautiful domed room and carefully arranged as a Parliamentary workshop of books. Even here one is met by the dual languages: two librarians in two offices are equally courteous, but one in French and the other in English. It is almost the same in the House of Commons: there is not only a division into parties, but each party has a French wing and an English wing, and occasionally speeches are delivered in French. So far as I can judge from observation and conversation with members, there is a higher standard of experience and public spirit among the members of Parliament than among members of our State legislatures or of Congress. Changes are less frequent—eight members of the present Parliament have sat since confederation in 1867. Several of the younger members are pointed out to me as sons of former members, and practical inheritors of their seats. I might have thought it aristocratic, but for remembering the Pennsylvania Camerons.

Certainly a far greater share of the time of the members is devoted to the public business. One member of the House and of the Ministry does, indeed, complain that the death of a collector in his district has brought upon him a series of deputations of constituents seeking the vacant office. The patronage, he says, is the most disagreeable incident of the office; but it is fortunately confined to a very few classes of officials, and vacancies are not created by any artificial means. Of the Senate it is not possible to form a judgment, inasmuch as that respectable body has adjourned for lack of business; there seems to be a general feeling, however, that the appointive life Senate is the weakest and least satisfactory part of the Government. The presence of the two houses, and of a permanent staff of officials, brings to Ottawa a very agreeable society, again suggesting Washington in 1820. The official receptions of the Governor-General and of the Prime Minister can be more general in a small capital; and the private hospitality among the people and toward visitors is most easy and delightful.

The Prime Minister is, however, "at home" rather in the House of Commons, of which he has been the recognized leader as Prime Minister during eighteen of the twenty-three years of its existence. "Sir John," as he is universally called—there is no need of adding Macdonald—and the rest of the Ministry occupy the first row of desks on the right of the Speaker. Mr. Mackenzie, the former Liberal Premier, Mr. Laurier, the nominal leader, and Mr. Blake, the actual leader of the Liberal party, with their followers, sit opposite them. The Speaker, in gown and white gloves, sits under his canopy between. In this arrangement, and in the occasional wearing of the hat during the sitting, the outward resemblance to the British House of Commons ceases. Members lounge in and out and read the newspapers or write letters during the session, as in Washington. In the procedure one at once recognizes a different system. It is not the frequent use of the "Honorable Member" or the "Right Honorable Member" so much as the formal questions put to the Minister and the courteous references to the "Government," which mark the outward side of responsible government. In the delicate and somewhat opinionated face of Sir John one reads the conscious enjoyment of power; but his manner is singularly quiet and almost deferential. The Ministry as a whole seems to me equal in ability and superior in debating power to most presidential cabinets, and well it may be: every member is an experienced Parliamentarian, and must be able to defend his department and his party on the floor; and many of the thirteen Ministers have seen years of executive service. A good Minister, so long as he holds his seat in Parliament, is likely to continue in office, or to be transferred to a more important department.

The present stage of the tariff debate does not bring out the leaders. I have been, therefore, quite as much interested in the Railroad Committee, one of the great organizations for preparing legislation. Imagine a body of about one hundred—one-half the whole House—in informal session, at a time and place announced by public notice, to consider a specified bill. Any person interested may be heard, and the interests of the railroads are represented by counsel. The question is considered on its me-

rits, without any application of rules; each clause of the bill is read and voted on, and the final decision of the Committee is taken by a public yea-and-nay vote. If a proposition is clearly not supported, it is simply not reported to the House; should it be reported, the later debate is upon details. Such is the simple, effective, and public process of sifting measures in great committees. Of course no bill can be reported against which the Ministry protest. The Prime Minister is present, but does not commit the Ministry to or against a proposition unless it clearly affects great lines of policy.

This elasticity is characteristic of responsible government, and greatly facilitates legislation. Party lines are not drawn on unimportant questions. There is little manœuvring for position and "putting the other party in a hole"; but when the Ministry adopts a policy, its supporters must follow, or cause the downfall of the Administration. To an outsider there seems very little contrast between the Conservatives and the Liberals. On questions of individual rights, of the public service, there seems no essential difference. There is, however, a strong antagonism on commercial questions. Here again the Liberals have had to yield to the clamor for State assistance to railroads, but they are now standing out with all their power against the tariff policy of the Government.

The political development of Canada was so slow that an independent financial and commercial policy was not possible till after 1846 and the adoption of free trade by England. To Canada then, as to the young United States a century ago, the policy of revenue duties on imports seemed the only feasible one. When, therefore, power was given the Confederation in 1867 to lay such duties as it might see fit, there was no expectation of a protective tariff. The reciprocity treaty with the United States had just expired, and the policy of the Canadian Government was to renew it. On both sides of the line came a change of policy; the *Alabama* controversy prevented negotiation; the fishery difficulty was unsettled; the war tariff continued in the United States, thus shutting out many Canadian exports. Canada herself began to lay high revenue duties, eventually rising to a maximum of 25 per cent. and looking towards the establishment of manufactures. This was the so-called "national policy"; it seems to me in essence like the countervailing legislation of the United States from 1815 to 1830. After 1878, the duties were gradually increased, and the present Canadian tariff in many respects approximates to that of the United States. There is even a duty on books.

The present state of the tariff discussion in the United States, and the recurring fishery troubles, have persuaded the Conservative Ministry that there is no immediate hope of any reciprocal arrangement; and a new tariff is now proposed by the Ministry, and will doubtless pass. It embodies two principles: an increase of duties, and duties on American food products. Like the United States in 1824, an agricultural country is trying to establish itself in home manufactures. Unlike the United States at the same time, it cuts off those articles of food which may advantageously be imported. It is a return to the Corn Laws. At the same moment Congress is legislating against the agricultural products which Canada is well situated to produce. Mr. C. C. Colby, President of the Privy Council, an American by birth, and held to be one of the most sincere and intelligent of Canadian statesmen, voices the policy of the Government thus: "Free trade between Canada and the United States, in all agricultural products, would be the worst possible thing that could happen to the farmers of Canada at the present time." Of course objections pour in from lumbermen and fishermen who have long depended on certain preferred American imports; but the country is committed to the doctrine of all-round protection. The probability that the United States will still further discriminate against Canadian products is foreseen and accepted. The vigorous protests of the Liberals are based upon the unfortunately selected ground that their country, especially Ontario, is retrograding, and has fallen behind her neighbors.

The effect of this double retaliatory policy upon both sides of the line is not difficult to predict. The United States will lose the custom of Canada, and must deny herself valuable imports from Canada. The friendly relations which ought to exist between two neighboring countries, so nearly alike in tradition and interests, are more and more strained. For this unfortunate result the United States is primarily responsible, by its long refusal to cultivate advantageous trade with Canada; but the United States will suffer far less in a struggle of tariff against tariff. Canada is essentially a poor country. There are thousands of industrious people, but not one good farm-house visible from the railroad between Quebec and Ottawa, three hundred miles. The average wealth of the nation is certainly much below that of the United States, and the debt is proportionately much greater. Enterprise it has, Gallic spirit and Anglo-Saxon tenacity—otherwise the country would have remained a wilderness. But the sun must shine as warmly on the Saskatchewan as on the Mississippi, and the corn must ripen in Manitoba as it does in Illinois, before Canada can support a manufacturing population to compete with that of the United States.

ALBERT BUSHNELL HART.

FROM THE CAPE TO ST. HELENA.

SAINT HELENA, February 20, 1890.

AT last the old *Pensacola* finds herself again in the roads of St. Helena, where she dropped anchor this morning about eight, in the little bay of Jamestown in the northwest of the island. I say again, because she has been here once before at least—on the way home from the Asiatic Squadron six or seven years ago. Jamestown has changed but little in the interval, and the change has been that of decline rather than progress. But more of that another time. Our voyage from the Cape took just a fortnight under sail—life at sea with ideal conditions.

I do not now recall whether in a previous letter I alluded to the signal service rendered the Expedition by Dr. David Gill, the Astronomer Royal at the Cape. But even if I did, it should again be mentioned here, embracing as it did courtesies and facilities nowhere else extended to the scientific staff or any of its members. Ample rooms at the Observatory were assigned for the work of the Expedition; the magnetic instruments were mounted in small tents in the Observatory grounds; and Mr. Preston set the Peirce pendulums swinging only a few feet removed from the precise spot occupied by the pendulum-observers, Foster and Sabine, a half-century ago. Both H. M. Astronomer and Mrs. Gill have the warmest thanks of the officers of the *Pensacola* and the Expedition for their unfailing hospitality during our sojourn at the Cape.

Before leaving the Observatory, opportunity offered, by the kindness of Dr. Gill and Mr. Woods, for testing one of the large lenses furnished the Expedition by the Gundlach Optical Company for photographing the sun's corona. It is a lens of unusual purity, and was made from the new Jena glass. The test was made upon the Orion stars, in work similar to that which Dr. Gill is now conducting as the photographic extension of Argelander's 'Durchmusterung' to the south pole of the heavens. The performance of the lens showed qualities quite remarkable, both as to the extent of its photographic field and the rapidity of its action. More the pity that it should have had no chance at the corona at Cape Ledo.

The resources of the excellent library at the Cape Observatory were freely and gladly drawn upon by Professor Bigelow, who spent nearly all his time there, hard at work upon the theoretic researches upon the corona and terrestrial magnetism, the beginnings of which are outlined in his paper already published by the Smithsonian Institution. To say much about this work as yet would, perhaps, be premature; but if the key to the solution of the complex phenomena of the corona and terrestrial magnetism has not actually been found, it surely looks strongly that way.

Among the great variety of works undertaken by Prof. Abbe at the Cape was an attempt to interest the scientific gentlemen of the Colony and the colonial authorities in the formation and permanent establishment of a weather service on the model of those already in efficient operation in Europe, America, Japan, and elsewhere. To this end, one meeting of the South African Philosophical Society was quite given over to Prof. Abbe, who delivered an address on the modern weather service, which the Society is printing. Meteorological observations have, of course, been made for years at a number of colonial stations, under the superintendence of Dr. Gill, and the time may not yet be ripe for that amplification of the service which the organization of systematic weather predictions would entail. However, the seeds at least have been sown; it remains to be seen in what sort of ground.

I dare say the idea of a Philosophical Society in the south of Africa will strike most Americans as no less an incongruity than the idea of a Philosophical Society in Idaho or the Indian Territory would the average Bostonian. As I may presume that a few facts about it will find a welcome place in the *Nation*, I will say that (1) there is such a society, (2) its membership is about one hundred, (3) it publishes an excellent series of transactions now printing in the fifth volume. The Society was founded by the Right Hon. Sir Bartle Frere, F.R.S., nearly fifteen years ago, and he became its first President. The office cannot be held by the same person longer than two years, and the successors of the founder have been Dr. Gill, Mr. J. G. Gamble, Roland Trimen, Esq., F.R.S., and Prof. P. MacOwan, F.L.S., the present Director of the Botanical Gardens and Curator of the Cape Government Herbarium. He is a thorough botanist, and probably the only person living in the Colony capable of completing the Flora Capensis, which, if not done now, must likely lie over for another generation. It would seem appropriate that the Government should relieve him of such part of the current routine as others might well perform, in order that he might complete the task of the remaining volumes, and bring the rich flora of the south of Africa within reach of the world.

But I was going on to say that, glancing through the fascicules of the transactions of the Philosophical Society of South Africa, I see at random such papers as the following:

On continuous girders, arched ribs, and tension circles; some observations on witchcraft in Basutoland; on the limestones, granites, and gneiss of the Colony; on the stone implements of South Africa; on free rigid rotation, summer and winter temperature in South Africa; note on *Tinea vastella* (a South African moth whose larva feeds on horn); contributions to the South African coleopterous fauna; a great variety of philological notes; and 'The Orchids of the Cape Peninsula,' the last a masterly work of about 200 pages, finely printed, with thirty or forty partly colored plates, and which compares very favorably with European contributions to orchidology.

At the Cape it was next to impossible to hold the Expedition together; in fact, no attempt was made to do so. All were free to pursue the lines most agreeable. One detachment proceeded at an early day to Kimberley, six or seven hundred miles into the interior, to investigate the diamond fields and report upon present methods of separating the stones from the "blue" or diamondiferous rock-earth. Many specimens were obtained for the National Museum. The Expedition is greatly indebted to Mr. A. Difford, Secretary of the Department of the Cape Government Railway, for numerous courtesies.

The naturalists found much to interest them and to occupy their time to the full. Collections were prosecuted along various lines. The members of the Philosophical Society, knowing well the fauna and flora of the colony, were able to give much assistance and advice, and they have the best thanks of the Expedition for the services they so willingly rendered. In particular the Expedition is indebted to the Rev. G. H. R. Fisk for a very valuable collection of tortoises, embracing *Testudo pardalis*, *T. angulata*, *T. trimeni*, and *T. tentoria; Homopus areolatus*, *H. femoralis*, and *H. signatus* (the representative of these last being very rare away from the Cape), and forming a perfect series of the South African *Homopus*. If I do not mistake, complete series have heretofore been presented to the French zoölogists and to the British Museum alone; but some of them arrived only in alcohol. We may have better luck with our own, as they have so far done well at sea, and will, I hope, reach their Washington quarters alive.

Both naturalist and anthropologist found the outlook so promising in the Colony that they applied for discharge from the Expedition there, in order to continue their work in the Cape peninsula. The opportunities were, indeed, rare. A great exploring expedition was about organizing under the auspices of the English syndicate to which the King of the Matabele has granted unusual privileges and concessions; and Mr. Brown, the naturalist, will accompany this expedition in an official capacity. The region has for the most part been untravelled by white men, and is represented as very rich in material for naturalist and anthropologist, especially the latter. I think I have not previously alluded to the anthropological work of the Expedition in Angola, which might have been better had our stay been longer. Physical measurements were made of the Umbundus, Cabindas, Bailundas, Quissamas, and others. Collections of folk-lore and mind-products were attended to, and materials for a general study of fetishes obtained. Also, the manual of the British Society was taken as a guide in gathering information about a great variety of subjects which I need not detail here.

Our reception at Saint Helena has been very warm, and the *Pensacola* is evidently very welcome. Gov. Grey-Wilson some months ago, acting on the information very wrongly given in Whitaker to the effect that last December's eclipse would be total at Saint Helena, most courteously offered the American Expedition the civilities and hospitality of the island for an observing station—an offer which we are most sorry that celestial circumstances over which we had no control prevented our accepting; the more so now that we have seen what a charming region the interior of Saint Helena really is—so different from the forbidding cliffs which continually frown above Jamestown. The Governor is now temporarily absent in London; but the Expedition has found no want unsupplied, the Acting Governor, Mr. Antrobus, having cordially afforded all possible attentions which might in any wise serve to facilitate our work. Mr. Preston and Prof. Bigelow are confined every night with the pendulum-work at the Castle, where excellent surroundings are commanded. Prof. Abbe is roaming over the island, barometer in hand. After a week or more, a secondary gravity-station will be established at Longwood, not far from the spot where Napoleon lived and died. By the 10th of March the *Pensacola* will have sailed for Ascension—a week's voyage by the trades nearly directly northwest.

DAVID P. TODD.

Correspondence.

MR. HAMERTON AND LONDON.

TO THE EDITOR OF THE NATION:

SIR: I perceive that by a slip in your notice of the *Portfolio* I am made to say that I never lived in *England* for more than three months at a time. The passage incorrectly quoted said that I had never lived in *London* for more than that space at a time, which is quite bad enough without exaggerating it, and gives an arm against me to the very few enemies I have. The truth is, that London never suited my health. However, I made rather a long stay there (for me) towards the close of last year, and bore it much better than might have been expected. The climate of Autun is severe in its extremes of heat and cold, and is said to kill off delicate people quickly, yet, for some reason that nobody can explain, it suits me better than any other. I am not what is called delicate, though unable to endure for long the noise and atmosphere of London.

Sincerely yours, P. G. HAMERTON.

AUTUN, April 9, 1890.

"A LITTLE STORY ABOUT ORES."

TO THE EDITOR OF THE NATION:

SIR: Yesterday a friend called my attention to your editorial of April 17 under this heading, which, following a letter entitled "A Nickel Paradox" addressed last month by "W." to the *Nation*, states that I am now striving to have nickel ores put upon the free list.

To this totally fallacious statement you add other fallacies; and since the whole is intended to injure not me alone, but also and principally the system of protection to home industry, I thus reply:

(1.) You say that I openly confessed that I had fixed a former tariff to suit myself, and that I have again, with Mr. McKinley's coöperation, fixed the now proposed tariff. If I had fixed a tariff to suit myself, and had mentioned it, I should have *stated* it like a man, and not *confessed* it like a thief; but I never fixed a tariff to suit myself nor made any such avowal.

(a.) The existing tariff on nickel, nickel ores, nickel alloys, etc., which is doubtless the tariff you mean, I have always held to be grossly absurd.

(b.) Mr. McKinley and his Committee refuse to adopt the rates which I have recommended, and adopt others which I oppose.

The phraseology of the existing tariff law, defining the several forms in which nickel may be imported, is that which I suggested; the rates are not.

(2.) You say "it was stated on the floor of the United States Senate in January, 1883," that I was producing nickel "at 50 to 70 cents per pound," and with touching credulity you offer this partisan statement "on the floor of the Senate" as conclusive, though it was made by a man entirely ignorant of the business, and was in fact false.

You say that "by the efforts of the Connecticut Senators," the nickel duties "were reduced in 1883 from 30 cents on the ore and 20 cents on the alloys of nickel to the existing rates of 15 cents." This is erroneous. There never was a duty of 30 cents on the ore, but that rate was on the finished metal nickel, as even a Connecticut Senator could have told you, and the reduction to 15 cents in 1883 was apparently effected by an unworthy trick which its author will scarcely thank you for bringing into notice. The Conference Committee had before it for reconciliation the rate of 25 cents per pound on nickel which had been passed by one house, and the rate of 20 cents which had been passed by the other house; it reported neither of those rates, nor anything between them, but a new rate discordant with and beyond the limits of both. In the turmoil of final passage, this insult to both houses, which you attribute, perhaps justly, to "the efforts of the Connecticut Senators," was unnoticed, and the trick succeeded. Furthermore, in their ignorance or negligence, or urged "by the efforts of the Connecticut Senators," that Committee fixed one and the same rate of duty, namely, 15 cents per pound, on nickel in ore, nickel in matte, and refined metallic nickel. And this is the outrageous absurdity which you have been led to believe I "fixed to suit myself."

(3.) You say that so long as it was possible for him to work his Lancaster County mine, "Mr. Wharton wanted the highest possible tariff on the importation of all competing ores," but that he now, "so far as nickel ores are concerned, has become a rampant free-trader."

Having explained above that the existing absurdly high duty on nickel ore was not my work or wish, I now add that I have never suggested or desired that nickel ore should enter free of duty. In all my oral or written communications to the Ways and Means Committee, I have taken the ground that nickel ore should pay duty. This not only because of the injury that free importations might cause to my own mine in Lancaster County, Penn. (which you may regret to learn is still working, and has been working without a day's interruption except Sundays for many years, and is now being sunk to greater depth), but also because of the discouragement to other owners of American nickel deposits who wish them opened. The Canadian mines near Sudbury, which, in your large liberality, you call "American," are certainly good. I have more than once visited that region, have used its ores and mattes, have had many offers of nickel deposits there, and think seriously of opening mines there for the purpose of supplying in part my nickel works at Camden, N. J.; yet I have constant-

ly resisted the contention that the ores or mattes of Canada or of any other foreign country should enter our country free.

The Cleveland *Iron Trade Review* says: "Nickel ore is to come in free, under the new tariff bill, according to reports. This will please Mr. S. J. Ritchie and his Ohio stockholders in the Sudbury nickel and copper mines of Canada." Here you have the source of the clamor for duty-free nickel ore which I have in vain resisted. It is said that Senator Sherman is one of the owners of the Sudbury mines with Mr. Ritchie and other Ohio men, and that he is their advocate at Washington. This I cannot, of course, assert.

(4.) You say that I published a pamphlet setting forth in the strongest terms the benefits to arise from complete reciprocity of trade between the United States and Canada, but, that event being distant, I initiated the good work by persuading the Ways and Means Committee to remove the duty on Canadian nickel ores. Now, the pamphlet you allude to was, unfortunately for your argument, put out in 1879, several years before nickel ore was known to exist at Sudbury, and was simply an "Address of the Industrial League to its Constituents," a minor feature of which was the suggestion of a Zollverein between this country and Canada. My views are not changed on that subject, except that as the practical difficulties become more apparent of agreeing upon schedules, of harmonizing appraisers owing different allegiance, and of dividing joint revenue, I have come to prefer absolute political union with Canada to any half-way measure.

(5.) You expect me to show consistency by having an amendment offered to the McKinley bill putting iron ore and copper ore on the free list, because you assume, erroneously as I have shown, that I have labored to put nickel ore on the free list. It would be much to my advantage if iron ore were free, and it appeared to me quite unfair in 1883 to raise the duty on iron ore while lowering the duties on all its products; yet I have always refused to join any movement for removing the duty on iron ore, thinking that national welfare calls for the development of our own ores, and that miners merit a share of the ruling tariff protection. As for copper ores, it is not for me to speak upon a subject which is so much better understood by other men.

(6.) You say that the 15 cents per pound now levied on nickel in ore equals 35 per cent. ad valorem. This is erroneous, for 15 cents per pound on nickel in ore equals, not 35 per cent., but about 450 per cent., as I proceed to show.

The Sudbury ore, the only foreign nickel ore ever brought into this country, except a few sample casks from New Caledonia, can be put on cars at mines for about $3 per ton of 2,240 pounds, and it contains by average about 4 per cent. of nickel, or 90 pounds of nickel per ton. The duty on that 90 pounds is 15 cents per pound, or $13.50, which is 450 per cent., supposing the nickel to be the sole value in that $3 ore. But, in fact, the ore usually contains about twice as much copper as nickel, and the nickel cannot therefore be reckoned as worth $3, unless by marking up profit; so that the duty on nickel ore is even higher than 450 per cent.

(7.) You assume that the United States Mint suffers under the extortions of an American nickel monopolist. Passing by my demonstration, in the little treatise from which you quote, that tariff-ridden America has bought its nickel for coinage much lower than free-trade (in nickel) Germany bought its nickel for coinage, I point out to you that the United States Mint buys its supplies from the lowest bidder after due advertisement; that it has frequently bought foreign nickel, and that it now has on hand a large quantity of nickel copper-coin blanks made of foreign nickel. It is safe to say that no one ever did or ever will grow rich by supplying nickel to the United States Mint.

To conclude: There is probably no article in the tariff schedule which affords to the free-traders more frequent temporary enjoyment than does nickel. They do not understand it, but they feel sure that there is some deep iniquity connected with it, because they suppose that I am wealthy, and they assume that my supposititious income is derived from making nickel, though my total gross annual sales of it are but $150,000. I am alone in the business, because no one else dares encounter its difficulties, and no one ever speaks in my behalf. Therefore, from time to time, some hot "little barking creature," to use again my own words, which you seem to find attractive, jumps in to attack me, thinking that here is a safe chance to show valor. Occasionally, if I condescend to notice him, he retires more or less sadly, with broken teeth, from his enterprise.

JOSEPH WHARTON.

PHILADELPHIA, April 23, 1890.

[We frankly apologize to Mr. Wharton for the misrepresentations into which we have been led concerning his attitude towards the duty on nickel ore and concerning his mining industry. If we return to the subject of his letter, it will not be for the sake of excusing ourselves in these particulars.—ED. NATION.]

INFANTS' FOOD VS. INFANT INDUSTRIES.

TO THE EDITOR OF THE NATION:

SIR: In one of your recent numbers you call attention to the duty on milk-sugar, and speak of it as chiefly used in homœopathic pills. Have you not overlooked another and more important use which clearly points to the propriety of making it free—namely, in the preparation of cow's milk for infants not nourished by their mothers? It is surely bad statesmanship to tax a substance of such importance in the feeding of infants, while they die yearly by the tens of thousands simply from improper food. Humanity calls upon us to do all we can to save the infants and let the industry take care of itself. J. A. JEFFRIES, M.D.

BOSTON, April 25, 1890.

A SIDE LIGHT ON GREEK ART.

TO THE EDITOR OF THE NATION:

SIR: I should differ with M. Reinach on any archæological question with the greatest diffidence, if I differed at all, and I will not maintain against his opinion that the groups of statuettes I alluded to in a former letter are made at Smyrna. My information at Athens was that they had been sent from Smyrna, and were seized at Peiræus on account of the irregularity of their consignment leading to their being examined. It is immaterial to the point at issue whether they are made at Smyrna or Athens, but the same search which could disclose no evidence of their production at the former place was equally unsuccessful at the latter. We know where the Tanagra figurines come from, and we are equally sure of those of Myrina, Megara, Taranto, etc., and an expert has no difficulty in telling the origin of any individual case of either variety; but the provenance of these groups of several large figures is a mystery which could not have been so long preserved in the case of any possible excavations. M. Reinach has conducted one of the very few systematic and scientifically correct excavations of the cemeteries which render these works of antique art, and is therefore in a position to give an authoritative opinion of a peculiar and exceptional value, on grounds which no simple dealer in them can ever acquire, to say nothing of his complete archæological education, in which advantage his only rival among the dealers is Prof. Roussopoulos of Athens, whose judgment on the groups is the same as M. Reinach's. When last in Athens, I saw at the Professor's house one of the counterfeits which he had bought for 300 francs, knowing it to be a counterfeit (as did the seller), and desiring to have it as an example of the degree to which the imitation had been carried and as a lesson to intending purchasers. If it had been genuine, it would have sold readily for 2,000 francs. But it must not be supposed that these forgeries have in all cases caught the spirit of Greek art so well that they have an intrinsic value as art, for some of them are so bad that they would be almost worthless if genuine, and are quite so as imitations.

It would be quite impossible for the most dexterous contrabandist to carry on excavations of magnitude sufficient to supply the immense number of these questionable statuettes (which are not all or nearly all groups) without coming under the knowledge of the local authorities; for the region from which they can be derived is limited. The production has been going on for years and in great numbers. I am told that at Rome a single American gentleman was victimized several years ago to the tune of $15,000 by a well-known Athenian dealer, to whom most of the doubtful (not to beg the question of authenticity) examples can be traced. Perhaps the facility with which they are exported from the place of origin (be it Asia Minor or Athens) is explained by the proofs that might be afforded to the Custom-house officers of the modern character of the articles. It would otherwise be extremely difficult for the dealer in question to carry on such extensive operations as we know to have taken place without being caught, and, so far as I know, the case M. Reinach alludes to is the only one in which this was the case. At Athens or Peiræus it would be impossible even to do this, but I am informed that the exportation, when from Greece, takes place from the Gulf of Corinth, probably from Patras. The Greek Custom-house officers at Peiræus are very rigorous, and not, as a rule, accessible to bribery, and a systematic corruption would certainly be discovered in three months, for, under the regimen of Tricoupis, it is hunted very closely, and the responsible heads of the Custom-house at Peiræus are incorruptible.

I think M. Reinach is unjust to the Greek Government. The law punishes any one who sells a counterfeit antique as genuine, and imposes a fine, besides obliging the seller to return the price; and the Greeks are opposed to the counterfeiting, as it diminishes the value of their own collections by making the objects common. They do not regard it as a real good fortune that the strangers are put off with forgeries, and the fact is that the greater part by far of the sales are effected out of Greece, at Rome, Berlin, Paris, etc., etc., and numbers of them are in the hands of dealers who naturally make a great outcry over the impeachment of the genuineness of the works. But as there are thousands of dollars annually expended by American amateurs in such matters, it is well to insist on the fact that the greater part of the

figurines sold as of Asia Minor and Tanagra are forgeries; and from many years' experience in those regions I feel justified in saying that the only dealers who can be trusted in Athens are Roussopoulos and the brothers Dracopoulos. The Americans who go to Athens will buy and can always carry away small objects, but they must not trust to their wits or to local guarantees, which are worth nothing.

The same system of counterfeiting extends to coins, and I am told that an American physician who makes a specialty of coins relating to Æsculapius is able to obtain new, and often unique, specimens as often as he goes to Athens. The facilities for the fabrication of the forgeries are very great, and the British Museum, with its facsimiles, adds to the security. It is profitable for the dealers in antiquities, who, with occasional exceptions, are people without scruple or moderation, to keep up the system of counterfeiting as offering extraordinary profits and no risk, for the demonstration of the falsity of a piece is impossible, as resting on personal opinions which the customer cannot control or determine the value of. If the counterfeits were made in accordance with the motives of good Greek art, no one would be injured by them any more than by copies of Raphael; but when they are only superficially in agreement, and have nothing but the most non-essential qualities of it, they only perplex and bewilder the student. Good, authentic copies are easily to be had, and, as far as their artistic value goes, are as good as the originals; but when it comes to drawing conclusions on Greek art from forged material, I must say that it is worse than forging wills or bank-notes.—Yours truly, W. J. STILLMAN.

ROME, April 8, 1890.

A NEEDED REFORM.

TO THE EDITOR OF THE NATION:

SIR: Permit me through your columns to call attention to a branch of the public service which in my opinion needs complete reorganization on business principles. I refer to our consular service. As the law now stands, the principal duty of a consular officer is the legalization of invoices. Every business man in New York, as well as every appraising officer, will, for reasons satisfactory to himself, bear me out in the statement that this consular legalization, except in isolated cases, is an empty farce and a disgrace to our national intelligence. In most consulates the consul reaps a petty political reward—paid from the pockets of American consumers—by reading newspapers or absenting himself from his office, while the vice-consul, an overworked, shabby, and half-starved-looking patriot, as fast as they come in, certifies over his seal and signature to the accuracy of the prices quoted on a score of invoices, on whose contents we collect an *ad-valorem duty*.

The conscientious consul (and perhaps there are a half-dozen such on the Continent, the most eminent among them being the present Consul-General at Berlin) labors under three disadvantages:

(1.) He is not allowed to stay in office long enough to become a real expert in the lines of goods shipped from his district.

(2.) His efforts are completely negatived, through a lack of uniform system, by his ignorant, negligent, or criminal colleagues.

(3.) No evidence, however complete, if furnished by him, receives any consideration from customs officials. This is due either to the prevailing idea as to the worthlessness of consular corrections, a complete antagonism between our consular and customs services, or to the jealousy of dishonest sub-appraisers who do not like light thrown on what they consider their "private snap."

Under existing circumstances it is not unnatural that men, appointed for political reasons and not from fitness or experience, who know that they are not standing on their own merits, but are dependent on influence in Washington, yield to the temptation to enjoy their "holiday abroad," to draw their salaries in full whether present or absent, to forget the serious duties which they have theoretically been sent to perform, and to heap as much as possible on the aching shoulders of the poor vice-consul, who, in many cases, is compelled to give his superior officer a receipt for more salary than he receives.

Is this not a sad picture of the present state of an honorable branch of the national service? And yet every shade and color of it is true to life. The present system has been given every chance. Consulates have sprung up at every trade centre, and naturally the consul has been looked upon as a spy by the people among whom he lives. In Saxony alone (and it is about as large as Connecticut) there are at present *six consulates*. What wonder that the dignity of the service has been debased?

But the remedy? Ask any business man, honest or dishonest. Ask any man, woman, or child who can think. The law as it stands, in defence of an ad-valorem tariff, sends little men on little salaries to every trade centre in Europe to do a work which, with a few honorable exceptions, they either cannot or will not do. The law contemplates coöperation between the consular and customs services. Instead there is antagonism and ill will for which, I must admit, appraising officers are almost entirely to blame. The remedy? *Specific duty*. The result? The complete doing away with consular authentication of invoices, the suppressing of four-fifths of the useless consulates now in existence, the raising of the tone of the consular service by placing it on a permanent footing and making it a training school for the diplomatic service, and last—but not least—the reduction of fraud to a minimum in the New York Custom-house.

H. G. VAUGHAN.

HOTEL BELLEVUE, DRESDEN, April 14, 1890.

GEN. GRANT'S SCOTCH DEFAMER ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: Abusing all decent credibility, and palming off malice for facts, Sir William Fraser, as I pointed out some weeks ago, has thought fit to represent Gen. Grant as an ignoramus of the grossest, and a braggart nothing short of fatuous. This yelping at the heels of a dead lion will, with many over here, doubtless redound to the credit of the yelper; and so, doubtless, will the commentary on his unseemly detraction with which he has just been suffered to soil the pages of *Notes and Queries*. On that commentary I would be allowed to offer a few remarks.

In a former letter I rehearsed, on Sir William Fraser's unsubstantiated warrant, two anecdotes, each of them turning on a question said to have been addressed by Gen. Grant to the late Duke of Wellington. The Duke, on being interrogated touching the first anecdote, knew nothing about it, we are told by his self-styled interrogator, and went on to relate something wholly different, except in being injurious to the General, as what "happened." So much we learn from the anecdotist's 'Words on Wellington.'

The question which, it is there asserted, was new to the Duke was: "My Lord, I have heard that your father was a military man. Was that the case?" But, on recent reflection, succeeding professed investigation, Sir William Fraser is not satisfied that we therein have a fiction. His amended conclusion is, that "the Duke had forgotten the first story, or perhaps had not heard the inquiry." Thus, the second story, the one alleged to have been told by the Duke, and told by him as a substitute for the first, being accepted, though no longer as a substitute, but as independent, the Duke's memory is, in one instance, arbitrarily relied on, but, in another instance, arbitrarily refused reliance. Wholly at variance with this is what is found in 'Words on Wellington,' where it is distinctly implied, as regards the first story, after it had wrought the harm for which it was intended, that, "in the interests of truth," it should be set aside as pure invention.

This position surrendered, Sir William Fraser now says, with the imaginative assurance engendered by a sense of *impasse:* "The question so simply put by Gen. Grant caused, no doubt, great merriment." His belief in the tale rests, he confesses, on the faith of a "friend," by whom it was communicated to him. But whether that friend had the tale from another friend, and he from another, and so on indefinitely, till some one is reached who was never with the Duke and the General when they were together, we are left to conjecture. On the whole, until we are better informed, it still seems quite safe to deem the mysterious original informant as having only the sort of entity which attached to Mrs. Harris, in the critical estimation of Betsy Prig. What between his reckoning it a proud thing to cut the comb of an American at all hazards, and the ethical lubricity which has been brought home to him, Sir William Fraser appears to entertain substantially the same notion of a patriot that Sir Henry Wotton entertained of an ambassador, "vir bonus, peregre missus ad mentiendum reipublicæ causa."

Taking it for granted that Gen. Grant really asked the late Duke of Wellington whether his father was a military man, Sir William Fraser speculates that his "intention was to inquire if the first Duke had had a military education. As we should say, 'Was he an Oxford man, or a Christchurch man, or an Eton man?' the Americans, in speaking of a successful general, would say, I presume, 'Was he a West-Point man?'" In more of its acceptations than one, here is a presumption in abundance. Yet the crutch will look strong enough to those for whose inspection it is designed.

Weak argument failing, next there is resort to something even worse: "That any one in possession of his senses ever seriously believed that Gen. Grant had never heard of the Duke of Wellington, is beneath the nadir of human stupidity." That Sir William Fraser, when he wrote his book, must have been traversing an unlucid interval, and must have touched the very bottom of the abyss which he speaks of, is, then, a matter that we may be as certain about as we choose. A Scotchman, unless one out of a host, on retailing a joke, or delivering himself of anything equally recondite, or not altogether as plain as a pikestaff, never fails of supplementing it with an elucidation, which it is a mercy if he does not reiterate to tediousness. It is useless for the anecdotist to deny that he took in their strict literal sense the words attributed to Gen. Grant. So they were taken by the writer of a leading article in the London *Daily News;* and so they would be taken by "any one in possession of his senses"

who was not bent on defending what he knew to be indefensible. Moreover, why should they have "caused, no doubt, great merriment," or any merriment whatever, if, on the assumption of their having been spoken, they had not been understood just as a wriggler has it that they would be understood only by a lunatic?

Sir William Fraser, as he apprises us, conducted Gen. Grant over the Houses of Parliament, but heard from his lips nothing more than "the historical words, 'Sir, I thank you.'" Is this meant for "wut"? "Mr. Comklin [Conkling], who accompanied him, asked a number of questions, all of which, I need not say, showed intelligence and appreciation." To speak of an American, in compliment, much as one would speak of a Zulu or a Maori, is, for a Briton, as many of us are aware from personal experience, well nigh the utmost stretch of conventional courtesy. Sooth to say, the "Yankee" who has to do with his unamiable foreign cousins, if, on the one hand, he is not made a butt by malevolent contempt, and, on the other hand, escapes being patronized superciliously, has reason to account himself exceptionally fortunate.

Your obedient servant,

FITZEDWARD HALL.

MARLESFORD, ENGLAND, March 30, 1890.

FEAR, IN THE SENSE OF *FEAR FOR.*

TO THE EDITOR OF THE NATION:

SIR: In Masson's Life of Milton, vol. ii., p. 81, is a foot-note containing the words, "Doctor Deodate does something fear her"—quoted from a letter of Lady Brilliana, 1638—in which the meaning is evidently "fear for."

Your usually careful correspondent, "F. H.," should have qualified his assertion that this sense of the word has been "overpassed by the lexicographers," since it is noticed by Webster and the Imperial, both giving the same illustration, from Shakspere.

When your correspondent says, "Nowhere, perhaps, but in America, and among the most illiterate Englishmen, does one hear the like of 'I sleep *home*,'" does he mean to fix the stigma of such language upon Americans *as a class*, without regard to the question of education? If so, it would be well to prove the charge by citations from a few Americans who have an acknowledged standing in our literature.

Augustus Jessopp; 'Parsifal: Richard Wagner as a Theologian,' by Albert Ross Parsons; 'Maimonides,' an essay by Rabbi Louis Grossmann; 'A Son of Issachar,' by Elbridge S. Brooks; 'The English Novel in the Time of Shakspere,' by J. J. Jusserand; and 'The Othello of Tomaso Salvini,' a study by Edward T. Mason.

A new edition of Trelawny's 'Adventures of a Younger Son' will be published immediately by Macmillan & Co., forming the first volume of "The Adventure Series." The same firm announce a cheap edition, "limited to 100,000 copies," of 'Tom Brown's School Days,' uniform in style with their paper-covered editions of Charles Kingsley's novels.

The 'Economic and Social History of New England (1620–1789),' by William B. Weeden, a work in two volumes, will shortly be published by Houghton, Mifflin & Co., along with 'John Jay,' by George Pellew, in the "American Statesman" series; a new edition of the 'Life of Gen. Nathanael Greene,' in three volumes; select 'Tales of New England,' by Sarah Orne Jewett; and 'Liberal Living upon Narrow Means,' by Mrs. Christine Terhune Herrick.

Fords, Howard & Hulbert announce 'Midnight Talks at the Club,' by Amos K. Fiske.

'Corn and Poppies,' a new volume of verse by Mr. Cosmo Monkhouse, perhaps best known to American readers as an art critic, will be published shortly in London by Mr. Elkin Mathews. There will be a large-paper edition, which will contain a frontispiece etched by Mr. William Strang.

Mr. Charles Eyre Pascoe's unconventional guide-book, 'London of To-day' (Boston: Roberts Bros.), reaches with the present year a sixth edition, much rewritten and reillustrated, but keeping well to the old lines of topical arrangement. One would like sectional maps for use in the several walks described, and an index; but this last can hardly be expected in a handbook which refers you to previous editions for details omitted in the latest.

Estes & Lauriat have in press, by arrangement with the author, a translation of Camille Flammarion's 'Urania,' illustrated with half-tone cuts from drawings by eminent French artists.

To the sixth volume of the collected writings of De Quincey (Macmillan) Prof. Masson gives the title of 'Historical Essays and Researches,' arranging the several contributions to *Blackwood* in chronological order, from "Homer and the Homeridæ" to "Cicero" and "The Cæsars" and the "Philosophy of Roman History." They make a homogeneous collection in which learning and speculation are mingled in readable proportions.

'Stage-Land' (of which Henry Holt & Co. have just issued an American edition with illustrations a little reduced in size, but none the worse) we praised when it appeared in London six months ago. It is a very clever skit on the contemporary theatre, written out of the fulness of knowledge, and with a humor easier, more natural, and more effective than that to be found in Mr. Jerome's other books. The illustrations, by the clever young actor who is "Bernard Gould" on the stage and "J. Bernard Partridge" in black and white, are delightful, especially the "Stage Adventuress" and the "Stage Detective."

The third volume of M. Legouvé's 'Comédies et Drames' (Paris: Ollendorff; New York: F. W. Christern) contains "Bataille de Dames," "Une Séparation," "Médée," and "Miss Suzanne." The preface to "Médée," oddly enough, gives no particulars of the author's controversy with Rachel and the Comédie-Française, or of the play's acceptance by Ristori; it was not to be expected that it should refer to the marvellous burlesque of Ristori by F. Robson, or to the English version by Mr. Wills acted by Miss Kate Bateman. The preface to the famous comedy "Bataille de Dames," probably the most frequently acted of M. Legouvé's plays, tells the story of its composition, and shows that Scribe's share in it was less than he usually had in the plays he helped to write.

A new edition of Charles Edmonds's 'Poetry of the *Anti-Jacobin*,' with copious fresh annotations, guesses at authorship, selections from the *Anti-Jacobin Review and Magazine* (the successor of the *Anti-Jacobin*), and other matter, has just been issued by G. P. Putnam's Sons. The illustrations by Gillray are retained, and the general appearance of the work is attractive, in spite of much necessary fine print in the editorial department. The two original indexes to the earlier and the later periodical are reproduced for the sake of showing their essential unity of spirit, and will aid any one to explore further the field in which Canning and his confrères plied their slashing trade.

The vague prospectus of the *Republic Magazine*, begun to be published in April in this city, leaves us in doubt as to the motives of its founders. So far as it fosters the Grand Army of the Republic, or perpetuates the memories of the late war for the sake of political capital, we cannot think it a desirable addition to existing periodicals. Gen. Alger's portrait serves as frontispiece, and a sketch of his life accompanies it.

A biological journal, *Zoe*, was started in March by the Zoe Publishing Co., San Francisco, as a medium for amateurs and working naturalists on the Pacific Coast. Its existence for a year has been guaranteed. The first number is presentable and readable. We may mention the paper on the behavior of birds and other animals during a total eclipse, and that on naturalized plants, in which we read: "It is worth noting that it is to the plant-eradicating sheep, which has wrought such destruction to our native flora, that California probably owes the introduction of its most valuable and abundant forage crops, namely, alfileria, bur-clover, and wild oats, and that all are of Mediterranean origin."

The Duke of Argyll's address before the Scottish Geographical Society on the "Border-Lands between Geology and Geography" is published in the April number of that society's magazine. It treats of the old theory of glacial action in moulding the surface of northern Europe as illustrated by the present condition of Greenland. The Duke argues that the sluggish movement of Greenland's great ice-cap, estimated to be at least 2,000 feet thick and sliding down a slope 15,000 feet high and some 400 miles long in its widest part, is inconsistent with the theory. Were it true, the ice would be thrust out into the sea with irresistible force, ploughing up its depths and filling up its bays and narrow channels. As a matter of fact it does not everywhere reach the shore, the largest mass which succeeds being the Humboldt Glacier, with a frontage of 50 or 60 miles out of a total coast-line of over 3,000. The Duke accordingly sides with those who imagine the submergence of our northern hemisphere during the glacial period, the scratches observed being made by small local glaciers and floating ice. His address is followed by a singularly clear and interesting account of Southern California by Prof. W. G. Blaikie of Edinburgh, with some sound advice for intending immigrants; and a description of the Kanikaras, or Jungle Kings, a native race of Travancore in Southern India.

The principal article in the April Proceedings of the Royal Geographical Society is Sir William MacGregor's report of his successful ascent of the Owen Stanley Range in New Guinea. Advantage was taken of a newly discovered river to penetrate some distance into the interior by boat, the rest of the journey being through a trackless jungle and over a succession of mountain ranges, through a country almost devoid of inhabitants. The highest point, near which the expedition camped for two days, was found to be 13,121 feet high, and was apparently partly clothed with grass, in which were daisies, buttercups, forget-me-nots, heather, etc. There were very few birds, the most noteworthy being a lark, and no animals, so far as appears from the report. It was noticeable that none of the natives accompanying the expedition expressed any religious scruples

about the ascent of the highest peak. An admirable map, twenty-three statute miles to an inch, of the country between the Rovuma and Zambesi Rivers is especially interesting, as showing very clearly a part of the territory in dispute between Portugal and Great Britain.

The December number of the *American Journal of Archæology* (Boston: Ginn & Co.) concludes vol. v. The leading papers all relate to Grecian topics, and all but one proceed from the American School at Athens, and have reference to excavations and discoveries. In the always full department of news, notice is taken of Capt. Bötticher's theory that Schliemann's Troy was only a necropolis for incineration, and of Dr. Schliemann's invitation to this sceptic to visit Hissarlik in company with Dr. Dörpfeld, etc. On the 30th of March, in fact, a conference held on the spot declared that there were no traces of incineration of human bodies, and that the plans given in the 'Troja' and 'Ilios' are quite accurate and conformable to the existing state of the uncovered ruins. The signers of this report were the French delegate (an engineer), C. Babin, Frank Calvert, United States Consular Agent, Dr. F. von Duhn of Heidelberg, Dr. Grempler of Breslau, O. Hamdy, Director General of the Imperial Museum at Constantinople, Dr. Carl Humann, Director of the Royal Prussian Museum, Dr. R. Virchow, and Dr. Charles Waldstein. The plates in this number of the *Journal* are, as usual, well executed and interesting.

The London *Bookseller* for April 5 reports the proceedings at the trade dinner of the craft on March 8, and supplies a noteworthy portrait-gallery of the British publishers and authors associated on that occasion.

A premature discussion has been tolerated in the columns of the London *Times* over the coining of a verb to denote electric progression. Several correspondents suggest *trize* (sb. *trice*, as trice-boat), *trise*, *trice*, or *triss;* one proposes *trek*, another *mote*, another *lect*, another *circuit*, another *tim* or *loc* (from Timæus of Locri), etc. Most sensible, to our thinking, is he who thinks *go* sufficient for the present. In this country and State we observe a journalistic uneasiness caused by the substitution of electricity for the rope in putting an end to criminals; and as if *execution* did not cover all possible modes, *electrocution* is invented without a blush.

On March 15 the *Revista de España* resumed publication after suspension for about a year. Protracted litigation over the ownership of the magazine was the cause of the trouble, but Antonio Leiva has now been legally reinstated in his rights as proprietor, and proposes to add new years to the splendid history of the *Revista*. He will undoubtedly find a formidable competitor for public favor in the new *España Moderna*, now entering upon its second year with brilliant success.

Numbers 36 and 37 of the Harvard University Library's Bibliographical Contributions consist respectively of a Bibliography of William Hogarth, by Frank Weitenkampf of the Astor Library, and a catalogue of the Dante collections in the Harvard College and Boston Public Libraries, by William Coolidge Lane. Mr. Lane's achievement deserves very high praise, and the catalogue will be invaluable to Dante students, for, though at a distance, they can, under proper restrictions, avail themselves of the collection at Harvard, for which Mr. Lane bespeaks the gifts of its friends. We must not omit mention of the elaborate "Index of Subjects and of Passages in the Divina Commedia," which concludes the catalogue; or of the note on the Dante portraits in the collection.

Mr. James Lyman Whitney of the Boston Public Library has just completed a 'Catalogue of the Bibliographies of Special Subjects' in that institution, filling seventy-one pages in double columns. It is needless to remark on the utility of this work wherever there is a tolerably well-equipped library within reach. The title-words in this catalogue are, we think, open to criticism on the score of the indistinct type selected for them.

"A Review of the Family Delphinidæ," by Prof F. W. True, in Bulletin 36 of the United States National Museum, puts together in convenient shape the scattered knowledge of the porpoises and some of their allies. The preparation of the work necessitated visits to the principal European museums. Its extent is shown by the fact that the author's descriptions and notes relate to sixty-two species, of nineteen genera. There are 191 pages of text and 47 plates of illustrations.

Conchologists and students of mollusks in general will welcome Bulletin 37 of the United States National Museum, containing Mr. W. H. Dall's 'Preliminary Catalogue of the Shell-bearing Mollusks and Brachiopods of the Southeastern Coast of the United States.' The list includes more than 1,100 names, 221 pages, with localities, depths, ranges, etc. Of the seventy-four plates, illustrating some hundreds of the species, forty are republished from papers of the author in bulletins of the Museum of Comparative Zoölogy, and the rest from others in publications of the United States Fish Commission and elsewhere.

The report of the Connecticut Bureau of Labor Statistics for 1889 is mainly devoted to the fish and oyster industry. An interesting account is given of the development of the oyster farms under the waters of Long Island Sound, and elaborate maps, based upon those of the Coast Survey, are furnished showing the limits of the oyster grounds of the State. This singular industry has been developed through the conflicts of interest of individuals, towns, large capitalists, corporations, and even States, and its history is an epitome of the growth of the institution of property in land. Scientific research has done much for it, but the chief causes of loss (storms and starfish) have not been brought under control. It appears that the great oyster industry of Baltimore is the result of Connecticut sagacity. Many interesting bits of information are to be found in the reports from the fishermen of the various towns. The total capital employed is $3,322,000, value of product $1,232,000, expenses $556,000, losses $543,000 (starfish cause $498,000 loss), and number of employees 1,024. The small profit shown by these figures casts doubt upon their accuracy, and the losses are probably to some extent speculative. The report also contains an abstract of the proceedings of the convention of chiefs of bureaus of labor statistics held last June at Hartford.

The opening of the Johns Hopkins University Medical School is at best but a question of a few years, when temporary embarrassment has been overcome. To hasten the much desired event, however (for the Hospital is already open and organized), it is proposed to raise the sum of at least $100,000 to be offered to the Trustees "on condition that women whose previous training has been equivalent to that of the preliminary medical course of the University, be admitted to the School . . . on the same terms as men." This offer is more likely to be accepted now than it would be if the School were once opened to men only.

Mr. F. Gutekunst, Philadelphia, has surpassed himself in the latest issue of his American portrait gallery, an imperial photograph of Walt Whitman. The pose of the old poet, his free costume, wonderfully set off by Tudor collar and cuffs, and his noble expression, leave nothing to be desired on the part of his admirers, to the English portion of whom particularly we commend this panel-picture as an ornament after their own hearts.

—*Harper's* for May opens with an appreciative notice of the latest group of French artists, each being treated individually, and sufficient illustration is given to suggest the qualities of their work so carefully discriminated by Mr. Child. The avoidance of any general discussion of their practice of the art is a happy instance of discretion on the part of the critic; it is enough for the present that he presents their phases, indicates their choices in subject and sentiment, and leaves time for judgment upon their work to ripen. Literature receives attention in two noticeable papers, one upon the Caroline lyrists, adorned with excellent and attractive portraits, and the other upon wit and humor. The author of this last paper makes a most elaborate analysis, partly in a psychological, partly in a literary vein, and reviews the opinions of those who have tried from the day of Plato to determine the nature and origin of the delight of the mind in the ludicrous. He meets with no success in attempting to analyze it from the Darwinian point of view, and will not admit that malignity is at all adequate to explain either its composition or its growth. At the end he can only suggest that the faculty of humor in primitive tribes was, like the electrical organ in the tail of the skate, a prophecy of utilities to come; and such a conclusion reads like a malicious parody of the true faith of Darwinians, though apparently not so intended. The paper is a very thoughtful and well-informed examination of this much-disputed matter. The account of the old taverns of this city revives a subject of which the general or the learned reader seems never to weary, and the accompanying cuts of Manhattan life furnish the proper half-sportive accompaniment. Mr. Chittenden records an incident of the history of the Treasury in which a physically costly service was done in the line of official duty under striking circumstances, and in which virtue seems to have been its own reward. Mr. Curtis in the Easy Chair pays a friendly tribute to the qualities of the late George P. Bradford of Cambridge.

—The *Century* is an eminently entertaining number, well varied in matter and not laboriously serious in its most solid portions. Some new portraits of Washington represent him in somewhat hard and dry lines and with less distinction and expression in the features, but they are interesting to the eye. The text contains many little details, mostly of a domestic kind. A paper upon "Chickens for Use and Beauty" gives occasion for several admirable illustrations, full of spirit and refinement in rendering—really a remarkable series. The French salon is a third topic, so attractive and fresh in itself that it never fails to entertain us with its bevy of beauty and fame, its wit and scandal and intrigue; and under the present writer's hand it loses nothing. Mr. Kennan describes the working of the press-censorship in Russia, and tells a number of illustrative incidents to show the meddlesomeness and inefficiency of the system. A page or two of the *Century* "blacked out" by the Russian officials is the one expressive illustration of his article. He says that some pages of the 'Life of Lincoln' were also erased in the same way. Major Powell writes of the institutions which he thinks should be established in the arid region of the

country in order to meet the peculiar agrarian conditions of a vast irrigated district with the modifications of property-right and associated control under these new circumstances, and it is a pleasure to observe in such an article a disposition to reduce Government action within the narrowest limits and to leave to local control the actual management of affairs. A careful comparison of the valor and skill of the two armies in the civil war brings forward a subject upon which it is not desirable to reach any decision. A number of short papers, together with fiction, interleave these leading contributions.

— *Scribner's* contains two articles of leading interest. The first is upon Barbizon and the life of Millet and other artists there, abundantly illustrated and pleasantly narrated. The second is Mr. Eugene Schuyler's paper upon Mme. de S äel in Italy, in which he has gathered much curious matter from the letters and memoirs of the time, and set the life of the author of 'Corinne' and her ways of thought, sentiment, and action among the Italians very vividly before the reader. The contribution belongs with the other sketches of foreigners in Italy which the author has written of late, full of close information and side-lights; but in the present instance the treatment is more elaborate, and the subject has a certain exceptional brilliancy of its own. The right of the citizen to the use of the streets is treated of briefly and sufficiently, and incidentally illustrates the complication and complexity of our modern city life, especially in those parts of the paper which look to the street not as a superficial roadway of locomotion, but as a thing in the air and under ground, the home of rails and wires, in which respects this city shows the most advanced development of the old highway. The cut showing the actual occupancy of the underground space by the sewers, pipes, subways, etc., is remarkable and suggestive. Another paper of great value for its illustrative examples, is a review, by Mr. W. A. Linn, of some actual results of coöperative building, with cuts of houses and prices, taken from a wide extent of territory. The Japanese theatre is the last topic that calls for any special mention, and it is treated with considerable fulness and with regard to many different points of interest.

—The American Metrological Society, organized in 1873 to promote measures looking towards the improvement of the systems of weights, measures, and moneys at present existing among men, has just held a special meeting in Washington. It was the first time the Society had met in the capital, and one of the objects in convening there was to bring influence to bear upon Congress. Only one paper was read, that by Mr. Horton on "Instruments of Valuation." In the discussion of this topic the science of metrology played an unimportant part, since the writer had a financial or economic theme in view. The activity of the session was manifested in three resolutions. The first was to request the Secretary of the Treasury to ask Congress to include the equivalent in metres or kilograms in all designations of measure or mass in subsequent legislation on all questions of customs. That is, when the duty is fixed as so much per pound, to state, parenthetically so to speak, the amount per kilo; or, when given as so much per yard, to add "or so much per metre," thus relieving custom-house officials of the trouble of conversion when the invoice specifies the quantity in the metric system. The second resolution provided for the appointment of a committee to suggest to the Postmaster-General the desirability of specifying in the postal regulations the weight of single foreign postage in the metric system. At present there is nearly a gramme difference between the actual equivalent and what is given in the postal regulations as the equivalent—a fact which causes embarrassment when mail is delivered with postage due, or held for lack of full postage prepaid. The third resolution, advocated by Prof. Mendenhall, was in the shape of an expressed opinion that, inasmuch as the electrical units have received the names of distinguished specialists from all parts of the world, excepting America, one or two of the units yet to be designated should have the name Franklin, Henry, or both. The matter is likely to be brought definitely before the International Electrical Congress during the session to be held in this country in 1892. The members of the Society had an opportunity to inspect the standards of measure and mass in the possession of the Bureau of Weights and Measures. The chief interest, of course, centred around the metre and kilo prototypes recently received from the International Commission and opened a few weeks ago by President Harrison.

—Master Francis Villon, of joyous memory, was the subject of an extremely interesting communication to the French Academy of Inscriptions and Belles-Lettres at its sitting of April 4. M. Marcel Schwob, who has been following up traces of Villon in the old court records, read a number of documents taken from the archives of the Department of the Côte d'Or, which throw much light on the ballads in slang which have gone by the name of Villon's "Jargon." It is known that these were written between the years 1456 and 1461. There are plain allusions in ballads iii. and iv. to a gang of loose fellows of the baser sort who were known as the Coquillards, or the "Compagnons de la Coquille." Several of them were hung at Dijon on December 18, 1455. Ballad ii., "Coquillars narvans à Ruel," is directly addressed to them, and makes mention of the punishment of two of Villon's friends, Régnier de Montigny and Colin de Cayeux (Colin l'Escalier), both of whom were executed after 1460. A list of some seventy-five words of the *argot* of the Coquillards was shown by M. Schwob, in which twenty-four of the slang words used by Villon in the "Jargon" appear. It seems certain that Villon was on terms of close intimacy with the gang, even if he were not regularly affiliated to it. Villon was himself in prison in 1461, and his own neck (as he says, or some one in his name says) ran some risk of receiving a lesson at that time. He himself attributes his imprisonment to his *folle plaisance*, but he doubtless had very liberal notions as to what that phrase might be held to cover. M. Schwob ended his communication by some remarks on the etymology of the *argot*, which he traces in many instances to the Greek.

— The admirers of Henrik Ibsen will be glad to know that another of his social dramas ("De Unges Forbund") can now be had in a translation by Mr. William Archer. This play, which Mr. Archer entitles "The League of Youth," while not to be ranked with Ibsen's best dramas, will be welcome as the first example obtainable in English of his lighter vein. In the same volume Mr. Archer has included his translation of "Samfundets Stötter" ("The Pillars of Society"), which was published two years ago in the "Camelot Series," but which he says he has thoroughly revised, and also a translation of "Et Dukkehjem," which was only issued before in a limited, illustrated edition. The book is published as volume one of "Ibsen's Prose Dramas," and all the author's prose works are promised to be included in this series, in a chronological arrangement—that is to say, not only the eight modern social dramas, but the previous six historical plays. The poetical works, however, are to be omitted, including 'Brand' and 'Peer Gynt,' which even Mr. Archer, apparently, does not feel courageous enough to attempt to turn into English.

—Mr. Archer's "Biographical Introduction" is a slight performance, and contains nothing not already familiar to American readers. He acknowledges his indebtedness to Mr. Jæger's biography of Ibsen, but says he owes other details to the courtesy of the poet himself. We fail to detect anything of interest, however, which could not be found in Mr. Jæger's book. It is not quite accurate, by the way, to refer to the short-lived satirical sheet which Ibsen and his friends, Botten-Hansen and Vinje, issued in Christiania in 1851, as being entitled *Manden* (The Man). This interesting bibliographical rarity was issued without any title, and the above peculiar appellation was due to the clever vignette illustrations which showed "the man" (the news-seeking editor) in various attitudes in the market-place of Norway's capital, or as an observant spectator and listener in the gallery of the Parliament House. But near the close of its existence the paper was given a title, and then it was called *Andhrimer*, that being the name of the cook in Valhall, the home of the gods in Scandinavian mythology. The second volume of the series, promised for April 25, will contain, besides "Ghosts," two new translations, "En Folkefiende" ("An Enemy of the People") and "Vildanden" ("The Wild Duck"). The volumes are neatly printed and bound, and the issue for this country bears the imprint of Scribner & Welford. In view of the fact that a suspicion of piracy attaches to all previous American reprints of Ibsen's works, a more definite statement of the author's sanction of this edition than the mere words "Authorized translation" upon the title-page would have been welcome.

THE HISTORY OF ENGLISH METRES.

Englische Metrik in historischer und systematischer Entwickelung dargestellt von J. Schipper. Zweiter Theil: neuenglische Metrik; erste Hälfte: Verslehre. Bonn: Strauss. Pp. xxvi., 464.

It is nearly eight years since we had the pleasure of reviewing the first volume of Schipper's monumental work. That volume covered the entire period from Anglo-Saxon times, through the Anglo-Norman reigns, Chaucer and his "school," down to the reign of Henry VIII. The present volume is wholly concerned with the treatment of the single line. For the needs of the ordinary reader, this may be thought excessive; but for the genuine student assuredly it is not. The varieties of single line in English metre are much more numerous than the uninitiated are apt to suspect, and the adjustment of the metrical units, the so-called feet, comprising each variety of line, is extremely diversified. A single illustration will make this clear. It is simple enough to define blank verse as five-foot iambic pentameter without rhyme; but puzzling questions spring up the moment we undertake to discuss the cæsural pause, its position in the line, its capacity for suppressing a syllable or introducing an extra syllable, the difference between end-stopped and run-on lines, inverted accentuation, lines apparently six feet in length, but in

reality pentameter, and the like. Schipper has allotted 120 pages in all to his discussion of blank verse. There are fourteen pages of general remarks, nearly twenty upon the blank verse of Shakspere's predecessors, about thirty upon Shakspere, upwards of twenty upon the later dramatists, nine upon Milton, nine upon the Restoration and eighteenth century, about twenty upon the nineteenth century. Whoever works through this seemingly long chapter with a view to mastering all the curious ups and downs of our English verse by eminence, from Surrey's 'Æneid' and the old play of "Gorboduc" to Tennyson's "Queen Mary," will be deeply grateful to the man who is teaching him, and will never dream of taxing him with prolixity.

Our strictures upon Schipper's treatment are in part general, in part are corrections of special points too important to be passed over as mere slips. Among the errors of a general nature, we note the author's disposition to regard his own statement of Anglo-Saxon verse (in vol. i.) as conclusive. This statement might have passed eight years ago, but should now be readjusted to the new method established by Sievers. According to Sievers, we have no right to speak of *Senkung in der germanischen Poesie* as Schipper does at pp. 3 and 42; nor is it prudent to ascribe the prevalence of iambic over trochaic movement in modern verse (see p. 13) to a like phenomenon in early verse—at least if under early verse we include Anglo-Saxon, for in Sievers's tabulation the trochaic type of foot exceeds the iambic. Perhaps Schipper draws the line sharply between Anglo-Saxon and early English; if so, his language should be more precise.

Another general fault in our author's method is the assumption—sometimes expressed, more frequently implied—of a correct standard line, deviations from which are to be condemned as errors, or at best tolerated as blemishes. Now, whatever may be the theory of metres in the classic tongues, or in modern French and German, we reject every assumption of a correct standard line for English. Schipper has very likely been misled herein by the regularity and smoothness of the great German poets, notably Goethe. But all great English poets, whether or not adopting in their subject-matter the motto of Tasso's Princess, "Erlaubt ist, was sich schickt," have in their management of verse-form unquestionably realized Tasso's own speech: "Erlaubt ist, was gefällt." From Marlowe and Shakspere to Tennyson, every great poet has been master of his metre, not its bondsman. Thus, what right has Schipper to assert, p. 16, that the coincidence of word and foot (diæresis) always produces a disagreeable, chopping effect (*stets eine unangenehme hackende Wirkung*), thereby pronouncing a sweeping condemnation upon Milton's

"Too well I see and rue the dire event"?

Does the German critic really believe that his ear is better than Milton's for the effect intended by just such a line? Does he believe that Tennyson did not know what he was about when he wrote:

"Would turn and glare at me and point and jeer"?

In like manner, pp. 33 and 34 recklessly invert the relative position of two features in our verse which we supposed beyond the reach of misunderstanding, viz.: hovering accent and the suppression of the *Auftakt* (anacrusis). As to the latter, our best poets since the days of Chaucer have tacitly shunned it in the five-foot iambic; and even for Chaucer himself it has cost Prof. Skeat a hard and prolonged struggle to establish the validity of such passages as—

"Óf this flóur when thát it shúld enclóse"

or—

"Y'permístra, yóngest of hem álle."

whereas hovering accent is among the veriest commonplaces of our poets and poetasters. Yet Schipper in all seriousness declares, p. 33, the suppression of the anacrusis to be the only one of these two features susceptible of artistic treatment! And at p. 38 the hovering accent is denounced as "eine unter allen Umständen tadelnswerthe metrische Licenz," involving "eine Beeinträchtigung der natürlichen oder logischen Wortbetonung zu Gunsten des Versrhythmus," and cultivated chiefly by poets "die nur über einen verhaltnissmässig geringen Grad technischer Geschicklichkeit verfügen!" What a pity that all our poets should be such botchers—that Tennyson, for instance, could dare to perpetrate the verse—

"For testimony; and crying with full voice"—

and force us to suspend *our* voice between "with" and "full." But we comfort ourselves with the reflection that perhaps the Laureate's verse rests upon other principles than those of metrical philosophy.

Not quite so glaring, yet no less untenable, are Schipper's views upon *enjambement* and light-weak endings, pp. 59-65. Whether or not the *enjambement* in a given passage be good or bad, is a question not to be settled according to abstract criteria, but solely and simply by English taste and English ear. To designate, p. 62, the immortal opening of 'Paradise Lost,' that "God-gifted organ voice of England," as "not bad" (*nicht übeltönend*) is altogether too condescending. But to designate, p. 65, Shakspere's light-weak endings as "usually bad" (*in der Regel misstönend*) is measurement by rule-of-thumb with a vengeance.

The title given by our author to his chapter iii., viz., *Silbenmessung*, is not, in our judgment, a very happy one. What Schipper means by it is the suppression or utterance of a vowel in unaccented terminations, such as *-ed*, *-est*, *-iage*, etc. The subject is more important for Elizabethan than for Victorian poetry. In the main the treatment here given will be found highly instructive, but we must take exception to some points. Thus we fail to see the practical advantages of distinguishing syncope, synicese, *Verschleifung*, *doppelte Senkung* (see pp. 95, 100, 101, 106, 110, etc.). To our way of thinking, it would be much simpler to say that a (written or printed) vowel is either suppressed (syncopated) in actual pronunciation, or is sounded; *e. g.*, *patience* (usually spoken, *pâshens*, but in Elizabethan English spoken, *pa-shi-ens*). In the latter case the word may bear two accents, as in *pá-shi-éns*, or it may form a foot with a superfluous syllable, as: wárrior chíef. But in any case the reader should have no difficulty in reading correctly without the aid of cumbersome terminology.

In like manner, the technical term *Zerdehnung* used by Schipper (and others) does not commend itself to us (pp. 46, 115). Schipper's language, in fact, seems to imply that he looks upon the phenomenon itself as metrical, or at least as evolved through the exigencies of metre. If so, this is an error. To begin with, the pronunciation of *our*, *fire*, *year*, *humbly*, *ordnance*, etc., with a distinct *e* sound before the *r*, *l*, *n*, is not confined to poetry. We find it equally in the prose of most Indo-European languages; in Celtic, indeed, it becomes almost a grammatical function. In the next place, it is not correct to designate the process as a "lengthening"—it is rather the evolution of a vowel from a consonant. In philological treatises it is called svarabhakti, or epenthesis, although we observe that Brugmann gives a slightly different meaning to epenthesis. At any rate, Schipper should have treated the phenomenon more in accordance with general philology. And in the last place, we do not admit that such words as remembrance, wondrous, pilgrim, when pronounced rememberance, wonderous, pilegrim (pp. 117, 118), are genuine instances of epenthesis. On the contrary, the fuller forms are older and historically justifiable (for pilegrim, compare even the modern French *pèlerin* and the Latin *peregrinus*); whereas the shorter ones are contractions. With regard to the dissyllabic sound of *door* in Shakspere, "And with my sword I'll keep this do-or safe," *Tit. Andr.* i, l. 288 (if the line is really Shakspere's), a brilliant modern instance occurs to us. Wordsworth, in his poem "To the Small Celandine," wrote:

"That they all are wanton wooers;
But the thrifty cottager,
Who stirs but little out of doors," etc.

The rhyme wooers: doors we submit as a neat crux to the ultra-Wordsworthians. That door is spoken dūr in North England may be safely assumed. But is dū-er also Northern, or is it a Wordsworthism?

Chapter iv., on Word-Accent, rests on solid ground, and offers many valuable suggestions upon the difference between Elizabethan and Victorian speech. Yet, in one respect, the chapter is seriously defective. The Elizabethan poet by eminence, outside of the drama, is Spenser. Yet Schipper nowhere gives evidence of having made that minute study of the poet which is his due. Our readers may compare what is said of the pronunciation of diet, p. 129, with—

"And of her owne foule entrayles makes her meat;
Meat fit for such a monster's monsterous dyeat."
(*F. Q. v. 12, xxxi.*)

The rhyme evidently requires a pronunciation like that of the modern French *diète*. As for cóntrary, contrary, p. 155, we need only cite:

"That sayd, her rownd about she from her turnd,
She turned her contrary to the sunne;
Thrise she her turned contrary, and returnd
All contrary; for she the right did shunne."
(*F. Q. iii. 2, vi.*)

and

"From one to other so quite contrary"
(*iv. 6, xxxii.*),

where the rhyme with "suddenly" requires us to speak "cóntrary."

Schipper's treatment of the cæsura is both full and satisfactory, in its general principles, at least, although we might differ with him as to an occasional scansion. Such terms, however, as lyric and epic cæsura (p. 25 and throughout the volume) are objectionable. Lyric and epic, if they mean anything, designate different kinds of poetry. To call a certain variety of cæsural pause epic, almost of necessity intimates that it is characteristic of epic poetry; yet Schipper means nothing of the sort. We venture to suggest trochaic and dactylic as safer terms; and the blunt cæsura may be called the iambic. The value of Schipper's treatment of blank verse, in particular, is diminished not a little by the tacit assumption that there must be a cæsura in every line. We fail to see the validity of the assumption. It seems to us an application of the systems of Greco-Latin hexameter and French Alexandrine to a poetry that defies rigorous system. There is not a master of English blank verse that scruples to compose without cæsural pause whenever he feels that the situation justifies or requires continuous utterance. To a true poet, language and metre are only means to an end; he aims at varying effects, and he makes his line run or halt, flow equably or grate upon the ear, merely because he wishes to, and with the clearest conscious-

ness of what he is doing. Thus, p. 174, Chapman's lines made up of monosyllables are spoken of disparagingly. By what right? Regel, to whose essay on Chapman Schipper is indebted for most of his data, is careful to avoid committing himself on the point. And if Chapman is to blame for monosyllabic lines, what becomes of Shakspere's

"Earth gapes, hell burns, fiends roar, saints pray."
(*Rich. III.*, *iv.*, *4*, *75*)

or Tennyson's

"Let the great angel of the Church come with him,
Stand on the deck and spread his wings for sail!
God lay the waves and strew the storms at sea."
(*Queen Mary*, *i.*, *5.*)

We have not space to even touch upon the various forms of verse as developed by our author; the septenarius, the Alexandrine, the four-foot line, the four-beat line (the most original section and perhaps the most deserving of careful heed in the entire volume), the heroic couplet, blank verse, trochaic verse, modern imitations of Greco-Roman metres, etc. We merely note, in passing, that Schipper omits from his treatment of the Alexandrine all mention of Biron's ecstatic sonnet, "Love's Labor's Lost," iv.,2, 109-122; also (from his remarks on the septenarius) the immortal effusion of good Master Holofernes to the Sorel, in the same scene. Upon the whole we suspect that "Love's Labor's Lost" has been rather persistently avoided by metrical investigators, although it is singularly rich in "finds." But we hope that Mr. Sweet's "inevitable German" will not be long in making his advent with an exhaustive line analysis. For a Victorian revival of the Alexandrine on a grand scale our author should have noted, p. 193, Browning's "Fifine."

Concerning modern attempts to reproduce the metre of 'Beowulf' and other poems in Anglo-Saxon, noted pp. 234, 235, we content ourselves with asserting that not one of the translators there mentioned has reproduced the movement of his original, for the all-sufficient reason that not one has made his translation in accordance with the principles demonstrated by Sievers. Browning's "Flight of the Duchess," put by our author (p. 251) in his chapter on the four-foot iambic, belongs rather to p. 232, in the chapter on four-beat verse. So also the quotation from Rochester (p. 211). Why Schipper (p. 257) should see fit to echo Guest's absurd attempt to connect Chaucer's 'Tale of Melibeus' somehow with the beginnings of blank verse, is to us a profound mystery. Yet Guest's absurdity has found its match in our own day. Goodlet, in an article on "Shakspere's Debt to John Lilly" (*Engl. Studien*, v., 359), gravely ventures to assert of Lyly's prose, "It may have acted on Shakspere by directing his attention to poetical form"! What our author means (p. 298) by an evident tendency in Shakspere's later dramas to revert to a certain regularity, we fail to understand. If the dramatist ever penned anything more free, more "irregular" in metre, syntax, word-usage, than the "Winter's Tale," it has escaped our notice. The selection from the "Tempest" given p. 315 we can scarcely accept as "typical" of Shakspere's very latest manner. Schipper's dry enumeration of eighteenth-century writers of blank verse (p. 355) has its value. If it does nothing more, it will at least rectify Gosse's extraordinary blunders.

The treatment of blank verse of the nineteenth century is usually fair-minded, but scarcely full enough for such poets as Wordsworth, Tennyson, and Browning. The estimate put upon Byron (p. 372) is unworthy of the book; Schipper, like Swinburne, merely echoes the cheap and puerile jibes of Campbell. Byron is the only modern English poet that knows how to wield the free run-on blank verse of the later Elizabethan and early Stuart drama. But it seems that what was good in the "Winter's Tale" is not good in "Cain."

Schipper's treatment of the various forms of trochaic verse is excellent. The author is here more original, less hampered by the dicta and statistics of his predecessors. But we cannot enter upon the subject, nor upon that of imitations of classic metres.

There are some single points that call for corrections. Twice (pp. 98, 371) "soldiers" is made out to be trisyllabic in Coleridge's translation of "Piccolomini." Here Schipper's text has misled him. The line is not as quoted—

"The very churches are full of soldiers"—

but

"The very churches are *all* full of soldiers."

Similarly, p. 222, the line from Byron's "Beppo"—

"I don't know how they can get over it"—

should read—

"I don't know how they *ever* can get over it."

At p. 444, in enumerating the English renderings of 'Hermann und Dorothea,' Schipper has overlooked the excellent one by Miss Frothingham. Some of the remarks upon single words are quite at fault. Thus, "certes" is classified (p. 92) as an Old-English genitive in -es; it is not, but an Old-French word throughout. The remarks upon the termination -ious (p. 99) are in very questionable shape; the entire paragraph should be rewritten. How Schipper happens to put the termination -uence in the same category with -ience (p. 97), and thereby declare it to be usually monosyllabic, is a fresh puzzle. But for the citation of "influence" from "Tintern Abbey," we might charitably conjecture the -uence part of the paragraph-heading to be a printer's blunder.

Our criticism of Schipper has been almost exclusively in the nature of fault-finding; yet, viewing the book as a whole, we do not hesitate to concede to it an unstinted measure of praise. It is well proportioned and inspired throughout by self-denying research. The author has set himself a lofty ideal and striven manfully to attain it. Personally we are indebted to him for an insight into the structure of our verse, for a broad bird's-eye view of it in all its bearings, such as we should never have enjoyed without his aid. That any one should undertake to systematize the English verse line, with all its quirks and quibbles for three centuries and a half, is remarkable. That the work should be done by a German is almost incredible. It is easy for the native to hear where the German ear has failed to catch the beat of the English pulse; but to make too much of this superiority would be childish. After all, method is method. There is not one of us who would not profit immensely by three months' or six months' diligent study of Schipper's method. And, once familiar with it, every one will gladly revert to it on all occasions as the patientest and honestest of guides.

WEISMANN ON HEREDITY.

Essays upon Heredity and Kindred Biological Problems. By Dr. August Weismann. Authorized Translation, by Selmar Schönland and A. E. Shipley. Edited by E. B. Poulton. Oxford: Clarendon Press; New York: Macmillan. 1889. 8vo, pp. 455.

THE fourth volume of the "Translations of Foreign Biological Memoirs" contains eight of Dr. Weismann's papers, brought together from various sources of original publication, dating from 1881 to 1888. On account of the high rank of the author as a biologist, these writings attract much attention, especially among the followers of Darwin. A firm belief in Darwinism is evident from the start; knowing this, it is possible in some measure to anticipate the conclusions reached in these essays. Rate of growth, ultimate size, rapidity of reproduction, parthenogenesis, difference of sex, instinct, heredity, length of life, and death, all are said to be useful to the organism and consequently to have been the effects of natural selection. Taken in order of sequence, the chapters lead up to the later and more mature opinions, which are shown by the series to have suffered some modification. We can touch upon but a few of the prominent points.

Spontaneous generation, though not yet demonstrated, is to this author a logical necessity. The protozoa, unicellular, monoplastid, divide into others similar to the parent, and, all the cells being reproductive, are practically immortal. In multicellular metazoa, division of labor obtains: some of the cells remain wholly reproductive, others become body cells, which, incapable of reproducing themselves indefinitely, wearing out, become useless and detrimental; hence the necessity of death and the birth of a new body to bear the generative cells and prolong the life of the species. Duration of life is made to depend upon adaptation to external conditions and to be governed by the needs of the species; the advantage of the species alone, not that of the individual, being of importance. It may be said, in passing, that here as elsewhere, it is the temporary advantage, that of the present, that is important, regardless of ultimate influence on the existence of the species.

The first essay, "Duration of Life," is continued and amplified in the third, "Life and Death." As taught here, death is an adaptation brought about by natural selection; it is expedient because individuals that have served their purpose, reproduction, become useless and harmful in that they take the place of useful. The mortality of the body cells arose with their differentiation from originally homogeneous cells of polyplastids into dissimilar cells in heteroplastids.

The second essay deals with the transference of hereditary tendencies from one generation to another. This is accomplished by means of the "substance of the germ cells" (in a later writing by the contents of the nuclei), the germ plasm. On the supposed continuity and unchanged nature of this substance, Weismann builds his theory of heredity. One thing adduced in support is the fact that in certain insects the formation of the embryo begins by setting apart a few small cells for the reproductive organs. A portion of the germ plasm transmitted to the first generation remains unchanged and is passed on to the second, and so on, thus insuring permanence in the type and perpetuating characters of parents and previous ancestors. Abnormalities, mutilations, etc., are declared non-transmissible. It is conceded, more or less directly, that the direct influence of circumstances (climate, for instance) may work changes in the germ, and in this manner originate predispositions and bring about the possibility of accumulations of effects which would depend not wholly on the influence upon an individual during its life, but on the germ during generations. In extra use of an organ the amount of power depends on the predisposition; and natural selection, while apparently deciding between stronger and weaker individuals, is said to be really deciding between stronger and weaker germs. After all, Weismann does not make it clear that the predisposition itself is not an acquired character, a consequence of the action of ex-

ternal causes. His theory carries the matter further back, and his arguments make apparent a need of repairs in the foundation on which the general idea of "the survival of the fittest in the struggle for life" has been built.

Panmixia is defined as the suspension of the operation of natural selection, a condition which allows all the individuals to reproduce and stamp their characters upon the species—not only those which are fittest in all respects or in some special organs. We do not see that it is established that selection ever really ceases, or that Panmixia is not ceaseless, whatever the effect of selection.

The fourth of the essays is an amplification of the second in most of its features. The fundamental idea is, that heredity is brought about by transmission from one generation to another of a substance with a definite chemical and, above all, molecular constitution, slight changes in which induce divergencies in the descendants. These changes control the predisposition, without the preëxistence of which, as our author says, nothing can arise in an organism. The nuclear substance is the sole bearer of hereditary tendencies; and it must contain not only those of the immediate parents, but also those of an indefinite number of ancestors. A true continuity is apparently shown in some flies; in plants, however, there are propagations by shoots, buds, or leaves, in which cases the germ must be widely distributed. Even here the author does not find continuity impossible. His proof that somatic nucleoplasm is not at certain growth stages changed into germ plasm, is found in the Hydroids, in which only certain cells in the body of numerous so-called embryonic cells are capable of becoming primitive germ cells. Expulsion of the polar bodies is explained by the supposition that they contain ovogenetic nucleoplasm which has served its purpose in building the egg, and must give place to the germ plasm which builds the embryo. It is held that nature generally pursues the sexual method of reproduction, and that the only way parthenogenesis could be prevented was by the production of eggs, which, after expelling the ovogenetic nucleoplasm, lost capability of growth until after fertilization.

The preface to the fifth chapter, "The Significance of Sexual Reproduction in the Theory of Natural Selection," contains a definition of acquired characters evidently made to order:

> "Only those new characters can be called 'acquired' which owe their origin to external influences, and the term 'acquired' must be denied to those which depend upon the mysterious relationship between the different hereditary tendencies which meet in the fertilized ovum. These latter are not 'acquired,' but inherited, although the ancestors did not possess them as such, but only as it were the elements of which they are composed."

Whenever the author succeeds in making out the significance of a structure, it always proves to be a fresh example of adaptation. In the relation of parts to the function of the whole everything depends on the adaptation. No part, not the minutest or most insignificant, has arisen in any other way than under the influence of the conditions of life, and the parts of the body conform to those conditions. Individual variability forms the most important foundation of the theory of natural selection. Although he does not in this connection deny that external influences may affect the germ, Weismann believes they have no share in producing hereditary individual characters. The source of these he finds in sexual or amphigonic reproduction, the object of which process is to create those individual differences which form the material out of which natural selection produces new species. This is in the face of the fact that individual differences do exist in the lowest unicellular organisms; and the argument is weakened further by the admission that the ultimate origin of individual differences lies in the direct action of external influences upon the organism. Our author asserts positively that hereditary variability can only arise in this way in these lowest organisms.

Chapter vi. continues the discussion of the theory of continuity as set forth in chapter iv. In all eggs requiring fertilization two polar bodies are expelled; in others only one. The first nuclear division removes the ovogenetic nucleoplasm; this is called the "equal division." The expulsion of the second body, "the reducing division," removes part of the germ plasm, and reduces the number of ancestral germ plasms by one-half; the addition of the sperm nucleus to the remainder restoring the original quantity. The reducing division does not take place in the parthenogenetic egg; it contains the necessary germ plasm, and is ready for development at once after the expulsion of the polar body removes the ovogenetic nucleoplasm. In parthenogenetic reproduction the whole of the ancestral germ plasms is transmitted to the embryo; in sexual reproduction half is derived from each parent, thus preventing the existence of the same hereditary combinations in the germ cells of individuals and securing an ever-varying supply of individual differences. Among facts brought forward in support of these views, we learn that children who are exactly alike are, without exception, twins, of the same sex, enclosed in the same membrane, and presumably derived from the same egg cell. Unlike twins are supposed to arise from two eggs.

The seventh essay is "On the Supposed Botanical Proofs of the Transmission of Acquired Characters," and the eighth is devoted to "The Supposed Transmission of Mutilations." The importance of the discussion in these chapters arises mainly from the fact that it is deemed absolutely necessary by advocates of selection to disprove such transmission. Without this they feel themselves unable to displace Lamarckism or to establish firmly their own theory. To define acquired characters so as to include only the accidental, the superficial, the transitory, or the individual renders denial more easy, but does not lead to a satisfactory settlement of the questions involved. Dr. Weismann says of the germ plasm that it is not an organism in the sense of being a microscopic facsimile, which has only to increase in size to become a mature organism. It follows that the changes required in it must differ from those acquired by the body of the parent; yet it is supposed that the former are produced by the latter as a result of correlation. To quote from the author himself:

> "I believe, however, that they [the inherited variations] can be referred to the various external influences to which the germ is exposed before the commencement of embryonic development. Hence we may fairly attribute to the adult organism influences which determine the phyletic development of its descendants. For the germ cells are contained in the organism, and the external influences which affect them are intimately connected with the state of the organism in which they lie hid."

In the case of a plant in which influence of climate causes a change in form of leaves from ovate to lobate, it is asserted that such a change could not be transferred in pollen or ovule as anything similar to leaves or form of leaves, for such have no existence in the germ plasm. The only thing that could happen would be, as the author says, changes in its molecular structure which bear no resemblance to those changes which are implied by the direct alteration of the form of the leaf in the parent plant. Very true, no resemblance; but if the wind, heat, dryness, etc., modify the shapes, they also affect food and habits and through them the germ. The consequence being an acquired tendency to vary from ovate to lobate leaf, it will be difficult to convince the many that the resulting shape is not an acquired character. Such inauguration and enhancement of predispositions take prominent places in the foundation of a "theory of tendencies," recently put forth, as we understand it. If well grounded, that theory greatly reduces the province of selection, since a tendency brought about by climate, for instance, would more or less affect the species as a whole, impressing effects to which the individuals must adapt themselves. As connected with this, may be noticed the comment on one of our author's experiments to prove non-transmission of mutilations, the oft-cited one in which the tails of mice were cut off to the fifth generation without the appearance of a short-tailed breed: "The Doctor should not have expected shorter tails, but rather, in consequence of the efforts to obtain the support or other assistance formerly derived from the organ, should have been prepared for the appearance of a tendency towards greater length."

From the words of the author it is evident that some of the hypotheses discussed still have undetermined values. The common end of all of them is natural selection. But it is not in his theories alone one is to look for the causes of the general interest in these papers, which, as he says, are but steps towards a more perfect knowledge; it is in the powerful and well-supported discussions, in the really important additions they make to science, and in the light they shed upon other theories which his own are intended to supersede. Like Darwin, of whom he is a worthy, though not an entirely orthodox, disciple, Dr. Weismann prefers to build upon facts verified by himself, and it is a question whether it would not have been to the advantage of the scientific world had he started equally unpledged to any theory.

BOOKS ABOUT THE STAGE.

A Memoir of Edward Askew Sothern. By T. Edgar Pemberton. London: Richard Bentley & Son.

Players and Playwrights I have Known. By John Coleman. London: Chatto & Windus.

Brief Chronicles. By William Winter. New York: The Dunlap Society.

Le Théâtre de la Foire, la Comédie-Italienne et l'Opéra - Comique. Par Maurice Drack. Première série, 1658 à 1720. Paris: Firmin-Didot; New York: F. W. Christern.

Les Jeux du Cirque et la Vie Foraine. Par Hugues Le Roux. Paris: E. Plon, Nourrit & Cie.; New York: F. W. Christern.

Mr. Pemberton's memoir of Sothern is the ordinary theatrical biography, neither more nor less. It has no consecutive account of Sothern's career; it has no informing analysis of his ability as a comedian; it has no complete list of the parts played by him—and it cannot be said too often or too emphatically that a list of the characters performed by an actor is absolutely indispensable in his biography, as it is one of the most important means of estimating his final position. Mr. Pemberton evidently knows little or nothing of Mr. Sothern's parentage, birth, and bringing up; his chief reliance seems to have been on an American

book called 'Birds of a Feather'—a cloth-bound book which the British biographer terms a *brochure*. The most of Sothern's theatrical career was passed in America, and Mr. Pemberton knows little or nothing about the American stage. He seems to think that Sothern was successful as *Armand* when Miss Heron produced "Camille," and he nowhere records the epigrammatic criticism of a New York critic that Mr. Sothern's *Armand* had "every characteristic of a poker except its occasional warmth." Apparently Mr. Pemberton is unaware that the plot of "Sam," which the late John Oxenford wrote for Sothern when the public began to tire of *Lord Dundreary*, was taken from the German. These defects are for the most part trifles in themselves, but they indicate Mr. Pemberton's deficiencies as a writer on a theatrical subject. The fact is, that Mr. Sothern was a comedian of remarkable, though limited, powers, and of an unusual individuality; he deserved a better biographer than Mr. Pemberton, who seems to think that his hero's chief title to attention is derived from the abundant practical jokes recorded here to depress the spirits of all sensible people.

Mr. John Coleman is himself an actor, and he knows the stage thoroughly; he has even read some of the books about it, an achievement far rarer among actors than most persons would imagine. He has the courage of his opinions; he is a good hater, and he sets down in plainest black and white what he thinks of Macready, the Charles Keans, Charles James Mathews, and Mme. Vestris, the Wigans, Benjamin Webster, the late John Ryder, and others. From his earlier biography he condenses his account of Phelps. He is at his best in the chapter describing his relations with Charles Reade, and perhaps nowhere else can so clear an insight into Reade's character be had as in these careless and hearty paragraphs of Mr. Coleman's. We know now that Charles Reade is not to fill as important a place in the history of literature as he was once thought likely to occupy, but he deserves a better biography than the misshapen and uninformed life thrown together by his nephew; and these chapters of Mr. Coleman's, and the papers which Mr. House printed in the *Atlantic*, are among the sources of information which the future biographer will most value. Reade's collaborator, Tom Taylor, a dull man who edited *Punch* and adapted French plays, Palgrave Simpson (also an adapter), and Tom Robertson are among the playwrights Mr. Coleman considers. In the chapter on Robertson he insinuates that the author of "Caste" derived the suggestion of that neat little comedy from Barrière's "Vie d'une Comédienne," but this is one of the most unfounded and foolish suppositions extant. In the chapter on Macready Mr. Coleman gives a full account of the hissing of Macready by Forrest in Edinburgh, an "incident" at which he "assisted"—to use two French idioms. It is to be noted that Mr. Coleman thought very highly of Forrest's acting.

'Brief Chronicles' is the neat title Mr. William Winter has given to a collection of outline biographies of the leading actors and actresses who have been seen on our stage during the past thirty years. Most of them are obituary notices, recalling the facts and characteristics of the departed actor while yet he lay unburied; and, as the author declares, the "reader will find here the impressions, set down while still fresh, that were made by various distinguished and interesting men and women of the stage upon a writer of the time," who had seen all of them and who knew most of them personally. Nothing fades more quickly than the fame of an actor not of the first rank and not dying in the full radiance of the footlights; and Mr. Winter's sympathetic summary of their careers is almost the only memorial of many of the minor people of the stage who have passed away during the last quarter of a century, and who were too inconspicuous to call forth a volume of biography. Even the more important performers sometimes fare better at Mr. Winter's hands than in their set biographies. Mr. Sothern, for example, makes an impression far less distinct in Mr. Pemberton's volume than he does in the ten pages of these 'Brief Chronicles' of Mr. Winter's; and from neither of the long biographies of Charlotte Cushman can so good an idea of her merits be obtained as in the acute study of her art which is included in the sketch of her life prepared by Mr. Winter when she died. Perhaps the same might be said of Forrest, of whom there are three biographies, and of Lester Wallack, a review of whose empty 'Memories' is here included—a review couched in terms of eulogy, but adequately admitting the self-satisfaction and egotism which were the chief characteristics of the last manager of Wallack's Theatre. Among the others of whom Mr. Winter writes, always with sympathy and delicacy, always with full knowledge of the history of the stage in England and America, and always with an obvious bias in favor of those whose work tended upward, are Edwin Adams, John Brougham, Fechter, Hackett, Matilda Heron, Laura Keene, John McCullough, H. J. Montague, John T. Raymond, Mark Smith, and Mrs. Vernon.

M. Maurice Drack, a dramatic critic of repute and a dramatist of experience (an adaptation of his "P'tiote" was once brought out in New York), has prepared the first of a series of volumes intended to contain the chief plays acted in the minor theatres which existed in Paris under the shadow of the Opéra and the Comédie-Française, and which developed slowly into the Opéra-Comique and into the predecessors of the Porte-Saint-Martin and the Palais-Royal of to day. The ten comedies or farces here collected were acted either by the Comédie-Italienne or at the Théâtre de la Foire. Some of them suggest the local plays of Mr. Edward Harrigan, which are essentially like the Italian *commedie dell' arte* in the use of typical characters recurring in successive plays, and in the commingling of music and "variety business" with a regular plot. In Italian, the characters were *Pulcinella*, *Stentorello*, etc.; in French they are *Arlequin*, *Colombine*, *Lucas*, etc.; and in America they were the negro preacher (the *Rev. Pewter Palestine*, for instance), the typical German, Irishman, Chinaman, etc.

What is most interesting in M. Hugues Le Roux's new book about acrobats and contortionists and circus-riders and lion-tamers and show-folks generally, is the series of colored illustrations by that very clever painter, the late Jules Garnier. In the main, they have nothing to do with the text; indeed, it seems as though the author and the artist had worked separately, and that the pictures had been scattered throughout the text as appropriately as possible. M. Garnier was a Frenchman, and, of course, his portrait of Mr. Barnum naturalizes that American as a Frenchman; but he has given here a series of views of show-life and a series of portraits of show-people hitherto unequalled. We remark by the way that in an English translation of this book, recently issued, it is said to be from the French of MM. Le Roux and Garnier!—this being intended, perhaps, to soften the anger of the artist when he should discover that his colored sketches appear in the British book in barren black and white. M. Le Roux's preface leads the reader to expect much that is new, but the book contains little not already known to those interested in the subject. He is not quite so much of a pioneer in writing about the circus and its associated shows as he seems to think. He does not know, apparently, Strutt's 'Sports and Pastimes,' or the two books on 'Circus Life and Circus Celebrities,' and the 'Old London Fairs.' He does not know 'Hard Times,' or Albert Smith's circus novel, or 'Toby Tyler.' He does not mention even 'L'Hercule' of M. Léon Cladel, although of course he cites the 'Frères Zemganno' of M. de Goncourt and 'La Petite Lambton' of M. "Philippe Daryll," to whom the book is dedicated. But though 'Les Jeux du Cirque' is a little lacking in novelty, it is amusing and attractive. Perhaps it should be pointed out that part of one chapter (pp. 184-189) M. Le Roux had already printed as a short story in his 'Entre Hommes' (pp. 261-269).

TEXT-BOOKS IN PHYSICS.

Laboratory Manual of Experimental Physics. By Albert L. Arey, C.E. Syracuse, N. Y.: C. W. Bardeen. 1890. 12mo.

The Elements of Laboratory Work. By A. G. Earl. Longmans, Green & Co.

Elementary Dynamics of Particles and Solids. By W. M. Hicks. Macmillan & Co. 12mo.

Electrical Engineering. For electric-light artisans and students. By W. Slingo and A. Brooker. Longmans, Green & Co. 1890.

The Physical Properties of Gases. By Arthur L. Kimball. Riverside Science Series. Boston: Houghton, Mifflin & Co. 1890.

Mr. Arey's little 'Laboratory Manual' is well worthy of the attention of teachers. It contains a description of the apparatus necessary for making each of seventy experiments, together with directions for the experiments themselves and for what may be termed a discussion of the results. Very well-contrived blank tabular forms are given, in which the student may enter his results, a tabular form accompanying the description of each experiment. The student is thus shown how to make an experiment and how to discuss it when made. The subjects treated are: Properties of Matter, Fluids, Dynamics, Heat, Sound, Light, Electricity, and Magnetism. The apparatus suggested is, as a rule, very simple and well selected. An appendix contains an account of some more costly instruments. An intelligent boy of fifteen, with a fair power of using tools, ought to be able to make some of the simpler apparatus for himself, and would probably need but little help from a teacher. The book belongs to a class of works which have, within the last few years, become very numerous, and, while very elementary, it deserves to take rank among the best.

Mr. Earl's 'Elements' is of the same general character as that which we have just noticed, but is far more elaborate, and is intended for much more advanced students. The study of it would require greater maturity of mind and, frequently at least, the assistance of a teacher. A large part of the work is almost purely chemical, and recalls the expression "chemical physics," soon, we trust, to pass into oblivion. The work, in spite of its name, is not merely a laboratory manual, but to a great extent a treatise, while the questions asked are in general to be answered by actual experiment. We are not at all sure that the work will find favor

in this country, because it attempts to do too much, and cannot replace special treatises on the different subjects of which it treats, or the larger works on experimental physics. Still, it is by no means without merit, and to some teachers it may be of real value.

Mr. Hicks's work, as he states in his preface, is intended for the use of students with no knowledge of mathematics beyond the elements of algebra and pure geometry. From this point of view the work is a very good one, and is likely to receive a cordial welcome. It forms an excellent introduction to works on mechanics in which the higher analysis is employed, as it enables the student who has mastered the purely geometrical treatment of the subject to get a clear knowledge of general mechanical principles. From this point of view the work will also form a good introduction to elementary works on physics. A great number of problems and exercises are given, and materially add to the value of the work.

Messrs. Slingo and Brooker state in their preface that their work was designed to cover the extensive syllabus of the City and Guilds of London Institute, and that it embraces the requirements not only of those engaged in electric lighting, but also of those who, with little or no electrical knowledge, have under their supervision various kinds of electrical machinery. The work is likely to prove of great value in this country as well as in England. We have no elementary treatise upon the same subject which covers anything like the same ground. In seven chapters introductory to the main part of the work the authors treat with sufficient thoroughness fundamental electrical principles, units of measurement, and the more modern methods of determining resistances and electro-motive and current forces. They wisely include the galvanic battery in its different forms as steps in instruction which have a real value, though the galvanic battery itself is fast becoming antiquated as regards all practical applications. There is a sufficient account of Ohm's theory, and we come then to the subjects of electro-magnets and electro-magnetic induction. With this introduction the student is prepared to understand the different forms of dynamo-electric machines, both direct and alternating, of which a large number are described with excellent woodcuts illustrating construction, methods of winding armatures, and other needful details. We have then various forms of electric motors, and then chapters upon transformers, secondary batteries, arc lamps, incandescent lamps, and finally a valuable chapter on installation, equipment, fittings, etc. The style is clear and the mathematical part of the work sufficient for a purely practical treatise. The advanced student will need a more elaborate mathematical treatment of the theoretical questions presented, but such treatment could hardly be expected in a work like the present. It is safe to predict for the book an extended popularity among practical men.

The little work on 'The Physical Properties of Gases' is an agreeably written popular treatise which any intelligent reader can easily master, and which can hardly fail to open up a new world of thought and observation to a large class. Little or no mathematical reasoning is employed. The work is clearly written, and embraces all the really essential parts of the subject. It will hardly serve as a text-book for schools, from its non-mathematical form; but as an excellent presentation of a very interesting subject with which all educated persons should be familiar, it deserves a cordial recognition.

James Macdonell, Journalist. By W. Robertson Nicoll. London: Hodder & Stoughton. 1890.

One hope, the dearest, perhaps, to all men of letters, is denied the journalist. High as his ambition may soar, enduring fame is beyond its reach. However brilliant his achievements may be, they go nameless before the world; and should they by a rare exception come to attract attention to themselves, the glory attaches to the journal and not to the man. For it is, after all, the humbler intellectual wants that the journalist must satisfy—wants which are important, which are, indeed, imperative, but which, because of their very necessity and their frequent recurrence, are classed among ordinary things. They are "every-day" matters; and, as the very name of journalism shows, the labor of satisfying them is ephemeral. There may be no lack of either disposition or ability to be thorough, but the conditions of the journalist's work do not admit of it. He writes for men who are hurried, and he, perforce, writes hurriedly. He cannot choose the subject which he can best handle, and, if he could, considerations of policy would often restrict the expression of his own convictions. Even if fortune favors him in both theme and opportunity, he is hampered by the necessity of being brief. Like the makers of sonnets, he must say what he has to say within fixed limits, but, unlike them, he must also say it within a fixed time. He must be quick, short, and clear, or his craft will have none of him; as to his other qualities, they may be as pleases God.

But while the journalist can never hope to see his labors attain the dignity of "works," and must forego the desire to have his name held in honor by posterity, or even, for the most part, by his contemporaries, he can attain the more solid satisfaction of the conscious exertion of power. He may feel that while much of his labor is of little higher order than that of the grocer or the baker, it may from time to time influence, and influence perceptibly, the course of human events. He can not only direct and repress the great motive power of society, public opinion, but he can sometimes positively create it. But it is a mistake to suppose that he can accomplish anything by mere will power. He may apparently arouse ignorant passion by ignorant passion, but tempests of this kind make no enduring impression upon human affairs, and, when serious, are the results of deeper forces than any journalistic raving. A trifling matter, as Aristotle said, may occasion a revolution, but cannot cause one. If the journalist is to exert influence, he must possess power, and this power must be trained. Mere talent for writing is of no avail unless it is educated, and this education is not to be gained in any ridiculous "school of journalism," but by the study of many branches of knowledge and the mastery of some.

Of education in the narrow sense in which the word is generally used, the subject of this memoir had little. Of comparatively humble birth, he was reared in what would be looked upon outside of Scotland as poverty, and he had no regular teaching except what the parish schoolmaster could give. But the Scotch schoolmaster was sometimes no ordinary man, and of Mr. McPherson, whose pupil James Macdonell was for a year, it is said: "At a dinner in London some years ago, five of his old pupils were present. Two were ex-Premiers of Australian colonies; one a famous Indian soldier, who has filled the highest offices; a fourth the chief of the medical staff in India, and the fifth an American millionaire, whose name is familiar to every railway-man." To this influence was added that of Mr. McCombie, the editor of the Aberdeen *Free Press*, together with Hugh Miller, the most notable of the self-taught men of Scotland, "who, even while he held the plough, was studying speculative philosophy," and who dominated Aberdeenshire by his combined intellectual and moral force. But it was his own striving that educated Macdonell. He was brought up a Roman Catholic, but became a Protestant after a prolonged and profound study, not only of differences of creeds, but also of church history and general theology. In this internal struggle his whole nature was developed, and at the same time he acquired a familiarity with the ecclesiastical movements in Scotland and with certain departments of philosophy that was afterwards to stand him in good stead. In his leisure hours he taught himself French, and eventually became well-versed in both the literature and history of France.

At the age of sixteen Macdonell went to Aberdeen as a clerk, but, under the encouragement of Mr. McCombie, he soon began to write for the *Free Press*, and, when only nineteen years old, was engaged to contribute the leading articles during the absence of the editor. This determined his career, and within two years he obtained an engagement as sub-editor of an Edinburgh paper. In a twelvemonth he became editor of the *Express* at Newcastle, and, almost within the same period, attained the position of assistant editor of the *Telegraph* of London, refusing a similar post on the *Scotsman*. Here he remained ten years, becoming in 1875 a member of the staff of the *Times*, and continuing there during the last three or four years of his life. Like most of his trade, he burned the candle at both ends, and died at thirty-seven.

Mr. Nicoll observes that this book is "perhaps the only life of a journalist pure and simple ever written." It is certainly full of instruction for those who think of entering that occupation, but we should say that it is the life rather of the man Macdonell than of the journalist. Much information is given as to what he wrote and how he wrote, and as to how he prepared himself to write, but the charm of the book lies in the character that it reveals—a character, we fear, that can hardly be accepted as typical. Macdonell's life was singularly pure and noble, and he was deservedly successful and happy. But he was the victim of the cruel overwork that seems almost inseparable from his calling, and it is difficult to enjoy the delightful letters which his biographer has collected, when we reflect that the time given to them was borrowed at a frightful interest from the hours that should have been devoted to rest. Mr. Nicoll has performed his task gracefully and with fidelity, and we heartily commend his book to American readers.

The New Spirit. By Havelock Ellis. Scribner & Welford.

Mr. Ellis has taken into his brain many ideas, and, in giving them out in this book of essays with some color from his own personality, he affords the best example we have lately had of the fermentation of modern literary thought. He has natural audacity which will shock some and amuse others, and the offhand way in which he makes some novel remark of apparently tremendous significance is, perhaps, the most telling of his traits. The coming destruction of England by the Suez Canal, just like the overthrow of Venice by the discovery of the Cape route, as he thinks, is

mentioned as a thing of course: the mother-country, he predicts, will soon be no more than a museum of antiquities for the colonies. He ventures the assertion that the predominant English strain is Scandinavian, and apotheosizes William Morris as its late incarnation. He goes so far as to intimate that the fact that woman is the practical half of the race involves as its necessary consequence the passing of the practical art of government into her hands, after which happy consummation man, the idealist, will have room to develop in his own sphere of the fine arts and their cognate realms of imagination and fancy. But such matters as these are not the substance of his book—they are only preparatory and by the way; the body of the volume is occupied with a critical exposition of the "New Spirit" already moving in the latest modern world.

The men he has chosen to show forth this regeneration are Diderot, Heine, Whitman, Ibsen, and Tolstoi. It is a sign, probably, of his belief in the degeneracy of his country that there is not an Englishman on the list. The Frenchman represents the starting-point of the change; the German-French-Jew stands for the half-way period of romanticism; the American, Norwegian, and Russian for the things that now are. Each of these essays is a thorough and well-considered piece of work, admirable in information, firm in grasp, stimulating in style, appreciative in matter, and the survey afforded is broad. It is singular that in no place do we find out just what the "New Spirit" is—we are left to make that out for ourselves; and this seems to us a misfortune. We get no further than a vague impression that the democratic and social ideas of the race are growing and spreading; but of their good or evil, their ground or consequence, there is nothing said. In other words, we have here the book of a young mind which finds its new ideas so surprising that it is carried away by the mere current and fervor of the experience of them. They are in reality few, but they seem many; they are old, but they seem new; they are doubtful and confused, but they seem to the mind that entertains them the revolution of the world.

This is the description and, one may say, the transcript of a youthful mind with broad views and various culture. There is, however, a lack of perspective in the scene, and of the reasonable temper, which are generally looked for in any except juvenile work. It is a sign of this intellectual puberty that Mr. Ellis speaks with quite unnecessary frankness of certain parts of Whitman's poetry and theory which even Whitman's admirers are fain to pass over in silence, and that he sympathizes too plainly with the "naturalism" of the poet; and frequently in the volume one comes upon remarks that suggest a pæan upon sex scientifically, philosophically, and poetically. We do not very well understand in America the foreign repute of our great democrat in verse, and the present essay upon Walt Whitman, though it is the most complete we have seen, does not much assist us. He serves here as the exponent of democracy and of the "natural" man, and so helps to fill out the round of ideas; criticism of him, under such circumstances, is of course panegyric. Ibsen brings before us the uselessness of social conventions, and Tolstoi religion undefiled. A final chapter treats more generally of religion, in a large style and unsatisfactorily enough; and so the book ends as it began.

From what has been said it will be seen that error has, to our thinking, no small share in these essays, and that, nevertheless, it is not without a generous quality. Fermentation, the word we originally used, best describes the volume. It is an altogether unusual work, both for its ambition and for its matter; it brings the reader near to some of the marked ideas of the time, though mainly by way of exposition, without adequate criticism; and as a first book it is a sign of a vigorous intellectual mind.

Robert Browning: Essays and Thoughts. By John T. Nettleship. Scribner & Welford. 1890.

NEARLY one-half of the four hundred and fifty pages of this volume were originally published twenty years ago, and marked the beginning of the study of Browning rather on the ethical than the poetical side. The essays were well fitted to open lines of thought, and to bring out the identical moods and principles variously illustrated in miscellaneous poems. Nothing more admirable in this kind of criticism has been produced by later writers, and these original essays are now supplemented by as much more matter dealing largely with the poet's works since 1868 in the same painstaking manner. They are, however, far from being easy reading. The paper upon "Fifine at the Fair," for example, requires as much resolution in the attack by the reader as do the verses themselves, and the other papers, which contain an exegesis of the later poems, are nearly as dry, formal, and difficult. The volume is, therefore, an aid to study, and appeals only to minds capable of intellectual labor of considerable strain. The question of the worth of these prose translations of the poems is secondary to that of the poems themselves; but if one wishes to follow Browning through his later years, he could not find a more conscientious guide. It is interesting to observe in the midst of this mass of explanation that the author protests vigorously against the view that Browning is to be regarded as a preacher and moralist primarily, and not as a poet and artist. His art, nevertheless, is not the subject of any essay. Mr. Nettleship is a thorough devotee of his master, and uses phrases with regard to him which have no excuse for being in a book of criticism. It is clear, moreover, that it is Browning's thought and spirit which have attracted this idolatry, and not his poetry as such. Idolatry has, at all events, led to faithful and prolonged study, such as used to be given to Scripture in old time, and the collected results of this application are valuable to others of the sect. Taken in connection with Mrs. Sutherland Orr's 'Handbook,' this volume ought to be sufficient as a guide to the most persistent and deep-thoughted of all Browningites.

L'Instruction publique en Égypte. Par Yacoub Artin Pacha. Paris: Ernest Leroux. 1890.

IN this the first systematic work of its kind, necessarily the major portion is taken up with an account of the Mohammedan system of education and learning, its methods and history, and the well-known close relationship of all instruction with the religious life of the people. This the author has done systematically and well without too great detail. Though looking through French spectacles, he has performed a valuable service in an impartial manner, freely adding pertinent extracts from English writers and reports not accessible to the general public. One gains from him a good view of the current of modern knowledge meeting the Moslem system from the beginning of this century under the favor of Mehemet Ali, with all its varying checks and flow during subsequent reigns to the present tentative and fairly established plans under a tolerably prosperous financial régime. There are six well-proportioned chapters, followed by six annexes of statistics of schools and their character, number of pupils, names of directors, lists of subjects taught, number of young men sent to Europe from 1813 to the present time, with their subsequent careers, and finally a list of journals, Egyptian and foreign.

Half of the book is taken up with an interesting account of Moslem learning, including references to the great schools of Syria, Asia, Spain, and the great Mosque University of Cairo, "El Azhar," with quotations from famous writers, the Prophet, and others, on the glories and distinctions of the learned. Such a general view is essential to the comprehension of the present state of education in Egypt. The author is at pains to show that learning and science in the centuries of the Moslem conquests were superior to what Christian nations could show, and also that Mohammedanism is not inimical to the enlightenment of the female sex. He quotes freely in support of these statements, and refers to the writings of at least two remarkable Egyptian women. He has published several theses on Oriental subjects, and has had unusual facilities for acquiring accurate information on his present subject; his father and uncle having been members of the first council on public instruction appointed by Mehemet Ali in 1836.

The glory of El-Azhar, founded in 975, mainly in opposition to the Sunnites of Bagdad in the strife of the sects, culminated in the fifteenth century, when 20,000 students thronged its halls. From that time to the present it has steadily declined, and is now little more than a decaying memory and a school of Moslem theology and law. Every community has its mosque or mosques; and its imams, fakirs, and ulemas teach the same petrified system of memorizing the Koran, reading and writing in the Arabic, whether in rude mud hovels or under the shadow of resplendent minarets. It was not until two hundred years after the Conquest that the mass of Berbers became converted to Islamism, and the comparatively small number of Copts are now generally Protestants. Moslems know little beyond the Koran, some romance and poetry, and Arabic grammar, and have long lost the eminence gained by them in the Middle Ages in the cultivation of astronomy, algebra, and the natural sciences. The Copts, Greeks, and "Franks" have for ages carried on the finances and commercial transactions for their masters, the Turks and Arabs.

Among Mussulmans instruction is begun at six or eight years of age, and usually ceases at ten or twelve. Those who go further procure Government employment, or ultimately enter the religious hierarchy, the leaders of the people in all respects. It was the genius of Mehemet Ali that saw the need of change, and let in the stream of Western knowledge, solely to save his country and people. In answer to a question, one of the members of the Council of Education in 1852 stated that about 10 per cent. of males and 1 per thousand of females could read and write. When it is remembered that only in 1884 was the kourbash abolished, in 1882 thirty-two slave-dealers existed in Cairo alone, and the corvée annually caused thousands to perish, this state of affairs need cause no wonder. In 1816 Mehemet Ali engaged Italians to teach military science, and established some schools, mainly, however, for the officers of his army; and he sent forty young men to noted schools in Italy, followed by some others to England, and finally exclusively to France, who were

placed in the administration, in his army, and at the head of native technical schools. The first lot, returning after eight years, were locked up in the citadel at Cairo by their practical sovereign and made to produce translations or original works on technical subjects most familiar to them, which were forthwith printed at the newly instituted printing establishment at Boulak.

In 1836 the first Council and Ministry of Public Instruction was formed, and primary and secondary schools sprang up over Egypt, with special and technical schools in the larger cities and Cairo, including some for music, medicine, and the arts. Pupils from the Turkish and Mameluke families, and white slaves, not being sufficient, the lower Egyptians were *forced* to attend. This scheme was based on French models and was in theory adequate, but practically nearly useless and wasteful, and lasted fifteen years. The succeeding pashas did little or nothing, notably from 1848 to 1863. All this time pupils were kept in European schools, and Ibraham Pasha compelled his officers to send their sons at private expense, hoping for better results from the latter plan. More genuine progress followed the efforts of a Swiss pedagogue, Dor Bey, from 1863 on, who, under great difficulties, established the present Normal or High School at Cairo, the pupils coming from El-Azhar and being prepared as instructors for the schools of the country. The first school for females was opened in 1873.

After 1840, the foreign nationalities and colonies established their own schools with the aid of the Catholic orders, and the Copts were converted to Protestantism in large numbers by the English and American missionaries. After 1860, the American mission-schools attracted notice and extended over the greater part of the country, and were not confined to Copts alone. In the public schools, French, Italian, and latterly English, along with history, arithmetic, geometry, and drawing, are added to the study of the Koran in Arabic. There are also native pious and charitable schools and foundations, and for a short time several large mixed public schools existed in the larger cities, and were frequented by foreign and native children. Orthodox Moslems incessantly object to European instruction and the study of the natural sciences, for, as they justly say, their young men cease to be true believers.

The number of pupils in the primary communal schools in 1887 exceeded 120,000, the number of schools being 7,142. The rate of increase since 1840 is estimated at 4 per cent.; since 1875 at 6 per cent. The number of pupils in schools under foreign auspices is 22,764, more than 15,000 of whom are native Egyptians. It is estimated that at present 25 per cent. of males and 2 per cent. of females can read and write. In 1838 but one female school existed, and that for Copts alone, under Mrs. Leader, an English lady; the number of pupils is now 6,000, and their rapid progress is remarked. In 1840 there were only two journals, official, in Turkish and Arabic and printed at Boulak; now there are thirty-three (eighteen in European languages), and the two official journals are in Arabic and French. The printing establishments number fifteen, the original one at Boulak producing the bulk of educational works and translations into Arabic. In its first eleven years it issued 160 Turkish, Persian, and Arabic books.

The impression made by all this endeavor thus far is considerable, though to the practical Anglo-Saxon, who does not fully realize the *laissez-faire* and indolent character of the people and their mentors, there is hardly any education worthy the name. Little practical application of it is to be seen, and the people as a rule are steeped in the degradation of a truly miserable existence. Poverty, filth, preventable disease, and waste of life strike the traveller nearly as keenly as in other and more distant countries where public instruction is not thought of. We are not told what is the sum annually expended by the Minister of Public Instruction; but, as Government statistics in Egypt on most subjects are wofully inaccurate, the omission is not serious. A fuller index should have been provided.

Winchester. By G. W. Kitchin. [Historic Towns. Edited by E. A. Freeman and William Hunt.] Longmans. 1890. 8vo, pp. xiv., 227.

EXCEPTING London, no English town has a more interesting history than Winchester. It is hard to realize that this quiet little city once rivalled London in importance, and down to the thirteenth century played a very prominent part in the history of England. Dean Kitchin gives an excellent outline of the rise and decline of this historic town.

The author's account of the development of the civic constitution of Winchester is admirable, though very limited in scope. We think, however, that he errs in some matters of detail. There is no good authority for the statements that "in 856 Æthelwulf had granted Winchester a Merchant Guild" (p. 159), and that this fraternity "is said to have been the first corporation permitted to exist within the Kingdom" (p. 166). The Gild Merchant was not established in England until after the Norman Conquest. Equally untenable is the conjecture, that the Knights' Gild of Winchester was "the original civic corporation" of that city, and was merged into the Gild Merchant (p. 74). The word "hantachevesle" (p. 74) would probably have troubled the author less had he known that it is a misreading; "hantachensele" is the proper reading, according to the manuscript of the Winton Domesday owned by the Society of Antiquaries of London. The word seems to mean "the hall of the Knights' Hanse." There were also two other Knights' halls in Winchester early in the twelfth century. Perhaps "tregilda" in the Winton Domesday refers to these three Knights' Gilds. The author thinks that the word refers to the Gild Merchant, the Knights' Gild, and the Palmers' Gild (p. 74).

This volume, more than any other of the series, impresses us with the conviction that the series might have done much more for the advancement of knowledge had its scope been less wide. The list of authors includes such competent historians as Freeman, Creighton, Hunt, Boase, and Kitchin. They are asked to bring out, in each of these small volumes, "the general historic position" of a town, "the special part each played in the general history of the Kingdom." Now the general histories of England and most of the older local histories give much information on this part of the subject, while the development of the municipal government, or the civic constitution of English towns, has been greatly neglected. The series does not aim to fill this void. Dean Kitchin—who has evidently made good use of original local records—would probably have found it a much more congenial task to have given a full account of the history of Winchester's civic constitution, to have traced in detail the growth of the powers of the various conflicting authorities in Winchester (the town magistrates, the King, the Bishop, etc.), and their final consolidation into one municipal government. If not more congenial, it would at any rate have been a more profitable task.

Paris. Par Auguste Vitu. Paris: Maison Quantin; New York: F. W. Christern.

THE Paris Exhibition of 1867 called forth the extraordinary 'Paris-Guide' in two volumes, to which almost every French author of note contributed, and for which Victor Hugo (then in exile) wrote a flamboyant preface. 'Paris-Guide' was an expensive failure, and the fate of its publishers probably deterred any one in 1878 from attempting any very important book about Paris. But last year, when the fourth great French Exhibition was held after the usual interval of eleven years, the Maison Quantin announced a sumptuous tome about Paris, to be written by M. Vitu, illustrated by half-a-thousand views, and to contain about as many folio pages. The ship on the shield of Paris may sail a troubled sea, but it carries a goodly cargo, to which the artists have contributed their full share. Perhaps the first impression made by this lordly volume is one of delighted wonder at the persistence and the continuity, the high value and the wide variety, of French architecture and of French art, as we see them reproduced here to illustrate M. Vitu's summary of the city's history and his outline of its present organization. M. Vitu is the dramatic critic of the *Figaro*, and he is therefore a lively writer; he is an antiquary of fair repute, and he is therefore trustworthy; but the illustrations make the text pale. They are all process blocks, scratchy at times, slovenly even, but effective generally; yet the city they attempt to reproduce is so varied, so beautiful, so rich, so artistic, so full of light and color and life, that the occasional demerits of the drawing disappear before the merits of the thing reproduced.

Walks in Epping Forest. New edition.—*Walks in Holland*, Cycling, Boating, by Rail and on Foot.—*Walks in the Ardennes*, with Boating, Fishing, Cycling, and Shooting Notes. By Percy Lindley. London, 125 Fleet Street.

BRITISH guide-books to the cities or districts of the Continent are sometimes well written, and often contain much valuable information in the fields of history and art; but the information they give about railways, inns, roads, and the like is nearly always meagre, and out of date at that. This is why the Baedeker guides, though ill-printed, and no more interesting than a time-table, are so much used. To our mind, the best guides, if one can read German, are Meyer's; they contain, one may almost say, *everything* which the traveller may wish to know, and their typography, maps, and illustrations are well nigh perfect. The abridgments (called *Wegweiser*) are particularly to be commended to foot-travellers, or those who need to practise economy.

Mr. Percy Lindley, however, has begun to publish a series which are more "practical" than Meyer, even, and give more for the price than any books on any subject with which we are acquainted. Their first merit is, that they seem to have been written because the author loves the country described, and wishes others to share his enjoyment; whereas the usual attitude of a guide-book-maker is that of an auctioneer hired to proclaim the merits of a particular "lot" of places for this occasion only. Mr. Lindley's motto is from Washington Irving: "Recollect, my friend, that I am tired of churches, convents, palaces, galleries of paintings, subterranean passages, and great men. If you have anything else to show me, *allons!*" He has produced, so far, only three

little volumes, printed in two columns of leaded nonpareil, with plenty of maps and lithographed illustrations, good enough for the purpose, though very different from the beautiful little steel engravings of Meyer. All this, bound in boards, in a shape to be easily carried in the pocket, is given for sixpence!

The Brain of an Army. A popular account of the German General Staff. By Spencer Wilkinson, author of 'Citizen Soldier.' Macmillan & Co. 12mo, pp. 115.

THIS is one of a series of military handbooks published in England for the benefit, primarily, of the volunteer service, which have established for the author a high reputation as a military critic. It gives within a small compass a clear idea of the vastness and complexity of the task of mobilizing a great European army and entering upon a campaign with it. It is in relation to this that the author discusses the importance and value of the German General Staff organization, and the manner in which it fulfils the function of the "brain of the army."

An American reader will need to read such a book with an ever-present remembrance of a fact which will only be found between the lines of European publications on the subject, viz., that where hereditary princes are, for political and dynastic reasons, made commanders of armies, the chief of staff becomes the "brain" of the organization in a much higher sense than in cases where the highest command is open to unrestricted competition. With this reservation this little book cannot be too highly commended for the force with which it brings out the idea that modern warfare on a great scale involves problems so vast and so delicate that a trained body of staff officers is necessary, not merely for the administrative and bureaucratic work in the departments of the Adjutant and Quartermaster-General, the ordnance, the commissariat, the Surgeon-General's office, and in the Engineer's, but also for the general assistance of the commander in all that pertains to his handling of the whole army and all its departments as a unit. If a general-in-chief be a man competent to be his own chief of staff, the value of the assistance rendered by a highly trained general staff would be none the less, though more subordinate to his own brain and will.

American soldiers need also to note well that the education given at such a school as West Point is presupposed before an officer enters upon the most rudimentary part of the staff training according to the European idea and practice. Indeed, our military academy can hardly be ranked as a military school at all in the German sense, and unless its graduates supplement their work by independent study in the directions indicated in Wilkinson's chapters, it might be broadly said that there is no staff education in the United States.

What I Remember. By Thomas Adolphus Trollope. Vol. II. Harper & Bros. 1890.

MR. TROLLOPE continues in his second volume the reminiscences of Italy, and his later life there, which he agreeably set forth in the previous one. Much of this volume is devoted to pleasure trips in Switzerland, the Tyrol, Austria, Germany, and France, in which the experience of the general traveller receives illustration. The more interesting portions describe Florence as it was when it was the capital, and the unfortunate effect of the removal to Rome upon his own private fortune. There are, perhaps, fewer notable characters in his list of guests, and less is told of them, but our Minister, Marsh, comes in for pleasant words of remembrance and appreciation; and of Italians Francesco dall' Ongaro, Salvini, Molmenti (and may we not include Rawdon Brown?) are examples. Longfellow also appears in the Florentine drawing-rooms, and Emerson at Rome. Mr. Trollope thought Emerson inferior to Arnold: "To me Arnold appeared a far more many-sided man, gifted with a much larger receptivity, and stronger capacity for assimilating all the mental pabulum to be sucked out of all that was around him"; but it is to be said that Emerson did not seem to like Rome and things Roman. Among the curiosities of the volume are a couple of ghost stories such as the Society for Psychical Research prizes, and a description of the preparation of human flesh made by Signor Marini, who reduced it to the consistency and condition of marble, "capable of receiving the highest polish." The brain and liver were thus treated, and a table is described, "very beautiful and highly polished," of many colors, which was made from different portions of human flesh. The anecdote of Pope Pius IX. consenting to give the reporter of a New York paper his allocution at the creating of Cardinal McCloskey, because he was impressed by the cost of telegraphing it, is entertaining: "Five thousand francs! I rejoice that our words are so highly valued by your people!" Such bits of humor are rare, but there are other anecdotes, pictures of extraordinary spectacles, tourist adventures, and the like, which enliven the book.

Catalogue of the Cuneiform Tablets in the Kouyunjik Collection of the British Museum. By C. Bezold. Vol. I. Printed by Order of the Trustees. London. 1889.

THE Trustees of the British Museum have determined to publish a catalogue of their collection of cuneiform tablets, and they have secured the services of Dr. Carl Bezold of Munich, one of the most painstaking among the younger Assyriologists, for its compilation. The first result of his labors is before us. The Kouyunjik collection comprises nearly one-third of all the cuneiform tablets in the Museum, and the present volume describes about 3,000 tablets. The size of each tablet, its condition, and the number of lines of writing preserved are given; and when tablets have been published, references are added for the text and translation. The catalogue will be most valuable to students using the cuneiform collections of the British Museum, and the Trustees are entitled to the grateful recognition of all interested in cuneiform science for having undertaken the work.

It is much to be regretted, however, that the form of the publication is open to serious exception. The typography is, in some respects, good, the outline cuneiform types being especially commendable. The Roman character employed is also clear, but no attempt has been made to distinguish statements to the eye by the use of different types. The numbers would be of more service at the beginning of the articles than at the end. Catch-numbers at the tops of the pages would have been extremely useful. A judicious selection of technical terms, an avoidance of unnecessary expressions, and the use of a more reasonable system of abbreviations (as for the very common terms "obverse" and "reverse"), would have materially reduced the size of the catalogue.

The English is incredibly bad. The author certainly brings a very serious accusation against Mr. Evetts of the Department of Oriental Antiquities of the British Museum, in acknowledging "indebtedness for a revision of the English text." It is no exaggeration to say that probably no book in worse style has ever appeared in the "English" language. That the Trustees of the British Museum were willing to authorize the publication of the catalogue in its present form is a matter for surprise. To point out the peculiar constructions (which not infrequently leave the reader at sea as to the author's meaning) would require a volume; a few specimen bricks will suffice: p. 52, "obverse and reverse, which are now joined together, belong on this account, and on that of the similar material, writing and contents, apparently to the same tablet, although the two parts do not fit to each other"; p. 60, "and on both sides very large pieces out of the middle are broken out"; p. 66, "on obverse 31, and on reverse 29 lines, of which on obverse considerable parts are broken out, with clear Assyrian characters," etc.

The most serious charge to be made, however, is that the catalogue is subjective and personal in tone throughout. The British Museum, or, for that matter, any other public institution, should not assume the attitude of criticism towards the labors of scientists; its position should be neutral, with no persons or theories to favor. Its mission is to acquire collections and render them accessible to students. And when foreigners are employed in the preparation of scientific publications, a decent regard for the English language should prompt a careful revision of the text.

SOUND-ENGLISH

A Language for the World.

BY

AUGUSTIN KNOFLACH,

Author of 'German Simplified,' 'Spanish Simplified,' etc.

'Sound-English' may be ordered through any bookseller, or will be sent postpaid on receipt of twenty-five cents (in postage stamps) by

G. E. STECHERT,

828 Broadway, New York.

Seashore Lands.

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchasers and for sale. A number of beautiful shore, island, and peninsular properties on Penobscot Bay and other parts of the coast. These ranging from 10 to 1,000 acres, of the best selected frontages of high land, have beautiful rocks, trees, beaches, harbors, and mountain and sea views, and in the rapidly increasing movement to this coast, are almost the only remaining shore lands still purchasable at very low prices and offer exceptional advantages for gentlemen wishing independent estates for summer occupancy or for local colonization or investment. For details address

J. Murray Howe, 27 School St., Boston.

PARTY OF SEVEN

To the North Cape and Russia.

A party limited to seven members, visiting Denmark, Norway, Sweden, Russia, Vienna, Salzburg, Munich, Oberammergau, Paris leaves New York May 28, in charge of E. C. KIMBALL, Bradford, Mass. Supplemental trip from Paris, Sept. 23, to Spain, Morocco, and Southern France. Send for itineraries.

F. W. CHRISTERN,

254 Fifth Ave., between 28th and 29th Sts., New York.

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

Houghton, Mifflin & Co.'s New Books.

The Master of the Magicians

A Novel collaborated by ELIZABETH STUART PHELPS and HERBERT D. WARD. 16mo, $1.25. [*May 3.*]

'The Master of the Magicians' is a novel dealing with court life in Babylon six hundred years before Christ. "For art, power, scope, flexibility, wealth of imagination, and fidelity to that human nature which changes so little in the course of ages, 'The Master of the Magicians' must be considered a brilliant success, and one of the very few really admirable productions of its kind."—*New York Tribune.*

Poems.

By JOHN HAY. 16mo, gilt top, $1.25.

Colonel Hay has included in this volume the poems published nearly twenty years ago under the title of "Pike County Ballads," which have had a quite remarkable popularity, with the poems he has written since that date.

Castilian Days.

By JOHN HAY. New Edition, uniform with Hay's Poems. 16mo, $1.25.

Palestine under the Moslems

By GUY LE STRANGE. With Maps and Plans. Crown 8vo, $3.00.

A book of great value concerning Palestine during the sovereignty of the Moslems. It gives for the first time in English the Arabic and Persian records of this sovereignty from the middle of the ninth century to the close of the fifteenth.

Tales of New England.

By SARAH ORNE JEWETT. In the Riverside Aldine Series. 16mo, $1.00.

Eight of Miss Jewett's most delightful stories, forming a peculiarly good summer book.

Life of Nathanael Greene,

Major-General in the Army of the Revolution. By GEORGE WASHINGTON GREENE. *New Edition,* in three volumes, price reduced from $12.00 to $7.50.

A work of very great historic and personal interest.

Houghton, Mifflin & Co.,

Boston and New York.

For Sale or for the Season.

A desirable cottage, fully furnished, at Wianno (Osterville), Mass. Address T., 332 Palisade Avenue, Yonkers, N. Y.

THE NATION.—A BOUND SET, also an unbound set; various vols., both bound and unbound; 25,000 odd numbers. Will buy, sell, or exchange. A. S. CLARK, 34 Park Row, N. Y. City

A. C. McClurg & Co.'s

NEW BOOKS.

Russia: Its People and Its Literature.

By EMILIA PARDO BAZAN. Translated from the Spanish by FANNY HALE GARDINER. 12mo, $1.25.

This remarkable and brilliant work was originally given in the form of essays before the Spanish Athenæum, at Madrid—a body composed of the foremost authors and scholars of Spain. The essays received such hearty recognition that they were soon issued in book form; and they now appear, for the first time, in an English translation. The work is one that must challenge attention in any country for its deep, critical insight, wide historical knowledge, and charming style.

A Short History of Mexico.

By ARTHUR H. NOLL. 16mo, $1.00.

This is a compact work, covering the whole ground of Mexican history in a single volume. Beginning with the earliest Aztec civilization in Mexico, it gives an epitome of all that is clearly known regarding that somewhat cloudy but ever-fascinating period of history; sketches rapidly and clearly the events of the Spanish Conquest; details the rise and fall of the First and Second Empires, culminating in the death of Maximilian, and ends with Mexico as a Republic.

Raphael;

Or, Pages of the Book of Life at Twenty. From the French of ALPHONSE DE LAMARTINE. *Laurel Crowned Tales.* 16mo, gilt top, $1.00.

This dreamy, imaginative, poetic tale has long been known as one of the purest gems of French literature. American readers will be delighted to welcome an English translation of 'Raphael' in this most fastidious edition. It is a worthy continuation of the series which contains Johnson's 'Rasselas' and Laboulaye's 'Abdallah.'

A Foreign Match.

By MADAME BIGOT (Mary Healy). 16mo, $1.00.

Mme. Bigot (Mary Healy), who is known through her charming little story—'A Mere Caprice'—which, when written in French, received the high honor of being "crowned" by the French Academy, has written another brilliant short story with the title 'A Foreign Match.' This story, like the former, is a tale of Parisian life, and treats of the perils and dangers of American heiresses abroad. It is simple in construction, is easily followed, and abounds in brilliant passages and dramatic situations.

A Winter Holiday in Summer Lands.

By JULIA NEWELL JACKSON. Illustrated. 16mo, $1.25.

A pleasantly written and easily read short book of travels. The author, with a small party of friends, made a winter excursion to Cuba, thence to Mexico, returning overland. Her stay in Cuba and Mexico was of uncommon interest, and the descriptions of life and society in these romantic places are given in a delightful vein, with apt feminine touches and playful wit.

For sale by booksellers generally, or will be sent, postpaid, on receipt of price by the publishers.

A. C. McCLURG & CO., Chicago.

THE OPEN COURT—A WEEKLY Magazine of Philosophy, Science, and Ethical Religion.—The all-important want of our time is the foundation of a purely ethical religion. This religion must rest upon a scientific basis. Its principles must be derived from the scientific investigation of the facts of human soul-life (PSYCHOLOGY), and the relations of the world (PHILOSOPHY) and the circumstances of society (SOCIOLOGY) that determine human conduct.

These three topics are discussed in *The Open Court* by the most eminent investigators of Germany, France, the United States, and Great Britain. Correspondence from Continental critics. SPECIMEN COPIES FREE. Subscription one year, $2.00. THE OPEN COURT PUBLISHING CO., 1733½ La Salle St., Chicago, Ill.

AN INTRODUCTION

TO

POLITICAL ECONOMY.

BY

RICHARD T. ELY, Ph.D.

Crown 8vo, cloth, $1. Half leather, $1.50.

OPINIONS.

"It is, I think, the best elementary economic treatise which I have read. How clear and simple it all is!"—*Emile de Laveleye, Professor of Political Economy, University of Liege, Belgium.*

"In my judgment the book is a pronounced success, and I even think it will mark an era in text-book making. The sociological standpoint and the historical method, also generally the human spirit in it, sharply distinguish it from text-books now in the hands of elementary students."—*J. B. Clark, Professor of History and Political Science in Smith College, Northampton, Mass.*

"It shows, as no other book ever has shown, what the scope of economic study is. The entire field is mapped out, and the survey is from the right standpoint, the sociological."—*F. H. Giddings, Professor of Political Economy, Bryn Mawr College.*

"We are using Ely's 'Political Economy,' and find that it is doing just what the author intended it should do, namely, awaken the mind to a full comprehension of the subject and stimulate it to further inquiry. It does more. It puts the subject in a new and attractive light. I regard it as a great success."—*F. W. Blackmar, Professor of Political Science, University of Kansas, Lawrence, Kansas.*

"I think I can use it better than any other as an introduction to economic studies."—*Edward W. Bemis, Professor of Political Science, Vanderbilt University, Nashville, Tennessee.*

"I have looked through it, and I wish to say that no other text-book on the subject pleases me quite so well. It is sufficient to prove that this subject need not be a dry one, as is so often claimed."—*George P. Garrison, Professor of History and Political Science, University of Texas, Austin, Texas.*

HUNT & EATON,

150 5th Avenue, Corner 20th Street,

NEW YORK.

A ROMANCE OF THE HEAVENS.

URANIE.

FROM THE FRENCH OF

CAMILLE FLAMMARION.

By MARY J. SERRANO,

Translator of 'Marie Bashkirtseff,' The Journal of a Young Artist,' etc., etc.

Paper, 50 cents. Extra Cloth, 75 cents.

This volume, by the leading astronomer of France, has made the sensation of the year in Paris. It is a singular mixture of love and science, and while it is altogether fantastical, it has such an air of reality about it that there is no disbelieving it. The book is bound to attract the attention of all lovers of the romantic, and will hold its own with the popular imaginings of Jules Verne, though it is more of a novel than is anything written by that author.

REV. J. G. WOOD.

The Life of Rev. J. G. Wood, Clergyman, Naturalist, and Author. By REV. THEODORE WOOD. 1 vol., 8vo. Cloth, $2.50.

If the Life of Rev. J. G. Wood has as many readers as the man and his work have admirers, the publishers need ask no more. His biographer follows him from the day of his birth until his death, and traces the growth of his love of out-of-door pursuits from its earliest inception to the end. Every one who loves Nature will be interested in this life of one of her most ardent lovers.

PRICE, 25 CENTS.

MARIE BASHKIRTSEFF.

THE JOURNAL OF A YOUNG ARTIST.

Translated by MARY J. SERRANO.

A new edition from the original plates, to be ready in a few days, is now in press of this world-famous book, of which over 80,000 copies have been sold within five months. Everybody is reading it.

Ask for Cassell's 25-cent Edition.

FOR SALE BY ALL BOOKSELLERS.

Cassell Publishing Co.,

104 and 106 Fourth Ave., New York.

William Morris's Great Prose Poem.

"We would say of it, first and last, that no single poem in the English language is comparable to it in nobility of conception, in beauty of diction, in the sustained skill of its composition, and above all, in the power and quality of the imagination taxed for its writing," says *The Philadelphia Press* of

The House of the Wolfings and all the Kindreds of the Mark.

By WILLIAM MORRIS, author of 'The Earthly Paradise.' A limited edition, of which only a few copies remain. Price $3.00.

LATE NEW BOOKS.

SONS OF THE SOIL. By Balzac. $1.50.

THE BAGPIPERS. By George Sand. $1.50.

THE NEW PRIEST. By Robert Lowell. $1.50.

ALBRECHT. By Arlo Bates. $1.50.

Sold by all booksellers. Mailed, postpaid, by the publishers.

ROBERTS BROTHERS,

BOSTON.

MENTAL INVALIDS OF A MILD type, especially those afflicted with Melancholia, sufferers from abuse of alcohol, and victims of the opium habit are offered superior advantages in private treatment and care at the STOCKTON SANITARIUM, in the beautiful village of Merchantville, N. J., five miles by train from foot of Market St., Philadelphia. Absolutely no suggestion of an asylum. The spacious, veranda-surrounded houses in the outskirts of the village, with their twelve acres of grove, garden, and lawn, are precisely like the better class of private country villas. The utmost freedom consistent with security is allowed. Pleasant surroundings, open-air exercise, country drives, cheerfulness, comfort, quiet. These conditions are *demonstrated* by experience to have marked effect on curable cases, and they contribute largely to the comfort of confirmed cases who here find a home, combined with the safeguards of skilled attendance. The proprietor (who was for 20 years in charge of Male Department of Pennsylvania Hospital for Insane) refers to many eminent alienists. Illustrated Circulars by mail. Address, DR. S. PRESTON JONES, Merchantville, N. J.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.

NEW PUBLICATIONS.

Nelson, and the Naval Supremacy OF ENGLAND. By W. CLARK RUSSELL, author of 'The Wreck of the Grosvenor,' 'The Life of William Dampier,' etc. 12mo, fully illustrated. Cloth extra, $1.50; half-bound, uncut edges, gilt top, $1.75; large paper, uncut edges (planned for extra illustrations; but 250 copies printed), $3.50.

Curiously enough, no one of the previous biographers of Nelson had any personal knowledge of the sea, and Southey, whose memoir has shown the most enduring popularity of all, was probably entirely ignorant of nautical matters.

Mr. Russell's narrative, on the other hand, while carefully studied as to the facts and the history, is as breezy and as briny, and as full of stirring incidents and dramatic situations as any of the best of his stories.

The 'Nelson' forms the initial volume of the new Series, "Heroes of the Nations," which will be under the editorial supervision of EVELYN ABBOTT, M.A., Fellow of Balliol College, Oxford. (Nearly ready.)

A full prospectus of the "Series" sent on application.

The Story of Russia. By W. R. MORFILL of Oriel College, Oxford. Very fully illustrated. 12mo, $1.50.

This volume (No. xxviii. in the Story of the Nations Series) is particularly pertinent at the present time, when the attention of the civilized world is directed to the mighty Empire of the East and its Eastern Questions. The narrative covers the history of the development of the country from the little Grand Duchy of Muscovy, in the fifteenth century, to the present Empire with its hundred million inhabitants.

A Romance at the Antipodes. By MRS. R. DUN DOUGLASS. 16mo, cloth, $1.00.

A clever story of Australian life.

An Introduction to English Economic History and Theory. By W. J. ASHLEY, M.A., Fellow of Lincoln College, Oxford; Professor of Political Economy in the University of Toronto.

PART I. THE MIDDLE AGES. 12mo, pp. xiii+227. $1.50.

The Manor and Village Community; Merchant and Craft Guilds; Economic Theories and Legislation.

"Mr. Ashley's treatment of his subject and evidently faithful and thorough investigation of the sources of information speak eloquently for his scholarship, and will render his work, when completed, an unusually valuable and interesting addition to economic history."—*Boston Post.*

The Trials of a Country Parson. By AUGUSTUS JESSOPP, D.D., author of 'Arcady,' etc. 12mo, cloth extra, uniform with 'Arcady' and 'The Coming of the Friars.' $1.75.

*** *List of spring publications sent on application.*

VOL. L.—NO. 1297. THURSDAY, MAY 8, 1890. PRICE 10 CENTS.

THE LITERARY DIGEST.

A Weekly Summary of the Current Literature of the World, etc.

Public Library

THIS new periodical, essentially a time-saver, a money-saver [illegible]ducator, fills a want not hitherto supplied. Its first number was everywhere received with most marked enthus[illegible] It cannot but prove most serviceable to the thousands of thinking readers who require to be well informed, but [illegible] have neither the time, the means, or the facilities for consulting the hundreds of newspapers, leading magazines, [illegible]views of all countries, and the cream of which the LITERARY DIGEST will contain.

ITS FIVE DIVISIONS:

1. THE REVIEWS, giving condensations, varying in length from 100 to 1,000 words, of the most important articles in the quarterlies and monthlies of America, England, France, Germany, Italy, Russia, Spain, etc.

2. NEWSPAPER COMMENT, consisting of paragraphs summarizing the leading editorials and contributions to the daily and weekly press of every land.

3. BOOK DIGESTS—not so much reviews, notices, or critiques, as summaries, seeking to give an idea of the book as it is, rather than another person's idea of what it ought to be. The Book Digest will be prepared by many of the best writers in the country, including Howard Crosby, James M. Ludlow, C. F. Thwing, Thomas S. Hastings, W. E. Griffis, James G. Roberts, Marvin R. Vincent, Geo. P. Fisher, and others.

4. A SELECTED INDEX OF PERIODICAL LITERATURE AND OF BOOKS, arranged alphabetically by titles, subjects being repeated whenever necessary in order to make reference easy. The Index will be compiled with the assistance of many of our best librarians. History, Johns Hopkins University; Political Science, Columbia College; Theology, Hartford Theological Seminary, etc.

5. A MONTHLY RECORD OF CURRENT EVENTS. Articles from foreign magazines are made a specialty, the translations being made by good scholars accustomed to the work.

The Selected Index, also the Chronicle of Current Events, will be so printed as to be conveniently cut out and filed.

From hundreds of letters and press notices received, expressive of a high appreciation of the merits of the LITERARY DIGEST, the following are given to show its value, not only for editors, preachers, and other professional men, but for *all intelligent readers* who desire, at a nominal investment both of time and money, to keep abreast of current thought, well and adequately informed of what is going on throughout the world:

FROM THE PRESS.

The New York Observer: "THE LITERARY DIGEST is the latest important addition to the realm of journalism."

New York Times says: "The number of readers who will find it valuable is large."

The Hawk Eye, Burlington: "The scheme is a most admirable one, and will help to make liberal-minded and free-thinking men by laying before them all sides of the pressing questions of the day. It is bound to meet with success and approval."

Times-Star, Cincinnati: "THE LITERARY DIGEST unquestionably gives promise of filling a place in useful and entertaining periodical literature."

The Globe, Boston: "It easily finds an unoccupied and influential place among the few weekly issues for men and women who reflect as well as read."

The Daily Standard-Union, Brooklyn: "THE LITERARY DIGEST is admirably arranged, and will surely be successful."

FROM THE PEOPLE.

Senator W. P. Frye of Maine writes: "I have examined a copy of THE LITERARY DIGEST. The idea of it seems to me an admirable one, and, carried out, will afford immense assistance to the scholars of the country."

J. O. Murray, D.D., Dean of Princeton College, writes: "The paper will be very valuable."

Senator John J. Ingalls writes from Washington: "THE LITERARY DIGEST presents a comprehensive and cosmopolitan scheme, which, if properly conducted, would abolish provincialism in letters and enlarge the boundaries of intelligence."

Prof. A. M. Wheeler of Yale writes: "THE LITERARY DIGEST will be well-nigh indispensable to legions of busy men in this busy age."

Ex-President Noah Porter of Yale College writes: "Carefully edited, it will be an eminently useful and successful publication."

James McCosh, D.D., ex-President of Princeton College, writes: "There is room and a place for THE LITERARY DIGEST. No one can read all that is published. How convenient and useful to have a compend of what is good in the journals and general literature, prepared by writers who favor morality and religion."

Prof. J. W. Burgess of Columbia College writes: "Your periodical deserves the highest success. It will help to keep with us a much-needed clas of men—those who are not specialists, but all-round, many-sided men."

Subscription Price, $3 per Year; Single copies, 10 cents.

THE ADVENTURE SERIES. Large 12mo, cloth. $1.50 each.

The First Volume Now Ready.

ADVENTURES OF A YOUNGER SON.

By JOHN EDWARD TRELAWNY. With an introduction by EDWARD GARNETT. Illustrated. Large 12mo. $1.50.

'The Adventures of a Younger Son' is unique. Trelawny, the friend of Byron and Shelley, founded the exciting adventures and remarkable situations of the book on the incidents in his own wild and strange career, and mingled with them a spirit of lawlessness truly extraordinary. The book once taken up cannot be laid down till the end is reached.

"Trelawny's work is emphatically good literature. . . . It is admirable, full of vigor and variety, spirit and *entrain*, graphic, and picturesque from first to last."—*Globe.*

"The book is one of the most fascinating of its kind in the language."—*Echo.*

S. Dana Horton's New Book on the Silver Question.

SILVER IN EUROPE. By S.

DANA HORTON, author of 'The Silver Pound,' etc., etc. 12mo. 300 pp. Cloth, $1.50.

'Silver in Europe' is a series of essays dealing with various phases of the silver question, followed by a documentary chronicle indicating the development of events, which the author names "The Anti-Silver Movement, and Its Reversal."

Ready for Publication May 15.

THE STATESMAN'S YEAR

BOOK, 1890. Statistical and Historical Annual of the States of the Civilized World for the Year 1890. Edited by J. SCOTT KELTIE, Librarian to the Royal Geographical Society. Twenty-seventh Annual Publication. Revised after official returns. 12mo, cloth, $3.00.

A New Book by Sir Charles W. Dilke, uniform with James Bryce's 'American Commonwealth.'

PROBLEMS OF GREATER BRITAIN.

By the Right Hon. Sir CHARLES W. DILKE, Bart. With Maps. Large 12mo. $4.00.

"One of the most important and interesting studies of the time."—*New York Tribune.*

"The most important contribution ever made to the materials for the study of constitutional and political institutions."—*New York Sun.*

"The book should be not read merely, but carefully studied by the intelligent people of this country, whose destinies are inextricably intermingled with those of the entire English-speaking race."—*Boston Beacon.*

"The 'English Men of Action' promises to be a notable series of short biographies. The subjects are well chosen, and the authors almost as well."—*Epoch.*

MACMILLAN & CO., 112 Fourth Avenue, New York.

John W. Lovell Co.

Announce for early publication

The Gentle Art of Making Enemies.

By J. MCNEILL WHISTLER. Being a collection of his writings edited by himself. 1 vol., 12mo, cloth, $1.50. They will also issue an *Édition de Luxe* for the English and American market, limited to 300 copies, printed on Holland hand-made paper, numbered and signed by Mr. Whistler himself. Price, $15.00.

New publications now ready:

Los Cerritos.

By GERTRUDE FRANKLIN ATHERTON, author of 'Hermia Suydam.' Cloth, gilt, $1.00.

A delightful story that is redolent with the atmosphere of Southern California. Carmelita, the heroine, with her Mexican impetuosity, affords ample opportunity for dramatic effects, and the idyllic life of the land of the redwoods offers a most attractive background. The author's versatility has won for her a well-deserved popularity.

In the Valley of Havilah.

By FREDERICK THICKSTUN CLARK. Cloth, gilt, $1.00. Paper covers, 50 cents.

Mr. Clark's style is a new departure in the line of fiction. There is not a lady or a gentleman in the story, in the "society" acceptation of the terms; the surroundings are as rugged as the instincts of the characters, and yet the story reads like a beautiful prose poem. The atmosphere is delightful, and one lays down the book with the sense of having been mentally refreshed and invigorated. It is a charming story.

A Magnetic Man,

By E. S. VAN ZILE. Cloth, gilt, $1.00. Paper covers, 50 cents.

Mr. Van Zile has won a deserved reputation as a writer of short stories. They are really condensed novels. His style is crisp without being abrupt; his situations are natural and his climaxes are dramatic without being forced.

My Sister's Husband.

By PATIENCE STAPLETON. Cloth, gilt, $1.00. Paper covers, 50 cents.

The author has made the plot of "My Sister's Husband" more intricate than that of her stories generally. It is one of those books which gain strong friends for the writer, but is so marked in its character that it also makes enemies.

In Press:

Miss Marston.

By L. H. BICKFORD. Cloth, gilt, $1.00. Paper covers, 50 cents.

A delightful story for summer reading, beginning in France in a crisp, French style, and shifting to the West of the United States, its general tone changing with the locality.

A Modern Marriage:

By the Marquise CLARA LANZA. Cloth, gilt, $1.00. Paper covers, 50 cents.

Betty: A Last Century Love Story.

By ANNA VERNON DORSEY. Cloth, gilt, $1.00. Paper covers, 50 cents.

The Nation.

NEW YORK, THURSDAY, MAY 8, 1890.

The Week.

THE present state of the Silver Bill at Washington, if there is any such thing, is certainly chaotic. Certain speculators in Wall Street continue to bet on the early passage of a bill, without knowing what it is to be. They assume that there is to be inflation, more or less, and that inflation means higher prices for stocks. We advise them not to be too sure of either of these propositions. It is by no means certain that any bill will pass. It is not certain that a bill increasing the coinage would have the anticipated effect on stocks. The Republican Senators have not come to agreement among themselves, although they have come to a disagreement with the House. Both factions have to reckon with the Executive. The chances of "making a mess of it" are so great that very likely nothing will be done. The Republican party will look out for itself first. It will take no step without knowing what the consequences are to be; and since even the wisest can with difficulty tell what they may be, the progress of any bill will be very slow.

Senator Platt of Connecticut has written a letter to the Hartford *Post* on the subject of silver legislation, which calls for attention on more than one point. In the first place, the Senator intimates that the Republican party is between the devil and the deep sea on this question, thus:

> "In the first place, unless we come to an agreement with the 'silver-men,' a free-coinage bill will be passed by both houses by a decided majority. As near as we can ascertain, it would have 12 to 15 majority in the Senate. The Democrats will propose it, and vote for it with few exceptions, while most of our Western Republican Senators will do the same. It would probably be vetoed by the President. The tendency of such action would be to break up the Republican party, and, worse than that, to array the West and Southwest against the East. We cannot afford that split if it can be avoided."

This is an embarrassing situation, certainly, for those who want to hold the party together, but do not know exactly how to do it. Inasmuch as the outcome of any policy that may be adopted is very dubious, we would suggest the policy of voting for whatever one thinks to be *right* and taking the consequences. If it were perfectly clear that voting for what one thinks to be wrong would bring the party into a safe harbor, then there might be something to say on that side; but since it is not clear, but on the contrary very murky and obscure, one ought to prefer the chances which lie on the side of sound principles of finance. But Senator Platt cannot make up his mind what are sound principles. "All writers on political economy," he says, "admit that if the volume of money is not increased somewhat in proportion to the increase of population and of business activity, and of the creation of new money centres, the real effect is contraction, with a depreciation of value." We have never read anything of this kind in any work on political economy, and we are sure that Senator Platt would find nobody to support such an idea if he were to interrogate successively all the professors of that science in the colleges of Connecticut. These writers and professors "admit" that the volume of money *will increase* in proportion to the need of it, whether that need arise from increase of population or of business activity, or from "the creation of new money centres," whatever that may mean.

Since we began the process of buying silver bullion and coining it on Government account—a scheme of finance utterly unknown in any other part of the world or in our own previous history—a great many people have begun to think that there is no such thing as *gold*, or that if there is any such thing floating about the world, *we* never can get any of it; whereas, we are just the nation that can most easily get it, because we have the most available property to buy it with. Senator Platt seems to think that the only way to obtain money is to "issue" it. "The problem," he says, a little further on, "is to get a moderate but steady issue of money." By no means, dear sir. The gold-miners are "issuing" money enough for all of our purposes. They take it or send it to the mints, and when it is coined they can get gold certificates for it if they don't like to carry the metal around. It costs the public just as much to get silver certificates as it does to get gold certificates. There is not a pin to choose between them on the score of expense to the holder of the certificates. Therefore we beg that when the Senator writes again to tell how he proposes to extricate the Republican party from its situation between the devil and the deep sea, he will at least allow that there is such a thing as gold, and that it moves of its own accord to people who want it and are able to pay for it, and that it makes a very fair sort of money.

The Service Pension Bill passed by the House last week seems likely to take its final shape in a conference committee. It will be remembered that the Senate originally passed a Dependent Pension Bill, which it was estimated would call for an extra outlay of $38,000,000. The House substituted the Morrill bill, which gives a pension to every soldier who served ninety days upon his reaching the age of sixty, and to any soldier under sixty who is disabled from any cause. The Senate has declined to concur in the substitute, and has referred the matter to a conference committee. It will be contrary to all precedents if this committee does not prove favorable to the claim agents. Indeed, the Washington correspondent of the Philadelphia *Press* says that it is the expectation of Senator Davis, Chairman of the Pension Committee in the upper branch, that the measure, when it comes out of the conference committee, will include a dependent clause, "*and will involve a somewhat larger expenditure than the Morrill Service Bill*"—which was about $50,000,000 a year.

Republican organs are beginning to perceive that the policy to which their party is committed in Congress means nothing less than a deficit. The Philadelphia *Press*, for example, has an article entitled "A Little Plain Arithmetic," which points out that the enactment of the Pension Bill which was passed by the House on April 30 will use up the surplus over and above the sinking fund, and that the McKinley Tariff Bill, with its free-sugar clause, will leave nothing for the sinking fund. The Silver Bill which has been agreed upon by the caucus will take $10,000,000, with loss on coinage, and the public improvements contemplated will call for $12,000,000 more than the estimates, while public buildings and other additions to the estimates stand for another $10,000,000. "This," says the *Press*, "is a deficit of $72,000,000, if Congress carries out its present plans and the payment of pensions and the debt both go on. If the payment of the debt is stopped, the reduction of the revenue will take the rest; and the Silver Bill, and public works, buildings, and so on, will still leave a deficit of over $30,000,000." Our Philadelphia contemporary also calls attention to the interesting fact that a deficit for the fiscal year 1891 will be reported on the eve of the next Presidential election, and that "it will call for explanation of a kind which no party in this country has had to make since 1860, when the Democrats had to report a deficit."

It is useless to ascribe the defeat of the Copyright Bill on Friday to mismanagement. Its friends doubtless did handle the procedure very clumsily, but mismanagement could not have killed the bill had there been in the House a stronger sentiment of honesty. The trouble is, that those who are indifferent to the ethical aspect of the case are so numerous that they keep the open friends of dishonesty, the people who like a thing the better because the product of unpunishable theft, constantly on the edge of victory. What happened on Friday is no less disheartening for the friends of good government than for the friends of the bill itself. All we can say to the latter now is not to be discouraged, but to keep up the fight. "If hopes are dupes, fears may be liars." Thieving habits of eighty years are not to be overcome in one year, or may be in ten. In no country in the world should the champion of a good cause be less disheartened by delay than in this, for in none has persistence worked such wonders.

The proposal to have Congress pass a law to prevent gerrymandering in the States would be humorous if the matter were not so serious. The scheme is based upon the claim that partisanship governs the division of States into Congressional districts, which is true; but the preposterous feature is the further claim that partisanship will be avoided by having Congress interfere, as though a Senate in which "Bill" Chandlers are leading spirits, and a House which chooses a Thomas B. Reed as Speaker, were free from partisan bias! We are glad to see that, although the other Republican members of the Committee reporting the bill make an alleged outrage by the Democrats in districting Missouri one of their arguments for the proposed change, Mr. Frank of Missouri, himself a Republican, dissents from their action, saying with entire truth that the bill is intended to cover a political exigency, for the purpose of perpetuating a party in power, and insisting that no constitutional provision ought to be brought into requisition at any time for such a purpose, and certainly not if the power had never before been exercised for the general weal. This is obviously the non-partisan view of the proposition, and it is a sufficient commentary upon the pretence that the change would abolish the partisanship now complained of in the States that only one Republican member of the Committee took this view.

Our esteemed contemporary the *Congressional Record* contains occasionally some apparently trivial statement, which upon examination proves to possess no little importance. Such a statement appeared the other day in the paragraph, on page 4030, which reports the receipt of a message from the President announcing that "the following bills were presented to the President April 14, 1890, and, not having been returned by him to the House of Representatives, in which they originated, within the ten days prescribed by the Constitution, they have become laws without his approval: An act (H. R. 1043) granting a pension to Theresa Herbst, and an act (H. R. 4840) to increase the pension of William Boone." William Boone was an Illinois volunteer, who enlisted in August, 1862, was taken prisoner in November following, and at once paroled, and, while at home on parole and engaged in celebrating the Fourth of July, 1863, at Aurora, Ill., was terribly injured by the discharge of a cannon. Theresa Herbst is a name no better known to fame than that of William Boone; but the act granting her a pension is a notable one, because it establishes for the first time the principle that the Federal Government may reward a man who served in the Confederate Army. John Herbst enlisted in Company G, One Hundred and Fortieth Regiment, New York Volunteers, August 26, 1862, was captured August 19, 1864, soon after joined the Confederate forces, and, after nine or ten months' service in that army, was recaptured by Union troops while in arms against the United States Government. Having taken the oath of allegiance and explained that he deserted to the enemy in order to escape the hardships of prison life, he was released and mustered out of the service October 11, 1865, and died three years later. He had never applied for a pension, but years afterwards an application was put in for a pension to his widow, on the ground that when discharged from the army he was suffering from rheumatism and dropsy.

The noteworthy feature of the Herbst and Boone cases is the fact that similar bills were passed by Congress during the last Administration, and in each case defeated by the veto of President Cleveland. In the Boone case, Mr. Cleveland pointed out that there was no relation whatever between the man's military service and the Fourth of July casualty, and no more reason why he should receive a pension because of that casualty than any companion who chanced to be injured at the same time; and he quoted from a letter written by the soldier, in which he said: "I never thought of trying getting a pension until my old comrades urged me to do so." In the Herbst case Mr. Cleveland presented a straightforward statement of the facts, and then refused his signature on this ground: "The greatest possible sympathy and consideration are due to those who bravely fought, and, being captured, as bravely languished in rebel prisons; but I will take no part in putting a name upon our pension-roll which represents a Union soldier found fighting against the cause he swore he would uphold, nor should it be for a moment admitted that such desertion and treachery are excused when it avoids the rigors of honorable capture and confinement. It would have been a sad condition of things if every captured Union soldier had deemed himself justified in fighting against his Government rather than to undergo the privations of capture." Contrast Cleveland's course with Harrison's. The former saved the nation from the disgrace of rewarding faithlessness; the latter, equally cognizant of the facts, shirks the responsibility of approving such action, while lacking the courage to interpose his veto, and thus allows bills of this kind to become laws.

Gov. Hill, as was expected, filed a "memorandum" on Friday showing that he is a true friend, and almost the only friend of ballot-reform now in public life in this State, and that the public is really indebted to him for all that is good in the bill that has just been passed; that many changes have taken place in the attitude of other people towards this measure, but that he has from the first been steadfast and true. All this is in the nature of light comedy, however, and will contribute much to popular amusement on the Saturday half-holiday. What we should like to see from his pen would be a really serious work on the subject with which he is best acquainted, namely, "Holes." A monograph from him, entitled 'Hill on Holes,' or 'The Holes I Have Been In,' or 'Recollections of Holes by Dave Hill,' would be very widely read, and be a permanent and valuable contribution to political literature.

The issue by a United States judge of a writ of habeas corpus for Kemmler, the convict now awaiting execution in Auburn prison, on the ground that there is a question under the Federal Constitution whether execution by electricity may not be a "cruel and unusual punishment," is one of the oddest judicial incidents of recent times. The question has been passed on, after full argument, by the Court of Appeals of this State. Neither Kemmler nor any one employed or authorized by him, except *ex post facto*, has raised the point. The lawyer who obtained the writ appears to have been an interloper, who did not make known his purpose to Kemmler until after the writ had been obtained. In fact, although he veils his motives in great secrecy, he seems to be really acting neither for the convict nor for the United States Constitution, but in order to satisfy his own mind as to the legality of the use of the electric fluid for penal purposes. We suppose the writ of habeas corpus cannot be refused; but as the return is fixed for June 10, and an appeal may be taken should the decision be adverse to Kemmler, the execution may be considered indefinitely postponed. The arguments of the lawyer who has taken up the case would, if sound, give the Federal courts complete supervision of the penal legislation of every State in the Union, not only as regards manner, but as regards time and other conditions, and, in fact, would give every criminal the chance of two trials before the execution of his sentence.

We presume that the people of New York without a single exception were amazed last week to learn that a bill abolishing capital punishment had passed the Assembly without debate, receiving seventy-four votes, or nine more than a majority of the whole number of members elected. This is a measure of such far-reaching character, so fraught with the interests of society for weal or woe, that whenever, among American commonwealths or among civilized nations, it has been adopted or seriously considered, it has been studied, debated, and sifted in every possible way for years before being finally voted on in the legislative body. To rush such a measure through without any previous discussion in the press, or the pulpit, or on the stump, without any investigation by committees, or any debate in the Legislature itself, is what we might look for in an assemblage of drunken thieves, but hardly in any deliberative body on the face of the earth. The newspaper representatives at Albany are nearly unanimous in charging that the bill has been put through by bribery, and that the money to pay for the votes comes from a moneyed corporation that is interested in preventing the Electrical-Execution Law, passed last year, from going into effect. Certainly something else than public interests must have been the motive power urg-

ing the Legislature to stultify itself in this way. A year ago it passed the Electrical-Execution Law; now it passes another law to prevent that one from going into effect.

The Rev. Dr. Charles H. Parkhurst preached a strong sermon Sunday morning upon the spectacle which this city, "with hundreds of churches and 100,000 communicants," presents to-day as it stands before the world with "all its municipal life dominated by a band of felons, murderers, bribe-takers, gamblers, dive-keepers, and rumsellers, whose only title to candidacy was their deviltry, and their only apology for being elected the apathy of the saints and the subserviency of respectable men to political bossism." This is simply a truthful statement of the case, but the remedy which Dr. Parkhurst suggests for it does not go far enough. He says: "It is as much the duty of a New York Christian to go to the polls on election day as for him to go to the Lord's table on communion day." Mere going to the polls will not answer unless the intent and purpose of the Christian when he gets there be to vote in strict accordance with the needs of the city, without reference to any other consideration whatever. His going will do more harm than good if, when he gets there, he is thinking of how his vote will affect the tariff, or the election of a President or Governor, or some other question not in the remotest degree connected with the city's welfare. If he votes in accordance with any party demands of this kind, he is far more guilty of a neglect of Christian duty than if he had not gone at all —is, in fact, guilty of a breach of trust both as a Christian and a citizen. How did the present "band of felons, murderers, bribe-takers, gamblers, dive-keepers, and rumsellers" get into power? Simply because thousands of Christians went to the polls and voted for Col. Erhardt because his candidacy was a party necessity for a national victory on the tariff, knowing all the time that the sole effect of his candidacy, so far as the city was concerned, would be the election of Grant. Until Christian citizens can take a higher view of their duty as voters than this, it will be much better for the city if they do not vote at all, for their going to the polls is as sure an aid to our present government by criminals as the direct voting of the Tammany gang.

What every Christian and other intelligent citizen should be thinking of when he goes to the polls, is the effect of his vote upon the city and its inhabitants: how it will affect the poor above all others, for they are in the end the worst sufferers from misrule; how it will affect the schools, the paving and care of the streets, the sewers, the docks, the courts, everything that goes to make the city a community regulated by civilized men rather than by a band of thieving barbarians. No citizen can solve this problem wisely if he is thinking all the time of the tariff or the solid South, and of how his vote will affect those questions. He must ask himself: "How will my vote affect the city? Will it help to let the Tammany gang in or will it help to keep it out?" No honest, conscientious voter could have asked himself that question in November, 1888, when Hewitt, Grant, and Erhardt were running for the Mayoralty, and voted for any one save Hewitt; yet 73,037 Republicans, including thousands of Christians, voted for Erhardt because they thought the tariff and Harrison of more importance than the interests of the city. It is useless to denounce Tammany, and to hope to rid the city of its iniquitous rule, so long as Christians perform their duty as citizens in this way. They, and not Tammany, are the culprits, and against them the pulpit should thunder its loudest anathemas.

The exceeding quiet which prevailed in all the great capitals on May Day, and the poverty of the processions, showed what a tremendous uproar is often raised in this world by a very small number of persons. Of course, the military and police preparations may have had much to do with the peaceableness which prevailed, but they cannot have diminished in any marked degree the numbers of those who took part in the public demonstrations. In London 2,000 was the largest muster, in Berlin 20,000 out of 300,000 workmen; and in Vienna there was nothing but a holiday with many meetings which passed resolutions in favor of an eight-hours' working day. In Paris the display was quite insignificant—for Paris—and in New York the labor display passed almost unnoticed. This is all a very good illustration of the folly of the tremors which every now and then run through society about communism, socialism, and anarchism. The number of people who are ready to go beyond speechification in promoting anything that can be called a radical change in the present social organization, is really too trifling for serious consideration. If they were to exert themselves to the utmost, they could not succeed in carrying out their views beyond the creation here and there of a few easily suppressed riots. If this were borne in mind, how much alarmist literature on the labor question we should be saved. Social organizations are based on human nature, and grow along the lines traced out by human nature, and human nature will never agree to pass its life in a huge boarding-house with a lot of ranting orators regulating the diet and hours of sleep of the inmates.

The appearances are now that the Balfour Irish Land Bill will be passed, in spite of the very severe criticism it is receiving from all parties. The *Economist* has had an attack on it of the most destructive character from the point of view of the English financial world, but the trouble is that there is no union among its opponents, a point on which Mr. Balfour dwelt gleefully in his recent speech. The Irish attack it because they have not been consulted about it, but this position is weakened by their also opposing it as a favor to the landlords—something which the landlords deny. If they had rested simply on their right to be consulted about it, they would have produced more effect. Their position is weakened, too, by the fact that the tenants have shown no disinclination to profit by the money already advanced under the Ashbourne Act, over $25,000,000. It is difficult to see why as a matter of business the Irish should refuse to accept the money, as long as the British Treasury is willing to advance it. It is not for them to point out the danger that it will never be repaid, or repaid with difficulty. This is an objection for the British taxpayer to make. The defence, too, has been weakened by Parnell's offering some amendments to the bill without consulting his own side, which the Ministry seem willing to adopt. Where the ministerial calculations will probably fail is in overestimating the effect on the home-rule agitation. There is not the smallest prospect that the Irish will cease in our time to send eighty-six Home-Rulers to the House of Commons, and as long as they do, the home-rule question will remain in the forefront of British politics.

Mr. Depew's announcement, two years ago, of the adoption of the policy of protection by Holland, finds a show of confirmation, though a little late, in recent occurrences in the Netherlands Parliament. A Catholic Deputy, M. Bahlmann, introduced a bill for the levying of a protective tax on cereals. He supported his proposal with the usual protectionist arguments: The farmers were being ruined by foreign competition. A tax for their benefit was to make them rich, and this, in accordance with the mysterious way in which protection moves its wonders to perform, without increasing the price of bread. Almost all the Catholic Deputies favored the measure, as did also some others. But the Government opposed the whole thing, taking the position that the prosperity of Holland depended absolutely on commerce and navigation. The country could not be sufficient for itself, and only under a system of free trade could there be that sharing in the world's trade which was so essential. Holland was almost the first of the European nations to break away from the policy of protection, and the Administration was sure that the country had no desire to return to that folly. The subject was revived afterwards, when the Ministry was interpellated as to the possible effect of the Berlin Labor Conference on the customs policy of the governments participating in it. The Minister for Foreign Affairs, M. Hartsen, took occasion to reassert the determination of the Ministry to persist in the settled fiscal policy of the nation, and pointed out that such subjects had been expressly reserved from discussion at Berlin, so that there need be no fear of an attack on the economic principles of the Netherlands. Mr. Depew has thus not even got an *ex-post-facto* justification.

NEW YORK'S BALLOT-REFORM LAW.

GOVERNOR HILL has approved the Saxton Ballot Bill, which finally passed both houses of the Legislature without opposition. While not so perfect a measure of reform as the advocates of the Australian system hoped to secure, it will bring about improvements in our election methods which will be little less than revolutionary in their power for good. Not one of the vital principles of the system has been abandoned in the compromise which has resulted in the passage of the law, the only changes being in the nature of modifications of some of the methods by which the system is to be operated. Briefly summed up, the law insures to the voters of this State in all future elections (for the law goes into effect on July 1, 1890) a complete system of secret voting with exclusive official ballots, maintained at the public expense, operated by sworn public officials, and removed entirely from the control and interference of political organizations.

The greatest gain of all is the exclusive official ballot or ballots. Under the Australian plan as embodied in the Massachusetts and nearly all other American ballot laws thus far enacted, the names of candidates are placed upon one large blanket ballot, in some instances in alphabetical order, in others in party groups. To meet one of Gov. Hill's objections, the New York law splits the blanket ballot into as many separate ballots as there are parties or factions making nominations, giving to each a ballot, yet without its party name at the top or anything to indicate the politics of its candidates. These separate ballots, together with a blank ballot containing nothing except the names of the offices to be filled at the election, are handed to the voter when he enters the polling-place. Upon each is a coupon, or counterfoil, upon which the ballot clerk puts his official endorsement and the number of the voter, entering the corresponding number opposite the name of the voter on the tally-list. The voter must take all his ballots into a compartment and there prepare one of them for voting. He can paste on one or as many names as he pleases ; he can even paste an entire new ticket over the face of the blank or any other one of the ballots ; or can write an entire new ballot in the blanks ; but he can deposit in the ballot-box only one of the set received, and must fold the others in the same way as if he were going to vote them, that is, with their official endorsements visible for identification, and deposit them, after their coupons have been removed, in a locked box provided for the purpose. When the voter offers the remaining ballot to the clerk in charge of the ballot-box, the latter must tear off the coupon before depositing the ballot, thus removing all chance of identification of ballots in the counting.

Let us consider what is gained by this method of voting. In the first place, there is absolute secrecy. No one is allowed to do any electioneering within 150 feet of a polling-place, and no one is allowed to accompany a voter into a compartment save in cases in which the voter is physically incapacitated to mark his ballot. The result will be, that from the time a voter enters a polling-place till he has discharged his duty, he will be absolutely secluded from espionage or intimidation of any kind. His boss, or employer, or briber may give him a "paster," but can get no proof that he has used it in voting. The same uncertainty will exist in regard to the regular party tickets. Every voter will have a set, but no one can obtain proof as to which one has been voted. As for the independent voter, and the "scratcher" of every sort, he has all the ballots before him in compact form, and can make up his ballot to suit himself with far more ease than he could under the old system.

But the greatest gain for the independent voter is the change in the system of nominations and of ballot distribution. Heretofore it has been practically impossible for an independent movement of any kind to get its ballots distributed at the polls. Hereafter such movements are on equal terms with the most powerful party organizations. If 1,000 voters agree in desiring to have a candidate for Governor or an entire State ticket put in the field, they have only to send in petitions to that effect to have the name or names of their candidates printed on all the ballots and handed to every voter at the polls. Fifty voters, and less according to the size of the locality, can have the name of any candidate they agree in favoring placed upon the ballots for any except a State office or Brooklyn and New York city offices. In this city and Brooklyn 300 voters can have the name of a candidate for Mayor or any other city or county officer put on the ballots and distributed in any polling-place; and 100 voters will be sufficient to have the same results accomplished for member of the Legislature or other district officer. This is an incalculable gain. It puts it in the power of the respectable voters of the city to confront the political machines with a complete Citizens' ticket, whenever the former fail to make satisfactory nominations, and to get that ticket honestly distributed at the polls, a thing which under the old system was, of course, impossible. The expense of printing and distributing ballots for any movement in opposition to the regular political organizations in this city has heretofore been anywhere from $60,000 to $100,000, with slight chances for fair distribution even then, as the hired workers almost invariably betrayed their trust to the machines.

All excuse for "assessments" upon candidates is taken away by the law, for all expense of elections is henceforth to be borne by the State. This is a blow at Tammany's most abundant source of income, for it has been the custom of that organization to levy a grand total of assessments upon candidates which was from three to five times the amount actually disbursed in electing them. It is pretty well known that the late John Kelly laid the foundation for his handsome fortune with the surplus of these assessment funds. Whether Tammany will continue the practice of selling its nominations to the highest bidder in this way, is doubtful. It will have great difficulty in doing so safely if the Governor's amendment to the Corrupt Practices Act passes the Assembly as it has passed the Senate. That requires a complete itemized statement from all campaign committees, as well as candidates and their agents, of every dollar received and expended, and if it becomes law, Tammany can rest assured that there will be efforts made to have it strictly enforced.

"THE PARTING OF THE WAYS."

ARE they who discussed the Worsted Bill in the House at Washington on Tuesday last quite sure that they went to the bottom of the question presented by the bill ?

Congress cannot give an interpretation of the Tariff Law of 1883 which the judicial power is bound to obey as statute-law in a case now pending in the law courts between a tax-gatherer and a tax-payer. If Congress were in 1890 to endeavor to say what Congress intended in 1883, that would be an endeavor to exercise judicial power. Therefore Congress can do nothing that will, in pending cases, constrain the law-courts in deciding what Congress meant by the tariff law of 1883. What Mr. McKinley or Mr. Carlisle may think Congress intended in 1883 is quite irrelevant and inconsequential. Not a member of the present Congress would be heard if called as a witness to testify in court what Congress intended in 1883 by "woollen" or by "worsted." Congress can pass a declaratory law binding in the future—only in the future—but that would be prescribing a new rate on "*worsted* cloth." It is misleading and confusing persiflage for any Congressman to declare now what Congress meant seven years ago when it used the fifty-years-old phrase, "manufactures of worsted." That meaning is for the courts, not Congress, to discover.

A majority of the Ways and Means Committee wishes and intends, in 1890, to exclude importations by hook or by crook, by the taxing power or the commercial power—*fas aut nefas*—but Congress had not come to that decision in 1883. The intentions of 1890 cannot be injected into the laws of 1883. And yet the contention of President Harrison—echoed by the majority of the Republican Ways and Means—that we should endeavor in this country to prevent foreign trade, excepting so far as it may be found necessary to import articles which our country cannot possibly be made to produce, is not novel. We have heard little of it for a dozen years, because Democrats have controlled the House and the contention could not be embodied in legislation; but we hear of it now because protectionists do now control the Government at Washington.

"Protection" is an imported plant. We took it from England. Protection and a tariff *only* for revenue cannot live together. That is what the leading teachers of protection in this country have always taught. Mr. Carey, in his 'Past, Present, and Future' (p. 472), says: "Tariffs for *revenue* should have no existence. Interferences with trade should be tolerated only as measures of self-protection." Prof. Thompson, in his 'Political Economy' (p. 232), says: "Duties for *revenue* . . . are highly un-

just." Nearly fifty years ago were printed in the '*Tribune* Almanac' the very contentions set forth in the recent majority report by the Ways and Means Committee, as one can see in the Almanacs for 1842 and 1846. In that for 1842 is a paper by Charles Hudson of Massachusetts, which pursues the line of argument of the report with much greater literary skill. In that for 1846 (p. 12) Horace Greeley condemned the policy which kept European cloth-makers on the European continent and American grain-growers on this continent, as one of "great improvidence and waste." The cloth-growers should be brought hither. Further on he formulated this proposition, which in 1890 is to be put into our statute-book: "Let us encourage and *diversify* home production until everything to which our position is genial shall be produced on our own wide-spread territory and fertile soil." Our Mr. Evarts said not long ago that he should be ready for free trade only "when protection had so far developed all our industries that the United States can sell in competition with all the world, and at the same time be free from the necessity of buying *anything* from all the world." He looked to American primacy in production and trade as an object to be accomplished not by striking off our industrial fetters created by taxes on arriving raw materials, but by closing our ports, isolating our country, compelling ourselves to buy only American products, bounty-feeding our industries by taxes, and only opening our ports whenever we could produce everything and supply ourselves. When that can happen Prof. Thompson intimates (p. 223, where he says) that "it will ordinarily take the life-time of two generations to acclimatize thoroughly a new manufacture, and to bring the native production up to the native demand."

One sees that such a contention cannot be encountered successfully by displaying tables of percentages showing how much we are taxed on articles we consume, for protectionists will reply that, great as the taxes may be, protectionists will increase them till the foreign article is excluded; and if taxes will not do it, we will exclude under the commercial power. We are not seeking revenue, they will say, or to adjust taxes, but to exclude the foreigners' products. If driven to the wall, protectionists may adopt a "tariff for revenue only," like the British tariff, on articles we cannot produce, in order to get revenue, and then put an embargo on foreign articles similar to those which we can produce if we will expend money enough thereon. Protectionists are "fooling and monkeying" when they babble about revenue as the chief object, protection as an incident. They allure Democrats into a *cul de sac* when they lead them to fancy that is the real issue. Protectionists now concede that protection has not protected, but they insist that the failure has been because the country has not been protected sufficiently by taxes on foreign imports. Currency reform and taxation reform have, in a Democratic sense, gone backward if the pending silver demand and the pending protectionist demand shall be embodied in law. Instead of more free raw materials, we are to have their importation less free. The Chinese wall is to be strengthened and built higher. Democrats in Congress cannot prevent it this session, unless there shall be Republican defection. If the pending tariff bill shall be enacted, it cannot by Democratic votes be repealed till 1895 at the earliest.

If the policy of the two McKinley bills is to be our American policy, then of necessity there will be less and less each year of foreign trade, and less and less need of subsidized vessels for transportation. We shall have less and less need of a navy, unless to blockade our own ports, keep out the hated merchandise of the foreigner, and repel his assaults on our Chinese wall. Clearly we have come to "a parting of the ways."

THE SERVICE PENSION BILL.

With only a brief period for discussion, the House of Representatives last week passed a bill which introduces a new principle in the pension system—that of granting a pension of eight dollars a month to any man who served in the army or navy, beginning when he reaches the age of sixty and continuing during the remainder of his life. The bill also allows a similar pension to any soldier under sixty who is disabled, no matter what the cause of such disability, and to the widow of any soldier when she shall reach the age of sixty, or when she shall be without other means of support than her daily labor.

This measure is a substitute for the Dependent Pension Bill recently passed by the Senate, and no doubt is entertained that the upper branch will agree to it and that the President will sign it. It is therefore as good as settled that this vast extension of the pension system will be effected within a very short time. No more important measure will be passed by the Fifty-first Congress than the bill which was rushed through the House on April 30 with only three hours allowed for debate.

Mr. Morrill of Kansas, who stood sponsor for the bill, estimated the number of persons who would be put upon the pension roll under its provisions at 440,000, which would involve an additional annual cost of $39,629,000. This estimate, however, was based upon the age limit of sixty-two years, for which sixty was afterwards substituted, so that Mr. Morrill's own figures would run the yearly bill considerably above $40,000,000. Mr. Grosvenor of Ohio, who also wished to depreciate the importance of the change, said that this bill, added to the Prisoner of War Bill, when the latter was passed, would add 450,000 names to the pension roll, and would make that roll consist of 950,000 names, while the total expenditure for pensions would reach $150,000,000 per annum. All experience indicates that the estimates of its friends will fall far short of the demands actually made upon the Treasury; and judging from such precedents as that afforded by the Arrearage Bill, it is safe to say that the Morrill bill will call for at least $80,000,000 a year.

The passage of this bill practically disposes of the surplus. Secretary Windom's estimate of receipts for the coming fiscal year was $385,000,000, and of expenditures, including the sinking fund, $341,430,477, leaving a surplus of $43,569,522. The estimate of expenditures allowed only $98,587,252 for pensions, instead of the $140,000,000 or $150,000,000 which the advocates of the Service Pension Bill admit will be needed. To carry out other extravagant schemes which are projected, it will be necessary to repeal the sinking fund or to increase taxation. In either case the Secretary of the Treasury will be unable to redeem the $114,000,000 of 4½ per cents which fall due on the 1st of September, 1891.

But the great expense of this pension scheme is the least of its evils. The nation can afford to increase its outgoes by $40,000,000, or even $80,000,000, a year if it is wise to do so. The trouble about the service and dependent-pension policy is that it demoralizes alike the immediate recipients of the bounty and the communities in which they live. A large proportion of the half-million of people who are to be added to the pension roll are persons who have no possible claim to consideration. Some of them were worthless as soldiers during the war; others are now "hard up" simply because they have grown shiftless and dissipated since the war; others are well-to-do, and in no possible need of any increase to their income. The simple fact about the matter is, that any old "bummer" who can establish the fact that he was connected with the Union Army in any way for ninety days, even if he got no further than the recruiting camp, may now have his name placed on the pension-roll and draw $8 a month for the rest of his life; and so, too, may any prosperous comrade who has amassed a competence since the war.

Moreover, it must be considered that the age restriction will soon disappear entirely. It has just been cut down from sixty-two to sixty years, and it will not be long before the Congressional demagogues will advocate its abolition, on the ground that some men are as old and as much in need of help at fifty as others at sixty, and that discrimination is unfair. We may as well, therefore, take it for granted that at no distant day everybody who had anything to do with the Union Army, good, bad, or indifferent, will be placed on the pension roll.

The spectacle of hundreds of thousands of men drawing from the Federal Treasury $100 apiece a year to which they have no just claim, will have a most unfortunate effect upon their neighbors, and thus, as they will be scattered all over the North, upon the general public. It debases patriotism to a money basis, and makes love of country too nearly equivalent to love of the almighty dollar, and the war for the Union altogether too much like a war for the spoils.

A NEW MOVE IN COLUMBIA COLLEGE.

The Trustees of Columbia College, under President Low's initiative, adopted on Mon-

day a report which completely reorganizes the College and puts it definitively on the footing of a university, with faculties of philosophy, political science, mines, and law, each independent in its own sphere, but working under a university council made up of representatives of each faculty and of some selections made by the President. The University will give the Master's and Doctor's degrees, and the Council will "advise the President as to all matters affecting these degrees, the correlation of courses, the extension of University work in new and in old fields, and generally as to such matters as the President may bring before it."

The importance of all this, which may not at first sight be perceptible to those who are not familiar with university matters, is that it contains a further, and, indeed, full recognition of the fundamental principle of university organization, which has hitherto had so little countenance in American colleges, namely, that the teaching body, and not the property or the managers of the property simply, are the university; that you may have millions of endowment and acres of buildings, but if the teaching body are not in control of the things to be taught and of the manner of teaching them, you have no university. Considering how largely American colleges have owed their foundation and growth to voluntary contributions from men who never had the advantages of a university education, and had achieved their own success in life by the successful application of commercial standards to the various problems which confronted them, it is not surprising that even our best colleges are only now emerging from the condition of large estates to be prudently managed by business men, and the professors from the rôle of tutors called in to give such instruction to children as fond parents may think suitable. Until within twenty years, in truth, the only colleges which had secured emancipation from the property theory were the denominational ones, over which the clergy naturally exercised at least coördinate jurisdiction with the moneyed men. The others lay under the yoke without much hope of release, until a layman was appointed President of Harvard, and the Johns Hopkins foundation was put in charge of another with full powers.

Since then it is no exaggeration to say that there has been a great awakening among American colleges and great progress made in the direction of devoting their endowments to giving young men the higher education, instead of teaching the rudiments to young boys. This latter is really what Columbia did in the first quarter of the present century. The public knew very little more, and cared very little more, about what passed within its walls than about what passed within the walls of any day-school in this city. The first sign of any real development took place under Dr. Barnard, who had sound and large views of university functions; but he was, until within a few years of his death, when age had abated his powers, hampered by the property theory. Mr. Low is the first President who has entered on his functions untrammelled, and with adequate ideas of the true work which a university has to do for the community, and of the true relation of the property, and the buildings, and libraries, and laboratories to the teaching body. They are the university. They would be the university if the buildings were burnt down and they were giving instruction in tents in a vacant lot.

John Stuart Mill, in a famous article on universities written forty years ago, said the true function of a university was to "cultivate philosophy," meaning by philosophy mainly the laws of the human mind working in every field of thought. It would be foliy for us to seek to put any of our universities wholly within the borders of this definition. The true work of an American university is to furnish to every man a fair chance to attain all attainable knowledge in every field of human activity, and to furnish it in such wise and through such channels that no eager student, no one even who loves knowledge for its own sake simply, shall turn away unsatisfied and say that he can do better abroad. The greater the demand is for knowledge "with money in it," to use the slang phrase, the greater the need of provision, above all in this country, for those who love the "still air of delightful studies," and feel how much the salvation of the modern world must depend on the size of the class which is devoted to "the things of the spirit." No high standard of scholarship can ever be maintained, and no such appreciation of knowledge as will lead young men to scorn delights and live laborious days in search of it, can be maintained or cherished in any institution in which the professor's office is not magnified and his judgment exalted to the utmost. The present reorganization at Columbia looks distinctly in this direction. It must have the effect of stimulating the love of culture among the undergraduates, of making the University, more than ever, what all our colleges ought to be, but what only a few really are, a seat of learning.

BROWNELL'S FRENCH TRAITS.

PARIS, April 17, 1890.

IT would take too long to analyze all the causes of the extraordinary indifference to foreign criticism which is one of the traits of the French national character. I will only say here that it must not be confounded with what we call chauvinism. It is not a form of pride, it is not a pretension of the "grande nation." It is something much deeper: it arises from a conviction that, such as we are, we cannot be well understood by anybody but ourselves, and that, whatever our failings may be, we have been for a long time, and are still, in the forefront of civilization. You will never find a well-bred Frenchman boast much about his own country, its literature, its victories, its art; you will find hardly any who does not take a permanent inward satisfaction in the feeling that he is a living atom in that great body, "France."

It will always be a somewhat ungrateful task for a foreigner to write an essay of comparative criticism on France—at least, if his object is to be read by the French. The task is difficult, and the reward is uncertain. I have read with much interest the 'French Traits' in which Mr. W. C. Brownell has condensed his observations on France. He has studied carefully our social instinct, our morality, our intelligence, our sentiment, our manners, our women, our artistic instinct, the spirit of our princes, our democracy. His mind is subtle, catholic, and generous. There is in his style a certain fluidity which makes it sometimes difficult for him to condense his thought. He has such a desire to be just and impartial that he sometimes takes us round and round a subject without allowing us to stop and to have a quiet and definitive view.

Mr. Brownell, with reason, attaches much importance to the sociability of the French people, and he may be right when he looks to the Catholic religion as one of the causes of this sociability. He says that fraternity is, as it were, "in the air" in France, and he adds that this sentiment "is the poetic side of the notion of equality." It is, he says further, on account of its intense sociability that "France is so inexhaustibly interesting—because, in one way or another, she, far more than any other nation, has always represented the aspirations of civilization, because she has always sought development *in common*, and because in this respect the ideal she has always followed is the ideal of the future."

It will always be difficult for us to know ourselves, much as we may try to follow the Greek precept. The difficulty is the same for a nation as for an individual, and nations are, even less than individuals, given to self-inspection. They follow their hereditary instincts; they learn to look upon their prejudices as if they were virtues, and upon their selfish aspirations as if they were the duties imposed on them by destiny. Sometimes they hear a word of truth from the mouth of a foreign judge; but if the truth is unpleasant, they console themselves easily with the reflection that the judge is incompetent, or biassed in his opinions by his national prejudices. I have often been struck, however, in this respect by the differences which are to be noticed in various countries in their sensitiveness to foreign criticism. It may, in a general way, be said that the older a nation is, the more insensible it becomes. Young nations are like young people, who are easily moved, and who do not bear criticism with equanimity. It must be remarked, also, that criticism does not touch us in the same manner when it comes from different quarters. We don't much mind the criticism of a Japanese, or a Chinaman, or a Bulgarian. An American, who will hardly pay any attention to the remarks of a Spaniard, an Italian, I might perhaps say also a Frenchman, will be much more attentive to the observations of an intelligent Englishman. The reason of this is obvious: we like to be judged by our peers. Community of race, community of thought, will always establish intellectual ties between the various members of the Anglo-Saxon family.

I should infer, from my own observations, that of all nations the French are probably the least susceptible of paying much attention to the criticisms of other nations. Saint-Simon likes to say, when he speaks of some very proud man of quality, "Il se sent"—he feels himself, he is conscious of himself. I look in vain for words to translate exactly his terse expression. So does the French people "feel itself"; it has the assurance which is given by centuries of high

culture and of glorious history. A Frenchman will look with absolute indifference on the caricatures of *Punch* or of *Kladderadatsch*, and if there is something clever in them, he will be the first to enjoy it.

In his chapter on the social instinct, Mr. Brownell cites certain words of Gambetta's, but they were not faithfully reported to him. Gambetta was no Socialist, and in one of his speeches he attacked Socialism. Mr. Brownell writes: "There are no questions," said Gambetta superbly, "but *social* questions." What Gambetta really said was this: "There is no Social Question—there are social questions," meaning that the social difficulties must be treated and attacked one by one, but that there is no universal panacea for all the troubles of human society.

Having attached so much importance to French sociability, Mr. Brownell will not surprise us when he writes that "French morality is a direct derivative of the social instinct. Owing to the development of this instinct among them, morality is rather a social than an individual force, and the key to its nature is to be found in the substitution of honor for duty as a mainspring and a regulator of conduct." The distinction is a very plain and a very real one. Between the two there is all the difference that there is between the inspiration, say, of Lovelace's fine lines:

"I could not love thee, dear, so much
Loved I not honor more";

and that of Wordsworth's apostrophe:

"Stern daughter of the voice of God."

This chapter on "Morality" is remarkably fair. Mr. Brownell does not follow the vulgar prejudice which would find the French lacking in moral sense; he understands the French view of morality, the Latin view. He can be just to our ideal, which is partly elaborated in the depth of conscience and partly external. I cannot quite agree with him when he says that religion has not much to do, in our time, with this ideal, and when he affirms that "the great body of the French people is Voltairian.' The question which keeps our people rent in twain, so to speak, is the religious question. The *Kulturkampf* which was inaugurated by Gambetta when he said, "Le cléricalisme, c'est l'ennemi," resulted in the election to our last Chamber of Deputies of 200 Opposition members. (There are, in the present Chamber, about 180 Opposition members; but you must always keep in mind the tremendous power of the Administration in France.) I believe there is no exaggeration in saying that religious ideas have not lost their force with half the nation at least; and if you analyze the sentiments of the unbelievers, you will find them very different from those of the philosophers of the eighteenth century. See what a distance there is between the philosophy of 'Candide' and the philosophy of Renan. Even in science, you feel a deep religious aspiration. Musset said:

"Qui de nous, qui de nous va devenir un Dieu?"

I remember reading, during the Exhibition, excited lines by a clever writer who compared the rays of light shining from the top of the Eiffel Tower to the *Labarum* of Constantine. How difficult, indeed, is any analysis of French character. To-day, one will say with Voltaire, "Et cependant, cultivons notre jardin"; the next day, another will tell you that there is no happiness except in sacrifice. Balzac's "Human Comedy" shows you all the shades, all the extremes of French morality—the heroes, the saints, and the sinners.

It would be ungrateful in us to find fault with Mr. Brownell, when his sympathy for us leads him almost to partiality. His power of admiration seems never to abandon him. He enjoys the sensations obtainable from our café concert entertainments, and contrasts them with "those produced by the melancholy songs and the burnt-cork buffoonery under whose benign influence the Anglo-Saxon sensibility is so wont to expand." He admires excessively 'Madame Cardinal,' that creation of M. Ludovic Ha'évy's, and thinks that "these brief pages of *genre* will live as long as any masterpiece of the kind in literature." He calls it "a contemporary national document of the first class." He speaks of the "immensely clever and impressive work of M. Guy de Maupassant and M. Richepin." But his criticisms are, on an average, very just, very correct. The chapter on "Intelligence" shows the greatest familiarity with all our writers, even those who have not yet attained great fame. The stars of the first magnitude do not make him blind, and he can see the failings of Alexandre Dumas the younger, of Taine, even of Renan and of Victor Hugo.

In a "Tableau de Paris" manners and women must necessarily take a large place. Is it true that with us "le charme prime la beauté"? One of our poets—I believe it was Voltaire—said, "la grâce, plus belle encore que la beauté," but beauty, real beauty, will always hold her own, even in Paris; and if I needed a proof, I could find some examples in the American colony of Paris. Madame Récamier, when she was getting old, said to a friend: "Ah, my dear, it is all over. When I walk the streets, the little chimney-sweeps don't turn their heads any more." They do turn their heads at many whom I could name, and who do not all fall under this definition of Sébastien Mercier: "French women are remarkable for piercing, mischievous eyes, elegant features, and sprightly countenances, but fine heads are very rare among them." Mr. Brownell seems to share the opinion of Mercier. He tells us that "Mme. Sarah Bernhardt is well known to be what is called a *fausse maigre*"; in the balls of the Faubourg St. Germain, in the bal de l'Opéra, "the face may be positively common, but the figure is nearly sure to be superb." These are perhaps trifling remarks to make in a philosophical study of the position and the influence of women in French society. This influence, however, is well analyzed. There is not in France, as there is in America, "a separation and exaltation of woman's sphere far above contact with the rude strife of natural passions and complex interests, the intricate and absorbing conflict of business, politics, amusement, and ennui, of which the real drama of life is composed."

I have no room left to speak of the last chapters on the "Art Instinct," "The Provincial Spirit," "Democracy." This last chapter especially is particularly interesting, as it is a sort of justification and vindication of the action of the Republican party and the Republican Government during the last twenty years. This part of the work is, in my opinion, too journalistic—if I may use the word—too polemical. There is more originality in the concluding chapter, "New York after Paris." We go to Europe to become Americanized, said Emerson. Mr. Brownell says very amiably that "France Americanizes us less than any other country in Europe."

THE TRIUMPH OF AN IDEA.

FORLÍ, April 12, 1890.

AURELIO SAFFI is dead! To-day the city that gave him birth on the 13th of October, 1819, is overflowing with a sad, silent multitude, who have come from the remotest parts of Italy to pay the last tribute of love and sorrow, and accompany his remains to their last resting-place in the cemetery where his ancestors repose and where his noble-hearted mother was laid by other hands than his, while he was toiling in his exile to free the land, then crushed in the entwined embrace "of Pope, of Emperor and Kings," which now echoes his name in the palace of Italy's one King and in the meanest hovel of his beloved Romagna.

Six and thirty years ago with Saffi we undertook a tour throughout England and Scotland to lecture on "Italy for the Italians." Of sympathy there was plenty, nor was help refused; but of belief that the Italians would ever expel their foreign and domestic tyrants, and uprise from the ashes of the past a united, independent nation—only a dreamer here and there indulged in this wildest of Utopias. Saffi did believe—indeed, seems to have been born with the certainty—and from his boyhood worked instinctively to transform the idea into reality. By birth an aristocrat, by inclination a student—nay, a very bookworm—his gentle manners, noble form, and sweet, thoughtful face won every one who came in contact with him. "Could this be a Republican, this courteous gentleman—one of the demagogues, the triumvirs of Republican Rome—Mazzini's *alter ego?*" asked Englishmen who knew not Joseph in the olden days. And little thought many a reader of the Blue Books on Italy that one of the first important documents published in 1846 was penned by this young student of Forlí, fresh from the University of Rome, where he had just taken his degree. Nor did Saffi himself know till quite lately that the protest which he drew up in the name of the patriots of the Romagna against the pretended reforms of the Papal Government, had been considered of such importance by the English Ambassador as to be treated in official fashion. It occupies twelve pages of the Blue Book's correspondence on the affairs of Italy, part i, and so complete is the idea of national existence that it merits perusal even now.

Saffi was then in Rome, ostensibly practising law. He belonged to the secret society of patriots whose centre was Forlí, and when two Monsignori, Janni and Ruffini, were sent to calm the turbulent spirits of the Romagna with promises of reform, he was chosen to draw up a protest against the false promises and the party who could be contented by them. The revolutionary animus of the protest was in marked contrast to the prayers and supplications of the moderate faction for reforms, for a little breathing-space for one province, for one State. Then came Pio Nono, and when he blessed Italy the Romagna worshipped him; when he withdrew his benediction, he was himself accursed, fled to Gaeta, and the Romans elected their Assembly, which proclaimed the downfall of the temporal power and the Roman Republic. Saffi, elected deputy for Forlí, only entered into correspondence with Mazzini at the close of 1848; he was named Minister of the Interior before Mazzini, working in Tuscany for unity, came to Rome. We have before us an unpublished letter, in his own clear handwriting, to his mother, whom he was never more to see, dated Rome, April 29, 1849. On the morrow, the 30th of April, the French, under Oudinot, attacked the city, were defeated and driven back. The rest of Rome's truly glorious tale is known. Saffi, triumvir with Mazzini and Armellini, resigned when further defence was proclaimed impossible. After a few months in Switzerland with Mazzini,

Saffi also came to London, returning to Italy in disguise. There, in 1852, he was the soul of the conspiracies that kept the Pope and Austria in hourly terror. Returning to England, he earned his living by his pen and as a professor at Oxford. When the war of 1859 was proclaimed, he would take no part "with the murderer of Rome for ally," but, immediately after the peace of Villafranca, cast in his lot with his countrymen, affirming their right to decide on their own form of government. Garibaldi in 1860 offered him the prodictatorship of Sicily, but he declined. After the plébiscite in homage to national sovereignty, he entered Parliament, and was one of the most active members of the first Italian Parliament from 1861 to 1863. Then, with Garibaldi, Bertani, and others, he resigned, and never again would stand as candidate or accept a seat when elected.

During his exile in England he married Georgina Crawfurd, sister of the Scotch member, and found in her a devoted helpmeet in his work, an exemplary mother to their four sons. The struggle for national existence over, his old student proclivities returned in full. His life was spent in study and in striving by every effort in his power to elevate morally, and materially ameliorate, the condition of the populations of the Romagna, where the long abasement of priestly rule had left such deep and terrible trace. Gentle as a child in all his relations with rich and poor, he could be terrible in his ire against sin and sinners. Deeds of blood—stabbing in the dark—are but too common still, but Saffi's deliberate, constant crusade against all violence or lawless action has reduced them to an extent that would alone justify his title to patriotism. He was a republican to the core, and as such demanded of his co-religionists "purity of life, obedience to law, fulfilment of duty, the fountain of all right."

When Mazzini died in 1872, Saffi devoted himself to the publication of the great teacher's writings, prefacing each volume with a lucid exposition of the times and circumstances in which it was penned. In 1875 it seemed to Saffi and other republicans that the time was come for all to take part in political elections; that all who had not a conscientious scruple or personal repugnance to take the oath to monarchy, should enter Parliament and strive to wring from the Government the long promised, never effected reforms. The moderates, dreading his influence, resolved to prevent the consequences. Villa Ruffi, where a private meeting was being held, was invaded, Saffi and others seized, handcuffed, and dragged to prison. After three months' detention, he was released and "absolved." This act precipitated the downfall of the moderates. Saffi made no fuss, no protest, returned to S. Varano, where he farmed his little estate on the half-and-half métayer system, and wrote his chief work, on 'Alberico Gentile,' "that synthesis of the law of nations; pages," says Giuseppe Ceneri, "which are inspired by immutable faith in the progress of humanity towards ever higher, ever purer ideals." Such was the enthusiasm created by this work among cultivated and thoughtful men that the municipality of Bologna named "Count Marcus Aurelius Saffi" honorary citizen, inscribing his name in its golden book. And the University of Bologna invited "this patriotic philosopher, this sapient jurist, to enter its ranks and assist the other professors in the education of the young generations on the broad lines of law and civic wisdom."

So in 1878 Saffi was created *dottore collegiato onorario* of the Faculty of Jurisprudence in the University of Bologna. His lectures were frequented by professors as well as by students. First he gave a course on "Public Law in the Italian Communes from the descent of Otto I. into Italy to the famous Lombard League"; then on "The Origin and Causes of the Difference between the Political and Judicial Institutions of England and the Other States of Western Europe which arose in the Middle Ages from the ruins of Roman Civilization"; later, on "Public Law in Ancient Italy, Ancient Rome, and the Middle Ages." He was engaged on a course of lectures on the "History of Diplomacy and Treaties" when, some three months since, the first attack of illness prostrated him. Over-study, over-work was the cause, for his lectures at the University never interrupted his arduous toil over Mazzini's writings. His preface to the seventeenth volume, giving the true story of the Paris tragedy of 1871, is a masterpiece. It was impossible to induce him to rest sufficiently, and on the eve of his death, hastened by his last public appearance at the inauguration of Mazzini's bust in Forlí, he had prepared his papers for returning to Bologna and continuing his lectures. The text of Mazzini's eighteenth volume is prepared, with a sketch of the preface; and he had also superintended the choice and copying of Mazzini's letters to political and private friends, and especially to his worshipped mother, the copies being made by his devoted wife, Georgina, now the heart-stricken widow. Death came suddenly as he was sleeping by her side. Only the youngest son of four was with her at S. Varano. The other three came too late to see the father alive; but they are all noble fellows, and will prove worthy of the name they bear.

To friends the blow is as unexpected as it is terrible. Only last week Saffi, reported as quite convalescent, sent to us in Mantua urgent appeal for such letters of Mazzini's as are in our hands, and wrote a beautiful letter to the son of Achille Sacchi, after the death of that noble patriot, one of the defenders of the Roman republic, wounded on the day that Manara was killed and Rome occupied by the French. A letter breathing all the simple, absolute belief in God, in immortality, in the one mission of man to do his duty to his fellowmen here below, one rarely reads in these days, but it was the heart and soul of Saffi, who perhaps alone among Mazzinians shared the religious views of his friend and master.

And now all is over. We have left him alone in the subterranean vault of the cemetery of Forlí, not less than 20,000 mourners following the hearse with reverent, sorrowful step. It has been no official ceremony, though the municipality of Forlí undertook the funeral, and the Syndic, with Menotti Garibaldi, Fortis, Under Secretary of State for the Home Department, representing the Government, with other six, representatives of municipalities and workingmen's societies, bore the pall. No! Saffi was loved and reverenced as the good genius of the Romagna, the apostle of "God and the People, Italy one and free." Four artillery wagons were laden with the wreaths and floral crowns sent from every part of Italy, redeemed and unredeemed (for Trent and Trieste sent their representatives to the funeral of this stanch champion of their right, as members of the Italian family, to be united to Italy in Rome).

BOLOGNA, April 14.

The commemoration promoted by the Workingmen's Society has been worthy of Saffi and "his people." The enormous theatre was crowded; the platform draped with ivy and camelias; the workingmen's associations from all parts of the Romagna, with their flags and standards, in the pit and on the boards, the élite of Bologna in the boxes. Venturini, the President of the workingmen, in the chair, in a few words gave the keynote—"the desire to show how entire was the harmony between the workmen of hand and brain. This it is that bids us believe that the great social question agitating the world may be resolved not by hate, but by love; not by violence, but by pacific means in this our young free Italy." Ceneri, Italy's greatest jurist, spoke with deep emotion of Saffi, master, friend, colleague. Then Filopante; the only Bolognese survivor of the representatives of the Roman republic, spoke: "The Roman republic is under an eclipse, but in due time, if the future is not spoiled by rash impatience, it will shine forth afresh to give light and life to all the nations of the earth united one with the other, by paternal ties, in an indissoluble federation." All allusions to the necessity of peace among nations were hailed with warm applause. Carducci, nervous with emotion, held the house as he rapidly indexed the history of Italian redemption and her redeemers, who loved Italy not as a mere land, but as we love a living woman, the mother of grief, the bride of hope.

Sad as it is to see these last of the old guard depart, still it is a relief to forget the petty struggles of the hour, "the Byzantine strife of parties," in contemplation of the triumph of the idea. Saffi lived to hear the Italian Government decree a national monument to Mazzini in Rome. His family and friends outlive him to read King Humbert's telegram to the widow, expressing his sorrow and sympathy with the nation's grief for the loss of this true Italian, this great and noble patriot.

THE SCHOOL-BOOK BILL.

TO THE EDITOR OF THE NATION:

SIR: Your issue of April 24 contained an editorial that was so much at variance with the spirit of reform that usually dominates the *Nation*, as to call for a correction that I am sure you will be willing to allow. The article in question is entitled "A Very Queer Bill," and is founded upon a basis of error, as you will see upon further information and reflection. After stating, correctly, the specific object of the bill, which is to provide for a central board that shall have full control over all the text-books in use in the public schools of the State, the article says: "One trouble with our whole system of public schools is, that we have already too many boards, too much dictation, and too much machinery." Wisely said; there are too many boards, and the object of this bill is to take the matter out of the hands of the multiplicity of Boards of Education all over the State, which have abused their power most shamefully for the last quarter of a century, and put the control in the hands of *one* board, instead of a large number of boards. If all the evils that are anticipated from the proposed change were to be multiplied a thousand fold, they could not begin to be as bad as the evils that have existed in this city for twenty-five years, and that will probably continue to exist for as long a time to come unless some such bill as this can be passed before then.

The article says: "It is well known, so profitable is the sale of text-books, that there has always been a lively competition among rival firms to secure the supply for any one large

city." This sentence, as a statement of fact, is absolutely incorrect. There has not been anything approaching to competition in that line in this city or in Buffalo or in most of the other cities of the State for a great number of years. There may have been such a competition before the war, but not since then. So true is this, and so well known is the truth, that the story of the book-ring that rules this city has been told in our newspapers over and over again at every spring election when members of the Board of Education have been nominated by the book-ring (at political party caucuses) and elected by the people. The statements have never been denied—only laughed at. Tweed's old question has always been asked, "What are you going to do about it?" and the compliant answer has usually been given back by the voters at the polls, "Nothing." Not in every ward of the city is this invariably the case, but almost always enough are chosen to give the ring a good working majority. The efforts of good citizens were put forth more vigorously this last spring than ever before: some bad candidates were disavowed by their own party organs, and enough anti-ring men were elected to give us the victory, as we hoped. Only another disappointment was in store! The anti-ring candidate for President of the Board was not in all respects the most desirable man possible, and one of the newspapers that had been supposed to be true to reform took advantage of that fact and assailed him with such a torrent of abuse that he was defeated. The desire of the book-ring was attained, though not in the customary manner.

To make the matter of the utter absence of competition more plain, let me allude to an article that appeared in the *Evening Post* a few days ago. In speaking of the bill in question it said that well-informed people openly charge that the bill "is a corrupt job, the sole object of which is the financial profit of the 'School-book Trust,' the combination of four large publishing houses," whose names it proceeded to give. This is the most extraordinary statement ever made in a paper of the high standing of the *Evening Post*. The complete misconception on which it is founded will be seen from the following facts, known to be facts, publicly stated repeatedly by the writer and others associated with him, and never denied:

Years and years ago the first three of the houses mentioned (and one or two others), recognizing the uselessness of expensive competition, entered into a pact, not so formal as the Trust that has just been created, but quite formal enough, by which the whole State was parcelled out; each house was to have a particular city or cities, and the agent of no other house was to cross the boundary line. The first of the houses named took this city, and it has kept it ever since. Its agent here is one of the most astute politicians in Rochester, and all his skill is brought into play—first, at the caucuses of both parties, then at the polls, then in the Board of Education. Since that arrangement was made, not a single text-book, not a bottle of ink, not a piece of chalk, not a single item of school supplies has been introduced into any one of the public schools of Rochester without the direction of that agent, who occasionally allows some other dealer to furnish some insignificant articles, just enough to enable him to say that not quite everything comes from the same house, but not enough to appreciably affect the profits of his principals. Of course the prices which he charges are fixed by the house in New York, and have no relation to the general laws of trade. The trouble, annoyance, and expense to parents and pupils, caused by the arbitrary change of text-books, are almost intolerable, and it is to remedy this injustice, if possible, that the Citizens' Educational Association of this city is in existence.

These facts may be new to you; they are very familiar to all our citizens, and have been recited frequently at public reform meetings. At one of those meetings, more than a year ago, a committee, of which the writer was a member, was appointed to frame a bill that should remedy those evils by taking the control of text-books and school supplies out of the hands of a particular publishers' board of education. The bill was sent down to Albany and went through several stages in the last Legislature, but the agents of the book-ring were on hand and the bill was swamped by a Danaë-like shower. The same bill, with the full endorsement of the Citizens' Educational Association, has been sent down again this winter, and is now before the Senate. It is to be hoped that it will pass both houses and receive the Governor's signature. We have, however, little expectation of that; another inundation of current arguments will probably overwhelm it, as before. That is looked for, but the antagonism of those who ought to be its friends is as surprising as it is unpleasant. Criticise the provisions of the bill as much as you like, but do not say that its sole object is the profit of the School-Book Trust when it was framed by those who have been fighting the book-ring for many years; and do not say that there is a lively competition when there is none whatever.

WM. F. PECK.

ROCHESTER, April 29, 1890.

[Our remarks were not confined in principle to the State of New York, but if they had been, we should still object to Mr. Peck's remedy. We have no faith in a Board of Education selecting text-books for the whole State, much less in their preparing suitable books, or causing them to be prepared "by experts." Experts arise by competition in the ordinary course of trade, and are tested by the actual experience of the teacher. If the Board were qualified to pick out the expert, that would not insure the making of a good book. The law of freedom here as elsewhere gives the best results, and, while favoring constantly the best and most spontaneous productions, allows the more enlightened communities to take full advantage of them. It also tends to minimize, in the domain of history, the theological conflicts which the proposed Board would be very likely to precipitate, as well by omission as by commission.—ED. NATION.]

INDIRECT EVIDENCE.

TO THE EDITOR OF THE NATION:

SIR: In the April number of the *Contemporary Review* is a remarkable article, by Mr. A. V. Dicey, on the possibility of applying the Swiss Referendum to Great Britain. It is somewhat curious to see so conservative a writer, and one so strongly under the influence of legal tradition, toying with such a radical innovation; and indeed he cautiously observes that he is not advocating it, but only aiming to show that the arguments against it are not conclusive.

My reason for alluding to this article now is to point out how, indirectly and quite unintentionally, it shows how a ministry may hold seats in a legislature without being dependent upon it for the tenure of office, or bound to resign upon an adverse vote of the majority.

"As the tenure of office is (or may be) immediately connected with a Minister's success in carrying a given bill through Parliament, there is great difficulty in his renouncing legislation proposed by himself when he finds the country will not support his bill, without his at least incurring the charge of undue tenacity in clinging to office. The reference of a particular law—say a Parliamentary Reform Bill—to the people for approval or rejection, would greatly increase the freedom and improve the moral position of the Minister who advocated the measure. If the bill were accepted, things would stand exactly as they do now when a bill finally passes into an act. If it were rejected, the Minister could, like a member of the Swiss Council, accept the rejection as a final expression of the nation's will. It would soon be felt that he might with perfect honesty pursue the course which would now be taken by a member of the Swiss Council. He need not pretend that his opinion is altered. He might say openly that he still, as a matter of opinion, thought his own bill wise and politic. But he might also say that it was a matter on which the nation was final judge, and that he accepted the nation's decision. In all this there would be no pretence at conversion. There would simply be a pledge as to conduct. The Minister might continue to administer the affairs of the country as honorably as Peel held office after the passing of the Reform Act, or as a servant of the Crown in the days of Elizabeth remained in the service of the Queen, even though her Majesty had, on some high matter of state, rejected his advice."

If, in this extract, instead of the word "nation," we read "Congress," why would not the argument be just as good? Certainly it would not in Great Britain, because, as a Parliamentary vote is the only thing which can make a ministry, a similar vote must of necessity unmake it. If the Queen really appointed the Ministers, she might keep the same for twenty years, as the late Emperor William did Prince Bismarck. But in this country, where the President, and therefore the Cabinet, go to the nation every four years for approval or rejection, we might have all the benefit of the action of a ministry upon Congress without any such dependence upon Congress for their seats.

As akin to the subject, I observe, in your literary notices, that Prof. von Holst thinks that if Mr. Bryce had gone more thoroughly into the legal aspects of the Constitution, he would hardly have ventured the conjecture that a European cabinet might have solved the slavery question, whereas, in the American Congress, "it was the function of no one authority in particular to discover a remedy, as it would have been the function of a cabinet in Europe." If the strength of a mouse can add anything to that of a lion, I remark that for a quarter of a century I have been laboring to establish just this proposition of Mr. Bryce's, having begun, in the weakness of youthful enthusiasm, by publishing a pamphlet upon it at the outbreak of the war. *Me judice*, it is Dr. von Holst, and not Mr. Bryce, who, in this respect at least, has not bestowed adequate study upon the political history of the United States.

It is precisely this absence of a national authority which has again subjected the country to a glaring outrage of the lobby in the shape of the Silver Bill. Does any human being suppose for a moment that the nation as a whole wishes for silver inflation? It is hardly extravagant to say that all the financial institutions of the country would, as one man, if they were asked, record their opinion against it. It is, pure and simple, the result of a combination of silver-mine owners taking advantage of the extraordinary facilities for intrigue furnished by the way in which the Government at Washington is carried on. There is no one thing which needs so strongly to be impressed upon

the rising generation as this, that the arch-enemy which threatens the prosperity and even the life of our institutions—the poisonous miasma which calls, politically speaking, for all the resources of modern science in drainage and sanitation—the many-headed hydra, in the conflict with which the young Hercules of the Republic will need all the strength he can draw from his mother earth—is *the lobby*.

G. B.

Boston, April 26, 1890.

Notes.

For half his life (and he is now seventy years of age) Mr. John Lovell, the well-known publisher of Montreal, has contemplated a 'Gazetteer and History of every County, District, Parish, Township, City, Town, and Village in the Eight Provinces, with descriptions of more than 3,000 Islands, Lakes, and Rivers in the Dominion of Canada.' Having already carried to successful, if not profitable, conclusion two mammoth Directories of Canada (1856) and the Dominion (1871), Mr. Lovell has the requisite experience and connections for the vaster undertaking of his Gazetteer, as to which he will be content with nothing short of eleven volumes. The expense he estimates to be so great that only a subscription, in advance, of $150,000 will warrant his proceeding with the undertaking, and a sixth of this sum has been already pledged. There will be eight Province maps, and illustrations if paid for by persons interested.

The Messrs. Scribner will publish immediately 'How Shall We Revise the Westminster Confession of Faith?' by seven representative revisionist Presbyterian divines, including Drs. Vincent and Briggs. They announce also the second of the translations from Imbert de Saint-Amand, 'The Happy Days of the Empress Marie Louise,' and 'Dizzy Joe, and Other Comics,' from the pencil of A. B. Frost.

'The Mythology and Monuments of Ancient Athens,' by Miss Jane Harrison and Mrs. A. W. Verrall, and 'The Golden Bough: A Study in Comparative Religion,' by J. G. Frazer, are in the press of Macmillan & Co.

George H. Ellis, Boston, will make a volume of 100 pages of Mr. Edwin D. Mead's addresses on the Roman Catholic Church and the Public Schools.

In June, Ginn & Co. will publish 'The Leading Facts of American History,' by D. H. Montgomery, a companion to the same author's 'Leading Facts' of English and French history respectively.

John Wiley & Sons have begun to issue a series of twelve volumes, 18mo, from new plates, of Ruskin's complete works at a moderate price. Uniform with these will be a second series of 'Selections from the Works of John Ruskin,' edited by Mrs. Tuthill and others.

Among several German and French texts in preparation by Henry Holt & Co., we name Mérimée's 'Colomba,' edited by Prof. W. I. Knapp of Yale. A 'Short French Reader' and a 'Short German Reader,' by Prof. W. D. Whitney, will be brought out by the same firm.

Of late years the books of the "Bibliothèque-Charpentier" have tended toward an excessive naturalism. Now M. Charpentier announces a new collection in the same handy form, and in this "Nouvelle Collection" (New York: F. W. Christern) are to be included novels of literary merit, not risky and not namby-pamby—in short, fit reading for a lady of education and taste. The prospectus declares that the mere fact that a book appears in the "Nouvelle Collection" is proof "qu'elle peut être laissée sans contrôle entre toutes les mains, même entre celles des jeunes filles." Among the authors who have promised to contribute are Alphonse Daudet, André Theuriet, Hector Malot, and Théodore de Banville. The first volume to appear is 'L'Abbé Roitelet,' a simple and sympathetic sketch of a country priest who is devoted to bird-catching. It is by M. Ferdinand Fabre, and is eminently innocent. There is a quaint charm in the description of the Christmas feast in the Cévennes.

George Keil, Philadelphia, has in hand a 'Medical Register Directory and Intelligencer,' edited by Dr. William B. Atkinson.

The reproduction by "process" of a Webster's Dictionary of 1847 as a commercial venture (the copyright having expired) in 1890, is certainly one of the humors of the trade. No doubt there are plenty of people so much in need of dictionary learning as to be taken in by this revival of an obsolete book, but there ought to be a general warning against the deception which alone makes success possible.

The third volume of the 'Century Dictionary' marks the completion of one-half of this noble work, and concludes with the letter L. The compounds of *in-* alone fill more than 150 pages; the *hy-* derivatives from the Greek upwards of thirty. The specific entries under *index*, *Irish*, *iron*, *knife*, and *lamp* are good examples of the cyclopædic character of the Dictionary, as, to cite one of each, "Index Librorum Prohibitorum," "Irish Church Act" of July 26, 1869, "Italian iron" (a fluting iron), "War to the knife," "Student lamp." The illustrations maintain their high degree of excellence. Their abundance is apparently affected by the large number of abstract and scientific terms in this division of the alphabet.

Houghton, Mifflin & Co. have added to their list Mr. W. E. Griffis's Life of Matthew Calbraith Perry, and given it a second edition, without ostensible revision. Miss Sarah Orne Jewett has selected for the Riverside Aldine Series eight of her shorter stories, under the title, 'Tales of New England,' and has thus provided good entertainment in a form as refined as her workmanship.

A little less than three years ago we noticed Mr. Hubert Hall's 'Society in the Elizabethan Age,' a diorama rather than a panorama: society manifested in types, *e. g.*, the landlord, the steward, the tenant, the burgess, etc., rather than after the manner of the historical novel. Mr. Hall now publishes a third edition (London: Swan Sonnenschein; New York: Macmillan), and is able to substantiate still further the whitewash applied to his hero—for "Wild Darrell," Lord of Littlecote, landlord and courtier, is the main figure of his group, and serves the purpose of a hero in fiction. The book is very attractive externally.

Mr. Oscar S. Straus's work, designed to show the influence of Hebrew history and ideas on the formation of the republic of the United States, has after five years been translated into French by Mme. Aug. Couvreur, wife of an ex-President of the Belgian Chamber ('Les Origines de la Forme Républicaine du Gouvernement dans les États-Unis d'Amérique' Paris: Félix Alcan). Prof. Laveleye contributes a preface in which he insists on the natural harmony between Catholicism and despotism, and explains the failure of the French Revolution by the dominant religion of the country. He makes, in his rather scanty references to America, some curious errors, as when he says that Massachusetts established from the beginning the separation of Church and State, which was really effected only during the present century.

Mr. J. H. Wigmore's work on the Australian ballot is being published in full in a Japanese dress, and Prof. Ely's 'Political Economy' is about to share the same distinction.

The late Dr. Milner Fothergill was very felicitous in expression, and he thought much and clearly on subjects that concerned his fellowmen. His posthumous essay, 'The Town-Dweller' (D. Appleton & Co.), expanded from a paper before the British Association for the Advancement of Science, and published under the editorship of Dr. B. W. Richardson, is equally acceptable in style and suggestive of thought. Dr. Fothergill maintains that life in crowded cities, however it may stimulate the wits, deteriorates the body, so that, without fresh immigration from the country, the urban race would soon die out. This unpleasant prospect is so clearly brought into view that citizens interested in their posterity may enjoy the argument intellectually, although not happy over the impending fate. Their air, food, and habits are so diverse from those of rural life that each succeeding civic generation yields to its environment in retrogression. We have only space to quote, as a sample, the remark, "It is a great pity that education must go on during growth" (p. 95), which, as it seems opposed to the course of nature, will give some a start, but with which, as it is true, every student of physiology will agree. The little book is full of such texts, with clear-headed commentary.

Alexandre Dumas, *fils*, has for a fourth time gathered into a volume his scattered pamphlets and articles, and the new 'Entr' Actes' (Paris: Calmann Lévy; New York: F. W. Christern) is marked as the first number of a second series, which is fair encouragement for a belief that a second volume will follow in due season. The chief contents of the present volume are "Les Femmes qui tuent et les Femmes qui votent" and "La Recherche de la Paternité." But a letter chiefly about collaboration, another to M. Sarcey on the drama, and a third to M. Paul Alexis, are the most interesting to the general reader—though we may doubt if M. Alexis enjoyed the epistle addressed to him.

Mr. Joseph C. Rowell, Librarian of the University of California, puts forth a novel 'Contents-Index' of the "comparatively small but valuable library of reference" over which he presides. It is the product of a regular practice of "indexing books and magazines immediately upon their receipt," and of giving the students the benefit of this in MS. at once. The publication of Poole's Index has enabled Mr. Rowell to discard a vast number of references to periodicals, and his compact and abbreviated index makes an octavo volume of but 519 pages. In spite of the limitations of his material, he has made a widely available addition to existing helps to study and research. Every library should own one or more copies of his index. Mr. Rowell deserves great praise as a pioneer in a field in which he is perhaps more likely to find imitators than coöperators. His second volume awaits the accruing of forty or fifty thousand additional volumes.

We make to-day a passing record of the appearance of indexes to volumes i.–x. of the Baltimore *American Chemical Journal* and *American Journal of Philology* respectively.

The *Academy* of April 12 announces some remarkable discoveries concerning Giordano Bruno that have been made by Dr. Remigius Stölzle, Professor of Philosophy at Würzburg. In the town library he has found a MS. of the 'Liber Triginta Statuarum,' which is more

complete and correct than the Moscow one; and in the University library of Erlangen two other MSS., commentaries upon Aristotle. These last were composed when Bruno was in the College of Cambrai, at Paris. They are not written in his own hand, but have been copied by others. All these documents, and others that Prof. Stölzle has found that bear upon their author's life and writings, have been sent to the editors of Giordano Bruno's works, Messrs. Tocco and Vitelli, and will be published by them.

The Italian Ministry of Public Instruction has offered prizes and honorable mention for dialectic vocabularies presented before June 30, 1893. The prize-winners will retain their copyright, but cannot touch their money till their manuscripts have been printed.

In August, Antwerp will celebrate the 300th anniversary of the death of the famous printer, Christopher Plantin, whose workshop, now a public museum, is one of the chief attractions of the Belgian city. Simultaneously will be inaugurated the new Museum of Fine Arts and the Museum of Antiquities, and it has seemed a good time to hold a conference of all persons concerned in the art of book-making and book-publishing. The programme runs on from material considerations of form, types, pagination, indexes, illustrations, to duties on books, copyright, founding of public libraries, etc. Persons desiring an invitation to the conference should address Mr. Max Rooses, General Secretary, at the Musée-Plantin-Moretus, of which he is the learned curator. The American tourist will do well to make a note of this interesting occasion.

Some of our readers may like to know of the existence of a Society for the Study of the Old Masters, originated and conducted by Miss E. B. Waring of Newport, R. I. It aims to facilitate the study of Crowe and Cavalcaselle's 'History of Painting in Italy' and 'Life of Raphael' by what we may call a circulatory Grangerizing or "extra illustration." Text and photographs are passed from hand to hand among the subscribers in a manner made familiar by book clubs, clubs for microscopic study, etc. Mrs. E. F. Stephenson, 1216 Tenth Avenue, New York, is the Secretary of the above Society.

— The May *Atlantic* puts in the first place a careful notice of Ibsen, who seems for the moment to be the name to conjure with in the magazines. Critically the article is neither better nor worse than the score by other writers upon the same topic. A more unusual, indeed a unique subject, is the sketch of Sir Peter Osborne, the hero of Castle Cornet, by the editor of Dorothy Osborne's letters, that delightful volume with which our readers were made acquainted on its appearance two years ago. Sir Peter was a worthy father of his daughter, nor has a more excellent example of the old English strain, simple, strong, and true, been set before us for many a day than comes out in the few letters of Sir Peter here given, in which he exhibits the constancy of his allegiance to King Charles under the double strain of Warwick's friendly overtures on the part of Parliament and the enmity of Sir George Carteret, the King's representative. The character of Sir Peter is a bright spot in the dark history of the Rebellion. Another historical paper is on the well-worn romance of Mary Queen of Scots, and describes the funeral scene by the light of some unused documents. Agnes Repplier writes with great good sense of the affectation by which the too innocent reader pretends to like books which he is told he should enjoy, and in the course of her remarks aims a shrewd remark or two at the excesses of critics of the smaller kind, whose only stock in trade is some popular fad or personal enthusiasm of their own. Mr. Morton concludes his vigorous examination of the objections to civil-service reform with an attack upon the "rotation-in-office" superstition, which has seldom been reduced to such an appearance of mere silliness as by his argument and invective. There is rather more than the usual proportion of fiction in the number.

—From the advanced sheets of the First Annual Register of Clark University it appears that that institution is entirely committed to post-graduate work, which for the present is confined to the five departments of mathematics, physics, chemistry, biology, and psychology, with modern languages taught to meet the needs of students in these fields. The policy of the Trustees to strengthen to the utmost departments already existing before proceeding to the creation of new ones, is to be scrupulously adhered to. The year has been a prosperous one. The number of students has embraced graduates of forty-eight colleges. Twenty-eight lecturers have given thirty-three courses, with an average attendance of eight hearers to each course. In addition to the thirty fellowships and scholarships established by the founder, others have already been founded by outsiders who have been impressed with the plan and scope of the institution. The status and salary of the Docents, who are entirely independent of the heads of departments, and whose relations are directly with the President, have just been materially raised. Their honors and opportunities are reserved for men of pronounced scientific attainment whose work has already marked a distinct advance beyond the doctorate, and who wish to engage in teaching and to deliver a limited number of lectures on some special chapter of their department. A number of them have been provided with individual rooms, and expensive apparatus and books have been purchased for their work. If they desire, and their qualifications are approved, they may be invested, as the highest formal academic honor, with the *licentia docendi*, the terms of which can now be furnished; and so far as this diploma can have the significance of a title or degree, it will be regarded by the University as a brevet college professorship. The existence of such a select body ought to diminish the difficulties under which college trustees sometimes succumb in selecting professors. A central building of ninety rooms and a chemical laboratory of sixty are already nearly completed. The library already contains more than 10,000 bound volumes and receives nearly 200 periodicals.

—Dr. Charles Waldstein finished his excavating work at Platæa in the second half of March. The members of the Archæological School at Athens who assisted him there were Mr. W. J. Hunt, Messrs. H. S. and C. M. Washington, Mr. Shelley, Mr. H. T. Hale, and Mr. J. F. Gray. Their first object was to make an accurate map of the ancient city of Platæa, so far as it is now visible. The site has been thoroughly surveyed; the walls, which are over two and a half miles in circumference, have been measured; and the publication of the results will place them at the service of all classes of students. A careful paper on the topography of the battle-field of Platæa has also been prepared by Mr. Hunt, and will be illustrated by a new map drawn by Messrs. Hunt and Hale. Dr. Waldstein carried on other excavations at several points within and without the city walls, but without discovering as yet one of the three important temples (Athena, Hera, Demeter). In the course of the excavations some interesting inscriptions were encountered, the most important of which was a large slab containing a portion of the famous Edict of Diocletian, "De Pretiis Rerum Venalium." Last year Dr. Waldstein found at Platæa fifty-four lines of the Latin preamble to this edict. About half a mile from the scene of this find was discovered another slab, of about the same dimensions and in the same form, of the body of the edict in the Greek text, and it appears to be likely that the preamble was given in the Latin originally, whereas for the use of the people the text itself was published in Greek. The portion of the price-list contained in this tablet is the one dealing with the price of textiles. A part of it is published and known from other fragments, but there are interesting variations even in this part. A column and a half of the prices here given has hitherto been unknown, and supplies the beginning of the eighteenth chapter in Waddington's edition, hitherto wanting. Another inscription records dedications on the part of women to a goddess, probably Artemis or Demeter, and contains a large number of interesting feminine names. Dr. Waldstein intends to complete his excavations at Platæa next session.

— The second edition of W. Cunningham's 'Growth of English Industry and Commerce' (vol. i., Cambridge University Press, 1890) contains more than twice as much matter as the first edition, which was published in 1882. The author aims to give such an account of the development of English industry as may be easily followed by persons but slightly acquainted with history and political economy. At the same time, the book contains much that will interest and instruct the special student of these two branches of learning. The author emphasizes throughout the interdependence between the industrial and political history of England, keeping constantly in view the principle that "the economic institutions and ideas of each age are relative to their political and social environment." The book is an admirable one, and may safely be recommended to teachers and students of English institutions. We do not think that the author fully comprehends the situation of the mediæval Jews of England (pp. 187–193). For example, we doubt his assertion that "every legislative effort was made in the thirteenth century to induce them to conform to ordinary ways and take to other callings, so that they might be assimilated into the life of the places where they lived" (p. 190). In fact, the King's repeated demands for enormous sums of money tended strongly to keep the Jew away from ordinary callings, which yielded small profits. In the Appendix (pp. 501–579) some valuable documents are printed *in extenso*. The author seems to ascribe the tax of a fifth on the movables of the Londoners to the twelfth century (p. 541); but there appear to be good reasons for placing this levy in a later period. On the whole, the book is free from faults, and is a very scholarly piece of work.

— Somewhat more than a year ago, we chronicled the founding of the *Vierteljahrschrift für Litteraturgeschichte*, edited by Bernhard Seuffert. The second volume, now lately completed, justifies the good opinion of the enterprise we had then formed from the prospectus and the initial numbers. Among the noteworthy articles of the past year may be mentioned, first, a long and scholarly essay by Oscar Netoliczka upon German pastoral poetry

of the eighteenth century. The paper traces the history of the German shepherd-idyl in its relation to Theocritus and Virgil, and to the French pastoral, and also gives a good account of the theory on which these fantastic aberrations were constructed and defended. The study is an interesting one, and ought to be the more welcome from the fact that the literature examined is so very insipid. Of much interest also is an essay by Werner Pfau upon "Old Norse in Gerstenberg." Gerstenberg, born in 1737, was the first German to utilize Norse mythology in poetry, and was, in this matter, the immediate precursor and inspirer of Klopstock. Students know what a curiously fantastic and unhistorical conception Klopstock and his contemporaries had of the ancient Norseman. Kelts, Scandinavians, Anglo-Saxons, and Deutsch-men were mixed up together, and all were known as "our ancestors." The conception of the ancient Germans as a race of brave, hardy, and guileless sentimentalists fitted in well with the scenery of the Ossianic poems, and with Rousseau's theory of civilization as the progressive deterioration of man; and out of it all arose that comical episode in the history of German poetry known as the "Bardengebrüll." The essay we speak of shows in detail just how Gerstenberg got his impressions of the Northmen. It is written with wide and thorough scholarship, and with excellent critical discernment, and is the more remarkable as being the posthumous work of a young man who died in 1887 at the age of twenty-two.

— Another article of the *Vierteljahrschrift* which deserves mention is one by Hermann Conrad upon "Carlyle and Schiller." This describes the genesis of Carlyle's interest in German literature, but makes too much, we think, of Schiller's influence. It is going too far to say that "his [Carlyle's] saviour in his time of utmost need was Schiller"; especially when Carlyle has very emphatically told us that it was Goethe. An interesting feature of this paper is its review of Carlyle's critical judgments with regard to Schiller. In general Herr Conrad finds Carlyle rather shallow; he objects to him that his criticism consists so largely in the expression of mere personal feeling, and that it sticks too close to the moral and religious point of view. He disapproves Carlyle's later and cooler essay upon Schiller, as compared with the earlier 'Life,' and especially takes the Scotchman to task for placing Schiller "far below" Milton (which, by the way, Carlyle does not exactly do). "What has the world of to-day," exclaims our German essayist, "what will future centuries have, from Milton?" We do not care to assail the position that Schiller is on the whole a more universal poet than Milton, and has more to say to modern men; but we do wonder why it is that German critics of the present day can, as a rule, see nothing in Milton except a famous and respected fossil like their own Klopstock. The reason is of course to be found partly in Milton's theology and in the partisan temper of his mind. By virtue of these qualities, he strikes the Germans as a pamphleteer and a preacher, quite devoid of that genial breadth which they admire in Chaucer, and especially in Shakspere. But if we mistake not, there is another reason weightier than this. Milton's strength and charm, so far as he is now read for enjoyment by the English-speaking race, consist very largely in his superb management of the English language, and in his all but "infallible touch in matters of rhythm." These are qualities which the foreigner can rarely appreciate at their true value.

ADAMS'S SECOND ADMINISTRATION OF JEFFERSON.—I.

History of the United States of America during the Second Administration of Thomas Jefferson. By Henry Adams. Vols. III. and IV. Charles Scribner's Sons. 1890.

In this continuation of the history of the United States during the second term of Jefferson's Administration, from March, 1805, to March, 1809, we mark the presence of the same thoroughness of research, sobriety of judgment, even-handed impartiality, and accuracy of statement which, in the earlier volumes, commanded the respect of intelligent readers even where they could not always share the writer's point of view. In the present volumes, Mr. Adams moves over his ground with even a greater sense of the security inspired by a conscious mastery of his subject. In the former volumes he seemed to write under the shadow, if not under the glamour, of a political fame which he could not always substantiate to himself, even while confessing its fascinations; while the strange contradictions which he supposed himself to find in Jefferson's personal and political character were occasionally reflected in "the shifting and uncertain flicker" of his own critical judgments, as he held up his mirror, now in one direction and now in another, to catch a series of "semi-transparent shadows." In the volumes before us we see no traces of mental hesitation, or of the historical reserve which turns upon itself with more doubts and questionings than it can solve. The diction of the writer, always pithy and sententious, gains in fluency as he advances from stage to stage in his narrative.

In resuming his story at the beginning of Jefferson's second term, Mr. Adams notes the fact that at that time the Republican President "had made a democratic polity victorious at home and respectable in the world's eyes." The day had come when, in his second inaugural address, he could frankly exult in the success of that sanguine political philosophy which had lifted him into the Presidential seat, and when he could even indulge in covert sneers at the vaticinations of evil with which his advent to power had been heralded by the clerical and political magnates of New England. This second inaugural address, it is known, contained a mock-earnest homily which, in being nominally directed to a commiseration of our Indian tribes, because of the subjection in which they were held by their chiefs and "medicine men," was really levelled at that portion of the New England people who, under the influence of what Mr. Adams calls their "clergy, lawyers, and keen-witted squirarchy," persisted in standing aloof from the dominant mass of their fellow-citizens. The poor politics of such a rhetorical fetch was exceeded only by its bad taste. Mr. Adams is careful to tell us that Gallatin remonstrated against the indecorous allusion.

But the emphasis thus given by Jefferson to the declared antithesis which had now come to exist between the recalcitrant Federalism of New England and the self-complacent Republicanism which prevailed elsewhere in the United States, only causes us the more to regret that Mr. Adams has nowhere essayed a philosophical explanation of what seems to us among the most striking phenomena in our political history—to wit, how it came to pass that what was originally a social democracy in New England became the foundation of the most inveterate form of aristocratic politics ever exhibited in our annals; and how it was that a social feudalism in the South, built on an institute so anti-democratic as predial slavery, became the seed-plot of a popular political philosophy which degenerated at length into the so-called "vulgarity" of the Jacksonian era. This inquiry is not one which lies outside of Mr. Adams's purview as an historian, for it is one which enlisted the curiosity of speculative politicians at the very beginning of Jefferson's second term, when the dividing of the ways in our national politics had become sufficiently pronounced to indicate that the differentiation was not casual, but followed the trend of divergent tendencies hidden in our social strata.

Less than two months after Jefferson's second inauguration the causes of this separatism in the politics of New England were made a topic of formal discussion in the official journal of the Administration, the *National Intelligencer*, and these causes, as then and there analyzed (we abbreviate their substance in our own terms), were reduced under the following heads: The original religious separatism to which the New England colonies owed their origin; the clannishness and pride of opinion engendered by a sense of superior education; the greater compactness of the population, lending itself to the easier assimilation of opinions; better interior arrangements for the dissemination of ideas from a central point; the welding processes of the Revolutionary period, during which New England was confessedly at the head of the political movement; the consolidating tendencies of the early fiscal policies of Washington and John Adams, enuring to the special advantage of a people living by their wits rather than by agriculture; and, finally, the greater dependence of New England trade and industry on the fostering care of the Federal Government, a fact which naturally made the New England people averse to the independent and bucolic politics of Virginia. Such were, in substance, the views held by partisans of Jefferson when, at that early date, they undertook to account for the New England stratification in our national politics. It would have been instructive to see these constant elements of our party formation surveyed by Mr. Adams from that higher point of view which we have reached to-day. Bryce makes only a passing allusion to the subject.

With a theory of statesmanship broader than that announced in his first inaugural address; with opposition to his rule practically annihilated; with politic concessions which were slowly conciliating the favor of the more moderate class of Federalists, Jefferson stood in 1805, as Mr. Adams thinks, "nearly where President Washington stood ten years before." The prospects of a true American nationality had never seemed so promising, and this, too, in spite of the fact that "the national Government was controlled by ideas and interests peculiar to the region south of the Potomac." The acquisition of Florida, was, for the time being, the goal of Southern ambition, and hence it was that "the Florida question" became in the spring and autumn of 1805 the burning question of the Republican Administration.

Mr. Adams shows that it was Napoleon's countercheck quarrelsome, interposed against the diplomatic moves of Monroe in the course of his tedious and abortive negotiations with Spain, which "decided the fate of Jefferson's second administration"; because it was that countercheck which compelled Jefferson to reverse the positive and energetic policy to which he had been previously committed, in pursuit not only of Florida, but also of our just reclamations against Spain for wrongs done to our commerce. During the residue of his term he was doomed to halt and vacillate among conflicting opinions and dubious policies, which

left an impress of indecision on all his subsequent dealings with Spain and with the French autocrat. The French Emperor, in becoming the arbiter of Spain's destiny, had become the master of the political situation as between the Spanish Court and the United States. After the victory of Austerlitz he found it still easier to impose his policy of expectation both on Spain and on the United States. In the end our whole controversy with Spain, by reason of its dependence on the will and pleasure of Napoleon, and by reason of being caught in the meshes of Talleyrand's tricky diplomacy, assumed the appearance of "a French job." It is doubtless easy to say that the fluctuations of our policies at that date were peculiar to the characters and purposes of Jefferson and his Secretary of State, as men who were agreed to make peace their "passion"; but it seems to us, even from Mr. Adams's showing, that much of their hesitation was inherent in the political situation, and was common to them with the whole country. When Mr. Adams says that "one question alone was to be decided"—to wit, whether the Administration should seize this moment to break with Napoleon—it still remains to be said that this "one question" had as many heads as the mythologic hydra, and as many coils as the monster octopus. If Jefferson, argues Mr. Adams, had crossed the Sabine in August, 1805, and had occupied Texas to the Rio Bravo, as Armstrong, our Minister to France, and Monroe, our Minister to England, united in advising, and if then Spain had gone to war with us, and had dragged France in her train, all the difficulties of Jefferson "would have vanished in an instant." He might then have seized Florida, adds Mr. Adams, while his controversies with England would have fallen to the ground, for England would then have been his ally; and had this state of war continued for two years, till Spain threw off the yoke of Napoleon and once more raised in Europe the standard of popular liberty, "Jefferson might perhaps have effected some agreement with the Spanish patriots, and would then have stood at the head of the coming popular movement throughout the world." It is easy to write history as a prophecy of the past, but it is not so clear that the chain of events in Europe would have been the same if the links of the chain on this side of the Atlantic had been broken at the points indicated by Mr. Adams.

From this time forth, as Turreau, the French Minister at Washington, acutely phrased it, "to conquer without war" became "the first fact in American politics." The necessities of the political situation conspired with Jefferson's instinctive and philosophical love of peace to turn him away from all affirmative or aggressive measures. And now, too, it was that Spanish cruisers began to prey on American property, that France grew more and more arrogant in defence of her Spanish ally, and that England exasperated even the mercantile community, in spite of their timidity, by setting up a virtual blockade of our ports, under the pretence of watching for the recovery of British "deserters," alleged to be commonly employed in our merchant service. Mr. Adams here sees very clearly that the tameness with which our country submitted to the arbitrary pretensions of England was not entirely the result of cowardice, but was a sort of Hobson's choice supported by a comparison of expediencies. "Nations," he truly says, "rarely submit to injury without a motive." It was seen that "if the United States Government went to war to protect British seamen [enlisted in our service] America would lose all her mercantile marine, and these same seamen for whom she was fighting must, for the most part, necessarily return to their old flag, because they would then have no other employer."

In the winter of 1805-06, what with the violent opposition of the Federalists, the equally violent factiousness of the Republicans who fell away in the gainsaying of John Randolph, and the spirit of aggression which showed itself in simultaneous acts of war from England, France, and Spain, the position of Jefferson, as Mr. Adams admits, was difficult "beyond that of any other American President." And after "the two-million act" had been wrung from a reluctant Congress for the purpose of buying from Spain, at the dictation of France, the territory supposed to be ours (or at least claimed to be ours), under the Louisiana bargain with Napoleon, it was openly charged by embittered political enemies and estranged political friends that the President had become a creature of the French despot. The author shows that this latter charge was manifestly unfounded, and that the unwillingness of the Administration to offend Napoleon arose from no "Gallican sympathies," but from the conviction that Napoleon alone could give Florida to the United States without the expense and losses inevitable in a war. Such a charge, however, after it had once been lodged in the popular mind, could only breed fresh corrosions when subsequent phases of our politics came to lend fresh color to the damaging imputation, without having any better foundation in fact.

As if these international feuds were not enough, domestic treason now came to embarrass the Administration with privy conspiracy under the very eaves of the Executive Mansion; with the menaced revolt of the Western and Southwestern territory; and with filibustering expeditions against the Spanish-American provinces. However singular may have been "the veneered profligacy of Aaron Burr," as Mr. Adams graphically describes it, and however bad may be his eminence among American "conspirators," it is certain that his treasonable plot was no sporadic incident in our annals. It was a "sign of the times" that our political sky grew red and lowering with this portent in 1806, because similar portents had come before to vex our politicians with fear of change. To bring our metaphor down, perhaps too rapidly, from heaven to earth, we may say that Burr's Disunion project was part and parcel of a whole brood of misgrowths begotten in the mud and slime of the early period in our annals. Of such earlier misgrowths as the plottings of the Spanish Associations in Kentucky and Blount's conspiracy in 1796, we may say that they sprang from a chronic political unrest which dated, in Kentucky, from the year 1786, or earlier, when the possession of the Mississippi Valley was put in peril by a league of the Northern States in the Continental Congress. They were constantly nurtured besides by British machinations in Canada as well as by the unwieldiness and the insolence of Spanish misrule at New Orleans—the unwieldiness inviting to aggression, and the insolence provoking to resentment. In the conspiracy of Burr these permanent elements of disorder were accentuated by Federalist discontents in New England, by factional rivalries in New York, by schismatic dissensions in Virginia, under the lead of John Randolph, by the easy optimism of Jefferson himself, who was always slow to put himself on guard against impending mischiefs, and last, but not least, by the disaffection of the Creole population in Louisiana, smarting under a sense of wrong at the despite done them by the Territorial Government imposed from Washington.

That a spirit of popular giddiness and revolt had become rife in our politics at that juncture is shown by the line of connection between Burr's schemes and those of the old Spanish Associations and political societies of Kentucky, as also by the fact that Miranda's expedition worked at cross purposes with the plans of Burr, because, in springing from the same buccaneering politics, and in coming at the same time, it threatened to operate as a diversion from the Spanish part of his plot. How intricate and yet how continuous was the chain of events which at that period complicated our home politics with foreign entanglements, we may read in the single fact that the law of 1798 enacted for the maintenance of our neutral obligations (being the law under which Smith and Ogden were tried for complicity in the Miranda expedition) was a law which had been enacted by Congress while John Adams, as Vice-President, was President of the United States Senate, and which had been framed for the express purpose of inhibiting the machinations of Genêt. Yet such was the "cursed spite" of that disjointed time that the first person tried under the law was Col. William S. Smith, a son-in-law of John Adams; and the United States Judge who was first called to administer this law was Matthias B. Talmadge, a brother-in-law of Genêt. Foreign embroilments, partly personal and partly political, mix with the woof where they do not make the warp of our politics in those days. Wilkinson, the general-in-chief of the American Army, not only was the confidant and accomplice of Burr's scheme (at least in its earlier stages), but had also been for twenty years a stipendiary of the Spanish Government. Judge Sebastian of the Kentucky Court of Appeals was an annual pensioner of Don Carlos IV. Yrujo, the Spanish Minister at Washington, and son-in-law of Gov. McKean, the Republican Governor of Pennsylvania, meddled so openly with our politics that the scandal became at length unendurable. At a little later date we find the British Government employing a paid agent, one John Henry, to watch and abet the progress of Federalist disaffection in New England.

In order to follow the involutions of Burr's treason, we must clearly seize the fact that what he meant to be a tragedy, but which turned out to be a farce, was in its substance and form a trilogy. His plot comprised three dramas rolled into one. At one stage of his operations and with one set of adherents he intrigued for the expulsion of the Spaniards from North America; at another stage and with another set of adherents he conspired for the severing of the Mississippi Valley from the Atlantic States; while at still another stage and with still another set of adherents he contracted for a plausible scheme of land speculations which offered a lure to the avarice or ambition of his victims. Perhaps it could be wished that Mr. Adams, with all the lucidity he brings to his exposition of this historical episode, had attempted a little sharper definition and clearer characterization of the several classes who were drawn by Burr into some sort of complicity with his projects, according as he unfolded to them, in whole or in part, the interdependence of his several schemes. To some of his partners he doubtless communicated only so much of his plan as implied an attack on the Spanish provinces of North America, to be made so soon as the United States should be embroiled in a war with Spain—an event believed to be then impending. To a chosen set of accomplices, like Dayton and others, he confided the seditious pur-

pose of his plot in its full proportions; while another set may have supposed, at first, that they were invited to embark on a gigantic scheme of land jobbery and colonization on the Wachita River. Each of these schemes could be used as a stalking-horse behind which to push the one or the other of the projects that seemed, for the time being, to be the least alluring, or which could not be exposed without some danger of startling timid souls and of repelling men who, whatever may have been their military or predatory instincts, were at heart too patriotic to have entered into the conspiracy with full knowledge of its treasonable intent. It is because of the deceptive covers under which Burr worked that so many men among his confederates who *perhaps* were innocent, must rest for ever under a damaging suspicion of guilt.

It is known that he "counted on the aid of Great Britain" as the "pivot" of his whole movement. Without that aid, says Mr. Adams, he could not depend on the co-operation of the Creoles in Louisiana. And when Pitt showed no haste to follow the suggestions of Merry, the British Minister at Washington, Burr refused to wait for the coveted support of England, and precipitated his descent on the lower Mississippi, which, in any event, was the destined base of his operations, whatever their nature or extent might prove in the evolution of his drama. "Had he been wise," says the author, "he would have waited, and perhaps he might in the end have brought the British Government to accept his terms. If Pitt intended to plunder American commerce and to kidnap American citizens, he must be prepared to do more, and Burr might calculate on seeing the British Tories placed by their own acts in a position where they could not afford to neglect his offers." Foiled in his effort to get the sinews of his war from London, he next intrigued, through Dayton, with the Spanish Minister at Washington, in hope of levying blackmail on Spain, and, in his desperation, even conceived a light-headed *coup de main* for the capture and abduction of the whole Administration, with a view to the instant replenishment of his military chest and to the occupation of a coigne of vantage from which he might treat with "the residual fractions" of the United States. The confused state of public opinion which enabled Burr to frame his plots without detection is thus described by Mr. Adams:

> "So thick an atmosphere of intrigue, especially in Spanish matters, was supposed to pervade the White House; men's minds were so befogged with public messages about a Spanish war and secret messages about peace; with private encouragement to Miranda and public punishment of Miranda's friends; with John Randolph's furious charges of duplicity, and Madison's helpless silence under these charges —that until the President himself should say the word, Burr, Wilkinson, Dayton, and their associates were safe, and might hatch treason in the face of all the world."

Mr. Adams gives a graphic description of the collapse of Burr's conspiracy, his ignoble flight from the appointed scene of his operations, his arrest on the Spanish frontier above Mobile, his deportation to Richmond, and his trial there on a charge of high treason before Chief-Justice Marshall.

For the failure to compass a conviction of Burr on the indictment found against him, Jefferson, as every one knows, was inclined to lay the blame at the door of the Federalist Chief Justice. He gave publicity to his disappointment and chagrin by formally inviting the Congress to inquire whether this defeat of justice had been caused by a defect "in the evidence, in the law, or in the administration of the law." The sting of this clause was, of course, found in its tail-piece; and the flout was aimed at the Chief Justice in the face of the whole country. The narrative of Mr. Adams can leave the reader in little doubt that the breakdown of the prosecution was due to the incompleteness of the evidence, and this incompleteness was mainly due to the laches of the Administration. Jefferson had taken no prompt steps to hold Burr and his confederates in surveillance while they were "hatching treason," and, therefore, the prosecution was unable to prove the "overt acts," or to combine the nexus of events required to meet the conditions of the law of treason as expounded by Marshall. Mr. Adams shows that there were facts enough to support the charge if only they had been properly arrayed and duly corroborated.

It seems to us, however, that the historian hardly does full justice to the causes which defeated the prosecution of Burr on the occasion of his first arraignment in Kentucky by Daveiss, the United States District Attorney. However true it may be that Judge Innis was suspected of "Spanish sympathies," and however true it may be that some of Daveiss's witnesses "vanished," it was still more disastrous that some of his witnesses turned against him. John Wood, for instance, after thundering so loud in the index, by the pretended revelations he made in the *Western World*, was swift to say under oath that he knew "nothing which would amount to evidence," and even significantly added that he "had changed his opinion respecting Mr. Burr, and was then persuaded that Burr had no intention of doing anything contrary to the laws and interests of the United States." Street, too, the "fighting editor" of the *Western World*, as Mr. Adams describes him, was similarly reticent as a witness. Alike at Frankfort, at the trial in the territory of Mississippi, and in his final assize at Richmond, Burr was fortunate in the character of the witnesses summoned against him by the prosecution. In the last-named ordeal, Gen. Wilkinson, on whom Jefferson mainly depended for the conviction of Burr, was a man whom John Randolph did not scruple to portray as the only person he ever saw who "from the bark to the very core was a villain," and even Hay, the prosecuting attorney, was compelled at last to discredit that thrasonical soldier.

The sequel of Burr's trial brought only fresh mortifications to Jefferson. On the bench of our Supreme Judiciary he had been "thwarted," as he believed, by Marshall. In the House of Representatives he was "baited" by John Randolph for the patronage given to Wilkinson. Before the public he was made "the scapegoat at once of Burr's crimes and of Wilkinson's extravagances," because he was blamed for the long immunity allowed to the former and for the undue complaisance practised towards the latter.

THE DUKE OF COBURG'S MEMOIRS.

Aus meinem Leben und aus meiner Zeit. Von Ernst II., Herzog von Sachsen-Coburg-Gotha. Dritter Band. Berlin: Wilhelm Hertz; New York: Westermann. 1889. 8vo, pp. 726.

THE Duke of Coburg brings his memoirs to a rather abrupt conclusion in his third volume. The summary manner in which he despatches all the interesting and important events subsequent to 1866 is in striking contrast with the minuteness with which he describes every minor detail previous to that date; and the explanation he gives of this change of method indicates that he had intended, and would have liked to pursue, a different course, but was restrained by the same motives that prompted Talleyrand to postpone the publication of his memoirs to a time when all the prominent personages of his day should have passed from the scene. The newspaper rumors to the effect that Bismarck had objected to the publication of portions of the Duke's manuscript, and that Queen Victoria had similar views in regard to other portions, thus seem to have had some foundation in fact.

The volume opens with a view of the situation of Europe at the end of 1859, after the conclusion of the Treaty of Zurich, which the author pronounces hardly paralleled in modern history, inasmuch as every provision of it was in direct contradiction, not only of accomplished facts, but of the intentions of most of the Powers. Public opinion was at the same time much disturbed by Napoleon's pamphlet, 'The Pope and the Congress,' which was taken as an intimation that the Emperor had further wars in contemplation. It soon became apparent that all he wanted was to prepare the way for the annexation of Savoy and Nice to France, to which Cavour gave his assent on March 2, 1860, and which came near bringing about a rupture between France and England, as is set forth in the despatches of Lord Cowley printed in Sir Theodore Martin's Life of Prince Albert. Germany was at this time in a deplorable situation, being in constant dread of the French autocrat's mania for the rectification of frontiers by annexations to France. Prussia had proposed a revival of the Holy Alliance, but had met with rebuffs from both Russia and Austria. The Duke infers, from private information he received, that in the west of Germany there was sympathy for France, and reports that in some quarters it was even supposed that Prussia itself would not be opposed to making cessions of territory for the sake of peace.

Such fears were in some measure set at rest by an interview between Napoleon and a number of German sovereigns at Baden Baden in June, 1860, at which the Prince Regent of Prussia intimated that Germany was a unit on the question of making no cession of territory, and Napoleon breathed nothing but peace and good-will. The Duke reports an interview he had with the French Emperor, in which the latter complained that he was the victim of universal and unfounded distrust, and said that if he entertained all the warlike projects which were ascribed to him, he must be crazy. In regard to the Italian campaign, he said that he had been luckier than he expected, and had given the Austrian army credit for greater efficiency than it had displayed; that its campaign had miscarried through a lack of energy, and through a reluctance of the various commanders to assume any responsibility. The total impression which the interview made on the Duke was that Napoleon was sincerely desirous of peace for the time being, and had not full confidence in the ability of France to cope with a European coalition. After Napoleon's departure, the German princes held a conference, which, however, led to no practical results.

The Duke devotes several chapters to *Schützen-Feste*, *Sänger-Feste*, *Turn-Feste*, and other truly Teutonic mass-meetings which filled the air with inflated patriotic utterances that are empty enough in themselves, but, in view of the subsequent march of events, seem almost ludicrous in their childishness. Most of these meetings took place in Coburg or in Gotha, the Duke of Saxe-Coburg-Gotha being the only German sovereign who entertained or

had the courage to display any sympathy with the national and popular aspirations of the liberal classes of Germany, and who, as mentioned in our notice of his previous volumes, did not hesitate to hold intercourse with revolutionist refugees in London.

No less out of relation with the present condition of Germany was the Congress of German Sovereigns which assembled at Frankfort, in August, 1863, on the invitation of the Emperor of Austria, for the purpose of considering a reform of the Federal Union. Prussia declined to attend, upon the ground that any projects of the kind should first be considered by the various ministries. This was undoubtedly the first move in the masterly game which has since been played by Bismarck, who had taken the helm only a few months before. William I., who, after being Prince-Regent of Prussia, succeeded to the crown at the death of his brother, on January 2, 1861, would probably never have completely shaken off the hereditary subordination to Austria if he had not been continually braced up to the task by the iron will of his Prime Minister. A most important day in the history of Germany was October 9, 1862, when Bismarck was appointed President of the Ministry and Minister of Foreign Affairs. Austria was then in the ascendant, and her ascendancy was only enhanced by the Congress of Frankfort. How little any one, even in the best informed and highest circles, dreamt of the subsequent course of history, is shown by an incident related by the Duke. The Queen of England was on a visit at Coburg, in August, 1863. The Emperor of Austria, on his way home from the Frankfort Congress, stopped there and had an interview with the Queen at which, by her request, the Duke was present. After complimenting the Emperor upon the skilful manner in which he had presided over the Congress, the Queen added that, although it was not her affair to concern herself with German politics, she had a personal request at heart, inspired by maternal anxiety for her children. Whatever might be the divergent views of Austria and Prussia concerning political matters, she hoped that, under all circumstances, the Emperor would never allow the position and rights of her dear children in Berlin to be infringed upon. To this same period belongs the inception of the Mexican Empire, which was designed by Napoleon to serve the double purpose of reflecting glory on the French arms and securing the friendship of the house of Hapsburg. It appears, however, that Napoleon himself was not as sanguine about the success of the undertaking as was the Empress Eugénie; for the Duke mentions that when he was in Paris in March, 1864, the Emperor took him aside, and, referring to Maximilian, said: "It is a very bad business; in his place I would never have accepted" (meaning the Mexican crown).

A considerable portion of the volume is devoted to the Schleswig-Holstein transactions, and throws new light on the devious ways of Bismarck in his conduct of the most arbitrary and ruthless undertaking of his public career. The Duke of Coburg was intimately mixed up in this affair, being the first to recognize the Duke of Augustenburg as Duke of Schleswig-Holstein; the latter was a resident of Gotha, and took into his service as ministers two of the ministers of the Duke of Coburg, who gave them an indefinite leave of absence for that purpose.

By the Treaty of London of 1852, it had been agreed by all the Powers that, on the death of the King of Denmark, Prince Christian should succeed to the monarchy, including the duchies of Schleswig and Holstein. The Duke of Augustenburg, for a money consideration, signed away his claims to the duchies, which, indeed, he had no means of enforcing. In accordance with this agreement, Christian IX. was proclaimed King of Denmark on the death of Frederick VII. on November 15, 1863. On the following day, Duke Frederick VIII. of Augustenburg proclaimed himself Duke of Schleswig-Holstein, under the claim that his father had no right to sign away the son's birthright, and that he had not himself been a party to the transaction of 1852. Holstein being a member of the German confederacy, the Danish Ambassador appeared at the session of the Diet on November 21 to announce the accession of Christian IX., while the Envoy of Baden appeared as the representative of Frederick VIII., both claiming to be admitted as delegates. A motion was made to exclude the Danish Envoy, but Austria and Prussia opposed it on the ground of being bound by the Treaty of 1852. The motion, however, prevailed, and for the first time in the history of Germany the two leading States were outvoted by the remaining ones. It was a peculiarity of the situation that the German Confederacy as a body had not signed the Treaty of 1852, although several of its members had done so. In December, troops of the German Confederacy entered Holstein, which was at once evacuated by the Danes. A motion made by Austria and Prussia that Schleswig should also be occupied by German troops was voted down, whereupon these two Powers declared that they would take the matter into their own hands, and thus practically disrupted the Confederation. A motion made by Austria that the Duke of Schleswig-Holstein be ordered out of the dominions he claimed, had also been defeated. Before the final rupture Prussia and Austria had agreed to act in unison on the basis of the Treaty of 1852, and to recognize no other consideration. On January 16, 1864, these two Powers made a demand on the Government of Copenhagen for an abrogation of the Danish Constitution of November 18, in so far as it affected Schleswig-Holstein, to whom certain rights had been guaranteed by the London Treaty. This move was followed by an invasion of Holstein by an Austrian-Prussian army, before whom the German troops retired as from an enemy. Actual hostilities began February 1. The contest was too unequal to admit of any doubt as to its results, and the defeat of Denmark was a foregone conclusion.

In April, 1864, a conference assembled in London to attempt a solution of the quarrel. On May 15, Prussia formally repudiated the London Treaty, although up to that date the treaty had furnished the only pretext for the invasion of Denmark. At the London conference Bismarck now represented, contrary to everything that had gone before, that Prussia was only holding Holstein in trust for the rightful heir, the Duke of Augustenburg. However, the conference broke up on June 25, without achieving anything. In the meantime Prussia had been negotiating with Russia in regard to the claims of the house of Oldenburg to the Danish duchies. Finally, on August 1, Denmark ceded all of its claims to the duchies to Austria and Prussia without reserve. The troops of the German Confederacy, which were still in the conquered duchies, were ordered by Prussia to evacuate the territory.

In December, Austria proposed to cede the duchies to Duke Frederick, but Prussia refused. In February, 1865, Prussia offered to agree to the cession on condition that the army and navy of the duchies should be under the command of the King of Prussia, and that the post-office and telegraph should also be under the Prussian control, together with some minor concessions which would, in themselves, not have offered much of an obstacle. This offer was rejected by Austria, and the Duke of Coburg is of the opinion that before making it Bismarck had assured himself of its rejection by sounding the opinions of leading Austrian statesmen. He was thus quite safe to make a comparatively moderate proposition, the acceptance of which would have seriously interfered with the elaborate scheme he had contrived, and which was crowned with success by the Gastein Convention, dividing Schleswig and Holstein between Austria and Prussia. After arriving at this point, Bismarck was not at a loss for pretexts for a war with Austria for which all his previous manœuvres had been only preliminary. The annexation of Holstein to Prussia, with a total disregard of all rights, treaties, and professions, followed as a matter of course.

The part which the Duke of Coburg took in the war of 1866 was but slight. With the hereditary good luck of his family, he happened to be on the right side, and earned the gratitude of Prussia instead of incurring its wrath. He was engaged in the battle of Langensalza on June 27, which resulted in a defeat of the Prussian troops by the Hanoverians, but was nevertheless followed two days later by the capitulation of the King of Hanover and all his army. Perhaps the most valuable service rendered by the Duke was in recommending Gen. Blumenthal to the Crown Prince Frederick William as his chief of staff.

Lack of space compels us to take leave of this book, which, along with much that is of purely German interest, contains a number of characteristic letters of Bismarck and other leading personages, together with a few entertaining anecdotes. Although it perhaps tells us very little that is strictly new, and is rather too long, it presents on the whole a not uninteresting picture of the evolution of the German nation during the past half century, and throws light on subsidiary episodes that are apt to be overlooked in formal histories.

CARDINAL LAVIGERIE AND THE SLAVE TRADE.

Cardinal Lavigerie and the African Slave Trade. Edited by Richard F. Clarke, S. J. Longmans, Green & Co. 1889. Pp. ix., 379, 8vo.

Documents sur la Fondation de l'Œuvre Anti-esclavagiste. Par S. Em. le cardinal Lavigerie. St. Cloud. 1889. Pp. lix., 715, 8vo.

THE crusade against the African slave trade recently preached by Cardinal Lavigerie throughout Europe was remarkable for this reason: it was, in fact, the Roman Catholic Church pleading with all Christendom, without distinction of belief, to right a foul wrong. For though the act of an individual, yet his rank and the sanction of the Pope gave the Cardinal's mission an almost official character. He was received, moreover, by Protestant England and Germany with such sincere and hearty sympathy for his cause as shows conclusively that now, on occasion, all religious differences among Christians will be forgotten in the common desire to reach a noble end. This marked success of his crusade was largely due to the Cardinal himself, than whom no one could have been found among the Roman priesthood so well fitted, either by his powers as an orator or by his previous career, to present the cause of the oppressed African.

Born in Bayonne in 1825, Charles Martial

Lavigerie early developed a decided inclination for the Church, and his ability and progress in his studies were so great that he was ordained priest, by special dispensation, before he had reached the canonical age. In 1854 he was appointed to the chair of Ecclesiastical History in the Sorbonne, and two years after Director of the Society for the Promotion of Christian Education in the East. In this capacity he went to Syria in 1860 to distribute the funds which had been collected, chiefly by his means, for the relief of the Christians then suffering from the frightful persecutions of the Druses. It was a service of great difficulty, not unattended with danger, but was performed with such success as to gain for him decorations from the French and Turkish Governments. He was the first French priest to enter Damascus after the massacre in which more than 3,000 adult males alone perished. Of the Christian quarter, which had constituted a distinct town of 2,000 houses and 30,000 inhabitants, he says:

"Their dwellings had been all levelled to the ground, so that not even a shed was left standing. Everything that possessed the slightest value had been carried off; all the woodwork, the hinges of the doors, the very locks and bolts having disappeared. . . . I should have imagined that the city had been visited by an earthquake, for it was impossible to make out even the direction of the streets."

It is not surprising that a man whose first personal contact with Mohammedanism was amid such scenes, and who has passed thirty years in ceaseless conflict with it, should show but scant respect for those theorists, like Canon Taylor, who would see in Islam's conquest of Central Africa simply a preparatory stage in the conversion of the negro to Christianity. At the age of thirty-eight he was made Bishop of Nancy and four years later Archbishop of Algiers, his present post.

Here he soon found himself in direct conflict with the Government, whose timid policy was that of determined opposition to every attempt to Christianize the natives. It even endeavored to prevent ordinary charitable work by the French clergy, such as relieving the sick and starving, and providing homes for the orphans of those who had perished by the cholera and famine in 1867-68. After a long and bitter struggle, the Archbishop secured the privilege of establishing hospitals and orphanages, but not of missions, among the Algerians. When Tunis was occupied by France, he was appointed by the Pope to administer its ecclesiastical affairs. In fulfilling his duties in this delicate position, the majority of the Catholic residents being Italians and opposed to the appointment of a French bishop, he was remarkably successful in harmonizing the various discordant elements. The Italian *Riforma* said that "his presence in Tunis was worth more to his country than that of an army." In 1882 he was created cardinal, an honor which would have been conferred earlier but for the opposition of President MacMahon, who was Governor of Algeria during the first years of his bishopric.

One of the secrets of Cardinal Lavigerie's success appears to be his power of obtaining both money and men to carry out his projects. This was shown especially in the missions which he established in the northern oases of the Sahara and the lake region of Central Africa. Though here his missioners were forestalled by the English, yet both Protestant and Catholic seem to have worked in entire harmony, a fact to which Father Clarke, as well as the English missionaries, bears testimony. No greater proof of the success of the work in Uganda an be given than the history of the persecutions by which it was temporarily checked. The heroism and constancy of the native Christians was fully equal to that of the early martyrs of North Africa, whom a grateful church has canonized. During the height of the persecution the Roman Catholic Bishop confirmed ninety-seven of these savages, being called up four or five times in a single night to administer this rite to men who knew that death on the morrow was the almost certain result of their confession. In the successive revolutions which have recently convulsed this powerful native state, the Christians who escaped death in the persecution were for a time driven from the country. A remarkable incident in Mr. Stanley's "March to the Sea," after his rescue of Emin Pasha, shows what manner of men they were during their exile. "We were quietly camped," he says, in a letter to Dr. Livingstone's son-in-law, "when we were made aware that a body of superior people had arrived. They wore cotton dresses, spotless white, and were just as well clothed as any of the tidiest natives of Zanzibar." These men, each of whom "possessed a Prayer-book and the Gospel of Matthew printed in Kiganda," were a deputation from a body of three thousand of these exiled Christians, who had come to ask Mr. Stanley's aid in their ultimately successful attempt to restore Mwanga to his throne, affirming that he had become a Roman Catholic. This aid was necessarily refused, but the incident made a deep impression upon Mr. Stanley, who pertinently asks at the close of his story, "What can a man wish better for a proof that Christianity is possible in Africa?"

Father Clarke devotes the latter part of his volume to a discussion of the general subject of the African slave trade, without, however, contributing to it anything very new or suggestive. He gives the testimony of eye-witnesses, in one touching case of a slave himself, as to the horrors of this traffic, and then treats briefly of the relations of Mohammedanism to slavery and Christianity. This is followed by a short account of the attempts to suppress the slave trade by Sir Samuel Baker on the Nile, and by other less well-known Englishmen on the Niger. The closing chapter is upon the various schemes for its suppression, which may be summed up as follows: The preventing the exportation of slaves by making it piracy, the prohibition of the importation of arms and ammunition, the overthrow of Moslem supremacy, the commercial development of Central Africa, the planting of stations, and the sending armed expeditions to put the traffic down by force. The latter is Cardinal Lavigerie's own plan.

There are two ways in which force can be used, one of which is in successful operation on the west coast of Lake Tanganyika. Here for several years a Capt. Joubert, a French soldier, has devoted himself to the task of defending a district from the slavers. The missionaries have supplied him with arms, and "he has formed a body of militia consisting of 200 negroes. These native soldiers," says the Cardinal, "would, it is true, not bear comparison with European troops, but they are no longer utterly defenceless, and they are able to strike awe, within a certain radius, into the slave-hunting Métis and their allies the Rugaruga." A hundred like members of the church militant scattered throughout Central Africa would go far towards solving the problem lately before the Brussels Conference.

The other plan is to establish armed posts on the various slave routes to prevent the passage of the raiders. But who shall man these stations? White men cannot undertake the task, though a thousand Frenchmen and Belgians alone have volunteered to do it, without a terrible sacrifice of life. Within thirteen years, of the small band of the White Fathers in Africa, eleven "suffered martyrdom, while more than fifty others have died from fatigue and hardships." The black man can do it with far less danger from the climate, and what nobler work could he desire than this? and why might not some colored Americans take part in it?

The second work at the head of our notice is a collection of documents prepared for the use of the members of the Brussels Conference, and also, we presume, for the anti-slavery committees which have been organized in France, Germany, Italy, Belgium, Portugal, Austria, and Spain through the efforts of the Cardinal. It is prefaced by a letter to the King of Belgium, giving a summary of the facts contained in the documents, which are largely extracts from missionaries' letters, as well as the Cardinal's plan for the enrolment of "a sacred gendarmerie" for service against the slave-hunters in the interior of Africa.

Fine Arts.

SOCIETY OF AMERICAN ARTISTS.

If an intelligent foreigner—Goldsmith's "Citizen of the World" or the writer of the 'Persian Letters'—were now in New York, and wished to form an idea of the artistic culture of this great people, he would probably be taken to visit the exhibition of the National Academy, and would come away from it a sadder if not a wiser man. The error would be excusable—the name alone of the National Academy of Design is imposing, and its comparatively venerable age and its wealth and position would incline our traveller to look there for the art of America—but it would be none the less an error. Any one, foreign or native, who wishes to know what American artists are doing, what are the tendencies and achievements of the young but vigorously growing art of this country, may learn by going, not to the Academy, but to the twelfth exhibition of the Society of American Artists now open at the Fifth Avenue Art Galleries.

There are those who regret this fact, and complain that all this work does not go to the Academy; who vainly appeal to the artists to "concentrate" their efforts, and to make of the Academy exhibition the one strong showing of American art; but the artists will not hearken, and obstinately reserve their best work for the smaller and later show. May it not be

the fault of the Academy itself if it has failed to retain its place in spite of its many advantages? At any rate, it has failed, and the present exhibition of the Society is not only the best one it has yet held, but is far and away the best exhibition of the year, and, probably, the best exhibition of American art ever held in this country. Among its 206 works by 123 artists, of whom 50 are members of the Society and 73 are outsiders, is to be found, with few exceptions, all that is freshest, and best, and most vigorous in the work of the year, all that shows the point reached by to-day's achievement and the direction of to-morrow's progress.

The result is highly encouraging for the future of art in America. It is an exhibition of a singularly high average of attainment, and of an even more noticeable variety of aim and method. Above all, it is an exhibition of things done, not merely of things attempted. The time is past when the Society could be fairly taxed with showing only sketches, studies, tentative efforts. It shows to-day results accomplished, and works of art in several lines as thoroughly carried out as by the artists of any country in the world. It is true that the "subject picture," the picture of anecdote, is conspicuous by its absence, but this is a healthy sign of artistic life; it is true that there is a certain amount of work by men who are rather feeling for new means of expression than fully expressing themselves by means thoroughly acquired and assimilated, but it is by such effort that progress is made. There is still enough of work which can without exaggeration be called masterly to show that we have artists who know their language and have something to say in it, and to justify the boast that the art of America already ranks second only to the art of France in the world's production. There are pictures which might be placed in any collection, in any part of the world, with an assured confidence that nothing better of the same sort could eclipse their merit.

One member of the Society, who sends seven canvases, is one of the first living masters of direct and brilliant technique; another, cut off in his youth, is represented by a marine which, for strength and delicacy, need fear no comparison; the President is represented by five little pictures, which are altogether delightful in their justness of perception and frankness and skilfulness of execution. Composition and the drawing of the nude figure are perhaps the weakest points of the American school; but here also the present exhibition shows what we have of earnest effort and achievement as it can be seen nowhere else, while in landscape the whole gamut is struck, from sombre tonalism through frank naturalism to the latest experiments in brilliant light of the followers of Monet.

The sudden death, at the age of twenty-nine, of Mr. Robert A. Eichelberger, adds a special and melancholy interest to his picture, No. 73, entitled "Surf and Fog," but its intrinsic merit would suffice to make it one of the leading pictures in this or any collection. Its title tells its story—the surf rolling its sheet of foam to the spectator's feet; while the sun, encircled with orange light, struggles to pierce the dense sea fog; but words cannot convey a sense of the power of drawing in form of wave and foam-sheet, the absolute justness of value and color, the restrained force, coupled with exquisite refinement, of the execution, which make of the picture a work of the highest merit and the most interesting marine we remember ever to have seen. No one can have known until this picture was shown what a loss the art of America had suffered in Mr. Eichelberger's death, or how deeply that sad event was to be deplored. What he had already done had been enough to show that he was an artist of great promise; he was cut off in the very hour of achievement. The Society has done what it could to express its sense of loss by giving his last admirable work one of the places of honor in the large gallery, and by draping the panel it occupies with black, and placing upon it a tablet with the dates of his birth and death.

From this we turn to a very different work, Mr. Sargent's "La Carmencita," No. 153, which hangs at the end of the long gallery, and is, from its position as well as from its character, the most conspicuous picture in the exhibition. Mr. Sargent is of all living painters perhaps the most consummate virtuoso, and this picture is the most astonishing display of his virtuosity that we have seen. It is vain to look to him for thought, profundity, harmonies of tone or line; but Paganini was none the less great because he was not Beethoven, and Sargent is the Paganini of painting. For sheer audacity and brilliancy of execution the picture is a marvel that would evoke the admiration of artists the world over. In a New York gallery to-day is a picture fresh from the easel of an American painter that would have been praised by Hals and bought by Velasquez. Such work is not likely ever to be popular with the great public which knows nothing of the difficulties vanquished, and is only disquieted by the strangeness of the means employed; but for a painter it is the source of one of the keenest pleasures that art can give him, and his brother artists do well to treat Mr. Sargent with the highest consideration. Of Mr. Sargent's six other canvases, the most interesting, as showing him in another mood, is the "Summer Morning," No. 158, in which some of the methods of the impressionists have been most intelligently appropriated, and in which the sense of the sunlight reflected from the water and rippling up the white dress and into the face of a charming young woman is delightful.

The third place of honor in the large gallery is occupied by Mr. Bunker, who, in "The Mirror," No. 23, has far surpassed his former efforts and achieved rare grace and distinction. Varyingly excellent also are the portraits by Messrs. Dewing, Beckwith, Tarbell, Benson, Wiles, and others, and different from any of these, yet equally excellent in its way, is the sober, almost severe, "Portrait of Mrs. Schuyler Van Rensselaer," No. 44, by William A. Coffin.

Mr. Chase is represented only by some of his little canvases this year, but he loses nothing by it, for these are of his very best, which is tantamount to saying that no one else could have done them so well. One in particular, "At Kathleen Villa," No. 37, is a wonderfully lovely bit of light and color and air. Mr. Chase and Mr. Sargent are the two best *painters* of the Society, but their talents differ profoundly in quality. Mr. Sargent is the better draughtsman and the more audacious executant; Mr. Chase has the finer sense of color. Mr. Sargent is apt to conceive his figure *in vacuo*, while the best of Mr. Chase's art is his sense of relation. Another very clever executant is Mr. Wiles, whose studio interior entitled "Discouraged," No. 203, is remarkable for the sense of air and space got by direct *morceau* painting with a crisp brush. Though somewhat mannered and unpleasant in handling, Mr. Thayer's "Portrait of a Lady," No. 173, is charming in character, and Mr. Weir's "Reading," No. 196, has his wonted beauty of quiet tone. The range and variety of style in the work here exhibited could not be more clearly shown than by the contrast between the bright gayety of Mr. Blum's "Ca' d'Oro," No. 13, with its reminiscence of Rico, and the almost solemn sobriety of Horatio Walker's "Canadian Pastoral," No. 191, than which no more beautiful piece of color is often seen.

In the way of serious treatment of the nude, there are fewer things to praise. Mr. Low sends two of his smaller compositions, and Mr. Shirlaw, in his "Psyche," No. 163, is more modern in color than is usual with him, if still mannered in the treatment of form. Mr. Benjamin R. Fitz sends also a small nude figure, "The Reflection," No. 79, well drawn, though with great concision and suppression of detail, and painted with much feeling for breadth of tone. It is one of the good things of the exhibition, and somewhat of a surprise in that it is the first work on such a theme exhibited by him. Mr. Cox, who is always a prominent contributor to the Society exhibitions, and who is as notable as a painter of portraits as of the nude, is represented by three pictures: "An Eclogue," No. 49, "The Birth of Venus," No. 50, and "Diana the Huntress," No. 51. In the last-named two pictures, both small canvases, we find single female figures painted with his usual technical excellence, and in the "Diana" especially, a young and slender woman whose body is lithe and strong, great delicacy of line and modelling. It is, moreover, refined and just in color, and loses nothing—as the "Venus" does to some extent—by its background, which is quite in harmony with the figure and well disposed as to mass. "An Eclogue" is the most ambitious composition which the painter of "Poetry and Painting" and the author of the admirable designs for "The Blessed Damosel" has exhibited. Certainly no reproach of insufficiency or lack of thought can be brought against the picture, and it stands, perhaps, as the completest work in the exhibition. There are four female figures; the group is excellent in the great lines, and the landscape, simply treated, possesses the decorative element which painters of to-day so often seem to find it hard to attain. It is an excellent canvas to cite as proof that the art of *picture-making* is not lost sight of by some of our figure-painters, in these days when so much praise is given to the more dashing successes obtained by striving not for all, but only for one or two of the many things in the wide range of the painter's art.

In landscape-painting there are several distinctly marked and divergent tendencies. Apart from one or two surviving examples of the "brown-tree" period, American landscape painters, as shown at the Society's exhibition, may be divided into three schools, the naturalists, the sentimentalists, and the impressionists. At the head of the first of these are Mr. Coffin and Mr. Donoho. Mr. Donoho's "Grouse Cover," No. 64, is a thoroughly manly and straightforward piece of work, firm in drawing and construction, and sufficient in truth of color. It lacks, perhaps, a little in charm and sentiment, but, on the other hand, his second picture, "November," No. 65, with its rising moon, goes as far in the direction of sentiment as is desirable, or as is compatible with his robust personality. Mr. Coffin's "The September Breeze," No. 46, is one of the best of these simply realistic landscapes. In method it is perfectly direct and simple, without affectation or mannerism, and the feeling of a sunny day in late summer is perfectly given. Its color is full and agreeable without being either black and sombre or glitteringly brilliant. It is quite unobtrusive and as simple as good-day, but nevertheless it is perhaps the

best landscape in these rooms. His other picture, "A Pennsylvania Farm—After the Thunder Shower," No. 45, is marked by the same sincerity of manner, while dealing with a much more difficult and unusual effect. It would be hard to say whether it is better than the other or not; the effort is more ambitious, the success less unquestionable. At any rate, it is one of the notable pictures of the year.

By Mr. Tryon's really charming "Morning in May," No. 182; by Mr. Dearth's three pictures, already too artificial and disappointing to his admirers of two years ago, we pass to the true sentimentalists, whose formula would seem to be: "Forget that the earth is solid; forget that the sun ever shines; never paint anything but moonrise, and ruthlessly sacrifice all drawing, all construction, all solidity, to a certain artificial prettiness of tone." To our mind, the jury has admitted too many of the pictures of this class for the greatest good of the exhibition.

Of the landscape-painters of the third class, the impressionists, it becomes us to speak with a certain reserve. They themselves profess to represent the art of the future. They are as confident that other forms of art are outworn as are the Wagnerites that the music-drama is the only possible form of opera. Claude Monet, their high-priest, is a bold experimenter, an explorer of unknown regions, an analyzer of light who would reproduce the visual image of sunlight by the decomposition of the solar spectrum. We are inclined to think that there were heroes before Agamemnon, and that the art of the past will not necessarily tumble into oblivion because of the discovery that three primary colors, placed side by side, give more of the physical sensation of light than does a bit of pure white paint. Still, original research, in any direction, can only result in good, and we can feel that Monet himself, even in his worst extravagances, is adding to the material of art, and preparing the way for those who shall use his discoveries with a saner judgment. Towards his followers we do not feel bound to the same respect, and think ourselves at liberty to criticise their shortcomings or laud their successes, according as we find them intelligent or the reverse in their application of the new methods.

The best of them all is Theodore Robinson. Mr. Robinson was an intelligent artist before he was an impressionist, and remains an intelligent artist now that impressionism claims him for its own. His "Winter Landscape," No. 151, to which the Webb prize has been awarded by the jury, has great distinction of color, and is a picture much beloved of his brother artists. His "Birdseye View," No. 152, with its clustered cottages seen in steep perspective, is most interesting in drawing, though a trifle flat and chalky in its attempt at color on a high key. Mr. Willard L. Metcalf's five pictures, Nos. 126 to 130, have also many solid qualities, and their use of impressionistic methods is kept well within bounds by a masculine intelligence. In "The Enchanted Hour," No. 93, by Childe Hassam, we see the attempt, by a very clever man, to use the methods of Monet in the production of a picture which in primary quality has much more resemblance to the sentimental English school of art. The result is fascinating at first sight, but wears a trifle thin upon further acquaintance. Finally, in the picture by Henry F. Taylor, No. 172, entitled "Sunlight Study," we have the extremest methods of impressionist technique applied with little knowledge of form or construction, the color hatched and plastered until the sky looks like rose-tinted rough-cast, and the landscape like mustard. For good or for evil, such a movement is interesting, and its extent can only be judged of at the Society Exhibition. We believe that it will prove, in the end, to have been for good. It cannot but tend to enlarge the means at the disposal of our artists for their self-expression, while its extravagances will die out of themselves.

In sculpture the Society shows a "Portrait Bust," No. 86, of much distinction, by Daniel C. French, and a graceful relief, No. 87, by the same artist; a charming bust of a little girl, No. 125, by Philip Martiny, the modeller of the Washington Centennial medal; a number of groups of animals by Edward Kemeys, jr., etc., etc.

We have not mentioned nearly all the fine or interesting things in this most interesting exhibition, but the longest article must some time come to an end, and we can only conclude by advising all those interested in art to go and see for themselves. If they are hopeful of the future of American art, they will see much to confirm their hopes; if they are despairing, they will find much comfort there. The hanging, as is usual in the exhibitions of the Society of American Artists, has been admirably done. May this fact not have something to do with the marked preference which our younger and more vigorous artists have shown for the Society?

MENTAL INVALIDS OF A MILD type, especially those afflicted with Melancholia, sufferers from abuse of alcohol, and victims of the opium habit are offered superior advantages in private treatment and care at the STOCKTON SANITARIUM, in the beautiful village of Merchantville, N. J., five miles by train from foot of Market St., Philadelphia. Absolutely no suggestion of an asylum. The spacious, veranda-surrounded houses in the outskirts of the village, with their twelve acres of grove, garden, and lawn, are precisely like the better class of private country villas. The utmost freedom consistent with security is allowed. Pleasant surroundings, open-air exercise, country drives, cheerfulness, comfort, quiet. These conditions are *demonstrated* by experience to have marked effect on curable cases, and they contribute largely to the comfort of confirmed cases who here find a home, combined with the safeguards of skilled attendance. The proprietor (who was for 20 years in charge of Male Department of Pennsylvania Hospital for Insane) refers to many eminent alienists. Illustrated Circulars by mail. Address, DR. S. PRESTON JONES, Merchantville, N. J.

YOUR MOTHER, SISTER, AND Family want a copy of *Books of the Bible Analyzed*, by President Schultze (Moravian). Should you fail to find it at your bookstore, send *25 cents* (silver). H. T. FRUEAUFF, Easton, Pa. *American News Co.* supplies the trade. *The Interior:* "A frequent perusal rekindles, freshens, and confirms your knowledge of the Bible."

Seashore Lands.
ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchasers and for sale. A number of beautiful shore, island, and peninsular properties on Penobscot Bay and other parts of the coast. These ranging from 10 to 1,000 acres, of the best selected frontages of high land, have beautiful rocks, trees, beaches, harbors, and mountain and sea views, and in the rapidly increasing movement to this coast, are almost the only remaining shore lands still purchasable at very low prices and offer exceptional advantages for gentlemen wishing independent estates for summer occupancy or for local colonization or investment. For details address
J. Murray Howe, 27 School St., Boston.

Charles Scribner's Sons'

NEW BOOKS:

Personal Creeds:

or, How to Form A Working Theory of Life. By NEWMAN SMYTH, D.D. 12mo, cloth, $1.00; paper, 50 cents.

The aim of Dr. Smyth's book is to point out the value of a personal as distinguished from a doctrinal creed, which shall bring one into closer touch with the spirit of Christ's teaching.

How Shall We Revise?

A Bundle of Papers addressed to the people by Drs. BRIGGS, EVANS, WHITE, VINCENT, PARKHURST, HAMILTON, and THOMPSON, discussing and foreshadowing the action likely to be taken in Creed Revision. 12mo, cloth, $1.00; paper, 50 cents.

Day and Night Stories.

By T. R. SULLIVAN. 12mo, cloth, $1.00; paper, 50 cents.

Mr. Sullivan's stories have won for him an enviable position, and hosts of admirers, who will hear with interest of this collection of his artistic tales.

The Lawton Girl.

By HAROLD FREDERIC. 12mo, cloth, $1.25; paper, 50 cents.

"The realism is vivid and truthful. It would be difficult to find in fiction a stronger sketch than that of the poor and degraded Lawton family."—*Boston Journal.*

Expiation.

By OCTAVE THANET. Illustrated by A. B. FROST. 12mo, cloth, $1.00; paper, 50 cents.

"An exceedingly spirited, well-told, and interesting Southern story. It is briefly told, but every sentence counts, and it is impressive and absorbing."—*N. Y. Tribune.*

The Broughton House.

By BLISS PERRY. 12mo, $1.25.

"A bright, well-written story, told with great animation, showing close study of the surface phases of human nature, and full of keen observation on men and manners. It is very attractive in its freshness, buoyant spirit, and graceful realism."—*Boston Saturday Evening Gazette.*

The Nature and Method of Revelation.

By PROF. GEORGE P. FISHER, D.D. 12mo, $1.25.

"The author handles the subject in a masterly manner, and his volume will be perused by very many on account of its clearness and impartiality of statement, and by reason of its agreeable style."—*N. Y. Sun.*

The Philosophy of Preaching.

By A. J. F. BEHRENDS, D.D. 12mo, $1.00.

The volume aims to expound the spirit of all effective pulpit discourse, and to set forth the qualities, personal, ethical, Biblical, spiritual, and practical, which give preaching its power and influence.

"A book valuable not only to theological students, but to every man and woman who earnestly desires to make the best and noblest use of life."—*Boston Traveller.*

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

PUBLISH THIS WEEK:

A SUMPTUOUS VOLUME.

California and Alaska and over the Canadian Pacific Railway.

By WILLIAM S. WEBB, M.D.

The journey described in the above volume was taken in the winter of 1888–9, by the author, accompanied by his family and a few friends. It comprised a trip across the continent by the most picturesque route, and along the Pacific Coast to Lower California, and the travellers were in all nearly three months en route.

The author possessed, among other qualifications for a successful traveller, an enthusiastic interest in his undertaking, and in the very complete organization of his travelling arrangements he also possessed exceptional facilities for seeing all that there was to be seen in the country gone over—a country which, in the rapid progress of settlement, is changing so extensively from year to year, that descriptions given five years back would to-day hardly be recognizable.

The full-page etchings are:

Mission of San Luis Rey, Cal. By C. Y. TURNER.
Muir Glacier, Alaska. By R. SWAIN GIFFORD.
North Arm, Biscotasing Lake. By J. C. NICOLL.
Lake Louise, near Laggan. By R. C. MINOR.

The above are India Proofs.

Among the 88 full-page Photogravures will be found the following:

On the Coast, near Monterey.
Seal Rock covered with Seals, near Monterey.
Yosemite Valley, from Artist's Point.
Glacier Point, 3,200 feet, Yosemite Valley.
Vancouver, from Canadian Pacific Railway Docks.
Douglas Firs, on Vancouver Town-Site.
Floating Ice, near Muir Glacier.
Typical View along the Coast of Alaska.
Great Glacier, Canadian Pacific Railway.
Canadian Pacific Railway Station and Mount Sir Donald Glacier.
Hermit Range, from Hotel, showing Canadian Pacific Railway Station.
Lower Kicking Horse Canyon, near Golden.

The volume is elegantly printed in quarto; size 8x11 inches. It contains 190 pages of text, printed upon the finest vellum paper, and is sumptuously bound in full morocco. But 500 copies printed. $25.00.

The Pleroma. By Rev. E. P. CHITTENDEN, A.M. A Poem of the Christ in two books of seven cantos each, written in semi-dramatic form. 16mo, gilt top, illustrated. $3.00.

Can You Afford Ten Cents a Day

FOR A LIBRARY OF AMERICAN LITERATURE,

In Eleven Elegant Large Octavo Volumes, with over 6,000 Pages, Handsomely Illustrated with 160 Full-Page Portraits,

Compiled and Edited by

Edmund Clarence Stedman and Ellen Mackay Hutchinson?

This is all this great work will cost you, and it contains the cream of American Literature from the earliest writings—1607—to the present date. Nearly 3,000 selections arranged chronologically, over 1,200 authors quoted, a succinct biography of each author, and an exhaustive topical index. This is a great national work, and, in order that it may be in every American home, we deliver the eleven volumes on receipt of $3, and collect the remainder at the rate of $3 per month, amounting to

TEN CENTS A DAY.

The press, eminent scholars, and literary men unanimously pronounce this work one of the most interesting and important ever issued for the American public. If you can succeed in interesting five of your friends, and send us their orders on the above basis, we will give you

A Set of the Works Free.

Teachers and students desiring to profitably employ the summer vacation are earnestly requested to correspond with us. We offer exceptional inducements to intelligent solicitors.

Write at once for full particulars, circulars, etc.

CHARLES L. WEBSTER & CO.,

By FERNAND LAGRANGE, M.D. International Scientific Series. 12mo, cloth. Price, $1.75.

CONTENTS: I. Muscular Work—The Organs of Work, Movements, Heat, Combustion. II. Fatigue—Local Fatigue, Breathlessness, Stiffness, Overwork, etc. III. Habituation of Work—Power of resisting Fatigue, Modification of Organs by Work, etc. IV. Different Exercises—Violent Exercises, Exercises of Strength, Exercises of Speed, Exercises of Endurance, etc. V. The Results of Exercise. VI. The Office of the Brain in Exercise.

"This is probably the most valuable work of its kind that the general reader can find."—*New York Herald.*

"The whole work is worthy of careful study by every man or woman with an ambition to preserve a sound mind in a sound body."—*St. Louis Republic.*

II.

The Dominant Seventh.

A MUSICAL STORY. By KATE ELIZABETH CLARK. 12mo, half cloth. Price, 50 cents.

A novelette by a young author whose first effort is marked by a charm and grace that commend the story to all readers of taste.

"Its spirit is thoroughly modern, and there are many delightful side-lights on musical life in amateur circles, and also a number of shrewd critical observations *en passant*, on modern composers and their peculiarities, which, taken together, would make a clever musical essay."—*New York Evening Post.*

"The Dominant Seventh will interest all lovers of music."—*New York Sun.*

"The Dominant Seventh is a novelette of more than ordinary interest."—*Public Opinion.*

III.

The Craze of Christian Engelhart.

By HENRY FAULKNER DARNELL. 12mo, paper. Price 50 cents.

"A novel of more than ordinary quality and strength is 'The Craze of Christian Engelhart.' It is marked by vigorous action, original types of character, and a mystic atmosphere enveloping some of the most remarkable passages. As an intellectual effort it deserves high praise."—*New York Sun.*

To take place May 19 and following days.

Catalogues mailed upon application.

HOSSFELD'S METHODS FOR THE Study of Modern Languages: A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN. For the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations, with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 360 pages, $1.25). Especially adapted to the needs of those contemplating European Travel. KEYS and TASKS for self correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH-GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," No. 65 Duane St., New York.

The Nation

VOL. L.—NO. 1298. THURSDAY, MAY 15, 1890. PRICE 10 CENTS.

THE SALT MASTER OF LÜNEBURG.

From the German of JULIUS WOLFF. By W. HENRY and ELIZABETH R. WINSLOW. 12mo, cloth, $1.50.

In these days, so rife with labor troubles and the strained relations of employer and employed, it is interesting to go back to the time when there was a complete and complicated system of guilds, embracing nearly all trades, and carrying with it the hierarchy of masters and apprentices. To such a period are we transported by Julius Wolff's great novel, 'Der Sülfmeister' or 'The Salt Master of Lüneburg.' Since the death of Viktor von Scheffel, Wolff is the most popular of German poets, and this historical novel of his he has invested with all the charm of his fine fancy.

PHILIP,

A STORY OF THE FIRST CENTURY.

By MRS. MARY C. CUTLER, with an introduction by the REV. SELAH MERRILL. 12mo, $1.25.

"The style is excellent, the purely topographical, archæological details are correct. The language is everywhere well chosen, and is both clear and forcible. New Testament scenes are introduced with unusual skill, and in such a way as to make a vivid impression upon the reader's mind. The book will delight the young, and I am confident that persons of more mature years will find it both entertaining and instructive in its portrayal of Christian life in the times immediately following the death of our Lord."—*From the Introduction.*

Now Ready.

Midnight Talks at the Club.

Reported by AMOS K. FISKE. [illegible]llum cloth, gilt top, $1.00.

Fresh and attractive in style, they are practical appeal for politics without prejudice, Americanism without proscription, religion without superstition, Christianity without creed lines, and, in brief, for toleration, common sense, and reasonable views about the Deity and man's relations to him, as the solvents for most of the "problems" of the time.

Stanley on the Congo.

The great African explorer has written us a most interesting and suggestive letter concerning the fertile interior African region, which will cause many people to think twice about a question they have lightly turned off without thought. It will be sent *free* to any who are interested to see it.

The Negro Problem.

Two notable books on this great and growing question:

An Appeal to Pharaoh.

A Radical Solution offered, in gradual, selected, assisted emigration and colonization. 16mo, cloth, $1.00.

"Written in a fascinatingly clear style by some one who has studied the problem long and carefully, and who has clear convictions and the courage of them."—*Christian Union (N. Y.).*

An Appeal to Cæsar.

National aid in educating National voters, in proportion to illiteracy and local efforts to remedy it. By ALBION W. TOURGEE, LL.D. 16mo, cloth, with Vignettes and Tables, $1.25.

"Like a calcium light . . . clear, temperate, judicious, and effective reasoning."—*Congregationalist.*
"Reasonable and statesmanlike."—*The Nation.*

THE KINDERGARTEN TRAINING- Class, established by Mrs. Quincy A. Shaw in connection with the School No. 6 Marlborough Street, Boston, will be reopened on Thursday, October 9, 1890.
Three different courses will be given:
(1.) A full course in Froebel's Philosophy and in the Kindergarten Gifts, Occupations, Songs, and Games, fitting students to take charge of a Kindergarten.
(2.) A course of lectures on the same subject to mothers and women interested in the training of young children.
(3.) Weekly talks to nurses.
The last two courses are free of charge. Apply to Miss BRIGGS.

MASSACHUSETTS, Boston, 18 Newbury Street.

MISS ABBY H. JOHNSON'S HOME and Day School for Young Ladies reopens October 1, 1890.
Superior opportunities for the study of Language, Literature, History, and Philosophy.

MASSACHUSETTS, Boston, 112 Newbury Street.

THE MISSES HUBBARD'S SCHOOL for Girls will reopen October 1, 1889. A limited number of boarding scholars will be received.

MASSACHUSETTS, Cambridge.

THE CAMBRIDGE SCHOOL AND Margaret Winthrop Hall, English, Classical, and Elective Courses for Girls. Home comforts and social cultivation. Building and furniture new. No crowding. Applicants must be over fourteen. Address
Mr. ARTHUR GILMAN.

MASSACHUSETTS, Cambridge, 13 Appian Way.

DAY AND FAMILY SCHOOL FOR Boys. Fits for college. Boys taken care of during the summer, with or without instruction, on the coast of Maine. Circulars, JOSHUA KENDALL, A. M.

MASSACHUSETTS, Cambridge, Larch Street.

HOME FOR BOYS.—DR. ABBOT ADMITS not more than four boys into his family, to fit for college or educate privately. Separate tuition, with best of care in all respects. Charming location, with fine tennis-court. F. E. ABBOT, Ph.D.

MASSACHUSETTS, Duxbury, Powder Point.

POWDER POINT SCHOOL.—PREPARES for scientific school, college, or business. Laboratories. The boys are members of the family.
FREDERICK B. KNAPP, S.B. (M.I.T.)

MASSACHUSETTS, East Hampton.

WILLISTON SEMINARY.—PREPARES boys for any college or scientific school. Opens September 4, 1890. New laboratories and bath-rooms. All buildings heated by steam. Address
Rev. WILLIAM GALLAGHER, Principal.

Schools.

MASSACHUSETTS, Greenfield.

PROSPECT HILL School for Young Ladies.—21st year. Regular and Special Courses. Beautiful and healthful location. Our certificate admits to Smith. Science, Art, Music. J. C. PARSONS, Prin.

MASSACHUSETTS, Montvale.

ASHLEY HALL.—HOME SCHOOL for Young Ladies. Ten miles from Boston. Music, Art, and Languages. Miss M. G. WHITTEMORE, Principal.

MASSACHUSETTS, Plymouth.

MR. KNAPP'S HOME SCHOOL FOR Boys.—Twenty-fourth year begins Oct. 1, 1890. Mrs. Knapp, Principal; A.M. FREEMAN, A.B., H'd Master.

MASSACHUSETTS, Springfield.

MR. AND MRS. JOHN McDUFFIE, Successors to Miss Catharine L. Howard in her School for Girls. Address MRS. JOHN McDUFFIE, care of Miss Catharine L. Howard.

MASSACHUSETTS, Quincy.

ADAMS ACADEMY, PREPARA- tory and Boarding School for Boys.—Third term begins April 7. For all information address
WILLIAM EVERETT, Ph.D.

MASSACHUSETTS, Worcester.

MRS. THROOP'S SCHOOL FOR Young Ladies and Children. College preparatory. Reopens Oct. 1. $600 per year.

NEW HAMPSHIRE, Lake Winipesauke.

BEAVER ISLAND CAMP.—SECOND season will open about July 1. Six boys only will be received, ages between ten and fifteen years. Instruction in rowing, swimming, woodcraft, and camp cookery. No book study allowed. Best references given and required. Address LEE RUSSELL, P. O. Box 755, Worcester, Mass.

NEW HAMPSHIRE, Portsmouth.

MISS A. C. MORGAN'S SCHOOL FOR young ladies reopens Sept. 24, 1890. J. G. Whittier says: "A better, healthier, and pleasanter place for a school could scarcely be found in New England."

NEW JERSEY, Freehold.

THE YOUNG LADIES' SEMINARY invites the attention of those who seek for girls thorough instruction, with personal care, in a pleasant and healthful location. The 47th year opens September 17, 1890. Miss EUNICE D. SEWALL, Principal.

NEW JERSEY, Princeton.

THE PRINCETON PREPARATORY School opens September 17. Inquiries may be addressed to President PATTON of Princeton College, or to J. B. FINE, Headmaster.

NEW YORK, Brooklyn, 140-142 Columbia Heights.

THE MISSES ELY'S SCHOOL FOR Girls will reopen October 1, 1890.

NEW YORK CITY, 32 and 34 East 57th Street.

MISS PEEBLES AND MISS THOMP- SON'S School for Girls will reopen Thursday, October 2, 1890.

NEW YORK, Glen Cove.

DOSORIS SCHOOL—A HIGH CLASS school for boys; $600 to $750 per year. Summer session June 16 to September 15. Terms, $75 per month. B. F. O'CONNOR, B.L., Ph.D. Director.

NEW YORK, Kingston-on-Hudson.

GOLDEN HILL PREPARATORY School for Boys. Sixth year begins September 24. JOHN M. CROSS, A.M., Principal.

NEW YORK, Peekskill.

SUMMER SCHOOL AT THE PEEKS- kill Military Academy. Location healthful. Care and instruction excellent. JOHN N. TILDEN, A.M., M.D., Principal. Send for Circular.

NEW YORK, Syracuse.

MRS. ALFRED WILKINSON'S School for Girls. Reopens September 17, 1890. Refers to Hon. Abram S. Hewitt, George Wm. Curtis, Hon. Wayne McVeagh, Rev. Edward Everett Hale, Thomas Wentworth Higginson, Hon. Andrew D. White.

OHIO, Columbus, 151 East Broad Street.

MISS PHELPS'S ENGLISH AND Classical School for Young Ladies. Special advantages in Language, Literature, Music, Art, Home and Social Culture. Fall term begins September 25, 1890. New school building.

PENNSYLVANIA, Bryn Mawr.

BRYN MAWR COLLEGE, A COLLEGE for Women, ten miles from Philadelphia, offers graduate and undergraduate courses in Sanskrit, Greek, Latin, Mathematics, English, Anglo-Saxon, French, Old French, Italian, Spanish, German, including Gothic and Old High German, Celtic, History, Political Science, Physics, Chemistry, Biology, and lectures on Philosophy. Gymnasium, with Dr. Sargent's apparatus complete. Fellowships (value $450) in Greek, English, Mathematics, History, and Biology. For Program address as above.

PENNSYLVANIA, Bryn Mawr.

MISS BALDWIN'S DAY, BOARD- ing, and College Preparatory School for Girls reopens Sept. 30. For circular address Miss F. BALDWIN.

PENNSYLVANIA, Chambersburg.

WILSON COLLEGE FOR YOUNG Women. For Catalogue or advice on preparation, address Rev. J. EDGAR, Ph.D., Prest.

Schools.

PENNSYLVANIA, Haverford College.

HAVERFORD COLLEGE OPENS 9th mo., 24th. Early application should be made for rooms. Address SECRETARY OF HAVERFORD COLLEGE, Pa.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for young ladies reopens Sept. 30, 1889. Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

NEUILLY, PRÈS Paris, 22 Avenue de Neuilly.

MR. A. RENACK RECEIVES IN HIS house and prepares with marked success a limited number of students for the Sorbonne, the military and scientific schools. Special courses in modern languages for Americans. Diplomatic references at Washington and Paris.

GERMANY, Berlin.

THE AMERICAN HOME SCHOOL for Young Ladies offers to a limited number the protection and comfort of an American home, together with the chaperonage so necessary to young ladies studying abroad. The best masters in Music, Art, German, and French. Vacation trips to Russia, Italy, France, and through Germany. The school begins its fifth year September 24, 1890. A branch will be opened in Paris at this date also. Applications should be made before July 1. Address for circulars Miss R. L. GILBERT, 161 Lasalle St., Chicago, Ill., or the Principal, Mrs. MARY B. WILLARD, Nettelbeck Str. 21, Berlin, Germany. Mrs. Willard refers by permission to Mrs. Grover Cleveland, and the Hon. William Walter Phelps, U. S. Minister to Germany.

Teachers, etc.

WANTED—A PRESIDENT FOR A first-class Agricultural and Mechanical College to be established in the South. Must be in sympathy with such work and possess superior executive ability. Salary $3,500 or more. Also a distinguished chemist who can direct a scientific experiment station, and understands especially chemistry as applied to agriculture rather than the arts. Liberal salary to the right man.

A single man as commandant in first-class Military School in California. Salary $1,000.

For Colorado—A lady—Episcopalian—for Sciences, who understands laboratory work.

For female school in Alabama—Superior music-teacher—gent. Salary $1,000, to be supplemented by taking charge of choir and organ. Lady for French and German. Salary $600 to $900. Episcopalians preferred.

Active demand for good teachers from all parts of the United States.

SHERMERHORN'S TEACHERS' AGENCY, 3 East Fourteenth Street, N. Y.

AN OPPORTUNITY IS OFFERED to secure the services of an educated American lady, now residing in Paris, competent to act as interpreter, governess, or travelling companion in Europe. References: Rev. Endicott Peabody of Groton School, Groton; E. M. Hartwell, Ph.D., M.D., Johns Hopkins University; Miss Harriet Caryl, Girls' High School, Boston, Mass. For further particulars address Miss ELIZABETH CURTIS, Roxbury, Mass.

WANTED—BY A GRADUATE OF Packer Institute, Brooklyn, a position in New York or vicinity, to teach physiology, chemistry, Latin, and the English branches. Has had special laboratory courses in chemistry and physiology. Address Miss M. C. B., 170 Dean Street, Brooklyn, N. Y.

TEACHER OF LANGUAGES, GOING to Berlin for the summer, would take one or two pupils to board with him among his relatives. A cultured home at *very* moderate cost; fine opportunity for seeing Berlin and acquiring fluency in the German language. Boston and Philadelphia references. Address American and Foreign Teachers' Bureau, 3 Park Street, Boston, Mass,

ROBERT R. TRUITT, A.B., UNIV. of Penna., will prepare for College, in Greek, Latin, and English, privately or in a school. Has successfully prepared for College. Best references given. Address R. R. T., 3505 Baring St., Philadelphia, Pa.

A GRADUATE OF WELLESLEY COLlege (B.A.), with four years' experience in a private and a public school, who has been studying in Germany the past year, desires a position to teach German, Latin, and Mathematics. Address E. D. E., Carrier No. 5, Buffalo, N. Y.

THE SUBSCRIBER WILL RECEIVE at his summer home in South Duxbury on Massachusetts Bay, during July and August, a few boys completing their preparation for College or Institute of Technology. E. A. H. ALLEN, C.E. (R.P.I.), Principal of Friends' Seminary, E. 16th St., New York.

A GERMAN LADY—AN EXPERIenced traveller—desires to meet with some young ladies who are in want of a travelling companion for the summer holidays. Highest references. Address ABBOT Academy, Andover, Mass.

A REFINED AND CULTURED LADY who speaks English, French, and German would like situation as home or travelling companion with invalid or elderly lady. Highest of references of character and ability. Address L. A., Box 460, Pontiac, Mich.

A YALE GRADUATE, WHO HAS had unusual success in fitting boys for college, desires to establish (or otherwise obtain the principalship of) a classical school in a favorable locality. A. M., care of the *Nation*.

VACATION WORK WANTED.—FLUent French and German. Would tutor, travel (capital pedestrian), do French, English, Greek, Latin proof-reading or translations; or out-of-doors work. Address Box 468, Arlington, Mass.

A HARVARD STUDENT WITH considerable experience as tutor wants a position with a family for the summer. Best references. Address "CLASSICS," care *Nation*.

A LADY OF MIDDLE AGE DESIRES occupation as housekeeper, companion, or private secretary. References exchanged. Address E., care of *Nation*.

A YOUNG GERMAN LADY WISHES summer position as teacher, governess, or companion. Teaches German, French, music. Address M. L., Miss Morgan's School, Portsmouth, N. H.

HOLMES HINKLEY, A.M., 11 EVErett St., Cambridge, Mass., will prepare boys for the fall examinations, and make tutoring engagements for the winter.

TUTOR WOULD LIKE TWO OR three pupils for the summer. Excellent city references. Address TUTOR, *Nation*.

CHARLES W. STONE, *Tutor for Harvard*, 68 Chestnut Street, Boston.

School Agencies.

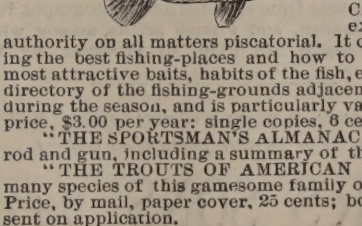
"GERMANIA."

A Fortnightly Journal for the Study of the

German Language and Literature

Subscription price, $2.00. Sample copies free.

P. O. Box 90. MANCHESTER, N. H.



WILL YOU ANGLE THIS SUMMER?

If so, you will want to know something about the sport: what kind of tackle to use, where the fish bite best, and how to get there; best seasons, etc. Our journal, "THE AMERICAN ANGLER" (established 1881), is the only paper devoted exclusively to practical angling in America, and is the standard authority on all matters piscatorial. It contains (in season) reports from all over the country, showing the best fishing-places and how to reach them, discussions on the most successful tackle, the most attractive baits, habits of the fish, etc., together with much other matter valuable to anglers. A directory of the fishing-grounds adjacent to New York, giving time of trains, tides, etc., is published during the season, and is particularly valuable to local anglers. Published weekly. Subscription price, $3.00 per year: single copies, 6 cents.

"THE SPORTSMAN'S ALMANAC" for 1890 contains many practical hints to devotees of both rod and gun, including a summary of the game and fish laws. Price, by mail, 10 cents.

"THE TROUTS OF AMERICAN WATERS" is an exhaustive work, fully illustrated, of the many species of this gamesome family of fishes, including habits, best tackle, etc., for taking them. Price, by mail, paper cover, 25 cents; bound, 50 cents. Our illustrated list of angling books will be sent on application.

THE HARRIS PUBLISHING CO., 10 Warren Street, New York.

TO BE PUBLISHED IN JUNE OR JULY.

STANLEY'S GREAT BOOK
'IN DARKEST AFRICA'

"There is no other manuscript, printed book, or pamphlet, this spring of the year of our Lord 1890, that contains any account of this region of horrors other than this book of mine."

Henry M. Stanley

In Two Octavo Volumes of over 500 Pages each, with Important Maps, Two Portraits on Steel, and Many Wood Engravings. Price, complete, $7.50, in cloth.

THE TEXT. 'In Darkest Africa,' besides its unequalled interest as a full and complete record of the most hazardous and eventful of all African explorations, and the one most fruitful of important discoveries, displays Mr. Stanley's literary skill in a new light. Marked by an unaffected fervor throughout, it is yet a masterpiece of strong and crisp narration and of graphic description.

THE ILLUSTRATIONS. These are made from sketches and photographs by Mr. Stanley and his staff. They are by the best American, English, and French artists, among whom are Mr. Frank Fowler, Mr. Carroll Beckwith, Mr. J. D. Woodward, Mr. Walter Wilson, Mr. Montbard, Mr. Riou, Mr. Forestier, Mr. Wardmuller, and Mr. Schonberg.

*** *Sold only by subscription through authorized agents, to whom exclusive territory will be assigned. Agents wanted everywhere. A rare chance for summer work for teachers and college students. For further particulars address*

CHARLES SCRIBNER'S SONS, 743 Broadway, N. Y.

The Nation.

NEW YORK, THURSDAY, MAY 15, 1890.

The Week.

If anybody had said, at the beginning of the present session of Congress, that five months' time would be consumed by the Republicans in bringing a tariff bill to the point of actual debate in the House, he would have found nobody to believe him. Yet that is the upshot of the labors of Mr. McKinley and his Committee. They have been at work since December, and they now talk as though they expected to pass their bill through both houses and a conference committee by the 10th of July. The debate was opened by Mr. McKinley, who labored heavily to furnish some reason for increasing duties above the present exorbitant rates. He said that the country, in the election of 1888, virtually instructed Congress to pass a bill sustaining the principles of protection. He did not mention what the aggregate vote of the people was, or what kind of an instruction can be drawn from a minority. Under our system of government a constitutional majority often goes with a numerical minority. In such cases the numerical majority have nothing to say against the rule of the smaller number, but they may rightfully deny that any instruction is to be drawn from a numerical minority, or that any moral support is to be found in a gerrymander. (We use this word not in its conventional sense, but because it best expresses the situation—Mr. Harrison having received a majority of the electoral vote, while Mr. Cleveland had a plurality of the popular vote.) All of Mr. McKinley's speech, therefore, which drew inspiration from the vote of the people in 1888, was hollow and insincere. And if we look at the Chicago platform, we find only one specific instruction, and that is that the taxes on tobacco and on alcohol used in the arts should be repealed. This is not done, and Mr. McKinley offered an apology for not doing it. On the other hand, the duties on a vast multitude of things are increased for the purpose of paying campaign debts to particular classes and persons at the expense of other classes and persons. Of course, Mr. McKinley would not avow this, but it is impossible to understand the bill in any other way.

Mr. Mills's speech in reply to McKinley was in good temper, but charged with the fighting spirit. It expressed the confidence which all the foes of the robber tariff feel, that victory will perch on their banners next fall, and that it will be all the more decisive by reason of the monstrous provisions of the pending bill. The mercantile classes have never been so aroused and indignant during the present generation as they are to-day. The farmers have never been so uneasy as they are now. The manufacturers have never been so divided in sentiment on the subject of raw materials and of the tariff in general. The public, wrathful at the picking of their pockets by a cordon of Trusts that have sprung up within two years, are waiting to see whether Congress will afford the one remedy which it *can* give, instead of the slow and doubtful ones which look to litigation in the courts, and are getting ready to pronounce judgment on this particular grievance in the election of a new Congress next November. Mr. Mills's confidence is well founded.

The colloquy in the House of Commons between Mr. Jesse Collings and Sir James Fergusson, Secretary of the Foreign Office, reported by cable, contains something which we commend to the attention of the promoters of the Fair in Chicago. Sir James Fergusson expressed doubts as to whether there was enough promise of advantage to British interests in the Fair to justify official participation in it, and he added:

> "It is probable that the manufacturers of Great Britain would, to a great extent, be deterred from sending exhibits to the Fair if the tariff precluded profitable sales in America."

This, of course, has reference to the effects of the McKinley bill, and it is a view which is undoubtedly shared to a greater or less extent by the manufacturers of the Continent. What object, they naturally ask, can we have in sending goods to a country which is actively engaged in shutting out foreign commerce, and in which importers of foreign goods and their agents are openly denounced as persons engaged in a disreputable calling, and threatened with a denial of the protection of a jury for their property? Any one who supposes that Europeans do not notice the inconsistency of holding an international fair under a Government which is trying to close its ports against foreigners, and that they are not amused by our anxiety for steamers to run to foreign countries while legislating to prevent their bringing return cargoes, underrates their sense of humor. The chances now are that the Chicago Fair will be simply an American Fair, and that "the world" will have but little to do with it. This would probably have been true of the proposed Fair in New York also. The McKinley bill abroad produces the impression that American democracy is lapsing into barbarism, especially when taken in connection with the action of Congress on the question of international copyright.

It is a rare occasion when we can find anything to commend in the performances of Congressman Boutelle, but he introduced a bill in the House last week which deserves only praise. It is in the shape of a section which it is proposed to add to the Inter-State Commerce Act, and reads as follows: "That nothing contained in this Act shall be construed to authorize the sale or traffic in intoxicating liquors in any State contrary to the laws thereof." The Supreme Court took occasion to say, in the decision rendered by Chief Justice Fuller last week, that Congress may pass an act of this sort permitting the States to apply their own laws to the traffic in liquors imported from other States, and there are evident and abundant reasons why it should pass such an act, while no objection is apparent. It is universally conceded that the States ought to enjoy this power, which most people supposed that they possessed before the supreme tribunal decided to the contrary; and the only way they can now secure it is through the passage of such a bill as Mr. Boutelle has introduced.

Some very grotesque comments have been made upon the Supreme Court's "original-package" decision, but the palm must be awarded to certain "temperance workers," mentioned by the Washington correspondent of the Boston *Journal*, whose "theory seems to be that the complexion of the Court was changed by electing Mr. Cleveland, who was enabled to appoint two extreme States'-rights Democrats to the bench, and, but for the fact that they have seats on that bench, this decision might not have been rendered." To appreciate fully the humor of this theory, one must reflect that the States'-rights side of the pending question was that which held that each State possesses the power to regulate the liquor traffic for itself, while the Federalist side was that which maintained the supremacy of Congress; and that the two Democratic appointees of President Cleveland, Fuller and Lamar, both took the Federalist side, along with Miller, Bradley, and Blatchford of the Republicans. Equally amusing is the theory of "Rising Sun Stove Polish" Morse that the people really responsible for the decision of the Court are the men in this State who voted for St. John in 1884. "The third-party Prohibitionists of New York," he says, "elected Cleveland by giving him the electoral votes of that State. Cleveland appointed Chief-Justice Fuller, a Democrat, and made a majority of the Supreme Court in favor of the liquor traffic possible. Had they helped to elect a Republican President, Republican judges would have sat upon this question and a different decision would have been reached, and the decision of the lower court would have been affirmed." If a man like Morse ever stopped to think, it would puzzle even him to give any reason for supposing that, if Mr. Blaine had been elected and had appointed two Republican judges, those two Republicans would have been any more likely to vote with Harlan, Gray, and Brewer than with Miller, Bradley, and Blatchford.

Congressman McCreary's charge, that the abandonment of the contemplated trip of the South Americans through the Southern States was due to a "premeditated blunder" on the part of Mr. Blaine, is putting it a little

too strong. There was blundering enough, to be sure, and it was that which led to giving up the trip, but Mr. Blaine was far from desiring that result. One of the most distinguished of the foreign delegates has stated that the work of the Pan-American Congress could have been done in half the time actually consumed, had it not been for the faulty management of the affair by the State Department. Through the lack of material and a programme for the Congress, both of which should have been carefully prepared, through the delays caused in the attempt to foist a secretary upon the Congress personally distasteful to the foreign delegates, through the squabbling of the American representatives among themselves, through the fearful inadequacy of the clerical force, especially the translators, and through Mr. Blaine's obstinate efforts to get his plan of arbitration adopted in the form upon which he had set his heart, and which he did not get after all, the Congress was so spun out that the Southern tour was made impossible. Probably the only thing that reconciles Mr. Blaine to that failure is the fact that it strikes off some thousands from the deficiency bill he will have, in all likelihood, to present to Congress. The true point of attack for Mr. McCreary is the Secretary's bad management. Most diplomats would have concerned themselves about the details of such a gathering; but "American diplomacy" would appear to consist in turning them over to incapable subordinates, and in dreaming pleasant dreams.

If any one wishes to have a better understanding of the occult forces which succeed in defeating an international copyright law, he will find much light in a column advertisement which occupies a prominent position on the first page of the *Christian Advocate* for May 8. That paper is the official organ of the Methodist Episcopal Church and of the Methodist Book Concern. The advertisement opens with the following remarkable declaration:

> "A publishing firm of New York, having purchased a manuscript from Mr. Stanley relating exclusively to his Emin Pasha relief expedition, are preparing to publish the same in book-form some months hence. This firm has a perfect right to purchase manuscripts from Mr. Stanley, and to publish them if it so desires, and we also have the right to do the same thing if it pleases us; but neither we nor these publishers have any right to resort to misrepresentation for the purpose of misleading the public with reference to our respective books."

The advertisers, who are the Methodist Book Concern, go on to say, with thinly disguised phraseology, that their book will be made of matter which has cost nothing—that is, of pirated or stolen material—and that they will thus be able to sell it for less than half the price at which the publishers who have bought their material of Stanley will be able to sell theirs. They even denounce the latter publishers for trying to make the people "buy these high-tariff" and "high-priced books intended for the studious or the shelves of the rich, and not for popular use." Finally, as a parting word of instruction to their agents, these highly moral Christian publishers say:

> "Do not be frightened by the unjust and untrue statements which appear in papers, and which are supplied and paid for by rival publishers. Remember that *you can arrange with an editor for just as strong notices of your book, if you care to pay for them, because the business of an editor is to make money for his paper;* and as long as you pay him for what you desire inserted, he will treat you just as kindly as he will any one else."

Senator Quay, as Chairman of the National Republican Committee, is sending out circulars asking Republican voters to take his certificates of party membership and return him the coupons, with $10 for each coupon, in order that he may get together a fund for the distribution of tariff documents. He assures all subscribers that a "record will be kept" of their names, but gives no guarantee that he will not take their money for his own uses, as he took the money of the State of Pennsylvania when he was one of its public officials. A man who, as Secretary of State, took $260,000 from the State Treasury and lost it in stock speculation, and again as State Treasurer took $400,000 of the public money in his care and speculated with it, being able, because of better luck, to return it again, is not a safe person to trust with a large campaign fund for which there is no accounting to be given. We should suppose that subscribers would think of Quay's record before they sent back his coupons with $10, even if the certificates which he sends out do bear a fine portrait of Abraham Lincoln. In fact, Wanamaker's portrait would be a much more suitable ornament for the certificates in every way, for it would serve as a trademark for the kind of business which Quay is engaged in, and through which Wanamaker himself got into public office.

Mr. Beekman, the former Corporation Counsel, who has spent much time at Albany during the session of the Legislature which ended on Thursday last, is quoted by the *World* as having said of that body: "It's awful, awful! Any man who goes up there and watches them for twenty-four hours will say that anything would be better for New York than to be at the mercy of such a gang." Similar testimony has come from other witnesses, of equally high character and capacity for sound judgment, who have had occasion to go to Albany during the past few months. The estimates of the press almost unanimously coincide with these personal observations. It is agreed on all hands that the late Legislature is one of the very worst the State has ever been burdened with. Yet, after all, the amount of positive harm which it has done is very small. By a wise dispensation of Providence, the worst men and worst jobs were about evenly divided between the two political parties, and in every instance in which a common agreement to plunder the public could not be reached, failure was the ultimate result. If all the jobbers had united for a grand raid, the plight of the State would have been woful indeed.

The new registration law which the late Legislature passed should be set down among the most praiseworthy acts of that body. It will be of great service in aiding the operation of the new ballot law, and, in connection with that and the Corrupt-Practices Act, will give to the State the best series of election laws possessed by any State in the Union. Our present system of personal registration, which applies only to New York and Brooklyn, is, under the new law, extended to all the cities of the State, twenty-eight in number, while the system hitherto used in these smaller cities, registration in person or through a friend, is extended to all the rural portions of the State. In this way the entire State is brought under a complete system of registration by means of which fraudulent voting will be made so difficult as to be practically abolished. No man can vote on election day unless his name be found on the poll list when he asks for his ballots. He can vote no ballots save those he receives inside the polling-place, and he must prepare and deposit his ballot in complete seclusion, free from espionage of all kinds. If he accepts a bribe of any kind for his vote, or if in consideration of such bribe he refrains from voting, he will be liable to imprisonment for not less than three months nor more than one year, and will be excluded from the right of suffrage for five years. The law for counting the votes in New York has always been regarded as one of the best in the Union, and has proved, in several close and critical contests, to be a sure bulwark against tampering with the returns. Now that we are assured of an absolutely fair and untrammelled ballot, as well as a fair count, there can be no further apprehension of a dishonest election in this State.

Thanks to the juggling tactics of Mr. Gardenier, the Republican Chairman of the Committee on Codes, the amendment to the Corrupt-Practices Act, extending its provisions to campaign committees, failed to reach a vote in the Assembly. We have no doubt that the politicians of both parties were in cordial sympathy with Mr. Gardenier—for they have the best of reasons for not desiring to see the amendment become a law—and that a majority of the members of the Assembly were very glad not to have to vote upon it. As the law stands, however, it will give them much annoyance when the next election comes around, provided they run for office. They will be obliged to file sworn statements of every dollar received or spent in the campaign and election; and if anybody be disposed to follow them up closely, this requirement may get offenders into serious trouble. In this city, for example, every candidate who pays an assessment will be obliged to publish the amount of it under oath, under penalty of imprisonment for not less than three months nor more than one year if he does not, together with the forfeiture of his office in case he has been elected. The friends of honest government ought to form an organization of some kind for the express purpose of seeing that the law is obeyed to the letter, and that perjurers under it are exposed and pun-

ished. This would be a first-rate public service for our energetic City Reform Club to take in hand.

Louisiana alone, of all the States in the Union, elects her legislators for four years, each body of law-makers holding two sessions during that period. The second session of the Legislature chosen in 1888 opened on Monday, and it possesses a national interest from the fact that the Louisiana Lottery Company is to make a desperate struggle for a fresh lease of life. The term of its existence under the State Constitution is nearly ended, and unless it can secure the passage of a constitutional amendment permitting an extension of its charter, it will have to shut up shop. The managers make most alluring offers, promising to pay the State a million of dollars a year, and they have largely subsidized the press, so that there is too much reason to fear that they may succeed. Gov. Nicholls has proved himself a worthy executive by devoting a large share of his message to the Legislature to an earnest protest against the continuance of lottery rule in Louisiana. He drew a graphic picture of the despotism which the ring would exercise if it should secure a fresh lease of power. "Should this lottery get firmly planted in this State," he said, "it will own and hold the purchasable vote, solidly, in the hollow of its hands for ever; and, through it and by it, the liberties, the property, and the honor of the people of Louisiana are at its feet. It would make and unmake governors, judges, senators, representatives, commissioners of election, returning officers, assessors, and all other officials at its will. Merit would be disregarded, and the test for office would not be ability, integrity, public spirit, or worth, but subserviency to the behests of that company." He concluded by announcing his resolution to exercise all the influence of his official position to avert the threatened disaster and disgrace, and by invoking the co-operation of all good citizens. The lottery managers are reported to be confident that they have "fixed" a majority of the Legislature, but the manly attitude of Gen. Nicholls ought to arouse a public sentiment which will prove irresistible. It was the opposition of the Governor of North Dakota which blocked a similar scheme in that State last winter.

Even if the lottery ring should capture the State of Louisiana, it would still be possible to break its power. The company declares that only 3 per cent. of its revenue comes from the people of the State, so that a Federal statute depriving it of its present privilege of using the mails to gather money from all parts of the Union would render a new charter worthless. "The Anti-Lottery League of Louisiana," whose roll of officers includes many of the most distinguished citizens of the State, has been organized for the purpose of overthrowing the ring, and it makes an earnest appeal for the passage by Congress of a law which would prevent the company from using the mails. It ought to be possible to frame a measure which would secure this end without infringing upon the rights of the public, and such a measure should be passed. At present, as the appeal of the League truly says, "the United States postal service is the means used by the lottery company for the debasement of national morals," and such a state of things is nothing less than a national scandal.

One of the curious phases of the liquor question in England is the acknowledgment by the Government and the community that not only is a distillery or brewery property entitled to the protection of the law, but that a liquor-dealer's license is property which cannot be taken away from him, without compensation, except in case of misbehavior. Consequently, whenever the question of reducing the number of public houses comes up, the question of compensation to the holders of the licenses comes up with it. Those who know what the prohibitionist view of intoxicating drinks is in this country, can easily understand how fiercely the public is divided on this latter question in England. To pay the money of the taxpayers to people who have been poisoning the bodies and ruining the souls of the community to remunerate them for the loss of their hellish traffic, is a proposal which lashes an English teetotaler into fury. But the reverence for property, deeply implanted in every Englishman's bosom, has thus far secured the liquor-dealers against any such legislation as that which in Kansas and Iowa swept the breweries and distilleries out of existence, with the sanction of the United States Supreme Court, without the smallest compensation. Both parties in England have thus far shrunk from any proposal to take away licenses without paying for them. The present Ministry has undertaken to solve the difficulty by increasing the duty on spirits, so as to form a fund out of which to compensate the holders of licenses, and have incorporated a clause in the budget to this effect at the eleventh hour, and before any previous discussion of the object of the tax. This marked departure from Parliamentary as well as constitutional usage is, combined with the heat which always surrounds the liquor question, likely to make a great explosion, in which the Ministry may suffer considerable damage.

The break between Emin Pasha and Stanley, of which there have been rumors for a good while, now seems to be public property, for Emin has openly announced his distrust of Stanley, and intimates that if he were to tell what he knows about Stanley and Tippoo Tib, the great Arab chief of the Congo, it would create a great sensation. The reason he gives for desiring to take service with the Germans rather than the English, is that the English were "trying to derive advantage from the prestige of his name." There is no doubt that if he had joined Stanley, he would have gone to England in the rôle of second fiddle to that explorer, and he doubtless perceived this as soon as he was rescued. Stanley has said nothing to raise Emin's credit, and in fact has given rather a depreciatory account of his state of mind when he was found on the great lakes. Emin has taken service now with the Germans, and is to have some field of work assigned to him in Africa. But the German leader there is Maj. Wissmann, an able and resolute soldier and explorer, who is pushing his way vigorously into the German "sphere of influence." Much bad feeling is growing up among the African adventurers of both nationalities, and the situation is getting to resemble strikingly that in this country in the middle of the last century, when the English and French were contending for the valley of the Mississippi.

The late municipal elections in Paris—that is, election of members of the Municipal Council—were a fair trial of Boulanger's remaining strength in the place where he once was strongest—the capital. His followers expected to win forty seats for him, and they won just two positively, with a chance of three more on a second ballot. This seems to make an end of him politically. There is a rumor that he proposes, by way of bringing himself once more into notice, to return to France if the Government will give him a new trial, or, indeed, to return anyhow and take his chance; but this latter is very unlikely. The difficulty in the way of this programme is, that the French public has had a new sensation in the arrest and imprisonment of the Duc d'Orléans, who is a competitor of Boulanger's for the business of saving French society, so that it would be very difficult to get up another about a cast-off hero.

The financial situation of Italy is breaking down the Crispi Ministry to all outward appearance, and throwing the whole kingdom into political confusion. The unbearable burdens are undoubtedly due in the main to an endeavor to live up to the obligations imposed by the triple alliance with Germany and Austria. For example, in 1875, before the alliance, the army appropriations amounted to about $34,000,000. In 1889 they amounted to over $73,000,000, or more than double. In 1870 the naval expenses amounted to about $6,000,000. In 1889 they had reached $24,000,000 in round numbers, or four times as much, and besides this there have been several supplemental appropriations. Signor Magliani, former Minister of Finance, and now a severe critic of the Ministry, in a speech recently delivered at Naples, proposed to remedy all this by a readjustment of taxes which he thinks would bring in about $6,000,000, and by a reduction of about as much more in the naval and military expenses. The situation is an extremely critical one, and the remedy will have to be applied before long. The city of Rome has apparently already gone into bankruptcy, and other Italian cities may have to share the same fate unless the public burdens are lightened.

AN UNPLEASANT CONTRAST.

"I AM proud of their splendid courage when I remember that they are Americans," said Gen. Garfield in the House of Representatives June 25, 1864, speaking of the Confederates. "It is over, thank God!" said Senator Sherman, in speaking of the war, during a speech at Nashville, Tenn., March 24, 1887, "but the courage, bravery, and fortitude of both sides are now the pride and heritage of us all."

These utterances of leading supporters of the Union cause, one during the struggle itself and the other nearly a quarter of a century later, represent the feeling of all candid men regarding the soldiers of the two sections. Nobody thinks of claiming that one army was the superior of the other in manly qualities, and it is a source of pride to every patriotic citizen that the Southern troops displayed such courage and fortitude that no question of that sort can ever arise. One cannot contrast the soldierly qualities of Federal and Confederate, because they were identical.

It would be a terrible misfortune to all Americans if the men who served in either army should make a record after the close of the war which was unworthy of them, and it would be especially humiliating to the people of the North if that record should be made by Union veterans. Unhappily, it must be confessed that occasion has of late been furnished for a contrast between the ex-Federals and the ex-Confederates to the disadvantage of the former.

The surrender of Lee left the Southern soldiers without resources, to begin life again in a country devastated by war. Lee told Grant that his men had been living for some days on parched corn exclusively, and that he would have to ask the victors for rations and forage to keep them from starving. Grant voluntarily proposed that the Confederate soldiers should keep their horses or mules as a matter of necessity. Here is his description of the incident in his 'Memoirs':

> "I then said to him [Lee] that I thought this would be about the last battle of the war—I sincerely hoped so; and I said further I took it that most of the men in the ranks were small farmers. The whole country had been so raided by the two armies that it was doubtful whether they would be able to put in a crop to carry themselves and their families through the next winter without the aid of the horses they were then riding. The United States did not want them, and I would, therefore, instruct the officers I left behind to receive the paroles of his troops, to let every man of the Confederate Army who claimed to own a horse or mule take the animal to his home. Lee remarked again that this would have a happy effect."

It would be almost impossible to exaggerate the hardness of the ex-Confederate's lot when he returned to his home. Even if disabled by wounds or disease, he could not look to the authorities anywhere for relief, since the Federal Government treated him as a traitor and his State was too poor to do anything for him; indeed, at first he really had no State, living under military rule. In short, he had only himself to depend upon. But he was not daunted by the difficulties of his situation. He set to work and was soon making his own way in the world, and gaining both confidence and self-respect with every forward step.

The victorious army also returned to the million homes from which it had been gathered. The nation it had saved was prompt to recognize its services. Generous provision was made for the pensioning of any man who had suffered a wound or contracted a chronic disease during his service. The sufferers quickly availed themselves of the offer of aid, and within ten years after the close of the war the annual appropriations for pensions—then less than $30,000,000—began to show the falling off which was to be expected from the ravages of death among those on the roll. In 1875 the Union soldier's reputation in peace worthily sustained the honor which he had gained in war.

The situation is different in 1890. Instead of having fallen off, as was expected fifteen years ago, and would have happened in a normal state of things, the annual appropriation for pensions has more than trebled, until it now reaches about $100,000,000, while one branch of Congress has just passed a bill which would increase the demand by about $50,000,000 more a year. Instead of being a roll of honor, containing only the names of those who earned a claim upon the nation's especial consideration by casualties of service which disabled them from earning a living, the list of pensioners already contains thousands of men who are in no sense disabled, and who therefore have no moral claim to an allowance from the Treasury. The pending proposition to give a pension to every soldier when he reaches the age of sixty, involves grants to tens of thousands who not only were never wounded or otherwise injured, but who are as well off as the majority of their fellow-countrymen who are to be taxed for their benefit. And there is another project earnestly supported which proposes to abolish the limit of age entirely, and enable any man of forty-five, though he may have a competence, to draw eight dollars a month for the remainder of his life from the Federal Treasury, provided he was in any way connected with the Union Army for the space of ninety days.

These wholesale pension schemes to-day threaten to ruin the reputation of the Union soldier. While the soldier who served in the Confederate army represents the best element in Southern society—the men who have built up a new prosperity on the ruins of the old by working hard and depending upon themselves—the ex-Union soldier is coming to stand in the public mind for a helpless and greedy sort of person, who says that he is not able to support himself, and whines that other people ought to do it for him. According to the claims now made, victory left the representatives of the rich North worse off than defeat left those of the devastated South.

It is truly an unpleasant contrast. The mischief, however, is not as yet irreparable. If the self-respecting veterans everywhere throughout the North will follow the example of those in Galena, Ill., who declare that the pending schemes are "degrading to the old soldiers," and who call upon their Congressman to vote against all such bills, the demagogues at Washington will be forced to listen and obey. The only question is, whether demoralization has already gone so far that the spirit of manliness which has just blazed up in Gen. Grant's old home, will die out again, and leave the reputation of the Union soldier tarnished by himself.

THE PRESBYTERIAN TROUBLE.

THE session of the Presbyterian General Assembly, which begins at Saratoga this week, has this most striking characteristic, that it concerns hardly more the Presbyterians themselves, though to them it is an occasion of most absorbing interest, than it does Dr. Alden and his friends on the American Board, and equally their opponents — that is to say, the whole Congregational body — on one side, and the Roman Catholics on the other. It is an instructive instance of the virtual solidarity of modern dogmatic theology that the proposed revision of the Presbyterian standards shou'd thus affect the two extremes of the ecclesiastical scale by its relation to the vexed question of the "larger hope," or probation after death, and to the Catholic doctrine of "the middle state." But so it is, and the Presbyterians, proceeding *in medio*—in this case not the safest nor the easiest path—will find themselves watched, more passionately perhaps by the friends and the enemies of the "new theology" in the Congregational order, but quite as closely by the keen-eyed Roman Catholics, who are more alive than any other class of men to the direct results and multiple implications of any change in Protestant theology.

As to interest of the Roman Catholics in the matter, it is further strange to observe that it is scarcely at all excited by anything which affects them directly, such as the Presbyterian classification of "infidels, Papists, or other idolaters," which it is proposed to reform by omitting the word "other"; or the declaration that the Pope of Rome "is that Antichrist, that man of sin, and son of perdition, that exalteth himself in the Church against Christ, and all that is called God," which it is proposed to eliminate. These things the Roman Catholics regard with calm indifference, and if they did not, the proposed modification would avail nothing so long as the chapter on the Lord's Supper was suffered to remain. That chapter denounces the Roman doctrine of the mass as "most abominably injurious to Christ's one and only sacrifice," and as "the cause of manifold superstitions, yea, of gross idolatries"; so if it were allowed to stand unaltered, the Roman Catholics still would be declared idolaters. And striking out the declaration about Antichrist would be a work of supererogation, after Dr. Briggs's acknowledgment, in his book 'Whither,' that "Protestant divines have always recognized that the Church of Rome was a true church. . . . They unite with her in veneration of the noble army of martyrs—pious monks, bishops, archbishops, and popes—who have adorned the history of the Western Church. These are our heritage as well as theirs." If it can be a "true church" in which Antichrist reigned, and if Presby-

terians "venerate" popes who exalted themselves "in the Church against Christ and all that is called God," the Roman Catholics naturally will not mind much the fulminations of the Westminster Confession.

The interest of the Roman Catholics is not in these things—it is one with the interest of the Congregationalists; both depend upon the proposed recasting of the standards so that they shall be made to declare, in the words of the New York Presbytery's Committee, "the general love of God for all mankind, the salvation in Jesus Christ provided for all, and to be preached to every creature," and be "so revised as not to appear to discriminate concerning infants dying in infancy, or so as to omit all reference to them (section 3, chap. 10); and so as to preclude that explanation of section fourth which makes it teach the damnation of all the heathen, or makes it deny that there are any heathen who are regenerated and saved by Christ through the Spirit, and who endeavor to walk in penitence and humility, according to the measure of light which God has been pleased to grant them." These are cardinal points of Presbyterianism, and debate must run high over them when the fathers and brethren meet. They will be called upon either to deny or to reaffirm the decree of reprobation, or "foreordination of some men and angels to everlasting death"; election of some, so that "neither are any other redeemed by Christ effectually called, justified, adopted, sanctified, and saved, but the elect only," and preterition, or "the passing by of the rest of mankind," and "the foreordaining of them to dishonor and wrath"; and damnation of the whole non-Christian world, including non-elect infants. But it happens that to free the Confession from what these doctrines presuppose, or what grows out of them by necessary consequence, will require not mere excision, but total reconstruction, or rather a root-and-branch regrowth. These are central ideas of the system as contained not merely in the Confession but in catechisms, Plan of Government, and Directory of Public Worship. The idea of a limited atonement runs through the whole Presbyterian structure, and to withdraw it would leave nothing to hold the parts together. The Confession is full of implications, necessary conclusions, and plain insinuations, all to the same effect as the distinct declarations which some now wish to remove from it.

A means of compromise has been proposed by allowing the Confession to remain unchanged, supplementing it with a "short and simple creed," declaring "the love of God in Christ for all mankind"; but this would mean merely that the Presbyterians would have two opposing creeds directly contradicting each other. The simplest solution, and one consistent with express declarations of the Westminster Confession of Faith, would be to expunge every article and chapter except the first chapter; that on "The Holy Scripture," which declares that the Bible is the only "rule of faith and life," and that "the infallible rule of interpretation of Scripture is the Scripture itself." But this would be to abandon Presbyterianism, and really to take the whole Presbyterian body over to the "Disciples of Christ," who are virtually a sort of Baptist-Unitarians; so we may not look to see the matter issue in this form.

A secular critic will not be suspected of objecting on principle to restatement, or even development, of Christian truth. Development has the mark of primitive rather than of modern times. There is no reason why truth may not be developed in the nineteenth century as well as in the third century, provided the same conditions are given—the freshness and courage of the third century in dealing with doctrine might be displayed in our day, if it were supported by the same knowledge, zeal, humility, and readiness for martyrdom. Only there is the important circumstance that the whole Church now is never ready to speak all at once, in which circumstance attempts at "repristination" are somewhat perilous. The working-out of the renovated Presbyterian doctrine on the side of eschatology would be a very serious matter, and exceeding difficult, in view of all manner of contention certain to arise over it. "The souls of believers are at their death made perfect in holiness," says the Westminster Shorter Catechism, a declaration which the *Catholic World* says is "but a plenary indulgence without conditions." But Dr. Briggs says, "Immediate sanctification at death is an error added on to the orthodox doctrine of sanctification that makes it inconsistent and virtually destroys it." Prof. Briggs holds to an intermediate state, and inclines to the opinion that it is one of progressive sanctification, being obliged thereby to deny the particular judgment of each soul after death in order to maintain the theory that there are opportunities in the middle state for further sanctification of those who need it, including the heathen. This would be objected to at once by Dr. Alden and his friends, and by the Roman Catholics, as a theory devised simply to meet a difficulty created by Calvinism, and as introducing other difficulties in the way of orthodoxy greater than any which it undertakes to solve. What the precise answer of Dr. Alden's party might be we cannot say, but probably they would affirm themselves to be more Calvinist than the revising Presbyterians, which no doubt would be true. The Roman Catholic answer would be that the universality of the benefits of redemption in this life removes the necessity of the extension of them to a future state.

It is not necessary to pursue the subject further in order to indicate the origin of the Congregational and the Roman Catholic concern in the General Assembly's revision work. Every line of that work properly run out to its natural end will touch some matter of peculiar interest to one or the other of those bodies, and from both of them inquiries may proceed, answers to which the Presbyterians probably have not yet thought out. Why, for example, does the new eschatology omit its manifestly necessary corollary— prayers for the dead? Its view of man's condition after death would make the practice of praying for the dead a most urgent duty. It seems absurd for Dr. Briggs to stop short of this practice, the fact being that prayers for the dead furnish the bulk of the testimony for the primitive belief in the middle state.

ARE ORCHESTRAL MUSICIANS ARTISTS?

Much has been written recently regarding the question whether the Musical Mutual Protective Union could succeed in preventing the famous Strauss orchestra, which has just arrived, from giving concerts in the United States, on account of the Alien-Contract-Labor Law. But there is a comic side to this question which deserves some attention. Jokes generally lose their point if they have to be explained, but in this case a few historic references are needed to make clear the funny part of this business. In the Middle Ages, when instrumental music was coming into general vogue, for its own sake or as an accompaniment to song, the minstrels and other musicians were regarded as mere vagabonds. As Naumann remarks in his 'History of Music,' "they never achieved any social distinction or attained any civil rights. True it is that their existence was tolerated, but all real protection of the law was withheld from them. Indeed, to such an extent was this carried that a strolling player might suffer bodily injury, even by the sword of his assailant, and yet have no claim to compensation. The farcical performance of striking at the *shadow* of his wanton aggressor a blow similar to that which he himself had received, was the only protection the law afforded him. Thus this remarkable people, unwittingly possessed of a romantic spirit, remained throughout the Middle Ages honorless and homeless outcasts. Even the Church withheld its sympathy, and denied them the right to partake of the Christian sacrament."

As late as the eighteenth century, operatic performers were regarded as being without the pale of ordinary citizenship, and even composers and famous virtuosi were treated very often as servants. The indignities suffered by Mozart which induced him to leave Salzburg, are well known; and Sir Julius Benedict, in his 'Life of Weber,' gives this striking account of the state of affairs in London only three-quarters of a century ago: "In the huge 'reunions' of the aristocracy, artists were not expected to mix with the company. Shut up, till everybody had assembled, in a small room, bid by insolent lackeys to enter the gorgeous drawing-rooms by a back staircase, even *separated in some cases by a cord* from the rest of humanity, to avoid any contagion, commanded like any menial to sing their songs, . . . the concert over, either directed to take their refreshments in a separate room or to go home supperless—all this considered, it was not to be wondered at that even richly remunerated artists were disgusted with the treatment they received."

Within the last half century, however, the social status of musicians has rapidly improved, so that to-day not only distinguished artists but ordinary orchestral musicians,

provided they are gentlemen, are treated as such in society and admitted to the privileges of guests, because it is beginning to be recognized that to play a musical instrument well requires artistic intelligence and taste. If, therefore, the M. M. P. U. or the Balfe Club (which has presented a formal protest against the landing of the Strauss Orchestra), should succeed in keeping these musicians out, on the ground that they are mere laborers, on a level with hod-carriers and miners, and not artists, they would thereby prove that they themselves, the orchestral musicians of New York, are not artists, and that the social privileges now accorded them are undeserved. A neater boomerang could not be devised.

So much for the comic side of this business. But there is another aspect, which would be very serious indeed if a handful of musicians, most of whom emigrated to this country, should be enabled to prevent sixty-five millions of Americans from having an opportunity to enjoy the performances of one of the most famous orchestras in Europe. This would put an arbitrary power in their hands which no German Bismarck or Russian Czar even would dream of arrogating to himself, and which, if submitted to by the American officials, would make them the laughing-stock of all Europe. It would be wofully absurd even to subject the members of the Strauss Orchestra to individual examination, like Barnum's tuba-player, whose landing the M. M. P. U. tried to prevent, and who would have been returned to Europe had it not been for the interference of a newspaper reporter. For the Strauss musicians do not come here as solo performers, and are therefore not to be judged as such. They come here as integral parts of an orchestra which has won world-wide fame as an interpreter of a special branch of music, in which it has no equal. Mr. Seidl says of this orchestra that it "is altogether unique, and of its kind the most excellent in existence," and Mr. Wm. Steinway says that "no existing orchestra plays the characteristic music of the Strauss family with the Strauss vim, as the Strauss Orchestra does. To accomplish this, each player must be an artist." The great success of the Strauss Orchestra in London and in all the leading German cities which were visited last season, shows that Eduard Strauss has succeeded in keeping the orchestra which his brother and father conducted before him up to its former artistic level. And it is self-evident that it would be folly for him to engage any but the best artists in a city which is so full of first-class musicians as Vienna.

In the face of such facts, the M. M. P. U. will do well not to cover itself with ridicule and odium by interfering with the Strauss concert tour. But it is perhaps too much to expect this Socialistic cabal to act with discretion. A few years ago they tried to ruin the Thomas Orchestra by preventing Mr. Thomas from importing such musicians as he needed to make his band first-class; and we heard another distinguished leader say a few days ago that the high prices now asked by members of this "protective" Union had compelled him to give up his annual series of concerts in New York, and that things had come to such a pass that no one could venture to give a concert unless he was backed by a millionaire or a society.

AMERICAN ORIENTAL SOCIETY.

BOSTON, May 8, 1890.

THE spring meeting of the Society was held yesterday at the rooms of the American Academy. To the great regret of the members, Prof. W. D. Whitney sent in his resignation as President. Dr. Wm. Hayes Ward was elected to fill his place. The other officers elected for the year were: Vice-Presidents, Rev. A. P. Peabody, Prof. E. E. Salisbury, Prof. D. C. Gilman; Secretaries, Prof. D. G. Lyon, Prof. C. R. Lanman, Prof. W. W. Goodwin; Treasurer, Mr. A. Van Name: Directors, Mr. A. I. Cotheal, Prof. M. Bloomfield, Prof. J. H. Thayer, Prof. E. W. Hopkins, Prof. R. J. H. Gottheil, Prof. A. L. Frothingham, Prof. J. P. Taylor. Profs. Antonio Maria Ceriani (Milan), H. Brugsch-Pasha (Berlin), Eberhard Schrader (Berlin), and William D. Whitney (New Haven) were elected honorary members. Mr. Alexander I. Cotheal of New York sent a gift of $1,000 to the Society.

The following papers were presented: Prof. W. R. Harper (Yale), with a view to show the value of historical syntax, gave several studies of the Taylor inscription of Sennacherib. The following points were dwelt upon: the accusative in *u* and *a*, the relation between adjective and substantive, permansive, participle, infinitive, and noun with pronominal suffixes. Mr. Lester Brader, jr. (Yale), presented "A Classification of the Sentences in the Taylor Inscription of Sennacherib." Mr. George A. Barton (Harvard) spoke on "The Origin and Character of Tiamat," the Biblical *tehōm*, symbolized as a dragon. Dr. Wm. Hayes Ward spoke on "Babylonian Mythology as illustrated by Babylonian Art." The chief sources of information are the seal cylinders. Dr. Ward thinks that there is no figure of Gisdubar on the celebrated Sargon stone. The figure is rather that of the god of fertilizing waters. We see this from other examples in which there appears in addition an undoubted Gisdubar figure. This god of the fertilizing waters is represented with fish, and with streams coming from his shoulders or from his navel. Before the god there generally appears an attendant pushing a figure. In later art the stream disappears, and the figure seems to come forward willingly. Dr. Ward sees in this figure Shamash, the sun-god, who is also pictured with streams. The Abbu Habba tablet seems to represent the same scene as the one so familiar to us on the seals. When the streams disappear from the seated god, they reappear in the emblems of the sun-god, as four streams of water crossing a circle. There is no doubt that the figure on the Abbu Habba tablet is that of Shamash. The scene must therefore be laid in Heaven, and not in Hades, as heretofore supposed. In the Abbu Habba representation, the god rides upon the *upper* waters, in the neighborhood of which stars are plainly visible.

Dr. Robert Harper (Yale) made a communication in regard to three tablets now in his possession which he had brought back from the University of Pennsylvania's expedition to Babylonia. They belong to the so-called class of loan-tablets, and were unearthed at Niffer. They are dated in the years two and four of Ashur-itilli-ilani, King of Assyria. The dates are of chronological value. They show that the Babylonian Empire existed, if only in name, for four years after the death of Assurbanipal.

Mr. F. P. Ramsay (Wetheredville, Md.) proposed to substitute the terms "postpositive" and "prepositive" in Semitic grammar for perfect and imperfect. Dr. William M. Arnolt (Johns Hopkins) sent a criticism of Schrader's 'Keilinschriftliche Bibliothek,' vol. ii., and Prof. D. G. Lyon (Harvard) a criticism of Peiser's 'Keilinschriftliche Aktenstücke.'

Dr. Cyrus Adler (Johns Hopkins) presented an account of the Johns Hopkins and the Abbot Egyptian collections. The first consists of 680 objects collected by Col. Mendez I. Cohn in the years 1832 and 1835. Among them are two Coptic inscriptions deciphered by Mr. W. Max Müller. The Abbot collection, the property of the New York Historical Society, is well known. It is said to be fully equal to the great collections in Europe; Miss Edwards is authority for the statement that it is one of the best in the world. The more the pity that it is not put in a building where it can be studied to advantage, and that complaints have been made by several scholars that it is not readily accessible.

Rev. Lysander Dickerman discussed the Egyptian synonyms for the word pyramid. He finds the word to be Egyptian and not Greek, and to denote always "a sacred enclosure for the preservation of things."

Prof. R. Gottheil (Columbia) showed several photographs of a remarkable Alhambra vase now in the possession of Mr. Charles A. Dana of New York. The vase is said to have been dug up by some peasants in the Alpujarras, whither Abu Abdallah Mohammad (Boabdil) and the remnants of the Benu Nasr retired after they had surrendered Granada to Queen Isabella, January 2, 1492. The vase is a beautiful specimen of Moorish art. It is perfectly preserved, and contains several interesting Arabic inscriptions. Of the four other Alhambra vases known to exist to-day, that in the Hermitage at St. Petersburg is the only other one in a perfect condition.

Dr. A. V. Williams Jackson (Columbia) read two papers, on "Sanskrit *hrade-caksus* (Rig-veda x., 95, 6)", and on "Avestan Transcription." In the latter, Dr. Jackson pleaded for a uniformity of transcription, at least among American Avestan Scholars. Mr. Charles J. Goodwin sent a paper on "The Hermes Function of the War-God Scanda," based upon a hitherto unpublished text of the 'Atharva-veda.' The likeness between Scanda (from the root *skan*, to leap) and Hermes is very close. They are both gods of cunning and roguery. They have parallel functions, and resemble each other in many minor points.

The fall meeting of the Society will be held at Princeton College. R. J. H. G.

SMOKELESS POWDER.

PARIS, April 23, 1890.

IN the beginning of the month, a brigade provided with the new smokeless powder was sent to Champigny, near Paris, to give a representation of what an engagement under the novel circumstances would be like. Although the powder invented by M. Vieille dates from the time when Gen. Boulanger was Minister of War, the experiments have hitherto been strictly private. So this mimic engagement excited great curiosity among officers and military attachés of foreign Powers. Also a considerable number of *mondains* of both sexes were not disheartened by the early start necessary to enable them to reach the field by nine o'clock. Champigny was a well-chosen spot, owing to the configuration of the country—the villages

in the plain as points of attack, the hills occupied by the artillery, and the two forts of Sucy and Champigny commanding the region.

It took very little time after the engagement began, to realize how different will be the physiognomy of future battle-fields from those of the past. Artillery and musketry opened fire, and no smoke was visible! A single shot fired from the line of fusiliers was absolutely imperceptible, and a salvo fired by a squad at 300 yards only produced a thin bluish vapor that vanished almost instantly. The vapor attendant on the firing of a cannon was more discernible, but as quickly dissipated. To those near, it looked like a slight rise of brown dust, in no way resembling smoke. Had the cannon been loaded with projectiles, the vapor would have been less visible. But in no instance was the vapor dense enough to indicate—even at a short firing range—the position of artillery or infantry. As to the noise: the report of a Lebel gun, usually very loud, sounds to the soldier who fires it like that of a carbine, and cannot be heard 400 yards off. The sound of the cannon is lessened by half, with none of the reverberating roar or thundering; the report is brief and dry. Yet some of the civilians present were disappointed: they had anticipated more than a comparative silence, doubtless expecting to be in presence of weapons equivalent to pneumatic arms.

Such as it is, the new gunpowder, owing to its chief property (burning without sediment and causing no smoke), becomes an agent sufficiently insidious in modern warfare. The umpires who followed the manœuvres through their field-glasses felt something of this as both sides exchanged fire. More than once, but for their cognizance of the theme of attack and defence, they would have been liable (since there was no smoke to indicate danger) to grow confused as to the points that were safe or exposed, and allow a troop to pass under an invisible but deadly fire without scoring against it. Therefore, according to military men, such manœuvres cease to be a very efficacious training-school for generals and commanders-in-chief; they will contribute so little to familiarize them with the ensemble of a battle and the practice of following its different phases. The smoke of the battle-field has been a useful auxiliary to the commander-in-chief. The clouds and puffs floating over the lines of fire, which he followed from his post of observation — usually an elevated one where the atmosphere remained clear—certified the troops engaged, revealed to his practised eye an estimate of the adversary's forces, and showed him step by step the fluctuations of the battle. In short, they often told him more than the delayed reports of aides-de-camp. In future the commander-in-chief will see very little, almost nothing, if no battle takes place in a diversified or wooded country.

Of course it is admitted that powder without smoke cannot remain the privilege of the French Army. Other European nations have taken up the problem and work it *à l'envie*. Some boast of having a formula—Italy and Germany; Russia, too, who, for prudential reasons, awaits a war to manufacture hers. Hence advantages and disadvantages attending its use in the field of war will be common to both sides. Each acquires a better view of his adversary, but loses the protection that a veil of smoke afforded him. *A priori*, one can judge how doubly important becomes the advantage of being the first to see the enemy—unseen by him if possible. For this reason every detail in the uniform that might mark too conspicuously the presence of a troop is to be discarded. In the French Army red is to be replaced by gray, and the brass buttons will be bronzed. Bronzed also will be the bayonets. But, for all these precautions, surprises—and surprises are common occurrences in war—will be much easier to effect than before. The troops attacking an advance post will do so without calling the attention of the reserves. In the same way the advance post returning fire will not be heard, most likely, by its own lines, and will fail to give the alarm. The side that first receives the fire will suffer a serious disadvantage, for some time must elapse before it can ascertain whence comes the attack, and the forces belonging to either side, though they may not be two miles distant, will know nothing of the skirmish.

In consequence of the absence of smoke, and partial silence, reconnoitring will be arduous in future campaigns, and will necessitate a greater and a better-trained number of men than heretofore. Aerostats will not play such a part in tactics as the many military trials had prepared us to expect. According to far-seeing officers, the idea is to utilize captive balloons only for short and temporary ascensions in order to ascertain the position of the enemy before the attacks; also, in the defence of forts and cities, to mark the site of the besieging batteries. The observer's view is not so extended after all: for a balloon not to run too great risks of being hit, the enemy mu t at least be at a distance of 5,000 yards. Then, if it rises to 600 yards, the observer cannot overlook any small obstacles existing 600 or 700 yards behind the first limit of 5,000; in other words, a battery may remain unperceived by a man in a balloon at a distance of less than six kilometres. The virtue of this experiment has been tested from the top of the Eiffel Tower. The view reaches very far—as far as the hills of Normandy around Rouen; yet a battery filing under cover of an undulation in the landscape just outside of the gates of Paris could not be seen.

Owing to the distance that two armies will preserve during the preliminaries of a combat, cavalry will be intrusted with the perilous honor of getting information—perilous because a mounted troop is not easily kept out of sight, and the chances are against its being the first to perceive a well-intrenched advance post. For the rest, the rôle of cavalry will be greatly curtailed; the future charge without the protection of smoke to cover its advance is looked upon as problematic. Even in late wars the increased improvement in quick-loading arms had diminished its efficacy.

The results of the new powder in what concerns infantry are doubtful, they depend so much on the quality of troops. As long as well ambushed, the fusilier will be a myth—firing at 600 yards, his shots will neither be seen nor heard. If he has a good view of his adversary, he can make a better percentage on his shooting than he has ever done. But his rôle in battle is not to remain stationary. He must advance and show himself. No longer protected by a cloud of smoke, he will have to face a fusillade tenfold more appalling than that of any previous battle-field: then what will remain of the teachings of his chiefs that to show heels is certain death?

Here is another problem. Artillery gains everything by operating in a clear field. Before, it worked blindfolded, as it were; the enemy's smoke served as aim, and it was often a very deceiving one. Now the exact position of the opposed artillery will be visible unless exceptionally sheltered by some natural defence. With even chances, when once a battery has attained precision in its aim—which before could but imperfectly be determined on account of smoke—it will serve as a guide to the neighboring batteries, and thus the fire will be concentrated and more effective. Again, the men serving a battery will be more apt to follow calmly the commands of the captain when there is no smoke and less noise. But in that artillery duel considerations of shelter will have to be reconciled with those regarding a favorable offensive position, instead of being held secondary according to present theories, for reckless exposure will be equivalent to seeking death. Considering that artillery will be the mainspring in future wars, it will have to make the most of its power; its influence will often decide the day.

With all this perfecting of the mechanism of war, the question to be solved is if the soldier will become the perfect workman he is expected to be in order to make use of the tools destined for him. The consideration is purely psychologic, and modern theorists admit it. Now, will the soldiers' morale stand the comparatively normal atmosphere of future battle-fields? Without forcing the note, as some writers do who speak of a verdant country where no noise is heard, where nothing stirs, but out of which death is belched through invisible cannon and guns (simple physical laws are opposed to this uncanny conception of a silence so deep and invisibility so complete), it must be granted that with shooting at long range there will be perplexity in the apparent emptiness of the field. This uncertainty will have limits; but to what extent the soldier's nerves will be tried when, the stimulating excitement of smoke and noise failing, he will be more keenly alive to the horrors of the battle, is a question that without actual experience no knowledge of humanity can answer.

Such were the martial hypotheses I was ruminating among the first lilacs in a flower market as I reëntered Paris, when a man offered me a small handbill, pale-green, the color of hope. On one side a few lines set forth the European military debt, nineteen millions a day. On the other, a dove, bearing an olive branch, soared above the exhortation: "Paix entre les Peuples! Arbitrage International!"

LECOCQ DE LAUTREPPE.

AT SAINT HELENA.

U. S. S. *Pensacola*,
ASCENSION, March 16, 1890.

ARRIVED to-day—nearly a week out from Saint Helena, under sail all the way, and another ideal voyage. Here it is a pleasure to see H. M. S. *Archer* again, that good ship looking much like our own *Yorktown*, and having been the welcome bearer of our mails at Cape Ledo on the African coast, when visiting her sister ship, H. M. S. *Bramble*, attending upon the English Eclipse Expedition. Here, too, at Ascension, we find Admiral Wells, R. N., in his splendid flag-ship the *Raleigh*, but recently returned from Delagoa Bay. In a few days, however, the American frigate will be the sole occupant of the little bay off Georgetown, as it is named (or Garrison, as it is always called), for both H. M. SS. *Raleigh* and *Archer* are only temporarily here, on their way to Saint Helena. Meanwhile, pending certain naval evolutions, the instruments of the Expedition cannot go ashore, and we have excellent opportunity to view from our ship the Admiralty's stronghold of the South Atlantic.

Outwardly Ascension much resembles Saint Helena, in being an island of exceptional beauty—the beauty of sheer desolation, that is. Ascension seems positively innocent of verdure. I should not have supposed it possi-

ble that anything could appear more desolate than the frowning exterior of Saint Helena, but it is. At Ascension you see absolutely nothing but smooth, brown volcanic hills and rough black "clinker" plains. The little fortified town of Garrison, neatly kept, and with never an unused structure, makes the surrounding desolation seem even more desolate. Every now and then, as the cloud-cap on the distant summit of Green Mountain rises a trifle, you can see that there is after all on the island a suggestion of something green; but you cannot make out for sure whether it is vegetation or only a greenish rock of some kind or other. However, after the charming disappointment afforded by the interior of Saint Helena, I prudently reserve judgment on Ascension.

I might send columns about Saint Helena, but there is no time, and readers would be even less, I fancy; for pretty much everything about this far-famed isle has been said that can be said, except that there is yet much room for competent writing of its scientific history. In particular the geology has yet to be completed on which Charles Darwin, more than a half-century ago, made so thorough a beginning in his 'Geological Observations.' In later years, Capt. Oliver, R. A., did excellent work. Geologically, Saint Helena is volcanic hodge-podge; and a visit to certain portions of its rocky desert is, I dare say, as good as a trip to the moon. To the geologist who loves hard work, it must be a perfect paradise—no end of clambering up hill and down dale; in fact, if you are anywhere in Saint Helena, and want to go anywhere else, you have to go either up hill or down. The Sandy Bay region, regarded as the site of an ancient volcanic crater, was to me the most instructive geologically. I have never seen the effects of processes geogonic anywhere more definitely marked. Dykes there were, running in every direction—crosswise, in and out—in the plainest confusion, but even an astronomer could see that they must be dykes.

But any one seeing only Jamestown and Longwood, Napoleon's exile home, and that marvellous crater through which the road winds down to Sandy Bay, sees Saint Helena only in part. Other regions there are—the official residence of the Governor, known as "Plantation"; Oak Bank, the residence of the Bishop; and "The Briars," famous because Napoleon liked it and first lived there on arriving at Saint Helena; and in these and many other localities nature perpetually sustains a lavish wealth of verdure, tropic and sub-tropic. But I leave this for poets to tell about. None, however, can put it more beautifully or appropriately than did Saint Helena's best-known resident, good Lady Ross, who said to me, "Our island is an emerald set in bronze."

The entomology of Saint Helena was well done by Wollaston long years ago, and the botany is excellently presented by Melliss, whose large treatise (London, 1875) on this many-sided isle of the mid-South Atlantic is in many respects most admirable. As everybody knows, Saint Helena has been a favorite spot for the visits of scientific men from time immemorial. Naturalists in abundance, of course; but workers in exact science in ample number also, beginning with the distinguished Edmund Halley, who when only twenty came to the island in 1676, built an observatory on a ridge near the present road to Longwood—a spot still known as Halley's Mount, and distinctly visible as a ruin of walls overgrown with bushes. Here it was that Halley stayed two years, collecting observations of precision for a catalogue of the stars of the southern skies, and observing the transit of Mercury in November of the year after his arrival.

I had little idea that there were so many localities of scientific interest in Saint Helena until Prof. Abbe handed me just now a list of a score and a half, which I shall print in Bulletin No. 13 of the Expedition. Of course a few of these are prominently known, as, for instance, Johnson's observatory on Ladder Hill, occupied in 1823-'34 for purposes of stellar observations, published in 1835 by the Honorable East India Company; and by Dr. David Gill, now Astronomer Royal at Cape Town, who, in 1877, en route for Ascension to determine the parallax of the sun by east and west observations of Mars at its apposition that year, made the site of Johnson's observatory the base of his determination of the longitude of Ascension. Perhaps equally well known is the station of Foster's gravimetric work in 1829-'30, repeated by Mr. Preston of our Expedition, who has swung a pair of Peirce pendulums in the judges' room of the Courthouse, adjoining the Castle at Jamestown, and has further extended the survey by an independent determination at Longwood. There, by the kind courtesy of Gov. Antrobus of Saint Helena, and Monsieur Morilleau, Guardian of the Napoleonic Possessions in the Island, the gravity apparatus was all mounted and used in the Longwood New House, still building for Napoleon's occupancy at the time of his death in 1821. A better station for these delicate instruments than the unoccupied kitchen of this spacious residence could hardly have been found; in fact, at all the places where the pendulums have so far been swung, Mr. Preston has been singularly fortunate in chancing upon observing apartments where accidental variations of temperature, the bane of gravity-work, were practically nil. The kitchen floor at Longwood, of stone, was complete, excepting two large flags taken up years ago and sent to Washington for incorporation into the national monument.

Hardly less known is Lefroy's significant work, begun just a half-century ago, and maintained almost ten years, at the Saint Helena Magnetic Observatory, whose site adjoins Longwood New House. The building is now an inn, known as "Bagley's," and in the large room at the left on entering may still be seen marks in the floor, evidently where the instrument-piers stood.

Among other localities remarked by Professor Abbe in his interesting Bulletin are those occupied by Maskelyne and Waddington (1761), John MacDonald (1796), Admiral Duperry (1832), and Captain Sir James Clarke Ross, commanding the *Erebus*, and Captain Crozier, commanding the *Terror*, in their celebrated Antarctic voyage (1840). That Saint Helena will continue to be visited in the future by scientific and other workers goes without saying: its equable temperature, its healthful climate, the beauty of its scenery, its association with historic names, and its situation quite unique, all combine to make it a spot of rare attractiveness.

Quite as I surmised in organizing the Expedition with a department of meteorology included, results have been reached which are full of interest, and have important bearing on marine meteorology not only, but on land weather also. I can readily see that this department of the Expedition might easily have been less fruitful, had I been obliged to place it in charge of one knowing the literature and methods of his science less fully than Prof. Abbe. From a preliminary memorandum of his results, I collate here and there a paragraph.

I think I have previously alluded to his "nephoscope," specially constructed for this Expedition. Prof. Abbe has elaborated a method for its use in determining the actual height and velocity of clouds by combining observations made when the vessel or observer moves successively in two different directions, or with two different velocities; and he calls this the "aberration method," to distinguish it from ordinary parallax methods. His main work has been a determination of the motions of the atmosphere from a study of the lowest winds and the successive strata of clouds; and, to this end, he has maintained daily observations with the nephoscope at sea, and when possible on shore. The visible clouds, he concludes, give little or no information as to the motions of the atmosphere in the widest sense, but prove that the atmosphere is everywhere divided into local systems of currents, so that we have winds circling around a storm-centre, a high barometer, an ocean, or a continent; and, at least in the Atlantic, have no winds that circulate exactly as they would do on a rotating, uniform, smooth globe. The angles of inflow and outflow have been determined for three or four successive strata of air in mid-Atlantic; also the relations of the cloud-appearances to distant storms, squalls, rains, and changes of wind, with such accuracy that on many occasions predictions of such phenomena have been made and verified.

At Fayal the phenomena of the "hood" over Pico were observed to be the same as those at Mount Washington and in other familiar instances. Pico will be remembered as the symmetric cone rising from the island of like name to a height approaching 8,000 feet. It is perhaps the most striking natural object in the Azores, and its likeness to Japan's great sacred mountain Fuji-san is often remarked—though only a miniature Fuji of course. As Prof. Abbe says, a mountain obstructs the lower wind, and thus forms a scud cumulus (or cumulus whose ascending currents are due to obstructed wind rather than to heat). These cumulus currents themselves obstruct the wind at higher levels, and so it is pushed up, flows without forming discontinuous eddies, and thus forms the hood or arched cloud. The hood will form on the very peak if the air below the summit is calm, and the air below the peak itself can be considered as a small obstacle to a gentle current at its level. With favoring conditions, beautiful hoods form over ordinary cumulus clouds: it is simply necessary that the upward deflection of the disturbed rectilinear motion shall be so gentle as not to introduce sudden curves and eddies.

At San Vicente, Cape Verdes, the cirrus clouds were shown to have a local origin, while at Freetown, Sierra Leone, a study of the "arched squalls" showed that they, the African "tornado," and the afternoon thunderstorm of the Eastern United States have the same nature and are governed by like laws, while they differ only in degree. At Elmina, on the Gold Coast, the *Harmattan* was taken up and shown to be dry wind flowing from the interior of Africa at its winter season, with a deflection to the right, and bringing the ashes of local bush fires in the interior, commonly known as "dust from the desert." The whole phenomenon is perfectly analogous to the flow of dry, cold air from Canada over the Rocky Mountain slope and southeastward across the United States; also, the *Bora* of Russia and the *Pampero* of South America have a like physical origin.

At Cape Ledo, our eclipse station on the west coast and about 300 miles below the mouth of the Congo, Professor Abbe had extraordinary

chances to investigate the cirrus; it was a daily experience to observe large cumuli ascend bodily, lose their flat bottoms, become pear or balloon-shaped, and then spread out into fields of beautiful cirrus streaks and cirro-cumuli. The highest cirrus clouds were found to belong to a local horizontal circulation, near the seacoast, whose range was between the limits fifty miles east and west of the coast-line. At Loanda the phenomena of Cape Ledo were repeated, and Prof. Abbe presented to the Meteorological Observatory there a nephoscope similar to his own, securing the promise of regular cloud-observations with it. There are several meteorological observatories in Angola, and from their records Prof. Abbe will compile improved meteorological notes for our 'Sailing Directions' along the African Coast.

At Cape Town, the clouds on Table Mountain afforded remarkable illustrations, under novel circumstances, of important principles in meteorology and fluid motions; the winds and clouds were studied day by day from the Royal Observatory, and a system of deep-earth temperatures was initiated within the tunnel of the new aqueduct.

At Saint Helena, Prof. Abbe determined barometrically the altitude of many points as a basis for contours on Lieut. Palmer's excellent map of the island; and his attention being drawn to "the rollers," he concluded arrangements for a record, as complete as possible, of past observations of these unusual phenomena, and for future observations as well, in the hope of definitely ascertaining their source and the laws governing their recurrence. Rain at the island essentially depends on the trade wind, varying with its variations. Accordingly all the old rain-fall records were collected, and arrangements made for new ones on a scale so large that Prof. Abbe expects to derive from their discussion a better view of the general variation in the trades than can be obtained from the records of vessels merely. In addition to that, Governor Antrobus will make an effort to secure a permanent meteorological observatory on Saint Helena, a step whose importance can hardly be overestimated, if we fully regard the extraordinary geographic position of the island.

But enough of meteorology for now. Soon the pendulums will be swinging in Garrison, meteorological work will be under way from the summit of Cross Hill, the naturalists will be traversing the island forth and back; later the gravity instruments will be transported to the high-level station near the top of Green Mountain, and within a fortnight afterwards, the 8th of April, most likely, the *Pensacola* will again be homeward bound. Barbados should be in sight by the 3d of May, and Sandy Hook a month later. DAVID P. TODD.

Correspondence.

AN ODOROUS COMPARISON.

TO THE EDITOR OF THE NATION:

SIR: Mr. Goschen has just laid before Parliament the annual budget. He shows that the estimate of expenditure made a year ago of eighty-six millions of pounds has been exceeded by £116,000, *or less than one-seventh of 1 per cent.* The revenue has exceeded the estimate by about 4 per cent., or £3,221,000, and he proceeds at once to dispose of this surplus as follows:

Barracks for soldiers	£300,000
Volunteers	100,000
Colonial and Indian postage	80,000
Release of duties on plate	200,000
Release of duties on tea	£1,200,000
Release of duties on currants (in consideration of concessions made by Greece on British exports).	210,000
Release of beer duties to local finances	386,000
Release of house duties	540,000
Leaving a balance for contingencies of	205,000
	£3,221,000

In other words, every reduction, except possibly the small duties on gold and silver plate, is made in the interest of the mass of consumers who have no special influence, and not in that of powerful private and local combinations, which might be expected to exert such influence.

Let us now turn to another picture, the figures for which I take from a leading daily paper, the only authority that I know of from which anything can be learned. Mr. Windom estimates the revenue for the next year in round numbers at 385 millions and the expenditures at 341 millions, leaving the pretty liberal margin of 44 millions, or nearly 12 per cent. It would be the height of impertinence (or rather of futility) for Mr. Windom to suggest either a disposition of the surplus or a mode of reduction of the revenue. And so, taking the side of revenue only, there comes a certain Mr. McKinley—of whom probably not one per cent. of the people of the United States ever heard the name or know where he comes from, who derives his reputation from the Tariff Bill, not the Tariff Bill from him (just as Mr. Mills did a year ago), who has no authority whatever, but is wholly dependent upon his Committee and the House—and prepares a tariff bill which, he says, would reduce the revenue by 71 millions, though as to whether it would or not there is not the slightest responsible evidence. If so, however, it would make a rather violent change from a surplus of 44 millions to a deficit of 27 millions. Whether it would or not must depend wholly upon expenditure, over which Mr. McKinley and his Committee have no control, but which belongs to another committee apparently not even represented by a Mr. McKinley, but wholly anonymous. It seems to be assumed that this Committee will stop the payment of 40 millions to the sinking fund, which would cause another bounce to a surplus of 21 millions. "Not much," as the paper referred to sadly observes, "but enough if the party in power chooses to live within the estimates."

It seems, however, that the party in power had no such idea. Mr. Windom's estimate for pensions is 98½ millions. The House has already voted 146 millions for pensions, and has at least one other bill favorably reported for 7 millions. Taking the first figures only, they would swallow up the 21 millions of surplus and leave 26 millions of deficit. Mr. Windom's estimate for river and harbor improvements is 12 millions. The House bill gives 21 millions, which would add 9 millions to the deficit, and make it 35 millions. Mr. Windom made no estimate for public buildings, but House and Senate together have passed or reported 25 millions' worth, which would make the deficit 60 millions, while if by any chance the bill to stop the sinking fund should fail to pass, the deficit would be over 100 millions.

It may be said that these things will not be done. Perhaps not; but nobody can say which will and which will not, or whether the close of the fiscal year will see us with twenty-five millions of surplus or deficit, while over all hangs the dark cloud, with almost equal uncertainty of its descent, of unlimited silver inflation. That is the sum of our system of finance.

What is the difference between the two? Simply and solely this, that in Great Britain the whole matter is left to the Chancellor of the Exchequer, acting upon his responsibility as a national official, while Parliament limits itself to approval or rejection of his measures. In this country no individual and no national authority has anything to do with the finances, which are left in sections to jarring and impersonal committees of local representatives, pulled about by private, local, and party interests of every description. So much is certain, that if we expect our finances to get into decent condition, we shall have to put them into the hands of the Secretary of the Treasury, and let him manage them, to some extent, at least, after the fashion of an English Chancellor of the Exchequer. G. B.

BOSTON, May 10, 1890.

CONGRESS AND THE LOTTERY.

TO THE EDITOR OF THE NATION:

FRIEND: How happens it, while the whole religious press and every respectable daily unite in condemnation of the Louisiana Lottery, that papers are allowed to be published at the capital of the nation advertising that iniquitous scheme, and the Government mails carry those same papers everywhere, even to the remotest corner of the republic?

There lies before me the 'Capital Almanac' of forty pages, handsomely illustrated, bound in covers lavishly gilt, and bearing on its title-page, as publisher, the name of "J. S. McIntyre, Washington, D. C." This particular copy came to me from Santa Clara, California, where it was locally issued by a Spanish dealer in general merchandise (liquors especially), whose imprint is found on the under cover.

This 'Almanac' fully declares its ulterior purpose in an extended exhibit of the aforesaid lottery, prefaced by a special plea—though an extremely shallow one—for the existence of what its caption announces as "A Useful Institution." The said plea, which could only mislead those who are already very willing to be led astray, tells how possible it may be for humanity to be mistaken (did not Luther, Wesley, and Cotton Mather labor under partial delusions?), and so the outcry against the lottery may be, in fact is, a huge mistake. Evidently it is so, because, as a Bible instance, "Moses and Aaron, the greatest of lawgivers, accepted the lottery system by divine command as the most equitable for dividing the land of Canaan among the chosen of the Lord." But I need not pursue the pseudo-argument.

From Washington, D. C., also emanates a sensational story paper, *Family Fiction*, but it is in truth simply a vehicle for the advertisement of the same lottery. It is distributed in immense quantities from the Atlantic to the Pacific and from the Gulf to the Great Lakes.

Congress has been besought time and again to enact laws for the prevention of the publication of demoralizing sheets of the foregoing character in the District, and against their dissemination through the mails. Postmaster-General Wanamaker, in his annual report upon the assembling of the present Congress, urgently asked for legislation to stop the sending out of such matter. Two bills, at least, were introduced early this session, one to prohibit the transmission of lottery-advertisement papers through the mails, the other to stop the collecting and paying of lottery prizes through the banks and express companies. These bills were referred to a committee; why are they not acted upon? Would it have been any worse for the North Dakota Legislature to

legalize the Louisiana Lottery than it would be for Congress to continue to protect the advertisers of the same lottery in the District of Columbia, and to allow the mails to spread their mischievous invitations and announcements far and wide over the country without let or hindrance? JOSIAH W. LEEDS.

PHILADELPHIA.

BOOK PIRACY.

TO THE EDITOR OF THE NATION:

SIR: Is it not time to "cry halt" to the encouragement which clergymen and other reputable people seem to be giving (to judge from the circulars they receive) to the various thieves' enterprises of publishing pirates? I have this morning received (this time from Boston) the second of such recent invitations to become a party to such a piece of mean stealing. It is unblushing in its effrontery, offering "an exact fac-simile" of the "Great Edinburgh Ninth Edition" of the 'Encyclopædia Britannica,' "reproduced by photographic process," the only new thing being the maps.

The 'Britannica' seems to have been a particularly attractive game from the time, near the beginning of the present ninth issue, when a Philadelphia house started a reprint, and, on being brought to bay, was let off by the judge—a very Dogberry—on the richly bouffe ground that the defendant had invested such a large amount of money in his plant (burglars' kits are apt to be costly), down to the later New York venture, admitted to advertise—I was loath and grieved to believe my eyes—in my long-time standard, *sans peur et sans reproche*, in newspaper morality, the *Nation* itself.

Is it right for us to let the cheapness of the coveted goods blind our eyes to the criminality of the whole business, and to the fact that *we who buy or tolerate are parties to that criminality?* With a decent law of copyright, these people would never dare to do these things. Shall we encourage them to take advantage of the present defenceless condition of the foreign author and publisher?

Respectfully yours, H. D. C.

EASTPORT, ME., May 3, 1890.

[We have never attempted to make our advertising columns a test of copyright integrity on the part of publishers, and our correspondent must perceive on reflection that we should have, on his principle, to go much further than exclude the advertisement of the pirated 'Encyclopædia Britannica.' From downright appropriation like this—a gross case, because of the enormous cost of the original work—to compensation of the foreign author at the pleasure of the American publisher, examples of want of strict justice and fair-dealing are to be found in the majority of the catalogues which make up the Trade-List Annual. This is especially true of publications before the copyright issue became a burning one as it is now. We are not, for our part, chargeable with concealing from the public the true state of affairs, or with failure to demand the most advanced legislation to remove a national disgrace.—ED. NATION.]

Notes.

THE well-known London publisher Walter Scott has appointed A. Lovell & Co. of this city his sole agents for the United States, and they will keep a full line of his publications always in stock. They announce for May 27 three additions to his Great Writers, Canterbury Poets, and Camelot Series, respectively, viz., 'Life of Robert Browning,' by William Shairp; 'The Lady of Lyons, and Other Plays,' by Lord Lytton; and 'English Folk and Fairy Tales,' edited by E. Sidney Hartland. Messrs. Lovell announce for themselves 'Clio: A Child of Fate,' by Miss Ella M. Powell.

David Stott, London, launches this month the "Foreign Favorite Series," leading off with a translation of 'Les Caractères' of La Bruyère, by Helen Stott.

A series of small books under the general title, "Science in Plain Language," is announced by Macmillan & Co. The first volume, to be published immediately, includes the following subjects: Evolution, Antiquity of Man, Bacteria, etc. The same firm has just ready a folio volume on 'Scottish National Memorials,' with three hundred illustrations, including thirty full-page plates.

A. D. F. Randolph & Co. will shortly publish 'Leah of Jerusalem: A Story of the Time of Paul,' by Edward Payson Berry.

John Wiley & Sons have in preparation 'Elliptic Functions,' by Prof. Arthur L. Baker of Stevens Institute.

D. C. Heath & Co., Boston, have in press 'Selections from Heine's Poems,' edited, with notes, by Prof. Horatio Stevens White of Cornell.

Éditions de luxe of George Eliot's 'Romola' and Victor Hugo's 'Hans of Iceland' are in the press of Estes & Lauriat, Boston. The former will contain photo-etchings of Florentine scenery; the latter likewise many illustrations of the same and other kinds.

A new work, 'Jesus of Nazareth,' by President John A. Broadus, is nearly ready for publication by A. C. Armstrong & Son.

The Salem (Mass.) Press Publishing and Printing Co. will, if the requisite support be obtained, issue in parts by subscription a 'History of the Putnam Family in England and America,' by Eben Putnam of Boston. The work will be freely illustrated.

The delightful "Temple Library," published in London by J. M. Dent & Co. and in this country by Macmillan, has just been enlarged by Landor's 'Pericles and Aspasia,' in two volumes admirably printed, bound, and illustrated. Portraits of the title personages and of Alcibiades, with one of Landor never before reproduced, and etchings of his birthplace and his villa at Fiesole, adorn the dainty pages. The editor, Mr. C. G. Crump, furnishes a model introduction, clear and succinct; and his notes of variant readings make the present edition valuable from a scholarly point of view. Inasmuch as one-half of the issue is reserved for the American market, it is a pity that Mr. Crump should have omitted the curious ode prefixed by Landor to the second volume of the original edition, in praise of Andrew Jackson. The hero of New Orleans had neither art, eloquence, nor breeding to remind one of Pericles any more than Mrs. Eaton does of Aspasia; but Landor could sing of him in this strain:

> "And where the fane of Pallas stands,
> Rear'd to her glory by his hands,
> Thou, altho' nowhere else, shalt see
> A statesman and a chief like thee."

Mr. Edmund Gosse has republished, in an attractive little volume, 'Robert Browning: Personalia' (Houghton, Mifflin & Co.), the article originally contributed by him to the *Century* nearly nine years ago upon the 'Early Career of Robert Browning.' This paper was written from material furnished by Browning himself in conversation, and was approved by him, and consequently is authoritative. It recounts in a pleasant narrative style the events of the poet's life until his marriage, and describes his circumstances. The more important portion is that detailing the relations between him and Macready, and the history of the performance of his plays when first written. To this paper a few "personal impressions" are appended, which appeared in the *New Review* after Browning's death.

The success of Mr. Andrew Lang's clever 'Letters to Dead Authors' arouses an expectation of amusing things in his latest experiment in "epistolary parody," which comes out under the title 'Old Friends' (Longmans, Green & Co.). The notion that contemporary characters in fiction must have sometimes met in so small a world is a fertile one, and under light treatment may be made productive of entertainment; but a less ready brain than Mr. Lang's might well hesitate to put it to the proof. The expedient of introducing our old friends of the novelists by means of letters was almost necessary, but in the letters they are made to narrate adventures of themselves in real contact with one another. A humorous turn is, of course, given to the whole. The range is broad enough to include Euphues and Herodotus, as well as Pickwick, Tom Jones, and "She." The book, however, is of the slightest in its substance, and not to be compared to the Dead Authors' collection; the humor is not of the most laughter-provoking order, and there is a lack of inventiveness in situation. The keeping of the tone and mannerisms of the characters is altogether the most commendable trait of this literary "skit," which may serve to pass an idle hour—as indeed it aims at no more.

Two little books on Mexico come to us from A. C. McClurg & Co. 'A Winter Holiday,' by Julia Newell Jackson, disarms criticism by the frank declaration in the preface that the book is only "a trifling bit of thistle-down." It consists of random notes of travel, written with a good deal of forced sprightliness which becomes rather depressing in the end. Mr. Arthur Howard Noll's 'History of Mexico' is a more serious work, being, in fact, a very convenient and accurate manual of the subject. The author has a good sense of proportion, and has made diligent use of the best authorities, though he omits to tell us who they are. His account of the French intervention will bear a little revision, but in general his work, within its limits, is correct and satisfactory. It certainly does not need the strange excuse for being, advanced by Mr. Noll—the fact, namely, that no "comprehensive history of Mexico exists in the English language."

Mrs. Hester M. Poole's 'Fruits, and How to Use Them' (Fowler & Wells) is a welcome addition to the list of cook-books. In few households is there command of an adequate variety of modes of preparing fruit for the table, though the supply itself may be, as the author points out, superabundant. Mrs. Poole gives nearly 700 recipes. She dedicates her work to the W. C. T. U., and associates it also with the vegetarian conscience when she says, somewhat naïvely, that "the shedding of blood and sacrifice of animal life, especially in the summer season, is not necessary in order to furnish a table both wholesome and attractive."

At the opposite pole from the foregoing is the "guide for amateur cooks" called 'What One Can Do with a Chafing-dish' (New York: John Ireland). Here there are some sixty recipes, but, except for "beignets de pommes" and "Warren's prune toast," fruits are completely ruled out, and vegetables are subordi-

nate to meats. The book is well conceived and liberally got up.

Ticknor & Co., Boston, publish a second edition of 'The Moral Ideal: A Historic Study,' by Julia Wedgwood. The work is an exceedingly interesting and valuable one for general students.

The Riverside Library for young people contains a little book on 'Coal and the Coal Mines,' by Homer Green (Boston: Houghton, Mifflin & Co.). It is prepared with greater care and with a better knowledge of the subject than one often finds indicated in juvenile books, and it contains many chapters that must interest its readers. The many difficulties that attended the introduction of anthracite coal into domestic use affords material for a number of entertaining stories; the dangers which the miners have to encounter and overcome, and the more important disasters that have occurred in our mines, are narrated in a simple but sufficiently impressive style, which serves to enliven the more matter-of-fact description of mining work in the coal regions of Pennsylvania. The preliminary geological chapters are not up to the quality of the rest of the book. A boy, in reading these earlier pages, might easily gain the idea that the author knew what is told from some other evidence than the facts here stated; whereas, it is only these facts and others of the same kind which serve as evidence to the conclusions that are given. We do not know that "the air was laden with carbon" and moisture, and therefore infer that plants grew luxuriantly; but, by reason of the luxuriant growth of coal plants, it has been inferred that the atmosphere of their time was unusually moist and carbonaceous. This kind of inverted order of statement is unfortunately common in popular scientific writing.

Mr. J. R. Elliott discusses 'American Farms; Their Condition and Future' in the "Questions of the Day Series" published by the Putnams, but we cannot say that his book throws much new light upon the subject. His treatment is rather emotional than scientific, and, while we sympathize with his motives, we do not feel that he is quite competent to deal with the difficulties of his task. The remedy for the decline of agriculture is, in the first place, "a proper and more general realization of the imperative necessity for a larger proportion of the people to be engaged in tilling the soil than at present." Then the farmers must make themselves a political force and improve the laws, abolishing "all laws which tend to engender national strife"; "which are barriers between supply and demand"; "which tend to prevent the reduction of taxes to the actual needs of the Government, and the reduction of government to the actual needs of the people"; "which prevent the placing of taxes where they should be placed"; and "which force labor to give unfair support to capital or to monopoly, creating inequality, sacrificing the true ethical spirit, which should prevail, to the wiles of scheming politicians." We fear that both parties would be only too willing to insert these planks in their platforms.

Those portions of the report of the Massachusetts Bureau of Statistics of Labor for 1889 which have so far appeared contain very little that is noteworthy. As to cost of transportation, the returns show that the amount paid for freight is about 3 per cent. of the value of manufactured goods, but we are not at all sure that many of these payments are not reckoned twice. It will perhaps afford pleasure to some minds to learn that the annual product of the manufactories of Massachusetts would fill a train of freight-cars 958 miles long. Great labor has been expended in getting answers to the question: "Are sales decreased by the importation of foreign-made goods?" Such statistics have the same scientific value that would attach to a vote of the farmers as to the influence of the moon upon growing crops. It may, however, be of interest to politicians to learn that nearly half the answers were to the effect that sales were not decreased, while about one-sixth held that they were decreased, and that the latter answers were from the larger industries. The figures concerning foreign sales and competition are, in our judgment, quite worthless. The expedited bulletin as to the condition of employees consists principally of a republication of some portions of the Census report of 1885, and we fail to discern any satisfactory reason for hastening its appearance—if, indeed, there is any reason for its appearing at all.

We have from Johns Hopkins University a monograph, in the form of a doctor's dissertation, which deserves more extended notice than we can here give it. It is a study of the history of the Absolute Participle in Old English, by Morgan Callaway, now Professor of English in the Southwestern University, at Georgetown, Texas. Prof. Callaway first gives a complete list of all absolute constructions to be found in old English; then he discusses the history of the construction in all the Teutonic languages; next he considers the substitute constructions used in Old English in rendering the Latin absolute participle; finally, he sets down what he considers to be the stylistic effect of the construction, and in a brief summary formulates his conclusions. The treatment of the prose constructions is clear and full, and the citation of examples is apparently exhaustive. Dr. Callaway, however, leaves much to be desired in his treatment of the related poetical constructions, and we trust that he will have opportunity soon to continue the study. The monograph is a credit to American scholarship, and an indispensable aid to students of Old English grammar.

The eighth series of the Johns Hopkins Studies in Historical and Political Science began with a double number, entitled 'The Beginnings of American Nationality: the Constitutional Relations between the Continental Congress and the Colonies and States from 1774 to 1789,' by President Small of Colby University. This is a methodical investigation of the documentary evidence relating to the subject, and the author's attitude of mind will much commend itself. But half the ground of the essay is covered by the present instalment. "I plead guilty," says Dr. Small, "of the large ambition to follow out this method and rescue our constitutional history from the misinterpretations of Von Holst." No. 3 of the same series is on 'Local Government in Wisconsin,' by David E. Spencer of the State University.

Prof. E. J. James of the University of Pennsylvania has translated for its Political Economy and Public Law Series the present Federal Constitution of Germany, together with a section introductory to the instrument from Von Rönne's 'Verfassung des Deutschen Reichs.'

'The History of Federal and State Aid to Higher Education' is given by Prof. Frank W. Blackmar of the University of Kansas, in Circular of Information No. 1, 1890, of the Bureau of Education at Washington. It makes a solid pamphlet of 343 pages. It leaves on one side the history of normal-school education.

With No. 19 of his 'Complete Index to *Littell's Living Age*,' Mr. Edward Roth (Philadelphia, 1135 Pine Street) concludes the section History, and gives the whole, or very nearly the whole, of Literary Criticism.

The *Unitarian Review* for May prints a paper by the late Prof. William F. Allen, read before a social literary club in Madison, Wis., on the subject of Historical Fiction. Our readers may remember a list of novels of this order which he drew up and printed some years ago as an aid to historical study, or the fostering of a love of it. The present writing was the last that he completed, and it was composed in the greatest haste. Some of its doctrine he might, and we think would, have modified on revision, but the paper is well worth reading.

From the Oxford University comes an 'Essay on the Importance of the Study of the Slavonic Languages'—where *Slavic* should rather be read than Slavonic as a general designation—by W. R. Morfill. It is, in fact, his inaugural lecture of January 25, 1890. Incidentally he depreciates Dr. Bowring's translations from Russian, Polish, Serbian, and Bohemian, saying that "unfortunately there is a want of color in all these versions, and a great sameness"; misapprehensions, too, because of following German versions.

The *Revue des Traditions Populaires* for February 15 notices a collection of twelve Rumanian melodies by G. Musicescu, transcribed for the piano, with words borrowed from divers national sources. The most of them are *chansons de danse*, some love songs, and one a striking soldiers' song. The melodies are highly praised from a musical point of view; and the *Revue* gives some specimens of them.

The Congregational Club of Boston in February last took steps to promote setting up at Delftshaven a monument to Dutch hospitality to the Pilgrims. A suitable site, at the junction of the Leyden Canal with the River Maas, has been fixed upon and can probably be secured. The Rev. William Elliot Griffis, D.D., 638 Tremont Street, Boston, is chairman of a committee to solicit subscriptions, large and small. The Treasurer is Mr. Frank Wood, 352 Washington Street, Boston.

The photographers are bestirring themselves to mark the just-passed semi-centennial of the discovery of photography by a monument to Daguerre. This undertaking appeals, of course, far more widely than to the profession itself. The Photographers' Association of America will set up the memorial in front of the Smithsonian Institution at Washington. The design by Mr. J. Scott Hartley has been severely criticised and sensibly modified, and still, we fear, does not promise much as an addition to the art products of this country.

— As the library of the British Museum overshadows every other in London, few Americans can have had their attention called to an humbler but interesting public library, namely, that of the Corporation, or the Guildhall Library of the City of London. Of this collection, which we roughly estimate at fifty or sixty thousand volumes, we have just received from Mr. Charles Welch, the Librarian, a generous catalogue of 1,137 pages in double columns. Employment of American methods would have resulted in such an economy of space as to permit a great extension of the topical arrangement, as to which we can only say that it has not been consistently carried out. For example, Mr. Percival Lowell's 'Chosŏn' is entered but once, under the author's name. Under Corea we are referred to China, and under China there is no mention of 'Chosŏn.' There is an invaluable collection of newspapers, nearly all published in London, but the *Anti-Slavery Reporter* is entered not under Newspa-

pers, but under Slavery, and *Punch* has a separate entry. Here "*newspapers*" seems to be used in a narrow sense. On the whole, the standard American literature of the past fifty years is fairly well embraced, and in the additions to June, 1889, there seems to be evidence of an effort to keep abreast of our current production; but the lacunæ are still sufficient to prompt the suggestion that Americans bear the Guildhall Library in mind as a worthy recipient of gifts from this side of the water. Not one of Fenimore Cooper's works, for example, is to be found in it, and no American statesman except Franklin is adequately represented. Jefferson, Hamilton, Madison, Calhoun, Clay, Webster are not to be found by searching. (The title Biography is confined to dictionaries.) Among the noticeable features of the library are the almanacs, Bibles, catalogues, and directories; works pertaining to the several London guilds; and the collections of the various societies, such as the Camden, Harleian, Hakluyt, Percy, Early English Text, English Dialect, and Christian Knowledge, all whose publications are minutely set forth. Corresponding lists of great utility are those of William Andrews's 'North Country Poets,' Cimber and Danjou's 'Archives Curieuses de l'histoire de France,' Jeffrey's 'Contributions to the *Edinburgh Review*,' Leon Levi's 'Annals of British Legislation,' the Lilburne Tracts, John Nicol's 'Bibliotheca Topographica Britannica,' etc. We will add that no introductions are required on the part of readers at this library, from which, however, books are not allowed to be taken.

—An appeal has been made in Boston, signed by Phillips Brooks and other prominent clergymen and laymen of that city, on behalf of Atlanta University. This institution is a Northern foundation. It exists primarily for the higher education, as teachers and mechanics, of the colored population of the South, but it does not turn away students because they happen to be white. For this reason it is now under the ban of the State, which has withdrawn its annual subvention until the University authorities consent to establish and maintain the color line. This action has seriously crippled and may prove fatal to the institution, unless it receive efficient aid from American philanthropy. Every intelligent observer knows, who witnesses this conflict, that the State's attitude logically implies contempt of and aversion to white persons who engage in teaching the blacks; and, as a matter of fact, we believe that the instructors at the University have been socially disregarded even to the point of non-recognition on the street, and even by professed friends of the University (such as the late H. W. Grady) before it had incurred the enmity of the Legislature. This body would fain have made co-education a felony, in the spirit of Southern law and custom which denounces with fine, imprisonment, and illegitimacy, voluntary intermarriage of white and black. This is the real "Southern problem," and one that can no more be discussed on the spot than abolition could in the ante-bellum days. The Atlanta University was not founded to raise or to force the issue, but it has, by a simple observance of Christian and democratic American principles, called attention to the repudiation of these by its persecutors. The Treasurer of the Boston Committee is Mr. William Lloyd Garrison, who may be addressed at No. 132 Federal Street.

—Sir Robert Stawell Ball, F.R.S., royal astronomer of Ireland, is known to many readers in this country as the author of a most poetic lecture on the relations of the earth and moon, entitled "A Glimpse through the Corridors of Time," reprinted in the *Popular Science Monthly* and *Littell's Living Age* some ten years ago. His ability in popularizing astronomical subjects is again shown in 'Star Land' (Cassell & Co.), a little book for young people on the wonders of the heavens, based on a series of lectures delivered in London at the Royal Institution of Great Britain in the Christmas season of 1887, to a juvenile audience. The style is simple and the explanatory illustrations are ingenious and well chosen. For example, the relative strength of gravitation upon the earth and the moon is brought home by picturing a man standing on the earth, bent down under the weight of a heavy sack of grain on his back, while the same man on the moon is able to carry six sacks of the same size. The difficulties against which old Kepler had to contend when he was trying to make out the orbit of Mars are illustrated by recalling the belief then prevalent that the planets must move in circles because circles were the only perfect curves. No imperfections had then been detected in the planetary motions, no spots had then been discovered on the sun. A number of interesting methods are employed to give some conception of the vast distance of the stars. One of the most ingenious is the account of that part of human history that would only now reach the stars if it were carried on rays of light. The light arriving now from the earth to the nearer stars would show Great Britain in a state of excitement over the coronation of a youthful Queen, whom we know as Queen Victoria, fifty years on the throne. There are other stars from which the inhabitants could now see, if they had good enough telescopes, a mighty battle going on not far from Brussels. On yet other stars, the light would only now arrive which left the earth at the signing of the Magna Charta; and even these are not the farthest from us. All this is pleasant and instructive reading. The woodcuts are generally good and correct, and the book would serve well as side reading for a young class in astronomy.

—Dr. F. J. Furnivall, in a letter which he writes to the *Academy* of April 19, puts forth in a very compact form the results of his researches as to the ancestry of Robert Browning. He rejects, with his habitual promptness of decision, the "myth" that the poet was connected in some way with the Obadiah Browning of 1689, and with the Captain that commanded Henry V.'s ship. These were only namesakes annexed to cover the poet's humble origin. He then goes on:

"His first forefather, that we know of, Robert I., was head butler, doubtless after being footboy and footman, to Sir J. Bankes, at Corfe Castle, Dorsetshire. Robert's brother Thomas was tenant of an inn—Woodyates Inn—in a very small hamlet of Dorsetshire, under Lord Shaftesbury, in whose family he may well have been a servant. At any rate, Robert I.'s son, Thomas II., succeeded Thomas I. in the tenancy of Woodyates Inn, and was the greatgrandfather of the poet. Robert I.'s wife, Elizabeth, could not sign her name to her will; and her grandson, Robert II.'s son, was apprenticed to a stone mason at Wimborne. Lord Shaftesbury, as the landlord of Thomas II., got his son Robert III., the poet's grandfather, into the Bank of England. There the poet's father, Robert IV. (a half creole) was a clerk also, and was a versatile, clever fellow. The rise of the family is a creditable one from the ranks; and it is a pity to try and tack it on to noteworthy namesakes who have nothing to do with it."

The editor of the *Academy* appends a note to Dr. Furnivall's letter to say that the word "creole" which appears in it is not to be taken in its strict sense, as meaning one born of European blood in the West Indies, but is to be understood (as the word is commonly and incorrectly used) as connoting a mixed negro parentage. Dr. Furnivall's paper on Browning's ancestry, with wills, extracts from registers, and so on, may be had, he says, by sending 3d. and an addressed stamped wrapper to Clay & Sons, Bread-Street-Hill, London, E. C., and mentioning that the application is made in consequence of his letter in the *Academy*.

—The latest accession to the Bohn Goethe (London, George Bell & Sons; New York, Scribner & Welford) is a volume containing "Reineke Fuchs," the "Divan," and the "Achilleid," all translated by Mr. Alexander Rogers, a gentleman who seems to be neither a very cunning versifex nor a very great German scholar. He remarks benignly of Goethe's hexameters that they "are as good as they can be expected to be in a language that lends itself to this particular metre but little better than our own." How well "our own" lends itself to Mr. Rogers in his less strenuous moments can be seen from this specimen: "Searched through a mill and the miller's wife was asleep, softly." At the beginning of the "Divan" one finds this bit of translation and commentary:

> "There, pure and right, where still they find,
> Will I drive all mortal kind
> To the great depths whence all things rise,
> There still to gain, in godly wise,
> Heaven's lore in earthly speech,
> Heads might break ere they could reach."

On reading this we were struck by its nebulousness, and guessed that the translator must have been struggling with something very obscure—a guess that seemed to be confirmed when we read this foot-note to the last line: "'Und sich nicht den Kopf zerbrachen.' Strangely put in the past tense (whereas the present is used in the first part of the sentence) in order to rhyme with *Erdensprachen*." This sent us to the original, where we found this simple stanza, which we should suppose that any well-taught sophomore would be able to construe and to understand (the "Dort" means the Orient, where Goethe had intellectually taken refuge from the turbulent politics of his own time):

> "Dort im Reinen und im Rechten
> Will ich menschlichen Geschlechten
> In des Ursprungs Tiefe dringen,
> Wo sie noch von Gott empfingen
> Himmelslehr' in Erdesprachen,
> Und sich nicht den Kopf zerbrachen."

—The publication of the fourth part of the 'Bibliographie générale et raisonée du droit belge,' by Edmond Picard and Ferdinand Larcier (Brussels: F. Larcier, 1890), completes this useful bibliography of the legal literature of Belgium. The printing of the work commenced in 1882, and the alphabet of authors, numbering 6,786 titles, was brought to an end in the third part, having filled 870 octavo pages. The present part contains (1) a list of anonymous books and articles, (2) a catalogue of legal periodicals, and (3) a supplement, comprising the titles of all the law books issued from the press of Belgium during the printing of the catalogue, to October, 1889. This supplement adds 1,122 titles to the alphabet of authors, making the grand total nearly eight thousand. About two-thirds of this number would represent the actual books and pamphlets relating to law printed in this little country since 1814—a remarkable record, which, we think, only a few of the great nations of the world could surpass.

—The bibliography of journals deserves special mention. It is not a mere list, but a careful bibliographical record of some hundred and thirty legal and statistical journals published in Belgium. Under the rubrics, "Mode of Publication," "Editing and Printing," "Col-

lection" (*i. e.*, number of volumes, etc.), we get the whole history of each journal, including a notice of any index or indexes which may have been published; while in many cases, also, under the additional heading of "Anonymous Contributions," there is printed a list of the unsigned articles upon law subjects which have appeared in the journal. Some of these periodicals deserve to have a reputation outside of Belgium, such as *Pasinomie*, which publishes all the laws and decrees, and contains in its ninety-one volumes a complete chronological collection of Belgian and French laws from 1788 to the present time. A somewhat similar publication, *Pasicrisie*, gives the decisions of the courts, including those of the courts of France, and now numbers, with its digests and indexes, about 280 volumes. Another fine work, published in periodical parts, is 'Pandectes belges: Encyclopédie de législation, de doctrine et de jurisprudence belge.' It is formed upon the plan of the well-known 'Jurisprudence belge' of Dalloz, and has required twenty-seven quarto volumes to cover the first three letters of the alphabet.

ADAMS'S SECOND ADMINISTRATION OF JEFFERSON.—II.

History of the United States of America during the Second Administration of Thomas Jefferson. By Henry Adams. Vols. III. and IV. Charles Scribner's Sons. 1890.

It has been already said that Florida was the key of Jefferson's politics in the early stages of his second term. The French Emperor indulged in a long dalliance with our Government under this head, using Florida as the lever of his diplomatic movements, now against the United States and now against Spain. After the overthrow of the Prussian Army at Jena, on the 14th of October, 1806, the dalliance came to an end, and was followed by sharp measures of coercion brought to bear on the United States as a neutral Power. The Berlin Decree, "which cut the roots of neutral rights and of American commerce," was launched on the 21st of November, 1806, and thus was joined that long triangular duel, in which the United States was doomed to stand under the fire of both England and France without being able to reply to the fire of either. The quarrel between the two great European protagonists had reached that stage of violence which, in the phrase of Thucydides, "assimilates the passions of men to the conditions of the moment." Hence it was that fury ministered arms to each, without the slightest regard to the interests or rights of nations which wished to be neutral spectators of the strife.

As early as August 17, 1805, the direct trade of neutrals with the colonies of France had been placed under restriction by a British order in council. Then followed the blockade of the Ems, Weser, etc., on the 8th of April, 1806, to be soon succeeded by the blockade of the whole coast from the Elbe to Brest. In the spring of 1805, our Congress had passed a non-importation act, if haply by so doing we might fatigue both belligerents into a respect for our neutral rights—"a dose of chicken-broth," as John Randolph sneeringly called it, and this, too, a "dose" which was to be taken nine months after its prescription; for the law was not to go into effect till the 15th of November. The pusillanimity of our public measures at this crisis, whatever may have been the justification for it in the hard necessities of our political situation, had now begun to react on the tone and temper of the national character. "The great issues of 1776 and of 1787," says Mr. Adams, "had dwindled into disputes whether robbery and violence should be punished by refusing to buy millinery and hardware from the robbers, and whether an unsuccessful attempt to purloin foreign territory should be redeemed by bribing a more powerful nation to purloin it at second hand." Englishmen, on the other hand, says Mr. Adams, "listened with as much contempt as anger to the American theory that England must surrender at discretion if Americans should refuse any longer to buy woollen shirts and tin kettles. Englishmen asked only whether Americans would fight, and they took some pains to make inquiries on that point; but it happened that of all the points in question, this, which to Englishmen was alone decisive, could be answered in a syllable: No! America would not fight. The President, Congress, the press of both parties in the United States agreed only in this particular."

While the Administration at this juncture, in common with the whole American people, was staggering under an intolerable burden of difficulty and weltering in a bottomless Slough of Despond, Monroe, our Minister at London, was set to the impossible task of wresting from Great Britain a treaty which should require that country to repudiate the right and renounce the practice of impressment, to restore our trade with the French colonies to its old footing, and to pay a round indemnity for unlawful captures made under the rulings of Sir William Scott. From the toils of such impossible conditions there was no escape for Monroe except by breaking through them. This he did. He put his name to a treaty drawn up in violation of his instructions, and a treaty, besides, which was rendered nugatory and worthless by an explanatory note of the British negotiators, who formally signified to Monroe and Pinkney that the treaty was to pass for nothing unless the American Government, before ratification, should give security that it would not recognize the Berlin decree! By signing the treaty with that condition, Monroe, the "Gallican" sympathizer of 1794, did his best to commit the United States to war with France and alliance with England.

Jefferson rejected the treaty without even submitting it to the Senate. He was abundantly justified in so doing, but the act cost him dear in the turbulent politics of that day. The Federalists charged that the treaty had been rejected because of its anti-Gallican tendencies, and they pointed to the mode of its rejection as a specimen of autocracy which Jefferson had braved in the interest of France, and in imitation of the imperial despot who was then giving law to all the world—except England. A little later it need not surprise us if we find Timothy Pickering offering his celebrated toast: "The world's last hope: Britain's fast-anchored isle."

From this time forth the triangular duel of which we have spoken gathered fresh virulence from the increasing ferocity of the European belligerents. The policy of impressment was pushed to its last extremity of outrage and oppression. At this late day, when our Government exults with only too much gayety of heart in its pride of place among the nations of the earth, it is difficult for the ordinary reader to measure the contempt in which our country was held by Great Britain during the Administration of Jefferson, or to hear without a tingling of the ears a recital of the indignities to which our flag was subjected on the high seas. The head and front of British offending was found in the impressment of our seamen, under color of the pretension that many of our seamen were "deserters" from the British service, or that, under the doctrine of indefeasible allegiance, many of our seamen were British subjects whom England had a right to reclaim whenever she found them at sea in an American merchant vessel. Hence the assumed right of search so long maintained by England and resisted by the United States. While doing full justice to the enormity of the British pretension, Mr. Adams, we believe, nowhere gives a precise statement of the proportions which the impressment outrage had assumed in its relation to the actual personnel of the American marine. Early in 1808, Mr. Madison reported that over four thousand American seamen had then made reclamations, through the Department of State, for their release from involuntary detention in the British naval or mercantile service. And this number takes no account of sailors captured on the Spanish Main, but not yet reported, or of sailors who, from death or helplessness, had made no sign. The recklessness with which impressment was practised may be read in the fact that one-fourth of those who had been kidnapped by British cruisers were admitted, on inquiry by the British Government, to have been wrongfully seized, and were ultimately released, but without apology or reparation.

The impressment outrage came to the acme of national insult and oppression in the well-known case of the *Leopard* in its attack on the *Chesapeake*. The right of search was here asserted against a public armed vessel of the United States, and was accompanied with an insolence as grievous to the national honor as the violence practised towards an unresisting ship was wounding to the national pride. If Jefferson had been anxious to precipitate a war with England, as the Federalists charged, the "*Leopard* incident" gave him more than the opportunity he was supposed to covet; for, as the news of the outrage spread, the whole country made a show of willingness to spring to arms. But the hard necessities of the political situation proved too strong for even this patriotic outburst, and the national honor soon ran to cover under the "resorts of a peaceful diplomacy." The story of the *Leopard* is not pleasant reading for either an Englishman or an American at the present day; for the country of each may well be ashamed of its attitude—England for the attitude she took by choice, and the United States for the attitude it took by compulsion.

It was the cruel dilemma of Jefferson at this juncture that he could neither make war with effectiveness nor conduct diplomacy with dignity. The civil sneers of Canning were as hard to bear as the rough epistles which Admiral Berkeley wrote with his marlingspike. Fresh from personal mixture in the humiliations imposed by the *Leopard* on the people of Norfolk, Littleton Waller Tazewell, Republican, as he was, denounced Jefferson as a *fainéant* ruler equally incapable of keeping peace or making war. But in all this hurly-burly of impotent rage and bitterness, Jefferson maintained a serenity of spirit, because he believed himself able to draw from the arsenal of his "Quaker politics" a mode of defence better than war. The embargo and the gun-boat system of harbor defence had long rested in his mind as the "cheap defence" of a nation situated like the American republic. The nation was now brought to the brink of choosing between war or embargo, and, war being clearly impossible, the alternative choice was inevitable in his eyes. The embargo had been an old cuirass in our national armory. When war with England was imminent, in 1794, an embargo for thirty

days had been instituted by Congress for the protection of our seamen and ships, but not, as John Adams has explained, with any expectation that it would influence the conduct of England. In its very theory it was of temporary duration, but Jefferson conceived the embargo as a weapon of permanent offence for the coercion of the belligerent Powers of Europe. He was willing to stake his reputation as a political philosopher on the success or failure of this new device in the applied art of statesmanship.

The British orders in council of January 7, 1807, commonly known as Lord Howick's orders, had interdicted neutral trade from port to port in France. This order was issued in alleged retaliation for the Berlin Decree, and had passed without much animadversion from our mercantile and shipping community. The Republicans professed themselves unable to account for this supineness, except on the assumption that our merchants, being mostly Federalists, were quick to resent the injuries of France, while bearing with habitual indifference the injuries of England. But the real explanation lay on the surface. France was powerless at sea, and could be scolded with impunity as the would-be brigand who had angered England into measures of "retaliation." England swept the seas with her cruisers, and had to be coaxed where she could not be cowed. The Administration itself, while blaming this mercantile subserviency, could but imitate it.

The "awful tragedy at Copenhagen"—the bombardment of the city and the capture of the Danish Navy—now came to emphasize the fact that "neutrals would be no longer tolerated." The same fact was soon emphasized by Napoleon at Lisbon. The Berlin Decree, which had long slept as a dead letter, was suddenly put in force by the French Emperor during the same early days of September which had witnessed the fall of Copenhagen. When "Copenhagen" Jackson came to our country as British Minister, in 1809, it was openly announced in the *National Intelligencer* that he came to us "red from the flames of Copenhagen and flushed with the blood of the persecuted Danes." It was seen at once that America's "turn" would come next. Reports reached Washington that "countervailing orders in council" would soon be published by the British Government to meet the rigorous enforcement of the Berlin Decree. On the 16th of October, 1807, as if in prospect of a closer grapple with France, the British King issued a proclamation recalling all British seamen from the service of foreign Powers, under threat of punishment. The proclamation reached the United States in December, and was published in the *National Intelligencer* of December 14 in that year. When Mr. Adams says that it was published in the *Intelligencer* of December 17, he means that it was republished on that day in order to emphasize the editorial opinion expressed on the 14th, that "this proclamation looked very much like shutting the door on all negotiation," and that it "furnished abundant cause for preparing ourselves for a rupture." On this same day, the 14th of December, 1807, the official journal published also an address to the President from the Legislature of New Jersey, in which it was held that England, in openly avowing to the Danes that "she could no longer distinguish between neutrals and enemies," had become "professedly and intentionally the open and avowed enemy of every nation at peace." "This language," it was added, "though addressed to the Danes, speaks with equal solemnity to us." In the first draft of his message to Congress on the 18th of December, recommending the passage of an embargo act, Jefferson caught not only the ideas, but some of the very words, which his official organ had used four days before. The embargo message, as recast by Madison, contained no express reference to "retaliatory measures" of England, actual or apprehended. Four days later the Embargo Act had passed through both houses of Congress on the simple recommendation of the President, with no other *pièces justificatives* than a letter from Judge Regnier announcing that the Berlin Decree would be enforced, and a newspaper copy of the Royal Proclamation of October 16. The embargo was enacted in secret session of both houses, without any public definition of its real purpose, and without any limit put on its duration. The country was committed to a permanent policy of "peaceable coercion" without knowing it, and was so committed under a disguise. The voice of the Administration was the voice of Jacob, but its hands were the hands of Esau. Mr. Adams explains this policy of disguise by referring it to Jefferson's love of secrecy. But the President had a controlling reason for it in this case. In form the embargo was a purely "defensive" measure, and, as we shall see, it was so represented to England. In motive, aim, and purpose, the embargo was "offensive," being conceived as a substitute for war. Hence it was but natural that Jefferson should have wished to avoid any public discussion which could but reveal a contrariety between the outside look of the embargo and its "true inwardness."

At the time of sending in his embargo message to Congress the President had not received Percival's orders in council of November 11, 1807. But some "retaliatory measure" was believed to be impending, and the sweeping scope of its application had been already presaged. In the first draft of his message the President had referred to apprehensions on this score. The *National Intelligencer* of December 21, the day before the passage of the Embargo Act, had published a rumor that an order placing the whole of France and her dependencies in a state of siege was on the point of being signed at the date of last advices from London. On that same day Erskine, the British Minister, wrote to Canning that the embargo was being pushed through Congress "on the ground of expecting that a proclamation will be issued by his Majesty declaring France and her dependencies in a state of blockade." The letter was doubtless an echo of what he had read in that day's *Intelligencer*. On the 23d of December, one day after the passage of the Embargo Act, Erskine wrote that the Embargo Bill had been passed, and that it had been passed "from an apprehension of a retaliatory order by Great Britain." At the same time, he was careful to add that the measure, "as this Government declares," was not "a measure of hostility against Great Britain, but only a precaution against the risk of the capture of their ships in consequence of the decree of Bonaparte of November 21, 1806." The embargo is here made to speak with the voice of Jacob. One day later, two days after the passage of the Embargo Law, the official journal of the Administration held it clear that Great Britain was "meditating further retaliations," and on the following day it vindicated the whole embargo policy "as a weapon of negotiation" in future dealings with Great Britain. The embargo is here made to show the hands of Esau.

We have placed these facts and dates in juxtaposition for the purpose of demonstrating the ostensible causes and the secret motives which precipitated the embargo of December 22, 1807. Because the orders in council of November 11 had not reached the United States at the date of the passage of this untoward act, and because it was not formally specified by Jefferson in his embargo message as among the proceedings which called for such legislation, it was commonly asserted in after days by the Federalists that the British orders in council of November 11, 1807, had had no share in precipitating the embargo policy. This assertion left the way clear for the useful inference that the embargo, in being apparently instigated by the judgments of the French Admiralty Court, had been really devised in the interest and perhaps at the behest of the French tyrant.

This aspect of the question became for years the turning point of the whole embargo controversy considered in its relation to our domestic politics. The real cause of the embargo became the article of standing or falling parties in Massachusetts and in all New England. On the 4th of January, 1808, about two weeks after the passage of the restrictive act, we find James Sullivan, the Republican Governor of Massachusetts, writing to Senator John Quincy Adams (who had voted for the embargo *sans phrase*) a pathetic lamentation over "the close silence of our members at Washington in regard to the *cause* of the embargo." "This silence," he said, "gives an advantage to the Federalists over the Republicans." And when Jefferson, in a special message to Congress on the 4th of February, 1808, sent in the long-expected orders of Percival, and described them as "a *further* proof of the increasing dangers" which had justified the Embargo Act, the Federalists exulted in these words as a virtual admission that the orders in council of November 11 had had nothing to do as a procuring cause of the act.

John Quincy Adams, as every reader knows, fell a victim to the reticence of Jefferson in this matter. As a Senator from Massachusetts he had supported the embargo, expecting it would be the precursor of ulterior and more energetic measures; but when no such measures were forthcoming, he had to stand the brunt of the embargo policy in the pure and simple form in which it lay in the thought of Jefferson, to wit, as a permanent measure of peaceable coercion. The measure in this shape outraged alike the sentiments and the interests of Massachusetts. The Federalists carried a majority of the Legislature which was to elect John Quincy Adams's successor, and the fiery patriot, foreseeing the drift of opinion in his State, incontinently resigned his seat in the Senate. He resigned, doubtless, as much in vexation with Jefferson, who had caught him in an *impasse*, as with the Federalists of the Essex Junto who had set up their Caudine Forks in it for his humiliation.

The author admits that John Quincy Adams "made a mistake" in voting for the embargo without limit of time. He also made a mistake, according to his own admission at the time, in voting for the embargo without a public specification of the reasons on which it was based. This latter mistake was the more unaccountable because, in his diary, he records that the diplomatic papers sent with the message recommending the embargo seemed "utterly inadequate to warrant such a measure." To vote for the measure under such conditions was to place a club in the hands of his embittered colleague, Timothy Pickering. It is needless to say that the club was wielded with all possible effectiveness. In the whole checkered career of Pickering we can recall nothing which excites the admiration of our historian except

the dexterity with which he conducted this assault on John Quincy Adams. Pickering's letter to the Legislature of Massachusetts, hinting at some secret (that is, French) motive as the real cause of the embargo, since the ostensible causes were not sufficient to justify it, is pronounced by the author to have been "a master stroke," and to be "stamped by a touch of genius." The praise seems slightly exaggerated; for what genius could it require to use a double-headed mistake for the discomfiture of a political adversary?

Omitting all discussion of the acts passed for the enforcement of the embargo (acts admitted by Gallatin to have involved the exercise of "arbitrary powers" at once "dangerous and odious"), we come to Mr. Adams's summary of results. His discussion under this head is calm and philosophical. He thinks the experiment essayed by Jefferson was worth trying as an object-lesson in the science and art of politics. The question to be decided was, which of two systems, the system of war or the system of commercial restriction, is likely to be the less costly and the more effective. The result showed that the embargo was an expensive system, and, in its immediate effects, was more destructive to the national wealth than war itself. While New England revolted at the system, the true burden of the embargo, as Mr. Adams justly says, fell on the South, and especially on Virginia. The remark is so just that we wonder the author did not authenticate it by citing from easily accessible tables the exact facts and figures which Matthew Carey compiled for the same purpose, with insufficient accuracy, in his 'Olive Branch.'

In its moral effects the embargo "opened the sluice gates of social corruption," teaching men to evade or defy the laws where they did not accept an economical paralysis in their brains as well as in their hands. In point of political effect its cost to the party in power, as Mr. Adams shows, was simply ruinous. As a permanent lesson in politics, the moral of the embargo is pointed by Mr. Adams in the following terms, which seem to us as just as they are terse:

"The law of physics could easily be applied to politics: force could be converted only into its equivalent, force. If the embargo—an exertion of force less violent than war—was to do the work of war, it must extend over a longer time the development of an equivalent energy. Wars lasted for many years, and the embargo must be calculated to last much longer than any war; but meanwhile the morals, courage, and political liberties of the American people must be perverted or destroyed; agriculture and shipping must perish; the Union itself could not be preserved."

This last item in the expense account of the embargo leads us to remark briefly on the effect which the hapless measure had in promoting what Mr. Adams calls "the rise of a British party" in the politics of the United States. "The Federalists of 1800," he says, "were the national party of America. The Federalists of 1808 were a British faction in secret league with George Canning." Perhaps the statement is a little too broad, and confounds the rank and file of the Federalist party a little too closely with its leaders; but that these latter were too much disposed to side with English policies against the rights and honor of their own country must be conceded. The well-known toast of Pickering, coming a year or two later, did but blurt out the secret and honest conviction of the Federalist thinkers, that England had become "the last hope of the world." Secret correspondence was opened between representative men of the Federalist party and emissaries of Great Britain. The "principal characters in Boston" retailed their disaffection in the ears of John Henry, not knowing that that political pimp and spy would afterwards peach on them. Timothy Pickering fell an easy prey to the flatteries of George Henry Rose. "One by one," says our historian, "the Federalist leaders of New England gave in their adhesion to Pickering's plan for the calling of a convention of the New England States." It was deliberately proposed by Pickering that these States should "put their negative on the usurpations of the general Government"; and so it came to pass that he who, eight years before, had been a Federalist Secretary of State under John Adams, became, in 1808, a convert to the doctrines of "the Kentucky Resolutions of '98" in their pure and simple form of nullification. The revolution which had been in progress between the two parties for the last eight years was now completed, says Mr. Adams, and each party stood on the ground of the other as compared with their respective attitudes in 1798. With all his repulsion for the embargo, Mr. Adams is inclined to wonder at the "madness" it excited in New England, and gives expression to that wonder in terms which certainly do not lack for "local color" in their vividness. He says:

"Not for a full century had the old Puritan prejudice shown itself in a form so unreasoning and unreasonable; but although nearly one-half the people held aloof and wondered at the madness of their own society, the whole history of Massachusetts, a succession of half-forgotten disputes and rebellions, seemed to concentrate itself, for the last time, in a burst of expiring passions, mingled with hatred of Virginia and loathing for Jefferson, until the rest of America, perplexed at paroxysms so eccentric, wondered whether the spirit of Massachusetts liberty could ever have been sane. For the moment Timothy Pickering was its genius."

The repeal of the embargo was signed by Jefferson on the 1st of March, 1809, three days before the end of his term. If the repeal brought relief to the country, it brought to Jefferson a mortification which was indescribable, and over which he never ceased to mourn in tones of undissembled bitterness. It seemed to him a calamity from which he should have been spared by his country.

"So complete was his overthrow," says Mr. Adams, "that his popular influence declined even in the South. Twenty years elapsed before his political authority recovered power over the Northern people; for not until the embargo and its memories had faded from men's minds did the mighty shadow of Jefferson's Revolutionary fame efface the ruin of his Presidency. Yet he clung with more and more tenacity to the faith that his theory of peaceable coercion was sound; and when, within a few months of his death, he alluded for the last time to the embargo, he spoke of it as a 'measure which, persevered in a little longer, we had subsequent and satisfactory assurance would have effected its object completely.'"

So true is it that the parental instinct, in the breast even of a political philosopher, will fondly cling to the weakliest and most deformed of his offspring.

We cannot dismiss these volumes without bestowing a word of praise on the care with which they have been edited. Misprints are exceedingly rare. The name of Breckinridge, wherever it occurs, is spelled "Breckenridge," contrary to the modern usage. In our review of last week the types conspired with Mr. Adams's authority to misspell the name of Burr's Kentucky prosecutor. Mr. Adams always spells it "Daveiss." It should be Daviess. A worthy citizen who once filled a conspicuous place in Kentucky politics, who was closely connected with Chief-Justice Marshall (he married a sister of the Chief Justice), and whose name is still preserved in the county geography of Kentucky, should not pass into history under a misnomer.

THREE SPANISH NOVELS.

La Incógnita. Por B. Pérez Galdós. Madrid: Imprenta de *La Guirnalda.* 1889.

Realidad: Novela en cinco Jornadas. Por B. Pérez Galdós. Same publishers. 1890.

Sister Saint Sulpice. From the Spanish of Armando Palacio Valdés. By Nathan Haskell Dole. Authorized translation. Thomas Y. Crowell & Co.

THE latest two to be added to the forty-odd volumes of the leading Spanish novelist really constitute a single work; the first one getting a rather complicated mystery before the reader only to put off the explanation till the publication of the second. If it could be supposed that Galdós either needed or desired to resort to a trick to increase his sales, the relation of the two novels to the considerable interval between their appearance would have a vulgar look; but Spanish literary customs admit of many things which with us are unknown. 'La Incógnita' is made up entirely of letters sent by a young deputy, Manolo Infante, to a provincial friend. They gradually acquaint us with a rich old collector of antiquities, who professes the most revolutionary theories of society and property without any disposition whatever to exemplify them, and his daughter Augusta, the beautiful and vivacious wife of a man of independent fortune, Tomás Orozco. The deputy proceeds to fall in love with Augusta, in right Continental fashion, but finds himself distinctly rebuffed. He is in doubt whether this is due to the lady's virtue or to the existence of a more fortunate rival. Inclining to the latter theory, he endeavors to place his finger on the man.

There is a young Italian cosmopolite, Malibran, who has the rare advantage over his fellow-males of being able to discuss with ladies the details of their dressmaking with an enthusiasm and intelligence equal to their own. There is a young offshoot of an old family, fallen on evil times, Federico Viera, known to be desperately in debt, suspected of being a gambler, with many dubious acquaintances, yet constantly a guest at the Orozco dinners and receptions. Infante's suspicions fluctuate between these two, without any positive ground in the case of either, until finally Viera is found dead one morning in an outlying street, with two bullet-wounds. The police are completely baffled, and though gossip hastens to connect the Orozcos with the tragedy, every clue leads up to a dead wall, and the mystery of the murder and its cause appears impenetrable. Just there 'La Incógnita' ends.

For the form of correspondence, well fitted to present the mystery as it stood before the eyes of a single puzzled observer, 'Realidad substitutes a dramatic narrative in five acts, wherein the whole ground of the story as it had been told in the letters is retravelled and the facts set forth exactly as they occurred. It then appears that Viera had been the favored one all along, Augusta having conceived a mad passion for him, and her husband, who is represented as a man of singularly noble character, having endeavored to befriend him, pay off his debts, recover him from his evil ways, and give him an opportunity to restore the honor of his family. The only shred of conscience that Viera has left, vibrates to the sense of monstrous ignominy in accepting such great favors from the man whom he is robbing of a wife, and his situation at last grows so intolerable morally—hounded by his

creditors, help pressed upon him by Orozco, the one man in the world from whom he could not accept it, and unable to break away from the fascination of Augusta—that he puts a revolver to his head as the shortest way out of it.

Galdós certainly should not be accused of writing this story of wretched intrigue and dishonor for its own sake, as he undoubtedly means to subordinate the whole to his psychological study of the characters of Orozco and Viera, and to the drawing of a moral which may be supposed to be needed in Madrid. Yet it must seem a misuse of his immense wit and charming style to expend them on such a theme. As to the implied common existence of immorality such as Augusta's among the women of aristocratic society in the Spanish capital, we have some valuable testimony in the negative from one who is a novelist, a woman, and a member of the aristocracy, Emilia Pardo Bazán. She says she has often challenged impugners of her sex to name a dozen women in the upper circles of Madrid society whom even vague rumor hinted to be guilty of conjugal infidelity, and that she never could get more than three or four names. Referring to Pereda's novel, 'La Montalvez,' she affirms that his assumption that Spanish women of the nobility are as a rule unfaithful wives, rests not upon facts, but upon the survival of "the provincial tradition." One may hope that Galdós is similarly misled. Much could be forgiven him for the many delightful bits of characterization and description that occur in these pages of his.

Valdés correctly describes his latest novel in the sub-title which he gives it, "A Novel of Andalusian Manners." Its main purpose and interest lie in its pictures of life in Seville, where the Moorish imprint still lingers so plainly. The story turns upon the love of the hero for a nun—one not under irrevocable vows, of course, but temporarily and almost against her will in a sisterhood, whence her desire to emerge is distinctly heightened by her knowledge that he is waiting for her out in the world. She is a strange compound of qualities—mischievous, impulsive, passionate, or provokingly indifferent, according to her mood, immoderately jealous, and capable of overpowering affection. Her lover is a Gallegan, whose native shrewdness and eye to the main chance have a hard struggle with the idealist and poetic tendencies to which he thinks he is surrendering himself. His characterization at his own hands (he himself tells the whole story) is amusing enough. High and low life alike appear in the novelist's picture, and, that nothing might be left out, some scenes of coarse debauchery get in also.

Señor Valdés cannot be counted happy in his American translator. Mr. Dole's version of the novel is disfigured by a surprising number of blunders, some of which may be due to haste and carelessness, but scores of which cannot be explained on that hypothesis. We have space to cite only a few typical instances of his bad work, though the examples could easily be run up into the hundreds. "Lectures" as the rendering of "lecturas," "idiom" of "idioma," and "sentiment" of "sentimiento" are specimens of his short and easy (and wholly incorrect) way of Englishing his original. He translates "avasalladora" as "in abeyance" instead of "dominating," gets "clog-dancing" out of "pisotones en los callos" instead of "treading on corns," and in "no transijo" finds "I am not growing thin" instead of "I do not admit it." "Gabinete" he takes to mean "library," undeterred by the fact that Valdés immediately adds, "Not a book was anywhere to be seen." The proverbial expression, "Lo prometido es deuda," he renders, "What is promised is doubtful," instead of "A promise is a debt," and takes pains to notify the reader of the blunder by putting in the original Spanish as well as the absurd English. But it is when Mr. Dole tries to get the meat out of an idiom that he is most fearful and wonderful. We cite him twice at his worst. "Charlar por los codos" he supposes to mean "prate about the codes." It literally means to "chatter with the elbows," and is a perfectly common phrase used to denote offensively verbose speakers. Not knowing this, and making his usual short cut on the word "codos" (it never means "codes"), the translator gives us the amazing version mentioned. "Pelar la pava" is a slang phrase (Valdés uses it with a "con perdón de Ustedes"), literally meaning to "pluck the hen-turkey," and employed to denote the Spanish custom of courting by night through the grating of the balcony where the adored one sits. Mr. Dole makes a desperate drive at this idiom, and translates "pelo la pava" as "a sudden transformation"!

Notice should also be taken of Mr. Dole's way of dealing with literary allusions. In his translation of Valdés's fine prologue on novel-writing (which affords the translator opportunity for some of his neatest butcher-work), he writes "Chaide y Rivadeneira," as if those two classic writers were one person, allows the name of the Greek romancer, Longus, to appear in its Spanish form, "Longo," and refers to Balzac's details about "the heaps of sugar" in 'Eugénie Grandet.' Of course, "terrones de azúcar" might mean "heaps of sugar," but it also might mean "lumps of sugar," and if Mr. Dole had taken the trouble to look at Balzac, he would have seen that it must mean that, as it is the Spanish for "morceaux de sucre." He makes Cervantes to have been the "last *comisionado de apremio*," presumably because he does not know what a *comisionado de apremio* is. The climax is fairly capped, however, by his translating "el espectáculo del *Don Juan Tenorio*," as "the sight of Don Juan the tenor." Now, Zorrilla's "Don Juan Tenorio" is probably the most famous and best known piece of writing that has been done in Spain in the present century, and Valdés is referring to the performance ("espectáculo") of that drama; but Mr. Dole ignores even the warning italics, and soberly fetches out his paralyzing "Don Juan the tenor"! We gladly testify to the frequent felicity of the translation, and can only wonder that what has been so well done in parts should have been so fearfully done in other parts. The errors are so numerous and so bad that it is simple justice to say that, so far as this book is concerned, Mr. Dole is only, to imitate his own way of rendering a Spanish word, a traducer of Valdés.

THE PROBLEMATIC SOUTH.

Joel Chandler Harris's Life of Henry W. Grady, including his writings and speeches. A memorial volume compiled by Mr. Henry W. Grady's coworkers on the *Constitution*, and edited by Joel Chandler Harris (Uncle Remus). Cassell Publishing Company.

The Silent South. Together with the Freedman's Case in Equity. By George W. Cable. New ed. Charles Scribner's Sons. 1889.

The Negro Question. By George W. Cable. Charles Scribner's Sons. 1890.

THE title-page of the memorial Grady volume grossly misstates the character of its contents. It should read, 'Speeches of Henry W. Grady, with a sketch of his life by Joel Chandler Harris, and Various Tributes to his Memory.' The volume is a hasty compilation—so hasty that the proofs have not had any critical revision; and though Mr. Harris appears upon the title-page not only as biographer, but also as editor, his editorial work must have been nominal. Thus, while he gives April 24, 1850, as the date of Mr. Grady's birth, the next contributor gives May 17, 1851, and the reader who pays his money is obliged to take his choice without any editorial or other help. In a felicitous quotation from George Eliot in Mr. Grady's Elberon speech, "A sweet habit of the blood" appears as "a sweet habit of the blest," and there are many typographical slips which no theological bias can excuse. Mr. Watterson, the only Southern editor of equal standing with Mr. Grady, leads off with a few perfunctory pages, and after Mr. Harris's "Life" there is a memorial sketch by Marion J. Verdery, prepared for the New York Southern Society, which presents the leading circumstances of Mr. Grady's life in a much more orderly arrangement than the sketch which names the book. Next we have seven of Mr. Grady's speeches and a selection from his writings; then seventeen "Poems by Various Hands," memorial pieces, only one of which, James Whitcombe (*sic*) Riley's, has any literary value. The kind intention of the others does not redeem their wretched doggerel. An account of memorial meetings in Atlanta and Macon follows, and then "Personal Tributes," the third and last an astonishing sermon by Dr. Talmage, which reaches its climax of absurdity in a final apostrophe: "Not broken down, but ascended. Not collapsed, but irradiated. Enthroned one! Coronetted one! Sceptred one! Emparadised one! Hail and farewell!" After 160 pages of "Tributes" of the Northern and Southern press, there is a glowing account of the fortunes of the Atlanta *Constitution*, and in conclusion certain "Letters and Telegrams from Distinguished Persons."

The editorial tributes from the Southern are more elaborate than those from the Northern press, and have much more rhetorical effusiveness, though in the others there is enough of this. In neither does the admiration for the man or the grief for his loss admit of any question of its sincerity. The eulogy is frequently extravagant, but there is some good analysis of Mr. Grady's admirable gifts. Several of the selections from Mr. Grady's writings illustrate the hold that Dickens had on his affections. Hugo was another favorite whose name was often on his lips. But by far the most valuable of these writings is a reply to Mr. Cable's 'Silent South,' from the *Century*, April, 1885. It has a definiteness and concreteness which the speeches lack. The rhetoric does not so much obscure the thought. If this reply is not a sufficient answer to Mr. Cable's 'Silent South,' it is an answer which no sympathetic reader of Mr. Cable's book has a right to leave unread.

Mr. Harris is evidently but ill pleased with his part of the book. He describes it as "a hurriedly written sketch, which is thrown together to meet the modern exigencies of publishing"; and, further along in the same paragraph, he says: "These reminiscences have taken on a disjointed shape sadly at variance with the demands of literary art." These judgments of the author the candid reader will approve. The facts of Mr. Grady's life are, as we have said, better stated in the next following paper. His first real hit in journalism was his study in Florida of the disputed election of 1876. At the same time he "wrote up" the Florida orange, and in so doing entered bravely on that careful study and eager adver-

tisement of the resources of the South which were the most characteristic features of his editorial career, and constituted his best hold on the grateful appreciation of the Southern people. He was a poetical materialist in all his dealings with questions of agriculture and manufacture in the South, and there was something so contagious in his enthusiasm that he probably did more than any other writer or speaker to create the industrial New South. Mr. Harris notes the singular fact that his early journalistic ventures were all unfortunate. He finds its explanation in the newness of his methods, for which the South was not prepared. An editorial article on Southern Conventions secured him a place as correspondent of the New York *Herald*. How he got the paper and found his article was in it, and cried like a child over his good fortune, is told by Mr. Verdery in a happy way. Soon after, he got his first appointment on the *Constitution*, and for that and the *Herald* wrote his famous Florida letters. Cyrus Field loaned him the $20,000 with which he bought a share of the *Constitution* in 1880, the value of which increased to $150,000 before his death. This increased value was the very coinage of his brain. The strongest episode of his editorial career was his taking the prohibition side of the temperance campaign in Georgia while his partner took the other. They made things lively and amusing, but there was no lack of earnestness in Grady's editorials or speeches.

Mr. Grady was preëminently a man of sentiment. We do not feel so sure as Mr. Harris that his sentiment never degenerated into sentimentality. We think it sometimes did, and that sometimes it obscured for him the lines of truth and justice in political and social matters. But for the most part it was sound and sweet. It was the source, in part, of his wide popularity. It furnished his speeches and orations with their Celtic warmth. It made him hosts of friends. In all private and personal relations it is evident that he was most loving and most lovable. For children and young people he had a very great affection. The same tenderness and passion that went to his private relations went to his feeling for Atlanta, for Georgia, for the South, and for the Union. The ardor of his patriotism was a wonder in these days when patriotism withers and the partisan is more and more. When he took a thing in hand, he left no stone unturned that could be built into its success. The Atlanta Cotton Exposition of 1881 was one of his greatest personal triumphs, and that of 1887 was another. When his influence was least apparent, it was often most important. Whether he was without political ambition or was biding his time, there is little here to show. That he was a Warwick in his way, a maker of Governors and Senators, there can be no doubt. No other man was so grandly representative of the New South. No other of approximate ability was so nearly equal to forgetting the things that are behind and looking forth to those that are before. It would not be easy to exaggerate his influence upon Southern thought and feeling. It was inevitable that the quality of his work and its success should inspire a host of editorial writers and political aspirants to make the lines of his activity their own.

His speeches and the *Century* article already named are worth all the other matter in these 600 pages. The speeches are remarkable for their energy and for the beauty of their thought and style. Add the speaker's ardent and engaging personality, and no one can wonder at their known effectiveness. They are full of poetry and sentiment. They are excessively rhetorical, and the rhetoric might be pruned of some of its less carefully considered phrases without any loss. His most questionable metaphor is, "The dews of night that fall from the distillery of the stars." This is conspicuously bad, and is more strange because of Mr. Grady's temperance principles. There is much repetition in the speeches, both in their general structure and in particular passages and illustrations. Their general structure is twofold: they deal about equally with the renascence of Southern industry and enterprise and with the race problem. In the handling of the former matter there is an effervescence that is quite intoxicating to the imagination. It is almost too good to believe that we have not a too glowing picture, but it is confirmed by many witnesses, notably by Mr. C. D. Warner and by Mr. Cable, whose opinions with respect to the race problem are not those of Mr. Grady. The New York and Boston banquet speeches of 1886 and 1889 have had the widest fame, but they do not repay the reader nearly so well as the Atlanta Exposition speech of 1887 and the Dallas (Texas) State Fair speech of the same year. Mr. Grady was too sympathetic, if not too politic, to be unaffected by the locality and atmosphere in which he spoke. The same ideas reappear in all his speeches, but for his clearest thought the Southern speeches are the more significant.

His solution of the race problem is well known. It is perfect equality in all political and civil rights, but separation in social and domestic life, in travel, in education: the white child or adult no more at liberty to enter the black man's school or car than the black child or adult to enter the white man's. Much is made of the race instinct, "which, if it did not exist, would have to be created." But he is certain that it does exist, and, in his talk of race-types as "markers of God's will," we are sometimes painfully reminded of the ante-bellum talk about God's curse upon the children of Ham. There is too much insistence that the white race is superior and the black must be subordinate. A Northern fire eater would interpret this as justifying the suppression of the negro vote, but it has no such meaning: that there must be no such suppression is insisted again and again. The meaning is the same as if one should say that the intelligence of New York city must and shall dominate the ignorance. But it is too easily taken for granted that all white men as such are more intelligent than all black men as such, which surely is not so. And the intelligence of black men ought to dominate the ignorance of white men. Mr. Grady would have strengthened his position if he had made intelligence and character the ground of domination, and let the race distinction go. A man of his courage should have been able to say, Let intelligence and character rule, whatever the complexion of the man. He was never more eloquent than in his praise of the negro: "History has no parallel to the faith kept by the negro during the war"; "A thousand torches would have disbanded every Southern army, but not one was lighted." It would seem that these things should have suggested that the negro has no inherent tendency to lawlessness, and that the chaos of the reconstruction period was more the carpet-baggers' than the negroes' fault. Without doubting the sincerity of Mr. Grady's assurance that there is no intimidation to speak of, and that criminal justice favors the black man rather than the white, it is allowable to doubt the justness of his view. Mr. Watterson admits the intimidation and suppression. But it is an ugly fact for the Northern Bourbon that in 1888 the South cast 67 per cent. of her total vote, the New England States but 63 per cent. of theirs. A small vote does not, then, necessarily mean a suppressed vote.

A new edition of Mr. Cable's 'Silent South' and his just published 'Negro Problem' will be found interesting and suggestive reading in connection with Mr. Grady's speeches. One cannot but regret that Mr. Cable did not maintain his Southern residence, so that his criticism might have been of the Southerners by one of themselves in appearance as well as in reality. The new edition of his 'Silent South' is different from the first only by the addition of two replies to Mr. Cable's strictures, with his replies to them, in which—criminal justice being the principal matter in dispute—Mr. Cable seems to show that he did not in the first instance speak without due warrant, but in the course of the discussion it is brought out that there is almost as much difference in the judicial treatment of the negro in the Northern as in the Southern States. Mr. Cable's 'Negro Question' is an elaborate reply to Mr. Grady's speeches, though not avowedly. His name only once appears, and he is seldom quoted. Mr. Cable has often been charged with claiming social equality for the negro with the white man: he makes it plain that he does nothing of the sort. His own idea is nowhere better expressed than in the articles of a civil-rights club of colored men organized to foster civil equality and the "recognition of every man's inviolable right to select and reject his social companions and acquaintances according to his own private pleasure or conscience." He is at his best in his chapter, "What Shall the Negro Do?" For one thing, "Keep his vote alive"; and this means that he shall determine in advance to vote with neither party as such; that he must stop "voting for gratitude" to the Republican party for its past services; that he must vote on all questions, and not merely on those which concern his own immediate interests; that he must cast his vote, though he has to die for doing so. In some of these positions Mr. Cable is evidently "between the devil and the deep sea," and will please the Republican as little as the Democrat. But it is evident throughout that he is no partisan, but goes his own way, let who will praise him or forbear. He is flatly opposed to Mr. Grady in his demand for the breaking of the color line. In that case Mr. Grady anticipated dreadful things for the negro: "His credulity would be played upon, his cupidity tempted, his impulses misdirected, his passions inflamed." Mr. Cable fears no such event, and shows us why he does not quite sufficiently.

We can also go with him very largely in his closing chapter on "The Southern Struggle for Pure Government." Purity without freedom is impossible; it is the stream poisoned at its source. If Mr. Grady overworked the reconstruction scare, Mr. Cable does less than justice to its natural influence. We do not believe that there is any soundness in his reasoning that the South has accepted the destruction of slavery so heartily because what she wanted was race superiority, and she finds that she can have this just as well without slavery as with it. His argument for national aid to Southern schools is offered somewhat timidly, as if he were not himself entirely sure it would be best, though he shows that Mr. Grady's figures—a white assessment in Georgia of $368,000,000, a black assessment of $10,000,000, while the black children are 49 per cent.—is not proportionately made good throughout the South. In "The Inventions of Despair" such vagaries as a negro Territory and deportation to Africa

are disposed of none too summarily, but there is some talk of Federal interference that is not a particle more sane. While in particulars acknowledging the sporadic nature of the evils he deplores, Mr. Cable is continually bringing his indictment against the whole people of the South, and assuming that some general treatment is required. Though he is one of the sternest critics of the Southern situation, it is impossible to read his book without astonishment that so much has been already accomplished, or without hope that all will yet be well. Somehow we have found ourselves rising from the perusal of his pages as little tempted to discouragement as by Mr. Grady's more optimistic but less pressingly moral strain.

Into Morocco. Translated from the French of Pierre Loti. New York: Welch, Fracker Co. Pp. 343.

On reading De Amicis's entertaining volume on Morocco, or his other volumes of travel, one notes here and there the influence of Gautier's example and methods. Still more obvious is it that the author of this charming and dainty little volume was inspired to his task by the example of De Amicis. The latter accompanied an Italian embassy to Fez, while "Pierre Loti" followed a French embassy. This is the only safe way of travelling in the interior, and it is quite safe, as the chiefs of the various districts who in turn take charge of the foreigners, are responsible with their own heads for the safety of the party. But naturally, under these circumstances, there had to be a certain resemblance between the descriptions of the two writers. Both travelled in tents provided by the Sultan, both were received at the entrance to a new department by troops of wild horsemen firing blank cartridges at them; while the *mouna*, or provisions, were everywhere supplied as a compulsory tribute of respect by the rulers of every camping-station.

In the matter of style, however, there is a great difference between the two writers, De Amicis's forte being bold *al fresco* painting, while Pierre Loti excels in minute realistic touches, and often succeeds in bringing a scene most vividly before the eyes in a single sentence. Better than any other writer on "the China of the West," he succeeds in making the reader realize the mediæval and worse than mediæval condition of the African Northwest, where there are no roads, no bridges, no taverns, where the streets are sewers, where women are treated as masked prisoners, and Jews worse, and where religious fanaticism is so rampant that a "Nazarene" takes his life in his hands if he visits any part of the country except Tangier and Tetuan. Tangier, where the foreign consuls and ambassadors reside, is considered an "infidel" city by the natives of Morocco. On coming to it from Spain, it seems so odd and so African that one imagines himself in the centre of Africa. Yet, as compared with Fez, Tangier seems quite Parisian, and after a week spent in Fez, Pierre Loti felt that same irresistible longing to get back into the world that was described by De Amicis, and which makes it impossible for ambassadors and other "Nazarenes" to remain in that city.

Worse even than Fez is one of the Sultan's other capitals, Mequinez, of which a most gruesome and realistic description is given in this volume. As the party on arriving there had not yet been provided with the Sultan's permission to enter, they were compelled to camp outside the city, and the place assigned them was discovered in the morning to be a cemetery. An escort of eighty men was sent out to guard them, for the region is so infested by robbers belonging to unsubdued tribes that the city itself has not been safe from their attacks even in the daytime. Painful pictures are drawn of the filth and poverty and misery of the natives, of old women kneeling among the mules and picking up stray kernels of oats, or bones and worse refuse. Morocco, nevertheless, is a most fertile country, with a vast amount of good agricultural land, which needs only tillage, and Government protection for the farmers, to become a granary for the whole of Europe; but their religion does not allow the inhabitants to benefit by the sale of grain to foreigners. With all these drawbacks, our author found nature and life in Morocco so fascinating that he confesses that, personally, he "would rather be the most holy Caliph than president of the most parliamentary, most literary, most industrious of republics. The lowest of camel-drivers, even, who, his courses in the desert ended, lies down and dies in the bright sunlight some fine day, extending his confiding hands in prayer to Allah, seems to me to have had by far the better part than the laborer in the great European workshop, be he diplomat or be he stoker, who ends his martyrdom of toil and covetousness in blaspheming upon his bed."

The Way Out of Agnosticism; or, The Philosophy of Free Religion. By Francis Ellingwood Abbot, Ph.D. Pp. 75. Boston: Little, Brown & Co. 1890.

Dr. Abbot, in this little volume, sounds the tocsin much as an orthodox theologian would do, and it is a very interesting spectacle to see liberalism taking alarm at its own progress. Still, the present case may only be one of those very common occurrences in which the individual has either not seen the consequences of his original doctrine, or has taken fright at them and beats a retreat. Certainly the spirit of the book is reactionary and conservative to an extent not expected of a man who has all his life clamored for a "free religion." Dr. Abbot is disturbed by the progress of agnosticism, and writes this summary of his lectures at Harvard to help the student out of this presumably unpromising philosophy. The "way out," when sifted down to its real meaning, is simply "feeling," which is to stick to certain time-honored beliefs—no matter what facts, science, and the limits of human knowledge may say about our inability to take a rational attitude towards them one way or the other.

It is a true instinct which leads the author to single out 'Robert Elsmere' and 'John Ward, Preacher' as representatives of the great struggle going on between reason and emotion, whenever religious problems are discussed; but he fails to remark that if religion is a "feeling," an emotion, or an intuition, a philosophy can never supply it where it is wanting. Those who are *in* agnosticism generally remain there, and those who come *out* of it generally defy the philosophy which tries to hold them in doubt, and so decide their convictions by sheer force of will. They think they have found a rational basis for their beliefs; but if their reasoning were examined, it would be found either to contain a material fallacy, or to have been adopted as the only way to satisfy the feelings.

The book is commendable for its earnestness and for the moral ideals in which it springs and which it fosters. But this apology does not require us to recognize the assumption that the only way into religion and out of existing agnosticism is the adoption of a philosophy. There are two fundamental truths here which the author does not perceive. The first is, that religion comes by insight, if it ever comes at all; and the second is, that philosophy does less to supply new truth than to supervene upon knowledge already acquired. These prevent it from ever being a condition of the beliefs which Dr. Abbot labors so strenuously to defend.

The Prose Writings of Thomas Davis. Edited, with an introduction, by T. W. Rolleston. London: Walter Scott.

This volume consists for the most part of short articles contributed half-a-century ago to Irish periodicals. None but writings by authors of the first ability, whose genius elevates their work above the passing circumstances of their time, would merit or bear such republication. There was a high and a pure purpose in what Davis wrote, but we cannot agree with the editor that there was in either his prose or his poetry, upon the whole, a higher and a wider spirit apparent than that which animates the present Irish movement. It was possible for Davis and his associates to put forward an ideal standard, because they were not brought face to face with the actual necessity of doing and accomplishing something in action. It is little wonder that there was small space left for poetry in the movement for the redress of the land grievances of Ireland, which, forty years after Davis's time, had to grapple with forty years' additional complications. And as the outcome of that movement, there appears to us arising a much higher ideal of union and of friendship between Great Britain and Ireland than was ever dreamt of by the author of these essays—essays whose interest and value for the most part lie in the revelation they afford of a state of feeling in Ireland which has largely passed away, and of hopes and anticipations which have not been realized, but which have been replaced by higher and wider ideals. The influence of Carlyle is apparent throughout the pages of the book before us.

Idle Musings: Essays in Social Mosaic. By E. Conder Gray. London: William Heinemann. 1890.

This collection of social essays belongs to the class of light editorial articles which are generally to be found in English weeklies; they are light subjects lightly handled. The opening group, upon Falling in Love and other topics of the marriage-state, on the male woman and the female man, serves as a type of the whole. The only unusual trait is the illustration of the characters dealt with by means of extracts from novels such as Mrs. Oliphant's and Mrs. Wood's; in this way a "mosaic" is easily made of commonplace reflections, apt quotations from well-known moralists, and a page or two of fiction. The range afforded by marriage being once exhausted, the author betakes himself to such material as Luck, Falling in Love with One's Work, Making the Best of Things, and the miscellaneous etcetera of which these are examples. He writes easily and agreeably, and except that he does not use anecdote to the degree which it is capable of in such chapters of manners and morals, he employs the resources of the idling littérateur with much felicity.

An International Idiom. A Manual of the Oregon Trade Language or Chinook Jargon. By Horatio Hale. London: Whittaker & Co. 1890. Sm. 8vo, vi., 63 pp.

In nearly all cases where commerce has sprung up between two nations having languages dis-

tinct in grammar and vocabulary, the necessities of the situation have led to the adoption of a jargon, *lingua franca*, or business language, for purposes of trade. Such are the "pidgin (business) English" of China, the Chinook jargon of the northwest coast of America, and the jargons in use by the whalers and traders in communicating with the Chukchi and Eskimo peoples on either shore of Bering Strait, and by these latter with each other. Such artificial languages have become permanent only in cases where one or both parties using them have not been numbered among civilized nations, and yet were too numerous or sturdy to disappear rapidly when brought into contact with aliens. That a jargon should be capable of pronunciation with clearness by both parties using it is obviously one condition of its existence. This leads to the elimination of all incompatible sounds from the words of either language which may be incorporated in it. A second condition is, that it shall be easily learned, and that a few words by compounding shall be made to express a variety of meanings. This leads to the elimination of inflections, conjugations, and declensions—in short, to the greatest possible simplification of grammatic forms. The words are derived from the languages of the traders concerned; the grammar, such as it is, has often little in common with either.

In the Bering Strait jargon the nouns are drawn from the Eskimo, English, Russian, and Hawaiian languages, and on the Asiatic side the Chukchi tongue contributes its share. A smaller number of words arise by onomatopœia. The verbs on the American side were formerly largely of Russian derivation, but, with the increase in American trade since the transfer of Alaska to the United States, many English verbs have been added to or have supplanted the others. In the case of the Chinook jargon, American traders in the last century began the work on the Northwest coast. Here the native languages were numerous, very local, harsh and complex. As the harbor of Nootka was the headquarters of the traffic, some words of the Nootka dialect became known to the traders, while a few English words were rapidly picked up by the natives. As trade spread to other parts of the coast, the traders naturally tried to communicate with the aborigines by means of the words which they had used at Nootka. The Chinooks soon acquired these words, both Nootka and English, and as early as 1804 they were found in use by the expedition of Lewis and Clarke to the mouth of the Columbia River. To these the English and Canadian French voyageurs of the Hudson Bay Company added others, and the Chinook dialect was drawn upon for numerals, some pronouns, adverbs, and prepositions.

The first scientific record of this jargon was made by the author of this volume as a member of Wilkes's expedition in 1841, when the total number of words was found to be about two hundred and fifty. Of these, eighteen were of Nootkan origin, forty-one English, thirty-four French, one hundred and eleven Chinook, ten onomatopoetic, and some thirty-eight of doubtful origin. The vocabulary of the language continued to develop. In 1863 the "Dictionary" of George Gibbs comprised nearly five hundred words. Those of Chinook origin had nearly, and those of French had more than, doubled, while some thirty-nine had been added from the Flathead dialects. Since that time the language has not materially changed; its use has widely extended, and numerous vocabularies have been printed. One issued at Victoria, in 1887, had reached its sixth edition, which proves the continued and widespread use of this international speech. There can be no doubt that it will remain a living and useful language as long as the native tribes continue to speak their own dialects. In British Columbia and southeastern Alaska it is the prevailing means of communication between whites and natives. These Indian tribes do not seem likely to die out. The jargon is in use for missionary purposes; hymns and sermons have been printed in it, so that it is beginning to possess a literature, and Dr. Hale finds reason to believe that it will still have its office to fulfil among the many-languaged tribes of this region for hundreds and perhaps thousands of years to come.

This little treatise was originally designed to form part of a larger work now deferred. It comprises a complete grammar and dictionary, with specimens of colloquial and narrative phrases, songs, hymns, a sermon, etc. That all this can be comprised in so small a space, for a language current among people in all stages of civilization, speaking more than twenty distinct languages, and diffused over a territory nearly half as large as Europe, seems marvellous indeed.

It is not necessary to state that the work has been performed in a manner commensurate with the reputation of the author. Even those who are not professed philologists will find the account of the formation and construction of the jargon interesting reading. The publishers have presented the volume in handy and attractive form, and it will no doubt have a wide field of usefulness.

The Syntax and Idioms of Hindûstânî, etc. By M. Kempson, M.A. London: W. H. Allen & Co. 1890.

We have already had occasion, in Nos. 1028 and 1130 of the *Nation*, to appraise excellent work done by Mr. Kempson, both as a translator and as an editor, in connection with Hindûstânî. And quite as helpful towards assisting the acquirement of that language as anything which he has previously published, is the admirable treatise now before us. Among the kindred guides which have preceded it, one or two are by no means wanting in merit; but, with all their laudable points, they must now count on being wholly superseded. Only by the aids which such scholars as Mr. Platts and Mr. Kempson have furnished can the student, if debarred access to the oral instruction of a native of Northern India, satisfactorily pick his way through a single page of any Hindûstânî book written within the last half century. Alike in vocabulary, in phraseology, and in grammar, to such an extent does the Hindûstânî of our time differ from that which was exhibited by Gilchrist and his immediate successors, as, indeed, to go far to constitute a new language. English anterior, by however short an interval, to that of Sir Philip Sidney was, in Dr. Johnson's estimation, little better than a jargon of barbarians; and yet, spelling apart, far less unlike it is English as now current than is the Hindûstânî of the present day to that of two or three generations ago. It is well-nigh solely as a medium of communication, and all but inappreciably for its literature, that any one busies himself to learn Hindûstânî; and every facility for learning it in its latest modification is now available. To enable the student to dispense with the offices of a teacher, Mr. Kempson announces that a key to the exercises embodied in his new work is in preparation. It will be very welcome.

BOOKS OF THE WEEK.

Aldrich, Anne R. The Feet of Love. Worthington Co.
Bazán, Emilia P. Russia: Its People and its Literature. Chicago: A. C. McClurg & Co. $1.25.
Bigot, Mme. A Foreign Match. Chicago: A. C. McClurg & Co. $1.

FAMOUS WOMEN

OF THE

FRENCH COURT.

A series of delightful biographical volumes, each one having for its nucleus some portion of the life of one of the eminent women who presided over the French Court at Versailles or the Tuileries.

The Wife of the First Consul.

Translated from the French of IMBERT DE SAINT-AMAND by THOMAS SERGEANT PERRY. With Portrait. 12mo, cloth, $1.25.

"In the career of Josephine, M. Imbert de Saint-Amand has a fascinating topic, and he has made a very readable and fascinating book, which, by reason of its qualities as well as its entrancing theme, deserves to be widely read."—*Boston Beacon.*

From the French of the same author.

The Happy Days of the Empress Marie Louise. (*Ready in May.*)

Marie Antoinette and the End of the Ancient Regime. (*In Press.*)

OTHER VOLUMES IN PREPARATION.

Day and Night Stories.

By T. R. SULLIVAN. 12mo, cloth, $1.00; paper, 50 cents.

Mr. Sullivan's stories have won for him an enviable position, and hosts of admirers, who will hear with interest of this collection of his artistic tales.

The Lawton Girl.

By HAROLD FREDERIC. 12mo, cloth, $1.25; paper, 50 cents.

"It has abundantly the essential quality of human interest. You read the tale with eagerness because you are interested intensely in the group of people who move through its pages. It leaves behind it the conviction of serious purpose, patient work, and abundant knowledge of motive and character."—*Life.*

Expiation.

By OCTAVE THANET. Illustrated by A. B. FROST. 12mo, cloth, $1.00; paper, 50 cents.

"An exceedingly spirited, well-told, and interesting Southern story. It is briefly told, but every sentence counts, and it is impressive and absorbing."—*N. Y. Tribune.*

The Broughton House.

By BLISS PERRY. 12mo, $1.25.

"A bright, well-written story, told with great animation, showing close study of the surface phases of human nature, and full of keen observation on men and manners. It is very attractive in its freshness, buoyant spirit, and graceful realism."—*Boston Saturday Evening Gazette.*

CHARLES SCRIBNER'S SONS,

743-745 Broadway, New York.

Scribner & Welford's

NEW BOOKS.

From Handel to Hallé

Biographical Sketches.

By LOUIS ENGEL, author of 'From Mozart to Mario.' With Autobiographies of Prof. Huxley and Prof. Herkomer. With 13 Portraits, and Facsimile of a MS. Sketch by Beethoven. 8vo, cloth, $4.50.

Contents—Handel, Gluck, Beethoven, Sir Arthur Sullivan, Barnby, Mme. Albani-Gye, Huxley, Herkomer, Sir Charles and Lady Hallé, etc., etc.

Arthur Schopenhauer's Essays.

Selected and translated with notes by T. Bailey Saunders. 12mo, cloth. Each $1 00.

Vol. 1. The Wisdom of Life.

Vol. 2. Religion—A Dialogue and Other Essays.

Vol. 3. Counsels and Maxims. (*Preparing.*)

"In these modest volumes we have a selection of very readable essays from the writings of the famous pessimistic philosopher, clothed in good intelligible English."—*Literary World.*

A Book of Verses.

By William Ernest Henley. A new edition, with additional poems, now first published. Printed on heavy paper. 16mo, cloth binding, $1.25.

"His productions are scholarly and musical, felicitous in expression, and show thought and quick perception."—*Boston Saturday Evening Gazette.*

NEARLY READY:

Egyptian Sketches.

By JEREMIAH LYNCH, formerly President of the San Francisco Geographical Society, and Member of the California State Senate. With 16 full-page Illustrations. One vol., demy 8vo, cloth, $1.75.

*** The author resided in Egypt for nearly six months, during the winter of 1889–90, and had, therefore, ample opportunities for studying the country carefully. Writing as an American, his views contain much that is novel and original, and his chapters on "The English in Egypt" will be found especially interesting.

*** *The above books sent upon receipt of advertised price.*

SCRIBNER & WELFORD,

743-745 Broadway, New York.

Macmillan & Co.'s

NEW BOOKS.

Now ready. 27th Annual Publication. Remodelled throughout. 12mo, $3.00.

THE STATESMAN'S YEAR

BOOK, 1890. Statistical and Historical Annual of the States of the Civilized World for the Year 1890. Edited by J. SCOTT KELTIE, Librarian to the Royal Geographical Society. Twenty-seventh Annual Publication. Revised after official returns. 12mo, cloth, $3.00.

The Statesman's Year Book for 1890 has been entirely reprinted with new type. At the same time the whole work has been reorganized, extended, and thoroughly revised.

"Not only statesmen, but all men who desire to keep pace with the march of events, with political and commercial changes—in fact, with the general progress of the world—will find in 'The Statesman's Year Book' an indispensable guide."—*New York Tribune.*

Now Ready. Vol. VII. of the new and enlarged edition of the collected works of

DE QUINCEY. Edited by DAVID MASSON, M.A., LL.D.,

Professor of Rhetoric and English Literature in the University of Edinburgh.

VOL. VII., HISTORICAL ESSAYS AND RESEARCHES, including Casuistry in Roman Meals; The Pagan Oracles; The Essence; Secret Societies; Greece under the Romans; Revolution in Greece; The Suliotes; Modern Greece; Revolt of the Tartars; Ceylon, etc. 12mo, $1.25.

*** This edition will be completed in 14 volumes published monthly. 12mo, $1.25.

Just Published. 12mo, cloth, gilt, $1.75.

A Second Edition of an Introduction to

THE STUDY OF DANTE. By JOHN ADDINGTON SYMONDS, M.A., author of 'The Renaissance in Italy.'

12mo, cloth, gilt, $1.75.

THE CIVILIZATION OF THE

RENAISSANCE IN ITALY.

By JACOB BURCKHARDT. Authorized translation. By S. G. C. MIDDLEMORE. 8vo, cloth, gilt top, $4.00.

HINTS TO TRAVELLERS,

SCIENTIFIC AND GENERAL. Edited for the Council of the Royal Geographical Society. By D. W. FRESHFIELD and CAPT. W. J. L. WHARTON, R.N., F.R.S. Revised and enlarged. 16mo, cloth, $1.75.

"A more thoroughly practical volume it would be difficult to find."—*N. Y. Times.*

"A pocket-companion that Americans, who are nowadays such devoted globe-trotters, should welcome heartily."—*N. Y. Critic.*

TRAVELS IN INDIA. By JEAN BAPTISTE TAVERNIER, Baron of Aubonne.

Translated from the original French edition of 1676, with a biographical sketch of the author, notes, appendices, etc. By V. BALL, LL.D., F.R.S., F.G.S., with illustrations and maps. 2 vols. 8vo. $12.00.

"He is a traveller whose work we could ill afford to lose; and Dr. Ball's translations of the chapters relating to India and further India well deserve a place beside Sir Henry Yule's *Marco Polo* and the publications of the Hakluyt Society. The translator's notes err, if anything, on the side of brevity, except when the subject touches on the mineralogy of India, of which Dr. Ball knows more than most people. But both the translation and the annotation are so well done that one can only hope the remaining portion of Tavernier's travels will now be taken in hand by the same editor."—*Academy.*

"He has fulfilled our expectations. . . . Nothing could be better than his treatment of Chapters XII to XVI, inclusive, dealing with diamonds and diamond mines of Golconda, pearls, rubies, and other colored gems, and with the general articles of Indian sumptuary merchandise, and the frauds practised in their manufacture. Also his six appendices, on the Koh-i-nor diamond and the Indian diamond mines, the ruby mines of Burmah, and the sapphire mines of Ceylon, are invaluable contributions to our knowledge of these attractive subjects."—*Athenæum.*

Now ready, with 200 illustrations. 8vo. $4.50, net.

DEVELOPMENT AND CHARACTER OF

GOTHIC ARCHITECTURE.

By CHARLES HERBERT MOORE. With 200 illustrations, 8vo, $4.50, net.

"We welcome Mr. Moore's book with unalloyed satisfaction. . . . A book so comprehensive, so compact, so clear in statement and so interesting in the treatment of its great subject, is well-suited not only to increase the general knowledge of Gothic Architecture, but to become a text-book for special students, and we are glad to know that it has already been adopted as such in one of Mr. Norton's courses at Cambridge."—*American Architect.*

For use with Batteries or Dynamos.

3 to 40 Volts.

WE WILL SEND FREE Catalogue E,

which shows prices of, and experiments with, Edison Lamps, and gives directions

HOW TO MAKE A CHEAP BATTERY

to operate them. Any intelligent Boy can make and use these Batteries and Lamps.

EDISON LAMP CO., Harrison, N. J.

FOR WATER, AIR, STEAM, ACIDS, OILS, LIQUORS, GAS, SUCTION,

And for any and every purpose for which a Hose can be applied.

Sizes ⅛ inch to 42 inches diameter.

The making, vending, or use of any Serviceable Armored Wire Bound Hose not of our Manufacture, is an infringement on one or more of our Patents. The rights secured to us render each individual dealer or user responsible for such unlawful use with all the consequences thereof.

For Catalogue and prices, address WAIERBURY RUBBER COMPANY, Sole Manufacturers and Owners of all the *Sphincter Grip Armored Hose Patents*, 49 WARREN ST., NEW YORK.

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S

Breakfast Cocoa

Is absolutely pure and it is soluble.

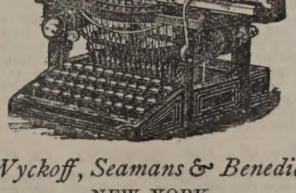
No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

Remington Standard Typewriter.



Wyckoff, Seamans & Benedict, NEW YORK.

For Fifteen Years the Standard, and to-day the most perfect development of the writing machine, embodying the latest and highest achievements of inventive and mechanical skill. We add to the Remington every improvement that study and capital can secure.

The American Book Company is a stock company incorporated under the laws of the State of New Jersey, for the purpose of carrying on the manufacture and sale of books.

Its places of business are at Nos. 806 and 808 Broadway, New York, No. 137 Walnut Street, Cincinnati, Ohio, and Nos. 258 and 260 Wabash Avenue, Chicago, Ill.

The American Book Company has purchased the school-book publications hitherto issued by D. Appleton & Co., A. S. Barnes & Co., and Ivison, Blakeman & Co. of New York, and of Van Antwerp, Bragg & Co. of Cincinnati. The company will faithfully carry out all contracts entered into by these respective firms for the publication and supply of these books. The text-books which have thus been acquired by the American Book Company have been intimately associated with the history of educational progress of this country for over half a century, and the company will devote its best efforts to sustain the great reputation these lists have achieved. To this end it will seek the aid and co-operation of educators and authors in maintaining the quality and accuracy of its publications, and in the preparation of such new and original books as the progressive demands of the schools shall warrant.

The company is organized in the interest of a reasonable economy in the production and sale of school-books, and it will employ its capital, its combined labor and experience, to produce books of the highest quality at the least cost, and will offer them at the lowest price at which similar books can be sold in any country. It will pursue an open, direct business policy towards competitors, customers, authors, and patrons. It seeks no monopoly, and invites an open, honorable competition, with respect both to quality and to price of books for use in schools.

The publications assumed by the company have hitherto received a large share of public patronage. The company hopes to merit a continuance of the same.

THE AMERICAN BOOK COMPANY.

New York, Cincinnati, Chicago, May 15, 1890.

READY SATURDAY MORNING.

STANLEY'S OWN ARTICLE

On "The Emin Pasha Relief Expedition"

APPEARS IN

SCRIBNER'S MAGAZINE

FOR JUNE.

THIS ARTICLE, which fills more than thirty pages of the magazine, is the first authoritative word from Stanley's own pen upon this, the most important of all his expeditions. Mr. Stanley reviews some of the chief incidents of his extraordinary journey, the conduct of his officers, the attitude of Emin Pasha, Nelson's starvation camp, slavery in Africa, and what can be done to subdue it, etc., etc.

The illustrations are made from Stanley's own photographs and sketches, and consist of eight full-page engravings and many smaller ones, much of the material dealing with a part of the country never before visited by a white man.

THE NUMBER ALSO CONTAINS :

THE CITY HOUSE (East and South). By Mr. RUSSELL STURGIS. Being number two in the "Homes in City and Country" series. Abundantly illustrated.
JERRY. Part I. of an anonymous serial novel of a very exceptional interest, by a new author.
BARBIZON AND MILLET. Completing the article begun in the May number. Illustrated.
THE RIGHTS OF THE CITIZEN—"As a User of Public Conveyances." (Third of the Series. By Hon. SETH LOW, President of Columbia College.
AMATEUR TRACK AND FIELD ATHLETICS. By CHARLES P. SAWYER.
IN THE VALLEY. Serial by HAROLD FREDERIC. Illustrated by HOWARD PYLE.
ROSAMOND. A dramatic poem by BARRETT WENDELL.
THE POINT OF VIEW.—The Travel Habit.—The Origin of Antipathies.—Treatment for a Defective Sense.—Genius and Ethics.

"*The publishers of this Magazine aim at obtaining the best articles, the best illustrations, and the best typographical results, and it is no disparagement to others to say that they achieve what they aim at.*"—The Boston Herald.

Price, 25 cents. $3.00 a year.

CHARLES SCRIBNER'S SONS, NEW YORK.

HOSSFELD'S METHODS FOR THE Study of Modern Languages: A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN. For the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations, with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 360 pages, $1.25). Especially adapted to the needs of those contemplating European Travel. KEYS and TASKS for self correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH-GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," No. 65 Duane St., New York.

THE NATION.—A BOUND SET, also an unbound set; various vols., both bound and unbound; 25,000 odd numbers. Will buy, sell, or exchange. A. S. CLARK, 34 Park Row, N. Y. City.

Seashore Lands.

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchasers and for sale. A number of beautiful shore, island, and peninsular properties on Penobscot Bay and other parts of the coast. These ranging from 10 to 1,000 acres, of the best selected frontages of high land, have beautiful rocks, trees, beaches, harbors, and mountain and sea views, and in the rapidly increasing movement to this coast, are almost the only remaining shore lands still purchasable at very low prices and offer exceptional advantages for gentlemen wishing independent estates for summer occupancy or for local colonization or investment. For details address

J. Murray Howe, 27 School St., Boston.

THE BEGUM'S DAUGHTER.

Ready May 24.

AN HISTORICAL NOVEL, founded upon early Dutch life in New York.

Illustrated. 12mo, $1.50.

BY

EDWIN LASSETTER BYNNER.

As wonderful in historical accuracy as 'AGNES SURRIAGE.' More dramatic and absorbing in interest. LITTLE, BROWN & CO.,
254 Washington Street, Boston.

For sale by all booksellers.

The Nation.

NEW YORK, THURSDAY, MAY 22, 1890.

The Week.

THE silver debate in the Senate has been submerged by the two-days' speech of Senator Jones, and dwarfed by the more interesting events taking place in the House. Nevertheless, it is necessary to take some notice of it. The drift of things is towards free coinage, pure and simple. This is the reason, undoubtedly, why Senator Sherman gave utterance on Friday to a lot of sayings that he must know to be unsound and economically untrue. When that distinguished and enlightened statesman tells us that the Government ought to furnish the people more money, and that he would vote to buy every ounce of silver produced in this country, and keep it in the Treasury vaults and issue legal-tender certificates on it, he is not telling what he believes to be good financial policy, but what he conceives to be good politics. He is trying to save the party, just as he tried to save it twenty-two years ago by telling the people of Ohio that Government bonds were rightfully payable in greenbacks. The danger to the party was greater then than it is now, yet the party was saved by rejecting Mr. Sherman's advice and adopting the contrary policy of declaring the bonds payable in coin only. The St. Paul *Pioneer Press*, a paper of as good standing in party journalism as Mr. Sherman is in party politics, holds that it is better to face the music and "have it out" now, than to adopt any more roundabout measures like issuing $4,500,000 certificates per month in bullion and making the certificates legal tender or redeemable in silver dollars. We admire courage, and we admire truth even more. The *Pioneer Press* has displayed both qualities in the stand it has taken, but it is too much to expect Mr. Sherman to borrow anything from such an example. To Senator Teller and all the silverites we say: "Leave your damnable faces and begin." Bring on the Free-Coinage Bill, if you have votes enough, and then let President Harrison sign it or veto it, according to his mood.

The Philadelphia *Ledger* justly characterizes the Bayne-Bynum affair in the House of Representatives on Saturday as a disgrace to both parties and also to the House itself. Mr. Bayne "began it" when he put into the *Congressional Record* a letter from a private citizen named Campbell applying abusive epithets to Mr. Bynum. Undoubtedly the provocation to Campbell was great, but that was not Mr. Bayne's business. He had no right to draw the dispute or quarrel of Campbell in an offensive way into the proceedings of the House. Having done so, he might naturally expect to hear from Bynum, who has a rough side to his tongue. Mr. Bynum's tongue in this case was even rougher than the occasion called for. An uproar followed that has not been surpassed in vehemence and passion since the days of slavery, and finally Mr. Bynum was censured by a party vote, which under the circumstances is no censure at all —that is, no moral censure, since he is sustained by his own side of the House, and would not be less thought of by his constituents if he were censured in the same way forty times. Such an affair simply deprives the censure of the House of any punitive effect, and that is itself a loss to the House and to the nation.

It ought to require very few incidents like the acquittal of the Pittsburgh glass-men last week to convince workingmen the country over how little real regard for their interest is felt by the men who champion a protective tariff. Even while the Republicans in Washington, high and low, are excusing higher duties on the ground that they are in the interest of better wages for American workmen, the trial of violators of the Contract Labor Law is allowed to result in an acquittal almost by default. It is not disputed that the by-laws of the International Federation of Window-Glass-Workers contain an agreement that all foreign members of the Association coming to this country shall be given work. The profits of the Pittsburgh glass-manufacturers, protected, were so immense that new factories were built, and foreign laborers were brought over to run them. It was to test the status of these laborers that the trial was had. After a spiritless prosecution of the case, the court ruled that no contract had been proved. It is a matter of notoriety in both Washington and Pittsburgh that this result was foreordained by Quay. Campbell was one of the leaders of the Glass-Workers' Association who took the stump for "Harrison and Protection," and he and his associates succeeded in giving the vote of the glass-workers almost as a body to the Republican ticket. Quay is not a man to forget such a service; and when Campbell found himself a defendant, it is stated on good authority that Quay interceded personally with Attorney-General Miller in the defendant's behalf. As only this charge stood between Campbell and a Federal office, it is to be presumed that he will now press on Quay and Harrison the entire fulfilment of their campaign obligations. The Democrats ought to find excellent campaign material in this case, all the facts of which have not yet been made public.

We implore our "picturesque" contemporary, Mr. Murat Halstead (he applied the designation "picturesque" to himself in his testimony before the Ballot-Box Investigating Committee at Washington), not to bring to the City of Churches the kind of morality that he sends by telegraph to the Cincinnati *Commercial Gazette*. Speaking westwardly, Mr. Halstead says of the Quay scandal:

> "We have not been able to read the whole story about Col. Quay, but as the case emerges from the fog of accusation and we catch its outlines as sailors on an ocean steamer see and feel an iceberg at about the same second, Quay is charged with having left the funds of Pennsylvania intact, and to have had Senator Don Cameron behind him in doing it. Every guilty dollar was there. But they say there was a time when there was an empty compartment in the Treasury. Whether the real offence was in taking or returning the money we have not seen stated with the close attention to accuracy in the specifications that we desire before making up the final verdict."

Really, if this is the sort of moral science that is to glow in the columns of the Brooklyn *Standard-Union*, it will need a new editor soon. Col. McKelway, in his speech at the Lotus Club banquet Saturday evening, said that that unfortunate paper had had thirty-two editors-in-chief in twenty-seven years.

The Chicago *Tribune*, oddly enough, denounces the Copyright Bill, and rejoices over its defeat in the most uncompromising terms. In its last article on the subject, it contends that it is right to continue our robbing of British authors because they rob us, a doctrine which, if clung to tenaciously by mankind, would have prevented the formation of civilized communities. Also, that the Adams bill ought not to pass because it gives the "monopoly" of our markets to the owners of the foreign books sold in them, the writer forgetting that he has himself the monopoly of his own clothing, and that every owner of property has and must have a monopoly in it; forgetting, too, that foreign nations give our authors the very monopoly we offered theirs in our bill. Also, because it would prevent "the masses having cheap reading," forgetting that the institution of property makes all portable articles somewhat dearer than they would be in a state of nature. The police and the courts in Chicago both raise the price of watches to the masses. If they were abolished, watches would for a short period rule very low in that city. The writer also says that "the masses do not propose to pay three prices for their literature," which is exactly what the thieves say about watches and silverware. All theft is, in the last analysis, a question of price. There is hardly any article which any thief would not sooner buy than steal if he could get it at a price that would suit him. The *Tribune* closes with the remark:

> "Western members will do well to remember that the George E. Adams bill confers no copyright on American authors in England, and to remember that in legislation, as in everything else, charity begins at home."

This is either the product of ignorance or something worse. The English international copyright acts were passed for the express purpose of securing reciprocity, empowering the Crown to enter into conventions for that purpose with any State giving copyright to English authors. Conventions under these acts have been concluded with nearly all European States. The United States are the only great civilized Power which stands aloof, and which has educated citizens who are not ashamed of it.

There was a curious sort of hearing before the Committee on Ways and Means last week,

when representatives of the Farmers' Alliance presented and seriously advocated a measure which proposes that the Government shall erect warehouses and receive therein wheat, corn, oats, tobacco, and cotton from the producers thereof, and advance 80 per cent. of the value thereof in cash. The "national lecturer" says that since these articles cannot be protected effectively by the tariff, this is the only way in which Governmental help can reach the great bulk of the farming class. The farmer, he says, is obliged to sell his crop as soon as it is harvested. He cannot wait. If the Government would advance him 80 per cent. of the value of his crop, he could hold it till prices became satisfactory. The cost of warehouses to hold the products would not, he thinks, be above $16,000,000, and this is a mere bagatelle as things are now going. When Mr. Flower asked him why the measure included only oats, wheat, corn, tobacco, and cotton, excluding wool, hops, rice, and cheese, he had the ready answer that "these other staples were protected by a high tariff, 75 per cent. on wool alone." That was a knock-down argument, not to Mr. Flower perhaps, but to McKinley and his faction. We trust that the national lecturer will persevere. He has just as good a right to governmental assistance as any manufacturer, or wool-grower, or hop-grower, or sugar-grower, or ship-owner; and if circumstances are such that he cannot get it by means of the tariff, he has a perfect right to "demand" it in some other way.

The Supreme Court has put a final extinguisher on the Minnesota Dressed-Beef Law, and the terms of the decision apply to all similar laws, and ought to extend to the oleomargarine laws also, in so far as they seek to prevent the importation of a wholesome article of food from one State into another. "It is one thing," says the Court, "for a State to exclude altogether from its limits cattle, sheep, or swine actually diseased, or meats that by reason of their condition or the condition of the animals from which they are taken, are unfit for human food, and punish all sales of such animals or of such meat within its limits It is quite another thing for a State to declare, as does Minnesota by the necessary operation of its statute, that fresh beef, veal, mutton, lamb, or pork—articles that are used in every part of this country to support human life—shall not be sold at all for human food within its limits unless the animal from which such meats are taken is inspected in that State, or, as is practically said, unless the animal is slaughtered in that State." The Minnesota law is declared to be unconstitutional, null and void, as it had been previously by one of the State courts and also by the United States District Court of Minnesota. This is decisive upon one point of the protective-tariff doctrine. It decides that protection shall be restricted to foreign trade and shall not exist among the States. There are still some traces of protection in State laws. Pennsylvania, for example, protects her own insurance companies against the competition of other States. When this meanness comes before the Supreme Court (as it will), it will probably be cast out as summarily as the Minnesota home butchers' law has been.

The immense appropriations already mad for pensions, and the enormous additions to the roll which are now demanded by the demagogues and claim-agents, could be justified only upon the ground that the ex-Union soldiers are an exceptionally helpless and inefficient class of men. But this is not the truth. On the contrary, Congressman Cutcheon of Michigan, himself a gallant soldier, only stated what every impartial person believes to be the fact, when he declared that his comrades are, as a rule, better off than the mass of their fellow-citizens. "In my own Grand Army post at home," he said, during a recent speech in Congress, "are many of the leading business men of the community. There are among them lawyers, physicians, merchants, capitalists, lumbermen, machinists, farmers, real-estate owners and operators, municipal and county officers. In fact, I seriously doubt if an equal number of men can be found in the community, except by careful selection, that would embrace a better average of wealth and comfort in my city [Manistee, Mich.] than the members of the Grand Army post." Equally emphatic testimony is borne by the ex-Union soldier who edits the *Times* of Chattanooga, Tenn. "The soldiers of the Union army in the civil war," he says, "have among them a larger number of self-sustaining and prosperous citizens than any other 600,000 or 700,000 of the whole population. They are found in all the walks of life, political, industrial, educational; and the number who succeed is conclusive testimony of good character, industry, sobriety, brains, and pluck. There are at least 1,000 ex-Union soldiers in Chattanooga and vicinity, and they are among our best and most successful citizens."

People in this part of the country cannot be expected to take much interest in the supplanting of the present Republican Congressman for the Sixth Kansas District by a new man in the recent nominating convention; but an incidental comment upon the occurrence by a representative Republican newspaper of the State is full of significance. "The failure to renominate Congressman Turner," says the Topeka *Capital*, "will be a disappointment to his friends, who justly consider that he has made as useful and creditable a Representative as a member can make in so large and exalted a body as the national House in so short a time. Mr. Turner has served his constituents and his State ably and faithfully, and would, in all human probability, have been renominated *but for the unfortunate tide of financial distress which has swept over the country* and rendered the path of the legislator extremely hazardous and his future doubtful." A tide of financial distress sweeping over the country under a Republican administration elected upon a high-tariff platform—what does this mean?

It will surprise nobody to learn from Mr. Clarkson's mouth that he has a low opinion of civil-service reform. His conduct as First Assistant Postmaster-General in "beating the record" as a remover of postmasters was sufficient evidence on that point. He says that, in his opinion, the Government of the United States is a "political, not a business machine"; that the "genius of our political progress lies in the active interest taken in our Government by the people"; that "to keep the people active their personal individual interest must be kept aroused," and that if they are taught to "consider that there is not only public but personal advantage to be gained, they will work, and for working they will be rewarded." That is to say, every man should be led to believe that if he works for the party, he can get an office after election. In order for Clarkson's plan to work well in practice, the number of Government offices would have to be increased to at least 5,000,000. When that was done, the President would be obliged to devote all his time to office distribution, instead of nearly all of it as at present. Clarkson would have all the incumbents turned out every four years, and a new lot put in, for he says: "I believe that continued service in the Government employ is bad for any man, and after a certain period all the public servants should be sent back to the people to renew themselves."

These are the utterances of a Department official of the Republican Administration which came into power only a little more than a year ago under a solemn pledge that "the spirit and purpose of civil-service reform should be observed in all Executive appointments," and that "all laws at variance with the object of existing reform legislation should be repealed, to the end that the *dangers to free institutions which lurk in the power of official patronage* may be wisely and effectually avoided." Mr. Clarkson's contemptuous disregard of the pledge is only more open and oral than that of his superior officer, Mr. Wanamaker, and of the President himself as well. They do not talk as he does, but they sustain his most indefensible acts, and commit others equally indefensible. Clarkson's impudence is without limit. He even has the brass to say that the "business of our Government is transacted more accurately and at a lower percentage of loss than any other public or any private business in existence, and why? Because of the fact that there is rotation in office." That is merely the old-time argument against civil-service reform, "Ours is the best civil service on the planet," with an extension to private business. Clarkson has not a particle of evidence to bring forward in support of it, for we doubt if he has any knowledge whatever of the civil service of other countries; but he is too intelligent a man to believe it himself for a moment.

The prompt nomination of Edwin Stewart as Paymaster-General of the Navy, which the President made last week, is one of his very best. Mr. Stewart's long service has been

unusually varied and extremely creditable, both ashore and afloat. He served through the war, and has since been on duty in the Brooklyn Navy-yard and in the Navy Pay Office in this city as Pay Inspector. The resignation of Paymaster-General Looker brought him the rank of Pay Director, and from this he has been taken to fill Looker's place, which is the highest in this branch of the service; and we believe it is conceded by all who know Mr. Stewart that a better selection could not have been made, though he goes up over many heads. President Harrison has not distinguished himself, in our estimation, as a seeker after merit for high places, but in this case at least he has managed to put the right man in the right place.

The President has sent a message to Congress recommending an appropriation of money to make surveys for an international railroad to the several capitals of South America. "The creation of new and improved steamship lines," he says, "undoubtedly furnishes the readiest means of developing an increased trade with the *Latin-American* (*sic*) nations. But it should not be forgotten that it is possible to travel by land from Washington to the southernmost capital of South America, and that the opening of railroad communication with these friendly States will give to them and to us facilities for intercourse and the exchange of trade that are of special value." At the very time when this message, intended to develop increased trade with the "Latin-American" nations, was received, the House was voting to restrict, curtail, and cut off a large and flourishing trade already existing with one of them, namely, the trade in silver-lead ores from Mexico. Surely we are not suffering for railroads to countries that we are not willing to trade with after we get them.

Many American cities have had queer Mayoral experiences, but Cedar Keys in Florida has had the queerest of all. Two or three years ago a "young feller" named Cottrell turned up as a candidate for the office in that city. As nobody knew much about him, nobody knew anything against him, and the account he gave of himself was doubtless very encouraging. He told the leading citizens that if "he did not make a good Mayor, it would be because he did not know how"—a species of *reductio ad absurdum* which they all appreciated highly. It was preposterous, they said, to suppose that he did not know how to be a good Mayor, and therefore it was certain that a good Mayor he would be. When installed, he got his old cronies around him in spite of promises to surround himself with eminent citizens, and appointed as Marshal a huge ruffian, and then began to have some fun. He was, during most of his first term, more or less drunk, and while in that state he and the Marshal displayed much eccentricity. He used to make large negroes strip to the waist and butt their heads against each other, under the compulsion of a cocked revolver. He threatened the lives of a great many people, robbed several others, threatened to horsewhip a minister and his wife, and he and his Marshal compelled most of the men of the town to go armed whenever they walked the streets; in fact, had a glorious frolic. When his term expired, however, he was reëlected, some said in order to vindicate him, and others because everybody was afraid to vote against him. His second term was rather worse than the first. He had far more fun. He committed more outrages on whites and made more negroes butt heads. The Governor was appealed to in vain. Finally the United States were asked to capture him and restore order. The guns of the revenue cutter were brought to bear on him, on seeing which he fled with his faithful Marshal to the swamps, pursued by a detachment of blue-jackets and marines, and has not been caught at this writing.

The *Tribune's* despatch says:

"The town rid of the Mayor and the burly Town Marshal, Cottrell's chum, the people breathe easy and sleep pleasantly, and appear cheerful when on the street. A prominent citizen said that if they were assured Cottrell would never return, real estate would advance 25 per cent. in a year or two. The churches will be open next Sunday for divine service and thanksgiving. The absent pastors will return to their respective churches, now assured that Cottrell and the Town Marshal are gone not to return. The stores are all open. The Collector of Customs and Postmaster, and other Federal Government employees walk the streets now as they would in any other well-governed city. The change in the people and place is like a magic dream."

The citizens are also looking into the Mayor's record now, which they had previously avoided from motives of delicacy and through fear of "hurting the party," and find that he at one time killed his brother-in-law, and had, when he left, eight indictments pending against him. We feel sure that after this cities will be more careful in employing mayors of whom they know nothing, and who bring no references from their last places. But what funny recollections Cottrell and the Marshal will have of the last city they governed. We hope they are not coming up this way, for we are very susceptible to Mayoral blandishments.

Noting a remark that Mr. Cleveland is "one of the inevitable candidates for 1892," the *Tribune* observes: "Yes, and there will be the same inevitable feature about his canvass that there was in 1888: he'll get left." You seem to forget, esteemed one, that in the words of your own memorable Confession of Feb. 14, 1890, the "inevitable feature" of the election of 1888 consisted in the fact that, "as people here well know, Hill succeeded only because he was able to sell a Presidency for a Governorship." Now, you must know that Hill will not be in the market with a Presidency or anything else to sell to the Republicans in 1892. His term will expire in 1891, and his successor will have to be elected in November of that year. You will see, therefore, that you are in error in saying that "there will be the same inevitable feature about the canvass [of 1892] that there was in 1888." It may be that the Republicans will be able to buy the Presidency again in that year—you are in better position to speak on that point than we are; but you must admit that they will not be able to buy it of Hill.

Gov. Hill has signed the act which forbids a "public officer, or a deputy, clerk, assistant, or other subordinate of a public officer, or any person appointed or employed by or in the office of a public officer," to receive "any emolument, gratuity, or reward or any promise of emolument, gratuity, or reward, or any money, property, or thing of value or of personal advantage, except such as may be authorized by law, for doing or omitting to do any official act, or for performing or omitting to perform or for having performed or omitted to perform any act whatsoever directly or indirectly related to any matter in respect to which any duty or discretion is by or in pursuance of law imposed upon or vested in him." Violation of this act will be adjudged a felony, punishable by imprisonment for not more than ten years, or by a fine not exceeding $4,000, or by both. If this law had been in force since 1884, the Mayor and seven other Tammany men would now be in grave peril of fine and imprisonment, the Mayor for taking illegal auctioneer's and "extra-compensation" fees as Sheriff, and "Barney" Martin and other Sheriff's deputies for exacting illegal fees from the occupants of Ludlow Street Jail. Both the Governor and the Legislature, in uniting for the enactment of the new law, have passed judgment upon the Mayor and his fellow-Tammany officials, declaring their acts to be of such indefensible character as to require legal prohibition under heavy penalties of fine and imprisonment.

The Grand Jury has found indictments against all three members of the Board of Excise, Mayor Grant's appointees, for wilful breach of official duty, an offence which is a misdemeanor, and the penalty for which is imprisonment in a penitentiary or county jail for not more than one year, or a fine of not more than $500, or both. With the conviction of Barker, the Thirteenth District Tammany leader, for assault, and with the indictment of seven other Tammany officials, who only escaped trial by the statute of limitations, this indictment of the three Excise Commissioners furnishes the city with the astonishing spectacle of ten of its governing class for whom the "penitentiary is yawning." As a final touch to the picture, one of the Excise Commissioners, Koch, was literally roaring drunk when he appeared in court to answer to the indictment! And this is government in the foremost city of America, in the latter part of the nineteenth century, by a Mayor whom we came very near having at the head of a World's Fair organized for the purpose of displaying the greatness and glory of American institutions as they have been built up during the 400 years which have followed the discovery by Columbus!

PARTY AND OTHER MORALITY.

MANY good people, including some religious papers, are much troubled, and very naturally, over the display of immorality made by members of both parties in the House in the vote on the International Copyright Bill, and above all in the arguments used against the bill. These arguments would indeed have been very shocking if we were not used to them. This discussion over international copyright has now been going on for half-a-century, and the pros and cons of the question have been thoroughly canvassed. It may be said that, as a rule, all intelligent Americans who acknowledge that there is such a thing as literary property at all, have ranged themselves on the side of those who are willing to provide legal protection for the foreign author in this country, in return for similar protection for our authors in foreign countries. A very marked feature in the controversy has been the increasingly prominent part which the question of right or wrong, as distinguished from the mere question of commercial expediency, has been made to play in it. In other words, international copyright has, as the years have gone by, been more and more urged on the ground that the publication and sale of an author's works, without his consent and without paying him any compensation, by another person for the purpose of making money by it, is theft or fraud in the sense in which these offences are forbidden in the commandment, "Thou shalt not steal."

The answer usually made to this by the opponents of international copyright is, that to give the foreign author property in his books on this side of the water would make them dearer, and that cheap books are so important for the American people that it is lawful to steal them from a foreigner, if they cannot be got cheap in any other way. It has been, in fact, maintained in terms, that it is far more important that an American should be well read and intelligent than that he should be honest. One member, in the late debate, told with pride a story of his having himself paid nine dollars a volume for the 'Encyclopædia Britannica' when it first came out, a work requiring an immense expenditure of brains and capital, for which the publishers paid American and British authors equally. Going to spend the night at the house of a farmer friend in Illinois some time later, he found on his shelves a pirated edition which came from Philadelphia and only cost $2.25 a volume. On this he (Mr. Payson) made the astonishing comment:

> "But there, sir, in an humble home in my county, in the sitting-room of an humble farmer, is a library in itself, made possible by the laws under which you and I live, and I am content with them. [Applause.] I am just now advised that a reprint of that work is out at $1.25 per volume. And so with other books."

This is exactly what a Norse statesman in the ninth century might have said after passing a night in a farm-house on one of the fjords, and having seen it filled with rich plunder from the coasts of Britain and France. "Thank God," he would observe, "under the laws and customs of our happy country, when the poor husbandman wants a new set of furniture and some ornaments for his bride, he can man his galley and run across the sea, and slaughter a Saxon family, and fit up his humble home with comfort and decency from the sack of their house; and yet there are canting rascals who say piracy is wrong."

No one can read such a speech as this of Mr. Payson's without feeling that there exists among men professing the Christian faith in the United States a moral separation of a very serious kind, which now shows itself most markedly in politics, but cannot exist in politics very long without making its way into business and other fields, and which needs prompt attention on the part of those who consider themselves the guardians of morals. How serious it is, cannot be better illustrated than by a quotation from Senator Ingalls of Kansas. He said not long ago to a reporter of the *World*, in an interview illustrated by instantaneous photographs of his various positions when speaking:

> "The purification of politics is an iridescent dream. Government is force. Politics is a battle for supremacy. Parties are the armies. The decalogue and the golden rule have no place in a political campaign. The object is success. To defeat the antagonist and expel the party in power is the purpose. The Republicans and Democrats are as irreconcilably opposed to each other as were Grant and Lee in the Wilderness. They use ballots instead of guns, but the struggle is as unrelenting and desperate and the result sought for the same. In war it is lawful to deceive the adversary, to hire Hessians, to purchase mercenaries, to mutilate, to kill, to destroy. The commander who lost a battle through the activity of his moral nature would be the derision and jest of history. This modern cant about the corruption of politics is fatiguing in the extreme. It proceeds from the tea-custard and syllabub dilettanteism, the frivolous and desultory sentimentalism of epicenes."

Now, this man is in our estimation a thorough charlatan. Intellectually he is unworthy of the smallest consideration. He has made no mark whatever as a legislator, nor has he made the smallest contribution to the political thought of the country. He is very foul-mouthed in debate, and is more than suspected of having bought his seat in the Senate. What he most prides himself upon, and oftenest refers to boastfully, is his sex, a quality which, of course, he shares with half the animal kingdom. But our opinion of him is by no means the general one. He has been elected three times by a Republican State to the United States Senate, and has been repeatedly—the last time very recently—elected President of the Senate by the Republican majority. Consequently he may be said to stand for his party very markedly. We commend him and his talk to the serious consideration of those who are troubled on moral grounds by the action of the House on the Copyright Bill. The more they ponder it, the more suggestive they will find it.

INTERNATIONAL BOYCOTTING.

THE London *Speaker* has an article on the recent defeat of the Copyright Bill in the House of Representatives, which proposes to mark the English sense of the dishonesty of the performance, and to punish the majority who voted against the bill, in a novel way. The plan is to turn to account, in the interest of honesty, the strong desire of American tourists for participation in English social life. As is well known, London is visited every season by a large number of American politicians and business men, generally on pleasure bent, who are extremely desirous to be the objects of British hospitality, to be asked to dinners and balls and garden-parties in fashionable circles, and to be put down at the leading clubs, and generally made much of as Americans, or "Amuricans," as the *Saturday Review* calls them. Now the *Speaker* proposes to take advantage of this weakness or ambition, and make out a black-list containing the names of the 126 who voted against the Copyright Bill, and boycott them socially whenever they come to England. It says:

> "But when there is no room for any doubt as to the guilt of an American visitor—when, for example, we know that he is a member of the majority which last week gave a dishonest and disgraceful vote—there can be no hesitation as to the course which it is our duty to pursue. No man who has taken part in the maintenance of this system of organized theft is fit to be admitted to English society. No club should open its doors to him; no private person should offer him hospitality. If he comes here, let him be treated as a pariah, and made to feel himself the moral leper and outcast that he is. Between him and the swell mobsman who picks one's pocket, or the 'smart' thief who carries off a jewel-box from a lady's dressing-room, there is really not a pin to choose, so far as relative degrees of guilt are concerned."

That this would be a terrible infliction to some American travellers we think is very likely; but if the *Speaker* supposes that this punishment will reach many, if any, of the 126, it is much mistaken. In fact, we greatly fear the mere threat is going to help them in the home society they most value. In the first place, opponents of international copyright seldom go to Europe, and, when they do go, they are apt to avoid the haunts of the nobility and gentry. They are too good Americans to care for the attentions of what they consider "the snobs" of the London clubs. The late A. T. Stewart was once examined in court as to the value of some old lace. The counsel began by asking him whether as a traveller in Europe he was not familiar with the lace worn by great ladies at court balls and receptions. He promptly and proudly answered "I am an American citizen, sir, and I do not go to court balls and receptions." We have no doubt the anti-copyright majority will hurl back the *Speaker's* threat in the same way. They have a thorough contempt for English hospitality, and would not be seen inside the clubs of an effete free-trade aristocracy. In fact, we should not be surprised if some of them went over this summer in order to have this British hospitality denied them in some conspicuous way. To be treated "as a pariah" in the land of the Cobden Club would make the political fortune of a good many of them. It would be worth far more to them than Mrs. Cleveland's failure to shake hands was worth to Foraker. They would run on it for a second term in Congress, or apply for a pension on it, or for a consulship, just as a vindication.

We must, however, put in a word ourselves in behalf of at least some of these copyright sinners. The *Speaker*, in passing condemnation on them *en bloc* and fixing their sentence, assumes that they are all equally guilty, or we might say all guilty. Now, it is, in the interest of international comity, a mistake to assume this. There are some honest men in the 126—that is, there are men who deny the existence of literary property or are unable to conceive of it—a state of mind which at one time existed all over the world, and still exists among ignorant and barbarous people. The notion of literary property is a product of the growth of civilization. There are others whose judgment is disturbed by the fact that there was no copyright at common law, and that many great books have been produced without any hope of pecuniary reward. These and many other considerations, which we have no space to mention here, naturally befog a good many honest men not used to processes of reasoning or to historical views of jurisprudence.

So there must in common justice be some discrimination in the treatment of the 126 when they get to London. All should not, for social purposes, be put in the same category. Probably none of them is fit to be put down at White's, or Boodle's, or the Carlton or Athenæum, but there are undoubtedly some who might be let in as visitors to the Reform or the National Liberal Club. Probably none of them, also, is entitled to a dinner at one of the great houses in town or to a Sunday in a country-house, but many, we are sure, are not unworthy to come in after dinner for a little music, or to be asked to an afternoon tea, or a garden-party, or to be allowed to see the gold vaults of the Bank of England or get into the strangers' gallery in the House. Some effort should be made to proportion the punishment in this way to the offence; and, if we might make a suggestion as to method, we should say that a good way of doing exact justice would be to have the offenders all brought up on their arrival before our old friend Squire Smalley of Norfolk, who could examine each case on its merits, and decide, as no one else in London could decide, on the exact grade of entertainment to which it would be proper to admit each applicant. It would of course be a delicate duty, but the Squire does not shirk social responsibilities because they are delicate.

THE FARMER AND THE CARPENTER.

At a meeting in Boston some weeks ago of a club which bears his name, Gen. Butler delivered himself of utterances on the labor question which were luminous and incisive to a degree, though, if the newspaper reports of his speech are to be trusted, he twisted his facts in a highly characteristic way to serve a paltry purpose, and made no special effort to enforce the true lessons which his statements teach.

It is an old and well-known story that, in the last analysis, the wages of labor in this country are based upon Indian corn. Corn is a crop easily grown, very productive, and extremely useful for feeding (and cheering) man and beast. Even as a fuel, corn is held to be the equal of the best hard wood, and it is actually used in many localities as a cheaper fuel than wood or coal. Every one familiar with agricultural literature knows that, taking one year with another, no sound American man will "hire out" for a less sum than he can gain by working upon land for himself and cultivating maize. Gallatin, Harriet Martineau, Robert Russell, and many other writers have touched upon this point, and more than thirty years have passed since Mr. Russell put upon record the familiar boast of the prairie farmer that he can cultivate in a single season forty, or even fifty, acres of corn. In this fact more than in any other is seen the determining cause of the fortune of the Republic. The very great significance of it was capitally illustrated by the endurance of the Confederacy. Nowhere else in the world can great crowds of immigrants so surely find immediate and adequate support as upon the corn lands of the great Valley, and it may even be said of the present temporary drift of men towards regions of wheat and of grass, that the movement serves to illustrate the transcendent merit of the corn-belt.

On the other hand, the census returns assure us that almost, though not quite, one-half of the population of the United States are occupied with agricultural pursuits, and the corn-wage necessarily governs and controls every one of these agricultural workers; and so it would immediately affect all other workers in the United States were it not for the innate malevolence of man. Rightly considered, the prime purpose of the trade-unionist here in America is to help to exclude "the outs." Mechanics and factory hands, on finding themselves living in much more comfortable circumstances than the farmers, have hastened to combine with their fellows in order the better to escape from the influence of the corn-wage by keeping the farmers upon the land. Upon every side the handicraftsman is seen seeking to protect himself by giving a very cold shoulder to those laborers who may wish to migrate from the farm to the workshop.

In spite of all manner of opposition, there is, as everybody knows, a constant movement of young men away from the hard work of the farm towards the easier occupations of railroading, shop-keeping, the mechanic arts, and what not; and nothing tends so strongly to check this movement as the hostile attitude of the men who have already got away from the farm and bettered their own condition. Nothing can be clearer than the truth that the chief result of any successful activity of workingmen's unions is to hinder or destroy the movement of labor from the farm to the workshop, and in so far to prevent the farm-hand from earning more money than he can get by the occupation of growing corn.

Now up speaks Benjamin Butler, and sets forth this long old story in a few well-chosen words:

"We all know," he says, as reported in the Boston *Herald* of May 2, "that a great strike of the carpenters and builders is going on in Chicago, and threatens on this day to extend itself to 100,000 workmen in this country. Their claim is that the skilled workman shall be employed eight hours a day only, even if his individual wish is to work longer, and that he shall be paid therefor 40 cents an hour. . . .

"Now, look to the farmers—I do not mean the mere farm laborer, but to the man who owns and tills the soil himself. Let us put the skilled operative with his tools on the one side, and the farmer with his farm, say of 160 acres of land, on the other side of the scale, and ascertain if we can the result. Within twenty-four hours' railroad ride of Chicago, the farmer cannot get more than fifteen cents a bushel for his corn. He cannot raise on the average of years, year in and year out, more than fifteen bushels to the acre. He cannot cultivate with his own hands more than fifty acres, and, to do so much, he must be aided by the approved modern appliances and horse power in some form to do that. Therefore, it will be seen at once—and I think I have given the largest possible value to the farmers' corn products—that the carpenter can earn twenty-one bushels of corn by a day's labor, or, in the year of 300 working days, 6,400 bushels of corn, or $960 in money, the purchaser buying the corn where the farmer sells it. If there is any mistake in my figures anywhere, it is that no farmer by his individual effort, without the use of very expensive horse power and machinery to aid him for a portion of the year, can do the labor necessary upon fifty acres of land and its crop, and if he hires any additional labor, it must come out of what he raises, and in that case the labor must be excessively cheap if he can make any profit on it. Fifty acres yielding fifteen bushels to the acre at 15 cents a bushel would be $112.50 for the farmer's crop. Another reply may be made that he need not work more than half of his time in raising his corn and devote the remainder of his time to taking care of himself and his family and matters of that sort. The farmer works sixteen hours a day when he works at all, and that during half of his time. The skilled mechanic works half of his time for the whole year, taking care of himself and his family, and improving his condition, otherwise, if he so chooses, in the other half. At the time when Washington repaired the President's house in Philadelphia, as will appear from the Treasury accounts, his carpenter received pay at the rate of 50 cents a day, and he worked from sun to sun. At the same time in the New England States—there were no Western States then—the farm-hand worked from sun to sun, taking for his pay a peck of corn meal, which he shouldered and carried home to his family. That corn meal was then worth from a quarter of a dollar to 40 cents in time of scarcity. In Washington's time the carpenters did all the heavy work, sawing, planing, hewing. All that is now done by machinery elsewhere than at the place of labor of the carpenter."

Of course the farmer, as a general rule, may get his hog and hominy, his bread, milk, butter, and fuel, and even his house room, for a smaller expenditure of money than the carpenter can, though it is most emphatically in the sweat of his face that the farmer gains these advantages. The candid reader will not fail to make due allowance for these considerations, as well as for any semblance of exaggeration which he may think to detect in the cited figures; but the fundamental, undeniable fact remains, that there is a wide gulf between the gains of the carpenter and those of the farmer, and Gen. Butler is to be complimented for his forcible presentation of this truth.

If the reporters have told us aright, Gen. Butler drew no other moral from his figures than that a change in relation to the rewards of farming labor must come very soon, and that the farm mortgages of the West will never be paid. But no long-continued study of his facts will be needed to convince every impartial observer that the organization known as the Knights of Labor is an offensive and venomous fly on the chariot

wheel of society, and that those "philanthropists" and "moralists" who sympathize with the buzzings of this impertinent insect have been grossly deceived.

Gen. Butler might have dwelt also on the bearings of his figures upon the claim of the protectionists that high wages are caused by our high tariff, a claim which is not a little absurd in view of the enormous preponderance of agriculturists in this country. Since nearly one-half of our people are immediately occupied with farming, and vast numbers of men are engaged in moving and selling the crops and in buying and carrying supplies to the farm-laborers, it follows necessarily that the wages of much more than one-half the population of the United States must depend directly upon the prices which the world is ready to pay for agricultural products. In point of fact, the chief influence of the tariff on wages is seen in those wholly exceptional cases where the immediate necessities of a manufacturer may compel him for the moment to submit to the demands of a limited number of work-people organized to exclude competing laborers, and strengthened by the moral support of an unthinking and unenlightened public.

THE CONVENTION OF WORKING-GIRLS' CLUBS.

THE full report of the convention of working-girls' clubs, lately held in this city, is a volume which may well give ground for thought. There is nothing which invites so much to oppression on the part of the strong as a dejected spirit on the part of the weak; and if the poor sewing-woman, whose name has hitherto been a synonym for the crushed and the down-trodden, has come to hiring halls and making speeches in her own behalf, it may well be believed that a better era is setting in for her.

The term workingman calls up at the present moment a picture of something firm and self-reliant—discontented, perhaps, and more or less unreasonable, but conscious that he is not altogether without power to affect his own circumstances, and hence conscious that he is a man. There is no reason why the term workingwoman should not carry with it a similar connotation. In this country there are few workingwomen who do not at least earn enough to buy themselves sufficient food; and, short of insufficient food, there is no reason why a workingwoman should not, if she orders her life well, have that spirit and energy and hopefulness which, after all, are the inmost secret of the happiness of all of us, and which are enough to prevent any class of people from being regarded, or from regarding themselves, as a pitiable portion of the human race.

The proper objects of working-girls' clubs are, it seems to us, two in number: (1) to teach the working-girl not to waste the means of happiness which are now within her reach, and (2) to give her that feeling of solidarity, of mutual trustfulness, of confidence in the power of concerted action, which will enable her, as occasion presents itself, to make effectual claim to a larger and larger share of the products of her labor. Existing clubs seem to have done little as yet towards organizing strikes. There is no necessity for having that object distinctly in view, but neither is there any doubt that the strong feeling for the common good which club life not of the frivolous kind tends to promote, will furnish the standing ground from which to force, either directly or indirectly, better terms from employers. A beginning in this direction has been made by the association of stenographers of Philadelphia. Its members pledge themselves not to accept less than a fixed standard of compensation; they also exact of themselves a fixed standard of work. Last year this association held the first banquet ever given by workingwomen to themselves.

The other object—that of securing a greater amount of happiness out of their present earnings—is a simpler matter. Happiness, for all of us, is at bottom very little a matter of the richness of our surroundings; it is much more intimately connected with their cleanliness, refinement, and good taste. Mr. Stanton Coit, after an intimate acquaintance with the very poor, said that the chief respect in which the rich differed from them was in the use of the tooth-brush. But habits of personal cleanliness are readily learned when quick-witted girls see of what vital consequence they are to the ladies who attend their clubs. Pleasing surroundings are easily in reach of girls in their club-rooms, if not in their homes. The most interesting report in this book is that which describes the way in which the Hartford working-girls are engaged in furnishing their summer home. Old packing-boxes are converted by muslin into washstands and tables, or by paint into book cases and cabinets. Pictures cut out of art newspapers are mounted on seasoned pine boards with a margin painted in gold and silver and finished with a row of picture-screws. All the bed-linen and table-linen is marked with a pansy, in different colors for the different rooms; hammock pillows are made of bits of newspaper torn fine; the hangings and sofa-covers for the parlor, which is to be in Dresden-china colors, are made of blue denim embroidered in white, and this embroidery is kept at the rooms of the United Workers, and worked upon by any one who has a few moments to spare.

Does not all this give a far more pleasing picture of summer rest, though it be only for a week or two for each worker, than the denizen of the crowded summer boarding-house is now looking forward to? Will all the monotonous fancy work which is to be executed upon the piazzas of sea-side hotels this summer give half the pleasure which is being got by these girls out of their blue denim embroidered in white? Separate pleasures are not in the reach of working-girls, but, by putting their small means together, pleasures in common may be had by them to an almost unlimited degree.

If we should ask ourselves what would be the source of our most poignant suffering, were we suddenly to be forced to live among the very poor, the answer would probably be (after the loss of good air and cleanliness) the lack of a courteous and considerate behavior on the part of our associates. Scolding mothers, ill-tempered fathers, quarrelsome brothers and sisters—these are things much more productive of unhappiness than poor food, hard beds, or long hours of work. The association of working-girls with the ladies who aid them in their clubs has a marvellous effect in quieting their manners and teaching them gentleness and forbearance. What the people who are most to be envied have reason to pride themselves upon more than all their possessions, is the subtle charm with which they know how to invest human intercourse. This is, in its perfection, the product of generations of culture, but its beginnings are not difficult to catch by girls who have the training in quickness which the sewing-machine brings with it. Their wealth the rich are not very likely to share with the poor, but the outward forms of respect which they show each other may not impossibly penetrate further and further into the lower strata of society, until virtuous poverty is robbed of no small portion of its hardness.

Clubs may easily be of so much advantage to working-girls that it is hard to see how any benevolent ladies who are not already overwhelmed with work for others can help doing something to start them, one after another, in large numbers, and to help them to become, as soon as possible, independent of outside aid. There is no doubt that the New York Convention will be productive of great enthusiasm among both of the necessary parties to the working-girls' club.

BISMARCK AS AN ECONOMIST.

THE May number of the *Journal des Économistes* contains a long and very interesting review of a history of Prince Bismarck's economical opinions, in two volumes, by Herr von Poschinger, who edited the Prince's 'Diplomatic Correspondence between 1851 and 1859.' The book is an avowed apology, and consists in the main of extracts from speeches and official and private correspondence, illustrating the various changes which the Prince's economical opinions have undergone. The author is so great an admirer of his hero that he maintains not only that the Prince is a great economist, but that he reaches correct economical conclusions by a process of simple intuition, while other men are toiling after them by a laborious process of deductive and inductive reasoning.

The book unfortunately does not bring us down later than 1880, when Bismarck became Minister of Commerce himself; but after 1880 his views underwent no serious modification. Before 1880 there were six periods in his economical history. The first is the period of his parliamentary activity as a young Tory, or "Junker," between 1847 and 1851. The second includes his diplomatic apprenticeship at Frankfort, St. Petersburg, and Paris, between 1851 and 1862. The third begins with his nomination

as Prussian Prime Minister in 1862, and ends with the foundation of the North German Confederation in 1867. The fourth includes the nine years between 1867 and 1876, during which Delbrück was Minister of Finance, and Bismarck lived under his ideas. The fifth was from 1876 to 1878, when Hoffmann was Minister of State, and the sixth from 1878 till Bismarck took possession of the Ministry of Commerce himself in 1880.

As regards the first period, from 1847 to 1851, when he was simply a parliamentary Junker, it may be said that in it he had no economical opinions at all except such as were suggested by some personal grievance or some matter of personal observation. He talked a little about the income tax, about the forest laws, and about the condition of the working classes, but he had no general ideas. The only sign of the growth of a body of doctrine which appeared was a speech in 1849 advocating the extension of the protectionist system to workingmen by legal provision for their comfort in the matter of wages, and hours of labor, and so forth. In that speech he made a vigorous attack on the protection accorded to manufacturers, on the ground that it infringed the rights of individuals in hindering them from buying where they pleased, for the purpose of enriching a small class of the community.

During his eleven years of diplomatic service there are numerous allusions in his correspondence to economical matters, but only allusions. He develops no new theories. It was not until he took office as Minister of Foreign Affairs in 1862 and entered on the task of establishing German unity, which subsequently gave him his immense fame, that he made himself in any degree known to the world as an economist. He found free-trade doctrines at that time in full possession of the field. All Prussian public men of note were disciples of Adam Smith, and the country was very prosperous under the free-trade régime. Bismarck himself was, to all outward seeming, in full accord with them, and he acted on their ideas in negotiating a treaty of commerce with France, and expounded these ideas in a memorandum explaining and defending the treaty. He did not make himself prominent as an economist, but lived in this matter in (for him) curious subordination to Delbrück, the then Minister of Commerce. What seemed to interest him most in the economical field at that period was the condition of the working classes, and the question of State provision for their old age. The germs of subsequent legislation on this subject were then clearly in his mind, and he coquetted more or less with Lassalle and other men of socialistic views. In one of his reports to the King on the condition of the Silesian weavers, he denounces "the abstract doctrines of political economy" in the now familiar fashion. In 1866 he got Prof. Dühring of the University of Berlin (in Germany, professors are supposed to know something about governmental questions) to make him two reports, one on State interference on behalf of the working classes, and the other on the best means of providing loan banks for landed proprietors. With the question of foreign trade and its conditions he can hardly be said to have meddled actively.

When he became Chancellor of the Empire, and initiated the thoroughgoing protectionist policy in 1878 which has lasted ever since, he was taunted with his departure from the principles which he either advocated or acquiesced in between 1867 and 1878, and excused himself on the ground that he was at that time engaged in a great political undertaking to the success of which a free-trade policy was necessary. A treaty of commerce with France, for instance, was a useful defence against Austria, which was trying to break up the North German Zollverein. Moreover, he needed Delbrück's coöperation so much in the work of internal organization that he felt compelled to let him have his way in fiscal matters.

It is in fact difficult, in running through his speeches and letters on economical questions, to avoid the conclusion that he has never in his long career given any attention worth mention to economical questions as economical questions simply; that is, never made any study of them on a broad scale, and with complete detachment from political considerations. His economy has been literally political economy. If we analyze his economical views, we find they are in part made up of his needs and prejudices as a large farmer; in part of a strong sympathy with the working classes and a desire to better their condition by a sort of monarchical or authoritative socialism, somewhat like the English "Tory democracy," and in part of a stern determination to use every means that "God and Nature" might have put into his hands to promote German unity. It is probably through the last that we are to account for the protectionist policy pursued since 1878. A high tariff has seemed a potent means of welding the confederation into a nationality, and it has accordingly been resorted to, with probably but little regard for its purely economical results, which thus far have, we may add, been rather deplorable.

THE UNIFICATION OF MEXICO.

To those who, twenty years, or even only twelve years ago, visited the Mexican Republic, its present aspect is, although not startling, still at least gratifying. In our own country we are accustomed to rapid changes: a city grows up in the course of a few years; a few years suffice to transform a wilderness into a productive farming region. No such changes *à vue d'œil*, occur in our sister republic, and yet a steady change is creeping over it—slow and gradual—perceptible only after years. But this slow growth promises to be durable, provided it is not interfered with from outside.

There is little danger of internal disturbances. The present Government of Mexico appears to be solidly established. The fact that President Diaz is continued and will probably be continued in office for an indefinite time is significant, but only an indication, and not in itself sufficient proof of permanence of the rule of which he is the head. There are many other points of greater importance which speak in favor of the maintenance of peace in Mexico, and consequently of the dawning of an era of at least modest prosperity.

The war which the Mexican people waged against foreign intervention, represented by the unfortunate Emperor Maximilian, had a singular effect upon that people. Until then, a nation had not, in reality, existed in Mexico. The success of the insurrection against Spain had not given them the consciousness of community of interests, language, and tradition, the feeling of solidarity from which national ideas arise. On the contrary, freedom from Spanish rule meant, in the minds of the majority, a return to conditions before the conquest—tribal and linguistic separation, to be maintained with the advanced methods of warfare due to European teachings. It was a herculean task on the part of abler minds to hold up before the eyes of a multitude unable yet to comprehend it the ideal of a fusion of local, tribal, and racial instincts into a common national feeling. It is no wonder if all attempts failed, and if to be a patriot in Mexico became synonymous with being a victim of particularism based upon local, religious, or merely personal grounds. It is a great wonder even that the republic did not go to pieces completely. The war with the United States failed to arouse a national feeling, owing to its disastrous results from the very inception. Had Mexico held its own, the result would have been different, for then there would have been something to be proud of, and every part of the country would have been anxious to share in the triumph. As it was, it merely increased the calamities of partisanship, by giving color to just and unjust recriminations. Every one looked to his neighbor for the guilt of the national disaster, of the humiliation which Mexico had been made to suffer.

In fact, the only element of union which Mexico possessed after its separation from Spain should have been the Church; or, rather, the Church in Mexico was the only power sufficiently free from local influences to become an element of union. It cannot be said that the Church in Mexico fulfilled its mission as well as it should. Still, it must be acknowledged that it maintained its position, and that the very opposition which it called forth, by creating an anti-clerical party in every State of the so-called republic, greatly fostered the feeling of coherence and of mutual relationship that is the precursor of the national idea. It is well known that the Church was not originally in favor of the Mexican insurgents, that it anathematized Hidalgo, seeing in him only the standard-bearer of a violent movement of purely racial character. As soon, however, as independence became an established fact, and a form of government was adopted promising law and order throughout the land, the Church, true to its principles, recognized it, and became the corner-stone on which a national idea could rest. Its very opponents were forced to become a national party.

Whether the sequestration of church property was a just or an unjust measure, need not be discussed here. It certainly had more to do with the attempt to plant a foreign empire in Mexico than may be generally conceded. At first the Church was decidedly imperialistic, or at least the clergy was favorable to the Empire. They hoped for the recovery of lost privileges, and, perhaps, of lost property also. But the weakness of the new régime soon became apparent, and none saw it earlier or more clearly than the Church in Mexico. At the same time they noticed that an opposition was forming against Maximilian which was no longer a matter of race or opinion, but a matter of true nationality; and they understood that the downfall of the empire was inevitable. Juarez himself was not a man of re-

markable ability, but he became the standard-bearer of national aspirations, and in this sense his memory is nearer and dearer to the Mexican people than that of Hidalgo, whose headship was only for racial revenge, as was that of Morelos subsequently. After Maximilian's hapless end, Mexico had become at least a rudimentary nation.

Some struggles were still necessary before the innate tendencies to segregation were so far subdued as to yield the first place and rank in Mexican politics to ideas of a national character. When Porfirio Diaz became President for the first time, the experiment was yet doubtful. But the peaceful election of Gonzales, and the equally peaceable return of Diaz to the Presidential chair, proved that the power of sectionalism was largely broken, and that the Mexicans had become conscious of the need to be Mexicans first, and only in the second line citizens and defenders of the interests of the various sections from which they originated or where they resided.

Twelve years of uninterrupted peace have further consolidated the national idea, and have made Porfirio Diaz its official representative. There are, of course, chronic opponents. There is an opposition to him and to his actions and decrees; to the modifications which, under his rule, have been brought about in the Utopian character of so-called institutions, most of which were hardly better than plans on paper. The great majority of the people feel that, with him and his surroundings, peace and security to life and property have been upheld, and that, while a great many things are far from being as they should be, it is to the direct interest of the country to overlook deficiencies for the sake of what has been obtained and what every earnest man in Mexico has so long sighed for in vain. They feel, with dread, that any change can only be for the worse, and therefore the honest men of all former parties are glad to support a régime that has thus far placed Mexico in a condition such as had been dreamt of before, but which sectional and partisan dissensions had always forbidden to exist.

From this feeling of tacit adhesion the clerical party in Mexico is not exempt. The stringent laws against the Church, some of which are silly, may never be modified, and yet it is well known that the upper clergy look with great favor upon the Government, and that their personal relations are unusually cordial. The Government has hereby eliminated a very dangerous element of disturbance. Where the temporal and spiritual powers are so closely linked together as they of necessity must be in Mexico, harmony between the two is essential for the stability of both, and especially for the welfare of the people itself. The present relations between the Government and the Church in Mexico are, of course, exposed to much gossip; but the fact that, after seventy years, during which mutual griefs had grown into a seemingly insurmountable barrier, both sides have dropped rancor and forgotten revenge and hatred to such an extent as to make their relations beneficent to all who inhabit the republic of Mexico, certainly shows on both sides an undercurrent of at least commendable patriotism.

Porfirio Diaz is known to have swiftly, and sometimes terribly, repressed attempts at disorder — nay, to have acted mercilessly upon the very first indication of disobedience. But he has also conciliated his opponents quite as often as he has repressed them by force. Therefore, the military power lies in his hands, and is no longer, as it formerly was, a constant threat to peace and life. The Mexican regular army may not be ideal in many ways; nevertheless it is an element of tranquillity in a country to which it formerly was a scourge. Herein lies another element of stability for the present and future of Mexico.

The recognition of the English debt has been the cause of much unfavorable comment upon the Government and its representatives, and even of attempts at open resistance, and yet, now that this measure is bearing its fruits, no sensible man in Mexico denies that the sacrifice thereby imposed on the nation is being more than amply compensated, instead of being a sordid speculation for purely personal advantage. The recognition of the English debt has proved to be a master-stroke of financial policy and of diplomatic skill. It has established for Mexico a growing credit in the markets of Europe, and has increased the ingress of European capital. Consequently industry and commerce have assumed a slow but steady upward tendency, which will finally induce indigenous capital, released from the dangers to which it has heretofore been exposed, to compete with foreign capital in the development of the country's natural resources. With an established credit, no longer compelled to resort to irregular and therefore oppressive taxation, the Mexican Government enjoys the support of whatever money may give and afford, not in the exaggerated sense of unlimited resources, but in the position of a nation accredited at the Board of Finance of the civilized world, good for its intrinsic value, and controlled, in its financial policy, by the consequences which that policy (or lack of policy) may entail.

No measure of the Mexican Government has been so much commented upon, favorably and unfavorably, as the opening of the country to the construction of railroads. Censure of such a measure seems overwhelmingly ridiculous to us; but in Mexico, we must not forget, there were apprehensions of a political nature which the conduct and public expressions of Anglo-Americans fully justified at the time. The result has proved highly advantageous to Mexico, and not wholly detrimental to foreign capital, though less productive than was originally anticipated. At all events, the advantage, notwithstanding every sacrifice, remains with the country through which these railroads operate. Aside from the usual benefits afforded by railroads to any country, it has brought people of the most remote sections of Mexico in personal contact, has thus contributed largely to the process of nationalization and unification, and has placed at the Government's command a vehicle which, in case of necessity, will enable it to prevent the hatching of revolutions, for which remote districts were formerly so convenient.

With the railroads, enterprises have entered Mexico which, while they may not immediately yield in proportion to their importance, afford new elements of subsistence to a people that has been, for centuries, often confined to the meagre resources of naturally unsatisfactory surroundings. Those enterprises afford the Government a new source of revenue, although very liberal conditions are usually given to the establishment of industries. They disseminate work, therefore money, among the people, and divert their thoughts from disorder and lawlessness, for the propagation of which idleness and misery have always been the most favorable hot-beds.

Under these circumstances, the chances for permanence of the actual régime in Mexico appear more favorable than those of any of its predecessors. A great portion of the clouds which have heretofore covered the sky are dispelled, and in all probability for ever. New difficulties will doubtless arise, but with a once disciplined crew and able officers, the Mexican ship of state can weather the storms which the future may bring. Internal troubles are not likely to occur, and the Government has thus far maintained its dignity towards foreign nations without giving any legitimate cause for complaint or trouble. A quarrel may, of course, be picked with Mexico, as well as everywhere else; but no nation, whether near or remote, has any interest in interrupting the slow upward movement of a country with which amicable relations can only be advantageous, whereas war, even if successful, will never lead to a permanent conquest.

BALFOUR'S LAND BILL.

DUBLIN, May 5, 1890.

THE adoption of Chief Secretary Balfour's Land Bill by a majority of eighty on the second reading in the House of Commons practically assures the passing of this measure. A fair discussion on its merits could not be expected: it is an axiom with the National party that no good thing can come from Balfour, and the English Home-Rulers act on the principle of voting with the Irish party on all purely Irish questions. The arguments against the bill were consequently of a mixed and contradictory character. The policy of State-aided land purchase is one which all classes in Ireland, except Michael Davitt and a small following, look to and desire as a final settlement of the land war. Since 1880 both of the great English political parties have, when in power, brought in sweeping measures of this kind, and each party in opposition makes very much the same objections against measures brought in by its opponents.

Except so far as speakers are prepared to eat their own words or renounce the views formerly held by their party, the only reasonable argument, from an Irish point of view, against a large or wholesale expropriation of landlords is, that no such measure can be fairly worked while coercion exists and Balfour reigns; tenants and Nationalists cannot be represented on the Land Board, and administration of the measure will neither seem nor be fair. Against the details of Balfour's measure many sound objections may be urged, as they may be against any and every measure of reform; but it is the business of the politician, the philosopher in action, to decide how much of an evil ought to be tolerated, and to set aside those arguments of the speculative philosopher which, if regarded, would prevent any theory being reduced to practice.

The bill proposes to advance 165 million dollars to enable tenants to buy from their landlords, who are to be paid in stock bearing 2.75 per cent. interest, while the tenants are to repay the loan by forty-nine-year annuities of 4 per cent. Both English parties agree in laying down the principle that the British (as distinguished from the Irish) taxpayer is to incur no loss and to run no risk. A large part of the discussion turns upon this point, which is obscured by the complicated nature of the scheme and the multiplicity of guarantees provided. Part of the price, usually one-fifth, payable to the landlord, is to be retained by the Land Board for seventeen years, the interest only being paid to the landlord, while the principal may be applied to make good the default of a borrower. Certain contributions in aid of local taxation from the imperial revenue, now applicable for charitable and educational purposes, are to be withheld annually to the extent to which any loss is incurred by default in

repayment of loans; the Lord-Lieutenant is also empowered to require a special county rate to be struck to make such losses good. Tenant purchasers are, for the first five years of their term, to pay a larger amount than their normal annuity, and so to provide a special insurance fund, for which, if not drawn upon, credit will be given at the end of the forty-nine year term. Lastly, there is an allocation of a reversion to a possible residue from funds formerly belonging to the Irish Church.

This part of the bill is so complicated that Balfour's followers have to take upon faith his estimate of the effective value of the guarantee deposits, the tenants' insurance fund, the reserve fund, the contingent guarantee, the special county rate, and the Church reversion. The collection of some of these funds must precede their application, and may not be so easy in practice as on paper. The withholding of funds to which Irish localities are now entitled for education of the poor, for the care and support of pauper lunatics, and other similar purposes, may not be ratified by future Parliaments. The principle of seizing such funds without the consent of the interested localities, and applying them to the payment of debts contracted by tenant farmers, is evidently open to grave objections on constitutional grounds.

Except from a mistaken sense of loyalty to their Liberal allies, it is not clear upon what grounds Irish members allow the British-taxpayer argument to pass unchallenged. If the expropriation of the Irish landlords is a matter of imperial interest, and to be settled by the imperial Parliament, is it not the concern of the British as well as the Irish taxpayer? Has the British taxpayer no responsibility for peace in Ireland? has he no responsibility for the deadlock which necessitates such a law? Is it not cheaper for him to risk and perhaps lose a small amount of capital in quieting the land war than to spend annually large sums in keeping up the existing system, in maintaining armies of soldiers and police in Ireland to collect rents and carry out evictions, and numerous special courts to control and regulate irreconcilable relations? When the British-taxpayer argument is brought out against such a measure as this, the Irishman may surely ask whether he does not pay heavily for royalty whose face he never sees; for London parks, museums, and institutions from which he derives no benefit; for wars waged all over the world in purely British interest, in which he has no concern. Ireland pays her share, and more than her share, for all these.

There is another aspect of these guarantees which has not educed observation. Every special provision for paying debts or losses which may arise under this scheme otherwise than out of the debtor's estate, and by making him a bankrupt and distributing the loss among his creditors (the whole body of taxpayers), weakens the motive for repayment, encourages the borrower to plead inability or poverty, diminishes his sense of responsibility, and impairs the value of the primary security, the land and its efficient cultivation. The bill provides what the tenant calls "back doors." Both the Land Board and the Lord-Lieutenant are empowered, under certain circumstances, to suspend collection of annuities and sales of defaulters' farms, and so to occasion the loss which is to be made good at the expense of other and more helpless classes.

The objection made by Parnell that the funds provided would only enable one tenant out of five to buy his farm and one landlord out of ten to sell his estate, and that therefore the money available would be better applied by loaning it to landlords at low interest to pay off encumbrances, requiring them in return to reduce their rents, seems weak. If the money is repaid, there is no reason why more should not be provided, and Parnell's proposal would leave the landlord-and-tenant system still as the universal rule of tenure. That part of the bill which deals with the congested districts in the West, and creates a special semi-charitable board with power to encourage emigration, migration, to develop local industries, is no doubt conceived in a benevolent though mistaken spirit. As John Dillon, in an admirable speech, pointed out, the inclusion of the vast tracts which have been converted into ranches is necessary to the treatment of the overcrowded spots, the agricultural slums in their midst. Balfour's proposals under this head indicate the usual complete and self-satisfied ignorance of English politicians of the problems which have to be solved in Ireland. An English born and bred statesman who has not spent thirty days consecutively in Ireland, advised by Castle officials whose acquaintance with the West may consist of an occasional fishing or shooting holiday, undertakes, in a contemptuously benevolent spirit, to legislate for the benefit of a population of whose life, habits, wishes, and wants he is completely ignorant.

The Land Bill will not go into Committee until the Government have got through their English Tithe Bill, a difficult and opposed measure. This will lead to a late consideration of the Land Bill, to the exclusion of discussion and amendments, to the application of the closure, and the passage for Ireland of another law on which the Irish members will not have been permitted to state fully their views, or urge the modifications which they, from their better knowledge of facts, would wish to urge on the Government. Amendments with the object of nullifying and spoiling the bill will no doubt be brought forward, but the leaders of the English Liberals, feeling that the responsibility for administering the act will soon be cast upon them, will no doubt do their best, if allowed, in no factious spirit to improve and make effective the crude and complicated provisions which Mr. Balfour proposes to impose on us.

In Ireland, so far as the views of the two classes, tenants and landlords, can be discerned and stated in general terms, I should say that the tenants approve of this as they would of any measure which gives them an opportunity of becoming owners on terms which will be easier to them than remaining as tenants. Until the grant is exhausted, every tenant is potentially a recipient of part of the loan. On the other hand, tenants approve of their members' opposition, which amounts, if successful, to a promise to do better things for them, or at worst to improving the bill in their interests. If passed, the law will not put tenants in a worse position than at present, and gives every farmer an opportunity of bettering his position. The landlords, while they complain that they are to be paid in a stock below par value, and that they are only to receive four-fifths of the value of their estates in this stock, the remaining one-fifth being locked up for seventeen years with a lien on it for any default of the purchaser, are satisfied at having an opportunity of selling, and at the administration as well as the framing of the measure being in the hands of their political friends.

In short, though the law will be thrust upon Ireland without the consent of the people, it directly injures nobody, and may benefit a very considerable number of persons. The solicitors, an interested, compact, and powerful class, are in favor of the bill. The profits of carrying out these sales are large; and in the process of creating a vast number of small estates a foundation is laid for future profitable litigation, and an opportunity offered to secure a new body of clients in place of the landlords, whose estates have for many years almost ceased to pay tribute to that part of the legal profession which occupied itself with sales of and loans upon land. AN IRISHMAN.

RENAN'S 'FUTURE OF SCIENCE.'

PARIS, May 2, 1890.

THE list of the works of Ernest Renan is getting very long. Here is a new volume with the catching title, 'The Future of Science'; but, as a sub-title, I read, 'Thoughts in 1848.' So the book is but a reprint of some articles written after the Revolution of 1848, in the *Revue des Deux Mondes*, in a forgotten and extinct review which was called *La Liberté de Penser*, and in the *Journal des Débats*. Renan gives in a long Preface the genesis of these articles. The Revolution of 1848 made a great impression on him; he had never until then paid any attention to Socialist problems, and had lived entirely absorbed in academical studies. 'The Future of Science' was originally intended as a whole, and was announced as such in the *Liberté de Penser*, where the first fragments appeared. The friends of M. Renan in the office of the *Revue des Deux Mondes* and of the *Journal des Débats* advised him to cut it in pieces—not to throw such a heavy stone in the pond of literature. He kept his manuscript, and doled it out in parts at various times. Now we have the whole of it, but we are not clearly told how much the original manuscript has been changed. It was often abandoned: Renan had to write his 'Origins of Christianity,' which absorbed nearly all his time.

He says he expected that his manuscript would be published after his death, but, "finding that his life prolongs itself more than he had supposed," he has decided to become his own publisher. The Renan of forty years ago is presented to us by the Renan of to-day. "In my writings destined for people of the world," he says, "I have been obliged to make many sacrifices to what is called in France taste (*le goût*). Here will be found, without any adornment, the little conscientious Briton who one day fled alarmed from Saint-Sulpice because he thought he perceived that a part of what his masters had taught him was perhaps not wholly true."

The art of composition was unknown to Renan when he wrote these first voluminous essays. He confesses also that, on some points, his opinions have changed; he believed too much in 1848 in the Socialist ideas of that period. He does not now believe that a civilization can be founded entirely on the idea of equality. It is clear that Darwinism has had its influence with him. "Inequality," he says, "is written in nature; it is the consequence of liberty, and the liberty of the individual is a necessary postulate of human progress. The present state of humanity, for instance, necessitates the maintenance of nations, and nations are very heavy establishments to carry. A state which should give the greatest possible amount of happiness to the individual would probably be, in view of the noble pursuits of humanity, a state of profound abasement."

You will recognize here what I might call the antinomical state of mind of Renan: he always corrects one affirmation by an almost contrary affirmation. He has arrived at a

curious sort of scepticism, very different from the light scepticism of old times. His is a sort of sentimental scepticism; he knows that what he loves must perish, but he loves it still. He knows that provincialism is narrow, and that it must disappear when the province is merged in the nation; still he loves provincialism. He knows that patriotism is a narrow form of the love of humanity, that it is prejudiced, that it can be cruel and unjust; still he can be patriotic at times. His unmerciful exegesis has destroyed the foundations of faith; still he loves the faithful and their simplicity of heart. He looks upon the legends of the saints as mere phantoms of the imagination, but nobody can speak of the saints with a more childlike affection.

The sentimental scepticism of Renan is becoming more and more marked; he has ceased to be dogmatic, as he was in the days of his youth: he has become more and more sceptical.

"There is," he says, "an error in these old pages, an exaggerated optimism which cannot see that evil still exists, and that we must pay dearly—that is to say, we must pay in privileges—for the power which protects us against evil. You will find in it also an old remnant of Catholicism, the idea that we shall again see ages of faith, ages in which there will be an universal and obligatory faith, as in the first part of the Middle Ages. May God preserve us from such a salvation! The unity of belief, that is to say, fanaticism, would only reappear in the world with the ignorance and the credulity of ancient days. I prefer an immoral people to a fanatical people; for immoral masses are not vexatious, while fanatical masses stupefy the world, and a stupid world ceases to interest me. I prefer to see it die. Suppose that the orange trees had a malady of which they could only be cured by ceasing to produce oranges; it would not be worth while, for the orange tree which yields no oranges is good for nothing."

In passing himself, so to speak, in review in these pages written in his youth, Renan has tried to make a sort of reckoning of what was real in his early hopes, and what was chimerical. He thinks that, on the whole, he was right, and that progress is going on on the lines which he then traced. He did not, to be sure, take sufficient account of the inequality of the traces, but, though he was not a naturalist, he understood the origin of life. "I saw well . . . that a creation has no place in the series of causes and effects. Unable to follow the ways of life in their labyrinth, I was a decided evolutionist in whatever concerns the products of humanity — language, writing, literature, legislation, social forms." Renan was only walking, in philology, in the footsteps of the Germans and of his illustrious French master Burnouf. He has hardly the right to consider himself as a precursor of Darwin because he believed in the *Werden* of Hegel and in the transformation of human idioms.

He has come now to a state which, if it is not the Indian Nirvana, approaches it. He confesses that he was wrong when, as did Hegel, he attributed to humanity a central part in the universe. "It may be," he says, "that all the development of humanity is of no more consequence than the moss or the lichen which envelops any moist surface." You will remark this form of language—"It may be"; nothing is really affirmed any more by Renan, nothing is worth an affirmation. After the strophe comes immediately, as in the Greek chorus, the antistrophe. As soon as he has said that humanity is no better than a bit of moss, he adds: "For us, however, the history of man keeps its primacy, since humanity alone, as far as we know, creates the conscience of the universe."

The historical and the philological sciences have made much progress since Renan began to interest himself in them; but he sees the end of their efforts approaching. In a century, he says, humanity will know all it wants to know about its past; "and then it will be time to stop." Is it really so? Has not history renewed itself in every age? It is true that the modern historical method is founded entirely on the publication of original documents. When once these documents are all published, you cannot add much to local, individual, or even national history; you can criticise and interpret the documents with more accuracy. With or without documents, history will persist in creating legends, and these legends become immortal. We read history, on the whole, as we read a novel: we want to find human characters, human passions. This is the reason why it is so difficult to give life to the history of parliamentary government: the interest becomes too diffused, the central figures are too rare. Who will care—I do not say in a hundred years—in ten years for our parties and their groups? The human mind is so made that it requires what we call great men, and the study of great men will always be interesting, and in one sense new.

The history of religions has been the favorite study of Renan. "It has become clear," he says, "not by a-priori reasoning, but by the discussion of the so-called evidence, that never in the centuries known to man has there been any revelation, any supernatural fact." With these few words he disposes of the whole subject, in the review of sciences which I am analyzing. As for the social and political sciences, he finds that their progress in forty years has been slow. "The old political economy, which had such pretensions in 1848, has been a failure." It is true that free trade has ceased to be considered as a sort of religion, that the formulas of political economy have become less dogmatic; still no country will ever repent accommodating its policy, as much as is convenient and possible, to the acknowledged laws of political economy. France will probably have to repeal the narrow protectionist policy which it has adopted at the dictation of small local interests; the interference of the State in the management of railways and their tariffs will everywhere have deplorable consequences. The relations of capital and labor, if they were left entirely free, would naturally adjust themselves to circumstances and necessities; in this respect, the abandonment of the principles of political economy has created an immense danger. Renan complains that Socialism is perturbing the world, though it offers no clear solution of any problem. "What seems probable," he says, "is that Socialism will not come to an end." He hopes that it will be with Socialism as it was with early Christianity—that it will transform itself; that it will become very different from the destructive Socialism of 1848. There is not much hope of such a transformation at present.

Renan complains, also, that in the political field we have not made much progress. "The situation is not clear. The national principle has taken since 1848 an extraordinary development. There are evident signs of the fatigue caused by the national burdens." It is quite true that the principle of nationalities, which in 1848 appeared as a principle of progress and deliverance, has produced very unexpected effects: the nations are all in arms, and the equilibrium of Europe has become more uncertain. Renan prophesies that

"fifty years hence the national principle will be at a discount. . . . It has become very apparent that the happiness of the individual is not in proportion to the greatness of the nation to which he belongs. . . . How long will the national spirit triumph over the egoism of the individual? Who will, after some centuries, have served humanity better, the patriot, the liberal, the reactionary, the Socialist? Nobody knows; still it would be important to know, for what is good on one hypothesis is bad on another. According to the end which is to be attained, what France does, for instance, is excellent or detestable. The other nations have no more light. The field of politics is like a desert through which they march, by chance, north or south, for march they must. Nobody knows, in the social order, where the good lies. The consolation is, that we necessarily arrive somewhere. Good men will thus always have their conscience at rest."

Was I wrong when I said that Renan has reached a state of universal scepticism which approaches the Indian Nirvana? He speaks as if the world were a sort of a dream; he has remained an idealist, though he has ceased to be a Christian—vulgar epicureanism is repugnant to him; he is afraid that "a real debasement of humanity would follow the day when it saw the reality of things." The Positivist school will never have a right to claim him as a disciple, though he professes the greatest admiration for science. He speaks his inner thought when he says that "science preserves us from error rather than gives us the truth." I have spoken at some length of this singular confession of faith, which is a confession of death. The Preface of the work has seemed to me more interesting than the work itself.

Correspondence.

THE KENTUCKY SENATORSHIP.

To the Editor of The Nation:

Sir: The delay in the election of Mr. Carlisle to fill the vacancy caused by the death of Senator Beck has furnished a crumb of comfort to the opponents of tariff reduction. It may, therefore, be interesting to those who, in the absence of some more substantial consolation, are compelled to lean upon this, to show how entirely the incident has been misinterpreted. Let them consider the following facts:

(1.) Throughout the State there are many men, thoroughly devoted to the cause of revenue reform, who earnestly wished Mr. Carlisle to retain his present position in the House, in the full confidence that he would be its next Speaker, a position for which he is so eminently fitted. The fact that Mr. Carlisle himself desired to go to the Senate weighed with them but little. Their feeling can be compared—though, of course, it is less intense—with that of an English Liberal, were Mr. Gladstone anxious to be raised to the peerage. In the American Senate, as (though much more decidedly) in the British House of Lords, the party of progressive ideas seems for some time doomed to a hopeless minority; does it not, therefore, seem a pity that a man of Mr. Carlisle's ability should be forced to waste his strength before a hostile assembly? And, furthermore, the House, in which revenue bills originate, is preëminently the place for a man whose chief prominence comes from his position on such matters.

(2.) Such being the opinion of many of Mr. Carlisle's warmest admirers, the personal friends of the other candidates felt that they had some reason for passing over the ex-Speaker. It was in their eyes made the wiser by the high character of some of the other candidates. It has been, for example, long known that Judge William Lindsay of Frankfort, a man of great ability and wide culture, was desirous of be-

coming Senator; here, then, was the chance to keep Kentucky's lead in the House, and at the same time to send to the Senate a gentleman well fitted to take a prominent place in that body. As far as the tariff is concerned, every one of the opposing candidates stands squarely with Mr. Carlisle; nor would any man dare to go before a Democratic caucus in this State who questioned the soundness of his party's position on this issue of supreme importance.

(3.) It must be remembered, too, that the Senatorial race was precipitated upon the Legislature without a moment's warning. Mr. Beck was stricken while attending to his regular duties; his health had been apparently no worse than for many months previous. A Legislature chosen without regard to the Senatorial succession is suddenly called upon to fill his place; is it strange that personal considerations, in some cases genuine, perhaps in others less commendable, for a while prevailed? The sentiment of the State had had no opportunity to crystallize; in real truth it did crystallize with remarkable rapidity. Whatever, indeed, the causes which hindered Mr. Carlisle's nomination, the result showed that the opposition to it was neither political nor representative—not political, because his course was not even questioned; not representative, because, with complete spontaneity, the demand for his nomination arose from the entire State. There was no wire-pulling, there was no artificial enthusiasm. At almost every ballot some member announced his change to the Speaker in response to the urgent pressure of his constituency; others admitted the pressure, while still maintaining that they could not honorably change front. But, whatever may have been the motives that actuated those opposed to him, the fact stands out clearly that his nomination was eventually made because the Legislature read in every quarter the unmistakable will of the people that Mr. Carlisle be allowed to choose his own career. From the first ballot his friends maintained their ranks without effort; his opponents were never sure. The delay in his nomination may or may not be creditable to the Legislature, as a whole; but no one who understands it can for a moment believe that it shows anything but complete confidence both in Mr. Carlisle personally, and in the cause with which he is honorably identified. A. F.

Louisville, Ky., May 17, 1890.

CLERGYMEN AND BOOK PIRACY.

To the Editor of The Nation:

Sir: With regard to clergymen and book piracy, may not the circulars they receive be explained on the ground that publishers bank on their ignorance of public questions? This is a more charitable and, I think, a more reasonable view than that they "let the cheapness of the coveted goods blind their eyes to the criminality" of the transaction. The large majority of ministers lead provincial lives, read provincial papers, and know little of public questions. Receiving a circular of the kind indicated, they consider only the question of cheapness, and think nothing of copyright in the matter. Better-informed ministers usually throw the circulars in the waste-basket. The writer did differently the other day. He wanted the 'Britannica' and had never been able to buy it. The circular came from such a reputable house that the presumption was in favor of some arrangement having been made. So he filled up the acceptance blank, writing upon it, "*provided the rights of the publishers have not been infringed.*" He has not heard of it since. P. H. H.

Wilmington, N. C., May 17, 1890.

EXCAVATIONS IN ITALY.

To the Editor of The Nation:

Sir: I see in the excellent letter of Mr. Goddard in the *Nation* of April 24 a repetition of the statement which I have several times contradicted, that the excavation of antique sites in Italy is "kept in native hands." It is simply kept under official supervision. To obtain a permit to excavate, one must apply to the Department of Public Instruction, and excavation can only be carried on under the supervision of a competent employee of the Ministry. Certain sites of historical importance are reserved for official excavation, but beyond these there is no difficulty in getting permission to dig anywhere in the kingdom, and the Government only claims the prior right to purchase objects needed to fill gaps in its own collections—a right rarely asserted lately. The Italian collections are increasing faster than the Ministry can find accommodations for them, and it is especially desirous to facilitate the work of foreign museums or societies; but, naturally, as to individuals, it will exercise its judgment as to the competence and responsibility of the applicants, and grant or refuse accordingly.

Yours truly, W. J. Stillman.

Rome, May 7, 1890.

MR. DOLE'S TRANSLATION.

To the Editor of The Nation:

Sir: In your criticism of my translation of 'La Hermana San Sulpicio,' I am charged, among other things, with ignorance of the slang phrase *pelar la pava*, the meaning of which is made perfectly clear when used in the text. But *Con perdón de ustedes, pelo la pava* is a chapter heading! A literal translation would have been nonsensical, and I know of no corresponding English expression. I took what seemed to me a justifiable liberty, and simply renamed the chapter, which was certainly not "a desperate drive at the idiom"!

Less justifiable, perhaps, were similar proceedings in the text for various reasons; such, for instance, as the one quoted, "clog-dancing" for *pisotones en los callos*. My chief desire was to make the book readable in English, though it was hopeless to reproduce the peculiar flavor of the original, which has page upon page of piquant dialect. It seems to me that in such a story a translator has the right to employ a considerable degree of latitude.

I am, etc., Nathan Haskell Dole.

"Hedgecote," Glen Road, Jamaica Plain, Boston, May 17, 1890.

Notes.

Henry Holt & Co. will hereafter be the publishers of 'A Japanese Boy,' by himself, which we lately had occasion to praise.

Robert Bonner's Sons issue directly 'Five Years with the Congo Cannibals,' by Herbert Ward.

W. H. Anderson, 222 East Broad Street, Richmond, Va., is preparing a book of negro authors, with an account of their lives and writings.

N. D. C. Hodges, 47 Lafayette Place, New York, has begun the issue of a series of popular scientific works, under the general title of "Fact and Theory Papers." The scheme even includes an essay on the true scope of a Shakspere Society, 'Society and the Fad,' by Appleton Morgan.

John Wiley & Sons have in preparation 'Least Squares,' by Prof. W. W. Johnson of the U. S. Naval Academy.

'The Riversons,' a novel of Pennsylvania life in the forties, by S. J. Bumstead; 'One of "Berrian's" Novels,' by Mrs. C. H. Stone; 'The Bank Tragedy,' by Mary R. P. Hatch; and two books of travel, 'From Yellowstone Park to Alaska,' and 'From the Land of the Midnight Sun to the Volga,' by Francis C. Sessions, are in the press of Welch, Fracker Co.

The fourth of Mr. W. M. Griswold's Cumulative Indexes is an author and subject Index to the chief German periodicals and to sundry collections ('Autoren- und Sachregister zu den bedeutendsten Deutschen Zeitschriften, 1886-1889,' etc. Cambridge, Mass.: W. M. Griswold). A convenient list of writers precedes the index proper, of which the plan resembles that of its predecessors. There appears to be a slip in the pagination of the Autoren-Verzeichniss, page x being succeeded by pages 3–12.

Mr. Gustav Kobbé, who has given us the best guide-book to the New Jersey Coast, now takes up the belt of the same State traversed by the Central Railroad, and makes a neat hand-book in every respect fitted for the tourist, with abundant information respecting local history, scenery, and hotels. It is entitled 'The Central Railroad of New Jersey,' and is published by the editor himself at No. 251 Broadway. Numerous illustrations and convenient map-sections accompany the text. Mr. Kobbé has also conferred a boon on those who drive or walk for pleasure by issuing excellent pocket suburban road-maps, viz., of Central and Northern New Jersey, the Jersey Coast, Long Island, and Westchester County, N. Y., with part of Fairfield County, Conn. They are very clearly and neatly executed.

By far the best series of guide-books yet produced in this country (and better will not soon be seen) are those which have borne successively the names of Osgood's and Ticknor's, and, now that they have become the property of Houghton, Mifflin & Co., are henceforth fitly to be known as Sweetser's, Mr. M. F. Sweetser being the editor. We have just received the tenth edition of the 'White Mountains,' the twelfth of the 'New England,' and the seventh of the 'Maritime Provinces,' the most indispensable of all. Collectively, they have no rivals.

The same firm send us the current edition of their 'Satchel Guide for the Vacation Tourist in Europe.' It has a well-established usefulness, after nearly twenty years of vogue.

From J. W. Bouton we receive the illustrated catalogue of the Paris Salon now exhibiting in the Champs-Élysées. There are, to judge from these memoranda, few striking works of the imagination, and only here and there is there a suggestion of a striking landscape. Portraits seem more than commonly abundant. Meissonier and his colleagues in the secession are of course wanting in this catalogue.

The artistic side of the great French Exposition of last year is subordinated in Henri de Parville's 'L'Exposition Universelle' (Paris: J. Rothschild; New York: F. W. Christern). The compact little volume of 700 pages forms, in fact, part of this well-known writer's 'Causeries Scientifiques.' He has undertaken to produce a handy and readable summary of the Exposition regarded as an organism, with a wealth of statistics which can hardly be sought elsewhere, and with the most apt and interesting illustrations, averaging one to a page. It would be easy to expatiate on this

remarkable record, which recommends itself especially to architects, builders, and engineers, and to boards of public works, but which also should be prized as a souvenir by every one who visited the Exposition. That it should find a place in every public library is a matter of course.

Mr. Keltie, the editor of the 'Statesman's Year-Book' (Macmillan), has boldly reconstructed it in a way which will meet with universal approval. In the first place, Great Britain and its dependencies are grouped by themselves at the beginning of the work, after which the rest of the world follows in alphabetical order for the first time, with the general exception that colonies are bracketed with the mother country. To what an extent Africa is dismembered in consequence will appear when we say that Abyssinia must be sought under Italy. The effort is made to embrace pretty nearly the whole of the earth's surface, so that the 'Year-Book' has more than ever the character and value of a gazetteer. We feel that a friendly coöperation might improve the lists of non-official publications regarding each country which has been a feature of the 'Year-Book' from the beginning. (It is now in its twenty-seventh year.)

'Appletons' Annual Cyclopædia' for 1889, being vol. xiv of the new series, has also made its appearance, and presents the usual features. The index embraces this and the preceding volume. The Pope, Stanley, Robert Browning, and Ericsson are the subjects of full-paged portraiture. A folded colored plan of the Paris Exposition accompanies the article on that head. The Congressional summary, geographical progress and discovery, financial and fine-art reviews, irrigation, registry laws, are some of the leading rubrics. The several States and countries and religious denominations receive the customary attention.

Six members of the revisionist majority of the New York Presbytery, with Professor Evans of Lane Theological Seminary, contribute papers to a little volume called 'How Shall We Revise?' (Scribners). It is at once the last gun from the hosts of revision before the meeting of the Assembly, and a signal-shot in honor of a victory already won. Professor Evans carries his witty flings at the opponents of revision to a length which will doubtless seem to them highly disrespectful; but the man who gives them the roughest handling, without any joking about it, is, as usual, Professor Briggs. The most valuable of his three contributions is his "The Confession Tested by Scripture," in which, with the help of an appendix setting forth the exact proof-texts used by the Westminster divines, he shows how faulty and partial their exegesis was.

An English translation of Professor Mantegazza's 'Physiognomy and Expression,' which has existed in Italian and French versions for half-a-dozen years, is issued by Scribner & Welford. It contains within the compass of about 300 pages a good deal of curious information regarding a department of human inquiry which is just beginning to assume a scientific aspect, and the appendix contains a number of plates of astrological, morphological and æsthetic types, etc. For some obscure reason, fantastic and absurd generalizations regarding the emotional and intellectual meaning of certain varieties of features have always possessed a greater interest for the public at large than real scientific deductions. Thus a silly article on the meaning of blue, black, and gray eyes or different kinds of ears is sure to be copied by all the newspapers, while Darwin's fascinating researches in this field are known only to a few special students. Mantegazza takes note of the most important historic vagaries as well as of the latest scientific researches, and in the departments of anthropology and national psychic traits he adds some valuable remarks of his own. On the whole, however, the work is a compilation rather than one of original research; but it will be found entertaining in spite of a certain diffuseness of style.

The 'Samaritan Chronicle' was edited in 1848 by Juynboll, who published the Arabic text (from the Scaliger MS.) with Latin translation, notes, and introductory dissertation. Up to this time there has been no English translation of the work, and Mr. O. T. Crane has done good service in putting it into English and presenting it in convenient form to the general reader (New York: John B. Alden). Juynboll had only one MS. before him. Mr. Crane states in his preface that, while following the Arabic text of the Dutch scholar, he has in many cases consulted a MS. in the British Museum, and has thus been led occasionally to depart from the Latin translation. He has added a number of useful notes at the end of the book. The 'Chronicle' belongs probably to the thirteenth or fourteenth century of our era, and contains a good deal of geographical and historical material belonging to the ideas of that time. It furnishes material also for the history of development of legend in the first 1,300 years of our era. The book is regarded by the Samaritans as an authentic history, though not divinely inspired.

Under the title 'Notes on the Hebrew Text of the Books of Samuel' (Oxford: Clarendon Press; New York: Macmillan), Dr. S. R. Driver, Regius Professor of Hebrew, gives us a timely and valuable textual and grammatical commentary on one of the most interesting of the Old Testament historical books. Availing himself freely of the investigations of his predecessors, especially Thenius and Wellhausen, he everywhere carefully criticises their works, contributes his own material, and uses his own judgment. His commentary is a thesaurus of grammatical and textual studies, the fullest and best guide in any language for one who wishes to go into a careful examination of Samuel. The introduction treats briefly but satisfactorily of the early history of the Hebrew alphabet, early Hebrew orthography, the chief ancient versions of the Old Testament, and the characteristics of the chief ancient versions of Samuel. There are facsimiles of the Siloam inscription, the Carpentras stele, an Egyptian Aramaic papyrus, and the inscription of Tabnith, King of Sidon, and a translation and discussion of the inscription of Mesha, King of Moab.

Their Eighteenth Report makes a very creditable showing for the Commissioners of Fisheries of the State of New York. It is a record of activity and good results. Among the first three hundred pages, on the work of the Commission, we find a couple of illustrated papers of scientific importance, viz., that of Prof. Bashford Dean, 'On the Supposed Fish-eating Plant, Utricularia,' and Commissioner Fred. Mather's more extensive work on 'Adirondack Fishes,' with two new species of suckers, Catostomus. It is well that the Adirondacks are receiving so much attention—the earlier the better. In an appendix of a hundred and thirty-five pages are given the laws of the State in general and of the counties in particular, so far as they relate to fish and game.

The Commissioners of the State Reservation at Niagara have done well in printing in their Sixth Annual Report a popular statement of the history of the Niagara River, by G. K. Gilbert of the United States Geological Survey. Too many of even the intelligent visitors to Niagara see only the Falls, and fail to apprehend their meaning; if they would give half-an-hour to reading over this geographical story (and it ought to be on sale at Niagara), their interest in the great cataract would be wonderfully increased. Mr. Gilbert illustrates some of the more important stages in the history of the Great Lakes, closely connected with the history of Niagara, by several hypothetical outlines of the great bodies of water that stood over the northern country when it was more or less tilted from its present attitude, and when the present river outlets were blocked by the retreating ice of the glacial period. The essay closes with a consideration of the conditions that may have determined a variation in the rate of recession of the Falls as they worked their way back from the plateau front through the gorge to their present position.

Dr. Siegmund Günther, professor at the Technical High School in Munich, has prepared a brief treatise on meteorology in its modern aspects with especial reference to geographical questions (Munich: Ackermann). Like his other works, this is a studious production, with many references to original memoirs by various authors; Dr. Günther's forte seeming to be rather a high quality of compilation than an originality in research. Like many German text-books, this one is marked by a serious style, with little that is devised to awaken the interest or to diminish the difficulties of the scholar, and with absolutely no padding. Such a book is sufficient for the student who desires to learn and asks only that opportunity be allowed him.

Dr. Hann of Vienna announced the following conclusions, derived from his recent meteorological studies, at the meeting of the Vienna Academy on April 17. Areas of low and high pressure, commonly known as cyclonic and anticyclonic areas on our weather maps, are the product of the general circulation of the atmosphere, which in turn arises from the difference between equatorial and polar temperatures. Cyclones and anticyclones possess ascending and descending components of motion respectively; but these are not produced by local differences of temperature, such as are commonly assumed by the convectional theory of cyclones, generally current. The convectional theory requires that cyclones should be as a whole masses of warm air, while anticyclones should be cold. The reverse appears to be the fact: cyclones are cold and anticyclones are warm. These temperatures are the product of the vertical components of motion, and not vice-versa. In reaching these results Dr. Hann made use of the records from the Alpine high-level observatories.

The *Dramatic Mirror Quarterly*, edited by Harrison Gray Fiske, and published at No. 145 Fifth Avenue, has just been started, bearing the date of June, 1890. It consists of original signed papers on the actor's art, plus a dramatic diary.

Prof. William James of Harvard College has been appointed census-taker of hallucinations in America, on behalf of the Society for Psychical Research. The aim is to accumulate a mass of facts, and also to discover how large a proportion of persons have had experience of hallucinations. The question put is, "Have you ever, when completely awake, had a vivid impression of seeing or being touched by a living being or inanimate object, or of hearing a voice; which impression, so far as you could

discover, was not due to any external physical cause?" A negative answer will be valued as much as an affirmative. Prof. James will furnish blanks to canvassers who would like to assist him.

—The twenty-second volume of Leslie Stephen's 'Dictionary of National Biography' (Macmillan) runs from Glover to Gravet. The editor has reserved for himself William and Mary Godwin, Goldsmith, and Lord George Gordon, "agitator"; and these sketches are all excellent examples of the writer's unsurpassed faculty for this sort of writing. Other noticeable sketches are those of Chinese Gordon (7 pp.), Grattan (8 pp.), and Graham of Claverhouse (16 pp.). Under Sir James Graham, we read, apropos of the scandal caused by the Home Secretary's opening the correspondence of the refugee Italian patriots, that "the power still remains in the hands" of that official, though "Graham's case is likely to be a lesson enforcing prudence." And while we are speaking of Grahams, let us note the omission of James Grahame, one of the most approved historians of the United States down to the inception of the republic, as well as author of other works. Not a few early American worthies turn up in this volume—Ferdinando Gorges, Bartholomew Gosnold, Goffe, the regicide, and his estimable friend Daniel Gookin, with the problematic Samuel Gorton. The Rev. Morgan Godwin, who preached in Virginia under Gov. Berkeley, was a zealous friend of the negro and the Indian. Thomas Godfrey, born in Philadelphia, produced the first play written in America. John B. Gough rose to the head of temperance orators here as well as in his native Britain. Mr. Edmund Gosse writes the sketch of his father, Philip Henry Gosse, who married Miss Emily Bowes, of New England parentage. Mrs. Anne Grant, author of the 'Memoirs of an American Lady,' passed her girlhood with the Schuylers as their protégée. Lewis Gompertz, the originator of societies for the prevention of cruelty to animals, and Sir Daniel Gooch, who had a hand in the beginnings of railways, tunnels, telegraphic cables, and even the *Great Eastern*, are the most conspicuous of the pioneers recorded in the present volume.

— Mr. Andrew Lang, a few years ago, made in his 'Custom and Myth' an exposition of his very sensible theory that a better explanation of many myths is likely to be found in the existing customs and beliefs of savages than is always to be had from the speculations and moral consciousness of too cultivated folklorists. A doctrine analogous to this applied to history is set forth in a recent article on the French Sudan in the *Nouvelle Revue*. The writer, Captain Péroz, takes for his text a remark of Dr. Béranger-Féraud's about the tribes of Senegambia, among which he has lived. The latter says that, in meditating upon their rudimentary social organization, he has often asked himself whether he was not contemplating a state of things that closely resembles the life led in times past by his own ancestors, the Gauls and the Franks. At last he became so entirely persuaded of the truth of this view that he puts it forth unconditionally: "The historian of our day," he says, "may see unrolled before his eyes in these countries a course of things which has not been seen for centuries in our own." Captain Péroz accepts this view, which he thinks may be widened so as to include all the conditions of life and society, men as well as things, the soil as well as its products. He sees much corroboration of it in his own experiences in the French Sudan, where at times it seemed to him as if he were really living in prehistoric Gaul.

—M. Auguste Marcade, who writes of Captain Péroz's article in the *Figaro* of April 12, says that it finds valuable and unexpected support in a learned and curious study on 'Les Curés avant 1789,' contributed to the *Correspondant* by the Abbé Sicard. The Abbé explains the rise of country villages, of which there were very few in France before the tenth century, by the impulse given to monasticism by the Benedictine Reform. The monks went out everywhere into waste places in the country, and built oratories, and lived by agriculture. These monastic chapels developed in the course of time into parish churches as the scattered inhabitants of the country gathered more and more around the monasteries, and villages were formed. It is well known that Cardinal Lavigerie hopes and expects that some such results may come from his missions in Northern and Central Africa; and the work of some of the English missionaries in the Eastern Equatorial region has, we believe, been directed towards the same end. There are grounds for hope that missionary work of this sort may leave more lasting traces than did an old-fashioned kind, which sometimes began and ended in the administration of the sacrament of baptism to savages who knew not a word of the missionary's language, nor he of theirs.

— Those who have been interested in the periodical *Artistic Japan*, which has been noticed in previous numbers of the *Nation*, will find pleasure of a kindred sort in the new publication which comes to us from Japan itself. The name of this appears to be simply *Ko-ka*, which is translated as 'Flowers of the Country.' The price is named as $10 a year, or $1.00 for each monthly part, but we are not informed whether any New York agent will undertake the delivery of the numbers at that price. Three of these numbers have reached our table. The text is entirely in Japanese; the improvement of an added text in some European language is yet to come. Each number contains either five or six full-page illustrations, the page being nine by fifteen inches, if we do not count that unavailable part of the margin which is taken up by the knotting with silk in the Japanese fashion. Of these illustrations, some are photographic reproductions of ancient paintings, and these are extremely well rendered. Only those who have tried to get good photographs here in New York of Japanese kakemonos and the like will understand how difficult this is. Even the one in which a painting on silk of a Buddhist subject, apparently of great antiquity, is imitated, has come out satisfactorily. The distinction between the transparent painting, through which the threads of the material show, and the loaded painting of the faces and some parts of the costume, is evident enough, and it is evident that the quality of the whole, apart from its color, is as well given as there is any hope of in such reproductions. Other plates are photogravures from the objects themselves, as, for instance, the interior of what we take to be the temple at Nara, with special attention given to the elaborate timber roof, to show which the photograph has been distorted in a curious fashion, reminding one of those photographs of Gothic vaults in Europe which have been taken specially for architectural study. Others again are in color, and here photography does not appear, except that it may have been used to assure correct drawing, the plate having apparently been worked by that process of printing in color which is tolerably familiar to those who have studied Japanese art. This process, in which the Japanese easily distance competition, has been so used that the appearance of fidelity to the ancient and probably precious original is very great indeed.

— We shall hope for more such colored plates as these in future numbers. Japanese color-printing should be made as familiar to Europeans as possible. Besides the large prints, there is in each number at least one drawing printed with the text, and mainly an outline. One of these represents ancient pieces of armor, much shattered and decayed, evidently a part of the storehouse of some temple or palace. Another shows the exterior of that famous treasure-house at Nara to which special attention has been called of late, and which has come down, almost unchanged, from a remote antiquity. The books are made up in a purely Japanese fashion, covered with pretty paper, printed with a pattern in green and silver on a gray ground, a different pattern being given on the inside and the outside of the covers. The publication is specially worthy of the attention of those who wish to study Japanese art in its least modified, its least sophisticated form. Let the Japanese choose the works of art that you shall study, and let them present such works of art to you in their own way, if you would learn what Japanese art really is. The interpretations of the European commentator will often mislead, and cannot replace the stating of the case which a native will offer you.

—There is strange news relative to the famous Paston letters. Four volumes of the first impression of them were brought out by Sir John Fenn, and a fifth by his nephew, Mr. Serjeant Frere. But to the originals of a considerable portion of this aggregate there hangs a tale. Of the various fate of the remaining originals the details are set forth at length by Mr. James Gairdner, in his excellent edition of the Letters, issued in 1872–'75; and the story is also there told of the mysterious disappearance of the manuscripts from which Sir John Fenn derived the contents of his two first volumes. These manuscripts, three bound volumes, were presented by Sir John to George the Third in 1787. Yet in less than two years they were missing. According to Mr. Gairdner, "there is a tradition that they were last seen in the hands of Queen Charlotte, who, it is supposed, must have lent them to one of her ladies in attendance." Some forty years ago, the late Prince Consort instituted a thorough search for them in the Royal Library at Windsor Castle, but only to end in disappointment. Not a trace of them was discoverable. And now, after the lapse of a century, they have at last turned up in a most unexpected quarter, of their migration to which it would be curious to know the presumably unknowable history. They have come to light in the library of the late Colonel George Tomline, at his seat, Orwell Park, Nacton, in Suffolk. Colonel Tomline was grandson of Bishop Pretyman, afterwards called Tomline, of anti-Calvinistic memory, who was, first, tutor, and subsequently private secretary, to the second William Pitt. The Bishop, it is said, was greatly interested in the manuscript letters; and how, unless through him, they can have found their way to the bookshelves of his descendant is difficult to conjecture. In all likelihood, their resurrection will not, however, prove to be of particular importance. In most cases where Sir John Fenn's discharge of his duties as editor could be tested by reference to the documents which he professed to reproduce, Mr. Gairdner has satisfied himself that it is marked by the most

praiseworthy scrupulousness. From time to time it has been suggested that Sir John, emulating Chatterton and Macpherson, was the perpetrator of a wholesale fabrication; and the suggestion, a very groundless one, has just been revived. Slight indeed is the hazard in believing that the Paston Letters, after whatever critical investigation, will continue to be accepted as an authentic and valuable contribution to our knowledge of England and Englishmen in that troublous period the fifteenth century, and also of the familiar language, then current, of our forefathers. Cruel would be the blow were we compelled to relegate even Margery Brews's love-letters to John Paston to the category of forgeries.

—Few Harvard graduates know that the College library possesses some thirty volumes of Goethe's writings, marked "Gift of the Author, J. W. v. Goethe of Germany, received Dec. 8, 1819." The fact of this gift, interesting as it is in itself, receives an additional interest from the manner in which it came about. It seems that Dr. J. G. Cogswell, who, with Ticknor, Hedge, and Bancroft, was among the earliest and most devoted friends, in this country, of German scholarship, was also one of the first to awaken Goethe's interest in the most venerable of American seats of learning. Readers of Miss Ticknor's admirable edition of Cogswell's memoirs will remember the touching description of his visit to Goethe and their animated conversation about American life and culture. Before Cogswell came to Weimar, he had shared the widespread prejudice that Goethe was proud and cold; indeed, in one of his letters from Göttingen, he does not hesitate to call him "insufferably vain," and to report in corroboration of his judgment an anecdote which must have impressed him very differently from the way in which it would appear to us of the present day. In an interview with a visiting Frenchman, Goethe is reported to have said: "I know that the world regards me as a carpenter who has built a ship of war, of the first rate, upon a mountain, thousands of miles from the ocean—but the water will rise, my ship will float, and bear her builder in triumph where human genius never reached before." "This," Cogswell adds, "is vanity which can have no parallel. Next week I shall be at Weimar and probably see this strange beast." He did see Goethe; and, instead of the proud, repelling giant for whom he was prepared, he found a kind, benignant man, who received the young foreigner with natural and unaffected heartiness. He soon turned the conversation upon America, and its hopes and promise, and displayed a minute knowledge of the character of its people. He spoke of Boston and its local situation, of the productions of American soil, of the larger scale of crystallizations in America as compared with those of other continents, and of the great prospects of American literature. And throughout their conversation, Cogswell says, he "made juster and more rational observations than I ever heard from any man in Europe." This was in April, 1817, and from that time on until he returned to this country, Cogswell remained in frequent and intimate communication with Goethe. In August, 1819, he went again to Weimar, to take leave of Goethe. "And will you remember me," said the poet, "when you are surrounded by your friends at home? and may I believe that there is a heart in the New World which cares for me?"

—Only one of Goethe's letters to Mr. Cogswell has been preserved, but happily this one throws some light on the Goethe collection in the Harvard College Library. In it Goethe informs his young American friend that he has just sent to the latter's address a parcel containing his "poetical and scientific writings," which he wishes Cogswell would forward to his "dear fellow-countrymen," to whom, he adds, he often finds himself "transported in thought and feeling." That the books mentioned in this letter, which is dated Weimar, August 11, 1819, were intended as a gift to Harvard College and are identical with those now in our possession, is evident from the following entry in the Harvard Corporation Records of the year 1819, which we give here verbatim:

"Translation of Goethe's note:

Through the agency of Mr. J. G. Cogswell.
Goethe's Works. Vol. I.–XX.
Doctrine of the Colours. Vol. I.–II,
—— —— Plates. 4to.
The Propylæa. Vol. I.–III.
Life of J. G. Hackert.
Travels in Italy. Vol. I.–II.
Art and Antiquity. Vol. I.–II.
On Natural Science.
Bohemian Mountains (3 copies).
Iphigenia translated into modern Greek (3 copies).
Occasional Poems.

The above poetical and scientific works are presented to the library of the University at Cambridge in New England, as a mark of deep interest in its high literary character, and in the successful zeal it has displayed through so long a course of years for the promotion of solid and elegant education.

"With the high respects of the author,
"J. W. v. GOETHE.

"WEIMAR, Aug. 11, 1819."

MOORE'S GOTHIC ARCHITECTURE.

Development and Character of Gothic Architecture. By Charles Herbert Moore. With illustrations. Macmillan & Co. Pp. 333.

GOTHIC architecture has never been properly studied by persons who write in English, because what study has been given to it—and it has been much and minute—has been in connection with the so-called Gothic revival in England, beginning in 1840 or thereabouts. This movement has failed entirely to make the architecture of England generally Gothic, or to make even the ecclesiastical architecture of England Gothic in any true sense. The art has not as yet become a modern art, nor has any form of modern art grown out of it in a natural and satisfactory manner. We are left, therefore, to study it as a subject of archæological research, as a part of the history of fine art; and in this respect, as has been said, it has been hitherto neglected by English-speaking people, mainly because of the enthusiastic advocacy of it as a style to build in, on the one hand, and the consequent violent opposition to it, on the other, among architects and decorators.

Mr. Moore's book is to be welcomed as one of the very few serious contributions to this critical study of Gothic architecture, and almost the only one in English. He devotes a chapter to the nature of Gothic architecture. The second chapter, which is much the longest in the book, is devoted to "Gothic Construction in France," and the third to "Pointed Construction in England," these titles indicating the distinction which Mr. Moore wishes to draw between the true and original Gothic buildings of France and the borrowed and less truly Gothic buildings of England. Chapters follow on the pointed construction of Germany, Italy, Spain; on the Gothic profiles of France, and the architectural profiles of the pointed style in other countries; on Gothic painting and stained glass in France and other countries; and on Gothic sculpture in France and other countries.

The book is interesting and truly valuable. The slightest examination shows that it is sincere beyond what is common, full of hearty love for the subject, and yet devoid of prejudice, and that it represents a great deal of careful observation and of earnest thought. Mr. Moore, with a long career as painter and draughtsman of extraordinary delicacy and refinement, and as a teacher of drawing and painting with a singular gift at exciting the enthusiasm and admiration of his pupils, is not an architect nor professedly a student of archæology; and one opens the book rather expecting to find evidence of a certain lack of precision and of minute accuracy in his knowledge of the subject. But it must be stated, at the commencement of our inquiry, that there is very little such evidence to be found, and that it is clear that the enthusiasm and admiration which we have spoken of have sufficed to replace long-continued and special training.

In one respect, however, the book is a disappointment, namely, in the illustrations. Such an artist as Mr. Moore is, so gifted, so accomplished, and so experienced, might have given us, one thinks, more drawings equal to the best of these. The extremely unsatisfactory English architectural wood-engraving of the day is seen, in about its normal condition, in the general drawings of large churches, which the preface assigns to Mr. H. W. Brewer; and the drawings of detail, also in the English manner, though better certainly than the views of Reims, Lincoln, and Ely, are still ugly enough, and very unsatisfactory to one who wishes the true effect of a piece of Gothic carving. We think the student had a right to expect more drawings like that of the front of Senlis, on page 107, or of the apse of St.-Leu d'Esserent, on page 79, or of the Church of Vaux-sous-Laon, on page 104. Such beautiful drawings of sculpture as the one on page 256—the culmination, we think, of the rendering of Gothic sculpture by free-hand drawing—no one has a right to expect, though we had hoped for more of them than this book affords. Most of the other drawings of sculpture are very inferior to this; yet such illustrations as that on page 267, that on page 271, and that on page 250 are certainly admirable in other ways, and very satisfactory to the student. On the whole, the book lacks illustration. There are many cases where the explanation is insufficient, where more illustration is needed. If the cost of the very ugly English engravings could have been saved, and applied to such drawings of associated detail as the one on page 80, the one on page 85, and the others previously mentioned, it would have been well for the book and for its readers.

With regard to the subject-matter of the book, it must be said that, for the last fifteen years, there has been a general consensus of opinion among all but English archæologists that Gothic architecture had its rise in the near neighborhood of Paris, about the middle of the twelfth century; nor is it safe to say that the English archæologists have positively asserted the contrary. Those loud claims of the credit of the invention of Gothic architecture for England which have undoubtedly been made, have often been almost confessedly partisan in their nature, and partake rather of patriotism than of criticism. It has also been agreed generally that England and Spain received the immense gift of the new style in the spirit in which it was offered, finding the need of those constructional devices which, when boldly applied, made Gothic architecture. It is generally agreed, too, that Germany was slower to receive this because the German Romanesque had reached a great pitch of de-

velopment at the middle of the twelfth century, and vast and noble structures had only recently been built in that style; and, furthermore, that Italy was the slowest of all to adopt the new style, and adopted it always with a certain reluctance. In saying that it is generally so agreed, however, we mean to imply no tiresome reiteration of well-worn truths in Mr. Moore's statement of these facts. Gothic architecture has excited so little interest during the last fifteen years that the conclusions we have mentioned above have scarcely attracted general attention, and are confined to seldom-opened pages of books which may otherwise be in daily use, or to articles in periodicals which are rarely consulted after the date of their issue.

Mr. Moore has done a service to all of us in putting these conclusions into a permanent and readable form, but his book goes further than this, and asserts positively that English Gothic, for instance, should hardly be called Gothic at all, because of the incomplete acceptance of the constructional programme which he claims for the Gothic builders of France. The incompleteness of the Gothic vaulting of England, in many cases even of the best time, may be admitted. The lingering of Romanesque principles of building in the midst of the pointed architecture even of the thirteenth century is evident—more evident than before, now that Mr. Moore has marshalled the instances of it in array. The apparently reluctant adoption of the new principles, and the failure to push them to their legitimate consequences, whether along new and purely English lines or in imitation of the French—all that is true, and it is true that a frank pushing of their principles to their legitimate conclusions is hardly to be found until the introduction of what is called the Perpendicular Style, or even, as we should say, the Fan-Vaulting Style, which is to all appearances an English invention, and one for which full credit should be given to the island builders. But it is difficult to state as positively as our author does that the buildings built according to this modified programme are not Gothic. A new definition must be set up if we propose to deny the name of Gothic to a building constructed with ribbed vaults—the ribs forming pointed arches and having their thrust taken up by buttresses and flying buttresses—for the single reason that it lacks wall-ribs, or that the vaulting-ribs all start from the same level. Between scholars, it may pass; one purist may say to another that he does not call such work as that Gothic at all, and his remark will be understood, and will not seem unduly exaggerated or inappropriate; but it is hardly safe to say to the public that such a building is not Gothic—hardly safe because not (in the sense that the public understands it) true.

It is also to be stated that an argument of this sort does not set the question at rest, because of the lack of dates which are accepted by all parties. Until a chronology of buildings and parts of buildings can be issued which will, in a sense, challenge contradiction or adverse criticism, it will be impossible to expect the students of any country to abandon unanimously their claim for such distinction as the first introduction of Gothic architecture. In the absence of documents giving accurate dates, reasons for the approximate dates given must be made extremely clear. If we do not know, by undoubted manuscripts of the time, in what year the building of such a nave or such a choir was begun, sufficient reasons for believing it to be within five years of the given date must be stated, and the partial reasons for believing it prior to or contemporaneous with such another building must also be made very clear. A dry, perhaps unreadable, almost tabular statement of these successive epochs is needed; but none of the treatises or partial treatises that have yet appeared has pretended to give us this. We go on asserting, on each other's authority, that such a nave was begun in 1180, and that it appears to have been dedicated in 1194, and the like. But, in the first place, the authority for these dates is not inquired into sufficiently, being, as we have said, too readily copied by one writer from another, on the principle on which dictionaries have generally been made; and, secondly, we lack that minute examination by experts into the work itself which will enable one to say, for instance, that it is almost certain that the walls of the nave were carried up in the first two years, and that then there elapsed a considerable space of time before the turning of the ribs of the vaulted roof.

It is not that we think for a moment that Mr. Moore's book should contain this kind of information. We have no right to ask it of him, as he did not propose to furnish it; but it is to be noted that he cannot expect unanimous assent to the rather staggering assertions that he makes—which, however, there is good reason to believe substantially correct—until this kind of work shall have been done by him or for him.

As regards other parts of his work, which are not of primary importance to his inquiry, it is probable that a few years will show reason for reconsideration of the statement that the Italians were slow to accept Gothic architecture. There is many an early monastic church in Italy which has been scarcely studied until of late, full examination of which will probably give cause to modify this opinion. We miss any adequate explanation of that popular movement which created the French cathedral—a movement partly copied, to be sure, in other countries, but which had its origin in northern and central France, and which is far from being exclusively ecclesiastical or even religious. Again we have to say that a deal of dry investigation and of dry writing will have to be gone through before any one can speak with entire freedom of this supremely important factor in the making of Gothic architecture.

TOZER'S ÆGEAN ISLANDS.

The Islands of the Ægean. By the Rev. Henry Fanshaw Tozer, M.A., F.R.G.S., Fellow and Tutor of Exeter College, Oxford, author of 'The Highlands of Turkey,' 'The Geography of Greece,' etc. Oxford: Clarendon Press; New York: Macmillan.

MR. TOZER'S book is a great disappointment. It is useless to be an able Hellenist, and, knowing the modern Greek, to travel in the portions of the Hellenic world so rarely visited as to be almost unknown to travellers, and yet produce a work which is nothing more than a cursory guide-book for casual sight-seers, and which might have been produced by any average scholar with the aid of the books he mentions. These are Ross's 'Reisen,' Pashley's 'Crete,' Conze's 'Reise,' and Mr. Bent's 'Cyclades.' Mr. Tozer also mentions once, in the course of the text, Spratt's 'Crete,' but he does not seem to have read it, or, if he has, to have profited by it, or he would not have made the mistake he does concerning the Euroclydon of St. Paul. Spratt explains it, from the nautical expert point of view, to be what is known in the eastern Mediterranean as the *Meltem*, a squall which bursts from the high lands down on the adjoining sea. The chapter on Delos, Rhenea, and Tenos might as well not have been published, as it was written in 1874, since when the changes are such that the immovable natural features alone remain to confirm the narrative. As a help to those who might wish to follow him in the journey of 1874 he has left no hint. The lines of steamers have all changed, and Syra is no longer the entrepot for all the archipelago as then, and the steamers now leaving for Crete are no longer limited to the Austrian Lloyds, but the passenger has a choice between three lines leaving Zante, Peiræus, and Syra. In the first chapter we notice a blunder of an historical character in attributing the origin of Malmsey wine to the district of Monemvasia in the Morea, the fact being that it came from Malevisia in Crete, and was the *raison d'être* of the establishment of an English consul in Crete, whose business was to supply Harry the Eighth with this wine. It is represented to-day by the Agios Myron, which is grown on the eastern slopes of Ida.

Crete, which, from the later phases of its history and its political importance, one would have expected to find the author deeply interested in, even if its archæological material had been less than it is, does not seem to have received more than a mere glance, the travellers landing at Canea and simply riding through to Candia, where they reëmbarked for Syra, having seen only the most commonly visited part of the island, and apparently only as the commonplace tourist visits anything, to say that he has seen it. At the moment, while the island is in the desolation of another return of Turkish barbarism, the note which Mr. Tozer makes of its condition six years after the end of the great insurrection of 1866, is worth reading:

"It was here that we first began to realize how terrible had been the results of the last insurrection (1866–'9). Every village that we passed through, and all that we could see along the hill-sides, had been plundered, gutted, and burnt; nothing but ruin met the eye; it was as if a horde of Tartars had swept over the face of the country. A few of these belonged to Mahometans, but the great majority were Christians; and on our arrival the miserable inhabitants—those, that is to say, who had not emigrated—emerged from the lower story of their houses, which they had temporarily repaired, half-clothed and half-starved. . . . This state of things we subsequently found to prevail throughout the island; along our whole route not a single village was standing; and what distressed us most was to find that many of those who were in this lamentable condition were persons of some position and very fair education. Another thing, also, we gathered pretty plainly, viz., that they would rise in insurrection again when the next opportunity presented itself; and this was hardly to be wondered at, for they had nothing to lose, and could hardly be in a worse plight than they were in at that time."

A visit was made to the convent of Arkadi, celebrated for one of those acts of heroic desperation which make the scene of them sacred to history, and the author gives a very incorrect and diminished account of its catastrophe, but is at no pains to furnish a tolerable description of its condition or position. He had, indeed, visited the convent of Agios Eleutherios near Canea, but did not take the trouble to go to the Agia Triada in the Acrotiri, a far more interesting and picturesque site and convent in the same vicinity; and he passes within a short distance of Preveli, the loveliest refuge of meditative monachism in the entire island, and does not mention it. He makes a détour, it is true, to Gortyna, where he refers for "the wonderful archaic inscription" found there in 1884 to "Mr. Roberts's interesting paper in the *Classical Review*," instead of to the discoverer,

Signor Halbherr's, narrative. It would indeed be difficult to find so listless and pointless a record of any journey in a classical land made by a person of Mr. Tozer's competence, one so closely resembling the condensed diary of a Cook's tourist, as this in Crete. The impression it gives is, that it is the half-oblivious record of the vacation excursion of an over-tired schoolmaster, too jaded to see anything well or remember what he had seen. The journey might have been refreshing and possibly instructive; but the result has hardly an excuse for being printed.

The succeeding chapters on Lesbos, Chios, Samos, Patmos, and the other islands still under the Turkish rule as far as Samothrace, have the merit of somewhat greater freshness, having been written on journeys made in 1886, twelve years after the Cretan voyage. But a curious evidence of the inattention of the author to the details of the life of the people among whom he moved is in the chapter on Lesbos, in which he notices with surprise that they eat the octopus. He says: "The octopus is a considerable article of food in the island, and not among the lower classes only. At the restaurant which we frequented in the town of Mytilene it was entered on the *menu* as one of the dishes, and *we heard it ordered*," which he might have done in any restaurant in Greece or Italy which was frequented by the common people, or even any class which is in the habit of eating at restaurants. The octopus is a common article of food all round the Mediterranean, and when young and tender is one of the best flavored of all the tenants of the deep; the eaters of it, like Mr. Tozer, making no distinction between the cuttle-fish and the octopus proper.

With regard to some of the islands which are rarely visited, we look for more precise information from a man whose education qualifies him for gathering it; but even there we get not only no original research, but not even vivid description which shall enable us to realize what has been vaguely said of their rare picturesqueness by casual travellers. Of Thasos, whose forests are proverbial among the Greek islands, Mr. Tozer writes:

"Descending on foot, I reached the forest, and followed the path that winds downward through it in the midst of most enjoyable surroundings. The calls of the goat-herds to their flocks, the tinkling of the goat-bells, the curling wreaths of smoke from the charcoal-burners' fires, and, as an accompaniment to these, the whispering pines, the running streams, and the expanse of blue sea, formed the perfection of rural scenery. The plain is covered with olive-trees, the extraordinary age of which is shown by their gnarled and twisted trunks; and the turf beneath them was starred with pink anemones and the blue heads of the grape hyacinth."

This is not only Mr. Tozer's best, it is all that he says of the forests of Thasos. He has confused forest, mountain, and plain in one picture.

In what is reported of these least known islands there is something that may serve travellers who mean to visit them as respects the manner of communication and the difficulties of living; but for much information beyond an idea of how the author enjoyed his journeys and how any one else might make them, it is useless to look to the book. As a guide-book even it is not so good as the ancient 'Isles de la Grèce' of Lacroix, which was printed in 1853, for the author has not taken the pains to recall the legends and historical events which alone make travelling in those classic lands more pathetic and interesting than in the more western lands.

RECENT NOVELS.

Mrs. Fenton. By W. E. Norris. New York: Henry Holt & Co.

The Young Queen, and Other Stories. By E. S. Vicars. London: George Bell & Sons.

Viera. A Romance 'Twixt the Real and Ideal. By Roman I. Zubof. New York: Thomas Y. Crowell & Co.

Erlach Court. Translated from the German of Ossip Schubin by Mrs. A. L. Wister. Philadelphia: J. B. Lippincott Co.

Magdalen's Fortunes. By W. Heimburg. Translated by Mrs. J. W. Davis. Worthington Co.

Countess Loreley. Translated from the German of Rudolf Menger by Miss Dandridge. D. Appleton & Co.

ANOTHER one of the never unwelcome children of Mr. Norris's pen greets us in 'Mrs. Fenton.' Here is, as usual, the clear English which reads itself, a little plot, and a few characters, all well drawn, none deeply interesting. Yet it always turns out that there is not a dull page between Mr. Norris's covers, and that many a well-sent shaft strikes home upon the sense of humor. His is the genius for comfort. His philosophy, his satire, his wit, his cynicism, his tragedy, are all comfortable and make us so. In a recent work of his, that destroyer of modern fiction, Organized Charity, attempted an appearance as one who will no longer be balked of her natural prey. Lo! even that baleful She changed under our author's alchemy, and turned ministering angel. Is it surprising that this talent for geniality should endear him and his novels to the public?

'The Young Queen' and the eight stories grouped with it, are of the young and for the young; but, being quite without the objectionable quality which such stories often have, of a sub-conscious appeal to the elders, they at once become pleasing to readers of all ages. They are slight in construction, some of them being mere fragments; but their quality is both rare and fine, and makes itself felt by a delicate pungency and a graceful originality. A chattering school-girl who appears in several of the sketches is capitally drawn. The story of two girls who go unchaperoned to a fancy ball is charming. Their meeting with a guest who represents Pepys, and their badinage with him in perfect understanding of the literary situation, is but one example of the pretty wit that runs through the book. The whole breathes an unusual spirit of humor, of compactness of style, and of a fine cultivation, speaking in light, natural tones, and not put on for the making of a book.

That 'Viera' is announced as a romance "'twixt the real and the ideal" prepares the reader for a good deal of balderdash, and this expectation is amply fulfilled. A young man named Alick succeeds to the title and estates of a disreputable gambling uncle. Among his new possessions is the portrait, and also the ghost, of a terrible old gambler who in his lifetime played with the uncle. He now plays with Alick, the stakes being a beautiful young woman, who appears as a sort of astral body. The card-playing takes place only on Fridays. On intervening days Alick rides and talks philosophy and slang with a cousin, of the "young-man-called-John" type, and visits a pretty kinswoman. The latter he stimulates to lofty action in page upon page of turgidity, bidding her "renounce the society whose conditions suck the very life-blood of her moral being." When he pauses for breath she prods him with polysyllables—or demolishes a chance antagonist who is present at one of the debates, by saying: "The abundant facts of history demonstrate against your contentions." Viera, the ideal maiden, now begins to carry Alick off upon aerial excursions. Soaring through the signs of the Zodiac, they visit heaven, Siberia, and other places, giving each other good advice upon love en route. In Alick's heart it is nip and tuck between Viera of the interstellar spaces and Edith of the spiritualistic séances and picnics; but a lecture of twenty pages on woman's rights delivered by Edith in a public hall carries the day. Alick forsakes Viera, and, after the due attack of brain fever, marries Edith, and we leave them, the world, and the universe, "revolving and striving towards the perfect realization of their archetype."

Ossip Schubin's novels are well known in Austria and Germany; but, so far as we know, do not often find themselves in America. This is the more surprising because they are far better suited to the modern taste than are the antiquated affairs, half nursery, half madhouse, which contrive to get themselves translated from the German as entertaining fiction. Ossip Schubin deals largely with scenes laid among the Austrian aristocracy. In 'Erlach Court' the characters are notably real, or, when unusual, are drawn with a commanding touch which gives them a title to life. There is, moreover, a vein of exceeding cleverness which yields delightful flashes on every page. The story is by no means dull, but it is the way of telling it which is chiefly attractive. When, as sometimes happens, the characters crowd too closely, they bring their own excuse in the vividness of their being. This goes far to cover the fault of a certain loose-endedness in the construction. Mrs. Wister's translation is of course admirably made, and the public will thank her for what she has done and for her skill in doing it.

'The Countess Loreley' is also translated, and well translated, from the German. Like 'Erlach Court,' it is thoroughly modern, and, so far, a novelty. It is, however, far less spontaneous and sparkling, though affording an occasional noteworthy observation. The Loreley herself is somewhat hazy as a portrait, and the group of gentlemen who surround her are rather too much in the extremes of excellence or unworthiness to be very real personages. The author, too, seems to have been conscientiously painstaking in keeping the story as near the verge of the disagreeable as possible, without any honest cause. Some scenes from the campaign of 1870 are hardly more than a feint of making a serious affair of the book, which persists in appearing nebulous and frivolous, spite of much bloodshed. We leave the Loreley smiling upon her third husband, and wonder if this is to be the novelist's new vogue.

'Magdalen's Fortunes,' on the other hand, appeals strongly to the psychologic sense of having experienced it before, which may be due either to the separate action of the lobes of the brain, or to the inherent qualities of this class of German novels. One is forced to remember the madman whose delusion was that he had a state dinner every day; "yet," said he, "somehow everything that I eat tastes of oatmeal porridge." How well we know already "the stately man," the "pale, lovely girl," with golden braids; the faithful coachman Gottlieb, the haughty matron, the machinating widow, the forester living in the deep wood, the spring landscape, and the obsolete upholstery. There is nothing to offend, and it may even yield an anæmic pleasure. The present estimate, however, would class it among those books which afford "not enjoyment and not sorrow."

A Naturalist among the Head-Hunters. Being an account of three visits to the Solomon Islands in the years 1886, 1887, and 1888. By Charles M. Woodford. London: G. Philip & Son; New York: Longmans. 1890. Pp. xii, 249. 8vo.

THE Royal Geographical Society has paid a high and well-deserved tribute to the value of Mr. C. M. Woodford's work in the Solomon Islands in making him their Gill memorialist for this year. It required no little devotion to science and a rare courage to live alone, for months at a time, among a people who, during the last two years, have murdered one white man out of every three among them—a people whose first thought on seeing a stranger is, "Will he kill me?" the second, "Can I kill him?" Mr. Woodford's purely geographical work was inconsiderable in comparison with the zoölogical, his collections consisting of more than 20,000 specimens, with many species new to science. The most interesting chapter in his book is an account of an ordinary day's occupation, in which he shows unusual powers of description of bird and insect life. The morning he spent in collecting, accompanied by his boy Barakossa, "a youth of about twelve years of age, who combines in himself the offices of cook, keeper of the animals, collector of orchids, and general adviser on native matters." By four in the afternoon his day's captures are put up, and his native collectors begin to appear with butterflies, prawns, snakes, or birds, receiving in return sticks of tobacco. One boy alone desires his butterflies to be put to his credit, as he wants a large knife valued at twelve sticks. Until night-fall the natives sit about his hut discussing the news and begging for tobacco, which, however, they will not steal. Though he left his hut, containing a large store of this precious commodity, sometimes for a week at a time, the door being closed simply with palm leaves, Mr. Woodford never lost "so much as a stick of tobacco." The evening is devoted to bird-skinning, and capturing the moths and beetles which, attracted by the light, fly in at the open door. This life was diversified by occasional trips in traders' schooners or canoes to different places, and by lengthened excursions into the interior of two of the islands.

Our traveller does not appear to have been as keen an observer of human life as he was of birds and insects, and frankly confesses that the longer he lived on the Solomons the more conscious he became "of possessing nothing but the most superficial knowledge of the natives and their customs." In this respect he differs from Prof. Lumholtz, which is to be regretted, as the Solomon Islanders are far more interesting than the North Australian savages. They cultivate the ground, build excellent keel-boats on scientific principles, and have some skill in ornamentation and carving. Although naturally treacherous and cowardly, when their confidence was won they were apparently trustworthy, and, as we have seen, strictly honest. Cannibalism and head-hunting is decreasing, though still rife in some of the islands. On one of them this singular custom prevails:

"All the villages of the district will club together and make a pool of native money, shell-beads, armlets, necklaces of porpoise teeth, and other ornaments, which goes to the village that distinguishes itself most in the attack upon the first vessel that comes along. At the village of Manaqui, at the time I am writing of, might have been seen a receptacle, raised on four posts and approached by a ladder. This was used as a bank for the pool money so collected. At the time I last left the group, viz., December, 1888, I knew that there was money out in this part of Malaita for a ship, and I regret to hear that the pool has since been won by an attack on the small trading schooner *Savo*, in which three white men and twelve natives lost their lives."

Mr. Woodford discovered during his last visit that an extensive and widespread system of castes exists upon some of the Southern islands. He could learn little of them besides the facts that "a man might not marry a woman belonging to his own caste," and that "natives belonging to tribes speaking a different language will be found to belong to the same caste." The fauna of the Solomon Islands is extremely interesting, as it includes many extraordinary species, as rats "nearly two feet in length," tree-climbers; frogs weighing over two pounds and a half; butterflies which measured "nearly nine inches across the wings," and the smallest of parrots known. This last, together with several species of bats, was discovered by our author. Although the islands are but five hundred miles distant from New Guinea, they have but one marsupial and no birds of paradise. It should be added, however, that our knowledge of them is by no means complete, the interior of none of the larger islands (which contain lofty mountain ranges, in one instance, on Bougainville, 10,000 feet high) having been explored. In the closing chapters a connected narrative is given of two of the author's trips, and there is an appendix treating of the different languages with vocabularies, and one in which it is argued that San Christoval was the sacred isle of Bouro—according to their traditions, the cradle of the Polynesian race.

There is much that is interesting in Mr. Woodford's book, though he was hampered by the fact that Dr. Guppy had gone over much the same ground in greater detail in his larger and more important work on these islands, published three years ago. The maps and illustrations are excellent. One of the boy collectors shows an unusually well-shaped head and a pleasing and intelligent face.

The Working Principles of Political Economy in a New and Practical Form: A Book for Beginners. By S. M. Macvane. New York: Effingham Maynard & Co. 1890.

IF it be true of political economy, as Prof. Macvane declares, that "there is nothing in the science that young persons of ordinary ability may not master if only they apply themselves," how shall we explain the fact that in their dealings with it not only our legislators, but most of our writers, and even many of our professors, betray incompetency? In truth, the science is not an easy one, and any mastery of it obtained by the schoolboy is likely to be a mastery of words and not of ideas. But we do not hesitate to say that for those who wish to apply themselves seriously to this study, no sounder guidance than is here provided is anywhere to be found. Almost all current discussion of social topics suffers from a blunder about wages that has been in recent years extensively received. Prof. Macvane renders the community a valuable service in demonstrating the absurdity of the view that wages are drawn from the product of the labor for which the wages are paid, instead of being advanced out of previous savings. The clearness and force with which this is done are thoroughly admirable, and there will be hereafter no excuse for disregarding in these discussions the all-important element of time.

The fact that we select this demonstration for praise is by no means to be taken as implying that the treatment of other questions is not marked by the same ability. Few books display a stronger grasp throughout on the part of the author of all the details of his subject, and if we limit our special commendation to one point, it is only because that point is at present of peculiar timeliness. The few criticisms that we shall venture upon relate to comparatively unimportant matters, and are intended only to draw attention to statements which seem likely to occcasion learners some confusion.

Thus the statement that buying is easier than selling, although perhaps a maxim among business men, will hardly bear examination. In the first place, every purchase is a sale, and secondly, injudicious buying is the most potent cause of ruin to both manufacturers and tradesmen. It is easy enough to buy at the seller's price, but it is quite as easy to sell at the buyer's price. The price that is given is quite as important as the price that is received. Again, when it is said that buying and selling do not create wealth, because they merely lessen the labor of carrying on exchange, we are led to inquire rather closely into the meaning of "creating" wealth. Of course, there is no creation of matter, and human industry is as a whole devoted to putting matter in the place and shape in which it is wanted. In this complicated process buying and selling, like transportation, may be as useful as any productive action, and, in so far as they economize labor, are properly described as creative of wealth.

It is a possibly misleading statement that comparatively few men own capital. The term "comparatively" is elastic, but if we were to consider the immense number of farmers and house-owners, and the constant increase of deposits in banks and other investments, we should probably conclude that the capitalists were in the majority. We fail to find any definition of "demand and supply." These magic words have been so often used to cover up logical shortcomings that the beginner should be put on his guard against an unthinking use of them. The substitution of "amount of waiting" for the established term "abstinence" seems to us to be attended with no advantage sufficient to compensate for the friction resulting from the change. It is like putting a statute that has been thoroughly construed into new language. We do not understand why a farmer does not practise abstinence, whether he employs a hired man or not.

It is paradoxical to maintain that risks to the capital employed in production are no burden in themselves, and the greater simplicity resulting from the resolution of the burden of risk into labor seems to us attained by disregarding an essential element or condition of production. In the very able treatment of money, Prof. Macvane occasionally uses language that may not arouse the learner to the difference between capital and currency, and something might be gained by distinguishing more carefully between currency and money in the narrower sense. The treatment seems to us at times possibly affected by the old currency theory, especially in the explanation of the phenomena of depressed business. Quite different results attend the normal increase of money and the application of labor-saving contrivances in its use, and that abnormal creation of currency occasioned by expectations of extraordinary profits. A little more space might well have been given to credit. But perhaps it would not be possible to improve the discussion without making it too elaborate for such a treatise.

The subject of protective duties being a political issue, the author prefers to confine him-

self to a statement of the arguments on both sides. He omits, however, and perhaps in a purely economical treatise he ought to omit, the most weighty argument in favor of free trade, that it prevents the prostitution of Government to the pecuniary interests of individuals. He does not feel it necessary to maintain the same reserve on the silver question. The appendix contains a convenient table showing the duties and amounts collected upon the principal articles of import. Upon the whole, we are disposed to recommend this book as the best summary of the leading principles of political economy that has fallen under our notice. Whether it will prove the best for beginners, experience will show; but mature minds will find it sufficiently strong meat to exercise their digestive powers.

The Anatomy of the Frog. By Dr. Alexander Ecker. Translated, with numerous annotations and additions, by George Haslam, M.D. Oxford: The Clarendon Press; New York: Macmillan. 1889.

As is well remarked in the introduction, "there is no occasion nowadays to offer a lengthened apology for devoting a treatise solely to the anatomy of the frog, which enjoys the doubtful honor of being, κατ' ἐξοχήν, the physiological domestic animal. It is kept in every physiological laboratory, and is daily sacrificed in numbers upon the altar of science. The physiologist has recourse to it, not only to obtain answers to new questions, but for the sake of demonstrating easily and quickly the most important known facts of the science. These unlucky batrachians are to be had in any number, and are specially adapted for experimental investigation; they have consequently fallen under a harsher tyrant than the stork in the fable, and their prophetic outcry in the frog chorus of Aristophanes, δεινὰ πεισόμεθα, has been literally fulfilled."

Even granting all that is implied in the above paragraph, and recalling the experiments that are now commonly done upon frogs in the most elementary grade of physiological teaching, the general reader may yet wonder that to the structure of this humble creature could be devoted 450 pages of text, and a figure, upon the average, for every third page; still less might he be prepared to find that, notwithstanding this and several other treatises of lesser scope, and several hundred papers on more or less special topics (over 300 are cited in connection with the nervous system alone), there are yet many things to learn about the frog, and several points which are still the subjects of distinct differences of opinion.

The accuracy and clearness of the present work are to be ascribed to the unusually composite nature of its authorship. The chief author, professor of anatomy at Freiburg, published the first part in 1864, and for the second, which appeared sixteen years later, had the coöperation of Wiedersheim. The translator, formerly of Owen's College, England, now of Zurich, has brought his work up to date by conscientious use of publications and by personal investigations. Finally, it is stated that the entire proof was read by A. Milnes Marshall, himself the author of a treatise on frog anatomy, and consequently the closest critic of another's work.

Notwithstanding the extended text and numerous illustrations, there are some serious and apparently needless deficiencies; *e. g.*, there is no figure of the conarium, so peculiarly located outside of the cranium, or even of the cranial or dermal regions connected with it; the account of the skin, while detailed in respect to the "supplemental toe," neither describes the conarial spot nor refers to the paragraph (p. 155) where it is considered in connection with the brain; nowhere, excepting from the "literature of the nervous system," would the reader learn that a single eye upon the top of the head has been shown to be connected with the conarium in a considerable number of vertebrates. The interesting lymph-hearts are inadequately presented. The central nervous system is treated with reasonable fulness, but the morphologically important lining membrane of the cavities is omitted from the figures, and the most important and instructive view of the brain, viz., when divided on the middle line, is omitted. It might have been supplied from the papers of H. F. Osborn (whose name, by the way, is constantly lengthened by an *e*).

The colored plates and most of the woodcuts are not only correct, but artistically good. Exceptions are the representations of the humerus (Figs. 35 and 36), and of the liver (Fig. 194) —the last almost indescribably inappropriate. A commendable feature is the arrangement of the explanations of figures in separate lines alphabetically.

In view of the declared preference for simpler terms, it is to be hoped that in another edition those typical long names, *vena cava anterior* and *posterior* may be superseded by Owen's unmistakable mononyms, *precava* and *postcava*. The consistent employment of the unequivocal terms *dorsal* and *ventral* is to be noted, especially since their unanimous sanction at the recent session of the Association of American Anatomists.

The small size of all European frogs, and the consequent need of enlarging most parts, occasions the query why the great bullfrog of North America has not been introduced, if only for the sake of museum preparations, laboratory instruction, and class demonstration. For the latter purpose and for physiological research the frog will probably retain its present sad eminence; but it is far from perfect from the purely anatomical point of view. Like the human species, it is a morphological monstrosity, and should be tabued to beginners in biology in favor of some less specialized form, like the European *Proteus* or the North American *Necturus*, which also might perhaps be naturalized in other parts of the world.

Browning's Message to his Time: His Religion, Philosophy, and Science. By Edward Berdoe. London: Swan Sonnenschein & Co. 1890.

Dr. Berdoe is a leading member of the Browning Society. The present collection is a series of papers read before students of the poet. They are brief, and are confined to a few fundamental points which in fact may be reduced to two, namely, that Browning was a Christian and a scientific poet. As to the first of these statements, it cannot be said that Dr. Berdoe has anything fresh to bring forward; in this part, which is the least interesting, the author is engaged only in propagandism, and assuring his audience that in Browning they will find a spiritual guide. The second statement, however, occasioned controversy when it was made, and in an appendix to the lecture containing it a very able letter is inserted, in which the writer argues cleverly that if Browning is a scientific poet, the "less poet he." Without entering upon the question of the capabilities of science as material for poetry, it must be said that Dr. Berdoe hardly makes out his case. Browning used illustrations from science, with some parts of which he was acquainted, but not in any profuse way except in one of his least known pieces, "Numpholeptos"; but beyond this consideration he did not express the scientific spirit or observe scientific method in his thought, and hence cannot fairly be regarded as the exponent of the scientific habit of mind in poetry. Science gave color to his verse, as it also has done to Tennyson's; in the results of science he had great interest; but the thoughts of science were but a small portion of his thoughts, and by no means the significant portion. Dr. Berdoe, as a physician, may notice and value more the elements which Browning took from science in setting forth his own ideas; but he clearly overestimates them, as is shown by the paucity and repetition of the examples. Quite the most valuable paper in this volume is that upon Paracelsus, which is a study of him in history as the Reformer in medicine, and touches the poem only indirectly. The great defect of the book as a whole is its tedious repetition of the same thoughts, and especially the same short quotations, which seem to serve the author as texts, and are always used as proofs of what he is laying down. The work of a faithful and enthusiastic student is here, but of critical faculty or literary sensibility there is a "plentiful lack."

On the Wing through Europe. By Francis C. Sessions. Welch, Fracker Co.

This book is written in such a kindly and unassuming spirit that we find it difficult to criticise it very severely. The contents had much better, however, have been left in the columns of the newspaper for which the author tells us it was "written hastily, . . . as I could catch a moment's time on the cars, or while stopping for rest during the intervals of travel and sight-seeing." Considering that this is a third edition, there must be a demand for such writing. Mr. Sessions tells us of the England of Disraeli, Paris of the Exhibition of 1878, and Switzerland while the St. Gothard tunnel was in process of construction. The author makes a mistake in thinking that the present edition "would gain nothing" by revision. It is bad enough to learn that (p. 19) Christ Church Cathedral, Dublin, was built in 1038; that (p. 135) it is only twenty-four miles from London to Dover; that (p. 167) the Danube rises near the St. Gothard Pass; that (p. 197) the Pope *and seventy-two* cardinals reside in the Vatican; but when (p. 159) we are told of passing by Lake *Sesaporck* on the route between Basle and Lucerne, and when (p. 175) the gloominess of the stores in *Regent Street Quadrant, Berne*, are spoken of, we begin to suspect that the printer's devil must have got at the forms before they went to press.

The author's sense of humor is not keen, or he would scarcely have concluded with the following paragraph:

"If I may be pardoned, I should be glad to indulge a little local pride, and say that, in all my travels, I have not seen so prosperous and thrifty a city as my own city of Columbus, Ohio, nor, for its size, any place so attractive in public buildings of masterly design and splendid workmanship. The old State House, with its Doric style of architecture, massive and grand, is a noble structure, and if the dome were remodelled so as to render it symmetrical with the other parts of the building, surrounding it with columns, as has been suggested, it would challenge the criticism of the world. Our Hospital for the Insane is the largest of any yet erected, and all of our public buildings—the idiot asylum, and those for the blind, deaf, and dumb, the Ohio State University, and the Penitentiary—are certainly, considering their cost, equal for style of architecture to any in the world, and would attract

the attention of all who are competent to judge in the matter."

Artist, printer, and bookbinder have well done their part.

Essays on Subjects of Moral and Social Interest. By John Stuart Blackie. Edinburgh: David Douglas. 1890.

THE five essays that fill this volume, upon Christianity and Social Organization, Physical and Moral Analogies, the Philosophy of Party, Scottish Nationality, and Philosophy of Education, belong to that more formal and laborious kind of essay which flourished before the magazine supplanted the review, and which grew with especial vigor in Scotland. Prof. Blackie makes the attempt to lay out his subject on a long scale, and to treat it reasonably on all its sides; he puts it to intellectual siege, and prepares to reduce it in the old way, with at least a three-months' interval before the corps of the Reviewers must move on to new posts. This sense of importance in the matter and of thoroughness in the method of examination is a pleasant change from our present off-hand and cut-down magazine papers, imparts seriousness and dignity to the volume, and gives it the flavor of a departed respectability. In the matter, too, a strong character and a vigorous mind are seen to be held fast, as if they had grown into the subject of thought and interest and had become bound up with it; there is something of prejudice, even, in the work which gives a tang; and there is a good deal that is Scotch, just as there always was in the Reviewers. The Scotch ballads and the Scotch heroes are very much to Mr. Blackie's taste, and in none of the essays is he quite so perfervid as in the analysis of Scotch nationality, and the plea for it against the Anglification of our day. The defence of war, too, with much effrontery for these times, must be a part of the old blood-thirsty inheritance of the Border; in fact, the author seems to *love* war, and this, in a book whose every other page preaches the name of Christianity, is sufficiently remarkable. The incomplete comprehension evinced by him of the doctrine and spirit of democracy is also singular to an American reader, and the conception of the "Christian" landlord and "lord-manufacturer" as a permanent fixture in organized society, where "Christianity" will continuously affect the law of wages favorably to the workmen, is an extraordinary contribution to economics, which may perhaps be classed with the curious argument that death is a good because it makes the old give place to the young, who enjoy life more. Strewn upon the pages one finds much whimsical or loosely-thought matter, perversities and twists of judgment, and, of course, a fine scorn of the other side, and some excellent examples of vehement rhetoric; but through the whole there is also a sound common-sense element, and in the chapter on education there will be found some remarks upon methods of teaching of high value.

BOOKS OF THE WEEK.

App'etons' Annual Cyclopædia for 1889. D. Appleton & Co. $5.
Chambers, G. F. Handbook of Descriptive and Practical Astronomy. 4th ed. Vol. II. Oxford: Clarendon Press; New York: Macmillan & Co. $5.25.

Has just issued and will mail on application,
I. Catalogue of Rare and Fine Books,
With twenty facsimiles of bindings, printers' marks, coats-of-arms, etc. 98 pages. Price 25 cents.
II. Catalogue of Valuable, Rare, and Interesting Books.
40 pages.
III. Catalogue of Etchings and Engravings; also of Sets of Prints for Extra Illustration.
THE SAN CARLO ART ROOMS,
Broadway and 31st St., New York City.

THE FEET OF LOVE.
By the author of 'The Rose of Flame.' 1 vol., 12mo, half Rox., $.25; or in paper, 75 cents.

"An essentially human book. The incidents in many cases are intensely dramatic. It bears none of the marks of the novice. There is a firm touch, a boldness born of conscious power."—*New York Journalist.*

"The intensity of this story is sufficient to hold the reader almost breathless. It is a spiritual drama, vivid, full of color and electric interest—such a story as has seldom if ever before flashed upon the readers of fiction."—*Boston Traveller.*

WORTHINGTON CO., 747 B'way, N.Y.

YOUR MOTHER, SISTER, AND Family want a copy of *Books of the Bible Analyzed*, by President Schultze (Moravian). Should you fail to find it at your bookstore, send *21 cents* (silver). H. T. FRUEAUFF, Easton, Pa. *American News Co.* supplies the trade. *The Interior:* "A frequent perusal rekindles, freshens, and confirms your knowledge of the Bible."

Scribner & Welford's
NEW BOOKS.

From Handel to Hallé
Biographical Sketches.

By LOUIS ENGEL, author of 'From Mozart to Mario.' With Autobiographies of Prof. Huxley and Prof. Herkomer. With 13 Portraits, and Facsimile of a MS. Sketch by Beethoven. 8vo, cloth, $4.50.

Contents—Handel, Gluck, Beethoven, Sir Arthur Sullivan, Barnby, Mme. Albani-Gye, Huxley, Herkomer, Sir Charles and Lady Hallé, etc., etc.

Laugh and Learn:

The easiest book of Nursery Lessons and Nursery Games. By JENNETT HUMPHREYS. Profusely illustrated by Engravings. Square 8vo, cloth, $1.25.

"'Laugh and Learn' instructs and amuses; it is the very book for a wet day in the nursery, for besides solid instruction, admirably given, it contains numberless games and contrivances, with useful and amusing illustrations. The musical drill is remarkably good."—*The Athenæum.*

Theism.

Being the Baird Lecture for 1876. By Prof. ROBERT FLINT, D.D., of the University of Edinburgh. New Edition. Crown 8vo, $3.00.

Great Musician Series.

Edited by the late Dr. F. HUEFFER.

NEW VOLUME.

Beethoven. By H. A. RUDALL. Small post 8vo, cloth extra, $1.00.

Horace Walpole and His World.

Select Passages from his Letters. Edited by L. B. SEELEY. With Illustrations after Sir Joshua Reynolds and Sir Thomas Lawrence. Crown 8vo, $2.50.

The Contemporary Science Series.

Edited by HAVELOCK ELLIS. Most of the volumes will be illustrated, containing between 300 and 400 pages. Others to follow at short intervals. Crown 8vo, cloth, $1.25 per vol.

NEW VOLUME:

The Criminal. By HAVELOCK ELLIS. With many Illustrations.

PREVIOUSLY ISSUED:

Evolution and Disease.
Physiognomy and Expression.
The Origin of the Aryans.
The Village Community.
Electricity in Modern Life.
The Evolution of Sex.

RECENT PUBLICATIONS:

Nelson and the Naval Supremacy OF ENGLAND. By W. CLARK RUSSELL, author of 'The Wreck of the Grosvenor,' 'The Life of William Dampier,' etc., with the collaboration of Wm. H. Jaques, late U. S. N. 12mo, fully illustrated. Cloth, extra, $1.50; half morocco, uncut edges, gilt top, $1.75.

The 'Nelson' forms the initial volume of the new Series, "Heroes of the Nations," which will be under the editorial supervision of EVELYN ABBOTT, M.A., Fellow of Balliol College, Oxford.

Curiously enough, no one of the previous biographers of Nelson had any personal knowledge of the sea, and Southey, whose memoir has shown the most enduring popularity of all, was probably entirely ignorant of nautical matters.

Mr. Russell's narrative, on the other hand, while carefully studied as to the facts and the history, is as breezy and as briny and as full of stirring incidents and dramatic situations as any of the best of his stories.

"No romance could possess a deeper interest, and certainly none could reveal a more thorough mastery of material or an imagination more entirely coöperating with the purpose and knowledge of the writer. The story is told with a spirit and an impulse which carry the reader along from page to page without pause or break to the very end."—*Christian Union.*

STORY OF THE NATIONS.

XXVIII. The Story of Russia. By W. R. MORFILL of Oriel College, Oxford. Very fully illustrated. 12mo, $1.50.

"Mr. Morfill has some eminent qualifications for the task he has undertaken—a thorough knowledge of Slavonic languages and literatures, a sufficient training in critical methods, and an interest in current European politics which is active and yet not biassed by party partisanship. . . . He has produced a book which does credit to his industry and care, for it evidently represents a minute and intelligent study of the most recent native writers, as well as considerable acquaintance with the old chronicles."—*Speaker, London.*

XXVII. The Story of the Barbary Corsairs. By STANLEY-LANE POOLE, author of 'The Story of Turkey,' 'The Moors in Spain,' etc. With the collaboration of Lieut. J. D. Jerrold Kelley, U. S. Navy. 12mo, illustrated, $1.50.

"He has produced a volume at once creditable to his literary sense and his historical knowledge, and at the same time of absorbing interest and value to any reader who will take it up."—*N. Y. Times.*

The Garden, as Considered in Literature by Certain Polite Writers. With a critical essay by Walter Howe. With Portrait of William Kent. (No. XXVI. in the Knickerbocker Nugget Series.) $1.00.

"A book that will especially delight all who are fond of gardens and gardening, and who take a certain pleasure in enjoying nature when treated by man as a work of art."—*Boston Home Journal.*

Liberty and a Living. How to Get Bread and Butter, Sunshine and Health, Leisure and Books, without Slaving away One's Life. By P. G. HUBERT, jr. 16mo, cloth, with frontispiece, $1.00.

"It well presents the attractions and compensations of unconventional living, the unsatisfactoriness of many imagined social necessities, and furnishes a picture of living on next to nothing a year which cannot fail to attract lovers of nature and liberty."—*Christian Intelligencer.*

Modern Horsemanship. A New Method of Teaching Riding and Training, by Means of Pictures from Life. By EDWARD L. ANDERSON. Fourth edition, revised and enlarged, with forty photogravure plates. $5.50.

"The rules and directions are so plainly stated and are so admirably illustrated by photographs from life that an intelligent reader will have no difficulty in putting them into practice."—*N. Y. Tribune.*

A Midsummer Drive through the PYRENEES. By EDWIN ASA DIX, M.A., ex-Fellow in History of the College of New Jersey. 12mo, cloth extra, illustrated, gilt top, rough edges, $1.75.

"Seldom does a book of travel come to our table which is so much like a trip itself as this one is. Upon closing the last leaf we feel as if we had been with the writer."—*Public Opinion.*

*** *List of spring publications and prospectus of the Heroes Series sent on application.*

JUST READY: **An Entirely New Novel of Great Interest and Power, from the Polish. Now First Translated.**

With Fire and Sword.

AN HISTORICAL NOVEL OF POLAND AND RUSSIA. By HENRYK SIENKIEWICZ. Translated from the Original by Jeremiah Curtin. Crown 8vo. Cloth. 795 pages. $2.00.

In a recent article in Blackwood's Magazine, the author was referred to as *the greatest living Polish novelists, past or present, and second to none now living in England, France or Germany. He has*, says the reviewer, *Dumas' faculty for conceiving and carrying out a complicated historical romance; he has much of Bret Harte's dry humor and laconic pathos, and a good deal of Turgénieff's melancholy suggestiveness, with some of his delicacy of touch.*

The Influence of the Sea Power upon History.

By Capt. A. T. MAHAN, U. S. Navy. With 25 charts, illustrative of great naval battles. 8vo, cloth, $4.00.

The period embraced is from 1660, "when the sailing ship era, with its distinctive features, had fairly begun," to the end of the American Revolution. The use of technical language has been avoided in order to bring the work within the comprehension of the unprofessional reader.

☞ *For sale by all dealers.*

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchasers and for sale. A number of beautiful shore, island, and peninsular properties on Penobscot Bay and other parts of the coast. These ranging from 10 to 1,000 acres, of the best selected frontages of high land, have beautiful rocks, trees, beaches, harbors, and mountain and sea views, and in the rapidly increasing movement to this coast, are almost the only remaining shore lands still purchasable at very low prices and offer exceptional advantages for gentlemen wishing independent estates for summer occupancy or for local colonization or investment. For details address

J. Murray Howe, 27 School St., Boston.

Teachers will find many valuable aids in

Egyptian Sketches.

By JEREMIAH LYNCH, formerly President of the San Francisco Geographical Society, and Member of the California State Senate. With 16 full-page Illustrations. One vol., demy 8vo, cloth, $1.75.

*** The author resided in Egypt for nearly six months, during the winter of 1889–90, and had, therefore, ample opportunities for studying the country carefully. Writing as an American, his views contain much that is novel and original, and his chapters on "The English in Egypt" will be found especially interesting.

Great Musician Series

Edited by the late Dr. F. HUEFFER.

SCRIBNER & WELFORD,

743-745 Broadway, New York.

FAMOUS WOMEN OF THE FRENCH COURT.

Translated from the French of IMBERT DE SAINT-AMAND by T. S. PERRY.

The Wife of the First Consul.

With Portrait. 12mo, $1.25.

"A very readable and fascinating book, which by reason of its qualities as well as its entrancing theme deserves to be widely read."—*Boston Beacon.*

The Happy Days of the Empress Marie Louise.

With Portrait. 12mo, $1.25.

Marie Louise and Napoleon are here pictured at the height of their glory, during the most successful days of the Empire.

Marie Antoinette and the End of the Old Regime. (*In Press.*)

Other volumes in preparation.

Day and Night Stories.

By T. R. SULLIVAN. 12mo, cloth, $1.00; paper, 50 cents.

"Mr. Sullivan's style is at once easy and refined, conveying most happily that atmosphere of good breeding and polite society which is indispensable to the novel of manners, but which so many of them lamentably fail off."—*The Nation.*

The Lawton Girl.

By HAROLD FREDERIC. 12mo, cloth, $1.25; paper, 50 cents.

"The story is one of American life. It has quickness without flippancy, firmness without a dull page—a story well matured, vigorously proportioned, and interesting to the end."—*Brooklyn Times.*

Expiation.

By OCTAVE THANET. Illustrated by A. B. FROST. 12mo, cloth, $1.00; paper, 50 cents.

"An exceedingly spirited, well-told, and interesting Southern story. It is briefly told, but every sentence counts, and it is impressive and absorbing."—*N. Y. Tribune.*

The Broughton House.

By BLISS PERRY. 12mo, $1.25.

"A bright, well-written story, told with great animation, showing close study of the surface phases of human nature, and full of keen observation on men and manners. It is very attractive in its freshness, buoyant spirit, and graceful realism."—*Boston Saturday Evening Gazette.*

Personal Creeds:

or, How to Form a Working Theory of Life. By NEWMAN SMYTH, D.D. 12mo, cloth, $1.00; paper, 50 cents.

"The book is addressed to those who cannot believe everything they have been taught but who would not miss the best faiths implied in man's truest life. It will be helpful to many in leading them to surer grounds for their faith and hope."—*Christian Inquirer.*

The Nature and Method of Revelation.

By PROF. GEORGE P. FISHER, D.D. 12mo, $1.25.

"We recommend this volume to all those who have to meet the crude theories as to Biblical composition put forth in such stories as 'Robert Elsmere,' and who have no equipment therefor except the theological training or treatises of half a century ago."—*Christian Union.*

The Philosophy of Preaching.

By A. J. F. BEHRENDS, D.D. 12mo, $1.00.

"A book valuable not only to theological students, but to every man and woman who earnestly desires to make the best and noblest use of life."—*Boston Traveller.*

CHARLES SCRIBNER'S SONS,

743-745 Broadway, New York.

J. B. Lippincott Co.

WILL SHORTLY ISSUE:

Travels in Africa.

By Dr. WM. JUNCKER. With 38 full-page Plates and 125 Illustrations in the text, and Maps. Translated from the German by Professor KEANE. 8vo, cloth, $5.00.

Two Summers in Greenland.

An Artist's Adventures among Ice and Islands in Fjords and Mountains. By A. RIIS CARSTENSEN. With numerous Illustrations by the Author. 8vo, cloth, $4.50.

Decorative Design:

An Elementary Text-Book of Principles and Practice. By FRANK G. JACKSON, Master Birmingham Municipal School of Art. Fully illustrated. Crown 8vo, cloth, $2.50.

A Modern Zoroastrian.

By SAMUEL LAING. 8vo, cloth, $1.25.

The Jewel in the Lotos.

A Novel. By MARY AGNES TINCKER. No. 110 of Lippincott's Series of Select Novels. Paper, 50 cents; cloth, 75 cents.

H. M. Stanley:

His Life, Works, and Explorations. By the Rev. H. W. LITTLE. 8vo, cloth, $3.00.

Works of William H. Prescott.

New Library Edition. Edited by J. FOSTER KIRK. Illustrated with Portraits and Maps. Complete in twelve volumes. Octavo. Neatly bound in cloth, gilt top, $2.50 per volume.

The Reign of Philip II.	3 vols.	Now Ready.
The Reign of Charles V.	2 vols.	
Ferdinand and Isabella.	2 vols.	
Conquest of Peru,	2 vols.	
Conquest of Mexico,	2 vols.	

To be followed by

Biographical and Critical Miscellanies.

One volume, ready in June.

For sale by all booksellers, or will be sent by the Publishers, postpaid, on receipt of the price.

715 and 717 Market St., Philadelphia.

The Nation.

NEW YORK, THURSDAY, MAY 29, 1890.

The Week.

THE scene which the House presented when the McKinley Tariff Bill was finally passed, was in harmony with the monstrous character of the bill itself. What that character is, our readers know full well. It was rightly described by Mr. Bland, in a few brief remarks, while the silver-lead paragraph was under discussion, thus:

"I see gentlemen rising on that [Republican] side of the House, one contending for a high duty on lead, another for a low duty on lead, each one of them declaring that his particular industry will be ruined unless his theory is carried out. On the other hand, one wants a high duty on glass and another a low duty; and so on throughout the whole of the schedules. It is not a question as to whether the Government needs the revenue or not; it is not a question whether we are levying duties for the purpose of raising revenue to go into the Treasury; it is not a question whether the majority of the American people are to be benefited by this bill; but it is a scramble, a trade, and a bargain on the part of gentlemen on that side of the House to see who can get the most of the steal in this bill. It is a mere bargain and sale; a trade, a scramble, a grab-game; and it seems that those who have got their maw into it are standing watch so as to crowd all the rest out. The whole thing is a steal and a robbery of the great American people."

A game of grab on a scale of national magnitude would naturally be carried out with the least possible discussion. There were 156 pages in the bill. Discussion ended on page 42. At this point amendments were allowed to be printed in the *Congressional Record*, but no debate could be had on any of them. From that point the bill was pushed and pulled by main strength and heaviness. All the property and business of the country was tugged at by yeas and nays only. The vast industries of which tin plate is the basis, the canning and roofing and household-utensil manufactures, were ravaged by a majority of one, the vote standing 150 to 149. The duty on jute yarn was fixed by a clerical error at 30 per cent. instead of 35, as was intended by the Committee; and when it was sought to correct the error, the motion was defeated by a majority of one, the vote standing 143 to 144. In this way the private fortunes of millions of people were disposed of, and the most astounding instance of Socialistic legislation of our time was put through under the lash.

Senator Plumb's motion, adopted by the Senate on a test vote, requiring the Finance Committee to furnish, with any tariff bill reported by it, a statement showing the amount of money now collected under each item, and the amount to be collected under the same items of the new bill, and also the reasons for increase of duty, if any, and (as amended on motion of Senator Hawley) the reasons for decrease of duty, if any, and (as amended on motion of Senator Reagan) the equivalent ad-valorem rate of the specific duties in every case where practicable, is distinctly a blow at the McKinley bill, and may almost be regarded as a death-blow. It is a matter of some significance that this cumbersome resolution was not resisted by the Finance Committee, although it was opposed by Senators Sherman and Morrill, who are members of the Committee. All that Senator Allison did was to suggest the words "where practicable" as a modification of Senator Reagan's amendment, and Senator Allison's colleague, Mr. Wilson, voted with Plumb on the roll-call. Evidently now is the time for the committee of New York merchants to move on the enemy's works. They could not have a more favorable signal.

Senator Wilson of Iowa has reported from the Committee on the Judiciary a substitute for the bill recently brought forward to meet the emergency created by the Supreme Court's "original-package" decision. The substitute provides that "when any intoxicating liquors shall be transported from one State or Territory to another, or from any foreign country, such liquor shall, when the actual and continuous transportation of the same shall have terminated, be considered to have ceased to be the subject of inter-State commerce and be a part of the common mass of property within the State or Territory, and subject to the respective powers of the State or Territory in respect of all police regulations of prohibition, regulation, or taxation." Substantially such a measure as this should be passed without any unnecessary delay. The present state of things is intolerable. For example, in western Pennsylvania towns which forbid the sale of liquors, a firm of Ohio brewers has begun selling beer in "original packages" of an eighth, a quarter, or a half of a barrel, as they appear to have a right to do under the Supreme Court's decision. Apparently the only thing that will put an end to such scandals is the passage by Congress of such a bill as Senator Wilson has just reported.

The silver debate in the Senate has given rise to a discussion of the question whether the greenback-redemption fund of $100,000,000 is a greenback-redemption fund, or simply a part of the general resources of the Treasury. This question was raised by an amendment to the Silver Bill, offered by Senator Plumb, providing that the Secretary of the Treasury should not keep on hand more than $110,000,000 at any one time. Senator Sherman objected that the business of the Department could not be carried on with so small a balance as $10,000,000 in the general fund, that being the amount which would be left to the Secretary if the Plumb amendment should be adopted. Mr. Plumb replied that, on the contrary, he would have $110,000,000 for all purposes, including greenback redemption. Mr. Sherman pointed out that $100,000,000 had been expressly accumulated for the resumption and maintenance of specie payments on and *after* January 1, 1879, and that Congress had at a later period (1882) passed another act recognizing the principle by appropriate words, viz: "That the Secretary of the Treasury shall suspend the issue of gold certificates whenever the amount of *gold coin and bullion in the Treasury reserved for the redemption of United States notes* falls below $100,000,000." The words in italics certainly do recognize a fixed sum of a particular metal as "reserved" for a specified and definite purpose. The Act of 1882 was an express acknowledgment of the preëxisting fact that about $100,000,000 of gold (the exact amount was $95,500,000) had been accumulated by the sale of bonds for the redemption of United States notes. That the language of the act of 1882 was not mandatory in form is nothing to the purpose if its meaning is clear, and we do not see how it could be made clearer without being mandatory. It is all the more binding in morals from the fact that it was, at the time, universally conceded and agreed that such a fund existed as a reserve fund for a special purpose. It was not until many years later that any question was raised concerning the sacredness of this fund.

Another question, somewhat of the same character, was raised by Senator Daniel of Virginia, and that is whether the Coinage Act of 1873, which dropped the silver dollar from the list of American coins, was passed by stealth and fraud. Mr. Daniel so affirmed. Mr. Sherman affirmed the contrary, and produced evidence that the bill was before Congress for two years and was frequently debated, and that everybody knew who cared to know that the silver dollar was dropped. Senator Stewart supported the contention of Senator Daniel until he was reminded that he was in the Senate at the time and voted for the bill. This blow would have knocked down an ox, but it had no effect upon Stewart, whose ready answer was that he did not then know what he was voting for. Very likely. Very likely, too, he does not know what he is voting for now. The truth is, as everybody knows, that the silver dollar was an unknown and functionless coin in 1873, existing only in cabinets of curiosities, worth more than the gold dollar, and that it was dropped by general consent as any other disused piece might have been.

The meaning of the silver plank in the national Republican platform was the subject of dispute in the Senate on May 14. Senator Stewart was making a long-winded speech in favor of free coinage, in the course of which he said that the Republican party was committed to free coinage by its platform. Senator Eustis of Louisiana asked him whether that was merely his interpretation of the platform, or whether it was the interpretation of those who prepared the silver plank. Mr. Stewart replied that he drew the plank himself, and that he ought to know what it meant, and that the phraseology "using both gold and silver as money" would be non-

sense unless it meant free coinage of both. Senator Farwell interrupted to say that he also was on the platform committee, and that he did not construe the silver plank that way, and that he knew of others who did not. Then Stewart asked Farwell what it did mean, and the latter replied that it meant this:

"That we were in favor of both gold and silver as money at the market price; that the Government should buy, say, a thousand dollars' worth of silver and coin it into a thousand units. That is what I meant, and that is what I hold it to mean now. The free coinage of silver should be at what it cost the Government, and not at seventy cents."

Thereupon Mr. Stewart made fun of the idea of "free coinage at the market price," which certainly is a contradiction in terms. The plank in the Chicago platform is in these words:

"The Republican party is in favor of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver."

If we were asked what this resolution means scientifically, we should say that it means what Mr. Stewart says it does, because a metal cannot be considered as money if its coinage is restricted. Any professor of political economy, being asked by his class to interpret the words, would be obliged to interpret them in that way. It is true that no particular ratio of silver to gold is expressed in the resolution, but, in the absence of any, the ratio now established by law (16 to 1) must be assumed to have been intended.

It is much more to the purpose to inquire what the Committee on Resolutions meant, and what the Convention meant, when this plank was put in the platform. Speaking broadly, we should say that both Committee and Convention meant anything that would catch votes. Senator Blair was quite right in holding this view. If the platform meant anything in particular, why, he asked, had not the party passed the Blair Education Bill? That was quite as plainly indicated as a part of Republican policy as free coinage of silver. Very true, but with this difference, that if each member of the Convention had been taken into a corner and asked what he thought the education plank meant, he could have told, while if all had been asked what the silver plank meant, none of them except Stewart, and possibly Farwell, could have told, and these would have told contrary stories. Most people think that we are now using both gold and silver as money because they see both in circulation more or less, and because they know that they can have either gold or silver by asking for it. This condition answers the popular conception of using both gold and silver as money, and this is what the Convention thought it was voting for—all except Stewart. That sly statesman, who did not know what he was doing when he voted in 1873 to drop the silver dollar from the coinage, did know what he was doing when he drew the silver plank in the Chicago platform. But since men do not like to have beliefs smuggled into them, nobody will believe in free coinage of silver any more, now that Stewart has shown us how smart he was, than before.

Mr. Cabot Lodge has, in an interview, dealt very skilfully but very gently with Mr. Clarkson's deliverances on the question of civil-service reform. He assumed that all that part of Mr. Clarkson's speech in Boston which consists of an attack on the merit system of appointment as at present carried out, was a joke—perhaps as good a way of disposing of it as could be expected from a faithful adherent of the Administration like Mr. Lodge. He then went on to show that Mr. Clarkson's position that *all* offices should be held by the party in power would never have been thought of, "if the holders of the subordinate places had not been taught for years that the right to carry letters or run errands for the Government depended on their political activity." He also affirmed that experience had shown that the use of the patronage for party purposes at the polls was a source of weakness rather than of strength; concurred with Clarkson in repudiating a civil-service pension system; denied that, under the present system, heads of departments selected their own subordinates in the unclassified service, and said they were selected for them by Congressmen, which is strictly true. Unfortunately, we fear the party leaders are far more in accord on this matter with Clarkson than with Lodge. Lodge is sound, but Clarkson seems to be orthodox. We find the following in the Washington correspondence of the Philadelphia *Inquirer*, which stands very close to the Administration and speaks its sentiments with a certain authority:

"The Boston speech of Gen. Clarkson is very satisfactory to the members of the Administration. It is regarded as a fair exposition of the Republican position on the questions discussed. There is a perceptible modification of the early views in reference to the civil-service work. There is a movement on foot to introduce some very radical changes in the organic act of the service. The speech of Gen. Clarkson was somewhat in the nature of a valedictory to his official life, as he is getting his affairs in condition to retire about the end of June. In connection with the enterprises in which he will embark he expects to continue in active party work. He feels that he can accomplish more untrammelled by office duty. A member of the Cabinet, referring to the speech to-night, said: 'I endorse every word of it.'"

By the bye, we have never known a time since the Civil-Service Law was passed when there was not "a perceptible modification of the early views in reference to civil-service work," and also "a movement on foot to introduce some very radical changes in the organic act of the service." The "early views" are always found in the platform, and the "perceptible modification" begins after the party gets into power, and is soon followed by "the movement for radical changes." This is true of both sides, but we think the Democrats have never gone as far as the Republicans did under Cleveland, when they abused the Administration bitterly for not carrying out the spoils system to its utmost extent. The Democrats have always reproached the Republicans for not living up to their professions, while the Republicans have strenuously urged on the party in power a policy of general perfidy and wickedness. Happily, the "radical changes" are never brought about. When the time comes to make them, the grumblers lose heart and let the "humbug" and the "fraud" go on its way.

The most striking attribute of the two newspapers with which the President's son is connected as part proprietor, *Judge* of this city and the *Journal* of Helena, Montana, is their frank contempt for anything like morals in politics. An obviously inspired Washington despatch which was sent on May 14 and published in the *Journal*, announced that "Senator Quay never stood so well at the White House as he does now, and the attacks upon him have awakened the sympathy of the President, because he recognizes that they have been made for partisan reasons; the Senator calls at the White House frequently, and can always get the ear of the President when other persons are refused interviews." Almost simultaneously with this defence and "vindication" of Quay in Montana, appears the following similar service for Clarkson in *Judge* in this city: "Mr. Clarkson will resign from the Post-office Department. He chopped off many heads with neatness and despatch, and is therefore the best of civil-service reformers. The President will never find a better man for his place, and it is to be hoped that he will leave his axe well sharpened." Thus the two organs of the Harrison family unite in openly expressed contempt for moral obligations in political conduct and for Presidential fidelity to civil-service reform pledges.

The passage of a ballot-reform law in New Jersey brings the number of States which have enacted such laws this year up to four, and swells the entire number which have secured them since the agitation of the reform began in 1887 to fourteen. The New Jersey law is in some respects different from all the others. It is not so good a law as most of them, but it is better than the Connecticut law, which is the poorest of all. While modelled on the Australian system, the New Jersey law contains the serious defect of allowing the official ballots, which are to be printed and distributed at the public expense, to be obtainable five days in advance of election by any one who will apply for them. This, of course, will enable the party bosses to have the tickets put in the hands of their followers outside the polling-places. The bosses cannot follow the voters to the polls to see how they vote, for no electioneering is permitted within 100 feet of the polling-places, and voters are required to put their ballots in envelopes, in a secret compartment, before depositing them. The official envelopes are to be obtained nowhere except in the polling-places on election day. This envelope requirement may be of some service in preventing the consummation of corrupt bargains, but it will not counteract entirely the evil which is made possible by the distribution of ballots in advance of election, and the use of such ballots whether obtained inside or outside the polling-places. The ballots are to be similar to those required by the New York Reform Law, each party or faction or movement having a separate one for its candidates. The great

gains of the New Jersey law are that the control of elections and ballots is removed from the political machines, that "heelers" and workers are driven away from the polls, that nominations may be made by petitions, and that there must be absolute secrecy in voting. These constitute a great improvement over the old system.

The Central Labor Union is quick to comprehend the advantages which third-party and independent movements have gained by the new election law. Its members met on Sunday, and, after calling attention to the facts that independent organizations can now "place candidates before all the voters without being subjected to an enormous and practically prohibitive expense for printing and distributing tickets," and that "it is now possible for men to vote in absolute secrecy for the candidates of their choice without fear of intimidation," resolved that they saw "in the immediate present a hopeful opportunity for a popular movement to smash all the political machines, and restore to the city of New York a 'government of the people, for the people, by the people.'" They appointed a committee to consider and report upon the best means for accomplishing this purpose. Tammany Hall is also sensible of what has happened, and is holding meetings in all its district organizations, at which the new Election Law is expounded; and its workers are all cudgelling their brains to see how they can "beat the law" in order to circumvent its secrecy obligations. What are the respectable citizens doing? Are they showing as much eagerness as either the machines or the labor agitators are? Are they appointing committees to consider and report upon the best way by which to improve the opportunity presented by the new law in order to give the city a genuine popular uprising, not merely against the machines, but in the interest of intelligent government? There is no time to be lost if a movement of this kind is going to be started this year with hope of success at the polls.

The instructions given to the commander of the revenue cutter *Bear* respecting the capture of sealing vessels in Alaskan waters are identical with those of last year, except that captured vessels are to be dismantled, so as to prevent any repetition of the offence during the season. The commander is to warn all persons against entering Bering Sea for the purpose of violating the laws of the United States therein, and particularly the law which provides that no person shall kill any fur seal "within the limits of Alaska Territory or the waters thereof." What those limits are has not been defined. The British Columbian sealers hold that they are the waters within three miles of any land of Alaska Territory. Do we hold the contrary? Not so far as any authentic documentary evidence has been submitted. Not so far as either Congress or the President has declared. We have not gone to the length of laying down one rule for Bering Sea and a different one for the Gulf of St. Lawrence. It would seem, therefore, that the Government has put into the discretion of the commander of a revenue cutter a question of extreme gravity which it has not ventured to decide for itself, and that upon his decision may rest issues of vast importance. Of course, no discussion of the Bering Sea question of any value will be possible until the negotiations between Secretary Blaine and Sir Julian Pauncefote are made public.

Minister Romero has had published a speech which he delivered in the course of the Pan-American Congress, wherein he took occasion to allude to Mr. Flint's figures brought forward to prove the exceeding generosity of our tariff to South American products. The veteran diplomat but thinly veiled his scorn for the assertion that the United States had been actuated by anything but self-interest and regard to the demands of manufacturers in laying taxes on South American imports. He roundly asserted that if any of the products now admitted free were to come into competition with anything produced in this country, prohibitory or fatally discriminating taxes would be clapped on them at once. The Mexican Minister delicately intimated that he was too well acquainted with the tariff policy of this country, with all its ins and outs, to have any Pan-American wool pulled over his eyes, and predicted that the action of Congress on the question of Mexican lead-ores would be a good test of the professed desire of this country to have a reciprocal trade with the republics to the south of us. A neat rejoinder to Mr. Flint was also made by one of the Argentine delegates. The 87 per cent. of free imports, he said, explain why South American products enter our ports, but they do not explain why the most of them are driven away to Europe by our tariff. "When the honorable delegate estimates the liberality of his tariff on the basis of the articles that come in, he reminds me of a man giving a party who should be surprised at the fact that out of a hundred people in his parlors, eighty came there on his invitation. What would surprise me would be not the eighty friends, but the twenty intruders; and if the giver of the reception still wished to prove to us his reputation for munificence, I should need to ask how many people had been shut out from the enjoyment of his hospitality."

There can be no doubt that the Argentine Republic is suffering severely from the financial crisis now fully upon her. Immigration during the first three months of the year has decidedly fallen off, and a new feature in the returns is the springing up of a movement of emigration, no less than 13,000 persons having abandoned the country in the period mentioned. The volume of foreign commerce has also undergone considerable diminution, and the customs receipts are diminishing in consequence. Still, the Administration is making a more resolute and intelligent effort to face the difficulty than it has before displayed. President Celman has taken occasion in various public addresses and messages to Congress to insist upon the need of a rigid economy in the administration of public affairs. He has given the best earnest of his determination in cuting down the estimates for the current year by as much as $10,000,000, or about one-sixth of the whole. Remedies for the great evil of a depreciated because immensely inflated currency are diligently sought for, and the lowering premium on gold shows the beneficial effects of contracting the volume of paper money. A new scheme for a national currency, based on land, has been put forward, and, curiously enough, appeals to our own Senator Stanford's similar proposal as a valuable precedent. There is no thought of adopting it, however, there more than here. In spite of all, the country's difficulties are only momentary. As a whole, the national position is sound and the public credit is unimpaired. As the President said at the opening of the great new La Plata harbor, a nation carrying through such a vast enterprise as that, is not going to suffer irremediably from mistakes in financial legislation.

Stanley, in his address at the Guildhall in London on the 13th, made a savage attack on the Ministry, on "Quakerism, peace societies, protection combinations, anti-enterprise companies, and namby-pamby journalism," by which he meant all persons and corporations who doubt the wisdom of England's seizing a large slice of Central Africa, and keeping it against all comers with the strong hand. He says she might have had the Congo region, and made 100 per cent. on the venture, and now Belgium has got it. She might also have had East Africa, and now Germany has got it; and he praises the German Emperor and Maj. Wissmann to the skies as men who know what they want and will stand no nonsense. Lord Salisbury has answered him by denying that any division of East Africa with Germany is yet arranged, and intimated that Stanley in his denunciations did not know what he was talking about, and that, when all was known, it would be found that the missionaries, the explorers, and the trading companies, and everybody else concerned had been properly taken care of. What makes the British public feel blue about East Africa is the accounts the agents of the East African Company are sending home of the high-handed way the Germans are behaving, and a map which Sir Francis de Winton recently published in the *Nineteenth Century*, showing that Germany had got the heart of the continent below the great lakes and as far west as the Congo, while England was shoved away up north towards Sahara. The fact is, as Lord Salisbury has hinted, that Germany is showing in Africa all the push of youthfulness in tropical colonizing. The pinch of trouble and expense will come by and by, while England, which has had a century's experience of fighting barbarians under strange skies, and has settlements all over the world, feels prudent and likes to go slowly. Such rescuing expeditions as those of Abyssinia and the Sudan naturally make a deep impression on the national mind. When Germany has had one or two, she probably will be more cautious.

FOREIGN RAILWAY COMPETITION.

ONE of the numberless contradictions of which the policy of protection is full, is brought out in the recent report of the Senate Committee on Canadian Competition and in the testimony printed with the report. The same communities which favor high duties on imports, are most earnest in demanding the continuance of the transit trade through Canada of American products. The reason for this demand is, that these communities, by reason of railroad connections through Canada to other parts of the United States, are enabled to ship or receive goods more cheaply than by lines lying wholly within the United States, or are given such exceptional facilities as to make the withdrawal of them a commercial misfortune. Senator Blair labored hard with the railroad witnesses before the Committee to draw out acknowledgments that the forbidding of Canadian railroad competition would compel the payment of higher charges to American roads; and although these witnesses evaded a direct reply, there is no doubt that at first such would be the result in many cases. The reason is plain: the Canadian routes whose competition is most complained of are longer than the corresponding American ones, or encounter some other difficulty which compels them to charge less for carriage to competitive places if they would secure any of the traffic. Such reduction in charges now arranged by an agreed differential or otherwise would, at least at first, be lost to the shipper should the Canadian route be closed by the Federal Government. Washington despatches to Boston papers speak of this as "a sacrifice of New England." The recommendations of Senator Cullom's Committee are, however, very moderate in tone, and less severe than would be justified by the facts collected. The Committee merely recommends a license system for Canadian railroads, or some other plan "not injurious to the general trade and commerce of the country."

The question raised by the quoted remarks is one of fairness and equity. Senator Hoar, Chairman of another Senate committee, that on Relations with Canada, put the matter squarely thus: If Canada chooses to spend millions of money in building and running a railway, and if that railway, by reason of such subsidies, can and does carry American products more cheaply than we can carry them ourselves, why should we not get the benefit of that cheapness at Canada's expense? Perhaps as good a way as any to answer this question is to ask another: If a manufacturer in Canada can produce a certain line of goods at lower prices than we can, why should not the New England consumer get the benefit of the cheapness? The usual answer to this is, that an extra price should be laid upon such imports to protect the American manufacturer. As long, then, as protection is our national policy, how can we decently refuse protection to American railroads? And if higher prices for clothes are paid by the New Englander, why should he not also pay higher charges for freights? The parallel runs close throughout. In many of the Pacific charters granted by Congress there is a section or proviso that only rails of American manufacture should be used. In any case, whether built under a Federal or State law, the American road purchases rails and all materials at protected prices, pays a high scale of wages in all departments, and at the same time is compelled under present conditions to sell its product (*i. e.*, transportation) at prices fixed by a foreign and, perhaps, Government-aided rival; and not a part of its product merely, for, under our long-and-short-haul rule, these foreign prices affect the whole traffic of the road. To take a slightly different illustration: Suppose Congress should allow manufactured goods to come in duty free, while taxing the raw material. There is no practical difference between such a plan and taxing the material of which the American plant is made, while allowing the Canadian roads free entrance to our cities.

There is no logical escape from the conclusion that Canadian railroad competition as it exists to-day is a direct violation of the protective principle. New England Republicans are now favoring the protective policy as regards their manufactures, and at the same time demanding a free-trade policy in transportation, without a blush for their stultifying position; but others see the absurdity clearly. If comparative freedom of competition is a good thing as regards the carriage of American products, why is it not equally good in other things? If American railroads can stand it, why cannot American manufacturers? If Senator Blair thinks that the stoppage of transit through Canada would for a time raise the price of breadstuffs in New Hampshire—a thing to be bitterly opposed—what should be said about the extra prices for protected articles now paid by the citizens of the same State? If it is replied that the New Hampshire factory would suffer by the admission of foreign goods free of duty, the easy answer is that the capital invested in railroads is as much entitled to consideration as that of the Manchester mills. That certain American railroads would lose a part of their traffic by the closing of the Canadian routes is true, but these are really acting the part of smugglers or disturbers of the protective peace, and logically have no title or claim upon that part of their business. Finally, if foreign competition is necessary as a "regulator" of American railroad tariffs on grain from the farms of the Northwest, why is it not equally necessary as a regulator of the prices paid by the same farmers on binding-twine?

A CASE OF PARTY DEBASEMENT.

IN Hartford, Conn., a few weeks ago, a city election took place in which Gov. Bulkeley, Chief Magistrate of Connecticut, as one of the leaders of a local Republican faction, had a deep interest. Joined with the Governor as his chief henchman was "Pat" McGovern, a Hartford ward-worker of most unsavory repute. When the votes were counted, it was found that upwards of a hundred "official" ballots issued by the State for elections of the kind were headed by the title "Citizens' Ticket," placed above the full list of the Republican candidates. In the Seventh Ward of the city these irregular ballots led to a contest before the Superior Court, where Judge Thayer some three weeks ago, in a preliminary decision on a demurrer, intimated that their title was a distinguishing mark in violation of the new Connecticut Secret-Ballot Law, and that the ballots were illegal.

On further proceedings the case came into the same court a fortnight ago, and Gov. Bulkeley himself was called to the stand. He testified, as it seems without a blush visible enough to get into the newspapers, that he and McGovern before the election had met in secret conference at which it was decided that these "Citizens'" ballots should be printed and put out. Under cross-examination, the Governor said that the tickets were put out "because there was a demand for them" on the part of electors who didn't like to vote tickets headed "Democratic" or "Republican." Why the tickets, in that case, were not printed without any title at all, to suit the nice scruples of the critical literary voters who wanted the Republican candidates without the Republican head-line; why, also, the Governor, who had himself signed the present law, did not discern that the title was a distinguishing mark by which voters might be detected either separately or *en bloc*—these two points this ingenuous magistrate did not undertake to explain. The State law on the subject is reasonably explicit. It declares that the ballots shall be provided by the Secretary of State to political *parties*, and that the name of the party issuing them shall appear in the title. In this case the Governor's own testimony showed that no "citizens'" party had issued the ballots, but that they were the pure invention of himself and McGovern, who thus headed the list of Republican candidates with a moral as well as political falsehood. Judge Thayer rendered his decision on May 21, and it was in accordance with the intimation he had previously given, "that ballots containing the word 'Citizens',' as indicating a party issuing the same, were void, and consequently that Talcott was elected Alderman in the Seventh Ward at the recent election." This was the only question brought before the Court. It is to be considered, however, that the Connecticut law furthermore provides grave penalties for any person "who shall violate any provision of this act." Under a moderately strict construction of the statute, therefore, it is possible that Connecticut's Governor is open to a criminal prosecution.

As a violation of high official dignity, of political ethics, and of the law itself, the case is surely bad enough. But it is less with Gov. Bulkeley that we have to deal in the offence than with the Republican party in the State that stands sponsor for the man and his acts. With full knowledge of Bulkeley's character and his peculiar shady tactics in Hartford politics, a Republican State Convention chose him two years ago without opposition as its candidate for Governor. It was a Presidential

year; Bulkeley was famous as a political "hustler," who knew how to handle money, who had the money to handle, and who could carry out effectively the scheme attributed to him, in his own phrase, of "working the scalawags." In other words, he stood to his party in the State in very much the same relation as Matt Quay to his party in the nation. He polled, too, almost his full party vote, and was duly chosen Governor by his party's representatives in the Legislature. And now, when he reappears as a trickster in city politics, we have looked in vain through the Republican press of the State for signs of the indignation which this disclosure ought to excite. In the more than century-old and eminently respectable Hartford *Courant*, proud of its Federalist and Whig heritage, no comment appears as to a scandal on which every Republican moralist in Connecticut ought to focus his wrath. The New Haven *Palladium's* only emotion in the matter appears to be one of admiration that the Governor did not commit perjury on the witness stand. "Morgan G. Bulkeley," it says, "is no trimmer. His testimony in the matter of 'Citizens' Tickets' was fully and candidly given; and when he had finished every one knew the facts. Such a trait commands the instinctive admiration of every man." And this in a New England commonwealth where the Republican party and its lineal predecessors used so to plume themselves on dignity, on purity, and on social and moral altitude—a State, too, where the Governor's office is much more dignified than powerful. Picture the effect on his party had Gov. Roger Sherman Baldwin in 1844 devised a trick to evade an election law, or had Gov. Henry Dutton in 1854 put a "distinguishing mark" on official ballots, or had Gov. Buckingham a few years later held a secret conference with a vulgar ward politician of Norwich to carry an election by violating a statute which, as Chief Magistrate of the State, he had signed!

We commend this episode of Republican party debasement, in one of those New England States where the party was cradled, to the prayerful attention of all its good deacons and church members.

THE GOVERNMENTS AND THE LABORERS.

THE workingmen in the great capitals have now made the May demonstration in favor of eight hours as a day's work and other improvements in their condition, and the leading Governments of Europe have nearly all made the admission that the labor problem is the leading political question of the day. The German Emperor has, as everybody knows, taken the lead in the matter, and announced his intention of improving the lot of the working classes in some manner, and of smashing anybody who interferes with his plans. An international conference was held on his invitation in Berlin a few weeks ago, and he has since then treated the matter in a speech from the throne at the opening of the Reichstag. Germany, Austria, Belgium, Denmark, Spain, France, Italy, Holland, Portugal, Sweden and Norway, and Switzerland all took part in the conference. Something great ought to have come of it, but what did come was simply a series of recommendations touching restrictions on the labor of minors and women in mines and factories, and on Sunday labor, nearly every one of which is already in force in England and America and France. There was a good deal of academical discussion of the laborers' condition, but the attempt to arrive at an international agreement restricting the hours of labor of adults, which was the original object of the conference as proposed by the German Emperor, was abandoned as impracticable at the very outset. The very suggestion showed the singularly cloudy condition of the imperial mind touching the whole matter.

In his speech from the throne at the opening of the Reichstag, he cut down his programme, as set forth in the "rescripts," by fully one-half, and proposed simply measures which, whatever their practical value, are within the reach of his own Parliament. He suggested the prohibition of Sunday labor, the legal protection for workingmen's lives and health and morals, some increase in the authority of working-class parents over their children, and the creation of machinery of arbitration between workmen and employers, and so on. The recommendations were all very vague, and can hardly have any serious result beyond exciting in the minds of the working class in Germany great expectations of improvement in their condition from some sort of governmental interference. Not one of them touched the central cause of working-class discontent, namely, the desire for more money for less work. As a rule, the working classes are not troubled seriously about their morals, or the unruliness of their children, or the risks of their callings. What they complain of is, that they do not receive a sufficient share of the wealth which they produce, and do not get leisure enough in which to enjoy it. The Emperor gave a touch of satire to his social remedies by proposing immediately after them a large increase of the army, or, in other words, a great increase of expenditure in the maintenance of idle consumers of the national produce, who have to be supported by the working classes.

The Pope, too, could hardly be expected to let the occasion pass by without having a say on it. So he has written a letter about the labor question to the Archbishop of Cologne, in addition to the one he wrote to the Emperor in answer to an invitation to take part in the conference at Berlin. His plan for solving the problem is simple enough. The duty of the Holy See is to "proclaim the principles of real justice, to teach respect for the dignity of human nature in the person of the workingman," and to "awaken in the conscience of the workingman himself the sense of duty," and "make him faithful, moral, sober, and honest." It will be easily seen that this does not help the world very much at this crisis. What is making all the trouble is the discontent of the working classes, and what the working classes complain of is not that they are short of morality or religion, but that they do not get paid enough for their labor, and have not as much time to themselves as they would like. They are not in the least grateful to people who give them good advice about their conduct of life.

We may go through all the governmental and professional utterances which the pending labor crisis has called forth in Europe, with similar results. They all avoid the real question. All the Governments which propose to do anything in the matter, propose to do something which the workingmen either do not care for at all or do not greatly care for. They propose more State guardianship of the workingman, when what he wants is more liberty and more spending money. As far as we can see at present, the net result of the great interest which they are now showing in the condition of the working classes is to strengthen and spread the belief that the employing classes are in possession of a fund or reservoir of wealth of which the manual laborers do not get their share, and the more equal division of which ought to be and can be enforced by legislation.

This idea crops out clearly in all the addresses of the labor leaders. In asking for eight-hour days, they are not troubled in the least by the argument that if it should diminish production, the working classes would be worse off. They hold that any loss incurred in this way could and would be made up by diminishing the share of the capitalist class, and, more than this, that by the same process the means of employing more laborers would be furnished. That the condition of laborers would not be sensibly improved by an equal division among them of all the profits of all the capitalists in the world is capable of mathematical demonstration; but it would not, for the reason we have given above, make much impression. The belief that somewhere there exists a store of good things which Government can, if it pleases, dole out, would still exist. It is this belief which the Emperor William's amiable talk, and the governmental fuss in other countries that has followed it, are strengthening. The labor leaders look on it all as a sign of fear, and of a desire to temporize and put off the evil day when the luxuries of life will have to be equally diffused. In fact, there appears to be every sign that we are entering on a period of extraordinary folly in the economical world.

THE INDUSTRIAL CONDITION OF MEXICO.

THE present régime in Mexico is a republic so strongly centralized that it appears like an autocracy with a democratic nomenclature. Yet it is far from despotism. The men at the helm act, in fact, with the consent of the governed, at least of the great majority thereof, because that majority perceives that this manner of governing is the only one adapted to the present wants of the Mexican population, and that, while tyranny and too great arbitrariness would not last, a looser

form of governing the people would cause a relapse into chaos. It is difficult for the average American to conceive accurately the working of a power which, while observing the outward forms of democracy, still acts quite independently in the main, and often contrary (in appearance) to the principles of a republic. It is, however, necessary that it should act in this way, owing to the nature of the population of Mexico. There is not, as yet, a strictly national type; that type is only just forming, and what it will be when formed it is not safe to predict. There are as yet too many local shades, and especially racial differences. In this respect the course of development was, in Mexico, the reverse of what it has been in the United States. There, sectional types are gradually blending into a national picture. In the northern republic local variations are growing out of an original homogeneity. The cause of this difference lies in the historical development of the two countries.

Some parts of Mexico were found by the Spaniards much more densely inhabited by Indians than any part of the United States was at the time of its first discovery. Instead of crowding out the natives, as was done in the north, the Spanish Government recognized in them the first and principal resource of the land, and began to train them for the ends and aims of civilization. This was a very slow and tedious task, and one which required centuries of patient toil. When the insurrection against Spain broke out in the beginning of this century, the work had not been half performed. The Spanish language had not penetrated, as a medium of daily intercourse, into many provinces; the Christian religion had scarcely superseded more than the most bloody rites of antiquity; tribal distinctions still separated district from district, even village from village, and the idea of humanity was borne by the Indians as a chain of bondage. To shake off the Spanish rule signified, for the aborigines, return to the primitive state.

A comparatively limited number of Spanish settlers occupied Mexico, and their offspring (the Creoles) felt justly slighted by the conduct of the mother country towards them. But while they were hostile towards the native Spaniards, there was little cordiality between them and the Indians. They united temporarily against the Spaniard, only to return with greater sincerity to their mutual state of mistrust, as soon as the main point, political independence, was secured. Thus the population was divided, at the very inception of the Republic, into two distinct, not to say hostile, camps, of which one, the Creoles, enjoyed the superiority in culture and means; the other, the Indians, the great superiority in numbers. Between the two, a numerous class of Mestizos constituted, not so much a link as a population of transfuges and spies, betraying both sides or joining either, as the balance of power seemed to pass from one to the other. The superior intellectual attainments of the Creole, however, established him in a position which but few among the Indians could reach. This helped to perpetuate in Mexico a social classification which no constitution, no proclamation of first principles, could obliterate, and which will remain for a long while yet. It is not an aristocracy of birth, not strictly a moneyed aristocracy either; it is rather one originally of racial origin, coupled with, but not exclusively based upon, financial standing. That the latter is no criterion is shown by the fact that the most modest man of business who claims to be a Creole looks down upon the richest but unpolished Indian; whereas, the educated Indian enjoys the same prerogatives as the well-to-do Creole or foreigner.

The Indian of Mexico is not always illiterate. Formerly the Church, of late public instruction in country schools, has done much for him. But he is always, to say the least, "peculiar," suspicious, and easily influenced to commit violence, even against his own race (provided it be not of the same village), but principally against the whites or against foreigners.

It is often stated that the Indians of Mexico are the only class there who work. The inference is drawn that consequently they are the real and only hope of the country. Truly, the so-called upper classes, even if they are poor, scarcely do any manual labor. This is not limited to the Mexican people proper. The same thing happens with all foreigners after they have resided in Mexico for a certain length of time. They accustom themselves to use the *criado*, the *mozo*, the *cargador*, as much as the natives use them; many of them deplore the "unfortunate position" of these "poor, down-trodden" people, while at the same time they are exceedingly watchful to guard against overcharges by these objects of their philanthropic commiseration. It was inevitable in Mexico, this formation of a lower class: it resulted naturally from conditions prevailing at the time of the conquest, and from the firm determination, persistently executed, of the Spanish Government to preserve the Indian. The breach between the two races was too great, in culture, to make it possible for the Indian to cross it at once. Spain sought to lead him across the chasm gradually. To do this, the Indian had to be trained, beginning at the very lowest level of European society, as it was then constituted.

A strong and to some extent paternal government is, therefore, required, in view of the mode in which the population of Mexico is constituted. It must sustain the mentally weak, and shield the numerically feeble from explosions of inconsiderate anger or jealousy on the part of the others. At the same time, it must be able to prevent ambitious elements of the more educated classes from exercising a fatal influence upon those below, using the latter for purposes detrimental to the peace and prosperity of the country. Where social differences are so pronounced as they are in Mexico, a government by all for all is impossible.

For the material development of the country the working faculties of its people deserve chief consideration. Among the higher classes there is no lack of ingenuity and skill. What they need is technical training, and, together with it, a certain amount of moral training to give them the tenacity of purpose that creates an inventive spirit. We must remember first that in tropical countries the facilities afforded for mere subsistence do not foster the desire to improve the mode of living artificially. Hence the necessity of invention is not as great as in climes where the contrast of seasons alone impels man to aid or to combat nature for his own benefit. Furthermore, the whole past of Mexico has given little room for the development of industrial skill. After Spain had once instituted its suicidal policy of isolating the colonies, industrial growth was stifled; for where there is no hope of improvement in production there is little motive for invention. With the period of dissensions and troubles inaugurated by independence, the arts of peace could not flourish, so that the present apathy of the Mexican people towards industry and technical and mechanical progress is easily explained, whereas it is no proof of their inability to perform work in that direction. Time is required above all—time spent in peace, and with a feeling of security for all achievements.

The Indian possesses natural mechanical skill, but in a peculiar way. As early as the sixteenth century, one of the many clerical educators of the Mexican Indians remarked that, while the Indian displayed surprising deftness and real skill in the working out of details, he lacked general ideas, was incapable of symmetrical conception of a whole. This is very true to-day, although much improvement is visible. Still, for a long time to come, notwithstanding the efforts at general education, for which the present Mexican Government is to be so highly commended, ere the Indian can enter the lists as a successful competitor in industry and manufactures, much patience, and, above all, much simple manual training, will be necessary.

Nature in Mexico has the general reputation of being overburdened with riches. The inhabitants are often reproached with being unworthy to own such a paradise. But Mexico is far from being uniformly rich in natural products. The surface of the republic is extremely varied in its topography, and whereas the greatest portion of it lies within the tropics, its northern sections resemble closely the Southwest of the United States, and are in many places perhaps even more forbidding on account of aridity. It is well known that Mexico has no navigable rivers. Some of its streams can be used for small craft for a short distance, but they bear no comparison with any of the mighty arteries of the United States. On the Gulf coast there are no real harbors. The Bay of Vera Cruz is not a bay. It is an enormous inroad made by the sea into the sandy beach, where, at one place, large steamers may anchor within reach of the shore. The outlets of the rivers at Tampico, Tuxpan, and other places are closed to larger craft by bars of sand and débris which until now it has not been possible to remove. The approach to Mexico by sea has been rendered difficult by nature itself. On the west coast it is easier: Acapulco and Mazatlan, for instance, have good harbors. In the interior there are but few lagunes, and the water supply of the regions north of the City of Mexico is scanty and irregularly distributed. On the other hand, the Northern States of the Republic are those which contain the richest mineral deposits. Sonora has extensive coal fields. In regard to the precious metals, those who might enter Northern Mexico with great expectations should have their attention called to the fact that the further north one goes, and the more he approaches the boundary of the United States, the more that peculiar and often deceitful formation called "pockets" prevails. There are probably rich deposits of silver yet undiscovered in the heart of the northern Sierra Madre, but the difficulties of transportation have hitherto more than offset their eventual intrinsic value. Southern Mexico is less rich in ores. There the vegetable kingdom unfolds its treasures, accompanied by all the drawbacks which a tropical climate and tropical vegetation present to man.

These drawbacks are often not sufficiently recognized, and when the enterprising Northerner at last comes to realize them, it is sometimes too late. Precious woodlands, proper for the cultivation of exotic staples, lie usually in regions where exuberance offers serious obstacles to man, and where the climate not unfrequently permits acclimatization only to a second generation. These are natural features which man cannot change, to which he must submit, and under the influence of which he

will undergo gradual transformation himself. That transformation will enable him to comprehend much in the present mental and physical condition of the Mexican people that history does not explain, and he will see then why certain things are and must be in Mexico, while they do not and cannot exist elsewhere.

On the natural products of the country its future industry and commerce are largely dependent. Its agriculture is limited by the topography of the land. There are few countries more "accidented" than Mexico in its southern parts. Few of the States are one continuous tropical forest—Yucatan appears to be, when once the arid coast-belt is traversed. There it would seem that all products of the hot regions might flourish with equal facility; and yet Yucatan imports maize! The great American staple grows there, of course, but it seems that the quality of the grain is inferior. Such local phenomena are common. They impart a semblance of great diversity of resources, but at the same time they limit the possibilities for one or the other important product to areas that are small in comparison with those over which in the United States or in Europe the culture of great staples can extend. At the same time they restrict commerce and compel foreign importations to cater to a great variety of local tastes and wants.

Many of the valuable vegetable products of Mexico have not yet been touched; many are as yet scarcely known outside of their homes. In these there lie powerful resources for the country. To render them available it requires peace and order. As varied as the topography is the ethnography of the country, and order cannot be maintained successfully by the same means in every section. There are to-day whole districts where the authority of the Government is as null as the influence of the Church; others where a foreigner is unknown, or at least an exceedingly rare bird. The opening of the soil of Mexico is yet in its infancy, and it can only expand if there is stability in the central power. That stability seems to be insured. The prospects for the future of our sister Republic appear, therefore, to be fairly bright.

Foreigners who earnestly desire to make Mexico their home will always be welcome there. To succeed, it is first of all necessary to abandon all unreasonable expectations of Mexico based on its natural resources, its climate, its population. Next, all thought of appearing there as a missionary of culture should likewise be abandoned. Much improvement is indispensable in Mexico, but it will come slowly, as a reform grounded upon natural and historical conditions, and not in the shape of effervescent proselytism. Finally, honest acceptance of the condition of affairs, submission to the laws, and adaptability to accepted customs are required there as well as in the United States or in any other portion of the globe. The immigrant who observes these rules will meet with no opposition from the people, and least of all from its Government. Bad elements exist in Mexico, of course, as everywhere else; but never before since the end of Spanish rule have they been so effectually checked, so successfully controlled, as during the administration of Gen. Porfirio Diaz.

LABOR DAY IN EUROPE.

MILAN, May 2, 1890.

THE great day has come and gone. The ruin of society, which the heated imagination of most Continental governments had expected if the workingmen of Europe were to be allowed to "demonstrate" all on the same day, has not happened. The dreaded spectre of the red-handed laborer wading in the gore of his enemies, the capitalists, has changed into something very like a small boy with "'arf a brick" in his hand. Something like sanity has begun to be visible in the press again, and one can now fairly review the question as it stands.

There can be no doubt that the anxiety of the governments was very genuine. For the first time what appeared to be the voice of reason had joined itself to the clamors of violence, and presented to Europe an "Internationale" more terrible than that of fire and sword. The watchword of the leaders in the new campaign was the eight-hour day. The old cry of "Eight hours for work, eight hours for sleep, and eight hours for 'recreation,'" was revived and made the text of flaming demands that all the laborers of Europe should unite in abstaining from work on the first of May and in "demonstrating" their allegiance to this programme.

There seems every reason to believe that nothing more was intended than a peaceable declaration of principles, manifested, as such declarations are wont to be, by public meetings and processions in the streets. But these are precisely the things which the Continental Government, backed by the well-to-do citizen with something to lose, cannot think of without a shudder. The response to the workingmen's peaceful proposition was, therefore, as might have been expected, a declaration of war. The different countries took measures, each according to its alarm. Germany, already hopelessly committed to the policy of forcible repression of all "dangerous" sentiments, had no need of any special enactments. Government laborers were simply warned not to abstain from work, on pain of dismissal, and many large firms followed the same plan. Others put the question to vote, and allowed such of their operatives as chose to take an extra holiday. Italy, in violation of a fundamental law, prohibited all assemblies on the 1st, and proceeded to mass soldiers at dangerous points in case of need. France, the starting-point of the present movement, and with more reason than any other Government to dread the consequences of any great gathering of people in her capital, took all measures needed to prevent disorder, and succeeded. England let the thing take its course, trusting, as it has so often done, to the natural effect of liberty in making men responsible for their own acts. Switzerland followed the same course.

Milan was a fairly favorable point from which to observe the European method of dealing with popular manifestations. It is, in many respects, the chief city of modern Italy. Its population of over three hundred thousand is mainly engaged in manufacturing. It is not a centre of culture, like Florence, nor of ancient traditions and new governmental interests, like Rome. Far more than either of these it represents the pure modern industrial community, with its sharp contrasts of employers and employees. Naturally, therefore, the alarmist in Italy had pointed with especial distinctness to Milan as likely to give most serious trouble on the awful day. It was probably with a sense of great relief that the well-meaning citizens awoke on the morning of the 1st to find a heavy rain falling in that determined fashion which promises a long continuance. Rain is a conservative element; it demands the possession of an umbrella as an indispensable condition of respectability. It seems almost, however, as if the good Milanese had forgotten this physical fact, and had actually conspired against themselves, for in the great covered Galleria Vittorio Emmanuele and the adjoining arcades they have provided a gathering-place where five to ten thousand persons can move about with considerable comfort, quite protected from the weather. As the rain continued heavy through the forenoon, their covered retreat became the natural resort for all who wanted to see what was going to happen.

Up to noon everything went on as usual. Shops were open, women were abroad: only a larger proportion of idlers marked the day as different from others. Now and then a company or two of soldiers was marched across the great Cathedral Square, just to remind the people that they were not without "protectors." The rumor spread that the royal palace close by was filled with troops, including a yard full of cavalry. Soon after noon the crowd in the Gallery had become pretty large and a trifle noisy. It was a very harmless-looking crowd. Evidently nine-tenths of the men there had come with the same laudable purpose as my own, simply to be on hand if anything interesting were to happen. The other tenth was made up, as is usually the case at such times, of rough and umbrellaless ragamuffins, not in themselves dangerous persons, but liable to be easily converted into effective mob material. The officers of the law, the picturesque carabinieri, revolver at the hip, marched in pairs up and down the Gallery, trying to look unconcerned, but evidently not quite easy in their minds. Men with their arms full of "labor literature" were crying their wares lustily, and disposing of surprising quantities of bad arguments and excited eloquence. I am bound to chronicle that the patriot of whom I bought my copies cheated me to the extent of 100 per cent. on the price.

As time went on, the lively tongues of the younger "demonstrators" began to wag a little too noisily; cruel jests at the expense of the authorities were flying about; words soon led to crowding, crowding to hustling, and hustling to scuffling. In a twinkling the frightened shop-keepers of the Gallery drew down their iron shutters, the great cafés closed their doors, the police fell to arresting with more promptness than discrimination, and a column of soldiers, which had been awaiting precisely this moment, cleared the Gallery and held it. The alarm spread rapidly around the square. All the principal shops were shut and remained so throughout the day and evening. Women disappeared from the streets and filled the balconies wherever a peep into the square could be had. Troops were drawn up across one of the entrances to the square on the side from which a party of "demonstrators" was said to be approaching. Announcements appeared that the theatres would "repose" for two nights—and this is the whole story.

It has been amusing and instructive to watch the expressions of opinion on the results of the May-Day demonstration in general. All parties agree that it was as harmless an affair as could well be imagined. A few broken heads are all the damage to be recorded in the whole of Europe. As to the explanation of this lack of result, however, opinions differ very widely. The voices friendly to the "laborer," or at all events opposed to repression of him, declare that the outcome was just about what was intended. There was, say these voices, no intention of violence, but only that, on this day, laborers all over the world should feel the unity of their class as a bond superior to all others, and should give peaceable expression to that feeling by taking a holiday and "demonstrating." That great num-

bers of workmen should prefer not to lose their day's wages, and should have no very profound sentiment of "solidarity," was, under existing circumstances, to be expected.

On the other hand, the "elements of order," as they like to call themselves, are jubilant over the triumph of authority. The declarations of the laborers, they say, mean nothing more nor less than the destruction of existing order. That workingmen should be capable of having opinions and quietly expressing them seems to these elements of society simply impossible. The lack of violent disturbances on the 1st they ascribe, not to any good will on the part of the labor party, but to the wholesome respect inspired by the certainty that any such efforts would be promptly suppressed. They draw from the whole episode the conclusion that the policy of repression has again justified itself. So far as the party is concerned, it will certainly be so much the easier to carry repressive measures in any European Cabinet, whenever the next occasion may arise.

The observer who stands outside both these parties, who sees on the one hand the hard struggle of the laborer, and on the other the desperate necessity now laid upon every European government not to lose any of its energy in internal conflicts, will come to a conclusion quite different from either of these. It seems very clear that the Labor Party—there seems really to be no good substitute for that absurd phrase—has made a decided step in the direction of organization. It has at least succeeded in emphasizing the idea of its own solidarity with sufficient sharpness to keep the whole press of Europe occupied with it for several days. But is this a gain? If the ultimate solution is to be worked out by each country gradually, by methods in harmony with its own history and in proportion to the actual demands of its own people, then this declaration of class interests as superior to those of nationality must only tend to embitter the feeling of the governments towards subjects who seem to them disloyal. Furthermore, such a proclamation of interest by one class is pretty certain to call out the antagonism of other classes. It is already predicted that the next elections in Germany will show a very marked falling off in that support from the other parties by which the great Socialist gains of the late elections were made possible. One must be personally familiar with the intensity of national feeling now dominant in Europe to realize how seriously any party would injure itself by seeming to represent ideas which could be attacked as "foreign." So long as nobody will go to a Wagner opera in Paris, while the average German is taught to use the word "Deutsch" as simply descriptive of all the virtues, an international party must choose its weapons with great discretion, or it will only consolidate the opposition.

Now, in the present crisis, it has not been discreet in this choice. The selection of the eight-hour day as a battle-cry was most unfortunate. The documents distributed in the streets of Milan will serve as fair examples of the arguments by which the shortening of the labor day was commended: If the day be shorter, more laborers will be needed to accomplish the work, and thus all the hosts of the unemployed will find something to do. This increase of occupation will bring an increase in the conditions of health; women will be relieved of labor ruinous to the race, etc., etc. One paragraph rose to this astonishing pitch: If the greedy capitalist really must have sixteen hours of labor done in a day, let him employ two men instead of one, paying to each, of course, the writer added, the full wages of a day. With such stuff as this for its contribution to economic science, little wonder that the new Internationale failed to command any very widespread sympathy.

There remains the question of suppression. A leading Roman paper of to-day calls attention to the significant fact that where the workingmen's associations are the best organized and most conscious of their purposes, they have shown themselves least dangerous to society, and most anxious to separate from themselves those enemies of all parties whose simple watchword is anarchy, and whose method is destruction of whatever exists. It draws the very obvious moral: "Let the workingman alone; let him unite; let him assemble; let him talk as much as he likes; keep the soldiers to fight our foreign enemies, when we settle who those may be; don't get panicky over rumors." All that is very sound advice, but it may well be doubted if it will be heeded. The possession of a handy army is a terrible temptation to any Ministry which has once felt the sense of power. Unquestionably the first duty of a Government is to keep the peace; but between whiles it is bound also to do nothing which shall make breaches of the peace more likely to happen. Whether the policy of repressing freedom of action does not furnish precisely that provocation to violence, is the question which faces Europe to-day.

A careful balancing of the probable results of yesterday's events shows, then, but little change in fundamental conditions. If it marks an epoch in any way, it does not seem at present as if it could be an epoch in the advance of the nations towards a reasonable settlement of existing difficulties, but rather an epoch of increasing bitterness and an obscuring of the true issues to be considered. E. E.

THE GROSVENOR GALLERY.

London, May 4, 1890.

For the art critic in London, last week was one of hard labor. On three consecutive days the three large galleries opened their doors to the press. But an advantage of this arrangement was that it helped one to make an interesting comparative study which would scarcely have been possible had a long interval separated the three openings. The result of this study is to give undoubted preëminence to the Grosvenor. The Bond Street gallery, which showed a decided falling off in interest and importance after the dispute among the directors leading to the establishment of what is jocularly called the Halicarnassus, has this year done much to retrieve its reputation. And it is for this reason, in noticing the three exhibitions, that I give it that precedence which would seem by right to belong to the Royal Academy.

The first fact that strikes one on making the rounds is that the success of the Grosvenor is entirely due to the younger men; and the second, that the affected morbidness which of old gave this gallery its notoriety has disappeared, to be replaced by honest, healthy work. Sir Coutts Lindsay, the proprietor and director, has been wise enough to profit by a late split in the New English Art Club, for unfortunately it seems impossible for any art organization to exist long without internal dissensions. This club, of which I have already had occasion to speak in the *Nation*, and which represents much that is best in British art, has hitherto shown in its exhibitions the work chiefly of that little group of men who call themselves the London Impressionists, of the Newlynites, that very clever colony of artists who have settled in a tiny fishing village on the Cornish Coast, and of (perhaps the most promising of all) the younger Scotch painters. But this year, for reasons not revealed to the general public, the Newlyn men refused to have anything to do with the New English Art Club, and their pictures, which might otherwise have been exhibited there, were secured by Sir Coutts Lindsay to give distinction to his walls. The latter, moreover, had the further good sense to obtain the coöperation of the Glasgow men, who have sent him their most important work.

All these artists, whether of Newlyn or of Glasgow, are endeavoring to the utmost of their ability to master the technique of their art, to see things for themselves, and to record their impressions in their own way, with the result that there is strong individuality and brilliancy in almost everything they do, and that their failures are artistically worth far more than the successes of the correct, characterless, academical painter, or of those morbid Neo-Tuscans who never looked at Nature at all, and who, not so long ago, reigned supreme at the Grosvenor. There is indeed a refreshing contrast between the work of men and women who make their studios in village streets and on the sea-coast, or who are the legitimate successors of the French landscape-painters whose inspiration came from Constable and Bonington, and the archaic affectations of the Ruskin-taught, who believe that art began to degenerate when painters first sought to model in the round, and who find it easier to copy the old "squint-eyed Madonnas" than the living human beings about them.

This return to nature, this desire to escape from academical traditions and mediæval limitations, and to be rid of studio properties, is very strikingly shown in the great predominance of landscapes, and this not only at the Grosvenor, but at the Royal Academy and the New Gallery as well. Apparently England, or rather Great Britain, is to have again its great landscape-painters, so sadly in the minority since the days of Constable. The man who in this sort of work stands out most conspicuously at the Grosvenor is James Guthrie of Glasgow, whose name, I venture to say, has hardly been heard in America; it is barely known here save among artists. And he is conspicuous, not merely because he shows one of the biggest pictures in the exhibition, but because of the great excellence of his work. His most important contribution is called "The Orchard," and is a vigorous out-door study of his subject: two children in the foreground picking up the fallen apples, while between the admirably drawn trees you look to a hay-stack in the middle distance, and to a low line of soft blue hills on the far horizon. It is very strong in color, very bold and direct in treatment, very fine and simple in feeling. One can see how susceptible Mr. Guthrie has been to French influence—behind his canvas, as it were, one seems to see many of the great modern Frenchmen; and yet that it does not suggest any one in particular, proves, I think, that he has been able to study them with profit and yet retain his own individuality, just as they could appreciate Constable without becoming his slavish imitators. While this picture is more interesting because it is a more difficult experiment, even more charming is his little "Pastoral," beautiful in color, with the soft harmony of greens broken here and there by the blue line of a winding stream, by the grayish white of the sheep in the foreground, by the reds of the houses half-hidden in the

foliage on the hill-side beyond, and no less beautiful in composition. It is painted broadly, and, because it is a true record of an impression, is full of that poetic feeling which the literary painter somehow never succeeds in suggesting. For its exposition of the poetry of realism, combined with simple, vigorous technique, this picture could not easily be surpassed.

"Audrey and her Goats," by Mr. Arthur Melville, another Scotchman, challenges comparison with Mr. Guthrie's "Orchard," both by its size and its subject and methods. It also is a landscape with figures. On a great stretch of green Audrey stands, a goat clutched by its horns in either hand, her head, with its vivid red hair, rising against a background of trees, over which Autumn has spread her covering of red, no less vivid. It is a splendid piece of decoration, but it is heavy and painty—the experiment is too obvious, it is not convincing. It just fails where Mr. Guthrie's picture succeeds. But it is the failure of a man whose cleverness makes one prefer it to the cut-and-dried successes of the painter so sure of himself that art to him no longer presents any problems. Mr. Melville has hitherto been better known for his water-colors, and the only one he shows in the same exhibition, a curious impression of "Javonaise Dancers," is a little marvel of brilliant technique and color.

It would be useless here to describe in detail all the other good landscapes, there are so many. I will just mention a few by men who, I think, call for special attention. A third Scotchman, Mr. E. A. Walton, shows one which must be ranked among the very best. It is but a quiet stretch of green meadow land with cattle, and pretends to be nothing else, since its simple title is "A Landscape"; but it is delightful in color and in atmosphere, true in tone, and genuine in feeling. Mr. E. A. Hornel, also from Glasgow, promises to make a name for himself as a colorist; it is the color that strikes one in his "Among the Wild Hyacinths," a rich study in greens and blues, even as it does more forcibly in a remarkable piece of decoration he has painted with Mr. George Henry, his countryman, with (for subject) the Druids bringing in the Mistletoe, in which he has simply revelled in the most gorgeous, brilliant colors, without a touch of vulgarity or coarseness. One can but hope that some day into his hands will fall the decoration of large public buildings in Scotland or in England, and that prosperity will not prove his ruin as it has that of so many other promising painters. Color is also the distinguishing characteristic of Mr. John Reid's landscapes, in which quality and style make up in a great measure for a certain want of truth to nature.

Mr. Henry Muhrman, an American, I believe, is represented by two of his low-toned studies, one with Millet-like figures, which would be so much more satisfactory in every way if he could only see that nature is not all made up of dirty grays and browns. And Mr. Peppercorn, the English student of Corot, has two or three of his soft, hazy sketches which are never seen to advantage in a large exhibition. Mr. Arthur Lemon and Mr. Arthur Tomson both show, by the results of their summer's work in Sussex, that Englishmen need not go to France to find that picturesqueness which Millet loved; while, if there be less tragedy and pathos in their shepherds and laborers, there is probably more realism. Mr. Mark Fisher, Mr. William Estall, Mr. Julius Olsson, and Mr. James Paterson are other men to whose future one looks with interest.

Of painters of marine subjects, there are two of distinction of whom England has good reason to boast—Mr. Henry Moore, who carried off the highest honors last summer at Paris, and Mr. Adrian Stokes, one of the little Newlyn group. Both have important and characteristic work at the Grosvenor. Mr. Moore, in his beautiful blue sea, breaking in sand-laden surf on the shore, is perhaps more subtle and more successful in giving the very movement and feeling of the water and waves; but Mr. Stokes paints, as no one else can, the brilliant luminous sky and the clouds just touched by the glowing colors of the sunset, above a cool sea, green as one always sees it off the Cornish coast; he is a poet as well as a painter.

Mr. William Stott of Oldham is a man who belongs to no particular school, unless it be that of Whistler, and who paints pictures that must be classed alone. This year he has given us a charming study of the nude: in a cool green wood, among flowers, and on soft turf, are three women with light gauze drapery, whom he calls "Diana, Twilight, and Dawn." In the immediate foreground is a delightfully decorative arrangement of straight tall irises. The figures are very graceful and well drawn, and treated with great refinement. Two are kneeling, and one lies outstretched in the centre of the composition, her feet towards the spectator, and it is in this figure the one defect of the work is found. She is on level ground, as you see by the position of the kneeling woman at her side, but, to avoid the otherwise necessary violence of foreshortening, the painter has tilted her up as if she were lying on an inclined plank. Because of this defect, many have declared the picture a failure. But its good points are so very good that they make up in a measure for what cannot but be considered a mistake.

Mr. John M. Swan is another man who stands alone. His picture at the Royal Academy last year, "The Prodigal Son," made a real sensation. He is not very young, but he had never exhibited before in the large galleries, and the report was that hitherto he had been altogether in the clutches of the dealers. He is not quite so strong this year, but his "Maternity," a study of a tigress suckling her cubs, is striking for the dignity in the pose of the tigress, in the modelling of the cubs, and in its directness of treatment; to a subject which the average animal-painter does not know how to make interesting, he always adds an indescribable charm by the stretch of vast undefined country he gives as background, and the great depth in the blue of the sky and the far distance.

In figure subjects the exhibition as a whole is weak. The only portrait of note is Mr. Orchardson's study of himself, which he has painted for the Uffizi Gallery in Florence. As if conscious of the great masters with whom he must there risk comparison, he has put into it his very best work. It is much more vigorous than the drawing-room picture by which he is usually represented at the Royal Academy; the modelling is good and strong, and, though, as in all his paintings, too yellow in tone, the color is rich and refined. It is by far his best exhibit this year. Mr. George Clausen has a large striking "Girl at the Gate"; but one wishes that a man who has so thoroughly mastered his technique would show a little more originality; but for Bastien-Lepage one feels that this picture would never have been painted. The girl, who stands directly in the foreground facing you, wears a light blue calico dress, and the whole figure, down to the old worn-out boots, is most carefully studied, while the expression of almost despair on her face gives some likelihood to the story abroad that Mr. Clausen had originally called the picture, "A Village Margaret." The perspective of the background, with its little cottage and garden, is very cleverly managed. Of the Newlynites, Mr. Stanhope Forbes, who may be called their leader, has reserved his principal work for the Academy, and shows a little "Road from a Market Town," in the late afternoon, full of figures. Mrs. Marianne Stokes has worked out a problem of light which it is difficult to understand: an infant, presumably Christ, lies in a cradle, and from the halo round his head the light shines on the mother kneeling by him; but, curiously enough, the light burns on that side of her face which is turned away from him and on parts of her dress which should certainly be in the shadow of the cradle. Praiseworthy as her efforts have been, she has not yet solved that problem of reflected light which Besnard and one or two other Frenchmen have treated so skilfully. Mrs. Stanhope Forbes, Mr. Bourdillon, and Mr. E. E. Simmons, other prominent Newlynites, all contribute work in which appears an "earnest intention to be just"; justness being that quality above all others at which they seem to aim.

Whoever has followed the development of British art of late years must notice how very few names among those I have mentioned are popularly known. But it is this fact which gives significance to the exhibition at the Grosvenor. The best and most striking work this year is by the rising generation of artists, upon whom much of the future of British art depends. N. N.

IQUITOS, THE METROPOLIS OF EASTERN PERU.

IQUITOS, March 10, 1890.

THE major portion of Peru lies east of the Andes. The reason for this fact being so little known is found, not in any fault of the geographers, but in that failure to derive ideas of length and breadth from degrees of longitude and latitude which is so common in the interpretation of maps. This vast region is called the Montaña, or wooded country, being in fact nothing more than a continuation of the great basin of the Valley of the Amazon, overspread by the same impenetrable, vine-draped forests as those which are seen throughout the two thousand miles from Pará to Tabatinga. It is a region regarding whose character and conditions even the Peruvians of "the coast," or Pacific Slope, possess but little information free from that romantic coloring in which travellers are tempted by its remoteness and inaccessibility to picture it. Strange as it may seem, in point of time this Montaña is much nearer New York than Lima. A line of steamers (the Booth Steamship Company) sails directly from New York to Manáos, Brazil, making connection there with the excellent Amazon steamboats, which in another ten days reach Iquitos, the metropolis of this region. The average time for completing this immense journey of 5,400 miles, including delays at Pará and Manáos, is forty days, and the total cost of a first-class passage a little less than two hundred dollars. Not only may passengers enjoy this benefit of close connections, but the same company gives to merchants the boon of through bills of lading for freight from New York to Iquitos. From Lima, however, one must either endure the hardships of a journey across the Andes, which occupies about two months or more, or else go by way of Panama, or around Cape Horn, to Pará, and thence up the Amazon.

Iquitos is 400 miles from the Brazilian frontier. A second line of steamers starting from this point serves the towns along the river for another 500 miles to Yurimaguas, the second city of importance in the Montaña, situated 75 miles or more from the Amazon, at the head of navigation on the Rio Huallaga. Whoever fancies the eastern part of Peru a territory of insignificant proportions, will be assured of error by reflecting that here in a line, lengthened only by the ordinary sinuosities of a river, are 900 miles of navigable water, open to vessels of six feet draught.

The entire Montaña is embraced within the limits of the Department of Loreto, which derives its title from a town of the same name which has passed by degrees into a state of dilapidation, and has yielded up every sign of its ancient importance except the time-honored flag-staff on which the little Gobernador daily hoists a tattered Peruvian banner. From appearances, one would say that not among the least delectable of the duties and prerogatives of the little Governor is to board each passing steamer, ostensibly to sign the bill of health and list of passengers, in addition to which, however, he does not forget to pledge the health of the Captain in a glass or two of the Captain's choice "Madeira." There are other towns between the frontier and Iquitos. Caballo Cocha is a village on a lakelet a mile from the main river, consisting of nearly 2,000 inhabitants, said to be very *simpatico*, from which delicate term one may, with some knowledge of the tropical disposition, picture scenes conspicuous for "the song and dance and the flowing bowl." There is also Pébas, a town of great antiquity, and famous for the manufacture of beautiful hammocks from the fibre of the Chambira palm. It stands high on a hill of red clay on the northeast bank of the Pébas River, a mile from the Amazon. Here, for the first time in the whole ascent of the great stream, is it possible to see Indians in their aboriginal costumes. These, in the case of this tribe, consist of what might be denominated "fringes"—long, heavy fringes of the fibrous red bark of a tree, one fringe tied around the waist, and another around the neck, thus enveloping the entire body.

After these small towns, which are really no more than collections of Indian huts, with one or two corrugated-iron-roofed houses of traders in their midst, Iquitos appears quite like a city. Where six thousand people are gathered together, there is necessarily some division of labor; the common workman, the artisan, merchant, and official, evidence their several degrees of prosperity in personal appearance and in the architectural display of their homes. Consequently the place looks diversified, and suggests progress and the prevalence of better ideas. A vista down one of the principal streets reveals many white-plastered houses, with red, blue, or brown dados, giving a quaint picturesqueness to the place. Here and there one rises to the dignity of a second story, with a balcony overhanging the way. The streets are as green as a pasture, for where gubernatorial edict, instead of the wear of vehicles, is the only obstacle, grass finds little impediment to its growth. Vehicles are absolutely unknown in Iquitos, and it is only at rare intervals that a donkey with his panniers may be seen carrying clay from some extraordinary distance, when a new adobe house is in process of construction.

The city is laid out in squares, and stands on a level plateau elevated about sixty feet above the river. Behind it, to the northwest, rise the forests in their solemn grandeur. On the west the plateau drops abruptly down to the Rio Itaya, a small stream coursing through the lowlands, which from this point stretch an indeterminate distance into the interior. Iquitos Island, which faces the city, is likewise low, but it is not marshy. Indeed, there are practically no marshes in the Montaña of Peru. The banks of the rivers may be overflowed at many places during the winter, or rainy season, but the receding waters leave them high and dry during the months of summer. The plateau of Iquitos, however, is so extremely flat that there is actually no surface drainage, and up to the present time no effort at sewerage or drainage by ditches even has been attempted—the gutters down the middle of the streets being choked with rubbish. The citizens aver that to drain into the river would cause the banks to wear away, which objection will only lose weight when they discover that a lining of bricks, which are plentiful, will prevent such a catastrophe. So the town is in large part much like a shallow frog-pond, and at night the chorus of croakers is sometimes sufficient almost to banish sleep. In spite of this, the testimony of decades has been that Iquitos is healthy. Those swiftly fatal fevers, the terror of so many tropical towns, are entirely unknown.

Iquitos is thoroughly cosmopolitan, consisting of Peruvians, Brazilians, Portuguese, North Americans, English, Germans, French, and Chinese, with of course a large preponderance of Indians and half-breeds, or "Cholas," as they call them. The eastern portion of the town is almost entirely given up to this native element, in which quarter may be seen the palm-thatched Indian hut, or "quincha," with its curious outfit of Inca pottery, hammocks, drums, and feather ornaments, almost the same as exist in the remote "chácras," or haciendas, along the upper reaches of the river and its tributaries. The majority of the cholas, however, live in quinchas scattered promiscuously among the "casas de paredes," or houses of clay walls. There is nothing striking in the appearance of the men, who wear trousers and blouse of Massachusetts "blue drilling," and a slouch hat, or oftener no hat at all; but the barefooted women and girls give a characteristic picturesqueness to the streets by brightly colored calico frocks, a simple white Panama hat worn well down over the eyes, and a blue-and-white shawl, woven with what ladies term a "shell stitch," wrapped with the true mantilla fold around the shoulders. Thus accoutred, they may often be seen passing along the streets, carrying, poised upon the head, instead of a hat, a gracefully decorated water jar, filled with the clear, sparkling fluid that issues from the foot of an Aguaje palm close down by the margin of the river.

Iquitos has suffered much abuse from travellers in the matter of its cuisine. It is true there are no hotels, but there are at least two excellent "posadas" (inns), where may be found as bountiful a table as exists in any part of the Valley of the Amazon. Beef is ever abundant; turtles, poultry, and eggs agreeably expand the menu; yuca and plantains are not only good substitutes for vegetables, but, when well cooked, are delicious. Vegetables, alas! are lacking. Potatoes and peas will not mature in this climate; a little lettuce and cabbage are raised, and vast quantities of beans. These legumes recommend themselves to the easy-going tropical gardener by growing without attention and bearing continuously for many years; one variety, in fact, having acquired the name of "Toda la Vida" because it will live and yield throughout the ordinary life of a man. It has really never yet been proved what vegetables will thrive in this climate, but it occurs to one that future experiments in this direction may be hinted at by Charles Dudley Warner's inveterate enemy, "pusley," which is here betimes, doubtless waiting to make the effort more interesting. It is a surprise to a Northerner to see common Northern plants flourishing in this distant land; but around the little clearings are the familiar ipecac and golden-rod, as well as "pusley," and the convolvulus opens its pretty blossoms to the morning light along every water-course, being called the "Flor de la Caña," because here in its native home it almost invariably clings to the canes that fringe the rivers.

Iquitos at present occupies an unusually interesting position. Within thirty years it has risen from a petty pueblo of a dozen huts to be the foremost city in that Montaña of which Peruvian orators are wont to boast, and which Peruvian poets so often celebrate in song. Some city must of necessity attain great and permanent commercial importance in this region, and very naturally the Iquitenos predict this happy fortune for their own. The situation is favorable. A short distance lower down the Amazon (or Marañon, as local terminology has it) is the mouth of the Rio Napo. Above are three other notable tributaries—the Ucayali, the Tigre, and the Huallaga, with many smaller streams, from all of which come large quantities of "caucho," the Peruvian rubber, which at present forms almost the sole article of export. It is thus central with regard to the staple product of the country. Another circumstance which helped to fix the site of the present metropolis of the Montaña was that to this point, and no further, could vessels of ten feet draught ascend the Amazon at all periods of the year. But there prevails in Peru, as likewise throughout South America, a disposition to achieve the extraordinary before there is a warrantable substructure of the ordinary. As illustrative of this spirit, they once held here a festival, raised a sum of money, built the foundation of a great hospital, and erected a monument on the spot which should by and by be an inner court of the structure; and then, having spent too much on the monument, the whole affair was abandoned, and the unfinished, crumbling walls have become the habitation of snakes and of several thriving colonies of ants. In equal heat of enthusiasm, having concluded that Iquitos was destined to become a great port, they constructed, in 1869, many years before there was any need of it, a floating dock, designed for vessels of a thousand tons capacity. They launched and proceeded to lower it, to see how it would work; but, in their haste and inexperience, the chambers were allowed to fill more rapidly on one side than on the other, and the machine rolled over and sank. This at once formed the nucleus of a sand bar which has grown to such dimensions that now the main river has scoured out a channel on the opposite side of Iquitos Island some miles away, while the harbor in front of the town is so shallow that it is only during the five or six months of flood-water that vessels of more than five feet draught can approach nearer than two miles. It is not yet too late to save the harbor by deflecting the current into its former channel, and by constructing jetties around the sunken dock. If something of this sort is not soon done, the prosperity of Iquitos will be doomed.

For reasons which it would be tedious to explain, the steamboat companies are not permitted to build docks and warehouses, and the merchants are not permitted to transport their cargo from their own establishments to the steamer, except by employing the official steve-

dore, who has a monopoly of all public porterage. The same wretched system of credit exists here as in Brazil, the merchant owing his broker, the rubber-gatherer owing the merchant, and the Indian again owing him. In consequence, prices are exorbitant; for the merchant figures a profit which will permit him to exist, while he loses at least one-half what his books represent as due him. The bulk of the merchandise used here is of English manufacture, and the reason for this is simply that the English have well studied the problem of packing goods for tropical climates, so that they arrive in good condition. The Americans have made so many errors of the kind that the people here have come to think that the quality is inferior. It is only in the matter of flour, which a few firms have learned how to pack in tin-lined boxes, that Americans have succeeded in gaining the trade in perishable commodities. Our hardware, however, has such a reputation that foreign firms are obliged to imitate our styles and to forge our brands to compete with us. In almost every chola's hut throughout the entire region may be seen an American sewing-machine, and they use our expensive "Florida Water" as freely as if it rained down from the skies.

When American merchants will learn to pack their goods appropriately for this humid climate, and will also believe that the South American actually knows and appreciates and patronizes the *best* manufactures, he will reap a harvest if he will intelligently seek this trade; and it would be wise to enter the field early before others have made it for ever their own, for the harvest will grow richer from year to year, now that even the remote Montaña of Peru is feeling the quickening spirit of that new era which is so surely coming for this country.

COURTENAY DEKALB.

Notes.

AN elaborately illustrated work, 'With Fly-Rod and Camera,' by Edward A. Samuels, will be published immediately by the *Forest and Stream* Publishing Company.

Worthington Co. have nearly ready 'Bella's Blue Book: the Story of an Ugly Woman,' from the German of Marie Calm.

Mr. David Nutt (Strand, London) announces "The Tudor Library, a series of sixteenth-century rare books to be reprinted" in large and small-paper editions, limited to 560 copies. The first to appear will be 'Giovanni Pico della Mirandola: His Life, by his nephew Giovanni Francesco Pico,' translated from the Latin by Sir Thomas More, and edited now by Mr. J. M. Rigg. A reprint of Angell Daye's 'Daphnis and Chloe' will follow, to be edited by Mr. Joseph Jacobs. Then there will come 'Poliphili Hyperotomachia; The Strife of Love in a Dream,' from the edition of 1592, with a selection of cuts from the Italian edition of 1498. This is to be edited by Mr. Andrew Lang.

Of Mr. Lang's books there is seemingly no end nowadays. His latest is a little volume containing his lecture, 'How to Fail in Literature' (London: Field & Tuer), delivered originally at the South Kensington Museum in aid of the College for Working Men and Women, and now revised and extended for a wider audience. It is a book to be recommended to all literary aspirants. Especially worthy of study are the samples of machine-made poetry of three or four different types of badness.

We are glad that our wish that Mr. J. S. Tunison's excellent book, 'Virgil in the Middle Ages,' might speedily reach a second edition, has already been realized, and we hasten to welcome the improved volume which is such a credit to American scholarship. The few misprints of the first edition have been corrected, and the usefulness of the book has been largely increased by the addition of an index of names and subjects. The only serious oversight of the former edition, that in regard to Oesterley's discovery of the 'Dolopathos' of Johanne de Alta Silva, has been repaired, and an additional section, dealing with the new material, added to the closing essay. It is pleasant to know that Mr. Tunison's book has been received both at home and abroad with hearty praise by scholars, and has also proved, as we predicted, attractive to the general reader. It is published by Robert Clarke & Co., Cincinnati.

Under the general title of 'Anecdota Oxoniensia,' the Clarendon Press is publishing materials, chiefly inedited, taken direct from manuscripts, those preserved in the Bodleian and other Oxford libraries having the first claim to publication. These materials include unpublished texts, new forms of published texts, published texts which are rare and difficult of access, collations and descriptions of MSS., and dissertations on their history and character. There are four series—Classical, Semitic, Aryan, and Mediæval and Modern. Part iii of vol. i. of the Semitic series consists of the 'Commentary of Jephet Ibn Ali the Karaite on the Book of Daniel,' edited and translated by Prof. D. S. Margoliouth (Oxford: 1889). With the Bodleian Arabic text the editor gives collations from a number of others, and adds a glossary of curious words occurring in the volume, most of which are not explained in the lexicons of Freytag and Dozy. The translation is published without notes. The work is an interesting illustration of the Jewish exegetical thought of the tenth century. Jephet, as a Karaite, is a bitter opponent of the famous Rabbi Saadia Gaon (El-Fayyumi). His exposition, derived in part from the history of his times, of the visions and predictions of Daniel is full of curious material. Naturally he finds the Abbaside dynasty of Bagdad in his text, and in the iron and clay of Nebuchadnezzar's dream he sees the mingling of Romans and Arabs—that is, of Christians and Moslems—who, indeed, intermarry among themselves, yet disagree on fundamental religious doctrines. In spite of his entire lack of historical critical feeling, Jephet's explanation of the last chapter of Daniel is fairly good.

The Clarendon Press publishes also the lecture delivered by Prof. Margoliouth at his inauguration as Laudian Professor of Arabic in the University of Oxford, under the title: 'An Essay on the Place of Ecclesiasticus in Semitic Literature.' The lecturer's eminent Semitic scholarship fits him in some respects admirably for the purely linguistic work of the restoration of an old Semitic text. In the present essay he gives only a few specimens of the results of his investigations in the work of the Son of Sirach. His method is, by comparison of the Syriac, Greek and Latin versions, to restore the original Hebrew text. Unfortunately, his results are largely vitiated by his assumption that Ben-Sira writes "trimeters and tetrameters with a regularity which scarcely falls behind that of the Greek and Sanskrit poets." He refers to Prof. Bickell's arbitrary way of dealing with the Psalm-metres (without, however, mentioning Bickell's metrical researches in Ecclesiasticus), and does not see that his method is open to the same charge. Still, his comparisons are interesting, and some of his emendations commend themselves as reasonable and satisfactory. His conclusion as to the language of Ben-Sira is noteworthy: it was, he declares, the language of the rabbis. Renan expresses a similar opinion in regard to the dialect of Ecclesiastes. Put in somewhat modified form, this view has considerable probability; but Prof. Margoliouth's inference that the whole modern critical conception of the dates of the Old Testament books must be greatly modified, rests on an unwarranted interpretation of the facts. That Ben-Sira wrote in a popular dialect is not sufficient reason for denying that a Levitical poet of the second century B. C. may have written a psalm in classical Hebrew. Prof. Margoliouth's complete discussion of Ecclesiasticus will be welcomed by scholars, though it is to be hoped that he will revise his principles of historical criticism.

'The Topography of Florida,' by N. S. Shaler, with a note by Alexander Agassiz, is a pamphlet of twenty pages with a map, vol. xvi of the Bulletin of the Museum of Comparative Zoölogy, No. 7. Several of Prof. Shaler's conclusions are likely to cause discussion. He deals with the southern half of the State, and accounts for the strange conformation of the surface, with its peculiar basins, in the lake region, by supposing it due to the Gulf Stream flowing across this portion of Florida, bringing the sands from the northern shores of the Gulf, as then shaped, and by invoking the aid of a sudden elevation, or series of such movements, within the present geological period. The sink-holes and porous conditions of the limestones are traced to the corrosive action of rain-water containing acids from decaying vegetation, and the origin of the calcareous ooze on the flats is referred to precipitation from mixture of this water with that of the sea. Mr. Agassiz directs attention to Prof. Shaler's discovery, on the east coast, of the extension of the great coral reef northward to Jupiter Inlet and beyond, and shows this to be confirmatory of the opinion of the late Prof. Agassiz in 1851, that the land in the everglades had an origin similar to the land now being made on the mud flats to the west and north of Florida Keys. He also mentions the still existing lack of knowledge in regard to the continuation towards the south of the rocks forming the basis of the northern part of the State. In the everglades the freshets cause a rise of five to eight feet; it is to sudden outbursts of this water, charged with organic matter, that Mr. Agassiz ascribes the frequent immense destruction of the fishes along the shores. This recalls the appearance of the water, as the present writer saw it, near Key West, when the dead and dying fishes were floating by in myriads: it had a slight coffee color, and all through it there were glistening flakes like very small, thin plates of mica. Others have reasoned that the mortality was caused by a supposed escape of volcanic gases or other poisons in the sea bottom.

'A Provisional List of the Plants of the Bahama Islands,' by John Gardiner and L. J. K. Brace, arranged and edited, with notes and additions, by Charles S. Dolley, separately printed from the Proceedings of the Philadelphia Academy of Natural Sciences, is a paper of value to those interested in American botany. The recorded number of species is 621, of 410 genera, or 115 families. About one-third are considered indigenous, and 195 are shared with the Bermudas. Comparisons with the United States and the West Indies are yet to be made. The notes are full of information on distribution, habit, utility, medicinal properties, etc. Besides the systematic index, there is a glossary of common names with scientific equivalents.

The Central Commission for Scientific Geography in Germany has issued an introduction to home exploration, 'Zur Deutschen Landes- und Volksforschung,' prepared by various experts and edited by Prof. Alfred Kirchhoff of Halle (Stuttgart: Engelhorn). The geographic conditions of the surface, a chapter which suffers from its extreme condensation; surface waters, terrestrial magnetism, climate, distribution of plants and animals, German dialects and folk-lore, domestic architecture, the laying out of villages and of fields —so the topics run on through the volume. All this tends towards home study, and teaches that exploration may begin where charity should. Our National Geographic Society might some day undertake the preparation of a similar book for our own country.

Geo. F. Kelly & Co., No. 31 Union Square, announce the immediate appearance of No. 1 (June number) of a new monthly periodical, the *American Etcher*. The magazine will make a specialty of high-class American etchings, printed on Japanese paper, mounted at the four corners, and enclosed in a mat, ready for framing. Besides the monthly plate, each number will have some letter-press of critical and practical value on topics connected with etchings and etchers.

In the current number of the British *Bookbinder*, announcement is made that the journal has changed hands and that it will be enlarged and improved—for which there is ample opportunity, as few even of English trade-papers have been so narrowly insular. In the fourth volume, to begin with the next number, a few articles are promised likely to be of interest to book-collectors in this country; and illustrations of artistic bindings, old and new, are to be frequent. The stamped cloth-binding of 'A Stage Romance' in the current number is unspeakably bad; yet the editor praises it blandly.

Mr. W. W. Pasko's *Old New York* appears to have met with favor, and its May issue has a very prosperous look, with its three portrait illustrations. Two of these are of Hamilton Fish and his father, Col. Nicholas Fish, of Revolutionary distinction—a family line less than fortunate in its representative in public life of the present generation: *desinit in piscem*, shall we say? Dr. Alexander Anderson's quaint diary is continued, and tells of his service in the yellow-fever epidemic in the fall of 1795 in this city. The picture of drunken and quarrelsome nurses and attendants is in sharp contrast with our modern hospital conditions, and refutes once more the pessimistic view of "progress and poverty."

Petermann's Mitteilungen for April contains the last of Dr. Heyfelder's interesting series of articles on "Bokhara on the threshold of a new era." In this he treats of education, saying that schools are so numerous in the Khanate that at least a quarter of the people can read and write. The pupils are not wholly boys, as he found at least one girls' school in the capital city. The common-school course is seven years, during which many learn the Koran by heart. There are in addition about 200 high schools or seminaries, with from 15,000 to 16,000 students. Here the course lasts from ten to twenty years, the studies being reading, learning, and expounding the Koran, the reading of religious and historical books, mathematics, Arabic and Persian, as well as rhetoric. It is interesting to note that torture was abolished last year as a token of thankfulness for the escape of the Czar and his family from death in the railroad accident the year previous. Criminals are no longer thrown from a tower, and far more attention is paid than formerly to the condition of the prisons and the prisoners. Among the shorter notices is an account of the plan of Dr. Nansen, the Greenland explorer, for reaching the North Pole. He proposes to go in a vessel so constructed as to be raised up and not crushed by the ice, provisioned for several years. His course would be through Bering Straits to the New Siberian Islands, and then, taking advantage of the northern current which he believes to exist, to drift over the Pole to Greenland. In support of his theory it may be said that there came, in the year 1884, into the harbor of Julianehaab, on the south coast of Greenland, a cake of ice on which was frozen a pair of oil-skin breeches, marked with the name of one of the sailors of the *Jeannette*, which sank near the New Siberian Islands three years before.

"Recent Explorations in Peru and Bolivia" is the subject of an interesting paper by H. Guillaume in the *Scottish Geographical Magazine* for May. Their common object has been to find available routes by which the products of the marvellously rich but entirely undeveloped region lying on the eastern slope of the Andes and about the headwaters of streams flowing into the Madeira and Amazon can be brought to a market. The mineral wealth is represented by gold—stated to be in vast quantities, but in mines situated on steep hills and approached by footpaths only, so that everything must be carried from or to them on men's backs—coal, copper, lead, marble, and jasper. The fertility of the soil is such that "rice yields two crops annually, the sugar-cane ripens every eight or nine months without being replanted, tobacco yields three crops of fine quality, and plantains, pineapples, vanilla, and yucca ripen at every season. Cotton, of a size unknown elsewhere, grows wild in great quantities; coffee and coco produce two excellent crops, and maize may be cut every three months." To these may be added India-rubber, the largest product, cinnamon, camphor, indigo, balsams, many medicinal plants, and all kinds of tropical fruits and vegetables. "Fish and game," says one of the explorers, "were abundant and the climate was delightful." The Indians are comparatively few in number, and are divided into a large number of tribes.

An interesting attempt to revive the old Shaksperian stage by adapting it to the modern theatre is reported from Munich. Two years ago Gaedertz, in a monograph 'Zur Geschichte der Altenglischen Bühne,' published a hitherto unknown interior of the London Swan Theatre of 1596, the main feature of which was the division of the stage by a pair of columns into two sections. On the basis of this discovery, the managers of the Royal Hof- und National-Theater at Munich have proceeded to construct a double stage, one in front of the other, the inner one being narrower and somewhat raised, the outer one nearly corresponding to the ordinary proscenium. This arrangement makes it possible to dispense entirely with the troublesome entr'actes and changes of scenery, and to represent Shakspere's dramas without depriving them of a single scene. The effect produced by "King Lear" as performed in this manner seems to have been perfectly overwhelming.

In concluding our notice of Mr. Henry Adams's History of Jefferson's Administration we ventured to correct his spelling of the name of Joseph Hamilton Daveiss. We depended on the concurrent spelling of the name as bestowed on three counties in Kentucky (especially), Indiana, and Illinois, as well as in contemporaneous prints, in Appletons' American Cyclopædia, and the United States Postal Guide, in taking Daviess to be the correct form. We have been satisfied, however, by possessors of autograph letters of Daveiss that Mr. Adams was right. The error goes back to the act of the Kentucky Legislature of December 14, 1815, which named a county after Daveiss. This misspelling, says a correspondent, was no less inexcusable than the same body's naming Green County after Gen. Greene, Muhlenburg County after Gen. Muhlenberg, Menifee County after Hon. Richard H. Menefee, etc. Mr. Daveiss, we are further told, as if to avert the fate that has befallen him, used to sign his name in capital letters (script).

The quarterly Bulletin of the Boston Public Library for April embodies the whole of Mr. J. L. Whitney's 'Catalogue of the Bibliographies of Special Subjects,' already noticed by us as of great usefulness and wide availability. This is followed by an account of the Barlow sale, somewhat in the nature of an apology for certain costly purchases made by the Library on that occasion. Much curious information is given concerning the origin of the collection, which was begun by Col. Thomas Aspinwall of Boston, and so rightly reverted in part to that city.

Dr. George Bullen's fifty years of service in the Reading Room and as Keeper of the Printed Books at the British Museum have prompted the raising of a testimonial fund on his retirement. Earl Spencer heads the committee, and Mr. B. F. Stevens, 4 Trafalgar Square, will, as honorary Treasurer, receive and acknowledge subscriptions. The names of contributors will be printed in alphabetical order without mention of the respective sums. American indebtedness for the use of the library has here a natural channel of expression.

Prof. Theodore F. Wright, 38 Quincy Street, Cambridge, Mass., as honorary Secretary of the Palestine Exploration Fund in this country, solicits subscriptions and donations to the Fund in view of its special undertaking to excavate the mound at 'Ajlan, the Eglon of Joshua, under the direction of Mr. Flinders Petrie.

—The *Century* for June gives the first place to an extremely interesting and profitable account of the London Polytechnic Institutes and People's Palaces which, within the last decade, have begun a revolution in the conditions of life for the poorer classes of the great metropolis. The original model of all, Mr. Quintin Hogg's Regent Street Polytechnic, is first described in detail which cannot here be followed; but the results are indicated by the fact that seventy thousand persons, in the formative age of their career, have been enrolled in it, and that its annual capacity of twelve to thirteen thousand is fully availed of. It is a club with so many educational, social, and athletic subdivisions that the enumeration is amazing, especially when it is remembered that the Institution is practically the work of one wealthy merchant who has given his time to its organization and conduct, and has expended, besides the first outlay of $300,000, an annual sum of $30,000 from his private means. Its success has been a main cause of the confidence felt in the later similar institutes founded in other parts of London, under the influence of Sir Edmund Hay Currie and others, and in cooperation with the Charity Commissioners, who have appropriated large sums from the consolidated ancient parochial trusts of the city. It is probable that there will soon be from nine to twelve of these great popular schools of useful instruction and entertainment in the different quarters of the city. This is a remarkable instance of the effective energy

and enlightened control of the English spirit, uniting public and private aid for great ends, in the face of practical social questions of real magnitude, and may profitably be studied by the destructive sentimentalists whose philanthropy can find no model short of a German militarism distributing the fruits of industry like rations. In the remainder of the number we notice a highly appreciative critique of the pictures of Mr. Albert Ryder, a timely paper upon the tariff as a tax, in connection with the theory of taxation, by Mr. Atkinson, and a literary and social contribution on the subject of the French Salon.

—The June *Harper's* begins with the first instalment of Mr. Henry James's translation of Daudet's "Port Tarascon, the Last Adventures of the Illustrious Tartarin," of which it is needless to say anything more than that the skill and interest of the translator bid fair to make this latest example of refined light comedy as delightful in English as any rendering of foreign wit which we possess. The illustrations are numerous and spirited, and help to translate to the eye the same foreign element which Mr. James renders for the ear. Vicomte Melchior de Vogüé contributes one of his thoroughly studied sketches of Russia, in this instance in the Caucasus. Mr. Hutton provides the dramatic article in the shape of a history of American burlesque, in which the lively illustrations are the most taking part; but the text is done with the conscientiousness and thorough knowledge of the topic which characterize Mr. Hutton's work in everything he undertakes to write about. Two other papers are of the solid worth which is looked for in the treatment of special subjects in this magazine. One is upon the city of Birmingham, under the title of "The Best-governed City in the World," in which the growth of the city in recent years, its Art Institutes, Libraries, and Schools, the municipal reforms which have made it the owner of its water-power, gas-supply, and a considerable portion of its own soil with the houses on it, together with the governmental system, are described and explained. The second article is an historical summary of the policy of Prince Bismarck, and its gradual working-out to the great results contained in it, from the inception of his schemes to the formation of the Empire. Inferior, but not valueless, papers are on range-finding at sea by electricity, whist for the beginner, and the chapbook heroes of immortal fame in the annals of the heath, the prison, and the gallows.

—In the *Atlantic* Mr. Charles Dudley Warner discusses the relation between the prevailing taste in fiction and the common school, and inquires to what extent the failure to develop an appreciation of good literature in the young is an explanation of the quality of the most popular novels. Whether this is an adequate theory or not, there can be no valid objection to the belief that a more intelligent and better-directed study of literature in the schools would help to improve the public taste, and sustain the better work of those authors who are not simply engaged in supplying a demand for reading, as if the newspapers, magazines, and circulating libraries were mere markets for pecuniary returns. President Walker deals with the present agitation for the eight-hour law in a temperate spirit of conservatism: he grants the usefulness of more leisure to the working classes and the value of State control of the hours of labor in the past; but, on the other hand, he questions whether the workmen cannot obtain such relief as is practicable by their own efforts, which is a better way of control, and he draws from the different conditions of different trades and the variety of their physical strain a doubt as to the possibility of a common limit of labor in all. He argues, too, in behalf of the right of the minority who may wish to labor a longer time, and against the desirability of making so large a reduction, which is really experimental, at once. Hannis Taylor takes up the often-mooted proposal to engraft on our Constitutional system the English Cabinet as the initiating power in legislation (but apparently without the feature which compels resignation on failure to effect measures), and argues in its favor, mainly on the ground of the defects in the working of our present method. There are in the number also an article, in the classical series, upon Ambrose and Symmachus, a word for "villains" from Agnes Repplier, and a description of King Arthur's country.

—*Scribner's* is notable for advance extracts from Stanley's book, illustrated with several cuts, among which the picture of the new-found race of the pygmies is the most curious, and that of the starving of Nelson the most pitiful. The text consists of the opening letter of the explorer, in which he acknowledges his faith in the providential care of God, and gives some special instances in which he seemed to recognize it most clearly; and to this he adds an account of the most miserable suffering of the expedition from the lack of food, during which Nelson's detachment, being left behind, perished or deserted, and the fate of his own column seemed desperate until his coming up with the Arab settlement in the wilderness. In connection with this incident, he draws a strong picture of the nature of these Arab slave-hunting and ivory-gathering bands, and urges the prohibition of gunpowder as the one measure which would inevitably put a stop to the devastation of the interior tribes. The personality of the leader is felt with extraordinary force and in a many-sided way in these fragments of his work. The remainder of the number is made tame by the leading article, but there are an instructive paper on city house-architecture, with illustrations from the East and South, by Mr. Russell Sturgis; a plea for legislation compelling cities to retain the title of public franchises and take a responsible lead in determining the manner of their utilization by leasing corporations; and a collection of Millet's letters from Barbizon, during the period of his greatest difficulty and poverty, which are often touching from their simple and intimate quality. The number concludes with a dramatic scene of the death of Rosamond, by Barrett Wendell, which is of unusual excellence, being, in the first place, really dramatic in handling, and, in the second, composed in blank verse of good form. It is noticeable also as an exceptional return by a young writer to the older models of English verse.

—From the Part of the English Philological Society's Dictionary next to appear we shall be able to learn all about the term *cockney*, the origin of which has exercised the wits of so many speculators. Meantime, Dr. Murray, the principal editor of the Dictionary, has discussed the term very fully in the pages of the *Academy*. It is there pointed out that, as applied to a person, it had, primarily, the sense of "cockered or pet child," and was used, later, to denote the sort of man into which such a child ordinarily develops. As the next step, *cockneys*, in the language of rustics, were the inhabitants of large towns, whom old-time Hodges and Gileses regarded as being, in comparison with themselves, squeamish or effeminate, cockered children of a larger growth, "milksops," "mollycoddles." Gradually, the epithet came, at last, to be restricted to Londoners, on the assumption that, in a preëminent degree, they were lacking in what uplandish folk accounted proper manliness. But, long before the emergence of persons designated as *cockneys*, there was a word *cokeney*, resolvable into *cokeney*, "cocks' egg," and signifying "fowl's egg." This is established by evidence which is beyond all gainsaying. "And, now that we know the original meaning," writes Dr. Murray, "there is no difficulty: the petted and cockered child was his mother's nest-egg, or, as Fuller, little suspecting how near he was to the truth, said, her 'nestle-cock.'"

— Prof. Skeat, in the first edition of his 'Etymological Dictionary,' prudently considered the origin of *cockney* to be "unknown." In his supplement, however, after he had taken counsel with the eccentric Mr. Hensleigh Wedgwood, he fancied that light was dawning on him. Still unaware of *cokeney* as meaning "cocks' egg," he there boldly lays it down that *cokeney*, "cockney," "answers precisely to" the fictitious French *coquiné* and the fictitious Low Latin *coquinatus*, evolved from the Latin *coquina*, "kitchen." And he adds: "I think we are now certainly on the right track." We are somewhat reminded, by this, for its astounding irrationality, of Ménage's celebrated genealogy of *rat: mus, mu-ris, mu-ratus, ratus, rat.* Adopting Prof. Skeat's notion, the 'Century Dictionary' unhesitatingly declares for the original of *cockney* in the Utopian *coquiné* and *coquinatus*, "a vagabond who hangs around [*Anglice* about] the kitchen," or "a child brought up in the kitchen," and pronounces that this is "the only solution of *cockney* phonetically satisfactory." On the other hand, Dr. Murray contends, on irrefragable grounds, that such a "solution" is demonstrably impossible. The implicit followers of Prof. Skeat have now had a lesson, and by no means the first, as to the danger of taking it for granted that his adjudications may safely be accepted without independent research and due acquaintance with scientific philology. A whole host of his confident whimseys has already been exploded by the redoubtable Dr. Murray; and doubtless a whole host more is destined to share their fate.

—A new edition of Prof. Ritter's 'Music in America' has been issued by the Scribners, bringing the work up to date and including two new chapters. The book contains a great deal of information not accessible elsewhere, and the gathering of which implied an extraordinary amount of patience and research in out-of-the-way places. It is not, however, merely a compilation of facts and dates, but the author enlivens every topic by looking at it in its æsthetic and social as well as its historic aspects. Among other new matter there is an interesting discussion of the music of American negroes, in the course of which the curious fact is referred to that in the slave songs the joyous major key predominates. The dying struggles of Italian opera at the Academy of Music are described, as well as the rise of German opera in New York and the fortunes of French opera in New Orleans. The West also receives considerable attention, and emphasis is placed on the great share which the German singing societies have in developing a taste for music: "for, wherever at least four Germans gather together, one may be sure to find a Männerchor." The greatest desideratum in our Western cities is a better orchestral equipment, New York and Boston being the only cities which have permanent first-class organizations. These two cities also differ

from others in being able to get along with a regular concert season, while elsewhere music festivals are needed to stimulate an occasional remunerative interest in the art. In the discussion as to why we have no folk songs, no native popular music, in America, the early Puritan influence and the hardships of pioneer life are taken into account. The following remarks should be printed in large letters and hung up in every school-room:

"When the War of Independence was over, the war songs sank into oblivion; the grotesque, foolishly skipping 'Yankee Doodle'—and history designates this as of foreign growth—had jostled them all out of existence. The fact that a people of such innate, exasperating seriousness, at times bordering on gloom, has accepted a melody like 'Yankee Doodle' as the emotional expression of their patriotic feeling, is a psychological problem. If a prize had been offered, open to competition among all the musicians of this globe, for the most melodiously insignificant, shallow, and trivial song, the author of 'Yankee Doodle' surely would have received the distinguished award."

—The tenth annual report of the Archæological Institute of America (May, 1889, now just printed) shows a cheerful outlook, not above being improved by an increased endowment, and records a noticeable activity in the New York, Philadelphia, and Baltimore branches. In the appendix, Professor H. W. Haynes summarizes what has been lately achieved in American archæology, and Professor Alfred Emerson in classic. The latter review gives a good idea of the Acropolis excavations among others. The report makes mention of Mr. A. F. Bandelier's final report of investigations carried on among the Southwestern Indians from 1880 to 1885. The first part of this document, which the writer's name stamps with the very highest authority, is now before us, and makes a comely volume in excess of 300 pages, with several photographic illustrations of the pueblo, a type which seems to be disappearing. Hinged doors and glazed panels, and ground-floor entrances in place of ladders—marks of greater security—are transforming these villages. "Isleta has lost the pueblo character completely, and resembles a Mexican settlement." Mr. Bandelier's narrative is thoroughly readable, while fortified, as usual, with scholarly references and citations.

TWO FAREWELL VOLUMES OF SONG.

Demeter, and Other Poems. By Alfred Lord Tennyson. Macmillan.

Asolando: Fancies and Facts. By Robert Browning. Boston: Houghton, Mifflin & Co.

One of the speakers at the Browning Memorial meeting in Boston pointed out that Voltaire had, in his day, disposed of Dante in terms that might seem to have been aimed, in our own day, at Browning, pronouncing him almost unintelligible (*peu de gens entendent ses oracles*), and predicting that his fame would only subsist through the absence of actual readers. The speaker might well have gone on to remark that Dante could no more have produced one of Petrarch's perfect and delicious sonnets than Browning could have written the closing poem of Tennyson's last volume; and hence that no permanent comparison could safely be based on detailed perfection alone. The curious simultaneousness of the publication, by the two leading English poets, of their final (or probably final) volumes, leads naturally to some such comparative review of results, and to a closer look at two men, the product of the same country and the same age, and yet as essentially unlike as if remote centuries and the antipodes of space had produced them. It is impossible to resist the impression, in viewing them jointly, that the individual man of genius is greater than his *milieu;* and that the mode of his production still remains a mystery, even after we have weighed and counted all the elements of his outward life.

Great poets are apt to come in pairs, and, when they do, it takes a long time for the balance to adjust itself. Shakspere and Milton would hardly now be cited as equal names, though this was formerly common enough—their sonnets being sometimes published together in a single volume. Nor would any one now regard Goethe and Schiller as equals, a thing once so common that Menzel thought he had finally put an end to it, and had solved the problem by placing Schiller definitely in the higher grade. When, nearly fifty years ago, Tennyson rose to his recognized place, on the publication of the revised edition of his poems (1842), it seemed to his admirers that he would have no brother near his throne. If he was destined to have one, there were a dozen men, now almost forgotten—Milnes, Sterling, Trench, Alford, Bailey, and the like—who seemed as likely to contest the palm as Browning. The latter began to publish poems somewhat later than Tennyson, though but three years younger, and he was not, like Tennyson, helped into fame by being heaped with ridicule; nor was he compelled in consequence to withdraw any foolish verses, as it were under fire, like Tennyson's "O Darling Room!" and "Rusty Christopher"—poems which might now teach us charity even towards Oscar Wilde. But, whereas Tennyson had won assured fame in 1842, Browning's 'Bells and Pomegranates,' which began to be issued in 1841, gained very little recognition, and the poet himself has said that a single odd number has often sold, of late years, for more than the whole series yielded him. Landor's admiring encomium, a few years later, came as an utter surprise to most readers, and Lady Pollock tells us, in her 'Macready as I Knew Him,' that this great actor was almost alone in London, in 1854, in pronouncing Browning "one of the few great poets of the world" (p. 64). Browning's long absences from England, too, kept him from the public eye, though perhaps hardly more than that habit of rather self-absorbed seclusion in which Tennyson rivalled and almost surpassed Wordsworth. When Browning came back to England, however, it was as a kindly and genial man of society, and he never came so near to describing himself, probably, as in his "How It Strikes a Contemporary." The stranger who saw Tennyson saw one who fulfilled by his presence all that fancy could demand of the picturesque, the poetic, the unusual; it was he, not Browning, whose aspect suggested Venice; he looked almost as un-English as Beaconsfield; all his conversation, moreover, revolved in a circle round himself, and he seemed to rate all contemporaries by the degree in which they appreciated him. In talking with Browning, the great difficulty was to believe him a poet at all, until one resolutely pushed through to the depths; he seemed simply one of a thousand genial and experienced Englishmen.

All this personal detail is not without its use in comparing the total result of these two lives. We do not criticise the mode of life or the decidedly self-centred personal habits of the pearl-oyster so long as nature has thus given him the key to the actual production of pearls. Nor can we, on the other hand, complain if a poet loves the market-place, so long as not an incident of that market-place fails to yield its material for him.

> "If any beat a horse, you felt he saw;
> If any cursed a woman, he took note,
> Yet stared at nobody."

As a result, while the admirers of Tennyson may claim with entire truth that if the standard of greatness is to set deep thoughts and emotions to music that surpasses not merely all criticism, but all imagination of possible higher excellence, Tennyson has reached that point in "Tears, idle tears" and "Ask me no more" and "Peace, come away!" yet there is room also in the universe for those who hold that range and compass of poetic conception count for something, and that the volume and variety of human life in this precise age of the planet will be found more copiously and richly rendered in Browning than anywhere or everywhere else, even counting in the whole work of Tennyson. Perhaps the best persons, on the whole, to strike the balance would be those who were familiar, nearly half a century ago, with both poets—who know their Tennyson by heart and a large part of their Browning; and to inquire which poet they continue, at this day, to take with them on their summer vacations. So far as we have been able to apply by observation this test of inexhaustibleness, we should say unhesitatingly that Browning—perhaps from the very fact of the difficulties he offers—holds his readers the longer. It is certainly a curious fact that while Browning societies thrive and multiply in spite of ridicule, and while these include not merely the young, but many persons past middle age, who have been life-long students of Browning, there seems no demand for Tennyson societies, whether of old or young.

If we revert to the Voltairian attitude, and say that all this study is simply due to obscurity, what are we to make of the fact that the Shakspere societies far outnumber the Browning societies? Indeed, we can never get far beyond the Goethian theory that if we wish to know where the best cherries grow, we must ask the boys and the blackbirds. The wide and genuine interest in Browning is really the response to his universal interest in what is human. From the very first, instead of singing of Mariana and faintly smiling Adeline, like Tennyson—worthy though that song might be—he flung himself into the mighty struggles of Paracelsus:

> "Are there not . . .
> Two points in the adventure of the diver:
> One—when a beggar he prepares to plunge?
> One—when a prince he rises with the pearl?
> Festus, I plunge!"

Or he joined the historic march of Strafford, following his terrible motto, "Thorough," till it brought him to his death. 'Sordello' will live, in spite of its bewildering condensation, because no other book so profoundly analyzes that contest between thought and action which so absorbs the early maturity of many a strong man. When Tennyson paints a human soul, he does it strongly, penetratingly, almost tenderly; but he does not paint it "as if his colors were blended of the mind's own atoms," as Margaret Fuller said of Coleridge; and this is what Browning did. He did it, too, with a wealth, a copiousness, an endless variety, that makes his collected poems an encyclopædia of human existence. As for the manner, he too could produce perfect lyrics, as in "Pippa Passes"—lyrics that sing themselves more essentially than Tennyson's softest strains; but when these did not come, something else must take their place. Just as Emerson says of John Quincy Adams, at bay in Congress, that he cared little if his voice wheezed and coughed—no matter; it must cough and wheeze his emotions—so Browning must give what he sees of life, melodiously if he can, rudely if he must. At any rate, we receive it, vast, varied,

unequal, often disappointing, sometimes exasperating, but we have it all.

And it will always seem a proof of this more extensive observation that Browning was incessantly creating and multiplying new types of character, and that even the plots of his dramas were almost absolutely his own. Of course, when a poet is so great as Shakspere, it matters little to us whence his story comes; but it takes Shakspere to make us wholly indifferent to that side of the matter, and in comparing poets below that supreme grade it is impossible not to recognize their difference as to degree of inventive power. It was with a sense of disappointment that all readers learned the Finnish origin of the 'Hiawatha' measure; it is with a kind of annoyance that the reader finds the iron rhythm of George Meredith's "Nuptials of Attila" to have been caught from Hodgkin's translation of the Latin prose of Jornandez ('Italy and her Invaders,' ii., 194):

"'Mid the joys of wine and night,
Painless thou hast taken flight,
From thy brethren, Attila."

In the same way it is impossible to forget that Tennyson found the Arthurian traditions ready-made to his hands, and that he hammered out his "Ulysses"—magnificently indeed—from the six terse lines of Dante:

"O frati, dissi, che per cento milia
Perigli siete giunti all' occidente,
A questa tanto picciola vigilia

"De vostri sensi, ch' è del rimanente
Non vogliate negar l'esperienza,
Diretro al Sol, del mondo senza gente."
('Inferno,' xxvi.)

Browning, on the other hand, after building on slight historic bases the whole airy fabric of 'Paracelsus' and 'Sordello,' trusted wholly to himself in 'Bells and Pomegranates,' and produced a series of dramas of which only one —and that the poorest—had any historic basis at all; achieving a series of highly wrought and admirably adjusted plots, all drawn, with their dramatis personæ, from his own brain. He wrote no more plays, but multitudes of his later poems were each a condensed drama—still original, plot, characters, and all; and when at last he borrowed again in the 'Ring and the Book,' it was virtually to produce a dozen dramas in one. Compared with this vast and living profusion, the dramas of Tennyson seem scanty and cold, and even his stately Arthurian traditions a little academic. Only in 'In Memoriam'—doubtless his masterpiece—did Tennyson unite creative imagination with wealth and variety; nor did Browning, perhaps, produce any single work which, taking all things into account, reflected his own genius with equal completeness.

It is pleasant to be able to add, since the world has something at stake in the vitality and longevity of genius, that the farewell volumes—if farewell it be in both cases—of the two great Victorian poets show them in full vigor at the last, and holding each to his characteristic qualities. Tennyson meets the final change with an exquisite reverie, and Browning encounters it face to face, as he might meet one who brings a challenge that arouses, not dismays. There is none of that stretching of the hands, one to the other, which is so agreeable to contemplate among our veteran American poets; they do not look towards each other, but float on side by side, like the two "ships becalmed at eve" in Clough's fine poem, unconscious of each other, yet having a common course towards the same haven:

"One port, methought, alike they sought,
One purpose hold, where'er they fare;
O bounding breeze, O rushing seas,
At last, at last, unite them there!"

LAWTON'S VERSIONS OF EURIPIDES.

Three Dramas of Euripides. By William Cranston Lawton. Boston: Houghton, Mifflin & Co. 1889.

EURIPIDES has not been so fortunate in his translators as Sophocles and Æschylus, partly by reason of the greater number of his plays, but chiefly because they are so unequal in interest and execution. It happens, however, that every one of the dramas which are here presented has been done before into English verse, and by no means ill-done. If the "Alcestis," in "Balaustion's Adventure" represents, as a recent *Saturday Reviewer* thinks, the very worst of Browning's performances, it must be remembered that Browning's nadir, contrary to definition, manages to climb high in the poetical horizon. It is natural, however, that Mr. Lawton should prefer to try his fortunes with the "Alcestis," the "Medea," and the "Hippolytus." They are as powerful and beautiful as anything of Euripides: the motive of each, self-sacrifice, jealousy, passion, and revenge, is entirely modern and intelligible. If there is anything antiquarian in them, it is a mere question of externals, and has little or nothing to do with the main action of the play. The conditions and limitations, however, of the Greek theatre were so different from ours that they require explanation for the English reader who desires to orient himself in a region so foreign to his experience. It would be hard to find this better done than in Mr. Lawton's introductory essay, in which he shows culture, good taste, a critical spirit, and sufficient learning without pedantry. Each of the plays is also provided with an introduction and a running commentary, which are in the main helpful and appreciative. It strikes one as strange that the poet has the smaller type allotted to him, while the commentator reserves to himself the more luxurious "long primer." It might also be felt that occasionally the cicerone, however refined and enthusiastic, has too much to say, and leaves too little to the imagination of his "personally conducted" band. But the essays were first delivered, we believe, in the form of lectures, and this may explain the peculiar cosey domestic air of certain passages at which the wicked might smile, and which imply that Boston is still the Delphic centre of the universe.

The general aim of the translator seems to have been fidelity—a very close adherence to the original, which he often apparently renders line for line, in the choral passages as well as the dialogue. We say apparently; for fidelity is of many kinds, and so close a matching of lines carries with it special snares and perils. In the first place, it is of very little consequence that there should be the numerical correspondence which exists, for example, in Longfellow's version of the 'Divina Commedia.' Metrical versions are evidently not made for scholars, except so far as the scholar is a lover of literary art, but for readers ignorant of the original. Being metrical, they must also aim to be artistic, to represent the higher qualities of the poet—his spirit, his beauty of thought and diction; in a word, his charm. The skeleton—"the letter which killeth"—can be obtained from Mr. Bohn and his most useful and honorable guild of anatomists; but the figure, the movement, the life, are what we ask in the poetic version. If an author like Euripides is to live to English people, he must consent to put off some of his Greekishness, and to use the English tongue according to English idiom and tradition. It is most important that the artist who re-creates, should not embarrass himself with the grave-clothes that were buried several thousand years ago; nor, indeed, should he fetter himself with any superfluous conditions. We believe that Mr. Lawton has suffered from his own theories.

The extract we subjoin is taken from the beginning of the "Medea," and presents some impassioned conversation, followed by a strictly choral passage, and some lines of level dialogue. It illustrates several different styles and metres:

CHORUS (entering).

I have heard the voice, I have heard the cry
Of the wretched one,
Of the Colchian, nor is she gentle yet.
Speak to us, prithee, thou ancient dame.
Wails from within have I heard at the gate.
Joyless to me are the woes of your home,
Since it is grown so dear to me.

NURSE.

A home there is none; that already is past!
For he has wedded a royal spouse,
In her chamber my lady is wasting away,
And in no wise the words of one of her friends
May bring to her heart consolation.

CHORUS.

Tearful was the cry I heard.
She with shrill lament proclaims
Him who cruelly betrayed her.
Suffering wrong, she calls on Themis,
Child of Zeus, of oaths the guardian,
Who across to Hellas led her,
Through the strait impenetrable,
Over seas in darkness veiled.

MEDEA (coming from her home):

Corinthian dames, I have issued from my home,
Lest ye be wroth with me; for I have known
Many proud mortals, some who dwelt apart,
Some publicly; but they who lived reserved
Acquired an evil name *and slothful soul.*
There is no justice in the eyes of men,
Who ere they well have learned a mortal's heart
Hate him at sight, though suffering no wrong.
A stranger must cleave closely to the State,
Nor do I praise a townsman crude and harsh
Through boorishness to fellow-citizens.

The choral passage is highly poetic; almost every word in the original is unusual in prose, or has an unusual syntax; the epithets in the later lines are picturesque and have a Homeric flavor. Of this lyric tone there is little intimation in our rendering. The address of Medea follows the Greek, line for line, with apparent closeness; and yet we believe the connection of thought is left quite obscure. This arises partly from the mistake we have italicized, partly from the neglect of certain guiding particles, and partly from a somewhat servile adherence to the letter and the arrangement. A brief paraphrase will explain this: "I come to greet you," says Medea, "lest you misinterpret my reserve and call it pride. For justice dwells not in the eyes of men. They hate at sight an utter stranger who has never done them wrong. So even citizen to citizen should render courtesy; but, above all, an alien —such as I am—should bend his humor to the State." It is very doubtful whether Euripides ever used such timber as the much-disputed τοὺς μὲν ὀμμάτων ἄπο, Τοὺς ἐν θυραίοις, here rendered, "Some who dwelt apart, some publicly"; and a version whose object is clearness and the poetic touch might well have cut this Gordian knot by choosing some simple emendation. This is a matter of opinion, however. On the other hand, it is quite certain that Euripides meant to say "acquired an evil name (reputation) for indifference"; or, according to Wecklein's reading, "the reputation of hostility and indifference."

A similar want of point and of articulation arising from similar causes may be observed in the strophe (page 128):

"Upward run the streams of holy rivers;
Justice is reversed and everything.
Treacherous are the thoughts of men; immortals
Watch no longer over plighted faith.
Fame shall bring us better reputation;
Honor comes upon the race of women,
Shrill-voiced infamy no more is ours."

The best commentary we can offer on this is to place beside it Mrs. Augusta Webster's rendering:

"The hallowed rivers backward stream
Against their founts; right crooks awry
With all things else; man's every scheme
Is treachery.
Even with gods faith finds no place.
But fame turns too; our life shall have renown:
Honor shall come to woman's race,
And envious fame no more weigh women down."

Each translator has misapprehended the sentence, θεῶν τ' Οὐκέτι πίστις ἄραρε, "And their faith plighted by the gods no more stands firm," which contains no accusation against the gods, but merely expands the thought of the preceding clause.

How awkward a task it is to make the English and the polysyllabic Greek travel side by side, is well seen in the line from the "Alcestis," κακῶς κλύοντι καὶ κακῶς πεπραγότι, which Browning renders perfectly by "ill-famed, ill-faring"; and which dissolves into mist in Mr. Lawton's "to live inglorious and most miserable." To the same difficulty may perhaps be referred some lines which we think would be unintelligible to the English reader, such as the retort of Pheres (line 724):

"Thou dost not bury in joy an old man's form,"

where Browning gives ἐγγελᾶς its due in:

"There's no laughing now,
As out thou bearest the poor dead old man!"

Again, in the passage (Medea, 1,209),

"Unhappy girl,
Who hath bereft *an old man's tomb* of thee?"

we doubt whether any one would suspect that the phrase italicized means "an old man with one foot in the grave," or, as we say, "an aged wreck." Another point is lost or buried in the "Hippolytus" (line 458), "They love, submissive to calamity." If στέργουσι is here interpreted by "they love," the usage and the authorities are against it. The nurse has been urging on Phædra the bright example of certain favorites, who were rapt to Olympus, and adds, with gentle irony, "They yield, I trow, *with resignation* to their fate."

The versification is partly illustrated in the specimens we have quoted. The choruses are rendered without rhyme, in metres some of which bear a certain resemblance to the original, and in a rhythm which is not always sufficiently marked to reveal itself easily to the ear. The obvious objection to this method is that it does not represent the Greek and is in accordance with no English tradition. To represent the Greek movement, as Mr. Lawton, of course, feels, would be next to impossible. Mr. Swinburne might perhaps achieve it, for short flights; but he has not chosen to do so, because, as he doubtless knows, versification is a matter of tradition, except to the few who can create tradition. It is not easy to evade tradition, to uproot the growth of a language. Longfellow could not manage it with his hexameter, nor Matthew Arnold, however delicate and exquisite the music of the fragments entitled "Antigone" and "Dejaneira." Indeed, our highest authorities point the other way. Shelley was content to rhyme in the "Cyclops" and Browning in the "Hercules Furens." These masters in their way bowed to the genius of the language, and followed its unbroken lyric tradition since the "Samson Agonistes" and "Alexander's Feast." The question may seem different when it concerns the anapæstic systems which are so frequent in animated dialogue, as an introduction to iambics. The anapæst is native in English, and has been used with great beauty, variety, and force in the "Atalanta in Calydon" and in Browning's "Hercules Furens." But here again Mr. Lawton has chosen to avoid rhymes, and in following the original systems closely, as he thinks, has fallen into lines that are weak and unskilful in emphasis, moving at a canter, and closing with a pirouette. His blank verse, which of course constitutes the bulk of the dramas, is far more pleasing and successful than these experiments. When it fails, its defects arise chiefly from the causes we have pointed out in the address of Medea just quoted. We permit ourselves an extract from the famous soliloquy of Medea, spoken before she resolves to murder her children:

"My sons, my sons! Ye have a city indeed,
And home wherein ye shall abide for aye,
Bereft of mother, leaving me forlorn!
I, exiled, to another country pass,
Ere I have joy in you and see you blest,
Delighting in your wife and wedded bliss,
Holding aloft for you the marriage torch.
Accurst am I for my perversity!
In vain, O children, have I nurtured you!
In vain my labor and my agony
When I the heavy pangs of travail bore!
High hopes were mine, ah me! in other days,
That ye should be the prop of my old age,
And honorably care for me when dead,
That men should envy me. But now is lost
That fancy sweet; for I, bereft of you,
Shall spend a sad existence, full of pain.
And you with loving eyes will watch no more
Your mother, passing to another life.
Ah me! Why do you gaze on me, my sons?
Why are you smiling with that final smile?"

It would be ungracious and unprofitable to discuss in detail slight errors or misconceptions, most of which would doubtless have disappeared upon careful revision. The instances we have noted are typical of a defective and somewhat servile method, which shows itself in various other ways, in the unidiomatic use of participles, and in weak phrases, such as "the implacable one," "the wretched one," which Browning permitted himself occasionally, but which are in him a disagreeable mannerism. The result is a version which may be called a likeness, but which too often reminds us of the cold and waxen counterfeit that was to console Admetus for his lost Alcestis. Picturesque words and phrases have faded into commonplace; metaphors are sometimes emptied of their vivacity and significance; the music of the Greek chorus has largely disappeared and its equivalent in English has been rejected. Yet there remains so much promise in a large part of the dialogue that we should hesitate to discourage a maturer effort. Mr. Lawton may have found his niche; he has not yet proved himself able to fill it. His equipment is not complete either in English or in Greek; perhaps he lacks a little of the "fine phrensy" which the translator certainly needs as well as the poet. So competent a critic will doubtless in time criticise himself, and settle his own powers and limitations. When he has regained leisure from his labors for the Delphi Exploration Fund, in which every scholar and lover of art must wish him success, he will have that opportunity for revision which would have been so useful before he published the present work. He promises hereafter the "Prometheus," the "Persians," and "Antigone." We wish, before completing them, he might encounter, or reread, Fitzgerald's "Agamemnon," and that brilliant version of the "Œdipus Rex" by Mr. Morshead, which is less known, we fear, than it deserves to be. He will find in them the exact antidote for his faults. Both are remarkable achievements, though in very different fashions; each succeeds in reproducing broadly and vigorously those beauties and great qualities which are the very life and spirit of a poem.

Orations and After-Dinner Speeches of Chauncey M. Depew. Cassell Publishing Co.

THERE can be little doubt as to the object of this compilation. When a woodcut purporting to be a likeness of the author accompanies a book, and the publisher informs editors that he will be pleased to furnish an "electro" of the cut for use "in connection with review," it is plain that politics has entered the sphere of literature. Still, we all love our joke, and it is impossible not to have some kindly feeling for a man who has amused so many of his fellow-creatures.

The humor of an after-dinner speech, however, is of a peculiarly volatile character. It evaporates almost before the reporters can bottle it for the next morning's paper, and it is seldom possible to confine it within the covers of a book. Judging from these speeches, we should certainly say that Mr. Depew had observed the maxim of Lord Chesterfield, that a wise man will live at least as much within his wit as within his income. The stories are of course twice-told tales, and the fun is principally of the kind well described as "chaff." There is nothing fine or subtile in it; perhaps the occasions have required good, broad, telling strokes, such as a number of people may easily apprehend at once. But the qualities which are necessary to make wit immediately effective are not enduring, and it must be exceptionally clever badinage that can survive the deadening effect of cold type.

The graver themes of which Mr. Depew treats are handled with varying success. He is at his best in subjects connected with the civil war, and here we find the ring of genuine enthusiasm. Very good, too, are the narratives of the capture of André and of the formation of the Government of the State of New York. But as a rule he does not rise much above the level of ordinary newspaper eloquence, and there are occasional sentences which we can hardly believe to have been written by an educated man. Mr. Depew seems impressed, from time to time, with the magnitude of his subject, and would speak of it in lofty language; but neither his thought nor his pen has been trained to deal with the ideal, and when he attempts to be fine he barely avoids bathos. We hear much of the beacon-fires of liberty, the destiny of nations, the shores of time, the wrecks of empires, the struggling masses, the teeming millions, and the other stock phrases with which our orators are wont to cover the poverty of their thought. The expression, "The high and harmonious teachings of the common school," however, must be allowed the merit of novelty. But for evidences of any depth of culture, or even of elementary statesmanship, we look in vain, and the most laughable thing in the book is the serious reference to President Cleveland as "remarkable for inexperience in the duties of Government and for ignorance of the great issues before the country."

Probably by this time Mr. Depew has learned who was ignorant of these issues, but it does not appear that he has yet acquainted himself with political economy. Whatever may be our impression as to his general sincerity, it does not admit of doubt that he honestly believes that the prosperity of our country has been mainly caused by the taxes upon industry imposed by Congress. We feel more sceptical as to the "prayerful consideration" which he professes to have given the matter of his "withdrawal from the Presidential race," and we are sure that he is quite too hard-headed a man to "devoutly believe," as he declares he does, that the souls of Washington and Lafayette returned "from the unseen and unknown" to participate in the ceremonies at the unveiling of the statue of Liberty, and that their "spirit voices" "joined in the glad acclaim" upon that occasion.

It is a strange fatuity that impels a man enjoying an exalted, secure, and eminently responsible position to desire to relinquish it, and to be "dragged through the hurricane and surfeit of mire and detestable accusation"

(to use the language of another great master of metaphor) to the office of President of the United States. Such would assuredly be Mr. Depew's experience, and his chance of election would hardly seem to justify the sacrifice. It is not his enemies but his friends that will assure him that he will be happier in continuing to devote his days to the solution of railroad problems and his nights to post-prandial oratory. But the appearance of this book proves, we fear, that the disease which has been so fatal to prominent Americans has made alarming progress, and we must conclude that it is not clergymen alone who feel it necessary to sacrifice personal inclination when the call comes to a wider sphere of usefulness.

North American Geology and Palæontology; for the use of Amateurs, Students, and Scientists. By Samuel A. Miller. Cincinnati: The Author. 1889. Pp. 664. 8vo.

In this monument of laborious painstaking, Mr. Miller, who has long been known as a collector and describer of Ohio fossils, has attempted to define all the genera of palæozoic fossils found in North America, and to give a list of all the known species under each genus. As this nearly exhaustive catalogue occupies all but a hundred pages of the volume, the title is somewhat misleading.

The chapter on the "Definitions and Laws of Geology," which forms the introduction to the work, could well be spared, seeing that for those who know geology it is quite superfluous, while for those who do not it is altogether inadequate. Worse still, it is confused and rambling in arrangement, and by no means free from inaccuracies of statement. The author is a rigid uniformitarian, and lays it down as a fundamental proposition that "the changes which the earth has undergone within the scope of geological investigations were produced by the same laws, acting with the same degree of power, as those we may daily witness." "The greater number of valleys in North America have been carved out by the streams flowing in them at substantially the same rate of excavation that is now in progress." "It is evident that glaciers have not been much more imposing in past geological ages than they are now." So far as the *intensity* of the forces involved is concerned, these positions are of course untenable, as might be easily shown were this the place for such demonstration. Especially remarkable is the section on volcanic activity. The observed increase of temperature as the earth is penetrated is referred to pressure of the surface layers, or the "force of gravity," while the melted masses are said to be due to chemical causes.

"From the proximity of volcanoes to, or occurrences in, the sea, it has been supposed their active state is produced by the percolation of sea-water to metallic bases of the earths or alkalies at various depths, which bases become inflamed, and chemical action ensues, producing the eruption." "Electricity is a factor in all earthquakes and volcanic eruptions. Its action is manifest in the atmospheric disturbances, in the undulatory movement on the surface of the earth, and in the speed with which the earthquake wave travels. . . . Suppose a powerful current of electricity near the surface of the earth to be broken and suddenly restored, the shock may be supposed to resemble that of an earthquake. Fusion might result in consequence of such restoration. . . . In other words, subterranean electric currents, if once excited, may melt the rocks and produce the heat necessary, when assisted by the presence of a sufficient quantity of water, to produce volcanic eruptions."

Mr. Miller does not, it is true, commit himself to these views, but that he should have selected such theories for mention while omitting all those that have any semblance of probability, is sufficiently extraordinary. If, again, he had carefully examined the lava plains of the Northwest, he would hardly have stated that "there is no evidence of a volcanic eruption on the continent of North America in past geological ages that surpassed in volume" the great Icelandic outburst of 1783.

This exposition of dynamical and structural geology is followed by a careful account of the American formations, their geographical distribution and mode of occurrence, from the Laurentian to the Post-Pliocene, though these chapters contain much that geologists in general will not be inclined to accept. Thus, Mr. Miller adopts the Taconic system of Emmons, despite the number of times that the untenable character of this supposed system has been shown, and especially despite the recent careful review of the whole question by Walcott. Our author does not seem kindly disposed towards this observer's work in showing that the lower palæozoic rocks of this continent, like those of England, may be divided into the Cambrian, Ordovician, and Silurian. "No careful geologist or palæontologist uses the word [Cambrian] in the nomenclature of American strata, though it occasionally occurs in incoherent geological papers."

In his account of the Western tertiaries, Mr. Miller omits the Puerco Eocene, refers the Wind River to the Nebraska Miocene, and calls the Loup Fork Pliocene. He altogether rejects the glacial theory, and will hear nothing in its favor. "The glacial epoch is a theoretical blunder, not supported by scientific facts or intelligent reasoning, and contrary to all geographical, geological, and palæontological information." We can only suppose that some classes of "scientific facts" have escaped Mr. Miller's attention. Indeed, he seems, in his zeal for uniformity, to deny, at least implicitly, all important climatic changes in the earth's history, ignoring such familiar and obvious evidence as the carboniferous and Miocene floras of Greenland, the sub-tropical plants which abound in the Green River shales of Wyoming, and the like.

The catalogue itself covers more than 500 double-column pages, involving an amount of labor which only those who have attempted similar undertakings can appreciate. Its arrangement leaves much to be desired, in that the genera (except in the case of the molluscs) are placed in alphabetical order under each phylum or "sub-kingdom"; the presence of a full index removes the only excuse for this highly inconvenient method. It is rather surprising too, to see the sponges classified as Protozoa, and the brachiopods as molluscs. Every specialist will no doubt discover errors and omissions, and determinations and references which he cannot admit; but this is, of course, inevitable in any work of such magnitude. The glossary might with advantage have been submitted for correction to some one whose classical studies were more extensive than those of the author. Such a plan would have prevented a number of ludicrous blunders, for example: "majus,-a,-um," "minus,-a,-um"; "gracilius, a,-um."

The book is a useful compilation and will prove of value for museum reference, though it cannot be recommended as a manual for "amateurs and students."

The Marriages of the Bourbons. By Captain the Hon. D. Bingham. Scribner & Welford. 2 vols. 8vo.

Judicious gleaning in the highways and byways of French history has yielded Captain Bingham very interesting material for these volumes of historical gossip. By confining himself chiefly to contemporary sources, he has given his narratives a degree of vividness and authenticity much beyond what is ordinarily possessed by compilations of this kind. It is a familiar paradox that nowhere has royalty a more pleasing glamour cast about it, or does noble blood exercise a more potent charm on the mind, than in this democratic country of ours. Kings and queens are creatures of another world, and the mystery of their being gives a romantic fascination to every little commonplace detail in their lives. For all persons who ever feel the sway of such emotions, Captain Bingham's volumes will be interesting and perhaps instructive. He takes his readers into the very inner circle of royalty, so far as it can be entered through private letters, memoirs, and the researches of modern biographers. Ordinarily we think of kings as enjoying power, and seldom ask ourselves if they enjoyed liberty. The maze of restrictions upon their liberty of action from the cradle to the grave, imposed by tradition, etiquette, family interest, and state policy, to say nothing of the concessions that had to be made to that feeling of proprietorship which their subjects entertained towards them, would make life fairly intolerable for the free American citizen. Repeatedly in Captain Bingham's pages is one impressed with the extent to which royalty had to forego that element of privacy in family life which is so essential to happiness.

It is unnecessary to discuss his work in detail. It is well conceived and well carried out, but insufficient care has been bestowed on the minor details. Selections from the letters of Mme. de Maintenon, Maria Louisa, and Marie Antoinette make up two of the most interesting chapters. It seems to have been an almost fatal misfortune for Marie Antoinette that she married so early. A few years longer spent with her mother would have made her a better queen and a more serious woman. The famous Chevalier d'Éon de Beaumont figures amusingly in one of the chapters on Louis XV. One of the best *mots* that Capt. Bingham records is that of Lord Mount Edgecombe on the later career of this modern Tiresias: "The Chevalier d'Éon Beaumont was his own widow!" M. Vatel, from whom Captain Bingham has derived many interesting facts about Mme. du Barry, attributes her execution during the Terror to "a man called Grieves, an Englishman, a deputy of the United States," who denounced her for having conspired in London against the republic. We find no trace of this Grieves holding any official relation to the United States. He seems to have been a man of worthless character, but some have given him a slight importance by conjecturing that he was the translator of the Marquis de Chastellux's Travels.

Captain Bingham closes with a paragraph on the surviving members of Louis Philippe's family. He mentions the Princess Clementine's marriage, but her later career deserved a paragraph. As the ambitious mother and trusted adviser of Prince Ferdinand of Bulgaria, she has recently played a rôle requiring the highest political tact, and has been of invaluable help to her son in maintaining himself for nearly three years in a position it was not thought he could retain as many weeks.

These volumes are handsomely made, but the text is disfigured by more misprints than is excusable. Among them may be mentioned Austria for Asturias, vol. ii., p. 553. Familiar personages, whose names have a recognized English form, often appear in a French disguise, as, Laurent de Medicis, Jules II. In vol. i., p. 35, we are told that the Bishop of

Liège was "assassinated, as described by Walter Scott, in 'Quentin Durward,' by William de la Marck." The Bishop was killed by De la Marck, but not at all in the fashion described by Scott, as Scott himself took pains to inform his readers in a note. On p. 12, the accession of Hugh Capet is put in the year 957, instead of 987, and on the last page of vol. ii. the death of the Duke of Orleans is dated in 1858 instead of 1842.

Bright Skies and Dark Shadows. By Henry M. Field, D.D. Charles Scribner's Sons. 1890.

THESE letters of Dr. Field's from and about the South have but a slight texture, for the most part, as the author himself frankly recognizes in his preface. The opening chapters, in particular, are marked by many instances of purely personal and superficial gossip such as is apt to characterize the correspondence of an editor of a religious paper on his travels. He gives a good and clear description of the battle of Franklin; both here and in his chapters on Stonewall Jackson and Lee drawing freely and happily upon the stores of knowledge possessed by his Southern friends. But the larger part of the book is taken up with discussions of the negro question, which, of course, is the "dark shadow." Dr. Field does not pretend to see his way clear to its solution, and contents himself with presenting various aspects of the case, in a general way, as they appear to his mind. He roundly denounces the giving of the suffrage to the freedmen as being merely a partisan expedient, and as roundly asserts the justification of the Southern States in freeing themselves from spoliation by a government of ignorance. On the other hand, he thinks the suppression of the negro vote a great wrong, though what is to be done about it he does not know. He admits that there is prejudice against the negro in the North, and even cites Gen. Armstrong to the effect that it is greater than at the South. The most he can advise is patience, with the application of all the resources of education and Christianizing influences.

The Economic Mollusca of Acadia. By W. F. Ganong. St. John, N. B.: Barnes & Co. 1889. 113 pp. 8vo. Ill.

IN this little brochure, which is neatly reprinted from Bulletin No. viii. of the Natural History Society of New Brunswick, the author has endeavored to present a synopsis of what is now known of the actual and possible value to mankind of the molluscs known to live in the waters of the Maritime Provinces. After a general introduction and a catalogue of the beneficial and injurious species, each species is treated of separately, under its scientific appellation, followed by its local or Indian names, with subheads for distribution, both in Acadia and elsewhere, for habits and biography, and for economics and statistics. In the preparation of it, archæologic, antiquarian, philologic, and statistical researches more or less recondite were necessary. The result is a very interesting little book, containing much curious and useful, though condensed, information, and prepared in a workmanlike manner.

BOOKS OF THE WEEK.

Aldrich, Anne R. The Feet of Love. Worthington Co. 75 cents.
Angel or Devil? Minerva Publishing Co. 50 cents.
Bynner, E. L. The Begum's Daughter. Boston: Little, Brown & Co. $1.50.
Clark, F. C. In the Valley of Havilah. F. F. Lovell & Co. 50 cents.
Cutler, Mary C. Philip; or, What May Have Been a Story of the First Century. T. Y. Crowell & Co.
Delpit, A. As 'Tis in Life. Welch, Fracker Co. $1.25.
Dumas, A. The Corsican Brothers. Philadelphia: T. B. Peterson & Bros. 25 cents.
Eleusis: A Poem. Chicago.
Epitomes of Three Sciences: Comparative Philology, Psychology, and Old Testament History. Chicago: Open Court Publishing Co. 75 cents.
Floyd, Isobel A. Stolen America. Cassell Publishing Co. 50 cents.
Goodyear, W. H. A History of Art. 2d ed. A. S. Barnes & Co. $3.50.
Haggard, H. R. Beatrice. Harper & Bros.
Harland, H. Two Women or One? Cassell Publishing Co. 75 cents.
Hartmann, F. The Talking Image of Urur. F. F. Lovell & Co. 50 cents.
Hearn, L. Youma: The Story of a West Indian Slave. Harper & Bros.
Heaven, Louise P. Chata and Chinita. Boston: Roberts Bros. 50 cents.
Heilprin, L. The Reformed Primer and First Reader. New York: Babyhood Publishing Co.
Hudson, W. C. Vivier, of Vivier, Longman & Co., Bankers. Cassell Publishing Co. 50 cents.
In Her Earliest Youth: A Novel. Harper & Bros. 45 cents.
Keyser, C. S. Minden Armais: The Man of the New Race. Philadelphia: American Printing-House.
Lane, E. W. Manners and Customs of the Modern Egyptians (1833-35). Ward, Lock & Co. 75 cents.
Lloyd, H. D. A Strike of Millionaires against Miners. Chicago: Belford-Clarke Co.
Lynch, J. Egyptian Sketches. Scribner & Welford. $1.75.
MacGahan, B. Xenia Repninà: A Story of the Russia of To-Day. George Routledge & Sons. 50 cents.
Mahrenholtz, R. Jean Jacques Rousseau: Leben, Geistesentwickelung, und Hauptwerke. Leipzig: Gebhardt & Wilisch; New York: Westermann.
Miller, Joaquin. My Own Story. Chicago: Belford-Clarke Co.
Miller, Joaquin. In Classic Shades, and Other Poems. Chicago: Belford-Clarke Co.
Pellew, G. John Jay. Boston: Houghton, Mifflin & Co. $1.25.
Roe, E. P. Nature's Serial Story. Dodd, Mead & Co. 50 cents.
Sessions, Francis C. In Western Levant. Welch, Fracker Co. $1.50.
Shakspere's Macbeth, edited by K. Deighton. Macmillan & Co.
Sienkiewicz, H. With Fire and Sword. Boston: Little, Brown & Co. $2.
Stanley: A Popular Account of his Rescue of Emin Pasha. E. P. Dutton & Co.
Stapleton, Patience. Babe Murphy, Chicago: Belford-Clarke Co.
St. Martin, T. The Christ in London, and Other Poems. London: Authors' Coöperative Pub. Co.
The Danvers Jewels and Sir Charles Danvers: A Novel and its Sequel. Harper & Bros. 40 cents.
Van Zile, E. S. A Magnetic Man, and Other Stories. F. F. Lovell & Co.

A JAPANESE BOY.

By Himself. 12mo, $1.00.

"There are very few natives who have attempted, in a foreign language, to lift the veil of private life, and let the people speak for themselves. . . . Mr. Shigemi, though writing in a chatty delightful way his boyhood's memories, is extremely accurate. . . . Well worthy of a place in all our libraries."—*The Nation.*

THE TRUE GRASSES.

By EDOUARD HACKEL. Translated by F. LAMSON-SCRIBNER and E. A. SOUTHWORTH. 12mo, illustrated, $1.50.

HENRY HOLT & CO., New York.

THE FEET OF LOVE.

By the author of 'The Rose of Flame.' 1 vol., 12mo, half Rox., $1.25; or in paper, 75 cents.

"An essentially human book. The incidents in many cases are intensely dramatic. It bears none of the marks of the novice. There is a firm touch, a boldness born of conscious power."—*New York Journalist.*

"The intensity of this story is sufficient to hold the reader almost breathless. It is a spiritual drama, vivid, full of color and electric interest—such a story as has seldom if ever before flashed upon the readers of fiction."—*Boston Traveller.*

WORTHINGTON CO., 747 B'way, N.Y.

YOUR MOTHER, SISTER, AND Family need a copy of *Books of the Bible Analyzed*, by President Schultze (Moravian). Should you fail to find it at your bookstore, send *31 cents* (silver). H. T. PUBLICATIONS.

I.

RECENT ECONOMIC CHANGES,

And their Effect on the Production and Distribution of Wealth and the Well-being of Society.

By DAVID A. WELLS,

President American Social Science Association.

12mo, 493-xii pages, cloth. Price, $2.00.

"The book is the best contribution Mr. Wells has ever made to economical and statistical and social science, and one of the best that are to be found in any country or language."—*N. Y. Evening Post.*

"No man, whatever his economic opinions, can pretend to be a competent judge of the great material and social problems now appearing in every direction until he has acquainted himself with the facts and reasoning contained in Mr. Wells's book."—*New York Commercial Bulletin.*

"Abounding in facts of the most comprehensive and convincing sort, but taken down from that endless scroll of industrial and commercial experiences which is unrolled daily and yearly for the whole world to see, but which only the enlightened few can read in its true meaning."—*Springfield Republican.*

II.

THE PHYSIOLOGY OF BODILY EXERCISE.

By FERNAND LAGRANGE, M.D.

INTERNATIONAL SCIENTIFIC SERIES. 12mo, cloth. Price, $1.75.

"The whole work is worthy of careful study by every man or woman with an ambition to preserve a sound mind in a sound body."—*St. Louis Republic.*

III.

THE GARDEN'S STORY; or,

Pleasures and Trials of an Amateur Gardener. By GEORGE H. ELLWANGER. With Head and Tail Pieces by Rhead. 16mo, cloth extra. Price, $1.50.

". . . This little book cannot fail to give pleasure to all who take a genuine interest in rural life. They will sympathize with most of the author's robust and positive judgments, and with his strong aversions as well as his tender attachments."—*The Tribune, New York.*

IV.

DAYS OUT OF DOORS. By CHARLES C. ABBOTT, author of 'A Naturalist's Ramble about Home.' 12mo, cloth. Price, $1.50.

"Dr. Abbott is no closet-bred student. He gets his inspiration from actual contact with nature, and he is continually discovering analogies that escape the less sympathetic observer. He insists upon the intimate relationship between animal life, plant life, and the vicissitudes of the seasons. He dissents from the text-book view that animals of the same species are always the same. Dr. Abbott is not only a clear-eyed observer and a sound philosopher; he is an admirable writer as well."—*The Beacon, Boston.*

For sale by all booksellers; or sent by mail, postpaid, on receipt of price.

D. Appleton & Co., Publishers,

1, 3, and 5 BOND STREET, NEW YORK.

Roberts Brothers' New Books.

MISS BROOKS.

A Story of Boston.

By ELIZA ORNE WHITE, author of 'A Browning Courtship.' 16mo, cloth, $1.00.

FAME AND SORROW,

And Other Stories.

By HONORÉ DE BALZAC. Translated by Miss K. P. Wormeley. 12mo, half Russia, uniform with our editions of Balzac's Works, $1.50.

NOTE. This was the title (*Gloire et Malheur*) under which the story was first published in 1830. The name was changed in 1842 to 'La Maison du Chat-qui-pelote.' The awkwardness of the title in English (The House of the Cat-playing-ball) leads the translator to use the original name given by Balzac.

New Volumes of Summer Reading, Paper Covers, 50 cents each.

INSIDE OUR GATE.

HENRY H. VAIL.

The American Book Company is a stock company incorporated under the laws of the State of New Jersey, for the purpose of carrying on the manufacture and sale of books.

Its places of business are at Nos. 806 and 808 Broadway, New York, No. 137 Walnut Street, Cincinnati, Ohio, and Nos. 258 and 260 Wabash Avenue, Chicago, Ill.

The American Book Company has purchased the school-book publications hitherto issued by D. Appleton & Co., A. S. Barnes & Co., and Ivison, Blakeman & Co. of New York, and of Van Antwerp, Bragg & Co. of Cincinnati. The company will faithfully carry out all contracts entered into by these respective firms for the publication and supply of these books. The text-books which have thus been acquired by the American Book Company have been intimately associated with the history of educational progress of this country for over half a century, and the company will devote its best efforts to sustain the great reputation these lists have achieved. To this end it will seek the aid and co-operation of educators and authors in maintaining the quality and accuracy of its publications, and in the preparation of such new and original books as the progressive demands of the schools shall warrant.

The company is organized in the interest of a reasonable economy in the production and sale of school-books, and it will employ its capital, its combined labor and experience, to produce books of the highest quality at the least cost, and will offer them at the lowest price at which similar books can be sold in any country. It will pursue an open, direct business policy towards competitors, customers, authors, and patrons. It seeks no monopoly, and invites an open, honorable competition, with respect both to quality and to price of books for use in schools.

The publications assumed by the company have hitherto received a large share of public patronage. The company hopes to merit a continuance of the same.

THE AMERICAN BOOK COMPANY.

New York, Cincinnati, Chicago, May 15, 1890.

Macmillan & Co.'s New Publications.

Just Published. 2 vols. 8vo. $6.50 net.

A Second Edition of an Introduction to

THE STUDY OF DANTE. By JOHN ADDINGTON SYMONDS, author of 'The Renaissance in Italy.' 12mo, cloth, gilt, $1.75.

READINGS ON THE PURGATORIO OF DANTE. Chiefly based on the Commentary of Lenvenuto da Imola. By the Hon. WILLIAM WARREN VERNON. With an Introduction by the Dean of St. Paul's. 2 vols. 12mo. $3.00 net.

Now ready. 27th Annual Publication. Remodelled throughout. 12mo, $3.00.

THE STATESMAN'S YEAR-BOOK, 1890.

Statistical and Historical Annual of the States of the Civilized World for the Year 1890. Edited by J. SCOTT KELTIE. Twenty-seventh Annual Publication. Revised after official returns. 12mo. cloth, $3.00.

The Statesman's Year-Book for 1890 has been entirely reprinted with new type. At the same time the whole work has been reorganized, extended, and thoroughly revised.

"Not only statesmen, but all men who desire to keep pace with the march of events, with political and commercial changes—in fact, with the general progress of the world—will find in 'The Statesman's Year-Book' an indispensable guide."—*New York Tribune.*

CAPITAL AND INTEREST: A Critical History of Economical Theory. By EUGEN BÖHM-BAWERK. Translated, with a preface and Analysis by WILLIAM SMART. 8vo. $4.00.

PURE LOGIC: and other Minor Works. By W. STANLEY JEVONS, M.A., F.R.S., LL.D. Edited by ROBERT ADAMSON, M.A., LL.D., and HARRIET JEVONS. 8vo. $2.50.

GENERAL VIEW OF THE CRIMINAL LAW OF ENGLAND.

By Sir James Fitzjames Stephen, K.C.S.I., D.C.L. Second Edition. 8vo. $3.50.

The first edition of this work was published in 1863. The new edition is substantially a new work, intended as a Text-book on the Criminal Law for University and other students adapted to the present day.

The CHEMISTRY of PAINTS AND PAINTING. By A. H. CHURCH, M.A., F.R.S., Professor of Chemistry in the Royal Academy of Arts in London. 12mo. $1.75.

AMONG THE SELKIRK GLACIERS. Being an account of a rough survey in the Rocky Mountain Regions of British Columbia, By WILLIAM SPOTSWOOD GREEN, M.A., F.R.G.S., A.C., author of 'High Alps in New Zealand.' 12mo. $2.25.

Science in Plain Language. 12mo. Cloth, 50 cents.

EVOLUTION,

Antiquity of Man, Bacteria, etc. A Series of Papers giving the results of Scientific Investigation in plain every-day language, without too much detail. By WILLIAM DURHAM, F.R.S.E. The subjects comprised are:

THE CIVILIZATION OF THE RENAISSANCE IN ITALY. By JACOB BURCKHARDT. Authorized Translation by S. G. C. MIDDLEMORE. 8vo, cloth, gilt top, $4.00.

MYTHOLOGY AND MONUMENTS OF ANCIENT ATHENS: being a Translation of a Portion of the 'Attica' of Pausanias. By MARGARET DE G. VERRALL. With Introductory Essay and Archæological Commentary by JANE E. HARRISON, author of 'Myths of the Odyssey.' With Illustrations and Plans. Large 12mo, $4.50.

THE MARQUESS OF DALHOUSIE

And the Final Development of the Company's Rule in India. By Sir WILLIAM WILSON HUNTER, K.C.S.I. C.I.E., M.A., LL.D. With Portraits and Maps. 12mo. 60 cents.

NEW NOVELS.

THE MINER'S RIGHT. By ROLF BOLDREWOOD, author of 'Robbery Under Arms,' &c. 12mo. $1.25.

THE RING OF AMASIS: A Romance. By the Right Hon. the EARL OF LYTTON, G.C.B., G.C.S.I. 12mo. $1.25.

MACMILLAN & CO., 112 Fourth Avenue, New York.

JUST PUBLISHED.

By Author of "Jack Gordon," etc.

VIVIER,

OF VIVIER, LONGMAN & CO., BANKERS.

BY

W. C. HUDSON (Barclay North),

Author of 'Jack Gordon, Knight Errant, Gotham, 1883,' 'The Diamond Button,' etc.

Paper, 50 cents. Cloth, 75 cents.

"Few story-writers have jumped so quickly into popular favor as W. C. Hudson (Barclay North). He always has a story to tell, and loses no time in telling it. There is a rattle and a dash about everything that he writes, and a contemporaneous interest that never fails to please the reader as well as to hold his attention."

By Author of 'As It Was Written,' etc.

TWO WOMEN OR ONE?

From the Manuscript of DR. LEONARD BENALY.

By HENRY HARLAND (Sidney Luska).

Author of 'As It Was Written,' 'Mrs. Peixada,' 'The Yoke of the Thora,' 'A Latin-Quarter Courtship,' 'Grandison Mather,' 'Two Voices,' etc. 1 vol., 32mo, artistic binding, cloth back, etc., 75 cents.

The name of Henry Harland (Sidney Luska) needs no introduction to American readers. Few first novels have created the furore of 'As It Was Written,' and each subsequent one has met with instant success. 'Two Women or One?' is in Mr. Harland's best style. There is something of the psychological mystery of 'Dr. Jekyll and Mr. Hyde' about it, but not in the sense of imitation.

STOLEN AMERICA.

By ISOBEL HENDERSON FLOYD. 1 vol., with illustrations. Paper, 50 cents; cloth, 75 cents.

Mrs. Floyd's pictures of Bermuda sights and scenes are graphic and picturesque, and every one who has visited and every one who anticipates a visit to that pretty little island will want to read 'Stolen America.' Through it all runs a delightful love story which has some novel features of its own.

A Romance of the Heavens.

URANIE.

FROM THE FRENCH OF

CAMILLE FLAMMARION.

By MARY J. SERRANO,

Translator of 'Marie Bashkirtseff, The Journal of a Young Artist,' etc., etc.

Paper, 50 cents. Extra cloth, 75 cents.

This volume by the leading astronomer of France has made the sensation of the year in Paris. It is a singular mixture of love and science, and, while it is altogether fantastical, it has such an air of reality about it that there is no disbelieving it.

"A story of real life."

PACTOLUS PRIME.

A Novel. By ALBION W. TOURGÉE, author of 'A Fool's Errand,' 'Figs and Thistles,' 'Bricks Without Straw,' etc., etc. One volume, 12mo, new and unique binding, $1.00.

This is perhaps in all respects the most unique, fascinating, irresistible, and yet scathing and profound of all Judge Tourgée's works. It cuts across American civilization in a new place, with a new knife, and will make some people smart who never thought of being called to answer such accusation.

FOR SALE BY ALL BOOKSELLERS.

Cassell Publishing Co.,

104 and 106 Fourth Ave., New York.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 3 East 14th St., N. Y.

SUMMER SCHOOL
AT
ASBURY PARK, N. J.

All day and every day practice. Only the best NATIVE teachers. No large classes.
Send for Circular to
BERLITZ SCHOOL OF LANGUAGES,
West Madison Square, New York.

HOSSFELD'S METHODS FOR THE *Study of Modern Languages:* A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN. For the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations, with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 360 pages, $1.25). Especially adapted to the needs of those contemplating European Travel. KEYS and TASKS for self correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH-GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," No. 65 Duane St., New York.

FRENCH, GERMAN, - - - - SPANISH, ITALIAN.

You can, by ten weeks' study, master either of these languages sufficiently for every-day and business conversation, by DR. RICH. S. ROSENTHAL'S celebrated MEISTERSCHAFT SYSTEM. Terms, $5.00 for books of each language, with privilege of answers to all questions, and correction of exercises. Sample copy, Part I., 25 cents. Liberal terms to teachers.
MEISTERSCHAFT CO., 299 Washington St., Boston.

LONGMANS, GREEN & CO.

HAVE NOW READY:

ELECTRICAL ENGINEERING:

For Electric Light Artisans and Students. By W. SLINGO and A. BROOKER, of the Telegraphists' School of Science, London. Crown 8vo, cloth, with 307 Illustrations, pp. viii.–631, $3.50.

"'Electrical Engineering' is a work to be commended, its special value being in the newness of much of the matter and in the able method of treatment. The typography and illustrations are excellent."—*Engineering and Mining Journal.*

"Not only does this contain a great store of accurately arranged information for the electrical expert, but it is as well a complete guide and instructor to those who, while having little or no electrical knowledge, have under their supervision various kinds of electrical machinery."—*The Safety Valve.*

THE THEORY OF CREDIT.

By HENRY DUNNING MACLEOD, M.A. In two volumes. Volume II., Part I. 8vo, pp. i.–xii.—337–518, $1.50.

*** Vol. I. 8vo, pp. i.–xii.—1–336, $2.50.

THE ROTIFERA; OR, WHEEL-ANIMALCULES.

By C. T. HUDSON, LL.D., Cantab., F.R.S. Assisted by P. H. GOSSE, F.R.S. SUPPLEMENT, 4to, 64 pages, with Plates XXXI. to XXXIV. Paper covers, $4.00.

"It was originally intended that the two volumes of the 'Rotifera' should contain all the foreign as well as all the British species; but, while the work was being written, so many new British forms were discovered that want of space compelled the authors to omit all but a few of the more remarkable foreign Rotifera. The Supplement, however, now remedies this omission, and completes the work by describing every known foreign species, as well as the British that have been discovered since its publication in 1886."—*Extract from Preface.*

*** The complete work, with 34 Plates (30 colored), 2 vols., 4to, cloth, with Supplement as above, $28.00.

TEXT-BOOKS OF SCIENCE.

ELEMENTS OF MACHINE DESIGN.

Part I. General Principles, Fastenings, and Transmissive Machinery. By W. CAWTHORNE UNWIN, F.R.S., B.Sc., etc. New (Eleventh) Edition, revised and much enlarged. With 304 Illustrations and Diagrams. Crown 8vo, pp. xvi.-460, $2.00. [*Just Ready.*]

*** A full list of this Series sent on application.

ADVANCED PHYSIOGRAPHY.

By JOHN THORNTON, M.A. With 180 Illustrations, 6 Maps, and a Colored Plate of Spectra. Crown 8vo, pp. 350, $1.40. (Longmans' Advanced Science Manuals.) [*Just Ready.*]

This work may be regarded as a continuation of the author's treatise on "Elementary Physiography." It carries the student into wider realms of nature, and includes a fairly well defined and well ordered series of facts connected with the study of the universe.

LONGMANS' SCHOOL TRIGONOMETRY.

By the Rev. FREDERICK SPARKS, B.A., Instructor in Mathematics. Crown 8vo, pp, viii.–164, 80 cents. [*Just Ready.*]

This book of Elementary Trigonometry is designed primarily as a text-book for use in Preparatory Schools, High Schools, and Private Schools and Colleges. It covers the whole of the subject as far as the end of the "Solution of Triangles," and contains geometrical and analytical proofs of the usual propositions, treated in a way comprehensible to the beginner.

LONGMANS' JUNIOR SCHOOL ALGEBRA.

By WILLIAM S. BEARD, F.R.G.S. Crown 8vo, 163 pages, 50 cents. With answers, 60 cents. [*Just Ready.*]

For sale by all booksellers. Sent on receipt of price by the Publishers,

LONGMANS, GREEN & CO.,

15 East Sixteenth Street, New York.

JUST READY: A NEW EDITION

OF

Dillon on Municipal Corporations.

"The work is practically unrivalled, for the simple reason that its excellence renders rivalry hopeless. It is already of absolute authority, both original and derivative, in all the courts of the country."—*Albany Law Journal.*

COMMENTARIES ON THE LAW OF MUNICIPAL CORPORATIONS. By JOHN F. DILLON, LL.D., Member L'Institut de Droit International, late Professor of Real Estate and Equity Jurisprudence in Columbia College Law School, formerly Circuit Judge of the United States for the Eighth Judicial Circuit, and Chief Justice of the Supreme Court of Iowa. FOURTH EDITION, thoroughly revised and enlarged.

Two volumes, 8vo, law sheep, $12.00 net; delivered to any address for $12.60.

It is no exaggeration to say that the new edition is almost a new work, the length of time—nine years—since the publication of the third edition having necessitated large and important additions, embracing over 250 additional pages and involving a great amount of labor by the author, who has bestowed upon the preparation of the new edition unusual care, with the view of making the work fully represent the law relating to Municipal Corporations as it exists at the present time.

☞ Several thousand cases will be found cited in the new edition that were not in the previous edition.

LITTLE, BROWN & CO.,

PUBLISHERS,

254 Washington Street, Boston.

The Astronomical Society of the Pacific.

This Society was founded February 7, 1889, as a result of the cordial coöperation of amateur and professional astronomers in successfully observing the total solar eclipse of the preceding New Year's Day. It seeks to continue that association, both as a scientific and as a social force. The new Society is designed to be popular in the best sense of the term. *Any person who takes a genuine interest in Astronomy is invited to join its membership*, whether he has made special studies in this direction or not. It is believed that every such person will get, and will feel that he gets, a full return from the Society, through its meetings, or through its publications. Three meetings a year (March, November, January) are held in San Francisco, at the rooms of the Society (408 California Street), and three meetings (May, July, September) are held at Mount Hamilton, where an opportunity is afforded to the members to see and use the instruments of the Lick Observatory. The Society has a membership of about two hundred and fifty.

The *Publications* are printed in octavo form at irregular intervals; two hundred or more pages a year may be expected. The *Publications* contain papers read before the Society (either in full or in abstract), plates, etc., the Minutes of the meetings, and also *Notices from the Lick Observatory*, which are brief and popular accounts of the current work of that establishment, prepared by members of the Observatory staff. Such notices have previously been printed in various astronomical journals, but in future they can be found in full only in the *Publications*.

The *Publications* of the Society are sent (in exchange) to about one hundred Observatories and Academies of Science. They can be obtained also by joining the Society (dues $5 for each *calendar* year, no initiation fee. Life membership, $50). A diploma is issued to members. Correspondence should be addressed to either of the Secretaries as below.

CHARLES BURCKHALTER,
Chabot Observatory, Oakland.
J. M. SCHAEBERLE,
Lick Observatory, Mount Hamilton.

Yale Military Lectures.

Series 1890, 12th Thousand. Just Issued.

1 vol. 18mo; Illustrations and Tables.

Price 50 cents.

A complete and timely survey of the Military Outlook at Home and Abroad.

Sent by mail on receipt of price by

THE OUR RACE PUBLISHING COMPANY,
P. O. Box 1333. New Haven, Conn.

THE NATION.—A BOUND SET, also an unbound set; various vols., both bound and unbound; 25,000 odd numbers. Will buy, sell, or exchange. A. S. CLARK, 34 Park Row, N. Y. City.

JOHN W. LOVELL CO.

Announce for early publication:

The Gentle Art of Making Enemies.

By J. MCNEILL WHISTLER. Being a collection of his writings, edited by himself. One vol., 12mo, cloth, $1.50. They will also issue an *Edition de Luxe* for the English and American market, limited to 300 copies, printed on Holland hand-made paper, numbered and signed by Mr. Whistler himself. Price $15.00.

Lux Mundi.

THE GREAT THEOLOGICAL SENSATION OF THE DAY IN ENGLAND.

Twelve essays by eleven prominent writers, A wonderful coöperative production.

THE FRANK ACCEPTANCE OF EVOLUTION.
THE LIBERAL THEORY OF INSPIRATION.
THE UNGRUDGING CONCESSIONS TO MODERN CRITICISM OF THE OLD TESTAMENT.
THE MODIFICATION OF VITAL DOCTRINES.

All these have been advanced before, but never from such sources.

The book comes from what was considered the stronghold of English theological conservatism.

This book will be, in fact is already, the sensation of the age in theological circles. It glows with the ardor of conviction.

Its lucid and attractive literary style will attract thousands of readers who rarely open a theological treatise.

New publications now ready:

Los Cerritos.

By GERTRUDE FRANKLIN ATHERTON, author of "Hermia Suydam." Cloth, gilt, $1.00.

A delightful story, redolent with the atmosphere of Southern California. Carmelita, the heroine, with her Mexican impetuosity, affords ample opportunity for dramatic effects, and the idyllic life of the land of the redwoods offers a most attractive background. The author's versatility has won for her a well-deserved popularity.

In the Valley of Havilah.

By FREDERICK THICKSTUN CLARK. Cloth, gilt, $1.00; paper covers, 50 cents.

Mr. Clark's style is a new departure in the line of fiction. There is not a lady or a gentleman in the story, in the "society" acceptation of the terms; the surroundings are as rugged as the instincts of the characters, and yet the story reads like a beautiful prose poem. The atmosphere is delightful, and one lays down the book with the sense of having been mentally refreshed and invigorated.

My Sister's Husband.

By PATIENCE STAPLETON. Cloth, gilt, $1.00; paper covers, 50 cents.

The author has made the plot of 'My Sister's Husband' more intricate than that of her stories generally. It is one of those books which gain strong friends for the writer, but is so marked in its character that it also makes enemies.

Betty: A Last Century Love Story.

By ANNA VERNON DORSEY. Cloth, gilt, $1.00; paper covers, 50 cents.

'Betty'—a last century love story—is a delightful series of word pictures portraying the quaint simplicity of the true and trusting maiden of a hundred years ago. The great charm of the tale lies in the fact that the general wording and phrasing of the dialogue harmonizes with the last century atmosphere, at once fascinating and entertaining in its novelty of diction.

In Press:

Sunset Pass.

By Captain CHARLES KING. Cloth, gilt, $1.00; paper covers, 50 cents. Profusely illustrated from drawings by Goater. The frontispiece is an excellent likeness of the author.

Captain King is distinctively a military novelist. His training at West Point and his life on the frontier, filled with adventure and actuated by a venturesome spirit, yield to him, without doubt, the first place as a writer on military themes.

Miss Marston.

By L. H. BICKFORD. Cloth, gilt, $1.00; paper covers, 50 cents.

A delightful story for summer reading, beginning in France in a crisp French style, and shifting to the West of the United States, its general tone changing with the locality.

A Modern Marriage.

By the MARQUISE CLARA LANZA. Cloth, gilt, $1.00; paper covers, 50 cents. Ready June 10.

JOHN W. LOVELL COMPANY,

PUBLISHERS,

142 to 150 Worth St., New York.

The Nation.

NEW YORK, THURSDAY, JUNE 5, 1890.

The Week.

THE Republicans in the House appear to have decided that they must comply with the "*demand*" of the Grand Army Machine for the passage of a service pension bill. A party caucus was held on Monday, and after a long discussion it was agreed that the representatives of the House on the Conference Committee should insist upon the House amendment adding the service-pension scheme to the Dependent Pension Bill originally passed by the Senate. A service-pension scheme means the addition of an immense sum to the present enormous pension demands, but the country's only hope of escape now rests in the Senate. Thus far that branch has been strongly disposed to stand out against the job, but there is no assurance that it may not surrender to the "*demand*" of the Grand Army Machine.

The Senate has passed the bill intended to give the States the power of regulating the liquor traffic which was so largely taken from them by the "original-package" decision of the Supreme Court. The vote stood 34 in the affirmative to 10 in the negative. All of the negative votes were cast by Democrats, but five Democrats voted in the affirmative and one or two others were paired on the same side, among the number being such good lawyers as Gray of Delaware and George of Mississippi. There is no reason to suppose that the House will fail to concur. The majority in the Senate was so large that it is fair to presume the greater number of the Representatives will be found on the same side; and, what is of equal importance, Speaker Reed must favor the passage of the bill, as the courts of his State have just decided that the "original-package" decision at Washington overrides their former judgments and gives free license to the sale of liquor in that form.

Among the luminous conceits offered for enactment in connection with the Senate Silver Bill is a proviso "that the standard silver dollar heretofore coined and herein provided for shall be the unit of account and standard of value in like manner as now provided for the gold dollar." This is embraced in an amendment proposed by Senator Vest of Missouri, whose usual acuteness of perception seems to have been laid aside for the time being. The primary object of having a legal unit of value is to have something with which foreign money can be compared, invoices settled, duties liquidated, and foreign coins received at our mint. A unit for these purposes must be one thing, not two things. Even if the silver dollar be kept at par with the gold dollar, so that they are one thing for the purposes of internal trade, they are still two things for purposes of comparison with foreign money, because the element of comparison is the bullion contained in the coins. We trust that Senator Vest will not confuse the importers, the custom-house, and the Assay Office by insisting on his amendment.

In the Senate debate on the Naval Appropriation Bill Senator Blair of New Hampshire was as cranky as usual. He offered an amendment providing "that this appropriation shall not be available until the Government of Great Britain shall have been requested by the President to withdraw all her naval forces from American waters and to dismantle her naval stations in both North and South America and in adjacent islands, and shall have declined or shall have neglected for one year so to do." If Great Britain should decline to accede to this reasonable request, he (Blair) would then be in favor of building battle-ships; but if she should comply with our wishes in this matter, then a navy would be unnecessary and we could spend the money in promoting education. Even looking at education from the belligerent point of view, he considered that the money would be much better spent on schools than on ships, because "there is nothing that gives such tremendous force to a people in war as to teach them to think." Mr. Hale said that the New Hampshire Senator was not nearly so simple as his remarks indicated, and that if he (Blair) were Secretary of State or Minister to England, he would never put to the Government of that country the sort of question that he pretended to favor. Mr. Hale wanted to ask the New Hampshire Senator, soberly and without jesting, what sort of a reply he would expect. Instead of answering the question, Mr. Blair asked Mr. Hale if he had ever read the Bible, and Mr. Hale replied that he had. Then Blair wanted to know whether Hale believed in the millennium—the time when nations should learn war no more—and Hale said that he did not believe in it as a present condition. Then Blair made another speech setting forth the reasonableness of his plan of asking Great Britain to blow up her forts and demolish her dock-yards on this continent, and the probability of Great Britain acceding to it. Such a move, he went on to show, would lead to a general disarmament throughout the world. Mr. Blair kept the Senate in session several hours over his crazy proposition, which was finally rejected without a division.

The Senate Finance Committee, or subcommittee, has got itself to work on the Tariff Bill, and has made rapid progress on the schedules about which there is little or no difference of opinion among the majority. Nevertheless, it would be a mistake to suppose that even the Republicans will get through the bill without throes of anguish. The articles of wool, tin plate, sugar, linen, and silver-lead ores will be the principal bones of contention. And now we hear that it is proposed to put hides again on the dutiable list in order to reconcile the ranch-owners and the cattle syndicate. Trouble may also be expected when the tobacco schedule is reached. The items of barley and hops are not without difficulties, especially in this State. The Finance Committee is not a bed of roses just at this time, especially when we remember that they must give a reason in writing for each change from the existing scale of duties which they propose or assent to. Opinions are about equally divided on the question whether any bill will be passed at this session. We are now at the beginning of "the heated term," and since debate is not restricted in the Senate, and since many appropriation bills are yet to be considered, there is some room for doubt on this question, as there is also much room to doubt whether the party in power will be most harmed by passing the bill or by not passing it. The Democratic leaders consider that their interest lies in the passage of a bill as nearly like the McKinley bill as may be.

The ridiculousness of the McKinley Tariff Bill was somewhat enhanced in the last agonies in the House by several amendments offered by the Committee of Ways and Means, some of which were adopted, while others were not. Among those that were adopted was one making "Russian camel's hair" dutiable at the same rate as carpet wool. We learn from the Boston *Journal of Commerce* that there are two kinds of camel's hair known to the trade, viz., Russian and Chinese. The latter variety is made dutiable at the same rate as combing wool. The only difference between the two is that the Chinese have the habit of sorting camel's hair according to its fineness, whereas the Russian exporters send it out in a mass, the fine and the coarse hairs together. It is needless to say that neither of them is produced in this country, and that nobody, not even Uncle Jerry Rusk or Statistician Dodge, desires that they shall be. It should be added that camel's hair is now free of duty and always has been. Until the McKinley bill dawned upon the world, it never occurred to anybody to tax it. During the struggles in the Committee of Ways and Means, however, camel's hair had as many ups and downs as hides. It was first put on the dutiable list and then on the free list, and was on the free list when the bill was officially printed. What influences induced the Committee to put it back on the dutiable list we do not know; but we presume that when the carpet-manufacturers declared that they would fight against the outrageous duties on carpet wool, and when the wool-growers abated a part of their exactions, they (the wool-growers) insisted that camel's hair should be taxed because it is used as a substitute for carpet wool to some extent. The Boston *Journal of Commerce* furnishes engraved cuts of the two kinds of camel's hair,

magnified four hundred diameters, to show that there is no difference between them except in the matter of fineness. It would have been more to the purpose to have applied the microscope to the Committee of Ways and Means.

The passage of the River and Harbor Bill in the House with the Hennepin Canal attachment is the result of a bargain between three parties, to wit, the Lower Mississippi land-owners, the Chicago sewer-builders, and the owners of the Milan (Ill.) water power. Navigation and commerce have nothing to do with any of these things, or are at most only incidental to them. The Milan water-power people are to have the first chance, the bill providing that the work shall begin at the western end of the Hennepin Canal by the construction of a lock and dam in Rock River. This will replace, at the public expense, an old, worn-out wooden dam at that place and save the owners the expense of rebuilding it. If commerce were the chief consideration of the bill, the work would be begun on the eastern end, and thus the canal would become available as fast as any section was completed. Beginning at the western end, none of it becomes available until the whole is completed. Moreover, the western end enters the Mississippi River below the Rock Island rapids and above the Des Moines rapids, or at the only point where its usefulness would be restricted to a reach of 100 miles of river. The Chicago Drainage Commission have generously postponed their share of the good things until the Milan water power is provided for. In the next bill they will insist on some work being done on the eastern division.

Emily G. Mills is the widow of Oscar B. Mills, who was appointed an acting third assistant engineer in the United States Navy in October, 1862, was promoted to the place of second assistant engineer in 1864, and was placed upon the retired list in 1872. On the 10th day of August, 1873, he was accidentally shot and killed by a neighbor who was attempting to shoot an owl. Fifteen years later, when the fashion of asking for a pension on account of the death of any one ever connected with the army or navy had set in, his widow made her application and Congress granted it. But the signature of the President was necessary to make the bill a law, and Mr. Cleveland refused to affix it. In a message laid before the House May 3, 1888, he made a simple statement of the facts, and added only this comment: "As long as there is the least pretence of limiting the bestowal of pensions to disability or death in some way related to the incidents of military and naval service, claims of this description cannot consistently be allowed." Of course such a message was fatal. But a new President came in a year later, and Mrs. Mills renewed her application, the result being that among the acts which the *Congressional Record* of May 27 reports as just approved by Mr. Harrison appears this entry: "An act [H. R. 5083] to pension Emily G. Mills." Could the absurdity of pension demagogism further go?

The announcement was made officially a few days ago that the Pacific Mail Steamship Company had bought the British steamer *Barracouta*, well known in this port, at the low price of $140,000, and would put her at once into the Central American trade. It was stated that as the *Barracouta* was only seven years old and was a good freight boat, she would prove a very desirable acquisition to the company. Of course she will sail under the British flag, thanks to our navigation laws, and will appear in the annual trade returns of the United Kingdom, although she is owned wholly by an American company. And presently we shall hear some subsidy beggar at Washington bewailing the decline of American shipping, and asking Congress to pay him a bounty for carrying the flag alongside the *Barracouta*, because "trade follows the flag." The *Commercial Bulletin* supplies another item of interest to our infant shipping industry, viz.:

"A new fruit steamer, the *Aud*, reached this port yesterday. She came from Baracoa with a full consignment of bananas. She flies the Norwegian flag and registers 542 tons. *She is one of half-a-dozen new steamers that have been placed under time charter to Gomez & Pearsall.*"

And this is far-off Norway that supplies us with half-a-dozen new steamers, without any subsidy whatever, to run between New York and Central America, while our ship-owners are "organizing" in twenty or thirty States and Territories, including Idaho, to make a raid on the Treasury in the interest of navigation. There is nothing to prevent American citizens from owning these six Norwegian steamers, or six others like them, and making the profits on their voyages, except our absurd navigation laws.

Long before its close, the barren results of the Pan-American Congress had been pretty clearly foreseen in Europe and South America, and it is safe to say that no presses were stopped to get Mr. Blaine's valedictory address, as it was reported that they were at the time of his opening speech. It is only in these days, however, that the definitive judgments pronounced upon the Congress by the weightier organs of opinion on the European continent are reaching us. Two of those that have fallen under our notice merit attention, on account both of their source and their significance. The *Revue Sud-Américaine* of May 18 devotes its leading article to the Washington Congress. Exclusively concerned with South American affairs, as its title indicates, this journal may fairly be taken to speak for the foreign delegates to the Congress. Summing up the whole, "from the standpoint of immediate practical results," it thinks the issue very little "flattering to Mr. Blaine." "Wholly Platonic recommendations, which even so encountered a good deal of dissent, all the main proposals aborted—there is the balance-sheet of the Pan-American Congress." Yet the *Revue* very justly considers the gathering to have had great indirect consequences and significance. "It has been a collective manifestation of free and peaceful America, in the face of armed and conquering Europe. It has been a weighty warning to the protectionists of Europe." This means that Europe ought not to fall into the folly which has lost the South American market to the United States and brought the Congress itself to an inglorious end. Finally, according to the *Revue*, the Convention was "a proud refusal of Spanish America to sacrifice the least part of its sovereignty by accepting the proposals of the United States, or to participate in that country's plan of isolation and exclusion directed against Europe." It shows how the foreign representatives set over against Mr. Blaine's shibboleth, "America for Americans," the more worthy and statesmanlike motto, "America for Humanity." Its general conclusion is, that the ties now so closely uniting South America with Europe will be distinctly multiplied and strengthened as a result of the fresh demonstration offered by the Congress that the United States are not in a position to have a foreign trade.

The other opinion is that of the editor of the *Journal des Économistes*, M. de Molinari. In the May number of his periodical he despatches the subject in the following paragraph:

"The Pan-American Congress, convoked under the influence of the protectionists of the United States, has adjourned without having reached any result but a Platonic resolution in favor of arbitration. How could it have been otherwise? A commercial union is only an extension of free trade, and is not free trade the death of protection? We are aware that the American protectionist had a different idea, namely, a continental blockade for the purpose of shutting European goods out of the South American market, for the benefit of the manufacturers of the United States. But the South Americans do not seem to have discovered any motive for protecting the industries of their Northern brethren at their own expense."

The appointment of a receiver for the Chicago Gas Trust by Judge Collins seems to have taken the Stock Exchange, or that portion of the Exchange that deals in "industrials," very much by surprise. There was not the least occasion for surprise if these people had kept the run of judicial proceedings in all the Trust cases here and elsewhere. The uniform course of the decisions has been that joint-stock corporations cannot abdicate their powers or turn them over to be exercised by another body. If they do so, they commit suicide, and the courts will wind up their affairs whenever a proper case is presented. The Chicago Gas Trust was composed of four distinct corporations amalgamated as a Trust under the auspices of a Philadelphia syndicate. It was a monopoly of the most objectionable sort. It is now on the way to Execution Dock, to the joy and satisfaction of all good citizens. If people will speculate in such trash, they are entitled to no sympathy when they lose their money.

The flag editor of the Philadelphia *Press* had an able article in Thursday's issue of that journal commenting upon what he alleges to be the fact, that the decorations in Richmond in honor of the unveiling of the Lee statue "are entirely of a Confederate character, and the Stars and Stripes find no place among them." But the "staff correspondent" of the *Press* in Richmond, whose opportunities for observation would appear to be rather better than those of the flag editor in Philadelphia, reports that "everywhere the Stars and Stripes wave from flagstaffs and hang from windows. Indeed," he adds, "the profusion with which the national flag is used for decoration is as marked as it would be in Philadelphia or New York or Boston." He describes at length the manner in which the Union and the Confederate flags are displayed side by side on business blocks and in the resident streets, saying that "the national flag floats over almost every door" on the latter streets. Evidently the flag editor of the *Press* had not learned the facts from the "staff correspondent" before he wrote his article; but, as the champion of all flag editors, Col. Elliott F. Shepard of the *Mail and Express*, has shown, facts are the last thing that the flag editor cares to have.

The subscribers to the $5,000,000 guarantee fund for the Columbo-Tammany Fair are in a state of mind over a discovery that they cannot get their subscriptions back again permanently without legislation. They pledged their subscriptions to a fund to defray the expense of getting up a fair at no particular time, and they are now assured by legal talent that they are liable to be called on to pay over the money for any fair which may be organized in the name of Columbus for the next six years, or until they are relieved under the statute of limitations. The executor of the estate of a deceased subscriber cannot close up its affairs so long as this question remains undecided. No living subscriber dares to go to Europe or anywhere else, for fear somebody may get up a Fair in his absence and demand the amount of his subscription. There appears to be no relief for them before the Legislature meets in January, 1891, unless the Governor shall take pity on them and call an extraordinary session to enact a law giving them immunity from Fair organizers of all kinds.

A firm of New York publishers—Messrs. Funk & Wagnalls, are now imitating Wanamaker by advertising their intention also to take a hand in the plunder of the Messrs. Black through a photographic edition of the 'Encyclopædia Britannica.' They are conscious that there is something wrong about the transaction, for they take pains to excuse themselves in this way:

"A word as to international copyright: We have long favored such a law; in its absence, it has become well-nigh, if not wholly impossible to do a successful book business and respect the wishes of the holders of foreign copyrights. Our books, again and again, are reprinted in England without so much as a thank you. If we make a market for a foreign book, it is straightway reprinted against us, at a less price, by some one who pays no royalty. We are forced by self-protection to adopt the following rule as the fairest, all around, that is practicable—to publish what we wish of foreign books and then pay the foreign copyright owners what we think to be a just share of the profits. This we regard as the nearest approach practicable to an equitable working plan until our nation has recovered from its collapse of conscience on the international copyright question. This rule we apply to our handling of the 'Encyclopædia Britannica.'

"We invite all to call at our store and examine our marvellously cheap edition of this wonderful work, or send money for a set."

Now, why, in the name of common decency, is a man obliged to do a "successful book business," if he cannot do it honestly, any more than a successful grocery or stationery business? What should we say to Park & Tilford if they told us they could not conduct a successful business without employing agents to steal stores for them in England and France? And what has the reprinting of the Funk & Wagnalls books in England by somebody else to do with the right to steal books from the Messrs. Black? Supposing the *lex talionis* to govern the relations of civilized business men, how can it excuse the punishment of one man for another man's fraud? Have the Blacks ever stolen the Funk & Wagnalls books? And what on earth is "the self-protection" which forces this latter firm to seize on "what they wish" of a foreign author's property, and then pay him what they "think to be a just share of the profits," after having sold the man's goods to strangers? Was any such overwhelming necessity as this ever heard of outside a robber's cave? When did your "rule of self-protection" get the better of the Eighth Commandment? And finally, brethren, is it worth while "waiting for our nation to recover from its collapse of conscience" before finding out what is the matter with your own conscience? The national conscience is not within your control. It will have to be doctored by a good many people besides you, but the Funk & Wagnalls conscience you have right under your hand, and can treat with as vigorous remedies as the case seems to call for.

The Methodist Book Concern's column advertisement of "impropriety and immorality," as the editor of the *Christian Advocate* rightly terms it, which got published in that paper without the knowledge either of the editor or of the advertisers themselves, contained, as our readers may remember, this astonishing paragraph:

"Do not be frightened by the unjust and untrue statements which appear in papers, and which are supplied and paid for by rival publishers. Remember that *you can arrange with an editor for just as strong notices of your book, if you care to pay for them, because the business of an editor is to make money for his paper*, and as long as you pay him for what you desire inserted he will treat you just as kindly as he will any one else."

Now this appears not to be true of the *Christian Advocate*, at all events, and we are glad that our comment called out an emphatic disclaimer of it from that paper. But here we have an office circular from the "*Herald and Presbyter*, the most largely circulated Presbyterian Weekly Newspaper in the United States. Montfort & Co., Publishers and Proprietors, 178 Elm St., Cincinnati, O., June 2, 1890," asking school-teachers for "patronage in the advertising columns," "*also to give facts for a brief free reading notice.*" And, says this largely circulated Presbyterian journal, "P. S.—We shall be glad to have you, from time to time, give us items of interest in regard to your institution." No wonder that people can be made to believe that "you can arrange with an editor for just as strong notices of your book, if you care to pay for them." The *Herald and Presbyter* goes on to say: "Presbyterians are distinguished for business activities and enterprises. They favor movements to advance the material, intellectual, and moral interests of society. They educate their children. The *Herald and Presbyter* advertisers appear before an extensive and appreciative audience. The clean character of its advertising secures them favorable attention." Evidently the *Herald and Presbyter* itself is of those "distinguished for business activities and enterprises," but its "movements" are not in accord with the "moral interests of society," and the character of its "reading notice" advertising is the opposite of "clean."

The British Ministry have succeeded, after the fiercest contest which has taken place in the House of Commons since the early days of home rule, in getting through the Committee the clauses of their revenue bill which put an increased tax on beer and spirits to supply the County Councils with the means of buying out liquor-dealers who wish to surrender their licenses. We have already given some account of the nature of the controversy, which has roused the temperance advocates all over the country to the highest pitch of excitement. They say that the provision of a fund to compensate the publicans for the loss of their licenses is a formal recognition that a license to sell liquor is a property or freehold, instead of being, what it really is, a permission given, in consideration of the weakness of human nature, to carry on a trade which is injurious to the community. They maintain, moreover, that after this concession has been made, no license will ever be taken away without compensation, owing to the chariness of English magistrates about interfering with what seems in the smallest degree a property right, and that a new and formidable barrier will thus be set up in the way of restricting the liquor traffic in any particular county. The bitterness of the conflict is increased by the general belief, both of the Liberals and the temperance men proper, that the measure is really a note of preparation for the general election; the liquor interest, or "licensed victuallers," as it is there called, being in England, as in this country, a very powerful body in politics. The collapse of the Liberal resistance in the House was due to a cunning concession made at the last moment to the Parnellites as regards Ireland.

A UNIQUE PERFORMANCE.

THE public announcement by the Postmaster-General of the United States that he proposes to take a photographic copy of the 'Encyclopædia Britannica' and sell it at a very low price and pocket the money, is certainly the most extraordinary incident in the history of this very remarkable Administration. Here is his announcement, which is literally unique:

DEAR SIR: We can furnish you with an exact facsimile of the ninth AND LATEST (1889) edition of 'Encyclopedia Britannica'—maps improved and brought down to date—at $1.50 the volume.

The set is well printed on good paper, without abridgement, and is one of the most substantially bound books we have ever handled.

To let you fully know what an unequaled opportunity this is, you can have the FIRST VOLUME for sixty (60) cents, without any agreement on your part to take the remaining volumes of the set—which can be had if desired at the price first named ($1.50 each), and be paid for as received.

The set will be in twenty-five (25) volumes, corresponding in number and matter with the Edinburgh edition. The total cost to you would be $36.60.

We expect to be able to deliver four volumes a month, and to complete the delivery in November next. You can arrange to take the books one or more a month, as you please.

Very truly yours,
JOHN WANAMAKER.

PHILADELPHIA, May —, 1890.

Following close on the announcement of the President of the Senate that there are no morals in politics, and that a man may lawfully lie, cheat, and steal in order to get the better of his fellow-citizens in party contests concerning the administration of the Government, one hardly knows what name to give this document. The 'Encyclopædia Britannica' is a collection of articles which have cost the original publishers a very large sum of money and an immense amount of labor. Without the expenditure of this money and labor the book would not exist. The paper and binding might exist, but nobody would buy them except by the pound as waste to be consigned back to the paper-mills. What makes the volumes worth the nine dollars each at which they have been sold, is the words printed on the pages, describing certain facts and expressing certain ideas. The publisher paid the authors for these words. He could not have got them without paying for them, and after he got them they were, by all the laws of morality, as much his as the furniture in his store or the type in his composing-room.

Even if we accept the view which some people hold, that there can be no such thing as property in ideas or in forms of expression, and that anybody who wants ideas or forms of expression may lawfully appropriate those of any other man, if he can get hold of them, it must be borne in mind that the appropriation must be for his own use. This argument will only cover stealing for the special personal benefit of the thief. If he prigs a man's thoughts, it must be for the cultivation of his own mind. He must take them, as he takes the air or the sunshine, simply as the common heritage of the human race. He cannot take, for the purpose of selling and making money, something which another man has constructed for the purpose of making money. To take a thing from another man because it is not property, and then immediately treat it as property for commercial purposes, is to be not only inconsistent, but absurd. Literary pirates are bound not to deal in their own plunder. They may study it, and absorb it, and enlarge their minds through it, but they must not open a store to sell it in, or peddle it through the country at low rates. Consequently, although John Wanamaker, Postmaster-General of the United States, might be justified in stealing from the Messrs. Black of Edinburgh one copy of the 'Encyclopædia' for the improvement of his own intelligence, or for his use as a book of reference when composing his Sunday-school addresses, on no theory yet produced by any school of thieves touching literary property can he steal from the Messrs. Black in order to stock his store, and for purposes of sale at a profit, without becoming himself a thief.

In copying the Messrs. Black's book by the photographic process, Wanamaker is simply guilty of counterfeiting. He is doing what copiers of bank-bills and greenbacks call "pushing the queer." His edition of the 'Encyclopædia Britannica' is neither more nor less than "green goods." It is true that, unlike the counterfeiter, he gives the person on whom he "pushes the queer" a thing of value. The person whom he cheats is the person whose bills he copies, so that his offence, although it resembles counterfeiting externally, in reality belongs to the category of grand larceny. Admitting that Wanamaker may lawfully appropriate one copy for the improvement of his mind, the fact still remains that the money he makes by the sale of the counterfeit property belongs to the Messrs. Black. In Wanamaker's drawer, or in his bank account, it is simply "swag," far more so than the money which Claassen and Pell took from the Sixth National Bank, and for taking which they are now to go to jail.

We made some fun the other day of the suggestion of the London *Speaker*, that the 126 members of the House of Representatives who voted against the Copyright Bill should, on their arrival in London, be treated as "social pariahs" or disgraced persons with whom men of honor could not properly associate in clubs or private houses. We thought this suggestion was due to ignorance of the special conditions of society that exist in large portions of the country, in which professional authors as a class are unknown, and the idea that a living can be made by book-writing is quite unfamiliar to most of the inhabitants. The notion, therefore, in these places, that there is anything of *marketable* value in a book, beyond the paper and typography, is hard to grasp. It is not surprising that it has not secured a firm lodgment in the local system of ethics, and cannot get Congressmen to do much "voicing" for it, as they say. In truth, the strong sense of literary property is not very old even in England. So we bespeak patience and discrimination of London society for our erring Congressmen. But John Wanamaker, the Postmaster-General of the United States, we leave at the mercy of British moralists. If, when he goes over to London, he has to take all his meals at a hotel, and is refused admission to all the clubs, and all "the great houses," as 'Squire Smalley would say, we shall not utter a word of protest. He ought not to be able in any civilized community to sit down comfortably at a dinner-table with honest men.

THE CENSUS QUESTIONS.

ONE of the most curious aberrations of the new Census Bureau was the list of questions it drew up to be asked by the enumerators. Some of these actually required people to tell not only about the diseases of members of their families, but about their own, and not only about their diseases but about their debts. The great object of a census is not so much to collect statistics on various matters, as statistics which are reliable—that is, from which one can make solid deductions of some kind. Rows of figures which cannot be depended on as records of facts are of no use whatever except as arithmetical exercises for children. This makes it extremely important, first, that the enumerators and collaters employed by the Census Bureau should be not only persons of good character, but persons noted for their accuracy; and, secondly, that the information they are set to collect should be easy to collect. The harder it is to acquire any particular kind of information, the less desirable it is that it should appear in a census, because if once it gets into the official tables, it acquires an air of authority, and may mislead thousands of persons in making calculations for public and private purposes, who, if they saw it anywhere else, would pay little or no attention to it. For statistical purposes it is always better to have no figures at all than figures which are not correct. After every precaution has been taken to secure the services of good enumerators, it will still be necessary to be very chary in extending their sphere of duty. They should be held up to the utmost diligence and efficiency in taking the count of population, and in collecting such obvious facts as age, sex, color, nativity, and parentage—that is, facts which are visible, or which the person interrogated is not likely to have any motive for concealing. But every step the ordinary enumerators take beyond this, the less trustworthy do they become. All information which can only be got by questioning becomes unreliable in the direct ratio of its disagreeableness. This is the ordinary experience of human nature, and nobody needs to pay more attention to peculiarities of human nature than census enumerators.

All this would be true even if census enumerators, especially in large cities, were accomplished statisticians, or persons of high character and standing, or if any pains had been taken to prepare for this census by selecting them under the civil-service rules. But no such pains have been taken. The civil-service rules have been deliberately disregarded in selecting them, and it is quite safe to say that a considerable number of them in this and other large cities belong to the

class known as "political heelers"; that is, people without regular occupations, who live, or try to live, by odd jobs in or out of politics. At all events, they are not by any means the class of persons to whom any one fit to superintend a census would think of confiding what are called "inquiries of a delicate nature," and yet they have been actually charged with the task of extracting from men and women answers to figure in a body of official statistics touching the two things on which all men and women are most reluctant to give information to any one—their bodily ailments and their pecuniary condition. No man, and especially no woman, likes to tell a stranger about a secret disease or disability—that is, about one which is not visible—and about debts and liabilities. Almost everybody resents inquiries on such subjects, even from friends, as an impertinence. It is therefore easy enough to foresee the state of mind in which they would receive them from a more or less forbidding stranger popping in from the street with a note-book. Of course they cannot be prevented by any legal penalties from returning lying or incorrect answers if they answer at all; and then what is the virtue of the resulting figures? Think of laboriously tabulating such stuff and having it printed at the public expense!

The criticism excited by the programme has been so lively that the earlier talk of giving power to the enumerators to arrest people who refused to answer them, or to start some sort of legal proceedings against them on the spot, has been judiciously abandoned. The enumerators will not take women to jail who resent their silly questions about their bodily condition or that of their daughters. We presume that penalty will be reserved for the fathers and brothers who kick them out of the house. A circular has been accordingly issued by the Superintendent revising the instructions. As it is a curiosity in its way, we reproduce it:

WASHINGTON, May 26.

To Supervisors of Census: You will please instruct enumerators in cases where persons refuse to answer the questions on the population schedule relating to physical and mental disabilities (22 and 23), or to the question relating to farms, homes, and mortgages (26 to 30 inclusive), to enter in the proper column the words "Refused to answer." No further steps will be necessary on the part of the supervisor or enumerator, and all legal proceedings will be instituted by the Washington office through the Department of Justice.

(Signed), ROBERT P. PORTER, Superintendent of Census.

The last part of this is worthy in every way of the author. It will be a comfort to sufferers from mental and physical disabilities, and persons who like to keep their private affairs to themselves, to learn that if they do refuse to lay their whole condition in life before the enumerator, such "legal proceedings" as may be taken against them will be instituted by the Washington office through the Department of Justice. This has an awful sound. To have the Department of Justice pursuing you to make you tell about your rheumatism, or your cough, or your fistula, would, of course, be a terrible experience for a delicate man or woman; but we advise the diseased public to be of good cheer. They will never be troubled by the Attorney-General with any species of writ. Common sense reigns in the Department of Justice, if not in the Census Bureau.

POLICE ETHICS.

THE wonder that this city has any orderly government at all grows with every session of the Fassett Committee. During its two months of inquiry into the methods of our municipal administration it has touched no department, even in the most cursory manner, without making revelations of jobbery, mismanagement, and more or less direct bribery and corruption. It has shown that the Sheriff's office for twenty years has been a perfect sink of iniquity, being literally a den of thieves who used the office as a headquarters from which to rob that portion of our citizens who were compelled by law to go there for assistance and protection. It has shown that the incumbent of this office, who confesses that he made a bargain for the division of illegally extorted tribute from the people whom he was sworn to serve faithfully, and who received from one such illegal source alone $21,000 in two years; who confesses, also, that he passed over $10,000 of his profits from the office to the political boss who had put him into it, through the absurd pretence that he handed it over as the godfather of the boss's infant child—it has shown that the man who did this was elected to the Mayoralty because he had by these and similar acts demonstrated his "usefulness" to the political forces which control the city. It has shown that the Excise Commissioners—all of whom are under indictment for wilful breach of official duty—have been conducting their department in the interests of rum-sellers and dive-keepers, and have been aided in that respect by police justices and by at least one of the higher courts.

On May 28 the Committee devoted a few hours to the conduct of police captains, and the result was similar in kind to what had gone before. Three captains were examined, and two of the three made admissions which ought to lead to their summary dismissal from the force, but which are more likely to lead to their promotion if the Police Board acts upon their case as it has recently acted upon that of another captain whom it found guilty of blackmailing. One of the two testified that though he had ninety-five men and two ward detectives under his orders, he was unable to get proof, easily obtained in abundance by excise inspectors, that a notoriously infamous resort in his precinct was really immoral, and he therefore signed a report in favor of granting a license to its keeper in which he vouched for him as a "man of good moral character." What he regarded as "good moral character" he had some difficulty in explaining. He did not think that a man who habitually violated the excise law could be said to be of bad moral character. He would not consider a man who was a "manufacturer of thieves and libertines" to be an immoral character. Finally, he summed up his ethics by saying: "A man can be good and moral, and a man can be good and not moral in a way." He did not know of any policemen who were "good and not moral in a way," and seemed to have a vague idea that goodness of that kind was to be found mainly in dive-keepers, who should because of that quality be allowed to conduct their business without police interference.

The second captain, who was the somewhat notorious Killilea, made even a worse exhibition of himself. He was forced to admit that he had, eight days after formal complaint had been made to him of the bad character of a place in his precinct, signed a report in favor of the renewal of the place's license, in which he said no complaint had been made against it. He was forced to admit, also, that he made a sham effort to test the place's bad character upon which he based his report that it was fit to have its license renewed. It came out during the inquiry about this place, which is notoriously one of the most infamous in the city, that when its proprietor was brought into court to plead to an indictment which adjoining property-owners had secured against him, one of the Excise Commissioners, Koch, appeared as the man's counsel. It was subsequently explained that Koch was not regularly retained as counsel, but, happening to be in court at the time, he had merely "acted as counsel in a friendly sort of way." This is the same Commissioner who was drunk when he was himself arraigned on indictment a few weeks ago. That he should be engaged in "friendly" offices for a keeper of a disreputable house whose license he, as Excise Commissioner, had been asked to renew, is one of those characteristics of Tammany government with which this public ought by this time to be very familiar.

We doubt if either the police captains or the Excise Commissioners are able to see anything particularly objectionable in their code of official conduct. They have a moral sense only a shade or two duller than that of the liquor-dealers and dive-keepers whose interests they protect, and with whom they have been intimately associated all their lives. It is not their fault that they have been put into positions of official responsibility, where they are supposed to be the guardians and preservers of the rights and interests of the law-abiding and respectable people of the community. It is the fault of these same law-abiding and respectable people that they allowed them and their kind ever to get possession of the Government, and that they allow them to keep possession year after year, though their grotesque intellectual and moral unfitness has been known and recognized of all men for years.

THE ICEBERG SEASON OF 1890.

THE fortunately harmless collision during fog of the steamer *Normannia* with an iceberg is but the latest of many collisions of the kind which have been reported since the present year came in. They have been the result of a remarkable flow of arctic ice over the Grand Banks of Newfoundland, which

has caused a condition of affairs more suggestive of north polar exploration, and of the journals of arctic navigators than of ordinary Atlantic voyaging. Our Signal Service and hydrographic charts during the last five months have been a continuous report of great fields of ice, of bergs many in number and often of great size, of "the whole coast of Newfoundland blockaded by ice" at times, of sailing vessels "nipped," and of steamers forced far from their courses to avoid the icy obstacles. The monthly review of the Signal Office for February, closing the winter months, refers to this flow of ice as the greatest during the last eight years, and made peculiarly exceptional by its early appearance in January. The May pilot chart of the Hydrographic Office covering the month of April reports twenty serious accidents to vessels by collision with ice and two vessels lost. One vessel reported seeing no less than 140 bergs, another 59, another 50, and another 49. One of these bergs was estimated at 250 feet high above the water line, and a thousand feet long, another 100 feet high, half a mile long, etc. When the record of the whole of the iceberg season of 1890 is fully compiled, we shall doubtless have the story of an area of ice quite unprecedented—a probability that gives special interest to the pilot chart covering the month of May, which will be forthcoming from the Hydrographic Office in a few days.

It is not merely the extent of the separate ice-fields and the number and magnitude of the bergs which make the present season noteworthy, but the vast expanse of ocean over which the ice area has reached. Hitherto the eastern limit of the ice in the track of ocean steamships has been fixed at about 40° W., possibly a little further. This means a limit say 500 miles east of Newfoundland. But the last report of our Hydrographic Office tells of bergs moving northeastward in longitude 35° W., which would mean a distance of some two hundred miles further east of the island. This variation of the record is accounted for at the Hydrographic Office in two ways: first, the enlargement or change of direction eastward of the arctic current flowing south past Labrador; and secondly, the probability that the immense mass of ice has created in the Gulf Stream lakes of fresher and lighter cold water, which have kept the bergs from melting rapidly after reaching the warm Gulf Stream water and changing, in its flow, their southerly course to a northeastward one. It may be noted that Mr. Richard Brown, F.G.S., in his 'Notes on the Northern Atlantic,' fixes the North Atlantic ice area off Newfoundland at about 200,000 square miles—figures which this year will have to be greatly enlarged, perhaps doubled.

The interest, popular as well as scientific, excited by this exceptional ice flow on the ocean may justify some speculations as to its origin and age. It is periodic, usually appearing eastward of Cape Race in April or late March, and is annually looked for by the sealing fleets which, in early March, sail northward from St. John's, Newfoundland, to "meet the ice" and secure, if lucky, their profitable cargoes of seal pelts. How long it takes to drift in the cold arctic current from the upper polar regions to the ocean steamship paths cannot be accurately stated. Very uncertain elements, such as strength or direction of winds, variations of the arctic currents or of the amount of discharge from arctic glaciers, enter into the problem. As one clue to it, we have the drift of the wrecked party from the *Polaris* during the later months of 1872 and up to April 30, 1873. That party sailed on their ice floe from near the upper point of Baffin's Bay for almost two hundred days, until rescued off Labrador. Adding the distance southward to the ocean-steamship tracks, we should have about eight months as the time of passage of the ice from upper Baffin's Bay to the Grand Banks. This would make the ice seen from the decks of ocean steamships belong to the flow detached by the arctic heats of the previous summer, as is generally assumed. But, as Gen. Greely has pointed out in his story of arctic exploration, an immense portion of the arctic ice has its origin much further north than Baffin's Bay; and when we find in that remote region a glacier like the Humboldt, with a sea-front from forty to sixty miles wide, we get a vivid conception of the magnitude of the remoter arctic ice flow, which, with its winter detentions, may have had a voyage of two, or even three, years before it reaches the Gulf Stream. Incidentally we can perceive the value to commerce of that great warm flood of water intercepting the arctic current, and melting quickly the bergs which otherwise might be common visitors to our own coasts, and, lasting long into the summer months, might become far more serious terrors to navigators than they are now.

Another point, the connection between our two successive "open" winters and this season's ocean ice, must be left to the scientific experts. If they find that our two mild winters extended into the arctic regions, that connection may be made clear.

The special perils of vessels from ice on the Grand Banks and beyond during this season recall a paper printed in *Harper's Magazine* of August, 1882, by Capt. J. W. Shackford, then of the American Line steamer *Illinois*, plying between Philadelphia and Liverpool. Capt. Shackford argued in favor of a route through the ice region about a hundred miles south of the ordinary steamship courses—a route over which during six seasons his ship's record showed an average of but three hours of fog. During 1881, one of the most foggy seasons known, his record showed fog for but two hours. We reproduce here his entries for six days of two steamers which sailed from Philadelphia and New York respectively on the 28th of May, and took respectively the southern and northern courses:

FROM PHILADELPHIA.	FROM NEW YORK.
May 29. Fine weather; five hours fog.	Light airs and hazy.
May 30. Pleasant weather; no fog.	Light breeze and hazy.
May 31. Fine weather; no fog.	Light breeze and fog.
June 1. Fine weather; no fog.	Light breeze and hazy; then clear.
June 2. Pleasant weather; no fog.	Moderate breeze and fog.
June 3. Rain.	Moderate breeze and fog.

It is generally assumed that the arctic bergs floating down past Newfoundland reach lower latitudes than bergs in other parts of the world. This is a mistake. The British Government Reports from ships meeting with south polar bergs, and extending over many years, showed bergs floating northward to much lower southern latitudes. Among them is the report of "many bergs" 400 feet high seen in November, 1839, in latitude 41°, which would be about the north latitude of New York city; three bergs 500 feet high seen in November of 1856 in the same latitude; and one seen August 16, 1840, from the Dutch ship *General Baron von Geen*, which is described as 1,000 feet high, and was met in latitude 37.30, which would correspond in north latitude with a point say 190 miles south of New York. The heights of the bergs given above refer to altitudes above the water-line, which must be multiplied by nine to give the depth below water. One of the floating ice mountains described in the British official reports was three miles long. Their heights indicate places in the great glacial continent of the south polar regions where the universal ice-sheet reaches enormous thickness. Sir James C. Ross, *facile princeps* among antarctic explorers, mentions the ice-sheet at no point as more than 300 feet high, and his largest berg—seen first in 1841 and again seen and measured in the succeeding year—was but 150 feet high though four miles long. It was of the common "table berg" type of the antarctic seas.

Since Ross's expedition of almost half a century ago—unless we except the short excursion into the ice of the *Challenger* scientists—there has been no real exploration of those mystic south polar realms of ice where glacier and pack and berg reach proportions far greater than in the arctic regions. The fact gives fresh interest to the plans for antarctic research which have been lately discussed in Australia. The purpose of the Danish Government of organizing an expedition to explore the interior Greenland ice-cap, announced by cable a few weeks ago, is still another point of kindred interest in this exceptional iceberg season.

LONDON—PARLIAMENT—IRELAND.

LONDON, May 22, 1890.

THE charm of London at this season can scarcely be exaggerated. It is no longer the gloomy, unlovely city of Oliver Twist and of the forties, when as yet the good and beautiful things of life were reserved for the few, when a park meant merely trees and grass, when the word *hotel* recalled dinginess and horsehair and high charges, and when it was difficult to procure meals outside a pothouse. Democratic ideas, enlightenment, and intercourse with the Continent have changed all this, and now London, at least London west of Charing Cross (and usually we judge a city by its best side), is perhaps one of the most delightful and cheapest cities in the world. Its pulse of life and beauty and strength can be felt only through quiet every-day residence and observation, undisturbed by evening entertainments and sight-seeing. Palatial public buildings and mansions have risen on every side. New avenues have been opened up,

scientific horticulture has embellished the parks, and nowhere are the capabilities of window-gardening better shown. City squares and graveyards, within the memory of some of us receptacles for battered tins and refuse, have been transformed into attractive gardens where children play and the weary take their ease. Everywhere you recognize a change from the gloomy Puritanism of the past to the growing conviction that life ought to be embellished and enjoyed. There prevail a lightsomeness and tastefulness quite foreign to our old impressions of the place. All that architectural skill can accomplish is being brought to the reconstruction of the city on new artistic lines—it is rising skyward under the pressure of its lateral expansion.

The inhabitants, however, in the streets and parks are what most impress the visitor with an indescribable sense of the well-being of London. The very flower of material civilization is before him, all that wealth and art and training can effect to adorn life, where for the most part struggle and want and sin and sorrow are thrust aside. Contemplating the array of youth and beauty and rank, superbly mounted, among the spring foliage in the bright morning sunshine on Rotten Row, the brilliant line of equipages on the drive in the afternoon, refinement and grace sweeping in their carriages to the levée and drawing-room, one is tempted to feel for the moment as if this were true life. All that is best in learning is to be found in the libraries of London; all that is most renowned and exquisite in art can be studied in its museums and galleries. At this centre of the most travelled and exploring of peoples, a kaleidoscope of exhibitions and a going and coming of bronzed travellers bring other nations close to us. In the quiet halls of the Patent Office, we are thrilled by seeing original creations of Arkwright and Watt and Stephenson, upon which depended so much of our modern progress. And over all this is the consciousness of power and dominion. We have before us a greater than Rome. We are at the mainspring of the most extensive empire the world has ever seen, exercising through modern science a direct, immediate, and unquestioned rule, such as was never imagined in former centuries. Above and through all there is paganism enough, but to me it is revealed less in the degradation of the poor crossing-sweepers and the worn, anxious-looking flower-girls and small dealers, crowding many of the thoroughfares, than in the hard faces and demeanor of the faultlessly dressed aristocratic men who throng the pavements in the vicinity of the clubs.

An Irishman is struck with the general kindliness and civility of all ranks and classes in London. Why should there be any barrier between us? All that is open to an Englishman is here open to an Irishman. Walk down to the House of Commons. The policemen stop the traffic rolling over Westminster Bridge as rigidly for the humblest Parnellite member as for the First Lord of the Treasury. As said member walks, perhaps alone, up the quiet expanse of Westminster Hall, from which the wealthiest and most powerful non-members of the land are ordinarily excluded, what a flood of associations and recollections present themselves to his mind if possessed of any imagination or historical knowledge! And to what an assemblage he belongs!—the greatest in its traditions that ever existed; with all its defects, the parent, the exemplar of freedom. The oldest and bitterest Nationalist member must acknowledge that he has never had reason to suspect a member in committee or in the House to be influenced by personal money considerations. Class interests, political, family, and commercial interests, are potent enough, but a vote for direct money considerations is unknown. The Irish member is not long in the House before he perceives not only that many of the police and attendants are Irish, but that a considerable proportion of the most prominent Government officials are his fellow-countrymen; Irish, indeed, occupying some of the chief administrative posts. In the arrangement of the committees he will meet perfect fair play. Arthur O'Connor, one of the sixty members for some months on their trial before the *Times* Commission, has just been appointed to one of the most important and honorable positions in the House, the Chairmanship of the Standing Committee on Trade. "We should all be delighted," said the Secretary of the Treasury the other day, in reply to some criticisms of Mr. Healy on the proceedings of a certain committee—"we should all be delighted if the honorable and learned gentleman would himself consent to serve with us." Why, then, should there be any alienation? Why should we Irish not realize that this wonderful metropolis is as much our capital as it is the capital of Mercia or Anglia? Why should we not feel that all this liberty, all the possibilities dawning on us under the growing influence of democracy, are as fully our heritage as that of Englishmen and Scotchmen?

The Speaker is in the chair, the last words of the initiatory prayers are said. The dream is past, and the present stands out in its stern reality. The Ministry desire to rule Irishmen in Ireland by and through the influence of a class, in the interests of a class, as Englishmen have sought to do since the invasion. After three months at the House, an Irishman finds himself a more implacable foe of the Government than when he first entered its precincts. Every day's experience of the freedom and fairness of British institutions in England strengthens his undying determination not to submit to the present administration of his country. He does not object to a common rule. Whatever his theoretical visions may have been in youth, manhood has brought the realization of the actual. He is no more responsible for the fact of a common rule, its necessity and desirability, than he is for the existence of the channel which forbids union, and the ocean which forbids separation. The contention of those who opposed the Union of 1800 was that it must inevitably lead to division and turmoil in Ireland, that it must perpetuate the power of a class to stand between the majority and their wishes. As it appeared to Grattan and the patriots of the Irish Parliament, so it has always proved, and so it continues. If Ireland were denied home rule, the duty of the Government would seem clear to accept Irish public opinion as a guide in ruling the country. Scores of honest and able Englishmen have devoted themselves to the government of Ireland with this view; none have been able to accomplish their desires. The attempt has wrecked many a noble reputation as it wrecked William E. Forster's. Mr. Balfour and his party struggle on in the old grooves, sinking deeper and deeper into the mire and confusion of the endeavor to govern an integral portion of the empire in direct opposition to the desires and wishes of its inhabitants.

For example: One of the principal measures of the session is a bill for the settlement of the Irish land question. It is opposed by the whole weight of Irish public opinion, National as well as anti-National. Not one Irish member of Parliament connected with landed interests spoke generally in its favor. Parnell and his party, 85 out of 103 Irish representatives, supported by men like Gladstone, Morley, and Trevelyan, entirely disapprove the Government proposals. Yet the bill is to be pressed on. We still hear the parrot cry, "The Irish representatives do not represent Irish feeling," although within the past three months three vacancies having occurred in Ireland, three Nationalists have been returned unopposed. Several Irish magistrates of unblemished character have, within the past few years, at a few days' notice, been dismissed for offending the Government, and in some cases without opportunity being given for explanation. Lately two Irish magistrates, adherents of the Government, were proved guilty of flagrantly immoral conduct. The circumstances had to be dragged before Parliament more than once, and not till after weeks of subsequent inquiry were these men deprived of their commissions. Within two months an Irish Crown prosecutor attacked a man with a sword for accidentally breaking a pane of glass, and acknowledged on oath that he would have "murdered him" had he resisted being taken to the police-office. The case was brought before the House by the Irish members, but nothing has yet been done regarding it. As compared to English municipalities, the Dublin corporation labors under many disabilities. Its rates are collected by a Government official not responsible to it. Sanitation, the erection of buildings, etc., are not within its full control. A remedial bill was prepared and unanimously approved by the corporation, composed of Catholics and Protestants, Nationalists and anti-Nationalists (in it nothing so wild is suggested as that it should have the management of its own police). It passed a meeting of citizens by an overwhelming majority. The opposition of the ascendancy clique in Dublin, who resist any extension of rights and powers to representative bodies in Ireland, has just led to a long and expensive inquiry before a committee of the House of Commons. Even that large Committee, upon which there was but one Irish Nationalist, and which comprised a majority of opposite politics, reported unanimously in favor of the main clauses of the bill. Foiled by the corporation, the citizens' meeting, and the Parliamentary Committee, the minority brought their influence to bear on Government through the Castle. Accordingly Government has announced that it will oppose the chief and most desired clauses at every stage. Under ordinary circumstances a bill unanimously approved in committee passes rapidly and surely into law. This bill will probably not survive the session.

A veil woven of false principles, long ago set aside by Great Britain in her dealings with other English-speaking countries, alone separates Ireland and England. Until it is rent asunder, this Westminster Parliament cannot be the Parliament of a united people, and Irish Nationalists cannot tread without bitter feelings the streets of this beautiful and marvellous metropolis. D. B.

P. S.—Since these lines were written and posted, the action of a body of opponents in Dublin, impugning the manner in which the bill has been passed through committee, has been brought before the House on a question of privilege. This has led to such a complete vindication by the Chairman and other members of the Committee regarding the exhaustiveness of the inquiry and the unanimity that prevailed, that it is difficult to believe the threatened Government opposition will be persevered in.

THE SOURCE OF WASHINGTON'S "RULES OF CIVILITY" DISCOVERED.

LONDON, May 16, 1890.

IN my biographical introduction to the Long Island Historical Society's volume, 'George Washington and Mount Vernon,' I mention a resemblance of some of Washington's "Rules" to those of an old work in Latin and French, entitled 'Communis Vitæ inter homines scita urbanitas.' Your reviewer spoke of this as hazarding a new guess, but it was rather more, and has led to an interesting discovery.

The "Rules of Civility," found in Washington's boyish writing, are dated 1745. There is reason to believe that he was then attending a school in Fredericksburg superintended, and probably taught, by the parish clergyman, the Rev. James Marye, a Huguenot who had taken orders in London. Mr. Marye was an accomplished gentleman and scholar, who founded the eminent family that gave its name to "Marye's Heights," and is still well represented by ex-Lieut.-Gov. John L. Marye and others. From what I had gathered from the old vestry-books of St. George's Church, Fredericksburg, it occurred to me that this learned French clergyman might have taught these "Rules of Civility," and that they might be in some French work. I mentioned this conjecture in a letter to my friend Richard Garnett of the British Museum Library, who presently wrote me that several of the "Rules" resembled others in the Latin-French book mentioned above. His library, however, at that time contained only Stoddard's inexact edition of about half the "Rules." I could not find the Latin-French book in America, so I could only make the allusion to it in my introduction, and postpone a thorough investigation until I could get hold of the volume. I have now carefully compared Dr. J. M. Toner's literal transcript of Washington's "Rules" with the Latin-French work, and find that of the 110 "Rules" 103 are contained in that old book of 'Maximes.'

From Backer's Jesuit Bibliography it appears that the "pensionnaires" of the College of La Flèche sent to those of the College at Pont-à-Mousson (1595) a treatise entitled: 'Bienséance de la Conversation entre les Hommes.' The great Mussipontane father was Léonard Périn (born in Lorraine 1567), who had been a Professor of the Humanities in Paris. By order of Nicolas François, Bishop of Toul, Périn translated the La Flèche (French) "Maximes" into Latin, adding a chapter on behavior at table. The book, dedicated to the said Bishop, was published in 1617. It passed through several editions and was translated into Spanish, German, and Bohemian, but never into English. The copy in the British Museum was printed in Paris in 1663. Its title is: 'Les Maximes de la Gentillesse et de l'Honnestete en la Conversation entre les Hommes. Communis Vitae inter homines scita urbanitas. Par un Père de la Compagnie de Jesus.' The first chapter consists of twelve maxims relating to religious observances, prayer, attending mass, etc. These are entirely omitted from Washington's "Rules," as indeed are others of a religious character occurring elsewhere in the book, even including one advising attention to grace before meat. (It is known that grace was never said at Washington's table.) The subjoined quotations from the "Rules" and the "Maximes," limited by consideration for your space, fairly represent the correspondence prevailing throughout. The same consideration leads me to omit the Latin, and also a literal translation of the French—which, indeed, is sufficiently translated by Washington's "Rules," even where abridged. I follow the old spelling in both books. The omissions indicated in the French text are of sentences not found in Washington's "Rules"; those in the latter represent defects of the original, as indicated in Dr. Toner's transcript. The figure preceding each "Maxime" and "Rule" here quoted indicates its number in the original.

MAXIMES (chap. ii.).	RULES.
(1.) Que toutes actions qui se font publiquement fassent voir son sentiment respectueux à toute la compagnie.	(1.) Every action done in company ought to be with some sign of respect to those that are present.
(3.) Gardez-vous bien de toucher de la main aucune partie de vostre corps, de celles qui ne sont point en veuë, en la presence d'aucune autre personne. . . .	(2.) When in company, put not your hands to any part of the body not usually discovered.
(4.) Ne faites pas voir a vostre compagnon, ce qui luy pourroit faire mal au coeur.	(3.) Show nothing to your friend that may affright him.
(5.) Ne vous amusez pas à chanter en vous mesme, si vous ne vous rencontrez si fort a l'ecart qu'aucun autre ne vous puisse entendre, non plus qu'à contrefaire le son du tambour par l'agitation des pieds ou des mains.	(4.) In the presence of others, sing not to yourself with a humming noise, nor drum with your fingers or feet.
(8.) Quand vous toussez ou quand vous esternez, si vous pouvez estre le maistre de ces efforts de nature, n'éclatez pas si hautement & si fort. Ne poussez soûpirs si aigres que les autres les puissent entendre.	(5.) If you cough, sneeze, sigh, or yawn, do it not loud but privately. [It will be noticed that maxims 8 and 9 are both neatly summed in this Rule 5,]
(9.) Ne soufflez pas si asprement, faisant des hurlements en baaillant. Et s'il vous est possible, empeschez vous absoluмẽt de baailler; mais ayez en un bien plus soin quand vous entretenez avec quelqu'un, ou dans quelque conversation. . . . Si vous ne pouvez pas empescher de bailler, du moins gardez vous bien de parler en cet instant mesme, & d'ouvrir extraordinairemẽt la bouche; mais pressez la sagement, ou en detournant tant soit peu du face de la cõpagnie.	
(11.) C'est une incivilité & une impertinence de dormir, pendant que la cõpagnie s'entretient de discours; de se tenir assis lors que tout le monde est debout, de se promener lors que personne ne branle, & de parler quãd il est temps de se taire ou d'écouter. . . .	(6.) Sleep not when others speak, sit not when others stand, speak not when you should hold your peace, walk not when others stop.
(12.) Il n'est pas seant d'avoir son lict en mauvais ordre dans sa chambre, non plus que de s'habiller en la presence des autres, ou de s'y dépoüiller, ou de sortir de sa mesme chambre à demy habillé. . . .	(7.) Put not off your cloths in the presence of others, nor go out of your chamber half-drest.
(15.) Il est mal-seant, dans le jeu, ou aupres du feu, de faire attendre trop long-temps ceux qui viennent à s'y presenter.	(8.) At play and at fire its good manners to give place to the last commer, & affect not to speak louder than ordinary. [This last clause of 8 is imported from a phrase in maxim 13.]
(17.) C'est une action peu hõneste de cracher dans la cheminée, d'approcher ses mains trop près de la flãme pour les échauffer, & de les mettre même dedans, de se baisser devãt le feu, comme si l'on estoit assis à terre & s'y tenir courbé. S'il arrive qu'il y ait quelque chose devant le feu, a cuire, prenez bien garde d'estendre le pied pardessus le feu. Dans une honneste compagnie n'y tournez jamais le dos. . . .	(9.) Spit not in the fire, nor stoop low before it, neither put your hands into the flames to warm them, nor set your feet upon the fire, especially if there be meat before it. [(14.) Turn not your back to others, especially in speaking.]
(18.) Pour l'ordre que l'on doit tenir étant assis, c'est de placer bien ses pieds a terre en egale distance que les cuisses, non pas de croiser une cuisse ou un pied sur l'autre.	(10.) When you sit down keep your feet firm and even, without putting one on the other or crossing them.
(19.) Il ne faut jamais rogner ses ongles dans le public, & bien moins les prendre a belles dents.	(11.) Shift not yourself in the sight of others, nor gnaw your nails.
(21.) Vous ne hocherez la teste, vous ne remuerez point les jambes, ny ne roüillerez les yeux, ne froncerez point les sourcils, ou tordrez la bouche. Vous vous garderez de laisser aller avec vos paroles de la saline, ou de crachat aux visages de ceux avec qui vous conversez. Pour obvier à cet accident, vous ne vous en approcherez point se prez; mais vous les entretiendrez dans une distãce raisonable.	(12.) Shake not the head, feet, or legs, rowl not the eyes, lift not one eyebrow higher than the other, wry not the mouth, and bedew no man's face with your spittle, by appr . . . r him . . . you speak.
(22.) Gardez vous biẽ de vous arrester à tuër une puce, ou quelque sale bestiole de cette espece, en presence de qui que a puisse estre. Que si quelque chose d'immõde vient à vous offenser la veuë, en regardant la terre, comme quelque crachat infect, ou quelque autre chose semblable, mettez le pied dessus. . . . S'il en attache quelqu'une aux habits de celui à qui vous parlez, ou voltige dessus, gardez vouz bien de la luy monstrer, ou à quelqu' autre personne; mais travaillez autant que vous pourrez à l'oster adroitement. Et s'il arrive que quelqu' un vous défaire de quelque chose de semblable, faites luy paroistre vostre reconnoissance.	(13.) Kill no Vermin or Fleas, lice ticks, etc., in the sight of others, if you see any filth or thick spittle put your foot dexterously upon it if it be upon the cloths of your companions, put it off privately, and if it be upon your own cloths return thanks to him who puts it off.

The above passages are sufficient to establish the substantial identity of the "Rules" and the "Maximes." The seven exceptions mentioned

above are of much interest. The "Rules" of Washington which I cannot find among the "Maximes" are these:

"(48.) Wherein you reprove another be unblameable yourself; for example is more prevalent than Precepts.

"(49.) Use no reproachfull language against any one, neither curse or revile.

"(50.) Be not hasty to believe flying reports to the disparagement of any.

"(89.) Speak not evil of the absent, for it is unjust.

"(108.) When you speak of God or his attributes let it be seriously & . . . Reverence. Honour and obey your natural parents altho they be poor.

"(109.) Let your recreations be manfull not sinfull.

"(110.) Labour to keep alive in your breast that little spark of Celestial fire called Conscience."

These last three "Rules" are in amusing contrast with the concluding part of the French book, whose final chapter is occupied with rather epicurean notes on table service, ending with a brief ascription to the Virgin. A notable addition to one of the French "Maximes" occurs in the following rule, the italics representing that addition:

"(105.) Be not angry at Table whatever happens & if you have reason to be so shew it not but on a chearful countenance, especially if there be Strangers *for good Humour makes one Dish of Meat a Feast.*"

The illegible parts of Washington's "Rules" hardly prevent the sense from being perceived. The meaning of Rule 75, however, has never been made out. It is the abbreviation of a "Maxime," which enables me to substitute for Dr. Toner's dots certain (bracketed) words which make it clear:

"(75.) In the midst of Discourse ask [not what was said before your arrival;] but if you perceive any Stop because of [your entrance, rather beg the speaker] to proceed. If a person of quality comes in while your conversing it's handsome to repeat what was said before."

Though my theory, that the Rev. James Marye taught Washington these "Rules," has done good service in leading to the discovery of their origin, it cannot be verified, unless the clergyman's descendants have preserved papers in which they can be traced. There was, however, no other man in the early history of Fredericksburg who would be likely to have the French book. There is evidence that Washington, in after life, was unacquainted with French, and, even if he had studied it with Mr. Marye, he could hardly be competent in his fourteenth year (1745 N. S.) for such artistic rendering and selection from the antique language. The boyish spelling, contrasting with the mature expressions, suggests that he was taking down oral instructions. Although one may regret that Washington, precocious as he was, can no longer be credited with the authorship of these generally wise "Rules"—the work of several hands—there is left us the satisfaction that he did not originate those among them that are rather snobbish. And indeed it is due to the English translator to say, that, while adding seven of the best maxims, he considerably toned down the extreme deference to "persons of quality" advised by the pensionnaires of La Flèche and Pont-à-Mousson.

MONCURE D. CONWAY.

A CORRESPONDENT OF TALLEYRAND'S.

PARIS, May 15, 1890.

THE Comtesse de Mirabeau publishes, in a small duodecimo volume, the letters written by Mme. Adelaide, the sister of King Louis Philippe, to Prince Talleyrand, between the end of 1833 and the end of 1834. She found these letters among the papers of her uncle, M. de Bacourt, who was the confidential friend of Talleyrand, and received from him the manuscript of the famous "Memoirs" which are not yet published. M. de Bacourt left them to M. Andral, and M. Andral, who died last year, left them to the present Duc de Broglie. The "Memoirs" cannot yet, for reasons which are not very precisely known, be published. Talleyrand's family objects also to the publication of any of his letters. I have myself seen copies of the letters which Talleyrand wrote very regularly to Mme. Adelaide, when he was sent to London as Ambassador, at the time of the conference which settled the fate of Belgium. The history of these letters is a curious one. Talleyrand had great prestige in the diplomatic circles of Europe; it was highly important that he should represent France at the conference, since he was able to give the King the surest information and the best advice. He was himself very anxious to serve the interests of the July Government. But this was a constitutional government, not yet very firmly established; the cabinets changed frequently, and the Ministers of Foreign Affairs were very jealous of their rights and of the preponderance of Prince Talleyrand. Talleyrand had therefore an official correspondence, and did not correspond directly with the King. At the same time, when he thought it necessary to give to the King information which had not strictly an official character, he wrote to Mme. Adelaide. He did not even send his letters directly to her; they were sent through the Princesse de Vaudemont, who was the last Princess of Lorraine, an old friend of Talleyrand and also of Mme. Adelaide, who always treated her like a princess. This correspondence was found and seized at the Tuileries, at the time of the Revolution of February, 1848; it was sold by the workman who got it to an engineer, and the latter allowed two or three copies to be taken by his friends.

The correspondence which Mme. de Mirabeau gives us has not the same interest as the unpublished letters of Talleyrand to Mme. Adelaide. It is clear that the latter had more to learn than she had to say; still, her letters form an interesting chapter in the confused history of the first years of the July Government. Everybody knows that she was a very clever, sensible woman, the most useful and confidential adviser of her brother; that he had no secrets from her; that she was a great Liberal, though in many respects she was quite a princess of the "ancien régime." She had a very masculine mind, disdained all the softer graces of her sex, and lived but for politics, for the advancement of her family, which in her eyes was identical with the progress and prosperity of France.

Mme. de Mirabeau gives amusing details concerning the life of Talleyrand. When her uncle, M. de Bacourt, was sent as secretary to the London Embassy, he received orders to present himself at the Prince's house at a certain hour. He found Talleyrand at his toilet table, and was cross-examined by him while he was finishing his toilet, given some report to write, and told to come every morning to receive his instructions. Talleyrand was very well satisfied with the work of M. de Bacourt, having found in him that rare type, the laborious diplomat, a "commis" of the old school, perfectly versed in the elaborate diplomatic language, in its attenuations, its delicacies, its intentional vagueness or intentional precision. Bacourt was the ideal man for Talleyrand, who was himself lazy, in a sense, as he did not like the material work of writing, but who was always able to give the clearest oral instructions. Bacourt had the invaluable virtue of absolute secrecy, and Talleyrand showed how much he appreciated him when he confided to him his "Memoirs."

At the time we are speaking of, after 1830, there was a person who played a great part near Talleyrand, namely, the Duchess of Dino. She was born a Princess of Courland, and at the age of thirteen had been married to Count Edmond of Périgord, who became successively Duke of Dino and Duke of Talleyrand. She was, in 1830, thirty-seven years old, and was still extremely handsome. She was the favorite niece of Talleyrand, lived with him, and did the honors of his house. Talleyrand took her side against his own nephew, who did not live well with his wife, and finally resided in Florence. The Duchess of Dino inherited, in the latter part of her life, the principality of Sagan, in Prussian Silesia. She died in 1862.

Mme. de Mirabeau gives in her preface some extracts from the notes which her uncle, M. de Bacourt, used to make, often on what he had heard during the day. A note of the 23d of March, 1844, shows the perspicacity of King Louis Philippe in all matters concerning foreign affairs. M. de Bacourt was sent to Sweden in March, 1844, to congratulate King Oscar I. on his accession to the throne.

"Your mission," said Louis Philippe to him, "is not merely complimentary; you must study the new King and his surroundings, and learn if he will be more or less Russian than his father. Try to make the King understand the dangers of his position between the democratic ideas of Norway, the progressive ideas of Sweden, and the domination of Russia, which is felt in Finland as well as in Denmark. A great agitation prevails in the Duchies of Holstein and Schleswig, and the King of Prussia wishes to detach these duchies from the north and make them enter the Zollverein. Prussia would probably be willing to abandon the Danish islands to Russia if Russia abandoned to her the Duchies of Schleswig and Holstein. Prussia will pretend that these duchies once belonged to the German empire; she is anxious to take them for herself, or, if she cannot obtain them, to make them members of the Zollverein. Her ambition is to have a navy and ports on the North Sea as well as on the Baltic."

Remember that these instructions were given in 1844, and you will certainly admire the foresight and the diplomatic knowledge of the King. Mme. de Mirabeau detaches from the papers of M. de Bacourt some other notes, which show us the King in his youth, long before he had become a Ulysses and Nestor among the sovereigns.

The following story, told by M. de Bacourt, I have heard from the lips of one of Louis Philippe's sons:

"I had," said the King one day to M. de Bacourt, "a singular interview with Danton in 1793. After the battle of Jemmapes, I received an order to leave the army of Kellermann, with which I then was, and go to Strasbourg, where I was to be made commander. I arrived in Paris, wishing to protest against this decision, and I was in the room of the Minister Servan when Danton entered. In an interval of the conversation he made me a sign, and, taking me in a corner, said:

"'Why do you solicit this fool of a Servan? Come to-morrow to see me and tell me what you want.'

"I went to see him the day after; it was at the Chancery Hôtel, Place Vendôme (Danton was at that time Minister of Justice).

"As soon as I came in, Danton said to me:

"'Well, well, young man, you don't want to go to Strasbourg?'

"'No, I prefer to remain in Kellermann's army, where I know nearly everybody, and where everybody knows me; I should like to remain with my comrades.'

"'And this is just why we wish to send you somewhere else. Your influence in that army does not suit us, especially now; we know that

you talk on the subject of the Government and of its measures.'

"'I have not talked in that way; I have only blamed the massacres of the 2d of September, and I am not afraid to say so to you. This event fills me with horror.'

"'Bah! bah! don't get hot on that subject. I ordered these massacres. I don't regret it, and you ought to thank me for it. In exterminating all those noblemen, all those aristocrats who were in the prisons, I burned the ships of those defending our frontiers; for them, there is now no resource but to conquer or die. As for yourself, remember that those who perished were your enemies, the enemies of your father and of all your race. This hatred went back to the Regency. Remember that you have nothing to hope from them, nothing to hope from the league of the Kings; their hatred and their vengeance will follow you wherever you go. If you are wise, you will keep quiet and prepare yourself for the part which the future has in store for you.'

"'Thank you for your recommendation; all I want is to defend my country and to die for it, if I find a favorable occasion, for all I see fills me with disgust.'

"Danton laughed, and then dismissed me with these words: 'Be reasonable, or else, beware.'

"I never saw him again, and I joined the army of Dumouriez instead of going to Strasbourg."

This version is identical with the one I have heard, with this difference only: Danton went so far as to say to Louis Philippe, "You will some day be King of France." Speaking of the September massacres, he said, "I have placed a river of blood between France and the émigrés."

These extracts from M. de Bacourt have detained me too long; let us return to the correspondence of Mme. Adelaide. It begins immediately after the marriage of King Leopold with Princess Louise, a daughter of Louis Philippe, and is of a very confidential character, as is proved by such passages as this: "I have burned your letter, as you desired. I ask you to do the same with this, and to tell me that it is done." Letters which are to be burned in this way are invariably kept. There was good reason why Louis Philippe should want to receive private information from Talleyrand, for we read in one of Mme. Adelaide's letters: "I quite agree with you that it is essential that all the despatches should be placed before the eyes of the King. Long ago we felt this desire, but we can only make wishes, you and I." In England the sovereign receives communication of all the diplomatic despatches, but in France the jealousy of the Chambers always tried to curtail the prerogative of the King.

The tone of the whole correspondence, which dwells at length on the Ministerial difficulties and changes of Cabinet in various countries, seems to indicate that the King was at the back of his sister when she wrote these letters. "A thing which shocks me is that many English papers attribute to other causes, and to others than to the King and to you, the union of France and England, and of their alliance, while, as our dear King says, he is the real father of it, and you are the godfather. You must claim this honor for him and for you, and if you can have something said on the subject in an English paper, it will be well." The "cordial understanding" of France and England was the corner-stone of the policy of Louis Philippe; it was his defence against the reactionary courts of Europe, who looked upon him as a usurper, as a representative of the French Revolution. It was natural that Talleyrand should adopt this policy; he represented it in London with much dignity and intelligence.

It is difficult, it is almost impossible, to analyze a correspondence like that of Mme. Adelaide. You will find in it few anecdotes; its interest is entirely in its general tone, in the light which it throws on the difficulties of the July Government, and in the relations of Louis Philippe and his family with the men whom the Revolution had brought to the front. Mme. Adelaide appears in it as a Liberal, as a friend of England, as a devoted sister, as a cautious and prudent adviser. There are also in the volume a few letters from Talleyrand himself, chiefly on private and domestic affairs.

Correspondence.

BURR AND STREET.

To the Editor of The Nation:

Sir: In your number of May 8, 1890, in reviewing Adams's 'Second Administration of Jefferson,' there is a reference to the testimony of Wood and Street, editors of the *Western World*, of Frankfort, Ky., in the trial of Aaron Burr, in which the two latter men are made to appear in a rather ridiculous light. That is, to any one acquainted with the facts of Street's vehement denunciations of Burr, and the risks of life that he ran for the same, it seems a lame and impotent conclusion for him to have testified that he had no knowledge of facts to cause him either to fight or write.

Jefferson Davis, who was stationed at Fort Crawford, Wis., when Street was Indian Agent there, and who knew something of Street's history from old Kentuckians also, told me that Street had so many challenges to fight duels that he had to make it a rule "first come first *fought*"; in other words, the challengers had to file their missives and take their turns. The incident touched on in Marshall's History of Kentucky, the attempt to eject Street from the room when the ball was given after Burr's trial and release, was given me by my father, in detail, he being Street's son-in-law. A big burly ruffian was employed by Burr's friends to put Street out of the ball-room to humiliate him. Coming up behind, he seized Street around the body as his arms were hanging down, thus pinioning them to his side, and walked towards the door. Street kept quiet, but made up his mind what to do. When they reached the door, he threw up his feet and pushed backward against the doorway so hard as to throw his captor over and break his hold. As they rolled over together, Street got out his trusty knife or dirk and aimed a blow with all his might at the heart of his antagonist. He described his satisfaction in seeing the knife descend on its supposed sure mission. But the other man made a superhuman effort, and twisted himself to one side, so that the knife just missed him and stuck in the floor so deep that Street could not pull it out. Burr's friends crowded him then, as he was disarmed, back to the end of the room, and would have made mincemeat of him but for his faithful body servant, a mulatto man, who raised the window and seized Street and pulled him out.

In another encounter—a duel, I believe—Street was shot in the chest, and the bullet, in going through his suspender, carried in with it some of the fine coils of brass wire then used as we now use rubber. He was engaged to be married to the daughter of Gen. Thomas Posey, once Lieutenant-Governor of Kentucky and second Governor of Indiana, an old Revolutionary officer. She was very young—some say thirteen, others sixteen—and at school in Lexington, Ky. But, for the purpose of nursing him and wearing mourning for him, they were married at once. However, she was so good a nurse and his constitution so strong that he recovered. But there was a dent or hole in his chest when he got well, "big enough to put the baby's fist in."

These details are given to show that a man who would do as he did without any reason would be regarded as abnormal. But was it the duty of good citizens and lovers of the Union to say and do nothing but by knowledge of overt acts of Burr's? My patriotic and brave grandfather seems not to have thought so. By general report and by Burr's failure in denial, he felt justified in throwing himself with all his ardor into the defence of the Union. He came from John Street of Bristol, England, a ship captain who migrated to Virginia a century or two before, about as sturdy a stock as exists. He would have lain indefinitely in jail for want of bail at Frankfort as the consequence of an assault on him and its repulse by him (by a man named Adams), but for the friendly stand of Humphrey Marshall. But though he knew what he was about, he doubtless on the stand answered, as any truthful man must, that he had no knowledge except hearsay.

I have been profoundly astonished and moved at the disposition of later writers to belittle the early heroes of this republic, living when patriotism did not wear the dollar-mark. Even Sumner, in his Life of Jackson, is guilty of it. Having in my veins no drop of blood except of defenders of the colonies or the Union for two and a half centuries, it may be that I cannot feel as do the children of burners of "Blue Lights."

Respectfully, George Wilson.

Lexington, Mo., May 27, 1890.

ENGLISH WHIGS AND HARRISON REPUBLICANS.

To the Editor of The Nation:

Sir: In reviewing Mr. Lecky's 'England in the XVIIIth Century,' I find a passage which is well worth commending to Republican Congressional leaders:

"The conduct of the Whig Ministers in the years that immediately followed their great reform bill is well deserving the study of all political thinkers. Sir Robert Peel, who led the Opposition, at once accepted it. There were not wanting those behind the Whig Ministers who urged them passionately to meet this policy by the obvious party device of a further movement for organic change, and, availing themselves of a tide of public feeling, to attack the House of Lords, and to effect a complete transformation of the Constitution. Nothing in the whole course of English Parliamentary history is more deserving of admiration, nothing is more characteristic of the best traditions of English public life, than the firmness and patriotism with which the Whig leaders resisted the temptation, repressed the revolutionary tendency among their followers, and applied themselves to calming passions which were becoming dangerous to the historic framework of English government" (vi, 227).

No sooner does the Republican party obtain control of the legislative and executive branches of the Government than its leaders seek to perpetuate their power by measures which are decidedly opposed to the historic framework of our Government. The arbitrary House rules, the hasty admission of new States, the Federal Election Law, and similar measures of the present session, indicate that the Republican party can no longer maintain its boasted claim to the succession of Anglo-Saxon conservatism. If there are those who are still true to the old faith, I commend to them the words of Mr. Lecky.

Coles Van Vechten Veeder.

MALMSEY WINE.

To the Editor of The Nation:

Sir: In your review of Tozer's 'Islands of the Ægean,' in your last issue, you suggest "a blunder of an historical character in attributing the origin of Malmsey wine to the district of Monemvasia in the Morea, the fact being that it came from Malevisia, in Crete." I take the liberty, therefore, to call attention to the following citation given in the last instalment of the Century Dictionary, s. v. *Malmsey* (which name the editor derives from *Malvasia* or Napoli di *Malvasia*—Monembasia in the Morea):

"Upon that hyll is a cite called Malvasia, where first grew Malmasye, and yet doth; howbeit it groweth now [1506] more plenteously in Candia [*i. e.*, I suppose, Candia, or Crete] and Modena, and no where ellys." (Sir R. Guylforde, Pylgrymage, p. 12.)

Brockhaus, I see, asserts the same transference.—Very respectfully yours, J.

May 24, 1890.

Notes.

Stanley's rediscovery of the pigmies has prompted Du Chaillu to condense and rewrite his two early books of travel, making one volume, entitled 'Adventures in the Great Forest of Equatorial Africa and the Country of the Dwarfs,' which the Messrs. Harper will publish directly. They announce also a work on the French Revolution, in two volumes, by Justin H. McCarthy.

'The Royal House of Stuart' and 'Scottish National Memorials' are sumptuous illustrated volumes in preparation by Macmillan & Co.

The Religious Tract Society, London, announce for immediate publication, through their American agent, Mr. Fleming H. Revell of New York and Chicago, the following works: 'London Pictures,' in the "Pen and Pencil" Series; 'Modern Ideas of Evolution as Related to Revelation and Science,' by Sir J. William Dawson; and 'Home Handicraft,' by Charles Peters.

Scribner & Welford will be the American publishers of the Contemporary Science Series which Walter Scott of London is issuing. The next volume on the list is 'Sanity and Insanity,' by Dr. Charles Mercier, with numerous illustrations.

T. Y. Crowell & Co. will continue the translations of Julius Wolff's novels, begun with 'The Salt-Master of Lüneburg.' This will be followed by the historical tale of 'The Robber Count,' a very popular work in Germany.

Frederic Edward McKay and eleven associates of both sexes have put each a representative short story together under the title of 'A Round Dozen.' De Wolfe, Fiske & Co. will publish the collection in July.

Harper & Bros. have become the publishers of the Rev. James M. Ludlow's 'Captain of the Janizaries,' a story of the fall of Constantinople.

A year ago we praised the execution of Mr. W. H. Goodyear's 'History of Art for Classes, Art Students, and Tourists in Europe,' but could not include the poor and ill-printed process illustrations in our commendation. A. S. Barnes & Co. have just brought out a second edition, in which this defect has been very successfully overcome: to better plates, better paper and presswork have been given, and even particolored inks have been employed with a gala effect. The volume is now altogether clear, legible, and attractive.

The third edition of Mr. Griswold's 'Directory of Writers for the Literary Press, particularly in the United States' (Bangor, Me.: W. M. Griswold), reverts to the original title, qualified by the adverb *particularly;* for Mr. Andrew Lang, Mr. Rider Haggard, Prof. Bryce, Prof. Max Müller, Prof. Freeman, and many another British writer of note is to be found in the one alphabet. Mr. Griswold has abandoned the double columns for one broad one, and has introduced a great number of non-personal titles, such as the leading colleges (English and American), the leading periodicals, authors' clubs and societies, etc. Condensed information as to nativity, age, education, special attainments, and pursuits is given in Mr. Griswold's way, often with a reference to the first edition, which is fuller in bibliographical details. Finally, an abbreviated list of authors recently deceased enhances the value of this convenient book of reference.

Ginn & Co., Boston, issue an educational book under the title of the 'Best Elizabethan Plays,' edited by William Roscoe Thayer. The plays included are "The Jew of Malta," "The Alchemist," "Philaster," "The Two Noble Kinsmen," and "The Duchess of Malfi." The editor has expurgated the grosser passages and added foot-notes explanatory of the text—not many, but sufficient; and he also furnishes in an introduction brief sketches of the dramatists represented. The book is valuable as a means of making accessible specimens of the voluminous dramatists in a shape adapted for school classes as collateral reading.

Mr. Francis C. Sessions has taken advantage of a trip to Spain and Northern Africa to publish his impressions of the various places visited and their inhabitants in a little volume with the title 'In Western Levant' (Welch, Fracker Co.). Like his 'On the Wing through Europe,' which we lately noticed, it is disfigured by many errors. But if we cannot commend the contents, we can praise the attractive make-up of this book. It is charmingly illustrated by Henry W. Hall, and in general appearance compares very favorably with some recent productions of the French press.

Mrs. R. D. Douglass's 'A Romance at the Antipodes' (G. P. Putnam's Sons) disguises itself by its title. The "romance" is clearly put on, and the substance of the rather florid narrative is the description of a voyage from England to Australia, and the author's personal experiences in and about Adelaide, Melbourne, and Sydney. The ship's company is sketched with force and cleverness, and the incidents at sea—familiar enough, to be sure—are well told. Much may be learned also from this travelled American woman's impressions of the civilization so often brought up for comparison with our own; and if her observations are chiefly social and scenic (the color of Australian skies in particular taxing her powers of admiration and expression), she not infrequently sets down an economic fact worth knowing, though of a kind with which her sex seldom concerns itself.

The care bestowed by Mr. Louis Heilprin on his 'Reformed Primer and First Reader' (New York: *Babyhood* Publishing Co.) will not be apparent at first glance; nor will the distinction between his method and the common ones. For this reason we call the attention of teachers to his primer, being certain that they will at least be struck with the intellectual stamp of the one-syllable reading exercises. In this respect Mr. Heilprin has solved the problem of how to be intelligible (and, we believe, interesting) to infants without being babyish. He has also boldly discarded the allurements of pictures, thereby saving both expense and the trial of the eyes with glazed paper. The book is beautifully printed.

Part i. of volume ii. of the Final Report of the State Geologist of New Jersey has just appeared, cataloguing the minerals and plants of the small but rich area. This was the work on which the late Prof. George H. Cook was engaged at the time of his sudden death, and his letter submitting the report to the Governor, here printed, bears date of July 29, 1889, barely two months before he passed away. Mr. Frederick A. Canfield prepared the list of minerals, of which he says "the great number of species and varieties, the rare chemical combinations, the beauty, and the wonderful crystalline development" have made the localities where they abound world-famous. Mr. N. L. Britton, speaking for the flora, shows its divisibility, through topographic and geologic conditions, into a marked southern and northern, mingling at the terminal moraine of the great ice-sheet, as well as into a marine and coast group, and a fourth in the Delaware River valley. He makes no allusion to Prof. Cook's aim to procure for the report photographic representations of the finest trees in the State. The distribution of the plants catalogued is attested by the names of observers.

M. Ernest Legouvé, the French dramatist, is now living in the house in the Rue St. Marc, Paris, in which he was born eighty-three years ago; and perhaps the most interesting chapter of a little book of reminiscences which he has just published, 'Fleurs d'hiver—Fruits d'hiver: Histoire de ma maison' (Paris: Ollendorff; New York: F. W. Christern), is his account of this old house, built two hundred years ago, and now occupied by three generations of the same family. To those who are inclined to judge French family life and French character by a survey of current Paris fiction, often as false as it is foul, no better advice can be given than to read this pleasant little volume of chat, from which they can catch a glimpse of the qualities that have made France what she is and keep her sound at heart. Among the other entertaining passages is a description of Labiche and of his clever conduct during the war. Worth quoting is his response to a bluestocking who asked for his opinion of Shakspere: "Est-ce pour un mariage?" he returned.

By a curious coincidence there have just been published in Paris two books covering almost exactly the same field: one is 'Les Évolutions de la Critique Française' (Paris: Perrin; New York: Christern), by M. Ernest Tissot, and 'Les Princes de la Jeune Critique' (Paris: *La Nouvelle Revue;* New York: Christern), by M. Georges Renard. In each book five or six of the leading French critics are themselves criticised. M. Jules Lemaitre, M. Ferdinand Brunetière, M. Paul Bourget are considered in both books. M. Tissot, who is apparently a youthful recruit from Geneva, and who is more abundant in scientific phrases than the more Parisian M. Renard, considers also the critical work of the late Barbey d'Aurevilly, the late Émile Hennequin, and the late Edmond Schérer (who would have been more surprised than pleased to find himself in such company). M. Renard takes up the less arid writings of M. Anatole France and of M. Louis Ganderax. M. Tissot is obviously juvenile in his judgments, but he gives promise of developing a critical faculty worthy of serious attention. M. Renard is more mature and lighter in touch; his paper on M. Jules Lemaitre is a pleasant sketch to set beside that recently published by M. Anatole France in the second series of his 'Vie Littéraire.'

Parts 6 and 7 of the 'Handwörterbuch der Staatswissenschaften' (Jena: G. Fischer; New York: Westermann) contain the completion of

vol. i., numbering 1,060 pages, and closing the letter A, and the beginning of vol. ii., which starts the letter B. The publisher still promises that the work will be finished in five or six volumes, but from present appearances his prospectus will form no exception to the rule or the proverb. The alphabetical list of articles appended to the first volume once more calls attention to the liberal scale on which the work is laid out, as evidenced by the great number of lengthy treatises, contributed by no less a number of specialists. Although several of these were mentioned in our notices of previous instalments, it may not be amiss to enumerate briefly the most important titles of volume i., as follows: Joint-Stock Companies, 90 pages, by six writers; twenty-two titles, more or less closely connected with the labor question, are treated in 412 consecutive pages by more than thirty writers of various nationalities; Poor-laws, 130 pages, six writers; Emigration, 46 pages; Insurance against Old Age and Invalidation, 34 pages. The second volume will apparently not lag behind the first in this respect, for at the very outset it has an article on Banks and Banking of over 150 pages, by Nasse and several other writers. There are a number of brief biographical notices, among which the recent ones are of Edward Atkinson, Walter Bagehot, Michael Bakunin, and Ludwig Bamberger.

We have received the fifth number of Prof. Willard Fiske's modestly named 'Bibliographical Notices' (Florence). Together with the first and fourth, it forms a substantial supplement for the years 1578-1844 to Thomas W. Lidderdale's 'Catalogue of Books Printed in Iceland, 1578-1880, in the Library of the British Museum.' Notable in this instalment is the list on p. 23 of printed editions of rímur, those rhymed romances which have, since the Reformation, superseded both the saga and the skaldic lay in the affections of the less educated readers of Iceland. It is the only list yet compiled. There is another, on p. 11, of útfaraminningar, curious funeral memorials, frequently containing lives and eulogies of the deceased in addition to the sermon. To be remarked, too, are the full historical note, under title 84, on the so-called Jörgensen Revolution of 1809; and the titles (122-145) of the published records of the Althing, complementary to those entered in Nos. I. and IV. Prof. Fiske takes occasion, in a preface, to give a general description of his remarkable Icelandic collection, the basis of these supplements. He has three other 'Bibliographical Notices' in preparation, viz.: 'Studies in Icelandic Booklore,' and (turning from the Pine to the Palm side of his library) 'A Bibliographical Record of Lorenzo da Ponte of Ceneda,' and 'Works by Francis Petrarch printed in the Fifteenth Century: Texts and Translations.'

A Bibliography of Beaumont and Fletcher, by Alfred Claghorn Potter, distinguishes the Harvard University *Bulletin* for May.

In the Proceedings of the Trustees of the Newberry Library, Chicago, for the year ending January 5, 1890, there are intimations of a desire to come to an understanding with the circulating Public Library and the embryonic John Crerar Library as to the lines of expenditure and development, with a view to avoiding unnecessary expense in duplicate purchases. The experiment deserves to be made, and the conditions in Chicago are perhaps as favorable as they will ever be anywhere.

The Bureau of Education has just issued English-Eskimo and Eskimo-English vocabularies compiled by Ensign Roger Wells, jr., U. S. N., and Interpreter John W. Kelley, and the latter prefixes some ethnographical memoranda which show the deplorable moral condition of this barbarous people.

The *Pall Mall Gazette* sends us its shilling extra, an illustrated catalogue of the 'Pictures of 1890,' viz., of the three exhibitions now open in London. The process cuts vary a good deal in quality, but the convenience of having memorada of the Royal Academy, the Grosvenor, and the New Gallery in one volume will make the buyer of this pamphlet lenient.

In August, 1888, two English travellers, Messrs. Donkin and Fox, with two Swiss guides, were lost while endeavoring to climb one of the higher peaks of the Caucasus. No traces of them could be discovered by the search parties sent out by the personal orders of the Czar, and, the Russian officials being convinced that they had been murdered by the natives, it seemed likely that retributive measures would be taken by the Government. The President of the Alpine Club, Mr. C. Dent, and the Secretary of the Royal Geographical Society, Mr. D. W. Freshfield, were confident that the natives were innocent, and, in order to prevent any unjust punishment from being inflicted, these gentlemen with several companions made another search last summer for the lost mountaineers. An account of the expedition is given by Mr. Freshfield in the May Proceedings of his Society. For their guidance they fortunately had Mr. Fox's diary, the last entry of which gave the plans for the ascent of Dychtau. Mr. Freshfield's first step on reaching the Caucasus was to carefully survey this peak from a neighboring height, with a view of determining the route which the lost party would probably have taken. As the result, he led his party through a previously unexplored region, over glaciers, up the face of a precipitous cliff to the very ledge where the travellers had made their last bivouac. Here were their knapsacks, sleeping-bags, a revolver, and some of their instruments embedded in the snow and ice. There is a striking picture of this place, it may be added, in the *Alpine Journal* for February. With a few of these relics, "sufficient to satisfy friends, and to prove to the natives and officials what we had discovered," they returned, having accomplished a feat which is almost without a parallel. Mr. Freshfield's simple but graphic account is easily followed on the map which accompanies the paper, and is well illustrated by various views of the mountain and the network of glaciers which encircle it.

—In a note in No. 1274 of the *Nation* regarding John Connolly were corrected certain errors in Appletons' 'Dictionary of American Biography.' The mistakes regarding the career of that troublesome Tory betrayed neglect of original authorities on the part of the compiler. A similar negligence is palpable in the account of another Revolutionary John, John Glover. It is there stated that "Col. Glover was with Washington at Valley Forge." The truth is, that Glover never was at Valley Forge at all, and the compiler would have known that he never was had he ever read Upham's memoir of Glover, which he himself cites as the authority for his article. Washington was at Valley Forge at the utmost from December 19, 1777, to June 18, 1778. Where was Glover meantime? He was in Boston (where his statue now is), or thereabouts, fifteen days' journey by express from Washington's winter quarters. His brigade, or a part of it, was with Washington, but Glover himself had been detached on a special service, namely, holding in custody the captured army of Burgoyne, and he was detained on this business longer than was anticipated, even till summer in 1778. Washington wanted him at Valley Forge. Upham had the original of Washington's letter to Glover, dated January 8, 1778, saying: "I must desire that you will join your brigade as soon as possible." He needed him because Glover was the best disciplinarian in the Continental Army—an American Steuben. (The German martinet had not yet appeared.) Glover answered, January 24, that he could not come. He made him the same answer on March 29, April 10, and May 15. In the last letter Glover says that "when he entered the service in 1775, he had as good a constitution as any man of his age, but that it was now broken and shattered to pieces." (He was a martyr to insomnia.) But he adds: "I propose to set off for camp on the 1st of June, if I find myself strong enough to undertake the journey." He set out, but on the 28th of that month, ten days after Washington's departure from Valley Forge, was no nearer him than West Point, and remained there till ordered elsewhere on the 23d of the following month. Proof of alibi is seldom more conclusive than this.

—The useful applications of photography to astronomical research are by no means all made. Offering at first aid merely pictorial, the introduction latterly of very sensitive dry plates has greatly widened the outlook, so that now many of the most critical problems in astronomy of precision promise the happiest solution through the intervention of photography. Even such delicate work as stellar parallaxes may in the future be done by photographic means better, not to say more easily, than with the heliometer even. Excellent results have, indeed, already been reached. But the highly sensitized plates are especially hopeful in view of the possibility that the trails of the less bright stars may record themselves with even the small glasses ordinarily employed in transit instruments. Stellar transits could then be taken by photography, and the effect of that very annoying element in such observations, known as personal equation, would be practically wholly eliminated. Experiments in this line have been going on many months in both Europe and America, at first with no result but very complex instruments and disappointment. The Repsolds of Hamburg, foremost among the instrument-makers of the world, were the main experimenters in this direction abroad; but their first device, while capable of doing work apparently good, was in effect two instruments instead of one, and could not therefore be regarded as a practicable form. In our own country, Professor Pickering of Harvard, in conjunction with Professor Bigelow, has attained results which are very hopeful, and with an apparatus of exceedingly simple form. The ordinary reticle of the transit was first replaced by a small sensitized plate attached to a metallic frame which is capable of sliding up and down a very small fraction of an inch by the attraction of an electro-magnet. A bright star trailing across this plate would then record a broken trail if the circuit were so manipulated automatically by the clock as to make the plate move either up or down at the beginning of each second of time. Furthermore, every time a star crossed a transit thread, the broken line on the plate would be interrupted. On developing the plate and subjecting it to microscopic examination, it was found that the beginning and end of each second, and the breaks occasioned by the transit threads, were sharply defined and capable of precise measurement. But before this was done, it was necessary to fix the lines themselves on the

plate, and this was very cleverly done by holding an artificial light in front of the objective a few seconds, until the fogging effect should be just sufficient to bring them out. A few transits actually observed in this way with preliminary apparatus afforded results quite comparable with good chronographic work. The experiments need, however, to be repeated under better conditions, particularly with lenses specially figured for the actinic rays, and of focal length sufficient to give the greatest practicable length to the seconds-mark on the plate. Meanwhile, the Repsolds have greatly improved their own methods, also, and there is already encouraging reason for the hope that the sensible differences in stellar coordinates now existing in the work of standard observatories, and so perplexing to the practical astronomer, may become a thing of the past.

—The report of the Minister of Education in Japan comes to our table this year, not as a bulky volume in Japanese print, but in English, as a pamphlet of one hundred and sixty-one pages. It is for the year 1887. Unfortunately, in the copy sent us, the binder has dropped out a folio, so that we have only one-half of the conspectus of the totals of statistics. From this, however, we see that there are now in the public schools of the empire 62,372 teachers, of whom 56,836 are in the elementary schools. There are enrolled in all the institutions of learning 2,828,633 persons, of whom 2,713,391 are children in the elementary schools. In the other schools the numbers are: Middle, 11,835; Normal, 4,899; in all the others, universities, special schools, kindergartens, etc., 98,538. The empire is divided into 10,862 school districts, the total population being 39,701,594, and the children of school age numbering 6,740,929. Among the teachers are nearly two hundred Europeans and Americans. The fifty pages of carefully compiled statistics are of great interest, particularly as showing the solidity of the foundation of the educational system, its sound financial basis, thorough distribution of burden, and the vital hold it has upon the people. The Japanese reformers who in 1868 overturned the old state of things, which was noted chiefly for its repression of mental activity and its determination to keep the masses in ignorance, took as their motto, "Education is the basis of all progress." The whole report makes suggestive reading to those Americans who, between 1868 and 1874, wrought with the native authorities at the beginnings of the organization of this national system of education. We note the fact that the curriculum in the general common schools approaches very closely that of Western nations. In addition to the staples of reading, writing, and arithmetic, singing (according to the European scale of musical notes), sewing, gymnastics, as well as natural and political history, physics, and chemistry are taught in the middle schools. A sea-side laboratory near the point on Yedo Bay past which Commodore Perry "sailed into Japanese history," has been established for the study of marine life. The courses in the law schools are now three, in German, French, and English. Besides advanced courses of the arts and sciences useful in war or peace, in the university, there are commercial schools of high grade, schools of fine arts, music, and for the deaf and dumb, the blind, etc. The libraries and educational museums are surprisingly numerous and well-equipped, considering that these, as at present constituted, are the growth of but twenty years.

—Text-books are constructed on the Western models, and some of these are of a high order of merit. It is pleasant to see so numerously the names of young men who, having given a good account of themselves in the native schools of two decades ago, studied in or graduated from American schools or colleges. These have been steadily and patiently at work in the education department, joining experience to aptness and ability. They have acted as compilers, critics, inspectors, or judges of text-books and educational apparatus. The general excellence of the Japanese exhibit at the various international expositions, and the school equipment in actual working, is thus explained. In some cases it has been found best to call out spontaneous private talent and to stimulate native experts, by offering prizes of from one to three thousand dollars for manuscripts of text-books on history. It will be of high interest to foreign critical students of what in their national lore the Japanese accept as history, to see how far the spirit of inquiry will be allowed or suppressed. It is not yet safe to print in the vernacular anything which challenges the ancient fables or mythology, though a Japanese is free to do so in English. The imperial throne still rests on the tortoise of mythology and not on the solid earth of fact. Only a few weeks ago an editor was imprisoned for "speaking disrespectfully of Jimmu Tenno"; or, in other words, criticising the dragon-born hero who was canonized centuries after his supposed achievement. Even the date of his "ascension to the throne" and "the beginning of Japanese history" was fixed and promulgated no further back than A. D. 1872. In regard to the popularity of the various courses in the Imperial University of Tokio, the splendid crown of the national school system, that of law comes naturally first. This is the first year of Japan's new national life as shown in representative government, and the procedure of business and justice has been approaching the spirit and methods of Western countries during the past fifteen years. The School of Medicine comes next in favor, and after that the College of Engineering. "The importance of the study of literature seems as yet to be hardly felt by the public at large," and the same may be said of science, despite the ample and varied facilities of instruction. The total number of students in the University is 864. Its faculties include 47 native professors, 24 assistant professors, 31 provisional teachers, and 21 foreign professors. Somewhat after the model and with the general aim of the French Academy is the organization of twenty-seven eminent native scholars of Tokio, who publish a magazine, give lectures, and are compiling an encyclopædia of antiquities. At the end of the year under review, 19 students were sent abroad to study at Government expense, 12 of whom went to Germany. In a word, it may be said that this report shows that the educational transition in Japan keeps healthful pace with the industrial and political movements, and in so far augurs well for the future of the nation.

THE NEW ENGLISH DICTIONARY.

A New English Dictionary on historical principles; founded mainly on the materials collected by the Philological Society. Edited by James A. H. Murray, sometime President of the Philological Society, with the assistance of many scholars and men of science. Part V. Cast—Clivy. Oxford: Clarendon Press; New York: Macmillan & Co. 1889.

PART V. of the new Historical Dictionary begins with the most voluminous specimen of word history yet written, the history of *cast*. One hundred and eighty-three meanings of the verb are given, and their history traced through more than eight hundred quotations. For noun and verb together there are some twelve hundred quotations. It is not a word of the old English family, and seems never to have been thoroughly domesticated. It appears in English books at the beginning of the third century. Some figurative uses are among the earliest and have lasted longest: "1225, To kesten kang eien upon yunge wummenen," "1816, You have cast your eyes upon Miss Wardour." *Casting the head, caput cassare*, is as old, but we *toss* it now. "To cast light," "cast love" are early. *Cast* in the sense of 'fortune,' 'chance,' 'lot,' is very old, reminding one of Latin *casus*, as other meanings do of *casso*, *quasso*. It is a Danish word, however. The very earliest find seems to be in a Homily of 1200—"casteth ut that water," pours or drains out the water. Most of the meanings are older than Shakspere, Biblical or bookish, or technical—hunting, hawking, fishing, and war. Sixty-three are obsolete. The noun occurs twice in "Hamlet" and twice in the other plays of Shakspere, once in Milton, thrice in Tennyson. Ten of the quotations in Tennyson for the verb *cast* are casting of eyes and glances. There are fifty-two in all. This article is a booklet by itself. It is headed with a sort of table of contents.

There are other articles approaching this in bulk and surpassing it in interest and importance, and in the difficulty of the discussions involved. That on *church*, for example, has every kind of interest known to linguistic study, and if its compounds be taken with it, the whole article is longer than that on *cast*. It is traced back in quotations to the earliest Anglo-Saxon, and then by argument to the Greek of the New Testament. Many difficulties, linguistic and historical, lie in the way—difficulties that have staggered the greatest etymologists. Grimm himself thought it came from *circus*, a place of assembly. A survey is required of many languages and many peoples through many centuries. Nowhere is the greatness of this greatest of dictionaries more eminent. Its all-pervading researches, its command of the laws of language, the exactness and clearness and fulness of its statements, both of fact and argument, are here shown at their best. The difficulties had arisen in the attempt to explain how missionaries or other spread of Christianity should have carried the word to the Germanic tribes at the dates and in the forms in which we find it. The solution is found in the discovery, to which the laws of phonetic change lead, that the Germanic tribes were in possession of the word at an earlier date than the introduction of Christianity among them. Careful historic research has gathered abundant proof that the phonetic deduction is correct. The Germans were familiar with these buildings as objects of pillage centuries before they had any of their own, and they called them by the name used in the Greek provinces.

The classification and exposition of the different meanings of the word *church* in the English language, from the earliest Anglo-Saxon to the latest American, with the collections of authoritative quotations from authors of all periods, are admirable. Dr. Murray presents his thanks to many scholars, etymologists, and ecclesiologists who have interested themselves in this article and have contributed to it by examination of the original data, by communication of fresh references, or by important criticism and advice. No doubt each of these scholars and a thousand other etymologists and

ecclesiologists will desire to thank Dr. Murray for the perfected article.

These articles are good specimens of the whole number, fair specimens in regard to learning, and acuteness, and scientific thoroughness. There are 8,371 words treated in the 456 pages, beginning with *cast* and ending with *clivy*. There are 5,966 main words, heads of articles. Hardly one of these is without novel facts for the student of language. The article on *cat* rivals that on *church* in variety of facts and skill in presentation. There are more cats than churches, and the original is more obscure. Many a big book has been made with a hundredth part of the research which is embodied in this article. The other great historical dictionaries—Grimm, Littré—do not rival it. Grimm, however, has some interesting paragraphs of an encyclopedic kind giving other names for the cat: *roller*, *niez*, *rammler*, *mull*, *bizi*, *minz*, *maudi*, etc., etc., and proper names in fables and beast epics and mythology: *Tibert* (*Tybalt*), *Peter*, *Tom*, *Kunz*, *Heinz*, and the like. Dr. Murray follows the word *cat* in all sorts of applications to persons and things; but, most likely, does not think it in his beat to follow the animal through its namings. He might, perhaps, have thought of some philological category under which he could bring in the cat names—synonyms, for example? The list of Grimm might easily be lengthened: *puss*, *tab*, *tib*, *gyb*, with their diminutives, are not mentioned in it.

New facts about *catkin* are here, and *cattle*, *chicken*, *Charles's Wain*, *cayenne*, *claret*, *cherub*, all about *cherubin*, *cherubims*, and all the forms. This number, indeed, including all words beginning with *ch*, is eminently learned with classic learning. The words are largely the familiar words of common scholarship, derived from Latin or Greek, and thrice-handled by etymologists. A considerable number of persons will be able to appreciate it; they will recognize it as the high-water mark of dictionary work as yet.

Opening Bartlett's 'Dictionary of Americanisms' in the region of *cast*, to compare it with Dr. Murray, we find that *castoria*, a preparation of castor-oil, is not taken; *castorial*, a "nonce-word" from J. R. Lowell, takes its place as a recognition of America: "A graduated arc, by which he meted out to each his rightful share of castorial consideration." What relations *castor*-oil may have had with Mr. Lowell's *castor*, Dr. Murray leaves uncertain. He does not think the Webster derivation of *castor*-oil from *agnus castus* worthy of mention.

Catawampous and its tribe are naturalized in England as slang, it seems. *Catechise*, a New England vulgarism for *catechism* in Bartlett, appears in Murray in a series of quotations from 1552, all right to De Foe's time. *Caucus* has a full history. It is a lively word in England with a host of descendants little known in America—*caucusdom*, *caucuseer*, *caucusified*, and the like. It is traced back by quotations to 1763 (John Adams's Diary) and by inference to 1624 (John Smith's Hist. Virginia), when "*caw-cawaasoughes*" are mentioned as elders of a tribe of Indians. This Dr. Trumbull recognizes as an Algonkin word, *cau'-cau-ass'u*, councillor, and the probable original of *caucus*. Dr. Murray does not quote the intermediate forms *cau'carouse*, used also by Smith, and *cockarouse*, 1705 (in Beverly's Hist. of Virginia), mentioned by Dr. Trumbull in the Transactions of the American Philological Association for 1872. *A caution*, a matter of astonishment, is well known to Dr. Murray: "His wife was what the Yankees call a 'caution';" so also *cavort*, *cayman* with a venerable pedigree; *cent*, *centennial* (with American uses), *Centennial State* (Colorado); *centreboard* (with no mention of prizes won); *certain*, *certainly* (quotations back to 1330, *certain sothe*, *certain sure*, 1500); *chained lightning*; *a long chalk*; *chaparral*; to *chaw up*. *Chaw* was current in polite use from 1530 to 1734. "It is now esteemed vulgar, and is used of coarse or vulgar actions, as 'chawing' tobacco." *Chebacco* boat, thought by Bartlett to be named from Chebacco Parish, Ipswich, Mass., is thought by Dr. Murray to be another form of *Chebec*, *Xebec*, Portuguese *Xabeco*, pronounced *Shabeco* (quotations to 1762). Here is *checkerberry*; *passing in one's checks*; *cheek*; *cheese*: "If greenbacks ain't not just the *cheese*" (Lowell), in Murray, Anglo-Indian slang, with no American associations. They do not seem to have heard in England of Dr. Mary Walker's *chemiloon*, nor of *chicken-fixings*. But *chigoo*, 1691; *this child*, meaning *me* or *I*; *chincapin*, *chipmunk*, *chowder*, and *chowder-beer*, are all here; so *clam-chowder*, *clam-bake*, *clam-shell*, "shut your *clam-shell*." *As close as a clam* is called a New England phrase of contempt. Dr. Murray does not know the clam as the type of happiness, its most cherished aspect to the overworked New Englander. The readers have overlooked Saxe's sonnet, "Dum tacent *clamant*":

> "Albeit men mock thee with their similes,
> And prate of being 'happy as a clam.'"
> *Duyck. Cyc. Am. Lit. ii, 630.*

Clever and its derivatives are in full force, with many quotations, one as far back as 1220. A very large number of American uses of words not in Bartlett are specified and illustrated. It is evidently the purpose of the editor to give thorough study to the usages of the United States, and a full exposition of the English language in America.

MR. HOWELLS'S LATEST NOVEL.

A Hazard of New Fortunes. By William Dean Howells. Harper & Brothers.

'A Hazard of New Fortunes' differs essentially from those novels by Mr. Howells which might be arranged in a series appropriately entitled 'Boston Under the Scalpel,' or 'Boston Torn to Tatters,' or 'The True Inwardness of Boston.' The difference is not in motive, for, from the beginning, he has adhered uncompromisingly to the only motive which he considers worthy, that of depicting life as he sees it, as it appears to his outward and inward vision; it is shown in a wider outlook, a deeper insight, an expansion of sympathy, and especially in a sensitiveness to emotional tragedy the actuality of which he has hitherto almost denied. The novel is perhaps no cleverer than 'Silas Lapham' or 'A Modern Instance,' but it is greater in just the same way that Mr. James's 'Princess Casamassima' is greater than his sharpest satire of Boston society or wittiest international episode. Both novels are the expression of observation of the multiform life of great cities, and of sufficient self-identification with it to produce a faithful and vivid picture. In London Mr. James heard and understood the cry of humanity for something better than it has or knows—a cry that gathers volume from age to age, and tones from the four winds of heaven. Mr. Howells has heard the same cry in New York; he has caught its shrill notes, its weak notes, its false notes, and has recognized the unbroken undertone of tragedy and sorrow. Seeing how lucidly and kindly he can translate the meaning of some of its innumerable vibrations, one regrets that he has devoted so much time to the inconsequent prattle and finished irony of ladies and gentlemen from Boston, despite the amusement which they have afforded.

The action of the novel centres about the office of the magazine *Every Other Week*, and almost all the characters have an artistic, literary, or financial interest in that publication. There is, first of all, Fulkerson the "organizer," the life and soul of the enterprise, and the life, though not the soul, of the story. Comment upon him could only wrong him. In almost every chapter he describes himself, and here, if ever, the style is the man. The people whom, in his own phrase, he "ropes in" for the service, form a group which could be brought together naturally in no city except New York. All are, for several reasons, worth describing, and with the description there is absolutely no fault to be found, excepting the uncouth sounds the Virginia girl utters when she is supposed to be talking English, or at least English as it is spoken in Virginia. The author's weakness in dialect may yet stir up contention about his right to be called an American novelist.

He has not by any means cut away from the Bostonians, for two of them, our old acquaintances, Mr. and Mrs. March, are the people who take the 'Hazard of New Fortunes' by transplanting themselves in New York, he to edit *Every Other Week*, and she to exercise conjugal censorship over a being who, possessing a flexible intelligence without the prop of rigid principle, could not long withstand alone the pressure of the wicked world. Mrs. March is not improved by a change of base. It is doubtful whether translation to Paradise could improve that sort of woman when once she had reached her prime. What she was born and "raised," she is immutably—illogical, opinionated, impervious to chaff, affectionate and generous only when selfish and cold impulses are corrected by perceptions trained to distinguish between the disagreeable and the admirable; most uncomfortable to live with and irritating to read about. In spite of her guardianship Mr. March does change. He has the advantage of spending his days away from her, in the office of *Every Other Week*, under the tutelage of Mr. Fulkerson, who is capable of demoralizing Virtue herself should he determine that the process would advertise any "little spec." in which he had immersed his buoyant soul. It is March who sees the picturesqueness of the city streets, and likes them notwithstanding their frequent filth and ash barrels, their heterogeneous architecture, and their intermittent hideousness. It is he who feels his blood flow faster as he brushes the restless crowd, so diversified in character that it appears characterless. It is he who makes use of an incomparable opportunity to estimate the worthlessness of wealth in hands incompetent to use it, offered by old Dryfoos, the "natural gas" potentate and Fulkerson's "backer." It is he whose imagination is warmed by acquaintance with Conrad Dryfoos, "a man well on towards thirty, in whose heart there had never been left the stain of a base thought." Nothing remarkable in the external life of New York, from the Battery to Harlem, escapes March, and his generalizations about its complex social organization are on the whole keen and just. Many of his reflections are worth quoting and remembering. What he says about the much-vexed question of the good-society basis in America is especially so. He is coming home from a party to which the hostess, in a spasm of social benevolence, has invited the Dryfoos girls. Mrs. March is, as usual, censorious.

"Such people as the Dryfooses," says March, "are the raw material of good society.

It isn't made up of refined or meritorious people—professors and littérateurs, ministers, musicians, and their families. All the fashionable people there to-night were like the Dryfooses a generation or two ago. I dare say the material works up faster now, and in a season or two you won't know the Dryfooses from the other plutocrats. *They* will—a little better than they do now; they'll see a difference, but nothing radical, nothing painful. . . . And that's the kind of people that form our nobility; there's no use pretending that we haven't a nobility; we might as well pretend that we haven't first-class cars in the presence of a vestibuled Pullman. . . . And you may be sure that if the plutocracy that now owns the country ever sees fit to take on the outward signs of an aristocracy—titles and arms and ancestors—it won't falter from any inherent question of its worth. Money prizes and honors itself, and if there is anything it hasn't got, it believes it can buy it."

Altogether Mr. March is much improved by his New York experiences. He discards slowly the cultivated habit of shirking unpleasant facts, but the seriousness and passion of life force themselves upon him, and he bids fair ultimately to despise the comfortable years spent in Boston largely devoted to polishing cynical epigrams which embody a vast and perverse ignorance of matters unattractive to persons of nerves and taste.

Through March's reflections and Fulkerson's sallies it is easy to see that the contrasted wealth and poverty of New York open Mr. Howells's ears to the voice of the Socialist, and that he vaguely dreams of a day when, as Fulkerson says, all will be working for the common good, instead of splitting up into as many cut-throats as there are able-bodied citizens. He, however, suggests no specific for wrongs or grievances. Probably the question is too appalling, and he can see no speedy relief for miseries that must endure until "that smooth-faced gentleman, tickling Commodity," departs into limbo, and the fair earth is peopled by regenerate man.

SMITH'S RELIGION OF THE SEMITES.—I.

Lectures on the Religion of the Semites. First Series: The Fundamental Institutions. By W. Robertson Smith, M.A., LL.D., Fellow of Christ's College, and Professor of Arabic in the University of Cambridge. D. Appleton & Co. 1889. 8vo, pp. xii, 488.

Prof. Smith's work marks an important turn in the method of treating the Semitic, and especially the Hebrew, religion. Up to a few years ago, no heathen Semitic religious system, not excepting the Phœnician (which Movers discussed at great length), had received satisfactory attention. Selden's great learning had collected the classic notices of the gods of Syria, and Sale, in the Prolegomena to his translation of the Koran, had gathered much of what Arabic authors say of the old Arabian religion; but Selden, Sale, and Movers were hampered by the double lack of sufficient data and of a scientific method. The first of these lacks has been partly supplied within the last half century by the discovery of the Babylonian-Assyrian literature, and of numerous Phœnician, Aramaic, Arabic, and Sabean inscriptions, and by exacter researches in all Semitic material. The results obtained from these recent acquisitions are found in the works of Renan, Lane, Tiele, Baudissin, Bäthgen, Wellhausen, Sayce, Rawlinson, A. Müller, Pietschmann, Goldziher, and others. By all these writers, also, the historical comparative method of inquiry has been more or less employed. A new direction has been given to the treatment of the history of religions by the application of the doctrine of evolution, in the works of Tylor, McLennan, and others, to the life of primitive human societies. The point which has been distinctly brought out by these writers is, that the origin of social and religious ideas and customs is to be sought, not in the developed systems of comparatively late civilizations, but in the crude conceptions of savage life.

Prof. Smith has undertaken to apply this method of inquiry in the Semitic field. His work on 'Kinship and Marriage in Early Arabia' has already been noticed in these columns; he now proposes to make a full investigation of the religious ideas of the Semitic peoples as far as the materials permit. The occasion of the present work was the invitation of the Trustees of the Burnett Fund to deliver three courses of lectures at Aberdeen, in the three years from October, 1888, to October, 1891, on "The primitive religions of the Semitic peoples, viewed in relation to other ancient religions and to the spiritual religion of the Old Testament and of Christianity." It may be taken as a refreshing sign of progress in Scotland that the man who, not many years ago, was tried in the courts of the Free Church on the charge of applying the principles of historical research to the Old Testament, is now invited to expound these principles, in a perfectly free and unhampered manner, in the same field of investigation. The present volume, containing the first course of lectures, deals with the fundamental institutions of the Semitic religion, under the general heads of the nature of the early religious community, the relation of the gods to their worshippers and to holy places and things, and the origin and development of sacrifice. The succeeding volumes will discuss the nature and origin of Semitic deities and myths, and the part which Semitic religion has played in universal history.

The reasons which Prof. Smith gives for beginning his investigation with institutions rather than dogmas appear to be sound. Strictly speaking, indeed, dogma or creed underlies all institutions and ceremonies, for even the most primitive savage community bases its religious procedures on some belief respecting the supernatural or extra-human constitution and government of the world. But this belief was in early times, and even down to a comparatively late period, fluid, unorganized, unformulated, not enforced by the authority of a settled dogmatic system; the essential thing in early religion was the due observance of rites and customs, obedience to which was regarded as constituting piety, and was believed to secure the favor of the gods. A man might interpret the ceremonies as he pleased, holding his own opinions concerning the nature of the deity and the origin of things; and it is from the ritual that we have to learn the dogma, since primitive communities produced no works on systematic theology. It is important to bear in mind the possibility and probability of diversity of dogmatic views in connection with unity of ritual, in order, for example, to understand the variety of theological opinions held by the early Israelites. The plan pursued in these lectures seems, therefore, to be not only reasonable, but, in a sense, necessary.

The propriety of the assumption of "a Semitic religion" will not be called in question. The racial unity of the Semites is fairly established by linguistic and other considerations, and the religious unity, made probable, though not absolutely certain, by the race relations, comes out more and more clearly from a comparison of the customs and ideas of the various Semitic peoples. We may therefore reasonably expect to find the usages of one section of the Semitic world illustrated by those of all other sections. The degree of culture must of course always be taken into consideration; like strata of development must be compared together. For the primitive history of religion, recourse must be had to primitive memorials of custom and belief. These are not necessarily to be found in what we commonly call the most ancient civilizations and literatures, since it is not always in them that we find the expression of the simplest social condition (it being assumed that religious crudeness and undeveloped social life belong together). Some readers may be surprised that Mr. Smith has not gone to Babylonian sources for the history of early Semitic institutions, the Babylonian literary monuments being the most ancient records of Semitic life, and indeed in the whole world rivalled in antiquity only by the Egyptian. But it must be remembered that even these earliest records present a comparatively developed phase of society and religion. They exhibit an established monarchical form of government and an organized pantheon; this is a very great advance beyond the primitive nomadic life, and presupposes a long period of social and religious growth. It is otherwise with the Arabs of the desert, who seem never to have reached a settled and organized social life. We read, indeed, in the Assyrian annals of a king of the Arabians conquered by Assurbanipal in the seventh century before the beginning of our era; but such a kingdom, situated in the north of the peninsula, need not have affected the civilization of the desert tribes; these, when they first appear in the native literature, in the sixth century of our era, show no traces of a monarchical constitution; the kingdom of Saba in the south had its separate history and religion, and is to be carefully distinguished from the wandering communities of the interior. It is among these last that the most primitive Semitic religious customs seem to have been preserved. Our author is therefore fairly warranted in seeking his material in the Arabian desert rather than in Babylonia. He by no means, however, confines himself to this source, but finds his illustrations wherever primitive ideas seem to have maintained themselves, even in much later stages of civilization. While looking especially to the Semitic field, he cites also a number of Greek and Roman religious customs and ideas, and thus makes his work a contribution to the general history of religion; he follows out, in fact, only in more detail in a narrower area, the lines of investigation laid down by Tylor, McLennan, and Lang.

Mr. Smith accepts and applies, but does not undertake to demonstrate, the theory of the history of social life advanced by these writers. It may be substantially summed up in the terms "totemism" and "tabu." The primary religious fact is the blood relationship between the god and his worshippers. Each tribe or clan had its own deity who was its kinsman, interested, in friendly and human fashion, in all its affairs, its protector against enemies, and sharer in all its fortunes. The special phase of relationship varied with the social organization—the god was father or mother or brother, chief or king. This relationship was expressed in proper names of men, such as *Abibaal*, *Abiel*, "Baal, El is my father"; *Ahimelek*, *Ahijah*, "Melek, Jah [that is, Yahwe] is my brother," and many others. In more advanced social states the worshipper was the servant or the client of the god, whence the names, *Ebedmelek*, *Obadiah*, *Gerastart*, *Gerelos*, etc. Prof. Smith has made an admirable study of the name Baal, in which he shows (Lect. iii.) that the Baals are agricultural deities, connected with land that does not require irrigation, land watered by underground springs; they are thus the fertilizers of

the ground, the owners of its products, and as such entitled to offerings of its natural gifts. Each district might have its Baal; that this title was given by the old Hebrews to their national deity is shown by proper names (as those of Saul's son and grandson, *Ishbaal* and *Meribbaal*, I. Chron., ix., 39, 40), and by the discourse of the prophet Hosea (Hos. ii.) in which the corn, wine, and oil ascribed by the Israelites to the Baals, are said to have been given by Yahwe.

Another point of interest brought out in these lectures is the difference between gods and demons. The probability is that no such distinction between classes of supernatural beings existed in the earliest times. All objects of nature alike, animal, vegetable, and mineral, were at first conceived of as living and powerful for good or for evil, according to circumstances; all were alike revered and worshipped; no ethical or other distinctions were made among them. Even in later times deities were often harmful and hostile. The Hebrews for a long time ascribed bodily and mental plagues to spiritual emissaries of their national deity. The difference between god and demon was not that between helpfulness and hurtfulness—it was a matter of clan-relationship. Those extra-human beings with which, for whatever reasons, the clan formed relations and came to feel kinship, grew in process of time to be its deities, its familiar friends among the supernatural powers; while those which stood aloof from the life of the community were looked on as strangers and enemies. The aloofness of such beings might arise from the fact that they dwelt in noxious or otherwise unfriendly regions, or from their identification with other communities, or from other causes; in any case, the essential consideration was that they were not kinsmen. One of these points of view is illustrated by the Old Testament application to foreign deities of a term (*shed*) which is intended to express hostility. Another is found in the Arabian *jinn* (genii), which Mr. Smith plausibly considers as originally the deities of unfrequented places, and to be identified eventually with various sorts of wild animals. However, the *jinn* are not to be regarded as without exception malignant, as our author seems to say (p. 122): he himself mentions the Arab view that medicinal waters were inhabited by them (p. 153), and the later Arabic folk-lore recognized a class of *jinn* who were good Moslems, having given in their adhesion under the prophet Solomon—a form of representation that is intended to account for helpful members of this category of beings.

The author has collected much valuable material respecting the abodes of the gods, sanctuaries, natural and artificial, and holy waters, trees, caves, and stones. In the beliefs connected with these he finds evidence that all such natural objects were regarded as instinct with life, and the anthropomorphic legends he looks on as productions of a later time of reflection. If Atargatis plunges into the sacred pool at Ascalon, or Astarte descends into the river at Aphaca in the form of a fiery star, these stories mean only that the waters in question were believed to be endowed with life, in explanation of which the presence of the goddesses was invoked by a later generation. The bearing of this view on the theory of astral myths is obvious. Mr. Lang has gone over the same ground, and Professor Tiele of Leiden has replied (in the *Revue de l'Histoire des Religions*) in defence of the solar-myth hypothesis. In so obscure a subject reserve is becoming. It has come to be widely felt that Professor Max Müller and his pupil, Sir George Cox, and others have often passed the bounds of discretion in their application of the astral theory, and the divergent and contradictory explanations of the same legend given by different writers have tended to bring the method into discredit. Whether this other hypothesis will account satisfactorily for the facts remains to be seen; meantime it furnishes a simple explanation suitable to the stadium of social development at which the legends appear to have originated. Mr. Smith brings a number of his illustrations in this part of the subject from the Hebrew Scriptures.

Harvard Graduates whom I have Known. By Andrew Preston Peabody, D.D., LL.D. Boston: Houghton, Mifflin & Co. 1890.

Dr. Peabody has sketched in this volume the lives and characters of several representatives of the men of the "elder day" in New England in whom the public spirit, the moral worth, and the Christian conscience of the community were more or less illustrated and effective in practical life, though few upon his list achieved any lasting fame among the great men of the country. He confines his record to those who were either benefactors of Harvard College or members of one at least of its governing boards. He begins with two men whom he knew in his boyhood at Beverly, both of whom founded professorships that became illustrious; Dr. Fisher being the source of that held by Prof. Asa Gray, and the Hon. Nathan Dane of that held by Judge Story. The repute of these men was local, but the record of their careers is perhaps the more valuable on that account, because they are complete examples of the ordinary "leading man" in the New England communities of a century ago. After these we find a long list of clergymen and scholars and men of practical affairs: John Pierce, the Brookline minister, who attended sixty-three out of sixty-four successive commencements, and was ambitious, if at all, to be the oldest living graduate; John Pickering, the editor of the first dictionary of Americanisms and of the first Greek-English lexicon in America, founder of the Oriental Society, and altogether a foremost scholar as well as an able lawyer; William Wells, the first publisher of an American Cicero and other classics; William Jenks, the first city-missionary of Boston; Judge White, the reformer of the Probate-Court system; Dr. Lowell, the father of the poet, whose work among the poor negroes of Boston is specially mentioned; Dr. Nichols, the Portland divine, whose letters and fragmentary remains suggest in what haven the men of poetic feeling found refuge in those unpoetical days; Presidents Walker and Sparks, Mayor Eliot, George B. Emerson, the teacher, Senator Silsbee, Dr. Palfrey, and others—a long and honorable roll. Indeed, it would be hard to find a volume in which such a group of able workers could be matched in respect to the results of life still existing and operative as the fruit of their charitable, executive, and scholarly labors; and their now fading memories have a fervent eulogist in the author, who admires in them the ideal which he has illustrated in himself as well.

Among the biographical and other matter is scattered much personal reminiscence, including details of their appearance, anecdotes, and curious items of information in respect to the life and manners of the times, particularly in the College. The volume concludes with sketches of the first two presidents, in an appendix, their lives having been omitted from Sibley's 'Harvard Graduates' because they were educated in England. Though the interest of the volume is mainly for Harvard men and for the local annals of eastern Massachusetts, it is a valuable memorial of the public zeal which is the main element in the New England tradition now so widely spread over the land. If we miss anything, it is what Dr. Peabody's 'Harvard Reminiscences' occasionally failed to supply—a firm moral judgment of public actions. This would, indeed, have disturbed the preacher's uniform tone of post-mortem eulogy, but would have shown the limitations of Christian profession and philanthropy in the period commemorated.

The Promotion of General Happiness: A Utilitarian Essay. By Michael Macmillan. London: Swan Sonnenschein & Co. 1890.

This book opens with a blunder. It is a misleading statement of the utilitarian position to say that "virtue itself would not be desirable unless it promoted the happiness of the world." As the author himself elsewhere observes, virtuous action means action productive of happiness; and the proposition that action productive of happiness would not be desirable unless it produced happiness, is, to say the least of it, an awkward statement. The confusion of thought seems to be like that of the New England divines who regarded a willingness to be damned for the glory of God as necessary to salvation. Explanation may remove the confusion in both cases, but the need of explanation is itself objectionable. But it is not very probable that utilitarians will ever be understood by their opponents until they consent to adopt Paulsen's suggestion, and substitute the word teleological for utilitarian.

The aim of this author, however, is not to discuss the theory of morals, but to determine the conduct which utilitarianism prescribes upon particular occasions. In this aim he seems to us in the main unsuccessful. The difficulties of the task which he has set himself are not only far greater than he supposes, but are to a considerable extent insuperable. The conditions of human existence are so fluctuating that conduct which seems right to-day may be proved wrong to-morrow; and while the great issue between the pessimists and the optimists is undecided, the solution of a great many minor problems must be postponed. Again, the assumption that one human being is to count for as much as another, while necessary for theoretical purposes, is so far from the truth that no particular act can be justified by it. Every case must be decided by itself, and only omniscience could lay down general rules of practice that would not be subject to exceptions.

As to the special cases examined by the author, we find our own conclusions in almost every instance opposed to his. We cannot admit that the inventions of printing and of the steam-engine have not resulted in a balance of happiness, or that English laborers are not so well off now as in the days of Henry VIII., or that the progress of medical science has not been a benefit to the race. We regard as worthless the statistics by which the author claims to prove that "the average of human life is no higher now than it was in the days of ancient Greece and Rome and in the middle ages." And we flatly deny that "the utilitarian is bound by his principles to promote the cause of total abstinence by all possible means, and especially by becoming himself a total abstainer, as that is the most effective way of promoting the cause." Some of the arguments used in support of these conclusions are valid, and some are not; but in every instance arguments are omitted without which no positive conclusions are attainable. Regarded as an

exercise in casuistry, the book is not without interest and value, but as a guide to right conduct we cannot recommend it. It is often suggestive, but it is not satisfying.

A Primer of Phonetics. By Henry Sweet, M.A. Oxford: Clarendon Press; New York: Macmillan. 1890.

THIS Primer is, according to its author, "intended to supply the double want of a new edition of his 'Handbook of Phonetics' and of a concise introduction to phonetics." In both of these capacities it will meet with an eager welcome from phoneticians.

Considered as a revised 'Handbook,' it shows, on the whole, rather the promise of progress than any great actual improvement. Mr. Sweet retains the Bell vowel-system, but he declares in his preface that in so doing he "by no means pledges himself to rigid conservatism." While "narrow" and "wide" are defined almost exactly as before, the statement is added that the "distinction between narrow and wide is not so clear in the back vowels." The movements of the soft palate are, unfortunately, still left out of account; in fact, the function of closing the nasal passage is ascribed, on pages 8 and 19, to the *uvula*. Rounding is somewhat inadequately treated; on the subject of "inner rounding" the author expresses himself more cautiously than in the 'Handbook.' The definition of "mixed vowels," on page 13, is misleading. Some American-English and Irish-English varieties of pronunciation appear in this 'Primer.' If the name "American" is given to peculiarities that are limited to a few States, the fault lies rather with our philologists than with Mr. Sweet. On page 15 occurs the expression, "the Irish and American pronunciation of *but*." Now, at least three entirely distinct pronunciations of *but* are to be heard in the United States, and there is certainly one Irish *but* that is different from them all. The Bell pigeon-holing system is probably to blame for the statement, on page 73, that "in American-English" the vowels in *bird* and *come* are identical. In treating of the "New York" pronunciation of words like *earth* and *bird*, Mr. Sweet has overlooked the important fact that the vowel is rounded. On page 76 one variety of American *o* in *not*, the "low-back-wide-unrounded," is not mentioned.

An examination of the 'Primer,' with regard to its merits as a "concise introduction to phonetics," shows that it is probably the best text-book available for English-speaking beginners. It contains a new and valuable introduction, and is shorter and clearer than the 'Handbook'; the chapter on the "Place of Consonants" is now about the only one that is hopelessly complicated. The most striking innovations are the introduction of the modified "Visible Speech" alphabet used in Sweet's 'History of English Sounds,' and the substitution of Latin and Greek 'Specimens' for Dutch, Icelandic, Swedish, and Danish. The Latin and Greek pronunciations given here will do for school purposes, but (excepting, perhaps, the description of Latin *m*) they have no great scientific value. In the selection from Cicero, on page 105, *abutere* is improperly accented. Of the two modern foreign languages discussed, the French receives better treatment than the German. The German diphthongs, particularly *ei*, are analyzed in a very peculiar way. The pronunciations of *tag* are given, on page 98, as *tāch* and *tāk*, instead of *tăch* and *tăk*. Here, again, the inadequacy of the Bell scheme shows itself: the German *a* claimed by most German phoneticians is not mentioned at all, and French *a* in *patte* is put into the same box as English *a* in *father*. If *bague* were pronounced according to the spelling on page 89, it would sound like *bâgue*. In the "Romic" version on page 92 the representation of nasality by the *ng* sign is unfortunate. As for the "Visible Speech" notation, it is, in spite of the confusion caused at the outset by the use of the consonant symbols before they have been explained, a great deal more intelligible than the letters used in the 'Handbook'; but throughout the 'Primer' altogether too much space is devoted to an attempt to make this alphabet perform, with the aid of countless perplexing "modifiers," something that it can never properly do—namely, express all the delicate shades of pronunciation in all languages. As a rough universal alphabet, or as a phonetic notation for one language at a time, the "Visible Speech" signs may, with some modifications, do excellent service; but, for the perfectly accurate representation of all sounds, nothing but an analphabetic system similar to that devised by Jespersen can suffice.

Essays and Studies, Educational and Literary. By Basil Lanneau Gildersleeve. Baltimore: N. Murray. 1890.

PROF. GILDERSLEEVE has collected in this handsome, if somewhat unwieldy, volume the more important of his contributions to periodicals during several years. The subjects are divided between education and the special studies of a classical scholar. Education itself is discussed only with regard to the place held in it by classical literature and the ideal which the professors of that literature should seek to develop. This pervading classicism gives individuality to the book. The endless controversy between the ancients and the moderns, the humanists and the naturalists, seems to be now at a lull, and we shall not take the occasion for fresh agitation. Those who are in search of arguments upon the conservative side will find a good array of them in these essays, but the more important matter in the educational portion deals rather with the ways and means of American scholars in philology, and the relation between grammar and the æsthetic interpretation of the classical authors. This last topic is novel, but we doubt whether the combination of the grammatical interest with the poetic insight is common enough to repay examination of the results which might follow such a union in the person of a philologist. Nevertheless, these educational essays are many-sided in interest and not without originality in the point of view, and the method of observation betokens a self-active mind.

The more attractive essays are upon some out-of-the-way topics in the survey of a well-read scholar. There is a paper, of the lighter sort, which represents the playfulness of the antiquarian littérateur, upon the probable character of Xantippe and the domestic relations of the Socratic household. Learning is not light of touch or agile in motion, but the fun in this paper is preëminently fun for the learned, and the author accomplishes what he set out to do. Much more to our taste are the essays upon Julian—one of the most brilliant subjects in the later Roman cycle—and upon Apollonius of Tyana, who is described as a Cagliostro of antiquity, and very severely snubbed and exposed—with a hand so heavy, indeed, as rather to excite our pity for the impostor than to arouse the scorn and reprobation which the author feels welling within him. Quite the best of all in the volume is the excellent résumé of the works of Lucian, the so-called Voltaire of the East, who originated so much in the way of comedy which later writers of all nations have profited by, and who was as fertile in matter as fresh in manner. There is in him that foreshadowing of the modern spirit which is so engaging to the mind, and at the same time puzzling through its unexpectedness and its incongruity with our ordinary conception of the ancient mind and morals; and this quality is especially brought out by Prof. Gildersleeve. We must mention also the essay upon Platen, the German poet, best known at present, we fancy, through Heine's diatribes, to whom the author seems attracted by the imitation of Aristophanes which Platen attempted. An Aristophanic Teuton is to the mind a monstrous engendering of the infinitely clever with the infinitely heavy, but the author does the best he can for his neglected client by translation and eulogy. The character and career of the Emperor Maximilian, together with some baccalaureate advice in the shape of the "occasional address," concludes a book which is so solitary an example of the literary recreation and critical faculty of classical scholarship in America.

The Elements of Astronomy. A Text-Book for the use of High Schools and Academies, with a Uranography. By C. A. Young. Boston: Ginn & Co.

THIS work, following close upon Prof. Young's 'General Astronomy,' will, we doubt not, be received with equal favor. Much of the material in the larger work has of course been used, but not to make a mere abridgment. We have a new book written from the point of view announced on its title-page. Although, after careful perusing, we are inclined to regard it as the best book for private study with which we are acquainted, yet there are many indications that the author did not have this object specially in view. It is written for pupils studying under a teacher. He assumes that those who use the book know enough algebra to understand simple formulæ and are acquainted with elementary geometry. The text requires no knowledge of trigonometry or any higher branch of mathematics. Occasionally, in a note or in the appendix, a trigonometrical formula is given for the benefit of that not inconsiderable number of high-school pupils who can understand it. By far the greater part of the book will be interesting and instructive to all persons who have any curiosity about the universe around us, even though their mathematical knowledge does not go beyond the limits of arithmetic.

The general arrangement of the work is: (1) the text-book proper of 344 pages; (2) an appendix of 70 pages, in which are treated a few points not previously considered, but which is mostly occupied in giving more detailed information on matters already treated generally; (3) four pages of "Suggestive Questions," not like the questions usually found in text-books, and to which direct answers can be given by committing to memory portions of the text, but ingeniously devised on a plan which we have no space to explain; (4) a very good index of twelve pages, for which the author deserves thanks; (5) a short treatise, with separate title-page and paging (42 pages), on what is usually, though absurdly, called the "Geography of the Heavens"; it is also published separately, and can be used equally well in connection with any other text-book of astronomy. Its title contains all that need be said of it: "Uranography: a Brief Description of the Constellations Visible in the United States, with Star-Maps and Lists of Objects Observable with a Small Telescope."

We are decidedly of the opinion that the study of uranography might be prosecuted by children three or four years before the age at which it would be advisable to commence the study of astronomy proper, and that the knowledge thus acquired would be a source of pleasure to them through life even if they never studied astronomy at all. We also think that it would have been better if Prof. Young had incorporated his appendix in the body of his work, either printing its sections in smaller type, or prefixing to them some mark to indicate that, where time did not allow the study of the whole work, they might be omitted.

In §95, p. 58, there is a somewhat important and very gross error which is not a "printer's error." The formula for calculating the area of the earth's surface is correctly given. Stated in words in the form of a rule, it is: Multiply the earth's mean radius by itself; then multiply this product by the ratio of the circumference of a circle to its diameter; lastly, multiply this product by four. In doing this the author forgot to multiply by the factor 4, and hence his result (in round numbers), 49,243,000 square miles, is only one-fourth what it ought to be. The true amount, *not* in round numbers and *not* neglecting decimals in the calculation, but true within a unit, is, 196,944,329 square miles. The calculation is based on the assumptions that the earth's mean radius is 3,958.83 miles as given in the section cited, and the ratio of circumference to diameter is 3.141592. We have checked several other calculations in the course of the work, but have invariably found them correct. On the whole, if there is any other elementary treatise on astronomy at once so scientific, so comprehensible, and so charming, it is one of those which we have not read.

The Adventures of a Younger Son. By Edward John Trelawny. Macmillan & Co.

WITH this novel, Macmillan & Co. open their new Adventure Series, which will revive several most desirable works of travel. Trelawny, through his connection with Byron and Shelley, is an historical name in our literature, and his own adventures and roving character interest us in himself on his own account. His life will, perhaps, never be written, but Dr. Garnett furnishes an excellent sketch of him, making some use of the new materials brought forward by Mrs. Marshall in her late 'Life of Mary Shelley,' and drawing also from Trelawny's autobiographical narratives. It is doubtful to what extent the 'Adventures of a Younger Son' represents the real facts of Trelawny's early career, though it is granted that it is in part a memoir, and Trelawny so stated the matter. Dr. Garnett suggests that the earlier portion is most near to fact, and that the element of fiction grew larger as the book grew longer. The story itself is one of riot and blood, but reflects the privateering life of the East Indies in the Napoleonic wars, and is full of a spirit and a hard reality in parts which is beyond the reach of fiction. It is often brutal in its matter, but if the tale requires a strong stomach in the reader, it is also relieved by descriptions of scenery and tropical loveliness in abundance. These are pervaded with poetical feeling, and, in comparison with Kingsley's work in 'Westward Ho,' are as the real to the imagined, and so impress the mind.

The story itself is not without a considerable degree of art also. It is well constructed; the figure of the hero, De Ruyter, is strongly drawn, his death is a fine scene, and the conclusion, which leaves Trelawny himself with the fisherman on a solitary rock in the English Channel, could not have been better conceived. This element of reality on the one hand and the artistic handling on the other convince us of the truthfulness of much of the volume, and of its subjection in part to the moulding of imagination. It is, at least, a unique work, strongly marked by the revolutionary time-spirit, full of hatred of the tyrant, of sympathy for the oppressed—whether by an English naval officer, or an East India company, or the French colony, whose conduct toward the slaves in the Isle of France is terribly delineated. Throughout, too, one observes the admiration for an ideal American—from the schooner which exceeds all others in beauty and speed to the hero Washington, who, De Ruyter says, was the only man he ever "served." In the writer one discerns great daring, and many crudely noble impulses in combination with a wayward, irresponsible, passionate, and thoroughly insubordinate spirit, except in presence of men whom he felt to be really superior to himself in nature and genius; and, it must be added, the man is always a melodramatic poser in his own imagination, with not a little of the mien and temperament of "Lara," whose real and imagined self perhaps were most nearly at one when he held the Cave of Odysseus with such resolute pluck in the Greek war. The friendship of such a man for Shelley is one of those marvellous encounters of the unlike which do the highest honor to both.

The Wine-Ghosts of Bremen. By Wilhelm Hauff. Illustrated by Frank M. Gregory. White & Allen. 1889.

HAUFF'S whimsical 'Phantasien im Bremer Rathskeller,' here for the first time presented in English dress, appears under favorable auspices as an æsthetic book printed by De Vinne in a limited edition of 500 copies. The translators are two Englishmen, Messrs. Sadler and Fletcher, who in a lengthy preface commend their original as "Hauff's acknowledged masterpiece," and as "a good German story about *strong drink*." They deprecate being thought of as "a pair of ultra-Pickwickian topers," they are "quite aware that there are to be no more cakes and ale"; but they are "a little sorry for it, that is all." We should think, however, that the *best* recommendation of a good German story upon the æsthetics of wine-bibbing would have been to make a good translation of it. This, we regret to say, has not been done. The translation is a jaunty paraphrase of the original; words, phrases, and even sentences being freely omitted or inserted at the caprice of the translators. The local color of the German is ruthlessly destroyed, or Anglicized into something worse than destruction. The result is a book which goes under Hauff's name, but does not sound like Hauff, and is not Hauff's except in a kind of conventional sense.

BOOKS OF THE WEEK.

A Japanese Boy. By Himself. Henry Holt & Co. $1.
Atherton, Gertrude T. Los Cerritos: A Tale of the Modern Time. John W. Lovell Co.
Bates, Katherine L. Ballad Book. Boston: Leach, Shewell & Sanborn.
Böhm-Bawerk, Prof. E. Capital and Interest. Macmillan & Co. $4.
Darnell, H. F. The Craze of Christian Engelhart. D. Appleton & Co. 75 cents.
Ellis, H. The Criminal. Scribner & Welford. $1.25.
Gregg, L. The Prophet of Palmyra: Mormonism Reviewed. John B. Alden. $1.
Logan, A. S. Messalina: A Tragedy in Five Acts. Philadelphia: J. B. Lippincott Co. $1.

A JAPANESE BOY.

By Himself. 12mo, $1.00.

"There are very few natives who have attempted, in a foreign language, to lift the veil of private life, and let the people speak for themselves. . . . Mr. Shigemi, though writing in a chatty delightful way his boyhood's memories, is extremely accurate. . . . Well worthy of a place in all our libraries."—*The Nation.*

THE TRUE GRASSES.

By EDOUARD HACKEL. Translated by F. LAMSON-SCRIBNER and E. A. SOUTHWORTH. 12mo, illustrated, $1.50.

HENRY HOLT & CO., New York.

A NEW NOVEL.

J. W. Randolph & English,

RICHMOND, VA.,

Have just published a Novel,

'THE WITCH OF JAMESTOWN,'

A story of the colonial days of the Old Dominion, by James T. Bowyer, Fencastle, Va. A readable little book, giving an interesting description of Bacon's rebellion, and the manners, customs, and religious dissensions of Virginia in time of 1676.

Price, paper, 50 cents; boards, 75 cents. By mail, postpaid.

The June Number of Wide Awake

opens a new volume, and gives the opening chapters of HERBERT D. WARD'S great school serial of life at famous Andover,

The New Senior at Andover,

and of GEORGIANA WASHINGTON'S delicious extravaganza,

The Quest of the Whipping-Boy.

Then there is a very funny anagram story (with Cash prizes for the solution, to be published next month) called

The Perplexities of a Crymangle,

a delightful budget of short stories, the "Amateur Photographer's" confessions about "Forbidden Fruit," and 80 pages of the best illustrated literature for young folks and the family. The "Men and Things" pages ought to be read aloud, of evenings, to the whole family!

20 cents a number; $2.40 a year; $1 20 for the half-year volume.

D. LOTHROP CO., Boston.

Seashore Lands.

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchasers and for sale. A number of beautiful shore, island, and peninsular properties on Penobscot Bay and other parts of the coast. These ranging from 10 to 1,000 acres, of the best selected frontages of high land, have beautiful rocks, trees, beaches, harbors, and mountain and sea views, and in the rapidly increasing movement to this coast, are almost the only remaining shore lands still purchasable at very low prices and offer exceptional advantages for gentlemen wishing independent estates for summer occupancy or for local colonization or investment. For details address

J. Murray Howe, 27 School St., Boston.

Buyers of Books, Autographs,

AND PORTRAITS will find *rare bargains* in the

NO NAME MAGAZINE,

A monthly full of fresh and bright ideas.
$1.00 a year; 10 cents sample copy.
No deadheads or postals noticed. Address
AMERICAN PRESS CO.,
1722 N. Calvert St., Baltimore, Md.

D. Appleton & Co.

PUBLISH TO-DAY:

I.

The Art of Authorship

Literary Reminiscences, Methods of Work, and Advice to Young Beginners. Personally contributed by Leading Authors of the Day. Compiled and edited by GEORGE BAINTON. 12mo, cloth, untrimmed edges, $1.25.

Among other contributors to this book may be mentioned

BROOKS, PHILLIPS,	HAWTHORNE, JULIAN,
BROWNING, ROBERT,	HOLMES, OLIVER W.
BRYCE, JAMES	HOWELLS, W. D.
CABLE, GEORGE W.	LATHROP, GEORGE P.
COLLINS, WILKIE,	LOWELL, J. R.
COLLYER, ROBERT,	LYALL, EDNA,
CRAWFORD, F. MARION,	ROE, E. P.
HALE, E. E.	TWAIN, MARK.

These are merely a selection from the names of contributors; there are many others equally well known with the above who relate their experiences.

II.

TOWN AND COUNTRY LIBRARY.

JOOST AVELINGH.

A DUTCH STORY. By MAARTEN MAARTENS. 12mo, paper. Price, 50 cents.

Notices from the English Press.

The *Academy* says: "A book by a man who, in addition to mere talent, has in him a vein of genuine genius."

The *Athenæum* says: "Unquestionably a good piece of work, with clear delineation, accurate pictures of life, and abundance of local color."

The *Morning Post* says: "So unmistakably good as to induce the hope that an acquaintance with the Dutch literature of fiction may soon become more general among us."

The *Figaro* says: "If all Dutch stories were as interesting and as well written as this one, there would be a considerable demand for them in this country."

III.

VOLUME XIV., INTERNATIONAL EDUCATION SERIES,

Edited by WILLIAM T. HARRIS, LL.D.

PESTALOZZI:

HIS LIFE AND WORK. By ROGER DE GUIMPS. Authorized translation from the second French edition, by J. RUSSELL, B.A., Assistant Master in University College, London. With an Introduction by Rev. R. H. QUICK, M.A. 12mo. Cloth, $1.50.

"The name of 'Pestalozzi' is for ever dear to the hearts of all men. For he is the first teacher to announce convincingly the doctrine that all people should be educated—that, in fact, education is the one good gift to give to all, whether rich or poor. . . ."

D. APPLETON & CO.,

1, 3, & 5 Bond Street, New York.

Houghton, Mifflin & Co.'s New Books.

The Tragic Muse.

A Novel by HENRY JAMES, author of 'The Portrait of a Lady,' etc. With covers of a fresh and artistic design. 2 vols, 16mo, $2.50.

Some of the most competent critics in America have pronounced this the strongest and best novel Mr. James has yet written.

Heat as a Form of Energy.

Vol. III. of Riverside Science Series. By R. H. THURSTON of Cornell University. Illustrated. 16mo, $1.25.

Girls and Women.

Vol. 8 in Riverside Library for Young People. By E. CHESTER. 75 cents.

A book of great interest and value for and about girls, by one whose experience peculiarly qualifies her to write a useful and readable book.

A Daughter of Eve.

A Novel by ELLEN OLNEY KIRK, author of 'The Story of Margaret Kent.' Paper, 50 cents.

New Edition.

Sanskrit and Its Kindred Literatures.

Studies in Comparative Mythology. By LAURA E. POOR. Third Edition, with entirely new Preface. 16mo, $2.00.

The book goes over ground which has been made new by the modern discoveries in philology and mythology. It describes and compares the literatures of the different Aryan families, and brings forward the comparative mythology, as it manifests itself in each different country, filling a place which is almost empty in that department.

"We consider this book by Laura Elizabeth Poor one of the most valuable and useful additions to the works which have succeeded in condensing into one conveniently sized volume the knowledge which it has taken scholars thousands of years to accumulate. These studies in comparative mythology are gratifyingly free from embarrassing technicalities, and to the young reader, or to the one who has not the time to spend in special study of an important subject, they will furnish a wealth of information very serviceable in these days of active thought. One of the chief merits of the volume is the clearness with which the author expresses her thoughts, and the skill with which she disentangles the subtleties of metaphysical and religious doctrines, making them plain to the most casual reader."—*Boston Courier.*

Sold by all booksellers. Mailed, postpaid, by the publishers.

ROBERTS BROTHERS, Boston.

F. W. CHRISTERN,

254 Fifth Ave., between 28th and 29th Sts., New York. Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. VOL. L.—NO. 1302. THURSDAY, JUNE 12, 1890. PRICE 10 CENTS.

APPLETONS'

Town and Country Library

12mo. Paper, 50 cents,

JOOST AVELINGH.

A DUTCH STORY. By MAARTEN MAARTENS.

Notices from the English Press.

The *Academy* says: "A book by a man who, in addition to mere talent, has in him a vein of genuine genius."

The *Athenæum* says: "Unquestionably a good piece of work, with clear delineation, accurate pictures of life, and abundance of local color."

The *Morning Post* says: "So unmistakably good as to induce the hope that an acquaintance with the Dutch literature of fiction may soon become more general among us."

The *Figaro* says: "If all Dutch stories were as interesting and as well written as this one, there would be a considerable demand for them in this country."

Recent Issues.

Donovan: A Modern Englishman.
By EDNA LYALL.

"'Donovan,' by Edna Lyall (Appletons), is a novel written with a purpose, the plot of which is very skilfully and dramatically developed. . . . The book contains not one superfluous page, and will interest the reader from beginning to end."—*New York Sun.*

The Silence of Dean Maitland.
By MAXWELL GREY.

"The story culminates in a scene which is almost unequaled and unexampled in fiction. . . . As a tale of spiritual struggle, as a marvellously graphic and vital picture of the action and reaction of human life, 'The Silence of Dean Maitland' is a book that is destined to an extraordinary recognition and permanent fame in literature."—*Boston Traveller.*

In the Wire-Grass. By LOUIS PENDLETON.

"An unusually clever novel is 'In the Wire-Grass,' by Louis Pendleton (Appletons). It presents a vivid picture of Southern life by a native of the South, and abounds in incidents and characters racy of the soil. . . . The humor is everywhere bright and genuine, and the action uniformly brisk."—*The Sun.*

Mistress Beatrice Cope; or, Passages in the Life of a Jacobite's Daughter.
By M. E. LE CLERC.

"A simple, natural, credible romance, charged with the color of the time and satisfying to the mind of a thoughtful reader."—*The Athenæum.*

The Awakening of Mary Fenwick. By BEATRICE WHITBY.

"We have no hesitation in declaring that 'The Awakening of Mary Fenwick' is the best novel of the kind that we have seen for some years. It is apparently a first effort, and as such is remarkable."—*The Athenæum.*

Besides the above-mentioned works, APPLETONS' TOWN AND COUNTRY LIBRARY includes nearly fifty other novels by eminent authors.

A complete list will be furnished upon application.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay are now first offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

OGONTZ SCHOOL FOR YOUNG LA- dies, removed in 1883 from Chestnut St., Philadelphia, to Ogontz, the spacious country seat of Jay Cooke, will begin its forty-first year Wednesday, September 24. For circulars apply to PRINCIPALS.
Principals—Miss Frances E. Bennett, Miss Sylvia J. Eastman. Principal Emerita—Miss H. A. Dillaye.

PENNSYLVANIA, Philadelphia, Germantown, 202 and 204 West Chelten Avenue.

MISS MARY E. STEVENS'S BOARD- ing and Day School. 22d year begins September 24, 1890.
Prepares for Bryn Mawr and other Colleges.
Bryn Mawr entrance examinations held in the school. Certificate admits to Vassar.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for young ladies reopens Sept. 30, 1889.
Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

PENNSYLVANIA, Swarthmore.

SWARTHMORE COLLEGE OPENS 9th month, 5th, 1890. Thirty minutes from Broad St. Station, Philadelphia. Under care of Friends. Full college courses for both sexes leading to Classical, Engineering, Scientific, and Literary degrees. Healthful location, extensive grounds, buildings, machine shops, laboratories, and libraries. For full particulars address WM. H. APPLETON, Ph.D., Acting President.

VIRGINIA (P. O. University of).

UNIVERSITY OF VIRGINIA.—SUMMER Law Lectures (nine weekly) begin 10th July, 1890, and end 10th September. For circular apply to JOHN B. MINOR, Prof. Com. and Stat. Law.

NEUILLY, PRÈS Paris, 22 Avenue de Neuilly.

MR. A. RÉNACK RECEIVES IN HIS house and prepares with marked success a limited number of students for the Sorbonne, the military and scientific schools. Special courses in modern languages for Americans.
Diplomatic references at Washington and Paris.

GERMANY, Berlin.

THE AMERICAN HOME SCHOOL for Young Ladies offers to a limited number the protection and comfort of an American home, together with the chaperonage so necessary to young ladies studying abroad. The best masters in Music, Art, German, and French. Vacation trips to Russia, Italy, France, and through Germany. The school begins its fifth year September 24, 1890. A branch will be opened in Paris at this date also. Applications should be made before July 1. Address for circulars Miss R. I. GILBERT, 161 Lasalle St., Chicago, Ill., or the Principal, Mrs. MARY B. WILLARD, Nettelbeck Str. 21, Berlin, Germany. Mrs. Willard refers by permission to Mrs. Grover Cleveland, and the Hon. William Walter Phelps, U. S. Minister to Germany.

Teachers, etc.

A YOUNG PH.D. OF THE UNIVER- sity of Berlin, 1886, German, special pupil of Tobler and Zupitza, with large experience in teaching, desires an engagement in an American University for next September.
Perfect command of English, Romance, but specially Germanic languages.
A modest position in a large University with prospect of promotion preferred to a Professorship in a small University.
References and testimonials.
M. S.,
Artilleriestr. 4c.,
Berlin, Germany.

A YOUNG LADY GRADUATING with diploma from the Framingham (Mass.) Normal School, having had success with children, wishes an engagement for the autumn to teach either in a school or family. Reference by permission to her instructors. Address E. P. L., P. O. Box 1283, Boston, Mass.

HOLIDAY ENGAGEMENT REQUIR- ed by well-educated English lady as amanuensis, companion, governess, or any position of trust. French and German acquired in France and Germany; is accustomed to travelling; highest references. Free 19th June. Address E. M., care of the *Nation*, Box 794.

THE SUBSCRIBER WILL RECEIVE at his summer home in South Duxbury on Massachusetts Bay, during July and August, a few boys completing their preparation for College or Institute of Technology. E. A. H. ALLEN, C.E. (R.P.I.), Principal of Friends' Seminary, E. 16th St., New York.

A HARVARD GRADUATE AND A.M. (experienced tutor and teacher) will take a few private pupils during summer. All branches. Greek and Latin and Mathematics specialties. Best of references. Will travel. J.W. H. W., 13 Mt. Auburn St., Cambridge, Mass.

EXPERIENCED TEACHER (Ph.D. of Heidelberg) desires a position in connection with some college or collegiate institute. Teaches the classics, modern languages, and mathematics. Specialties—Latin and German. Best references. Address Dr. H. ZICK, Newport, R. I.

Teachers, etc.

AN OHIO STATE UNIVERSITY graduate desires a position as laboratory assistant or instructor in Physics and Chemistry. Three years' special preparation. Excellent references. Address C. L. ARNOLD, O. S. U., Columbus, Ohio.

MR. O. C. JOLINE, A.B. (HAR.), Assistant Master in The Yeates Institute, Lancaster, Pa., will take two boys for private instruction in English and the Classics, at Saratoga, N. Y., after July 4.
References exchanged.

TUTOR WOULD LIKE TWO BOYS for the summer. Country residence on Long Island Sound. Long experience at preparatory work. Highest references. J. H. SPERRY, A.M., Clinton, Conn.

A YALE GRADUATE, WHO HAS had unusual success in fitting boys for college, desires to establish (or otherwise obtain the principalship of) a classical school in a favorable locality. A. M., care of the *Nation*.

WANTED BY AN AMHERST graduate, one or more boys to tutor for the summer months. Highest references. Address WILLIAM ESTY, Amherst, Mass.

HOLMES HINKLEY, A.M., 11 EVE- rett St., Cambridge, Mass., will prepare boys for the fall examinations, and make tutoring engagements for the winter.

A HARVARD SENIOR DESIRES A position as tutor for the summer. Best references. Address "HARVARD," care *Nation*.

TUTOR WOULD LIKE TWO OR three pupils for the summer. Excellent city references. Address TUTOR, care *Nation*.

CHARLES W. STONE, Tutor for Har- vard, 68 Chestnut Street, Boston.

School Agencies.

AMERICAN AND FOREIGN TEACH- ers' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to MRS. M. J. YOUNG-FULTON, 23 Union Square, New York.

THE FISK TEACHERS' AGENCIES, 7 Tremont Place, Boston, Mass., 6 Clinton Place, N. Y., 106 Wabash Ave., Chicago, Ill., and 120½ South Spring Street, Los Angeles, Cal. 100-paged Agency Manual free. EVERETT O. FISK & Co.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 3 East 14th St., N. Y.

Professional.

WANTED BY A YOUNG MAN.—A position as an Assistant Librarian in a Historical or Genealogical Library. Has had five years' experience; is a good cataloguer. Best of references. Address W. E. C., care of the *Nation*.

The Sauveur Summer College of Languages.

(Removed from Amherst, Massachusetts, and Oswego, New York, to Burlington, Vt.)

FIFTEENTH SESSION: July 9th to August 19th.

For board and rooms address Miss H. L. Burritt, Burlington, Vt.

"The Sauveur Summer School of Languages has come to be a recognized factor in the educational work of this country."—*The Critic.*

For Catalogues of the School, and Circulars of Dr. Sauveur's Educational Works, address, DR. L. SAUVEUR, Copley Terrace, Roxbury, Boston, Mass.

Twelve Editions in Six Months!

The Latest Success in Society Novels is

'A Saratoga Romance,'

By CAROLINE WASHBURN ROCKWOOD.

Now in its TWELFTH EDITION, although the first appeared but a trifle more than six months ago.

It is a clean, crisp, accurate story of fashionable life at the great American Spa, and has received more commendatory press notices than any other society novel of the last ten years.

Price, 25 Cents, in Paper Covers.

NOW IN PRESS:

'The Tatter Cup,'

A romance of immediate life in New York city. By S. C. WHEELER ("Nym Crinkle"). Sixty cents in paper covers. Out June 25.

Also,

'Seemingly,'

A story of Beverly Farms. By CAROLINE WASHBURN ROCKWOOD and LEW VANDERPOOLE.

Published by the

Lew Vanderpoole Publishing Co.,

162 TIMES BUILDING,

Trade supplied by American News Company. *New York City.*

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, or to Mr. A. S. Clark, 34 Park Row.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XLIX. comprising the last half-year of 1889.]

The Nation.

NEW YORK, THURSDAY, JUNE 12, 1890.

The Week.

THE Silver Bill which was forced through the House on Saturday calls for an appropriation of $54,000,000 per annum from the Treasury as a starting point. How much of the resulting currency (Treasury notes and silver dollars) the public may buy and permanently use, we cannot know beforehand. Whatever amount is thus bought the Treasury will be reimbursed for. The balance will be an expenditure and a drain upon the Secretary's gold balance. The bill is very crooked in its details, but it comes to this, that if the Secretary can arrange with somebody, or some bank, to present the new Treasury notes at the Treasury and demand bullion for them, he can keep down his expenditure for bullion, but if he cannot do this, the notes will be tendered for taxes and duties. The revenue of the Government will be composed in a larger and larger degree of silver. The Secretary will continue to pay out gold or gold value as long as possible. As long as his revenues exceed his expenditures of all kinds, including his expenditures for silver bullion, he can maintain gold payments. Whenever the balance turns the other way, he will be obliged to pay silver. Then we shall be on the silver standard, and every man's money will be worth something less that it was before. There is evidently an expectation that the Secretary will be able to guard his gold balance by means of the clause authorizing him to turn over the bullion he has bought to the holders of the Treasury notes, but it is doubtful if he can do so.

Since the new rules were adopted in the House, the caucus, the lash, and the gag have been substituted for debate and deliberation to a rather alarming extent. If things go on as they are now going, there will soon be no House of Representatives left, but merely a Speaker, a caucus, and a few chairmen of committees. All bills will be passed by "counting a quorum," the minority sitting speechless and voteless. The good understanding which goes so far to make representative institutions workable, will be gone—if indeed it is not already gone. It is best, we think, that Speaker Reed's system should be carried out, so that all parties may know what of good or evil there is in it. The next measure to come before the caucus will be the Federal Election Law, and the next after that will be perhaps the Pacific Railroad Funding Bill. Each time that the lash and the gag are applied there will be a residuum of discontent in the ranks of the majority. When this residuum becomes sufficiently large and sufficiently exasperated, the caucus yoke will be thrown off, or the people may at the coming election throw out the lashers and gaggers at one bounce. This is the result most likely to follow.

One of the saddest spectacles at Washington, we are told, is that of Congressman Farquhar bewailing the tax on barley in the McKinley Tariff Bill. About ten million bushels of barley are imported from Canada yearly, principally through the ports of Buffalo and Oswego, at a duty of ten cents per bushel. A large and varied industry in malting, warehousing, and brewing has grown up, of which Canadian barley is the raw material. The McKinley bill raises the duty to 30 cents per bushel, and will, if adopted, annihilate those industries, so the people engaged in the handling of Canadian barley say. Very likely Congressman Farquhar would be annihilated by the same blow. He has been a cantankerous supporter of high tariffs. No duty was ever too heavy for him to swallow until barley was reached. In the last Congress he signalized himself by supporting a duty of 2 1-10 cents per pound on tin plate. We do not see why he should be cast down now, seeing that he has got what he wanted on tin plate, even if he has got a little more than he wanted on barley.

A letter from Philadelphia to the *Dry Goods Economist* a few days ago mentioned the fact that the price of pearl buttons had already advanced, in anticipation of the passage of the McKinley bill, from 40 cents to 60 cents per gross. It added that "the cheapest pearl button now costs, landed, 17 cents per gross, whereas the duty alone which these will have to pay will be 36 cents per gross. In the higher grades the advance will be proportionately less, but in lower qualities it is most serious and is already showing its effects here in demoralizing trade." Some further information was contributed by Mr. G. Blumenthal to the Senate Finance Committee the other day. He showed, by exhibiting a shell, the various grades of pearl buttons made from one and the same shell, the very finest of which would pay at the new proposed rate 106 per cent. for a twenty-line button, and in the cheapest grade 500 per cent., or an average for the six grades as now imported, made from the same shell, of 250 per cent. for a twenty-line button; but as there are a great many more imported of the three cheaper than of the three better grades, the average on importations as they take place to-day would amount to over 350 per cent. Besides this, there are cheaper grades of shell, and he showed samples whereof a button that is imported by the thousands of gross every week would pay an ad-valorem duty from eighteen to twenty-four line of 640 per cent. In reply to a question by Senator Voorhees, he said that the cheapest grades are principally used by the large manufacturers of shirts, underwear, etc., and he showed the Committee a sample of a button which is used by the tens of thousands of gross by shirt-manufacturers, and which would pay at the new rate an ad-valorem duty of 571 per cent. In conclusion he created quite a stir among the Senators by giving the facts as to a small invoice of pearl and other buttons which arrived by steamship *Eider*, June 3, and which were entered at the New York Custom-house on the following day. This invoice, showing a market value of $1,600.80, paid a duty at 25 per cent. of $400.20. At the new rate of duty as proposed in the McKinley bill this same invoice would pay $5,187.60.

Mr. Whitman's Wool-Manufacturers' Association had a hasty meeting in Boston on Thursday, and passed a resolution urgently recommending to the Finance Committee of the Senate an amendment to the McKinley bill so as to make all yarns and cloths of woollen or worsted dutiable at a uniform rate, and of course at the highest rate—the bill as passed by the House having fixed one rate for goods valued at thirty cents per pound or less, and another and higher rate for those valued at a higher figure. The Boston *Journal of Commerce* says that there was "a tacit understanding" between the Committee of Ways and Means that there should be no dividing line, but that all kinds of goods should be taxed at the same rate without regard to value, but that "some not very creditable work was done on these sections of the bill by the Committee on Ways and Means, through the influence of the New England member of it, much to his reproach." This is rough on Gov. Dingley, but the *Journal* makes it even rougher by adding that the dividing line was inserted, "*somewhat clandestinely*," for the presumed purpose of reconciling the minority of the Committee to the general tenor of the tariff on these classes of wool manufacture. "Attempts were made to rectify these errors, though but partially, when the bill was up before the House, but they signally failed, much to the condemnation of the influence that occasioned their introduction." This reveals the meaning of the two votes in the House on the woollen schedule in which the Committee of Ways and Means were beaten. They had made a concession to the poorer classes of the community by putting a lower rate of duty on the cheaper goods, and they tried to withdraw their concession, but the House would not let them do so. Hence the hasty meeting and action of Mr. Whitman's Association.

The circular of the Wool-Consumers' Association asking the coöperation of all manufacturers and dealers in wool in a suitable protest against any increase in the present duties on wool, and in favor of a reduction of the same, is signed by eighteen large manufacturing companies and firms in New England. The objects of the Association are much broader, however, than any consideration of the McKinley bill. They go beyond the present Congress altogether, and look to the eventual

abolition of all duties on raw materials. The signers of the circular know, of course, what this means. It means the eventual abolition of protective duties on woollen goods also, and for this they are prepared. They do not say that they are ready to enter into competition with the manufacturers of all nations, but this is what they have in mind. They have counted the cost, and arrived at the conclusion that there is more solid prosperity for them in a tariff for revenue only than in any tariff for protection that they can ever expect to see enacted and maintained in this country. The formation of the Wool-Consumers' Association splits the Wool-Manufacturers' Association, of which Mr. William Whitman is President, into two parts, and weakens the latter by so much.

The organ of the American Protective Tariff League, in its issue of May 30, advances a queer argument for a duty on imported hides. It is that such a duty "would directly and immediately benefit the farmer and stock-raiser throughout the nation," and *also* that it would give the State Department at Washington something to trade on in the way of reciprocity with South America. In other words, it would be a good thing to put the duty on for the benefit of the farmer, and then to take it off for the benefit of somebody else. This clever device is accompanied by the following statement:

> "Semi-officially we can state that Secretary Blaine has now taken this position and recommends an import duty on hides."

It is not stated that Secretary Blaine has taken both positions—the farmer position and the something-to-trade-on position—but in his younger days, when he was doing business with Warren Fisher, jr., his agility would have been equal to both.

Retaliation against the McKinley bill has found a voice in France in the adoption of prohibitory duties on Indian corn, and now a report comes from Mexico that an export duty will be levied on silver-lead ore in order to supplement the effect of the Treasury regulations which have interfered with that growing and profitable traffic along our southern border. The more we have of this mutual crippling of trade the better. There is a wide scope for usefulness in the McKinley bill. It would be a good thing if Canada, in retaliation for the trebling of our duty on barley, would treble her own duty on corn, of which we sell her 8,000,000 to 10,000,000 bushels annually, or about the same quantity as the barley we buy from her. The eyes of a good many people would be opened by this process of getting rich by taxation and mutual scarcity. We should not wonder if Senator Hiscock as well as Congressman Farquhar might learn something eventually by means of the tax on barley.

The action of the Farmers' Alliance Convention at Huron, South Dakota, last week, deserves the attention of the country as a sign of the drift of sentiment among the agricultural population at the West. Although no mention of politics was made in the call for the meeting, it was decided, by a vote of 413 to 83, to organize a new party, and a convention to nominate a full ticket for the fall campaign was called to meet early in July. The organization is to be called the Independent party, and one of its principles is that "our tariff laws should be so changed as to reduce the present rate, taxing luxuries the highest, putting on the free list all articles of prime necessity and raw materials which enter into manufactures, raising only sufficient revenue for the needs of economic government."

The Indiana Service-Pension Association held a largely attended meeting on June 2, and passed resolutions insisting upon the immediate passage of a service-pension law, and declaring that no one should receive the support of soldiers for any office who is opposed to "*our just demands.*" This is the depth to which the patriotism of 1861 has sunk in 1890—a "*demand*" for a pension to every one who entered the army—good, bad, or indifferent; volunteer, drafted, or bounty-jumper; well or ill; rich or poor; the broken-down and penniless veteran now just turning seventy, who served four years at the front, or the millionaire business man in the prime of middle life, who spent 100 days in a recruiting camp during the last months of the war. And this insolent "*demand*" is coupled with a threat of vengeance against any aspirant for office who has the manhood to resist it. It is a melancholy spectacle.

John Dean was mustered into the service of the United States February 25, 1863, but never got any nearer the seat of war than Staten Island. While in camp there he contracted a shameful disease, on account of which he went to the hospital and never rejoined his regiment. On the 7th of April, 1864, he was discharged from the service for disability, the surgeon of volunteers in charge of the hospital certifying that he had lost his eyesight through this disease, and taking the precaution to add to his official record, "Not a case for pension." In 1877 this rascal had the impudence to apply for a pension, on the pretence that his misfortune was due to disease contracted in the service, but the Board of Surgeons who examined him in June, 1878, made short work of his case. Ten years more having passed, and his impudence having grown with his years, he applied to Congress for the special mark of honor implied in the passage of a private pension bill for his especial benefit, and such a bill was rushed through both houses. President Cleveland, however, interfered with his veto, and saved the honorable men on the pension roll from the shame of having such a person in their company. A few months later a new President came in, the bill was again passed, and the *Congressional Record* of June 3 announced that Benjamin Harrison, who was evidently familiar with all the facts in this history, had allowed the bill granting a pension to John Dean to become a law without his signature!

The Brooklyn Post-office is the most important Federal office in the third city of the country. Until four years ago it had been conducted as a part of the political Machine. During the latter portion of the period the eleemosynary principle was also recognized in filling the place, the office being given to a man who did not possess the first qualification for it, on the ground that he was a wounded soldier and poor. Having waited more than a year after his inauguration for the term of the incumbent to expire, Mr. Cleveland, in the summer of 1886, appointed as his successor Joseph C. Hendrix, a man of newspaper training and executive capacity. Mr. Hendrix was a Democrat in politics, but no resident of Brooklyn would ever have had any intimation as to his political views from anything in his administration. He simply put the office upon a business basis, and kept it there. All his energies were devoted to the effort to give Brooklyn the best possible postal service which the facilities at his command would permit. Three months had not passed before the whole community recognized the effects of the change, and each year has made the citizens more grateful for the good fortune of Mr. Hendrix's selection. Mr. Wanamaker has repeatedly alluded to him as "the model Postmaster of the United States."

Yet this "model Postmaster" has just been discharged by his employer. Worse still, the place has been given to a man who knows absolutely nothing about the postal service, a stonecutter by trade, who has built up a business which takes all his time. Worst of all, the place is given to this man, not because anything in his record indicates that he will make a good Postmaster, but solely because he is a prominent Republican politician, who has been twice defeated for Mayor, and who therefore ought to be "recognized." Except for his prominence in politics, nobody would ever have thought of picking him out as the man to keep the Brooklyn Post-office in its present condition as the best in the country. In other words, "the essential and discriminating test" in his selection has been "party service," as distinguished from "fitness," in the pledge given by Benjamin Harrison to the people of Brooklyn two years ago, when he promised them that "in appointments to every grade and department fitness, and not party service, should be the essential and discriminating test."

President Harrison deserves and will receive the commendation of independent-minded men for his veto of the bill providing for the erection of a public building at Hudson, N. Y., a city of only about 10,000 people, with gross postal receipts of less than $15,000 a year, which show but a slight increase during the past decade, on the ground that it is "very clear that the public needs do not suggest nor justify such an expenditure as is contemplated by this bill." Inde-

pendent-minded men commended President Cleveland for similar use of the veto power. A good many Republican organs then condemned it as "picayunish business." Doubtless they will see the matter in a different light now.

It is most unfortunate that suspicion should be cast upon the census in the South by the very methods adopted for taking it, but such is the case. Here are two illustrations of the methods adopted: W. E. Webb was appointed one of the Supervisors in North Carolina, after having signed this agreement: "This is to certify that if I am appointed a Supervisor of the Eleventh Census for the Fourth District of North Carolina, the Republicans of each county in my district shall have the control of the patronage, and that I will lend my influence to that party." The agreement is in the possession of the editor of a negro paper, who publishes it to show that Webb "has gone back on his pledges," inasmuch as he has not confined his appointments of enumerators to Republicans. Lafourche Parish, in Louisiana, had 11,282 whites to 7,806 blacks by the last census, and twelve enumerators were appointed to take the census this year. If they were to be divided between the two races in proportion to their numbers, seven would be whites and five blacks. In point of fact, only three whites were appointed out of the whole twelve, and, to make matters worse, the reputation of some of the nine negroes is represented to be bad. This is not the way in which a man who wanted simply to get an accurate census would go to work.

One of the best features of the Lake Mohonk Conference on the negro question has been the frank confession by Northern speakers that the prejudice against the negro is still very strong at the North. President McGill of Swarthmore College, for example, pointed out that in Philadelphia a negro is allowed to carry mortar up a ladder, but is not allowed to lay bricks; while if he should undertake to drive a horse-car, he would be mobbed. Another speaker told how a young colored man, who had a genius for mechanics, once came to him from the South, and he endeavord in vain to get him a place in a machine-shop, either in Pennsylvania or Massachusetts. The negro in question, he added, is now living in France, and not unnaturally hates the United States as the devil hates holy water. And yet people in Massachusetts and Pennsylvania profess to wonder that the whites in Southern States object to the appointment of negroes as postmasters!

The result of the Oregon election is a splendid tribute to the personal popularity of Sylvester Pennoyer, the present Governor and Democratic candidate for reëlection, who has a majority of about 3,500, although the Republicans swept the State on national issues, and Binger Hermann, the present Congressman, and Republican candidate for reëlection, has about 9,000 majority. It is very rarely the case that so remarkable a divergence is shown in the totals for two offices filled at the same time. On national issues Oregon appears to be safely Republican, the growth of population during the past ten years having helped that party, which in 1880 gave Garfield only 764 more votes than Hancock received.

Republican organs in Western Prohibition States, where "original-package" saloons have been started, talk about the restoration of liquor-selling "by the order of Chief-Justice Fuller." But Chief-Justice Fuller and the other two Democrats on the bench of the Supreme Court could not issue an order which would have any effect. The Supreme Court has nine members, of whom six are Republicans. The "solid Democratic vote" is therefore two short of a majority. What gave effect to the opinion held by Fuller, Field, and Lamar was the fact that it was shared by more than enough of their Republican associates to make a majority on that side. The "original-package" saloons in Iowa and Kansas are running by the order of Justices Miller, Bradley, and Blatchford just as much as by the order of Chief-Justice Fuller and Justices Field and Lamar.

France and England have got into a little trouble over fishing rights on the coast of Newfoundland, reserved, or rather defined anew, by the treaty of 1783, for they were originally reserved by the Treaty of Utrecht in 1713. The former treaty gave the French exclusive fishing rights on the western and northern side of the island, and they have ever since exercised them. These rights to fish include the right to land and dry the fish, "without interruption by the competition of the British." The immediate effect of this has, of course, been to exclude about seven hundred miles of coast from settlement by the native population and by immigrants, and the practical result of this prohibition has been to cut off a large portion of the interior from settlement also, because people will not settle in the interior when they have no access to the coast. This is the first grievance of the Newfoundlanders. The second is like unto it. They say that as a matter of fact the French have for a long time past been caring less and less for these shore fisheries, and have had fewer ships and men engaged in them, having been drawn off from them by the fisheries on the Banks, which are much more profitable; and that instead of fishing for cod, which is what the treaty meant them to do, they have established lobster-canning factories along the shore, carried on by speculators who have no connection with fish, beyond buying the lobsters caught by the natives. The Newfoundlanders maintain that the treaty gives no right to set up an industry of this sort, and they demand of the home Government that, as this lobster-canning is illegal, and as the fishery rights are now almost worthless to the French, all their rights under the treaty shall be bought, and the full possession of the island be restored to the colony.

The attention of France has been called to the few bits of territory which she still retains in the New World more within the last twenty years than ever before since the loss of Canada. The humiliation of the war of 1870, the new-born desire for colonies, the rapid multiplication of the French Canadians and their growing hostility to the British connection, have combined to rouse in France a strong interest in the Newfoundland question and a strong desire to "make capital out of it." The British Government is much worried by it. The colonists in Newfoundland of both parties are urging them to do something about it, but Lord Salisbury clearly shrinks from any vigorous attempt to deal with it, because he foresees that any concessions France may be willing to make would have to be purchased at a very high price. It is fully expected that part of this price would be the British evacuation of Egypt, or the cession of Gambia on the African coast, neither of which a Tory Ministry, with so much Jingo feeling behind it, would venture to make. British investments in Egyptian stocks and bonds are now so heavy that he would be a bold Minister who should venture to talk to the moneyed men in the city of the withdrawal of the British troops from Egypt. And yet there is hardly a doubt that the French Ministry will not venture to face their public with a surrender of French rights beyond the Atlantic without getting something handsome in return—that is, something that will gratify the national pride.

President Carnot has done a very sensible thing in releasing the young Duc d'Orléans from confinement and sending him across the frontier. This is what ought to have been done with him in the first instance. He never was, and can hardly ever become, a danger to the republic. The hereditary principle is as dead in France as the divine right of kings. It is so dead that it is the unanimous testimony of competent observers that very few of the rural population know who the Duc d'Orléans, or his father, the Comte de Paris, is, or why he claims the throne. What has taken the place of the hereditary tradition, in so far as its place has been taken by anything, in the French popular mind, is the Cæsarist tradition, started by the first Napoleon. The danger to the Republic lies now in the readiness of the French people in times of trouble for a military dictator—that is, for the rule of the successful soldier—and it does not care in the least whose son he is. Boulanger's career showed clearly what the Republic has to fear in the matter of competitors. The heir to the old French throne is just now, perhaps, more harmless than ever, owing to the great mistake of the Comte de Paris in allying himself with Boulanger. As far as its effect on the minds of the more intelligent Republicans goes, it was a mistake hardly less calamitous to the Royalist cause than the service of the émigrés in 1792 in the invading army of the Duke of Brunswick.

SENATOR SHERMAN'S SPEECH.

SENATOR SHERMAN'S speech on the silver question on Thursday last contained a great deal of truth very strongly put, and no more error than was deemed necessary to float the whole. It was in large part a reply to Senator Stewart's charge that the dropping of the silver dollar from the coinage, in the Act of 1873, was procured by stealth and fraud, in which Senator Sherman, as Chairman of the Finance Committee, had borne a large part. The facts having been repeatedly published in our columns, we need not now recall them. But there were two facts brought out by Mr. Sherman that have considerable personal interest, and which we had never heard of before. One is that Mr. Sherman himself voted *against* the Coinage Act of 1873, and the other is that Mr. Stewart of Nevada, and every other Pacific Coast Senator, both Republican and Democratic, voted *for* it. The reason why Mr. Sherman voted against it had no reference to or bearing upon the silver dollar, for as to that particular question all members in both branches of Congress were agreed. He voted against it because an amendment had been inserted abolishing all mint charges for assaying and coining, *i. e.*, making the Government work for nothing for the benefit of the gold-miners of the whole world. This he considered such a deviation from custom, precedent, and right principle that he thought the benefits of the other parts of the bill were more than offset by this bad feature.

The result of the personal bout was that Stewart was dragged around the Senate Chamber at the tail of Sherman's chariot several times, and finally left there, a bruised and mangled corse. With his last gasp he tried to show that there had been a mistake made at the clerk's desk while the bill of 1873 was under consideration, but here also Mr. Sherman proved that he was in error by producing the original copy, with the clerk's marks on it in his own handwriting. Every point sought to be made by Stewart on this branch of the subject was answered by Mr. Sherman with overwhelming proofs, except one. That one was the stale falsehood repeated by Stewart, that the late Ernest Seyd came to this country in 1873 or thereabouts to work in the interest of the "gold-bugs" of Europe to get the United States to demonetize silver—the fact being that Mr. Seyd was an industrious writer and advocate of bimetallism. He was what we should now call a strong silver-man. He wrote frequently for the newspapers on that side of the question, and never on the other side. He left a brochure of 112 pages, entitled 'The Fall in the Price of Silver, Its Causes, Its Consequences, and Their Possible Avoidance,' published in 1876, *i. e.*, two years before our present Silver Coinage Law was passed. If he had any influence at all on our legislation, it must have been in favor of silver and not against it. Yet every time the silver question comes up for debate some ignoramus or falsifier trots out Ernest Seyd as a monometallist sneak from Europe, sent over here to disparage silver and get it demonetized.

Aside from his controversy with Stewart, Mr. Sherman's argument consisted of two parts, one showing that the increase of the circulating medium in this country during the past twelve years (1878 to 1889 inclusive) had been more rapid than the increase of population; the other showing "how to increase, if possible, the market value of silver in its legal ratio to gold." The former proposition was established to the satisfaction of every lover of truth. It was proved by official statistics that the circulating medium of all kinds in 1878 was $805,793,807, and that in 1889 it was $1,405,018,000, an increase of upwards of $600,000,000, all of it at par with gold, and all of it consequently at the highest state of efficiency for commercial purposes. Not only so, but the banking facilities by which the wholesale business of the country and a large share of the retail business in cities is transacted, have been increasing in equal measure. Nobody can prove, or give plausible grounds for supposing, that any kind of business has suffered for the want of currency, or that any more could have been used advantageously. Mr. Sherman did not say that if more could have been used advantageously, we should have drawn it from the world's stock of gold, just as other countries do under like circumstances. Perhaps he thought that this was more than the public would swallow at present; and in fact it would not have fitted in very well with some things that he said when he came to the second head of his discourse.

His second proposition was that something more ought to be done to keep the circulation expanding, and at the same time to "boost" silver if practicable. Upon the latter point he said:

> "Now, sir, I am willing to do all I can with safety, even to taking great risks, to increase the value of silver to gold at the old ratio, and to supply paper substitutes for both for circulation; but there is one immutable, unchangeable, ever-existing condition, that the paper substitute must always have the same purchasing power as gold and silver coin, maintained at their legal ratio with each other. I feel a conviction, as strong as the human mind can have, that the free coinage of silver now by the United States will be a grave mistake and a misfortune to all classes and conditions of our fellow-citizens. I also have a hope and belief, but far from a certainty, that the measure proposed for the purchase of silver bullion to a limited amount, and the issue of Treasury notes for it, will bring silver and gold to the old ratio, and will lead to an agreement with other commercial nations to maintain the free coinage of both metals.
>
> "And now, sir, I want to state in conclusion, without any purpose to bind myself to detail, that I will vote for any measure that will, in my judgment, secure a genuine bimetallic standard—one that will not demonetize gold or cause it to be hoarded or exported, but will establish both silver and gold as common standards and maintain them at a fixed ratio, not only in the United States, but among all the nations of the world."

He went on to say that he would receive into the Treasury all the gold and silver produced in the United States at its market value, and would issue Treasury notes for these metals to an amount not exceeding their cost, and confer upon such Treasury notes all the qualities and attributes that are within the constitutional power of Congress. He would also "support and maintain them as money by coining the silver and gold as needed upon the present legal ratios, and by a pledge of all the revenues of the Government and all the wealth and credit of the United States." There is a good deal of confusion in this statement, but it is not a confusion in the Senator's own mind. He knows perfectly well that there is no market value for gold, since that is the index of market value for everything else. He knows, also, that our Treasury does now receive all the gold that anybody chooses to offer, whether produced in this country or not. Therefore, when he made this offer respecting the gold and silver produced in this country, he intended to give an impression of extreme liberality and impartiality. What he said on this point should be read as referring to silver only. Pledging all the revenues and wealth and credit of the United States to support and maintain gold and silver coin means nothing as to gold, because gold redeems itself; but it means much as to silver. It means that Mr. Sherman would pledge the Government to redeem all its silver coin in gold at the legal ratio. This is a pledge which the Government has never yet made, although it has, up to this time, performed the duty without making the pledge.

In spite of these Shermanesque drawbacks, the speech is by much the best that has been delivered in either branch of Congress on the subject.

HIGH LICENSE IN MASSACHUSETTS.

MASSACHUSETTS has now tried its High-License Law for a year, and instead of finding in it a solution of the "temperance question," is even deeper in the mire of intemperance. The operation of the new law has been attended by such an increase in the arrests for drunkenness that the party of moral ideas which was responsible for its enactment has been at its wits' end to know how to appease the increasing clamor of its temperance members, and at the same time retain the allegiance of its new allies, the liquor-dealers. A year ago the Republican managers were rubbing their hands at their successful management. Their reputation for favoring morality was to be maintained by an increase of the minimum of the license fee to $1,000, the small liquor-dealers and their political "influence" (generally Democratic) were to be cut off by the law limiting the number of licensed places to one for each thousand of the population, and the more influential men were to be managed for the good of the party. The Prohibitionists were supposed to be silenced by the vote on the constitutional amendment. The people were duly impressed with the efforts of their legislators, and, at the annual elections under the Local-Option Law, eighteen of the twenty-five cities voted in favor of license by large majorities.

The licensing boards fixed the fee in many cases far above the statutory minimum. In Boston the law allowed one licensed place to each 500 people, but, even so, the number of places was reduced from 1,588 to 780, paying fees ranging from $1,000 to $1,500. In Lowell, where the large population of

foreign-born mill-operatives makes the liquor question one of peculiar difficulty, the number was reduced from 198 to 64, while the fee was increased from $500 to $1,300. In Fall River, the rival of Lowell as a mill city, 260 licensed places gave way to 56, and the license fee, formerly $400, ranged from $1,300 to $1,800, nearly one-third of the saloons paying the latter fee. In general, throughout the State, the license fees were increased from two to four times their former amount, while the number of saloons was about one-third of the number licensed the previous year.

With this great blow at the liquor traffic, the people of the commonwealth settled themselves for an era of quiet and sobriety. As soon, however, as the new system was fairly inaugurated, the arrests for drunkenness and disturbance began to increase. In Boston the month of June showed 2,239 arrests for drunkenness, as against 1,680 in the same month the previous year, and the whole summer showed an increase of nearly a thousand arrests over the previous year, with a marked increase also in disturbance. In Fall River, June showed a jump from 90 to 125 in the arrests for drunkenness over 1888. In Lowell the effect was more immediate, and in May the arrests for this cause were 315, as against 246 in the year before. This carnival of drunkenness went on in other cities also, and the report of the Prison Commission for the year, five months of which had been under high license, showed an increase of arrests for drunkenness throughout the State of 5,005, 90 per cent. of which was in the cities. No statistics, however, were needed to bring this state of things to the attention of order-loving citizens; it was too apparent, and the voters expressed their views at the next annual vote on the license question. Lowell, which the year before had given a majority of 2,600 in favor of license, voted against license for the first time in its history by the decisive majority of 700; and finds in May of this year 172 arrests for drunkenness, as against 315 under high license. Fall River changed its majority of 1,800 for license in 1888 into a majority of 1,400 for prohibition in 1889. Worcester also added itself to the list of cities declaring in favor of prohibition, so that this year twelve cities have declared in favor of it, and the remaining thirteen have retained the license system by largely reduced majorities. The cities thus newly converted to prohibition gave heavy majorities against the prohibitory amendment to the Constitution some six months previously, and are generally so removed from any neighboring basis of supply as virtually to declare for prohibition in preference to the kind of high license provided by the Republican Legislature.

The responsibility for this failure of a system that has produced such good results elsewhere lies largely with the Republican politicians. Accustomed for years to tickling the moral ideas of the party by annually "tinkering the liquor law" in a few minor particulars, they were finally forced by public sentiment to the important step of adopting high license. Instead, however, of studying the laws of other States and drawing a comprehensive and consistent act, they continued the tinkering process by adding to the existing patchwork of statutes two acts of a few lines each, one limiting the number of licenses and the other increasing the license fee. They took no steps towards taking the licensing power from boards open to political influences; they made no change in the character of the bonds given by liquor-dealers or the old practice of allowing wholesale dealers to become bondsmen for hundreds of their creatures; in short, they did nothing to indicate that they had in any way changed their policy of "more law and less enforcement." The liquor-dealers, who had long and openly defied the restrictive features of the law with impunity, reasoned that if the new law forced them to pay more for their privileges, they should be entitled to take every advantage of the monopoly granted them to recompense themselves. They therefore seemed to feel that it was a business necessity to ply each customer with liquor to the extent of his purse, regardless of his condition. The bartenders thrown out of employment by the decrease in the number of saloons were soon found behind the new bars in the lucky places kept crowded to the doors. In Lynn, the City Marshal, in his annual report, frankly states that liquor-dealers have constantly violated the law against the sale of liquor to intoxicated persons, and naïvely expresses his hearty contempt for such persons. In Fall River it was openly charged that four wholesale dealers controlled the licensing body, and not only parcelled out the licenses among their creatures, but caused licenses to be issued in excess of the statutory limit. Ninety-one applications for licenses in Lynn were said to come from the creatures of two brewers.

The Republican politicians had won their game, however. In Boston the control of the police had been taken from the city and given to a commission appointed by the Governor. These commissioners, men noted for their political shrewdness, saw their opportunity, and made, it is alleged, a judicious distribution of the licenses for the good of the party, and allowed such latitude to the saloons that the arrests for drunkenness increased by two thousand during the year. The fortunate licensees were not slow to see the value of this sort of monopoly, and promptly made their bid for its continuance. The party of moral ideas woke up to find that its candidate for Governor, who was greatly distasteful to the temperance wing of the party, had been elected by a small majority, and that majority made up largely of liquor-dealers and their followings. The opponents of the saloon then took another tack, and, abandoning the hope of reform from high license, made a move in Boston to secure the enforcement of a law against public bars that had lain unenforced on the statute-books since its enactment fifteen years ago. The movement was too strong to be ignored, and the Police Commission in reply promptly appealed to the Legislature for the repeal of the law. This was refused a few weeks ago in a show of virtue, but the Republican leaders were discomfited by the passage of a resolution through both houses at the instance of the Democratic minority calling for a strict enforcement of the law. The Commissioners, however, were equal to the occasion, and construed the law to mean that the licensee must substitute tables for his bar, quietly ignoring the intent of the statute, which, as had been carefully explained by the Governor in his inaugural address, limits the sale of liquor to persons ordering meals at restaurants or hotels. Matters are thus left much as they were before, and the politicians have again outgeneralled the reformers, having declared loudly for temperance and yet left a large loophole for "deals" next fall.

AN INSIDE VIEW OF COMMERCIAL JOURNALISM.

A FEW weeks ago the *Voice*, the well-known Prohibition newspaper of this city, hit upon an ingenious scheme for testing the market value of the principles of the press of Nebraska. It sent to the publisher of every newspaper in the State the following circular letter, purporting to come from an advertising agent in Louisville, Kentucky:

"Please give me price per inch of inserting matter similar to the enclosed clippings, *first in ordinary news column, in news type, without any advertising marks, and secondly on editorial page as editorial matter without advertising marks.* If you make an attractive price on this business it is probable that I could close contract at once for as much as 100 inches, space to be used in one month, cash to accompany order."

The clippings enclosed were a collection of alleged statistics showing that the "prohibition States actually have more liquor-dealers than most of the non-prohibition States," and were so obviously designed to help the cause of liquor-dealers that the most careless reader could not fail to attribute their origin to liquor-dealing sources. The circular was sent out early in May, and the *Voice* has received over fifty responses, many of which it has published, and all of which are more or less astonishing. Not a newspaper in the State, from the best to the poorest, has declined to print the clippings as "reading notices" at varying prices per line, and only a very few have declined to print them as editorial matter.

No more instructive view of the inside of purely commercial journalism has been furnished for a long time than these letters from Nebraska publishers afford. One of the frankest of the collection is the following:

THE BEACON.
W. H. CARSON, EDITOR AND PROPRIETOR.
GIBBON, Neb., May 12, 1890.

Charles Turner, Louisville, Ky.:

DEAR SIR: In reply to yours of 5th inst. will say that I can give you news matter for 50 cents per inch. Editorial matter (copy to be furnished by you) for 75 cents per inch. *The Beacon is at the present writing the only paper who has not taken a start on the question, and is not going to do much unless there is something in it. We run our paper for revenue. Personally we are for high-license and against prohibition;* are publishing a paper in a prohibition city surrounded by a prohib. community, and *do not propose to cut our throat for nothing.*

Yours for Business,
W. H. CARSON.

This is one of the highest-priced editors in the list, but seventy-five cents per inch for "editorial matter (copy to be furnished by you)" does not seem to be too high for what Mr. Carson is willing to put forth as his "views" in a community so likely to cut his throat for uttering them. The publishers of the Tecumseh *Republican* are less reasonable, but, as the following extract from their letter shows, they have the "largest circulation in the county," and a slightly more sympathetic constituency :

"Your proposition for advertising matter received. In reply would say that we will give you 100 inches for $1 per inch each insertion, with the understanding that we are to have 400 inches more at the same rate between now and the election on the Prohibition Amendment.

"The price given may seem a little high, but when it is considered that we have the largest circulation of any paper in the county, it will not seem so.

"Another fact that must not be overlooked is, that we are sure to lose a large number of subscribers, and everyone counts $1.50 off of our exchequer.

"We can refer you to James Devenney or R. M. Frost as to the standing of our paper. *They are both saloon-keepers, and vitally interested in the defeat of the Prohibition amendment.*

"*The price mentioned is for the matter to be set in ordinary type in news columns without any advertising marks whatever. We will tend to the editorial part of it and agree not to support the Prohibition amendment.* What we say, and it will be no small amount, will be done free and separate from the proposition mentioned."

This remarkable reference to liquor-dealers as suitable persons to vouch for the "standing of our paper" appears in more than one instance. The editor of the South Sioux City *Sun*, W. C. Fairbrother, who says, "We claim to be the largest and most influential paper in northeast Nebraska, and to have the largest circulation," refers to several liquor-dealers "by permission," two of whom have been implicated in a murder case. Mr. Fairbrother says his prices are 10 cents per line for local columns and 20 cents for editorial, and advises quick acceptance of them as he has offered his columns on the same terms to the Prohibition League, and is expecting to hear from the latter at any moment. "We would prefer," he says, "to close a deal with you instead of the opposition," and, "should we make a deal with you, we will guarantee to give you good service for the money, and will help you in the fight in every way we can, both by pen and outside influences." There is evidently no high moral nonsense about Mr. Fairbrother. For twenty cents a line what he offers is surely dirt cheap.

Mr. W. E. Duncan, editor and proprietor of the *Madison County Reporter*, with the "confidence of the people of this county, and double the circulation of any other paper in this county, as well as a rapid increase daily," makes the extremely handsome offer to sell out for the minimum price of $100. He says he has been very conservative on the question, and it might injure his business to come out against prohibition, adding :

"I would not like to open up for less than a hundred dollars' worth of business or more. I will ad one hundred inches of my own production in addition to what is recd. from you. While you may furnish Statistical matter I might be able to ad other arguments in other matters pertaining to this Question which will be quite necessary. The prohibitionest are now organizing camp-meeting orginizations for almost every township in the State, and will camp on the ground and are pressing every county paper for recognition. If 200 inches for 100.00 is sadesfactory let me know at once, or if you have a more liberal proposition let me know I will furnish 100 inches of my own production on the same subject."

We should say that "100 inches of my own production" at a dollar an inch, thrown in gratis, was all that any reasonable man could ask for. Few of the other editors addressed offer as much, many of them sending plain, cold business statements of their prices. Thus, the editor and proprietor of the *Nonpareil-Democrat*, of Hartington, says his editorial-page price is 15 cents per inch for single column, and 10 cents per inch for 100 or more inches, "cash accompanying the order." The editor of the Geneva *Democrat* says: "You can have my news columns at 50 cents per inch and editorials at 70 cents per inch. These are my regular prices to everybody. Circulation much greater than given in the directories." There are no words wasted in that reply. The editor of the Atkinson *Graphic* is even more terse, as well as cheaper, saying in tabulated form that he is for sale as follows:

"As news matter	15c
As Editorial	25c

Without advertising marks Cash with order."

What a revelation these letters make of the condition of the press of Nebraska! Every newspaper heard from in the State for sale, either in whole or in part! Of the press of how many other States is the same thing true? How many newspapers are there in the whole country which refuse to print "reading notices" in their news columns? The fact is, that the step from selling the news columns to that of selling the editorial columns is a very short one, and, as the Nebraska revelations show, it is very easily taken in a great majority of cases. The two sales differ only in degree. In both a fraud on the reader is attempted, and in both the paper exacts a price above ordinary advertising rates, because it lends its character and influence to give color to the fraud.

JOURNALISM IN FRANCE.

THE condition of the newspaper press is exciting just as much attention in France as it excites here. The invasions of private life by French journals are not nearly so gross as ours, nor are the assaults on public men so personal as those of some of our worst papers, but they make a more disagreeable impression on the French public than our sensational journals make on our public, because Frenchmen are much more sensitive than Americans to anything that can be considered an "insult." Epithets and abuse which Americans receive with contempt or indifference drive Frenchmen nearly wild, and in seventy-five cases out of a hundred lead to duels. The public expects a man not to submit to them without fighting, and accordingly he fights. But constant exposure to the necessity of fighting is not pleasant, and, for some time past, French Conservatives have been busy devising some mode of repressing press abuse and intrusion which would be speedy enough and decisive enough to atone for insults without a "rencontre." What was finally decided on was the bestowal on the police courts of summary jurisdiction over a large class of press offences—that is, their withdrawal from the jurisdiction of juries. The bill, we believe, originated in the Senate, and was distinctly a reactionary product, and had never much chance of passing, but it led to a great deal of discussion, and has been finally defeated.

In this discussion M. Jules Simon has borne a prominent part. He is an old statesman as well as an old journalist, who has made his mark in both French politics and literature. He is now playing the rôle of a newspaper sage; that is, he writes every few days what he calls "Mon Petit Journal," being a short article, in the nature of either comment or reminiscence or both, on any topic of the day which happens to interest him, in the columns of the *Temps*. What he says in a recent number about the condition of French journalism is in substance this: He supports Messrs. Paul Deschanel and Camille Pelletan, who have been opposing the bill, and defends their attitude in the discussion, and says that if they are not old enough to remember what French journalism used to be when M. Simon was a young man, they must have read of it or heard of it in their families. Sixty years ago French journals represented opinions, or "doctrines," as he calls them. They were founded to champion opinions, and for no other reason. Their offices were centres at which all the forces of a political party converged. They had traditions. They listened respectfully to the older men. They obeyed leaders. They cultivated solidarity. The Bohemian life of which so many tales were told was followed only by the novelist and the feuilletonist. The political journalist had both solidity and enthusiasm. He studied questions seriously. He was always ready for one of three things —controversy, battle, or imprisonment. It was not everybody who could be a journalist. No one became a journalist except by some striking piece of work (*un coup d'éclat*) or a long apprenticeship. Journalists were severe on each other. All transgressions of the laws of honor received their natural punishment, namely, dishonor. There was a disciplinary tribunal, which was never organized, and never met, but was always trying cases. Its judgments were prompt and infallible. People used not to say at that time that the press was the fourth estate; but they knew it and saw it. It was for this kind of press that Armand Carrel died.

The condition of French journalism since then, M. Simon says, has been profoundly changed, first, by the appearance of the cheap penny paper; secondly, by the disappearance of the subscription list, and the substitution of the sales at the stands and over the counter. Instead of 100,000, or 150,000 readers which the journals of that day had, those of to-day have 4,000,000. The new public which reads the newspapers now cares nothing about opinions or doctrinal discussions. In the matter of opinions all it asks for is a banner,

and can get along, in case of need, even without this. For its daily journalistic food all it cares for is the gossip of the lobbies and the theatres, personalities, defamation, and calumny. The pen has fallen from the hands of philosophers to be taken up by newsmongers. Party politicians withdrew when the establishment of a newspaper, instead of being an effort in behalf of an idea, became a mere commercial venture. The press has passed in succession under three yokes—that of despotism under the Empire, that of the demagogues, and now of the money power, which has hooked the newspapers and uses them for its own purposes. "Where are you, Carrel," he exclaims in a burst of bitterness, "who used to defend the editorial authority? And you, Guilloutet, who used to defend the sanctity of domestic life?" Every day about ten journals are started, and one hundred journalists appear on the scene. The writing talent is not wanting—far from it; but there is no longer any question of thoughtfulness or self-sacrifice. Chateaubriand has been replaced by Timothy Trimm, and Timothy Trimm by the anonymous and venomous reporter.

Some of this talk we used to hear from Horace Greeley in his day; the rest, we cannot help thinking, we should hear from him if he were alive now.

THE BEETHOVEN FESTIVAL IN BONN.

Bonn, May 20, 1890.

The Beethoven Festival has of course awakened much local enthusiasm in Bonn, besides being the chief musical event in Germany at the present time. Apart from the universal significance of Beethoven's name in the musical world, this celebration is of particular interest to Americans from the fact that the history of the great composer's life in Bonn was only brought completely to light in the masterly biography by Mr. Alexander Wheelock Thayer, formerly American Consul in Trieste, whose name has had a most prominent place in all the utterances of the hour. Bonn has been before this the place of large musical celebrations in honor of her best-known son, particularly in 1845, at the inauguration of the monument in the Münsterplatz, and in 1871. Up to the present time, however, the small house where Beethoven was born has not been accessible to the public, and has been given up to mercantile purposes in such a way as to completely obscure all its associations with the past. There has been until lately, moreover, the absurd contest between the houses in the Bonngasse and the Rheingasse, each bearing its tablet with the explicit declaration that there was the composer's birthplace. Now, at last, the testimony has become conclusive, the Bonn Common Council has officially declared in favor of the first-mentioned house, and during the last year it was bought by an association of Bonn citizens under the honorary presidency of Joachim of Berlin. For some months it has been undergoing complete renovation, and, as far as may be, restoration to its condition in the Electoral period.

This Association has further the intention of founding in the house a museum to contain all of Beethoven's works and everything that can be collected relating to his personal history and musical activity. To this end the festival which has just closed was held. Twenty-five leading musicians of Germany and from abroad contributed their assistance in bringing out what has perhaps never been attempted before—a series of five consecutive concerts devoted entirely to the most important of Beethoven's works in the field of chamber music. This selection was made both because the compositions of this class cover a wider space of the composer's life than any other, and because they embrace a range of works less known and appreciated by the general public, to which this series was to serve as an introduction to a better acquaintance with Beethoven's most personal compositions.

Local pride and financial ends were influences at work, but the spirit of the season has been throughout that of reverence and genuine enthusiasm. The hearty response of those who had been invited to assist was a spontaneous tribute to the genius of Beethoven and the sway which he exercises to-day in the musical world. The audience included many of the best-known representatives of music in Germany, and the success of the enterprise was secured from the first. There was some doubt expressed as to whether the receptive faculties of any audience would be equal to the strain of five days' consecutive attendance upon a series of concerts devoted to one field of one author, especially as these included some of his most difficult and obscure works; but on the contrary the feeling of keen interest in Beethoven and the phases of his development was cumulative from the first. There is great variety and breadth in Beethoven's chamber music, and each of the three periods of his work was well represented. In general a chronological order was followed in each day's programme, and twenty-one numbers in all were given, including the years 1798–1826.

Naturally the quartets occupied a most prominent place; they were given for the most part by Joachim, Ahna, Wirth, and Hausmann, and the whole of the fourth day's concert consisted of the quartets 59, 95, and 130. The noticeable feature of their marvellous playing was not so much the technical perfection of each performer as the entire subordination of the *virtuoso* to the unity of the composition, and the broad, masterful spirit in which the work was approached. The last of these, which was written by the master in complete isolation, under much suffering of body and mind, contains the cavatina which was to Beethoven himself his dearest production, the very expression of his heart's sorrow which tinges so strongly the correspondence and journals of his later life. It was played with touching pathos and reverence, and marked the highest point of the whole festival. The trio op. 70, 1, was played very impressively by Profs. Seiss, Hermann, and Schröder. The gloom and melancholy of the largo in D minor in the second part (the "Bat" or "Ghost"-trio) was strangely heightened by the breaking out of a violent thunder-storm, a veritable elemental accompaniment. The last number on the third day (op. 70, 2) was played with great perfection by the veterans Reinecke of Leipsic, Joachim, and Piatti of London. The fifth and last programme was the most popular, and exhibited the greatest variety. The difficult piano-sonata in B major (op. 106) was performed by Director Buths of Düsseldorf upon a superb American Steinway piano, which seemed the favorite instrument among the pianists who appeared. The song-cycle "An die ferne Geliebte," was given by Carl Mayer of the Cologne opera; he is a popular idol in Bonn, and sang in his usually triumphant manner. His enunciation is the clearest and most agreeable I have heard in Germany. The last number was the beautiful septet, most purely melodious of Beethoven's compositions, and especially agreeable to the Bonn audience on account of its introduction of the Rhine song, "Ach Schiffer, lieber Schiffer."

There was great enthusiasm and much mutual congratulation among the audience at the close. Soon after, a special train carried about two hundred persons to Godesberg, where a banquet was held, at which the best of good feeling prevailed. Joachim toasted the artists who had contributed so unselfishly to the success of the concerts, and Reinecke responded on behalf of the guests. Consul Thayer, who was present, was saluted as "the best biographer of Beethoven," and made a short address.

There remains but little space in which to speak of the Beethoven Exposition, which was so satisfactory a part of the celebration. It was the most complete assembly of memorials of the composer which has yet been brought together, and comprises almost everything which has been preserved of documents, portraits, and objects connected with his history. The real interest of the articles shown was worthy of note, for the committee escaped the error made in the Goethe Museum at Weimar, where so prominent a place is given to articles which had nothing to do with the real mental life of the poet. There was exhibited for the first time a portrait of the youth Beethoven at the age of about twenty, a beautiful miniature, probably by his friend Gerhard von Kügelgen of Bonn. The picture has always been regarded as a likeness of Beethoven, and came by well-authenticated descent into the hands of George Henschel in London. The coloring is very fresh and well-preserved. The hair hangs over the broad forehead, and the large dreamy eyes and passionate mouth agree very well with the ideal youthful court musician. There was also shown for the first time a portrait of Beethoven's mother, with a refined, sad face, corresponding exactly with the description of her appearance in the Fischer manuscripts. Most valuable for comparative purposes is the large number of portraits and busts, especially the life and death-masks, and the paintings of Mähler, Schimon, and Stieler. From them is yet to be constructed a satisfactory likeness, though Dake's great etching is the best which has appeared. The drawing by Kloeber, and the widely circulated late likeness by Jager, are much weaker in character than the stern, earnest face which meets us in most of the other portraits. Beethoven's piano, his quartet of stringed instruments, the ear-trumpets constructed to assist his failing hearing, and many of the original scores of his works were also on exhibition.

The house in the Bonngasse is that of a well-to-do citizen in the latter part of the last century. In the hallway is a flight of stairs with a fine wrought-iron balustrade which goes back to the time mentioned. The parents of the composer only occupied the back part of the house, which is ascended by a narrow staircase. The birth-chamber is a very small room under the mansard roof, whose low ceiling is supported by clumsy beams. One little window admits a scanty light, and the boards of the floor are much worn and disfigured by age. At present the chamber contains nothing but Cauer's bust of Beethoven. The house is not yet ready for general exhibition, but the chamber was specially shown to visitors during the festival.

James Taft Hatfield.

ASCENSION.

En Route to Barbados, April 15.

The peaks of Ascension, as I first saw them

in the early morning light of March 16, exhibited most strange and beautiful colors. A rich crimson-brown was shot through by a cool purple, with an undertone of warm yellow, and distance added a tint of hazy blue, the combination making a lovely whole. As we neared the island the colors due to distance disappeared, but the strong crimson-brown and yellow remained, for these are the real colors of the hills. The rock of the highest peak, Green Mountain, 2,850 feet high, is of a light color, overlaid by what appears from a distance as a thin varnish of greenish-gray vegetation. The ultimate peak itself, on the day of our landing, was hidden in a cloud, and during our stay this seemed to be its normal condition. The moist, southeast trade wind sweeps up the side of the mountain, and, reaching a certain elevation, its moisture becomes visible in the shape of a driving cloud, which pours over the top and down the leeward side for six or eight hundred feet, where it vanishes, and below that point all is clear. Except at Green Mountain, the island appears at first sight to be utterly barren. A close examination, however, will detect some faint beginnings of vegetation. A prickly gray-green poppy, with a delicate flower of a bright yellow, spots some localities with little dots of color; and here and there may be seen a low bush of acacia, with its feathery foliage of tender green lighted up by fluffy spheres of yellow blossoms, and hung with pendant seed-pods of polished brown. Near the foot of one of the brown hills of ash and tufa is a lonely palm tree, fighting for its life in the midst of the arid desolation. This tree might well stand as the original of that made immortal in song by Heine's poem, "The Pine and the Palm." At any rate, his "burning ledge of rock" was not half so burning as the fire-and-sun-scorched hill on which this poor tree struggles for existence with a courage which seems so human as to be pathetic. Year after year it has stood there, its crown of frond-like leaves pushed out of all symmetry by the steady pressure of the trade wind, and only at long intervals refreshed by the blessed baptism of a pouring shower. Environment is an important factor in palm, as well as human, life.

Most of the peaks on the island are quite regular in outline. Some are perfectly pyramidal in form; many have smoothly rounded tops, and others again have such shape and appearance as would result from the bursting of a huge bubble of mud, lava, and cinder when puffed up to the limit of expansion, the wind driving all the lighter material to the leeward, leaving the windward side of the crater much lower than the other. Green Mountain is the one place on Ascension where there is an obvious possibility for vegetable life; all the rest of the island looks as if no drop of rain had cooled the fervid cinder for a hundred years.

The landing-place, called "Tartar Stairs," is at a flight of steep stone steps, alongside of which hang a couple of ropes suspended from iron bars projecting overhead. In landing, the boat is brought as near the stairs as the breakers will permit, one of the ropes is swung out and caught, and when the wave lifts the boat to the proper level, a spring is made for the steps, and quite frequently a landing is effected with dry, or partially dry, feet. Near the landing are several substantial stone buildings, used for storing naval supplies, and for various other naval purposes; for Ascension is not only an island, it is a ship as well, being borne on her Majesty's Naval Register as the "*Penelope* tender"; and therefore naval discipline rules the island: lights out at ten o'clock; no smoking except at certain times and places; in fact, man-of-war rules are supposed to govern Ascension. I think these rules have been much relaxed of late years.

Georgetown, or "Garrison," as it is always called, consists of a street having one side only. The Captain's office is a two-story building, then come long, one-story cottages with broad verandas, used for officers' quarters; beyond these a large, airy, comfortable hospital, then two or three more cottages and another, smaller hospital, and still further along a cemetery. Every cottage has a little garden in front, separated from the street and each other by pieces of lava, and the space within is covered with glittering white beach sand, shaped into geometrical figures by a broom or scraper. Flowers there are none; but a few broad-leaved plants, such as will best bear the scorching heat of Ascension, are cultivated in tubs and kept alive with difficulty by sedulous watering. The street is sand, the gardens are sand, and when the wind blows, which it always does, the atmosphere is a mixture of air and sand. The superlative of desolation is reached at the cemetery. The graves are dug through ashes, scoriæ, lava, and pumice stone; the mounds, defined by a border of lava blocks, are covered with sand; but no rose, no shrub, nor even the humble grass softens with tender ministry the dark rigidity of the terrible lava. All that loving hands can do is done, but at best it is burying the dead in the slag of a furnace. The road to heaven is, doubtless, as short and direct from the Ascension cemetery as from Greenwood, Mount Auburn, or Forest Hill, but for myself I desire to avoid the horror of a grave scooped in lava and heaped with volcanic cinder.

Captain Napier, the officer in charge of Ascension, gave us every facility in his power for prosecuting the scientific work for which we had called at the island. Buildings in which to swing the pendulum and make magnetic observations were assigned and placed absolutely under the control of the scientific staff; transportation was furnished for the instruments, and also for members of the expedition and officers of the *Pensacola* whenever they wished to explore the island, and permission was also given for capturing as many green turtles as might be needed for use on the ship. Indeed, the ready hospitality shown to us will always be gratefully remembered. One afternoon Captain Napier took Professor Todd and myself to "Wide Awake Fair." This is a place where the Sooty Tern (called Wide Awake by the inhabitants) breeds by thousands. It is an extensive plain, about a mile and a half west of Green Mountain, thinly covered by a vine (*Ipomœa maritima*) which grows to an enormous length. I measured two of them by pacing; one was fifty and the other sixty-two feet long. It is said to bear a purple flower shaped like a morning-glory, but it was not in blossom when we were there. The breeding season was nearly over, yet hundreds of birds, belated in nesting, were sitting. The female lays but one egg, directly on the ground, making no nest at all. Either they are such devoted parents as to brave death in defence of egg or young, or they have little or no fear; for the mother bird remained on her egg until I was within arm's length of her, and then reluctantly flew away, screaming a discordant protest against my intrusion. Young birds in all stages of growth, from little pinches of black, fluffy down, just hatched, to birds sufficiently developed for awkward flight, filled the air or covered the ground. Looking upward, the sky was darkened by a dust of birds; and all the while the ears were deafened by a multitudinous scream in which there were no flashes of grateful silence. Professor Todd caught a young bird which, not heeding the penalties provided for bribery and corruption, offered its most valuable possession for liberty, viz., two small fishes about three inches long, evidently just swallowed. The Professor refused the bribe, but magnanimously restored the bird to freedom.

The contrast between Green Mountain and the other parts of the island is astonishing. The plains and lower peaks look as if they had been dried and burned by centuries of drought, and practically they support no vegetation; but on Green Mountain the growth is luxuriant and vigorous, resembling a rich, tropical jungle. This is due to the cloud of which I have spoken, bringing a dense mist nearly every day, and frequent showers, which do not reach the other parts of the island. Water being the great want here, every effort has been made to collect and store as much as possible of the rainfall. A system of pipes and tanks conveys the precious fluid from the mountain to "Garrison." At the time of our visit the tanks contained a six months' supply for the island.

One experiment by which it was attempted to increase the amount of water was so original as to deserve mention. Some genius, deeming a cloud to be a reservoir of water, a kind of floating pond as it were, imagined that to make it rain at any time nothing more was necessary than to break a hole in the bottom of this reservoir, and the rain would come. He may have had in his mind a dim recollection of some one in America who tried a somewhat similar experiment, to bring electricity from the clouds by means of a kite. Be that as it may, his plan was this: To raise into the cloud a kite with a chain attached, then the electricity in the cloud would run down the chain, making, as it flashed downward, a hole through the bottom of the cloud-reservoir, and this lightning-rent orifice would afford a channel or sluice-way for any amount of water. Q. E. D. The chain which was actually procured for this purpose is still on the mountain. The links are about two and a half inches long made of half-inch iron, and it would probably weigh fifteen pounds to the yard. It is said that the experiment was considered so dangerous that permission would not be given for a trial. Whether the fear was of water or lightning, I did not learn.

We found a very interesting character in the trapper who acted as our guide to Crystal Bay. He is a Scotchman by birth, and bears the name of Robert Burns, the poet, and claims to be of the same family. It was a pleasant experience to hear him repeat Burns's poetry with the real Scotch accent. He is employed at Ascension as a trapper of vermin, and he gave me the prices which he is paid for destroying the different kinds. For each rat he gets a half-penny; for one hundred crabs one shilling and sixpence; for one cat one shilling and sixpence. He brings in the rat's tail, the two large claws of the crab, and the scalp of the cat with the two ears attached, as proof of their destruction. The cats are the ordinary domestic cat run wild. On our walk to Crystal Bay he carried our lunch in a little pouch slung over his shoulder, and when we sat down to eat it, in taking out the lunch he brought out at the same dip a handful of rats' tails which he had collected from his traps, and was taking in to the office for the bounty. But an eight-mile walk over lava and cinder tends to remove any squeamishness which might be felt under other circumstances by such a mixing of

lunch and rats' tails, and any foreign flavor which our sandwiches may have contracted was not heeded.

Our work at Ascension being completed, the *Pensacola* weighed anchor at half-past one on Tuesday, April 8, and turned her bow towards far-away Barbados. E. J. Loomis.

THE ROYAL ACADEMY.

London, May, 1890.

I have already explained that this year the Grosvenor is the best of the three great London art exhibitions. Between the Royal Academy and the New Gallery there is but little choice to be made. Both contain some really good work and much honest effort, but each is hopelessly uninteresting as a whole. The good work does not stand out with any great prominence—it does not assert itself; you have to look for it. No note of originality is struck; no new man comes to the fore. The general average at the Academy is perhaps somewhat higher than it has been for the last few years, but there are not so many pictures of importance as even in last spring's very poor show. The New Gallery seems to be fast losing the little character it had in the beginning of its short career. An offshoot from the Grosvenor, it at first promised to inherit the traditions of the æsthetic, Neo-Tuscan, or whatever it may be called, school which gave the old Grosvenor its fame. But in the present exhibition spurious mediævalism occupies but limited space, and Mr. Burne-Jones, its chief exponent, sends only sketches and studies for important pictures exhibited elsewhere. In both galleries, as at the Grosvenor, the best work is to be found among the landscapes. Indeed, nothing is more striking and significant in the art world this year than the unusually good showing made by the landscape-painters.

At the Royal Academy, however, there is one redeeming feature, of which the New Gallery cannot boast, though it must also be admitted that to the Academy there is always one serious drawback which other exhibitions are spared. But this drawback, the monopoly of the best places on the wall by Academicians and Associates, no matter how atrocious their work, is no new thing, and of late the evil has perhaps been less than in the past, owing to the strenuous outcry raised against it. But it necessarily detracts from the general effect of the show when such childish and obsolete compositions as those of Mr. Faed, such pretentious incompetencies as the productions of Mr. Sant, such showy and vulgar performances as the canvases of Mr. Fildes or Mr. Woods (to mention no others), are hung on the line, while infinitely better things are skied out of sight.

However, it is pleasanter to dwell upon what is good, and the commonplaceness of the painting is in a measure redeemed by the excellence of the sculpture. The vast stride in advance which English sculptors have been making since the days when Alfred Stevens, neglected and unappreciated as he was, first sought to raise the art from the abyss of mediocrity into which it had sunk in England, is very marked. It is shown, in the first place, in the decidedly high average reached in the two rooms devoted to sculpture. The old characterless conventionalities that linger, as if to point the difference, seem quite out of place, whereas at one time it was the good work that was the exception. In almost all the portrait busts there is vigor and individuality, in expression of character as well as in the means employed to obtain it. It is evident that sculptors at least are endeavoring to use their own eyes, and to preserve their own individuality in one of the most conventional of the arts.

This progress is to be seen not merely in the higher general average attained, but in the excellence of single works. Most conspicuous among these is Mr. Onslow Ford's statue of Gordon on his camel. It is enormous, quite life-size; the pose is natural in its quiet dignity, the modelling is vigorous, and the great mass of detail, in Gordon's uniform and the saddle and trappings of the camel, are rendered with almost photographic accuracy. Indeed, one at first is inclined to question such close and minute attention to details; but a little study shows how right the artist was, and how, without the hanging tassels and paraphernalia, the height and gawkiness of the animal would have been unpleasantly accentuated. This is the statue which has been erected in bronze at Chatham by the Corps of Royal Engineers, and upon which Mr. Ford has been at work for the last two or three years. A little, carefully modelled, study for the camel, which he made at the Zoo, is now in the New Gallery. In addition to this stupendous piece of work, he also shows two charming figures in bronze, destined, I believe, for some Indian potentate—one of "Music," a female figure almost nude, with winged head and the lyre in her hand; the other of "Peace," also nude, the lines of the figure delightfully graceful, the pose unaffected, as she holds in one uplifted hand one of her emblems, the dove, in the other, the palm.

Mr. Alfred Gilbert, unfortunately, is not represented. Mr. Thornycroft has nothing of much importance, though his "Mirror," a relief in marble, is interesting as his diploma work, henceforth to be seen in the permanent gallery at the Royal Academy, which so few people ever visit, and his two medallion portraits are characterized by his usual refinement and exquisite but vigorous modelling.

Of outsiders, Mr. Harry Bates is the most prominent. He has a very beautiful Pandora, kneeling with head bent over the casket in her hands. The statue is delightfully thought out; the pose altogether charming, showing as it does the lovely curve of her rounded back. There is great restraint and artistic feeling in his treatment of the face and its expression, and the detail on the casket is studied with the greatest care. The subject could scarcely be rendered more satisfactorily. But perhaps Mr. Bates is even happier in a large relief for a London church, a dead Christ with an angel at his head and another at his feet. There is no one to-day who understands better the decorative treatment of figures, the value of long, flowing lines, and the graceful filling of a required space. The draperies of the Christ stretch in beautiful lines between the two angels, who lean devoutly over him so that their wings naturally curve as gracefully as the back of Pandora, and fit, without the least violence of composition, into the two ends of the long panel. Mr. Bates's mastery as a decorator is also shown in his "Story of Psyche" at the New Gallery, in which the same beauty of line and unaffectedness of arrangement are found. Mr. John Donoghue has sent to the Royal Academy his "Young Sophocles," about which so much has been already said in America that it would be more than useless to describe it again. Mr. George G. Frampton has one or two bas-reliefs in which there is something of the feeling of the Cinquecento Florentines, and a large "Angel of Death"; but it is impossible to speak at length of all the good work in these two galleries.

In the other rooms, while there is really not one picture that stands out with any marked distinction, several cannot be passed over in silence. For example, one always turns with interest to the contributions of Sir Frederick Leighton; for though his color and composition and atmospheric effects are like nothing in nature, though his draperies always hang in the same conventional folds, and he does not even attempt to express different textures, his draughtsmanship is scholarly, his painting has style, and, accepted frankly as decoration, has more good points than the work of almost any one of his fellow-Academicians. Of his three pictures this year, the finest unquestionably is the "Bath of Psyche," a study of the nude. The well-drawn, graceful Psyche stands on the marble floor just at the edge of the bath, her fair white body in strong relief against a purple curtain, above which one sees a stretch of deep blue sky and long white cloud-rifts. The color is rich, and the decorative effect of the whole is heightened—legitimately, I think—by the frame which encloses the picture between two pillars of the same architectural construction as those painted in it. This has been bought by the trustees of the Chantrey Bequest, and hereafter will hang at South Kensington in that collection which will probably form the neucleus of the English Luxembourg, of which Sir Frederick proved himself a strong advocate by his speech at the Royal Academy banquet. Mr. Alma-Tadema has no large picture. His most important at the Royal Academy is the "Frigidarium," with a Roman lady of the time of Hadrian, in a marvellously embroidered robe, marvellously painted, making her toilet by the help of a slave in her chlamys. Beyond, one looks to the usual Tademesque marble halls and stretch of blue sky. But prettier than this is a little "Eloquent Silence" at the New Gallery, in which, to the well-known marble seat and figures and sunny landscape for background, is added a new beauty in a great purple clematis which scatters its petals over the seated man and woman, and makes a rich mass of color in the centre of the composition. It seems, however, that the new beauty is an archæological blemish. For it is said—with how much truth I am not botanist enough to know—that the flower which really gives the picture its charm is the *Clematis Jackmanni*, a cross between the wild English variety and the white-flowered plant of China, and only introduced to the world within the last quarter of a century. For my part, I do not regret the mistake; Mr. Tadema has seldom produced a finer piece of color. But when all is said, there is a tiresome monotony in his pictures of a life he does not know; and his tiny portrait of Miss McWhirter, with its exquisite suggestion of detail, at the New Gallery, and his head of Mr. Waterlow, strong in character, even if the modelling is somewhat flat, at the Royal Academy, make one wish he would concern himself oftener with the things and people he does see and know.

Of other Academicians and Associates, none show anything notable except Mr. Hook, whose work this year is unusually good. Of Sir John Millais the less said nowadays the better. Mr. Watts is seen at his worst in both galleries. Mr. Burne-Jones has nothing in the Royal Academy, being contented with an exhibition all to himself on Bond Street. Mr. Frank Dicksee occupies the chief place of honor with a "Redemption of Tannhäuser," the merits of which are literary rather than artistic.

Of the men for whom one looks in the Academy, but who have not yet been elected to its membership, Mr. Sargent still holds his own, though he has painted better portraits. One is

fine chiefly for its rich color, and it is instructive to compare his strong yet refined and restrained treatment of the lilac gown of his sitter with the brutal rendering of very much the same subject by Mr. Luke Fildes in a portrait which is simply a triumph of vulgarity. By such comparisons one becomes doubly appreciative of the subtleties and refinement of Mr. Sargent's methods. Even when one questions his success, one is forced to admit his originality; and his other canvas, which shows an apparently very ill-tempered lady in fur cape and soft-felt tennis hat standing on the lawn in front of an old ivy-covered brick mansion, commands interest, though I am not sure that personally I like it. On the other hand, I am quite certain that I do not like his portrait of Mrs. Comyns Carr at the New Gallery; it is clever, and a good piece of flesh painting, but it looks like a sketch made in the Morgue, and one wonders at the courage of the lady in allowing it to be hung. Here he has also a large landscape called "Ighthaun Mote," very broadly and simply painted, while the figures playing bowls in the foreground are wonderfully put in.

Three other Americans are to the fore at the Academy: Mr. Edwin A. Abbey, who, unless I am very much mistaken, makes his first appearance as an oil painter in "Mayday-Morning," a study of early morning light softly diffused over an old garden, in which two of Mr. Abbey's delightful figures, a man and girl in seventeenth-century dress, are tripping along, hand in hand, in front of a high wall, over which the pink and white flowers of a blossoming cherry droop in rich profusion—the whole composition filled with the spirit of Herrick; Mr. Frank D. Millet, who has one of his quiet, charming, white-panelled, eighteenth-century rooms, where two girls are sitting at the tea-table, which, with its old silver and china and fair white cloth, is unusually well rendered; and Mr. Dannat, who shows a large "Study in Red," very cleverly managed, about which I would say more if it were not that I believe it has already been seen at the Salon.

Mr. Stanhope-Forbes, in a very carefully studied but almost too black auction sale ("By Order of the Court"), in a cottage interior, and Mr. Adrian Stokes, in another of his luminous sketches of sea and sky, are the most successful of the Newlynites. Of men who belong to no school or clique, conspicuous are Mr. Albert Moore, in a fine piece of decoration in which he has carried out a harmonious scheme of yellow, and treated decoratively five not overdelicate or attractive female figures; Mr. John M. Swan, whose exquisite little idyl of a "Piping Fisher Boy," his young naked body stretched out on a cool gray rock in a calm blue sea, is so tiny that it could be easily overlooked, and whose big "Lioness and her Cubs" is too sombre in tone; and Mr. William Logsdail, whose "Ninth of November," with the Lord Mayor's procession starting from the Mansion House, will probably excite more interest than anything else in the show. To future generations it will have the historical value that many Bellinis and Carpaccios have for us; but it is to be hoped that time will kindly soften and subdue its glaring, vulgar color, which now more than counterbalances its decided cleverness. The Lord Mayor's procession, it is true, is not in itself a very artistic pageant, even when directed by an artist; but, for all that, it is strikingly picturesque, the London atmosphere refining its too gaudy details, making even its crude sumptuousness beautiful. But the London fog and mist is just the one thing which Mr. Logsdail, clever as he is, has not yet been able to give us.

I will say nothing about the landscapes, because the best are by men who have done still better in the work they exhibit at the Grosvenor, unless I except Mr. Alfred Parsons, in a fine "Bend of the Avon," in which he is particularly successful in rendering the soft English atmospheric effects which Mr. Logsdail cannot understand; and Mr. R. Noble, whose sombre classical landscapes are rich and impressive, despite their lack of realism.

In the water-color room little need detain one save an impression of "Arabs Returning from a Raid," by Mr. Arthur Melville, who can, better than most men, express a great deal by the simplest means; while in the black-and-white room the best thing is Mr. Hole's etching after Millet's "Wood-Sawyers," which is one of the very finest reproductive etchings ever made, but which was published some two or three months ago, and has probably long before this been seen and duly admired and praised in New York.

Correspondence.

COLIN.

To the Editor of The Nation:

Sir: I should be glad to know whether the ultimate source of the name *colin*, applied to the common partridge or bob-white of the United States, has been investigated and settled by any one in America, and particularly whether there is any reason to conclude that it is a native Mexican or Indian name. Prof. A. Newton has pointed out to me that European acquaintance with the name appears to be due to Francisco Hernandez, the naturalist and physician sent by Philip II. to describe the natural productions of Spanish America. The result of his investigations was his 'Nova Plantarum, Animalium, et Mineralium Mexicanorum Historia,' published at Rome in 1648 and 1651. In the latter edition the *colin* is treated at pp. 22 and 42, and the fuller name *acolin* is mentioned at p. 16. According to Watt's 'Bibliotheca,' "this work had originally been published in the Spanish language, at Mexico, under the name and care of Francis Ximenes." This Mexican edition I have not seen; but it is probably the source of earlier European references to the *acolin* or *colin* (unless these were taken from Hernandez's own MSS.). The 'Joannis Eusebii Nierembergii Historia Naturalis' (Antverpiæ, 1635) has at p. 232 "Coturnices vocabat Noua Hispania *colin*, quorum genera ex Francisco Hernando dabo," and at p. 214, "Vocatur acolin quædam auis fusca Mexicani lacus." From these sources the *acolin* or *colin* became known to Francis Willoghby and his translator John Ray, who has (Eng. ed. 1678, pp. 387, 393), "A certain brown Bird of the Lake of Mexico is called *acolin* because it is of the bigness of a Quail," "Those of New Spain call Quails *colin*," "Acolin is of the bigness of a Stare," etc. From Ray it passed to later ornithologists, and I suppose into use in the North American colonies and the United States.

Buffon has also a long dissertation on "*Colins*." Littré, in his Dictionary, treated the word as French, and explained it as "nom propre, donné à un animal." But when we turn to Cotgrave, 1611, we find two words, thus distinguished, (1) "*colin*, collin, a proper name (and a derivative of Nicholas); also a Sea-cob or Gull"; (2) "*collin*, a long-beaked riuer-fowle of a beautiful grayish colour." I do not know whether the latter can be identified with the *acolin* of the Lake of Mexico (which Prof. Newton thinks may be *Gallinula galeata*); but I see no ground whatever for thinking that the French *colin*, a sea-gull, is the same as the Mexican word. No hint of the name being French occurs in the early authorities.

An American correspondent informs me that *acolin* is still the Spanish-American name of the bob-white, or of cognate species, and that the word is believed to be of Mexican-Indian origin. I shall be grateful for any *facts* bearing on the latter point; and, as time presses, I ask communications to be made to me direct, addressed Dr. Murray, Oxford, England. This will not prevent the subject being discussed also in the *Nation*. Would that some competent American scholar would take up the subject of the origin and history of such words, and make it his own! It is disappointing when one turns to American sources for information about American words, and finds only a repetition of the statements, often imperfect or erroneous, of European writers.

J. A. H. Murray.

Oxford, May 26, 1890.

P. S.—Since writing my appeal for information as to the alleged Mexican origin of this bird-name, I have, through the kindness of Prof. A. Newton, acquired a clearer notion of the relation of the names *colin* and *acolin* in Hernandez, Nieremberg, and Willoghby. They were not applied to the same bird, *colin* being the name of the "quail," *i. e.*, of the species of *Ortyx* and allied genera, while *acolin* was a water-bird, "quædam auis fusca Mexicani lacus" (probably *Gallinula galeata*), but it was so called from being of the same size as the "quail" or *colin*—"a coturnicis magnitudine vocatur *acolin*," or, as Willoghby translates, "a certain brown Bird of the Lake of *Mexico* is called *acolin* because it is of the bigness of a Quail." . . . "Those of New Spain call Quails *colin*." We are therefore entitled to assume that the name *acolin* was formed upon *colin*. Now, in the Nahuatl or Mexican language, water is *atl*, and in composition, as in all words of this form, *-tl* was dropped, leaving *a-* = water-; thus *otli* way, *a-otl* water-way, canal; similarly *colin* quail, *a-colin* water-quail. The fact that the word was thus, in combination, treated as a native word, greatly confirms the supposition that *colin* was the genuine native name, which the researches of Hernandez thus first made known to European naturalists.

The French name *colin*, given to a sea-gull, occurs in Belon, 'Hist. Nat. Oyseaux,' 1555, p. 167; but it has evidently no connection whatever with the Mexican word, and Cotgrave, in 1611, was well informed in making two distinct entries for the two words, which later dictionaries have so unfortunately muddled up, by attributing to the American *colin* a French derivation.

Oxford, May 28, 1890.

THE ETYMOLOGY OF COCKNEY.

To the Editor of The Nation:

Sir: In the discussion of the etymology of *cockney*, noticed in your issue of May 29, the position of the 'Century Dictionary' in regard to that word has been misrepresented. Dr. Murray, in his first letter to the *Academy*, affirms that the 'Century Dictionary' advances the derivation of *cockney* from an O. F. **coquiné*, M. L. **coquinatus*, as certain, and insinuates that this view is a new one, peculiar to that work. This is false. Among several other suggested etymologies of the word, the one in question is mentioned, with the remark that, though

"phonetically satisfactory," it is "*historically unsupported.*" The italicized words Dr. Murray omits to quote, but they are essential to a correct statement of the position of the American book. The 'Century Dictionary' does not advance this etymology as its own, does not assert it to be true, and, in what it does affirm about it, is entirely within the limits of fact.

In, apparently, ascribing this etymology to the 'Century Dictionary,' Dr. Murray cannot be so ignorant as he allows himself to appear. In the glossarial index of 'Piers the Plowman,' edited 1886 by Prof. W. W. Skeat, is the following statement: "*Cokeneyes, pl.* scullions, a. 7,272. I have now no doubt at all that this difficult word (whence mod. E. *cockney*) answers to an O. F. *coquiné*=Low Lat. *coquinatus*, from *coquinare*, to cook, serve as scullion, a derivative of Lat. *coquina*," etc. The suggestion of this etymology did not originate with Prof. Skeat; but as it is positively asserted by him (after having been tentatively advanced in the supplement to his 'Etymological Dictionary'), and as it is not asserted at all by the 'Century Dictionary,' it is a natural inference that Dr. Murray's criticisms have been intentionally misdirected.—Very respectfully,

CHARLES P. G. SCOTT.

NEW YORK, June 3.

A MISTAKE ACKNOWLEDGED, ETC.

TO THE EDITOR OF THE NATION:

SIR: The statement that *to fear*, in the sense of 'to fear for,' has been overlooked by the lexicographers is erroneous; and Mr. W. H. Johnson justly pulls me up for having made it. Referring to my rough note on the point, I find that I relied on it without observing that it bore, dimly pencilled, the letters D. V., a consecrated symbol which I am wont to secularize by making it stand for the very kitcheny Latin *dictionaria vide*. The search which I thought was completed had been left incomplete. From my mishap the practical lesson may be deduced, that there is nothing like ink.

That the use in question of *to fear* is, as Dr. Webster's editors mark it, "rare," is, however, almost disproved by Shakespeare alone. Besides the quotations for it which he furnishes, many others, presumably, lie hidden in corners of our literature seldom visited. Such are the following:

"Than Arthur *fered* his horse, lest that the lyon sholde have slayne hym." Lord Berners, *Arthur of Little Britain* (about 1530), p. 213 (ed. 1814).

"They both maruayled what minde he had so to do, and also *feared* their owne partes, least he woulde bring them into lyke daunger." T. Key (before 1547), *Translation of Erasmus's Paraphrase* (1548), *Mark*, fol. 71*v*.

"The carefull hen, *fearing* her chickens, dothe clocke them together." Anon., *ibid.*, *Matthew*, fol. 109*v*.

"The City whose ruine wee *feared* wee did not so much as find to be moved." Sir Robert Le Grys, *Velleius Paterculus his Romane Historie* (1632), p. 409.

"The Physician *fears* his Life; but I'm in more fear of his Soul." Sir Roger L'Estrange, *Twenty Select Colloquies*, etc. (1680), p. 111.

It is not, however, through the obsolete idiom just instanced that the old *afraid of*, and *afeard of*, as equivalent to 'afraid for,' is to be explained. Here the peculiarity is in *of*, which, in former days, denoted relation much more variously than is now the case. For instance, as late as 1628, the Rev. John Doughty could speak of "sinne *of* the holy ghost." Subjoined are some quotations for *afraid of* and *afeard of* in an acceptation which was long familiar:

"And, whan the Duke of Bygor sawe that, he was *afrayed of* hym selfe, and so toke his hors, and fledde his way." Lord Berners, *Arthur of Little Britain* (about 1530), p. 273 (ed. 1814).

"For they wer *afearde of* theyr lyfe." Anon., *Translation of Erasmus's Paraphrase* (1548), *Matthew*, fol. 88*v*.

"Iesus therefore tarryed here with his fewe disciples, whiche, though they wer wofully *afeard of* theimselfes also, yet durst thei not forsake their Lorde." Anon., *ibid.*, *John*, fol. 81*r*.

"My mind is yet very much troubled about my Lord of Sandwich's health, which I am *afeard of*." Samuel Pepys (1661), *Diary and Correspondence* (ed. 1875), vol. i., p. 336.

"This evening Mr. Povy tells me that my Lord Sandwich is, this day, so ill that he is much *afeard of* him." *Id.* (1663), *ibid.*, vol. ii., p. 164.

"Mathew ill; we were *afraid of* him, & pray'd," etc. Rev. Philip Henry (1667), *Diaries and Letters* (1882), p. 197.

"The Physician is afraid for his body; but I am more *afraid of* his soul." "Why, but there is no cause why the Ape should be *afraid of* himself for the Snail." H. M., *Colloquies of Erasmus* (1671), pp. 122, 513.

As after past participles generally, so, after *affrayed* or *afraid* and *afeard*, *of* had also the sense of 'by'; and, hence, the current *afraid of*, historically considered, is one with "alarmed by." The vulgar *frightened of* has, therefore, the support of ancient analogy.

In "he goes in *fear of his life*," where *of* signifies 'for,' we have another survival of a venerable locution. But we no longer say, with our ancestors:

"The burgesses of the towne were in great *feare of their* lyues, *wyues, and chyldren.*" Lord Berners, *Translations of Froissart* (1523), vol. i., p. 146 (ed. 1812).

"He [the Pope] blamed those times for being so full of troubles, praising former Ages, when the Popes might live quietly, not being in *fear of their Authority.*" Sir Nathanael Brent, Translation of *Hist. Council of Trent* (1616), p. 364 (ed. 1676).

To return to the disused *to fear*, 'to fear for,' a similar use of to *dread*, 'to be apprehensive on account of,' though hardly to be recognized as English, is perhaps worth exemplifying:

"It is not my fear of the confiscation of our church property, from this example in France, that I *dread*, though I think this would be no trifling evil." Edmund Burke, *Reflections on the Revolution in France* (1790), p. 227 (2nd ed.).

"My excuse was, that I *dreaded* the safety of my father and Jane." Anon., *Cicely, or the Rose of Raby* (1795), vol. 1, p. 76.

Though Burke generally expressed himself admirably well, it could readily be shown that, occasionally, as above, he expressed himself quite otherwise.

As to vulgarisms like "I sleep *home*," Mr. Johnson wishes me to point out their occurrence in American literature of established repute. Equally in American books and in English it would, I apprehend, be no easy matter to discover them, except where it is intended to represent the very diction of the heedless or ignorant. My critic's compliment that I am "usually careful" is sustained, at least, by my having spoken, with respect to the expressions in dispute, of what, as I put it, we "hear," not of what we read; and, consequently, I have committed myself to no charge justifying his requisition for written evidence. Americans in plenty, of fair education and good social position, will say "I sleep *home*," or the like; whereas, in England, only the humblest will say so. Contrariwise, while one is surprised to hear, for example, "I *done* it," from any Americans but the most illiterate, one may often hear it, in England, from persons not very far below the rank of gentlemen. At the same time, one must, ordinarily, in England, go far lower down than to such persons, to meet with "he is not hurt *any*," "I slept *none* all night," and "it blows *some*,"—solecisms which I have again and again heard, among our countrymen, from graduates of colleges.—Your obedient servant, F. H.

MARLESFORD, ENGLAND, May 15, 1890.

A REPUBLICAN CONFESSION.

TO THE EDITOR OF THE NATION:

SIR: Mr. Speaker Reed, at a dinner of the Home Market Club in this city on May 31, undertook the defence, or rather the glorification, of the Republican party in its relation to the tariff, and this is the way he did it:

"We have just passed through the House of Representatives a tariff bill, and we passed it with a unanimity of action on the part of the Republicans which is without parallel in the history of the country. And yet that fact had its origin away back. It is that on the Committee of Ways and Means was thoroughly represented every *great* interest of this great country; and if you will look at the list of names, you see that they stretch from one end of the country to the other, from the Atlantic to the Pacific coast, leaving out no *great* interest which the Republican party desired to preserve, and therefore no *great* interest of the country at large."

In the old novels we read of words interlined in a letter with lemon juice, which, being brought out by exposure to the heat, entirely change the meaning. It needs the italics which I have put in to give the full significance of this delicious bit of cynicism. In plain English it says that every interest powerful enough to compel consideration has received it. One great interest, indeed, Mr. Reed might and ought to have excepted, namely, that of some forty or fifty millions of units who pay for the privileges given to the other great interests, just as in the Middle Ages the merchant or traveller paid toll to every feudal baron who pounced down from his castle.

If he was as frank as he assumes to be, Mr. Reed would say that this was a "negligeable quantity," an interest which the Republican party does not care to preserve, as it has no representative in Congress and no influence whatever in the committee-rooms. The Republican party, in the wisdom of its generation, fully understands the value of the friendship of the Mammon of unrighteousness, and the force of the text, "Why do the heathen so furiously rage together, and the people imagine a vain thing?" If the Democratic party, as its name implies, seeks to base its power on the mass of the nation, it will turn aside from the idle conflict of the committee-rooms, and bend its strength towards setting up in Congress a representative of the nation who, with the millions behind him, shall wield a lash powerful enough to send back the fierce beasts of prey growling and snarling to their dens.

In the Middle Ages this work was done by a Louis XI., a Richelieu, a Ferdinand, a Peter the Great, a Henry VIII. Parliamentary government in Great Britain has done it through an Earl Grey, a Sir Robert Peel, and a Gladstone, and one may hope that its victories are not yet at an end. Sooner or later, and in one way or the other, it will have to be done in this country; and the solution of this problem will be the most interesting feature in the next century of the history of our Government.

G. B.

BOSTON, June 7, 1890.

CAMEL'S-HAIR TARIFF.

TO THE EDITOR OF THE NATION:

SIR: I own a camel. I bought her of Barnum. I want her hair protected. My neighbors tell me the McKinley bill does it. Therefore I'm for the McKinley bill. As I look at

it, a camel is as good as a sheep. The hair of the camel has as much right to be protected in this country as the wool of the sheep. If not, why not? One is as constitutional as the other. I'm for the McKinley bill, I say. It protects my camel's hair against the pauper-labor camel's hair of other countries. If it be objected by Delano and his sheep-raisers that there are not as many camels in this country as sheep, I admit it, but reply that there may be, perhaps, if we will adequately protect them. Why not establish here the camel-raising industry, as we are trying, by the McKinley bill, to establish tin-plate manufactories? Indeed, the argument is all on the side of the camel, for, as I understand it, there is not a single tin-plate manufactory in the land, while I have one camel to start with. In the name of my infant industry, I ask to be protected.

To the objection that our climate is not adapted to the raising of camels, I reply that it may be modified and made so by the construction of vast Government-made conservatories to shelter them in wintry weather, the construction of which would furnish employment to many thousands of idle workingmen in the country. Certainly there is sand, in almost every State of the Union, for camels to walk on, water to drink, and grass to eat, unless it be in the Dakotas, and they need not raise them there.

Now, Mr. Editor, I claim to be a true American. I believe in the great Republican-American idea of protection—protection to everybody who wants it, and, of course, is willing to pay something to promote party elections for it. The Government ought not only to put a high tariff on all foreign and pauper-labor camel's hair, as it does on wool, but should offer a bounty on home-grown hair, just as McKinley's bill does on sugar. This would foster this infant industry, raise the wages of the laboring man, make us, as a nation, gloriously independent of the effete nations of the East, keep our money at home, give the lie to that "dismal science" that tells us to sell in the highest and buy in the lowest market, and carry out to its legitimate result our great American idea of protection. Then could we join with our Caledonian brothers, with a new spirit and significance, in their national song,

"The camels are coming," etc.

Mr. Editor, I am a poor man, but I love my country and want to raise the wages of the workingman. I cannot afford to hire anybody to lobby for me at Washington. I hear you are violently opposed to British free trade and a warm advocate of the McKinley bill. You must, therefore, have a deep sympathy for all such infant industries as mine. Is it too much to ask you to write Maj. McKinley and ask him to put a still higher tariff (it now stands in his bill only about 77 per cent., I believe) on the pauper-labor camel's hair with which our foreign enemies are trying to flood this country? Please be sure, also, to tell him that I was in the Union army.—Yours, for a consistent protection, W. H. Spencer.

195 Broadway, Providence, R. I., June 6, 1890.

FORT TICONDEROGA.

To the Editor of The Nation:

Sir: In an article, "English and Americans," in the May *Fortnightly*, Mr. W. Morton Fullerton says (p. 734): "Fort Ticonderoga still stands, the most imposing military ruin in America, and across its western barracks the sun sets full upon its brown and crumbling stones, now adorned with a truly nineteenth-century legend in the staring white letters of somebody's 'Stove Polish.'"

It has been many years since I saw Ticonderoga, and I do not know if this statement is true; but if true, ought not the *Nation* to give voice to the sense of outrage which all who have any feeling for the country's history must experience at this monstrous and impudent desecration? The firm that would employ such means of advertising ought to be publicly knouted.—Very truly yours, W. H. B.

Baltimore, May 19, 1890.

[We have delayed printing the above letter till we could make the necessary inquiry, with this result: So much of the old walls of the fort as a certain family of this city spared after being checked in its work of converting the whole into quicklime, is undefaced by any advertisement. It is suggested to us that what Mr. Fullerton saw, or reports, is painted on the rocky side of old Mt. Defiance, visible from the railway between the lakes. A number of advertisements here mar the scenery in a disgusting manner.—Ed. Nation.]

Notes.

Longmans, Green & Co. of Paternoster Row, London, and of 15 East Sixteenth Street, New York, are the second oldest publishing-house in England, dating from 1726, when the first Longman succeeded to the business of William Taylor (who had made his money as the original publisher of 'Robinson Crusoe'). In 1711, fifteen years before the first Longman acquired the house in Paternoster Row on the site of which his descendants still have their place of business, the first Rivington succeeded to the trade of Richard Chiswell, and from that day to this the Rivingtons have been London publishers; but now the news comes that they are about to retire, having sold out absolutely to the Longmans. Thus it happens that of two publishing-houses which have existed side by side in the same city for more than a century and a-half, the younger now absorbs the elder. Both houses have had a connection with America: in 1760 James Rivington came over, and in Philadelphia started the *Royal Gazette*, which was removed to New York during the Revolution; and all through the last century the dealings of the Longmans with the American colonies formed a large part of their business. Within the past few years they have followed the example of the Routledges, Macmillans, and Cassells, and opened a branch in New York.

Mr. F. Marion Crawford's 'A Cigarette Maker's Romance' is set down for publication in July by Macmillan & Co.

The Cassell Publishing Co. will bring out 'Society as I Have Found It,' by Ward McAllister; 'Scouting for Stanley in East Africa,' by Thomas Stevens; and 'Vengeance Is Mine,' a novel.

A new novel by Marion Harland, 'With the Best Intentions,' will appear at an early date with the imprint of Charles Scribner's Sons.

An authorized American edition of 'Lux Mundi' is announced by the John W. Lovell Co.

Estes & Lauriat, Boston, have in press a 'Popular Natural History,' by Prof. J. S. Kingsley, of the University of Nebraska, in two volumes thickly illustrated.

Editions of three of Molière's comedies, and 'A Compendious French Grammar,' by Prof. A. H. Edgren, are in the press of D. C. Heath & Co.

'H. M. Stanley,' by A. Montefiore (F. H. Revell), is a readable account of the great explorer's travels compiled from his published works and recent letters. To many readers the first few pages, relating to his birth and early career before undertaking the search for Livingstone, will doubtless prove a surprise. The book has several maps, but on such a scale that it will be somewhat difficult to trace his various routes across the Dark Continent. Very similar in character and in diction, as it is derived from the same sources, is 'Stanley' (London: E. Nister; New York: E. P. Dutton & Co.). It is more profusely illustrated than the preceding work, and the maps, being larger, are possibly more serviceable.

Prof. Masson's seventh volume in his 'Collected Writings of Thomas De Quincey' (Macmillan) groups together sundry "historical essays and researches," including "The Casuistry of Meals"; the futile castigation of Josephus in the matter of the Essenes; three papers on Greece under the Romans, in revolt against the Turks, and in her modern state; the revolt of the Tartars; and Ceylon. To the larger part of this the name historical would now be dubiously conceded, but the literary quality has not been impaired by time. The same firm adds to its popular edition of Kingsley 'Two Years Ago.'

The fifth volume of the new edition of 'Chambers's Encyclopædia' (Philadelphia: Lippincott) carries the work on to Humanitarians. It has not a few American contributions. Mr. G. P. Lathrop writes of Hawthorne, Gen. J. G. Wilson of Grant, Gen. Lew Wallace of President Harrison, and Mr. Henry George briefly sums up in his autobiographical sketch the doctrines which form the body of his economic agitation. Other noticeable articles are on Glass-staining, by William Morris; Hospitals, by Florence Nightingale; Gulf Stream, by Dr. John Murray; Goethe, by Prof. Dowden; Handel, by Sir George Grove; Hogarth, by Austin Dobson; Homer, by Mr. Gladstone, who uses the first person singular throughout, and, as might have been expected, does not shine in condensed exposition; and Hayti, by Sir Spenser St. John, who anonymously assures his readers that "Sir Spenser St. John's *Hayti, or the Black Republic*, gives a truthful picture, at once melancholy and ludicrous, of the utter savagery that is dominant in the western state," reiterates his charge of cannibalism as a feature of vaudooism, and says "the negro republicans have gone back to the lowest type of African barbarism." This is very amusing. The writer on Harvard University, though an American, has, as respects its founder, apparently got no further than Mr. William Rendle's monograph, to which alone he refers, while thinking John Harvard to have been "probably" born in Southwark in 1607. There are good maps of Great Britain, Georgia, and Holland, and the customary woodcuts in the text.

The volume of the *Century Magazine* that closed with April now comes bound to our table. It begins with Joseph Jefferson's autobiography, which in a way becomes the leading feature as Hay and Nicolay's Lincoln terminates. Mr. Kennan has not ceased to write, and Mr. Cole and Mr. Stillman continue their illustration of the old Italian masters. Mr. Lafarge brings his three letters from Japan. There are three enlightening papers on the Congo. Mr. Bryce is honored with a sketch and a fairly good portrait. Mr. Stockton's latest drollery, "The Merry Chanter," furnishes the lightest element. In thus reviewing the table of contents we grudge the permanence and conspicuity allowed to the late Robert

Carter's "The Newness," an inaccurate and misleading reminiscence of our period of sociological ferment.

'Echoes from the *Oxford Magazine*' is the title of a prettily printed collection of English undergraduate prose and verse not unlike the American volumes of 'Verses from the *Harvard Advocate*' and 'Pictures from the *Columbia Spectator*.' There is the usual commingling of sophomoric pedantry and scholarly sportiveness; and of course parody is the chief staple. There are humorous imitations of Herodotus and Walt Whitman, of Canning and Praed, of Mr. A. C. Swinburne and Mr. Andrew Lang, and perhaps this "Ballade of Andrew Lang" is the brightest bit of verse in the collection. An American notices the familiarity of the British undergraduate with the measures of Mr. Bret Harte and of "Hans Breitmann" Leland—both American authors now domiciled in Great Britain. A list of signatures is given from which we are able to declare that the gentleman who signs "Q.," and who has recently published a tale called 'The Splendid Spur,' is Mr. A. T. Quiller-Couch, formerly of Trinity College.

M. Eugène Verconsin has just gathered into a volume a second series of his amusing 'Saynètes et Comédies' (Paris: Hachette; New York: F. W. Christern). M. Verconsin's plays are very popular with French amateurs, and probably no French dramatist of our day is more often acted in French parlors. Nearly all his little plays are in one act. There are a dozen of them in this volume; and the majority are cleanly, clever, and likely to be of service to amateur actors in America who dare venture on a performance in French.

The *Popular Science Monthly* for June presents one of the good results of amateur photography in an article by Mr. David A. Wells on the "Evidences of Glacial Action in Southeastern Connecticut." It contains five excellent reproductions of views of large glacial boulders, so characteristic of New England scenery, and so commonly referred to among its prominent features. While the individual boulders here pictured have perhaps received little notice, it is hardly appropriate to open this article by saying that "remarkable evidences of glacial action in southeastern Connecticut seem thus far to have almost entirely escaped the attention of geologists." Connecticut is well known to be a bouldery State.

The camera has also been well employed by Mr. Frederick H. Chapin of Hartford, Conn., in procuring the striking picture of a cliff-dwellers' "palace" or communal home and stronghold in a side gorge of the Mancos Cañon, Colorado, which forms the frontispiece to the *Photographic Times* for June 6. Oriental antiquity is seldom more impressive.

The *Bulletin* of the Boston Public Library was in April changed to a quarterly, and is henceforth procurable for an annual subscription of one dollar, postage included.

The National Central Library at Florence continues its punctilious catalogue of the Palatine codices in Part I. of Vol. 2. The present instalment is, with rare exceptions, of prose MSS. Among the numerous *novelle*, that numbered 500 may be remarked for the name of one of the characters, Antenore degli *Amerighi*.

Dr. Kerner von Marilaun's 'Plant Life' is continued in Parts 118–123 of 'Allgemeine Naturkunde' (Leipzig, and New York: Westermann), with an array of beautiful colored plates equalling any that have gone before in the progress of this popular work.

From the same American agents we receive the first of twelve parts of an 'Allgemeine Geschichte der Litteratur,' by Gustav Karpeles, from the establishment of Grote in Berlin. It promises a lively description, in broad strokes, of the evolution of the world's literature, with careful selections, and with illustrations abundant and authentic, both in black and white and in color. The opening chapters deal with the Orient.

—Westermann & Co. send us the concluding numbers of vols. xv. and xvi. of 'Meyer's Konversations-Lexikon,' and the closely following parts 1–8 of a seventeenth volume which will supplement the main work and bring it down to date. These issues are all very rich in colored and other plates and maps, among which we remark for their interest plans and a section of the new Budapest Opera-house. The article on the United States is open to criticism, and bears marks of a purely book knowledge of this country and the character of its inhabitants. The attempt to sum up the New England traits and physique has a very antiquated air, and misses the qualities which have made, and still make, that section the leaven of the whole country. There is a slip in counting New Mexico among the freshly admitted States, and the article on Washington begins by defining it as a Territory, and ends by recording its promotion to Statehood. From the chapter on education it would be inferred that everywhere in this country colored children are provided with separate schools. The historical summary also cannot be praised; it has no grasp of the slavery issue, and refers to no American work on the subject. President Harrison is said to be the son of General Harrison. The letter Z is considerably swelled by the inclusion of words which, before the days of reformed spelling, began with *c*, as *zement*, *zentral* (*Amerika*), *zeremonie*, *zivil* (*prozess*), etc. The Supplement takes up anew all the leading countries, with Germany and her colonies and Brazil conspicuous in the numbers before us; has a chapter on Africa, of course; deals also with Darwinism, railroad-building, the state of European armies, recent European emigration, mountain chains, the ice age (but, though there is a glacial map of the United States, Wright's 'Ice Age in North America' is overlooked), excavations (particularly on the Acropolis), etc. A list of *Denkmäler*, or historic portrait statues in both hemispheres, is curious and novel, but disregards a great many in this country, *e. g.*, John Winthrop in Boston, St. Gaudens's Lincoln, Houdon's Washington and the Clay at Richmond, etc. The defects we have enumerated do not impeach the worth of this standard dictionary, but emphasize once more the desirability of cisatlantic collaboration in kindred enterprises.

—Since our notice of Paul's 'Grundriss der germanischen Philologie,' the work has been making rapid progress. The second instalment of vol. i. takes us well into, but by no means through, the bulky fifth section upon the history of the Germanic languages. Sievers's introductory chapter upon Phonetics is substantially an abbreviation of his well-known treatise on the same subject, with adaptation to the particular purposes of this compendium. Much longer and more important is Kluge's chapter upon the "Vorgeschichte der altgermanischen Dialekte," by which is meant an account of Germanic speech as it was after it had become differentiated from its Indo-European parent, and before it had broken up into separate dialects. Here we have what is not to be found elsewhere, or is to be found only in a large number of widely scattered books and monographs. An enormous mass of literature is judiciously digested, and the present state of scholarship with respect to the various matters discussed is clearly brought to view. Polemic is in the main avoided, the author's plan being to present only the view which he considers sound, but to give always along with the view a full array of the facts upon which it is based. As to the various theories that have been advanced respecting degrees of relationship among the different members of the Indo-European family, Kluge's opinion is practically a *non liquet*. He does not entirely reject the "tree-and-branch" theory of the Indo-European dispersion, but holds that certain facts are best explained by the "wave" theory of continuous dialectal variation. Word-lists are given which would seem at first to indicate a specially close relation between Germanic and Keltic speech; but then other lists are given which by similar reasoning would point to an equally close kinship of the Germans and the Slavs, or of the Germans and the Latins, or even of the Germans and the Hindus. In short, it is made to appear that if we take any one member of the Indo-European family, we shall find that there are certain words which it shares with Germanic speech and with that alone—a state of affairs obviously irreconcilable with the tree-and-branch theory considered as a complete account of the facts. On the whole, Kluge's exposition is well calculated to show how much less clear this whole subject is than it was a few years ago, in the days of Pictet and Schleicher and Max Müller. Even the theory of a European, as opposed to an Asiatic or Aryan, unity, is regarded by him as an unproved and probably unprovable hypothesis. That he is decidedly agnostic with respect to the origin of case-endings, person-endings, etc., need not be stated. We cannot here enter upon a fuller account of Kluge's essay, which will henceforth be indispensable to specialists in this field.

—The remainder of the second instalment is devoted to a short history of Gothic by Sievers, and a longer history of the Scandinavian languages by Noreen. This last is more ample and more technical than the author's article on the "Scandinavian Languages" in the 'Encyclopædia Britannica,' but less so than his 'Altnordische Grammatik,' of which the first part, dealing with Old Icelandic and Old Norwegian, appeared in 1884. The monograph before us anticipates the second part of the grammar in that it takes cognizance of Old Swedish and Old Danish. The third instalment of vol. i. contains, besides the conclusion of Noreen's contribution, an admirable history of the German language by Behagel. The histories thus far confine themselves to phonetics and morphology, leaving syntax untouched, and do not come down beyond the mediæval period —which makes them at any rate defective as histories, whatever their good points may be. What has been mentioned thus far belongs to vol. i., but we have also received four instalments of vol. ii. The first contains section 6, upon Heroic Saga, by Symons; a history of Gothic literature by Sievers (suggestive of the famous chapter upon "Snakes in Iceland," though Sievers does not hesitate to talk in his monograph on the Gothic language of the "characteristics of classical Gothic"); and finally a history of Icelandic-Norwegian literature by Mogk. A second instalment is mainly devoted to a history of German literature, the text being written for the older period by Kögel, for the later by Vogt. The literary no less than the linguistic histories stop with the Middle Ages. The other instalments received contain a monograph on Germanic Husbandry by Inama-Sternegg, one on Military

Arrangements (*Kriegswesen*) by Schultz, so short as to be hardly worth inserting, and one on Manners and Customs (*Sitte*) of the Ancient Scandinavians, by Kålund, this last being a translation from the Danish.

SMITH'S RELIGION OF THE SEMITES.—II.

Lectures on the Religion of the Semites. First Series: The Fundamental Institutions. By W. Robertson Smith, M.A., LL.D., Fellow of Christ's College, and Professor of Arabic in the University of Cambridge. D. Appleton & Co. 1889. 8vo, pp. xii, 488.

THE second half of Professor Smith's volume is occupied with the subject of sacrifice. He gives, in fact, a general discussion of the origin, nature, and development of the rite, with illustrations drawn chiefly from the custom of Semitic communities. His view of this question may be called a new one. The prevailing opinion (represented by Tylor, for example) has been that sacrifice in its simplest and most original form was a gift to the gods, either of the nature of tribute, in recognition of their lordship, or a friendly attention designed to avert their anger and secure their favor. Mr. Smith holds, on the other hand, that sacrifice was originally an act of communion between the worshippers and the deity. The grounds for this view he finds in the communal character of early sacrifice, and in certain accessory ideas which show themselves in all primitive communities. Relying on the accessible accounts of savage and semi-civilized life, he insists that as the clan was the primitive social unit, so all worship was the act of the community, in which the individual had a right to share only as a member of the community. The gods, he points out, were kinsmen of their worshippers, and in that character only entitled to honor. Certain widely diffused customs and expressions look in the same direction. The idea which formed the basis of the ancient *lectisternia* was that the god actually partook of the viands prepared; such is the representation in the story of Bel and the Dragon, and such is probably the original conception of the Old Testament expression, "bread of God" (Lev. xxi, 17). Other Biblical expressions which involve the belief that the gods actually consumed food are found in the story of Noah's sacrifice, where it is said that Yahwe "smelled the sweet savor" (Gen. viii, 21), and was pleased, and in Jotham's fable (Judg. ix, 13), where wine is said to cheer gods and men.

The evidence adduced makes the early communal character of sacrifice reasonably certain. The only doubt is whether Prof. Smith is warranted in concluding that this was absolutely the earliest conception of the rite. It would be better to say that the meagreness of the data makes the question uncertain. It is admitted that many ancient sacrifices were of the nature of gifts to the gods, tribute or thank-offering; one common Hebrew sacrificial term (*minha*) means simply gift. There is nothing in what we know of primitive modes of thought opposed to the supposition that man's primary instinct was to propitiate the supernatural powers by gifts. Further, it is a fair inquiry whether the underlying idea in the communal religious meals in which gods and men took part together, was not the desire to propitiate the deity and secure his assistance. The god might indeed be looked on as the natural companion and friend of his fellow-tribesmen; yet, as he was a tribesman of a very peculiar character, the main desire of men may have been to please him by respectful attentions. In a word, the clan-constitution is not necessarily the oldest form of society. Back of this comparatively developed social organization there was probably a looser form of life in which the predominating religious idea may well have been fear of the supernatural powers and desire to appease them.

There is a related point in which the author seems not to guard himself sufficiently. Early religions, he points out, were joyous in their nature, constantly tending to an orgiastic character. There were feasts in honor of or in company with the gods, in which the comfortable consciousness of the divine friendliness naturally led men to give themselves up to excess. There is a hint of this custom in the Deuteronomic prescription that householders were to celebrate the tithe-festival in Jerusalem, turning the produce into money if they lived far from the city: "and thou shalt bestow the money for whatsoever thy soul desireth, for oxen or for sheep or for wine or for strong drink or for whatsoever thy soul asketh of thee, and thou shalt eat there before Yahwe thy god and shalt rejoice, thou and thy household" (Deut. xiv, 26), and the survival of a similar custom, perhaps, in the celebration of the Lord's Supper in the Church of Corinth, where one was hungry and another drunken (1 Cor. xi, 21). Prof. Smith concludes that ancient heathenism was not made for times of sorrow, but for seasons of national prosperity (p. 245). Even in advanced forms of heathenism, he holds, when gods became in some measure the guardians of universal morality, what was gained in comprehensiveness was lost in intensity, and the advance towards ethical universalism was never sufficient to make up for the decline of the old heroic virtues that were fostered by the narrower type of national faith.

This view seems to us to overstate the facts, and not to recognize the true relation between the religious and the ethical developments of life. We have the history of ancient heathenism and of ancient Israelitism only in its more public features. Little or nothing of religious biography has come down to us, but the little that we have presents the worshipper as turning to his god for consolation and help in times of sorrow with the same earnestness and hope that characterize the best forms of religion known to us. The Babylonian penitential psalms, which are not later than the seventh century B. C., show an intensity of religious feeling and a capacity of trust which any worshipper of to-day might be glad to possess. The Babylonians doubtless had their orgiastic festivals, but they had also their seasons of private devotion; and we can hardly doubt that such seasons recurred in the lives of individuals in all ancient communities, Hebrew and heathen. The ethical character of private devotion varied with the stage of social-ethical development: a Hebrew of the time of Gideon or Samson would naturally be inferior in spirituality to a Greek of the circle of Socrates and Plato. Trust in the divinity in times of distress is a natural sentiment which does not depend on the special form of the organization of religion. It is equally erroneous to suppose that the character of human virtue is wholly determined or even essentially modified by the character of religious systems. If a causal relation between the two must be affirmed, it should rather be stated in the converse direction, but it is more accurate to regard virtue and piety as determined in their forms by the same general social conditions, and standing to one another in a complementary relation. What we call the robust virtues of half-organized societies are the product of social conditions, and it is these same conditions that give shape to the characters of gods and the rites by which their favor is gained. To represent later stages of civilization as inferior to earlier in moral robustness is to use this term in an improper sense. Exactly the opposite may be said to be true. What is usually described as the decadent period of Roman life, the age of the Cæsars, produced a type of character which in honesty, courage, and fortitude was certainly inferior to nothing that the early annals of Greece and Rome exhibit. The later Hebrew heroes, such as Nehemiah, Judas Maccabæus, and John the Baptist, are in all respects, to say the least, the equals of those names which adorn the old history.

The progress of organized religion is intimately connected with the development of piacular offerings, a point which Prof. Smith treats at length with the special purpose of determining the origin and religious significance of the piacula. These he regards as going back in their simplest form to a very early period, but as deriving a special significance from later social-national conditions. The ancient annual piaculum, he thinks, was not a means of obtaining forgiveness for the sins of the past year; the explanation was generally sought in a myth founded on the features of the ritual. The sacrifice was often a human victim, as among the Carthaginians and the Arabs of Dumaetha; the Semitic annual piaculum, however, was generally taken to be a commemoration of the death of the god, as in the case of Dido and Adonis. The death of the god was originally simply the death of the theanthropic victim, and the mourning for the dead deity was not originally a lament over decaying nature (though this it came to be in the later developed ritual), but simply the official mourning over the slaughter of a theanthropic victim in whose death the god died.

> "That the god-man dies for his people, and that his death is their life, is an idea which was in some degree foreshadowed by the oldest mystical sacrifices. It was foreshadowed, indeed, in a very crude and materialistic form, and without any of those ethical ideas which the Christian doctrine of the atonement derives from a profounder sense of sin and divine justice" (p. 393).

The piaculum was thus, according to our author, a communion of blood, that is, of life, between man and the god, and issues out of the old conception of kinship and identity of nature between the deity and his worshippers.

Accepting this as the primitive form, there remain to be explained the later mystic sacrifices and the more specific expiatory rites, such as the sin-offering of the Hebrews and their ceremony of the annual day of atonement. For the explanation of those sacrifices, peculiar to mystic rites or to extraordinary emergencies when a sacrosanct victim was chosen whose slaughter would at other times be unlawful, Mr. Smith lays great stress on those historical conditions which tended to break up the old clan-constitution, establish despotic monarchies, and break down to some extent the old national isolation. Mystic rites, he thinks, sprang in great measure out of international thought, and the severe and gloomy type which Israelitish religion assumed in the seventh century under Manasseh he ascribes to a general feeling that the old sacrifices had lost their efficacy, and that more potent means must be adopted to secure the favor of the gods. No doubt some weight is to be allowed to these considerations, but they do not seem to touch the heart of the question. In very early forms of religion we find intense and savage methods of placating the deity. The fundamental fact in the later gloomy aspect of Semitic and other religions is moral

growth, the deeper sense of sin, the generally more serious way of looking at life. The more joyous side of early faiths comes from their childishness; it is the consciousness of grave moral questions that gives gravity, gloominess, or moroseness to religion—the Roundheads are always deeper moral-religious thinkers than the Cavaliers. From this point of view the history of human sacrifice becomes especially interesting. Our author does not treat it consecutively or in detail; he explains it as he does mystic and extraordinary sacrifices in general. Lack of space, no doubt, enforced condensation and brevity, and indeed a full discussion of this rite would require a volume.

The details of Mr. Smith's treatment of his subject must be passed over with the remark that he gives freshness and life to everything he touches. The history of ancient sacrificial ritual is commonly looked on as a dry topic: he has brought it into organic connection with ancient life in such a way as to make it interesting throughout to the general reader as well as to the specialist. The volume is, as we have said, a contribution to the history of early religion. In the Semitic field, especially, his references to native authorities form a valuable bibliography for the scholar. Many of these he has collected himself, and, where he is indebted to others for references, it is evident that he does not quote without personal examination. No reader of the book, whether he agree or disagree with the author in whole or in part, can fail to admire its fulness of learning and brightness and suggestiveness of thought. One could wish that there was a full analytical table of contents; this would help the student to follow the course of the argument, which is sometimes obscured by the mass of details. The difficulty is partly but not wholly obviated by the page headings, which follow the subjects of the paragraphs. There is a fairly good general index.

ENGLAND AND HER COLONIES.

Problems of Greater Britain. By Sir Charles Wentworth Dilke. Macmillan & Co.

THE mere fact that this work is issued by the same publishers, and is uniform in outward appearance, with Prof. Bryce's book on the 'American Commonwealth,' may have much significance. Although nothing has been said to indicate that these are the initial volumes of a library dealing in a scientific way with the political and social problems now seeking solution under various forms of government, the idea of such a library is so admirable that it certainly ought to be carried out. So wide a range of subjects, of the deepest interest to thoughtful and intelligent readers, would be covered by such a library that it is hardly necessary to point out its value, especially if future volumes should be characterized by the accuracy and ability that distinguish those already published.

In 'Problems of Greater Britain' Sir Charles Dilke presents an elaborate study of the condition of the various British colonies, explains the legislative and other differences that exist between them and the mother country, and makes interesting forecasts of their future. Owing to the plan adopted by him of first stating all the important facts relating to each colony, and afterwards recapitulating special groups of facts under such heads as education, religion, etc., there is a certain amount of repetition which, perhaps, might have been avoided; but, as a compensation, the reader who wishes to refer to particular subjects will find his labor lightened by an excellent index.

Newfoundland comes first on the list of colonies, but Sir Charles Dilke has nothing very interesting to say about the land of "cods, dogs, and fogs," except that it is one of the few colonies with a large Irish population which retain their loyalty to the English crown. The valuable fisheries have been the cause of continual diplomatic differences between England and France since the beginning of the century, and at the present moment a settlement proposed by England is being angrily declined by the colony. Owing to the severity of the winter climate, one-third of the revenue has to be expended for the relief of distress, and a great future can hardly be predicted for a land so little blessed by nature.

Coming next to the Dominion of Canada, attention is called to the fact that it is now receiving more British emigrants than Australia. The completion of the Canadian Pacific Railway has opened up an immense and fertile country for settlement, and this, together with some assistance from the British Government, has stimulated the movement of late years; but the feeling against assisted immigration, which has entirely put a stop to it in Australia, has spread to Canada, and experiments in this direction will not be repeated. Since this book was written, there has been a marked falling off in the arrivals of immigrants, as a result of better times in England, and they will continue to fluctuate from such causes. It is rather remarkable that, out of a population of 5,000,000, 4,000,000 are Canadian born, and the rate of increase by natural growth is very rapid, especially among the French-speaking people. Sixty years ago Tocqueville found ten times as many French Canadians in the country as had been there at the time of the British conquest, and he said they were as French as he was, and much more like the French than the Americans were like the English. If their present rate of increase continues, they will be able to hold their own in spite of English immigration, and there is no likelihood, judging from recent Quebec legislation, that they will abandon their language. They are strongly loyal to England, because their ancestors obtained from her political and social liberties which France had refused them, and the sense of obligation seems to have been handed down from one generation to another, as in the case of Alsace. It is often claimed, as in this book, that the tone of politics is higher in Canada than in the United States; but those who are familiar with the way in which things are done at Ottawa, would be unwilling to allow even so modest a claim as this. If we would find a pure political atmosphere among the Anglo-Saxon nations of to-day, we must look for it on the Australian rather than the American Continent.

Sir Charles Dilke regards it as a misfortune for Canada that that "great English writer and powerful controversialist," Mr. Goldwin Smith, should write as strongly as he does against the whole scheme of Canadian confederation. As a matter of fact, however, the majority of Canadians are in favor of the present system, and Mr. Goldwin Smith's political writings have not been successful in the sense of making converts to his views. But while the majority of voters seem to think that the progress of Canada since 1878 has been the result of a protective tariff, it is open to question whether that progress would not have been still greater under free trade. The Dominion has a larger area and a larger population than Australia, and was settled much earlier, yet her trade is smaller and the condition of her working classes decidedly inferior. Canadian manufacturers are suffering to-day, as are Australian manufacturers in a less degree, from over-production, a limited market, and inability to meet European competition in the markets of the world. Those who would change the present system are mostly in favor of commercial union with the United States, but this would mean free trade with us and differential duties against the mother country.

In dealing with the liquor question the Canadians have achieved a remarkable measure of success. The Scott Act, which is a Dominion local-option law, giving power to close rum-shops by a bare majority of votes, without compensation, has not been invariably successful, owing to the imperfection of the machinery for its enforcement; but it has undoubtedly led to a reduced consumption of liquor, so that this is now less per head than in any other English-speaking country. In Ontario, apart from the Scott act, the maximum number of licenses that can be granted in any district has long been regulated according to population, and in recent legislation on the subject the "civil-damages clause" adopted by some of our State legislatures has been incorporated.

Sir Charles Dilke is very hopeful of the future of the Dominion, and expresses his belief that the one drawback to her present position, if she desires to remain unabsorbed by the United States, is the absence of sufficient means of defence in case of war. Other observers are apprehensive of the increasing strength of the Church of Rome, which is more powerful in Canada than in any Catholic country in Europe, and claims 42 per cent. of the religious population. Recent cases in which the Roman Catholic hierarchy has become involved in important political questions would seem to justify the latter view.

Those who are not familiar with the political divisions of Australia, or whose geographical ideas of the great continent are somewhat hazy, will find by looking at the map that by far the most important and most thickly populated British colonies are in the southeast corner. There, side by side, are the rival commonwealths of Victoria and New South Wales. To the north of New South Wales is Queensland, while to the west of Victoria the self-governing colony of South Australia and the crown colony of Western Australia occupy the remainder of the Continent. And here it is well to explain that in the colonies which have responsible government, the Crown has only a veto on legislation—very seldom exercised—and the Colonial Office no control except over the Governor, while the Crown Colonies are to all intents and purposes governed by the Colonial Office. The Crown Colony stage is the first stage in the life of a British colony, and the natural gravitation of Crown colonies towards self-government seems to be as steady as that of self governing colonies towards entire independence. It is a curious fact that Victoria and the colonies to the westward are more loyal to the English connection than New South Wales and its neighbor Queensland; and while Victoria and South Australia are strongly protectionist, New South Wales and Queensland are rather in favor of free trade. It should be added, however, that at present there is a growing popular sentiment throughout Australia in favor of inter-colonial free trade, coupled with protection against the rest of the world; and England finds here as in Canada that the possession of a colonial empire means increased duties on her manufactures.

Interesting comparisons have been made between the free-trade colony of New South Wales and its protectionist rival Victoria; but such comparisons have generally been open to the objection that the important facts were not

all given, and the conclusions were consequently unsound. While it is true that New South Wales has caught up to Victoria both in population and revenue, it must be remembered that the former colony has a much larger area than the latter, and enough coal to supply the Victorian manufacturers as well as her own. It is doubtful whether the New South Wales manufacturers could have maintained their position but for this abundant supply of cheap coal. Until recently the Victorian tariff ranged from 17 to 25 per cent. on the articles taxed, which would not be considered a high tariff in this country; but duties have been materially raised, and there is no doubt that Victoria is now suffering from overproduction, while the depression in the gold-mining industry has been increased by the tariff charges on imported machinery. The low-grade goods, which alone are manufactured there, are produced on such a scale that protection is no longer needed, especially in view of the heavy freight charges on goods imported from England; but the manufacturers, there as elsewhere, are unwilling to admit that such is the case.

In this connection it should be said that protection in Australia differs from protection in the United States in that it is demanded rather by the working classes, in the endeavor to keep up high wages, than by the employers of labor. In the two colonies above named, the hours of labor, wages, and the cost of living are about the same, and on the whole the advantage seems to be slightly on the side of the free-traders; but in spite of this the workingmen's vote in New South Wales, as elsewhere in Australia, is giving the protectionist cause the appearance of gaining ground. A direct issue between the two policies is now being tried, in the effort on the part of each colony to control the trade of the Riverina, a rich settlement on the Murray River where it divides the two colonies; and it seems probable that in this case the free-traders, being able to supply all imported articles at lower rates, will capture the business. Whichever policy may finally prevail, the growth of the external trade of Australia, taken as a whole, is very noteworthy, for in spite of the comparatively small population, it already exceeds the trade of Great Britain at the time of Queen Victoria's accession.

Apart from the tariff question, American readers will be interested in the growth of State Socialism in the Australian colonies. The Australians are of the opinion that the State should build and own the railroads and other public works, and generally act in direct opposition to the Spencerian theory of the proper sphere of government. As far as railroads are concerned, the Government management seems to be excellent. The service is good, the rates are low, and yet the roads earn a fair rate of interest on their cost, and the country at large does not lose by the competitive waste resulting from such a system, or lack of system, as ours. One explanation of this state of things is to be found, in the case of Victoria, in the existence of a Board of Civil-Service Commissioners, organized five years ago, who make all Government appointments on the merit system. The plan of making such appointments non-political has been found to work admirably in practice. Not only is the Victorian civil service the best in the world, but the change has had an equally good effect on the general tone of politics, and the attention of every United States Senator and member of Congress may well be directed to Sir Charles Dilke's account of the matter at page 121. Another experiment, which may be of immense importance to some of our Western States, is now being tried in different parts of Australia, namely, irrigation on a large scale. The outcome of this effort will be watched with much interest, as it is confidently expected that the whole character of the country and its cultivation will be changed; but so extensive are the necessary works that some years must elapse before any very definite result can be arrived at.

In dealing with the liquor question, the Australians have generally adopted local option. As in Canada, there is much less drinking than in England, and the prohibition cause is gaining ground. Sir Charles Dilke says of the people that, while they lack something of the earnestness of the New Englanders, they are beginning to share their temperance and sobriety. The eight-hour day for all laborers has not yet been formally legalized, but it has been universally adopted throughout Australasia, and the working-classes are better off in many ways than those of any European country. Wages are so high that the wage-earners are able to save money and buy property; hence, on the one hand, the absence of any movement to change the present relations of capital and labor, and, on the other, strong opposition to the importation of Chinese laborers and assisted immigrants from England. Throughout Australia there is a marked preference for life in large cities as compared with small towns. Thus Melbourne contains a greater proportion of the people of the State than does any other capital in the world, and Sydney is growing equally fast. This movement is partly due to the admirable railroad facilities, which make the large cities the best markets, and no doubt in part to superior educational advantages and to that love of amusements which is characteristic of the Australian people.

Australian Federation on the Canadian model is growing in favor, and has been partially accomplished. It would have been so entirely but for the long-standing jealousy between New South Wales and Victoria, and New Zealand's fear that, by joining such a federation, she would in effect become a mere dependency of Australia. A more serious matter from the British point of view is, at the present moment, the steady growth of a desire for separation from the mother country. The never-ending Irish question may have a good deal to do with the existence of this desire; but it must also be borne in mind that the bond which unites Great and Greater Britain is largely a sentimental one, and a new generation is growing up in Australia that has no personal knowledge of or sentiment for the old country. Moreover, it is becoming evident that, under the conditions of modern naval warfare, England could not successfully defend her distant colonies if she became involved in a great European war, and the Australians are therefore taking the matter of their own defence into their own hands. While this may be a relief to the British Government, it cannot but tend to weaken the tie between the two countries.

In the British South African colonies a new set of problems is encountered, some of which result from the fact that not only is the native population much larger than the European, but the Dutch population is larger than the English. The relations between the English and Dutch colonists are now on a satisfactory footing, but within a few years they have been far otherwise in consequence of England's unsuccessful attempt to annex the South African Republic, commonly known as the Transvaal. Quite recently the success of gold-mining in the Transvaal has led to a large English immigration, and it begins to look as if the English-speaking population would soon outnumber the Dutch. For the present, however, the Boers insist on the use of Cape Dutch—which, by the way, cannot be understood in Amsterdam—as the official language; and even if this is eventually changed, it is extremely improbable that the republican form of government will change with it; for it appears that English Conservatives—owing doubtless to some peculiarity in the climate—no sooner reach the Transvaal than they become ardent Republicans!

Since 1885 England, Germany, and France have been running a race in the division or acquisition of unoccupied territories both in Africa and among the Pacific Islands, until the new maps are completely colored with different tints marking the possessions or claims of these Powers. The trouble that has now arisen between England and Portugal in relation to territory claimed by both countries in the Zambesi Valley, shows that the boundaries of the different territories or protectorates are not well defined, and as a matter of fact no two of the maps are found to agree. The aggressive policy of the British trading companies has led to the present difficulty, and it is tolerably certain that similar difficulties will arise in the near future, especially if Stanley's forthcoming book should give a favorable account of the interior of the continent.

The importance of India to England is partly political and partly financial. The loss of India, either by Russian invasion or native revolt, or both combined, would mean for England an immense loss of prestige, and a consequent rapid increase in the separatist feeling that already exists in many of the colonies. On the other hand, England's Indian investments in railways and other enterprises are on an enormous scale, and bring in an annual income of sixty or seventy millions sterling, the whole of which would be lost with the possession of the country. Having these facts in view, Sir Charles Dilke devotes much space to the consideration of the best way of defending India from Russian attack by way of Herat and Balkh. He considers that, with the assistance of Afghanistan, which can be counted on during the lifetime of the present Ameer, the precautions already taken by the English at Quetta and other points along the frontier are sufficient, provided the Russians do not advance beyond the line of demarcation agreed upon two years ago; but either the death of the Ameer or a Russian advance on Herat would render the English position very uncertain. India is to-day better prepared for defence than England, but that is not saying much, and any additional expenditure for defensive purposes must be met by an increase of taxation, which is already too high, or by recourse to the British exchequer, which would be very unpopular in England. Moreover, in case of an invasion by the Russians, the English army on the frontier would be menaced by a very serious danger in their rear in the shape of the large armies maintained by the independent native princes. An early disaster would doubtless lead to a repetition of the events of 1857, aggravated by the presence of a successful foreign invader.

Turning to the financial side of the question, the growth of Indian manufactures under a free-trade system has been very rapid—so much so that Lancashire, having some years ago obtained the removal of duties on cotton goods shipped to India, is now driven by increasing Indian competition to agitate for the limitation of the working hours of Indian factory hands. The country seems to be benefited, as Australia is, by Government control of railroads, and no doubt for the same rea-

son—the efficiency of the civil service. But while all European critics admit the excellence of the British Government of India, it is becoming evident that the rulers are not sufficiently in sympathy with the ruled. The educational system inaugurated by Macaulay is bearing fruit in the shape of a rising generation of cultivated natives, who complain loudly because they are shut out from any important share in the government of the country, and the time is at hand when their complaints will have to be met. A move in this direction has recently been tried by giving natives a share in municipal government, but they fully appreciated the labor as well as the honor of such participation, and the native criticism was voiced by one old gentleman who remarked: "Where you formerly got rupees from us you now hope to get both rupees and work." Sir Charles Dilke confirms the reports of other observers in regard to the failure of missionary efforts in India and the East generally. In fact, the Hindus have lately founded Hindu Tract Societies for the propagation of Hinduism, and have started an anti-Christian agitation which has emptied the missionary schools; while in Mauritius it is alleged that the few converts made are practically bought, and are really left without any religion at all.

The most interesting feature in the British West Indian colonies is the success of the system of small holdings and peasant proprietorship as compared with large plantations. The revenue of the colonies, in spite of losses in sugar of late years, is four times what it was before emancipation, and there has been a marked improvement in the education and comfort of the colored people, as also in the social position of prominent individuals of the African race. On the other hand, the white population is steadily decreasing, and in Barbados, for example, there are absolutely fewer white settlers than in the middle of the seventeenth century.

Only a few of the 'Problems of Greater Britain' are here referred to, but enough perhaps to show that Sir Charles Dilke has produced a book which will well repay careful reading. The relations of the British colonies to the mother country are matters of interest to the whole Anglo-Saxon race, and particularly to that part of it which led the way in securing independent government. Statistics showing the growth of different nations are pointing more and more to the probable fulfilment of the celebrated prophecy made by Prévost-Paradol twenty years ago—that the world would one day be owned by three races, the Anglo-Saxon, the Russian, and the Chinese. He foresaw the rapid extension of the Anglo-Saxon race in consequence of its colonizing spirit, and its power of absorbing people of other races and languages—a power which he found wanting in his own countrymen. It is in some such way as this, in the survival of her language and of her traditions of freedom among millions of self-governing people in every part of the world, that England must seek her reward for rearing a family of apparently ungrateful children.

RECENT FOLK-LORE PUBLICATIONS.

Folk-Lore and Legends: Germany, Scotland, Ireland, Oriental. White & Allen. 1889. 4 vols. 16mo, pp. xv, 184; viii, 192; viii, 192; viii, 192.

Ancient Cures, Charms, and Usages of Ireland: Contributions to Irish Lore, by Lady Wilde. Scribner & Welford. 1890. 12mo, pp. xi, 256.

Myths and Folk-Lore of Ireland. By Jeremiah Curtin. Boston: Little, Brown & Co. 1890. 12mo, pp. vi, 345.

Sixty Folk-Tales from Exclusively Slavonic Sources. Translated, with brief introduction and notes, by A. H. Wratislaw. Boston: Houghton, Mifflin & Co. 1890. 12mo, pp. xii, 315.

Pawnee Hero Stories and Folk-Tales. With notes on the origin, customs, and character of the Pawnee people, by G. B. Grinnell. New York: *Forest and Stream* Publishing Co. 1889. 12mo, pp. xxi, 417.

Flowers from a Persian Garden, and Other Papers. By W. A. Clouston. London: David Nutt. 1890. 12mo, pp. xii, 368.

Chinese Games with Dice. By Stewart Culin. Read before the Oriental Club of Philadelphia, March 14, 1889. Philadelphia. 1889. 8vo, pp. 21.

THE interest in folk-lore seems to be steadily increasing in this country, if we may take as a proof of it the large number of works on the subject which have recently been published here, and the substantial support rendered to the American Folk-Lore Society. It is quite natural that at first greater interest should be taken in one particular class of folk-lore—popular tales—for they appeal to both the learned and the unlearned, and may be equally enjoyed by those who see in them sun-myths or survivals of savagery, and by those who find in them only an interesting phase of human fancy. For this reason we shall continue to have for a long time collections distinctly intended for each of these classes of readers, and attempts to attract both by the same work.

Of the works before us, the first two on the list belong to the class of books intended for the general reader, and it is perhaps not fair to subject them to scientific criticism, or to ask of them more than the quality of entertainment. 'Folk-Lore and Legends,' as its name does not very clearly show, is a collection of the popular tales of various countries. The selections are made with taste, and the versions are animated if not always exact. It is to be regretted that the compiler never deigns to mention his sources throughout the four volumes thus far issued. Ten of the stories in volume one are from Grimm's 'Household Tales,' eleven in the fourth volume from 'The Relations of Ssidi Kur' (*i. e.*, Vikram and the Vampire), the others from the numerous older collections of the stories of the several countries.

We have already had occasion to speak of Lady Wilde's contributions to Irish folk-lore. The present volume has the air of being made up of the remnants of other works, pieced out by essays historical, anthropological, and political. The result, as usual, is a very readable volume, although Lady Wilde has again missed the chance of making a serious contribution to Irish folk-lore.

This task, curiously enough, has been reserved for an American, and Mr. Curtin is the first to give to the public a volume of Irish popular tales which may justly be ranked with the best recent collections of popular tales in Germany, France, and Italy. He has collected his stories from the mouths of the people in the West of Ireland (Kerry, Galway, and Donegal), and reproduced them in an animated and apparently true English version. He has prefixed to his book a very sensible introduction on the subject of mythology and folk-tales, and appended a few notes on the proper names and peculiar characters in the stories. The only thing lacking is some comparison between the tales collected by Mr. Curtin and the other collections of Celtic stories, notably Campbell's 'Popular Tales of the West Highlands,' and the recent volume of the Folk-Lore Society, containing Folk and Hero Tales collected by the Rev. D. MacInnes. This is not the place to perform this task, and we can only say that the tales collected by Mr. Curtin offer many new combinations of familiar episodes. An extraordinary example of the preservation of plot (a thing sometimes lost sight of in the discussion of the origin of popular tales) is found in the story of "The Fisherman's Son and the Gruagach of Tricks," which is substantially the story of "The Thief and His Master" (Grimm, No. 68). The same may also be said of "Shaking-head," p. 186, which belongs to the class of stories known as "The Thankful Dead." Although a number of episodes in Mr. Curtin's tales have their counterparts in Campbell and MacInnes, no entire story in Curtin can be found in the other two collections. Mr. Curtin has made a delightful book alike for the scholar and general reader, and it is hoped that he will soon give us more of his Celtic treasures.

The 'Sixty Folk-Tales from Exclusively Slavonic Sources' might easily have been made more valuable had the editor displayed even a slight knowledge of folk-lore in general; but his share in the work consists of an occasional inane remark upon the subject of solar mythology, and a rare reference to Ralston and Grimm. The stories in themselves are interesting, and cover a wide geographical range; and are especially welcome inasmuch as comparatively few Slavic folk-tales have been translated into English, and the linguistic difficulties will always be an obstacle in the way of the student of comparative folk-lore. The present examples do not possess much originality, and, unlike those of Curtin just mentioned, entire stories have counterparts in other collections. Thus, "Long, Broad, and Sharpsight," p. 4, is a variant of Grimm, No. 71, "How Six Men Got on in the World"; "The Three Lemons," p. 63, is "The Love of the Three Oranges" (Crane's 'Italian Popular Tales,' p. 338), and there are other Italian tales with the very same name; "Right Always Remains Right" is "True and Untrue" (Dasent's 'Popular Tales from the Norse,' No. 1); "The Spirit of a Buried Man," p. 121, is a variant of "The Thankful Dead" mentioned above, etc.

From Slavic folk-tales to Pawnee Hero Stories and Folk-Tales is a long stride, and there is little in common between them. Mr. Grinnell's title is somewhat misleading, and his book, although we hasten to say that it is excellent and entertaining, contains almost nothing that can be called popular tales as the words are generally understood. The stories are almost exclusively of adventure. There are two ghost stories, "The Ghost Wife" and "The Ghost Bride," much alike, and one in which animals alone are the actors, "How the Deer Lost His Gall." A certain amount of folk-lore is to be found in the notes on the relationships, customs, and religion of the Pawnees by Mr. Grinnell, who, for the rest, gives a very vivid account of an Indian tribe now rapidly on its way to civilization. No one can read the "Later History" of the tribe without shame for the American people and hope and respect for the Pawnees.

Mr. Clouston has accustomed us to interesting and valuable works from his pen, and his last volume is no exception to the rule. It is made up of a number of papers, mostly on Oriental tales and aphorisms. The title is taken from the first paper, on the "Gulistán, or Rose-Garden," of the Persian poet Saádí,

This is followed by an article on Oriental wit and humor; selections from the Oriental story-book "Tales of a Parrot"; Rabbinical legends, tales, fables, and aphorisms; an Arabian love story; the apocryphal life of Æsop; ignorance of the clergy in the middle ages; and an essay on the beards of our fathers. The editor has drawn upon his extensive knowledge of the East for a host of amusing stories, and there is not a dull page in his book, except, perhaps, in the penultimate paper, which is out of place and not quite fair to the clergy. The book may be enjoyed by any one, and offers a rich harvest to anybody who is fond of hunting up Oriental parallels for modern jokes.

Mr. Culin of Philadelphia has had the happy idea to study the customs of the Chinese in this country, and has already collected and published some valuable materials in this field. He has now directed his attention to Chinese games, and the paper before us deals with Chinese games of dice, and is to be followed by similar accounts of dominoes, playing-cards, and chess. Mr. Culin has obtained his information chiefly from Chinese laborers in this country, and has prepared a paper worthy to be read and preserved.

THE INDUSTRIAL TRANSITION IN JAPAN.

The Industrial Transition in Japan. By Yeijiro Ono, Ph.D. American Economic Association. 1890.

As late as April, 1870, a Japanese noble, standing up in the temporary Parliament at Tokio, and speaking against a proposition to allow partnerships between natives and foreigners, said: "If our people enter into partnerships with foreigners, the lust of amassing gain will breed hatred and quarrels." There is a sentence of Mencius, current in feudal times, which runs: "When superiors and inferiors try to snatch the profit from one another, the country is endangered," and expresses the same orthodox abhorrence and contempt with which the gainful pursuits of commerce and industry were to be regarded by every gentleman. When we realize that exactly this sort of sentiment was ingrained in the dominant class in Japan for many centuries before the Restoration, we can partly understand how stunted and backward was its industrial life, and how great a task of development it has had to undertake. The fact is, that amid the interest roused by the new political life of that nation, we have almost overlooked the conditions of its industrial life.

The keynote of Japan's problem to-day (we do not mean as it appears to a foreigner, but as it comes consciously up to the people themselves) is: How shall the nation take its place in the midst of modern civilization as a factor deserving consideration? This is the question as it was formulated nearly ten years ago by Mr. Fukuzawa, the great Japanese editor, educator, and public thinker, in his 'Complaints of the Times'; and it continues to-day to be the living question. If its political and moral bearings are prominent, it asserts itself also in its industrial aspect, and is resolved into this: How can Japan become industrially and commercially successful in the business life of the world?

Of previous attempts to answer this question the only noteworthy one (Prof. Rein in his 'Industries of Japan' has given less than a page to the discussion of the problem as such) has been that of Gen. C. W. Legendre, in 'Progressive Japan' (New York, 1878). But this work is of very uneven merit, and, albeit perhaps more concrete and practical in some respects, does not compare in breadth of view and carefulness of reasoning with Mr. Ono's 'Industrial Transition in Japan.' Mr. Ono's monograph (though one cannot help noticing a faint odor of the university library) gives us not only an able treatment, but the most comprehensive and helpful one that has yet been afforded. He begins by surveying with some detail the present economic conditions in Japan, summing them up as a primitive and feudal agriculture, manufactures very little beyond the stage of house industries, and a transportation system utterly inadequate. It is worth while to call attention to the misunderstanding which seems to exist, among both native and foreign writers, as to the facts and possibilities of agricultural production in Japan. For example, in a paper by Dr. Latham, quoted in a United States consular report for 1888, it was stated that the average yield per acre of land in Japan was fifty bushels of rice, forty of wheat, or fifty of barley. Now, the yield in fact varies from eighteen to forty bushels of rice, from eight to twenty-two of wheat, and from ten to thirty of barley; the average in wheat and barley for 1887 being twelve and seventeen bushels respectively. Moreover, the small per-capita distribution of land (one-half to one and one-half acres) brings down to a minimum the individual share of the distributed product. Gen. Legendre, for example, compares (1878) the American farmer, with $137 per annum, with the Japanese farmer and his $8 per annum. Mr. Ono compares the English farmer's 544 bushels of wheat per annum with the Japanese and his twenty-six bushels of rice, and perhaps a dozen more of wheat.

Mr. Ono goes on to discuss the special causes which hinder the progress of Japanese agriculture, and finds them to be, first, the poor means of transportation; secondly, the high rate of land-taxes; thirdly, the badly adjusted system of land-holdings; fourthly, the lack of scientific knowledge and modern methods, and a resulting disinclination and inability to carry out improvements and extend the scope of agriculture; and, finally, the backward condition of manufacturing, which should be developed not only for its own sake, but also in the interests of agriculture. It is due to Mr. Ono to point out that he makes clear, as neither Gen. Legendre nor Prof. Rein has seen fit to do, the actual method of calculating the land-tax. The valuation of the land was settled several years ago by taking the average yield for five years, estimating its value at the average prices for five years, calculating the net profit, considering it as 6 per cent., and capitalizing this sum. Upon this valuation the total tax, though nominally 3⅛ per cent. in all, is still equivalent (notwithstanding the recent steady rise in price of rice) to an income tax of 20 per cent. or 25 per cent. Mr. Ono, in placing it as low as 16 per cent., and Mr. Gubbins, in placing it as high as 40 per cent. (in his learned 'British Consular Report on Taxation,' 1884), are both probably in error.

A significant statistical item in regard to the deficiency of transportation facilities Mr. Ono has not noticed: In 1886 (the year of the last translated statistics) the number of freight cars was 1,168, of passenger cars 353, of wagons drawn by animals 14,516, of carriages 1,959; but of carts and wagons drawn by men the number was 474,290, and of jinrikishas 166,058. Moreover, with all the recently projected railroad mileage noticed by Mr. Ono, that actually in operation in October, 1889, was less than 1,000. His suggestions for the improvement of agriculture and the development of manufactures we leave the reader to consult for himself. They are always clearly and carefully expressed, even if not in as much detail as the subject deserves; we wish, though, that he had dwelt more upon the possibilities of stock-raising and the means of obtaining cheap and abundant fertilizers. He might also refer more in detail to the scarcity of capital; that of England, for example, is about $20 per capita, that of the United States $18, of Italy $12, while in Japan it falls to about $5. An enlarged work, based on this monograph, exhaustively treating each of its topics, would be very acceptable from Mr. Ono's hands, and ought to insure him that reward which very few young men in Japan can resist, a secretaryship or directorship in a Government bureau.

We notice one or two slips which may be avoided another time. "The authentic history of the Japanese people" (p. 11) does *not* begin with the date 660 B. C. This error has been exploded for many years, though, to be sure, Prof. Rein and others continue to promulgate it. That "1.9 ri = 1 geographical mile" (p. 71) is true if the German and not the English geographical mile is meant, for the former is just four times as long as the latter. Finally, although the movement of population in feudal times was not large, still it is not true that (p. 20) "there was no way, except that of adoption into a family, by which a man could establish himself in a strange community." Witness, for example, this clause from an old *Kumi-cho* or *Na-yoshei-cho* (a remarkable sort of document, signed jointly by all the members of a village, pledging faith with each other to the observance of certain rules): "Any person coming from any other part of the country and asking permission to live in the village will be permitted to do so on naming a responsible person as security for his behavior." It is well known, too, that various daimios offered inducements to immigrants from other provinces who should come and reclaim waste land. The restriction Mr. Ono mentions existed, if at all, for samurai (the military class) only.

John Jay. By George Pellew. [American Statesmen.] Boston: Houghton, Mifflin & Co. 1890.

THIS is an interesting book, well thought out and well written, in spite of occasional ambiguities. The proof-reading, however, has been careless. Thus, we read "Rhode Island" for Long Island (p. 83), "Philadelphia" for Poughkeepsie (p. 257), and we are informed that "le papillon neutre" does not neutralize an enemy's merchandise (p. 310). To do so would be serious work, indeed, for a butterfly.

To American lawyers, John Jay is perhaps best known as the man who was willing to cease to be Chief Justice of the United States in order to become Governor of New York. This conduct is the more inexplicable that Jay was a decided Federalist and a man of quiet and scholarly character. Mr. Pellew has not made the course of his hero comprehensible in this respect. "I left the bench," said Jay, when asked to return to it by President Adams, "perfectly convinced that under a system so defective it would not obtain the energy, weight, and dignity which was essential to its affording due support to the national Government, nor acquire the public confidence and respect which, as the last resort of the justice of the nation, it should possess." It would be interesting to know the reason of Jay's dissatisfaction with the position of the Supreme Court under the Constitution. After his refusal the President

appointed John Marshall to the Chief-Justiceship, since whose day the office has certainly never been thought deficient in weight or dignity.

It was as a diplomatist that Mr. Jay rendered the most valuable services to his country. Mr. Pellew gives a very clear and interesting account of the negotiations for peace in 1782 and 1783. The history of that transaction cannot be finally written until M. Doniol shall have given us his fourth volume, and until the Stevens manuscripts shall all be published. (Mr. Pellew has had access to an elaborate digest of the latter, with quotations, and has made good use of it.) But there is little doubt that everything essential in the questions between the United States and France concerning the peace is now known. The suspicions of Jay, that Vergennes was consulting the interests of Spain rather than those of the United States, appear to have been well founded. Under those circumstances the course taken by the American commissioner was bold, wise, and patriotic.

Mr. Pellew does not attribute to John Jay the more showy qualities by which popularity is generally attained. Yet there was evidently something in the silent and reserved man which extorted not only the respect of statesmen, but the admiration of the people. He was not a very great man, but the success of a government, of whatever form, must depend in large measure on its ability to pick out and support such men as he.

Les Normands dans les deux Mondes. Par G.-B. de Lagrèze. Paris. 1890. 12mo.

Readers of Du Chaillu's 'Viking Age' who are disappointed by his meagre sketch of the wanderings and exploits of the Northmen, will find them set forth by M. de Lagrèze in the attractive style which we are accustomed to expect from skilled French writers. The subject is an interesting one, not only to the reader for amusement, but to the historical student. We are led to ask ourselves what was the peculiar combination of race characteristics that enabled the populations of the Danish and Scandinavian peninsulas, so scanty in numbers, to achieve results so unparalleled. From the eighth to the tenth century scarce a corner of Europe was secure from their ravages. In their frail, open boats they dared the most tempestuous seas on long voyages. They occupied Iceland and Greenland, they coasted along the American continent, they plundered the shores of all the lands lying around the Mediterranean. But it was not only on the water that they made themselves feared by the most warlike communities of the time: leaving their boats, they made long expeditions inland, pillaging, burning, and destroying. Occasionally worsted in a pitched battle, they were more often victorious, and defeat seemed only to bring forth new swarms from the inexhaustible Northern hive. The conquests of England and of Normandy were not the most remarkable of their achievements. They dominated Russia, and the House of Rurik commenced the process which welded that formidable Power into an organized nation. From Russia they penetrated as far as Armenia to the East, and twice they reached and threatened Constantinople. Even after the Viking age had passed, history has no more romantic episode than the founding of the kingdom of the Two Sicilies by the sons of Tancred of Hauteville.

The influence of the race on the destinies of Europe has been greatly disproportionate to its numbers, not so much, perhaps, by establishing dynasties as by the infusion of its blood in other peoples. A very curious problem suggests itself, which our author leaves untouched: how it came to pass that the conquerors of the tenth century, whose name was everywhere a terror, fell during the later middle ages and in modern times into a position so comparatively unimportant. The Northmen are still admirable sailors, as the flourishing mercantile marine of Norway amply attests. The dauntless energy of the old sea-rover has adapted itself to peaceful pursuits, fitting the industrial tendencies of the age, and the only representatives of the Viking spirit have been Gustavus Adolphus and Charles XII.; but the exploits of neither of these heroes left any permanent effect upon the destiny of their land. Sweden and Norway maintain their independence on the sufferance of Russia, and Denmark on that of Germany. Only the mutual jealousy of the greater Powers prevents their absorption, and the descendants of Regner Lodbrog and Hrolf the Ganger may at any time lose their distinctive nationalities. It is an instructive history from beginning to end, and the picturesque elements of its early development are attractively set forth by the practised hand of M. de Lagrèze.

Handbook of Descriptive and Practical Astronomy. By George F. Chambers. 4th ed. Vol. II. Instruments and Practical Astronomy. Oxford: Clarendon Press; New York: Macmillan & Co.

In reviewing the first volume of Mr. Chambers's great work, we spoke of its encyclopædic character and fulness of information. These qualities shine so conspicuously in the second volume, now before us, that a review in the ordinary sense is scarcely possible. It treats of instruments and practical astronomy, but the treatment is radically different from that adopted in technical works on the subject. Instead of intricate mathematical discussions, the reader has before him scores of illustrations showing on a large scale something about every telescope of note that has ever been made, from the imperfect instruments of Galileo and Newton to the huge tubes of Herschel and Ross and the refined telescopes of Pulkowa and California. The amateur astronomer and the general reader will find everything that a reasonable man could be expected to know about instruments of every class, as well as about building and fitting up an observatory and making observations on the heavenly bodies.

The minute bibliographical references and the extended catalogue of writings upon the various branches of astronomy render the book important to the professional worker. Like the preceding volume, it frequently shows a lack of discrimination in judging what to put in and what to leave out. But the critic can take no pleasure in seeking for defects in so magnificent a labor of love as that in which the author is engaged, and we cordially recommend his work to all lovers of the science who wish to be acquainted with that view of it most interesting to the general reader.

Crónicas Potosinas. Costumbres de la Edad Medieval Hispano-Americana. Por Vicente G. Quesada. Paris: Biblioteca de la Europa y América. 1890. 2 vols., pp. 520, 492.

These latest volumes of the veteran Argentine writer, who is now Minister from his country at Washington, are almost wholly made up of articles of his which have appeared in the *Revista de Buenos Ayres*—a periodical of which he was the founder and for a long time the editor. As their title indicates, they have to do with the life and manners of the old viceroyalty of Upper Peru, now mostly Bolivian territory. Señor Quesada follows Franciscan and other chroniclers of discovery and exploration. He opens with a long account of the discovery of the mines of Potosí, and adds a few biographical sketches, together with versions of native legends and several historical tales. The dramatic movement of the latter is usually overborne by their historical interest, though some of them present the germs of excellent historical novels. As will be seen, the unity of Señor Quesada's work is to be found in time and place rather than in a single theme. He has gathered together a great many curious data in regard to a society of which the two main elements were the leaders of civilized Europe and the leaders of savage America, thrown into close contact, and lays the whole before his readers in a correct and agreeable style. The volumes are well worth attention, quite apart from the interest attaching to them in these Pan-American days.

BOOKS OF THE WEEK.

Brine, Mary D. "Bonnie Little Bonibel" and her "Day Off." E. P. Dutton & Co. 75 cents.
Brown, J. M. The Political Beginnings of Kentucky. Louisville: John P. Morton & Co. $2.50.

27 and 29 West 23d St., N. Y.

PUBLISH THIS WEEK:

The Sayings of Poor Richard.
Being the Prefaces, Proverbs, and Poems of Benjamin Franklin, originally printed in Poor Richard's Almanacs for 1733–1758. (No. XXVIII. in the Knickerbocker Nugget Series.) Collected and edited by PAUL LEICESTER FORD. $1.00.

The Civil War on the Border.
By WILEY BRITTON, formerly Regimental Commissary 6th Kansas Cavalry. A Narrative of Operations in Missouri, Kansas, Arkansas, and the Indian Territory during the years 1861–2, based upon the official reports of the Federal commanders Lyon, Sigel, Sturgis, Fremont, Halleck, Curtis, Schofield, Blunt, Herron, and Totten, and of the Confederate commanders McCulloch, Price, Van Dorn, Hindman, Marmaduke, and Shelby. 8vo, with maps and battle-plans, and portraits of Generals Schofield and Lyon. Pp. xvii + 465. $2.50.

A Son of Issachar. By E. S. BROOKS. A Romance of the days of Messias. 12mo, pp. vi + 293, $1.25.

It is a stirring story of life and experiences during the closing days of Christ's ministry, and is, in reality, the romance of the son of the widow of Nain and the daughter of Jairus. As one of the three prize stories published by the Detroit *Free Press*, it has already created a profound impression in the columns of so thoroughly secular a journal, and its appearance in book form will arouse an even wider interest in its dramatic situations, its strong character studies, and its vivid pictures of the communities which witnessed the career and heard the teachings of Christ.

Parsifal: The Finding of Christ
THROUGH ART, OR RICHARD WAGNER AS THEOLOGIAN. By ALBERT ROSS PARSONS. 8vo, $1.00.

"Mr. Parsons has been a wide reader, and is a deep thinker. His studies of Wagner at first hand have enabled him to give this remarkable interpretation of the theological significance of the great German master. Among the signs of the times, few are more striking to the thoughtful observer than the fact, brought out by this work, that the man who confessedly stands at the head of modern music, and who has been popularly supposed to have represented the Pagan Renaissance, did in reality travel the historic path by which humanity climbed out of Paganism into Christianity, and made his rich and noble art a veritable Finding of Christ."—*All Souls' Monthly (Episcopal)*.

Lord Will by Force and Faithful
LADEEN. By JANET C. MCINNES. 8vo, cloth, gilt top, $1.00.

May Blossoms. By Lilian. 12mo, cloth, gilt top, $1.00.

No claim is made for this little volume—that it is of surpassing excellence, or that it is perfect in form or expression. Many of the poems were dictated when the child-author was but seven years of age, before she could read or write.

The strangeness of it consists in the fact that her immature mind could not fully comprehend the meaning of the words she uttered. That must be considered, therefore, an evidence of genuine inspiration and not merely the fruit of unusual precocity.

*** *List of spring publications sent on application.*

MISSOULA, Garden City of MONTANA. Railroad and manufacturing centre, fine water power, rich agricultural lands, mines, lumber, etc. A prosperous city and rich country. Full particulars, including beautiful book, 'Missoula Illustrated,' sent free upon application to
FAIRCHILD, CORNISH & Co., Missoula, Mont.

TWILIGHT PARK

IN THE CATSKILLS.

(THIRD SEASON.)

Where are you going for the summer, and in search of what, health, comfort, enjoyment? You can get all these at Twilight Park, storing up vigor for the winter's ordeal—and what fun your children will have.

There is something glorious about mountains; Ruskin says they are "the beginning and the end of all natural scenery"; Charles Lamb, that devotee of London streets, wrote to Coleridge, after a visit to the Lake Region: "I feel I shall remember your mountains to the last day I live. They haunt me perpetually." Goethe says sententiously: "On every mountain height is Rest."

The Catskills are the nearest mountains to New York, and physicians are recommending them more and more to their patients. They afford the best summer change for seaboard residents.

Twilight Park is not a sanitarium, nor a junketing place, nor a mere real-estate speculation, but an attempt to provide a wholesome summer outing for cultivated people at moderate cost, without housekeeping cares.

Two seasons have demonstrated that the scheme is a rational one. In 1888 there were five cottages. This year there will be thirty. The first season lasted six weeks, the next seven months. During July and August every inch of room was occupied. Even through September there was a crowd. June and October, the loveliest months of the year, attracted scores, and during the winter parties visited the Park to enjoy the spectacle of the frozen falls and the snow-clad summits.

We are not advertising widely. We can afford to wait—but life is short, and even an Earthly Paradise must be made known to bring the right people—not the very rich nor the fashionable, but those who appreciate wholesome outdoor life, without extravagance. We want a half hundred such this year, and then the Park will boom itself.

Besides, there is so much to be done to assist nature, that has done so much. Vistas must be opened, tangles cut out to let in sun and air, and sites prepared for building. The finest portion of the Park is yet to be developed. We haven't sold all our cream yet.

Some may say, "I don't want to be tied to one place." Others are tired of changing every season. But it is easy to share one's cottage with a friend and spend part of the season or alternate summers elsewhere.

We haven't declared any dividends yet—receipts all go into improvements, but what a store of health every one took away last fall, and how pale and puny the city children looked in contrast to those who had revelled in the Park. That is where the profit comes.

"Among all the fine arts," says Ruskin, "one of the finest is that of painting cheeks with health," and that is an "infant industry" at Twilight Park.

Plans, photographs, etc., at my office.

CHARLES F. WINGATE,

Sanitary Engineer and Inspector of Houses,

119 PEARL STREET, NEW YORK.

In the last issue of *The Art Interchange* (on the news stands) is a fine colored lithograph of the magnificent view down the Clove from Twilight Park. It is worth framing.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay are now first offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

The Nation.

NEW YORK, THURSDAY, JUNE 19, 1890.

The Week.

ALTHOUGH the Senate has passed the bill providing for the free and unlimited coinage of silver, the bill is very far from being a law, and the chances are decidedly against its becoming a law at this session of Congress. The House and the President are still to be reckoned with. The House may, by a close vote, ratify the Senate's action, but it is almost certain that the President will veto the bill. He will do this because the consequences to the public finances and to private business of a change in the standard of value are too serious to be incurred voluntarily. They must be fought off as long as possible by all who hold positions of responsibility. Grant that there are differences of opinion as to what the consequences will be, still everybody knows that there will be a change of some kind. Everybody knows, too, that the Administration will be held responsible politically for any damage that may be done.

The bill as passed by the Senate really goes much further than free coinage. Free coinage means that any holder of silver bullion may deposit it at the mint to be coined for his private account. The Government is under no obligations to pay immediately to the depositor of the bullion the number of dollars his deposit calls for, but usually does so because it has a surplus, and because the amounts deposited are usually no greater than it can turn into coin within a short time, thus reimbursing itself. This bill, in section 5, requires the Secretary of the Treasury to issue paper certificates at once for all the bullion deposited, and another section makes the paper certificates legal tender for both public and private debts. This is a truly bedlamite scheme. It proposes to lower the standard of value about 25 per cent. at one jump. A free-coinage bill pure and simple would change the standard of value none the less surely and none the less in ultimate extent, but the change would be gradual, because coinage takes time. The premium on gold would declare itself at once, but it would be small and would increase little by little. The experiment would thus be tentative, as it should always be in such grave cases. The people would have time and opportunity to inform themselves as to the ultimate effects of the measure without incurring any very serious disaster. Section 5 cuts away the scaffolding completely, and allows the whole fabric to fall at once the entire distance between silver and gold. It devises the greatest possible disaster in the least possible time. The Supreme Court unfortunately opened the door for this kind of disaster by its latest legal-tender decision. At all events, the Senate so understands it, although there may be some doubt whether the decision applies to Treasury certificates of deposit as well as to United States notes.

Senator Edmunds read a severe lecture to the fifteen Republican Senators who separated themselves from the majority of the party on this bill. The Senate bill was a caucus measure, although, of course, a caucus could not be considered technically binding in a case where the platform of the party was indecisive, if indeed it could be considered binding on any merely legislative measure. The significance of the break and of Mr. Edmunds's remarks upon it does not depend upon the action of the caucus, but upon the broad fact that a minority of Republican Senators separated themselves from the majority, and from the Administration, on a really vital measure, a measure known to be fraught with the gravest political consequences. The shattering effect of the vote upon the cohesive and effective strength of the Republican party will be very great, and probably irreparable during the present session of Congress. The Democrats, of course, go for anything that will divide or embarrass the Republicans. The Republicans did the same when they voted to reject all of Mr. Bayard's treaties, and refused to say how the treaties might be made acceptable to them.

The *Mexican Financier* of May 31 has a very lucid article on the silver question, taking for its text the bills in the American Congress providing for increased purchases of bullion. The question discussed by the *Financier* is whether such increased purchases will have the effect to advance the price of silver, and, if so, whether the advance is likely to be maintained. It thinks that some advance due to speculation is probable, but it gives good reasons for believing that it would not be permanent, since it would stimulate the production of silver, and bring into working a great many mines that have been abandoned in the past because they could not be profitably worked. The effect on silver mines would be the same as that produced on copper mines by the operations of the French syndicate. Every pennyworth of advance in the price would reopen some hole in the ground that had been abandoned because it would not return a new dollar for the old one spent in working it. The discovery of new mines would be correspondingly stimulated, and the result would be, as the *Financier* puts it, "a temporary rise in silver, followed in two or three years by a tremendous reaction, to the disturbance of all values."

The House has just passed another pension deficiency bill for the fiscal year now closing—this one being for the sum of $3,708,898, and in addition to a previous bill of the same sort requiring $21,613,009. The regular pension appropriation bill passed at this session covers $98,427,461, and the Dependent Pension Bill, which has already passed the House and will soon pass the Senate, calls for $35,000,000 at the lowest estimate of its friends—though it is much more likely to require double that sum. Accepting the lowest estimate, and adding a number of millions for the maintenance of the Pension Office, soldiers' homes, and other purposes connected with the pension system, Mr. Henderson of Iowa figures out a grand total of $167,824,735 already appropriated by the House on pension account since it met last December. But even this vast sum falls far short of the "*demands*" of the Grand Army Machine.

The only question as to any Republican measure proposed in the House of Representatives is, whether Speaker Reed wants it to pass. If he does, it will go through; if he does not, that is the end of it. The Speaker has made up his mind that there ought to be a Federal Election Law, and the party caucus on Thursday night practically agreed upon a measure which he will put through the lower branch of Congress in short order. Mr. Reed hopes to give the scheme sufficient impetus at his end of the Capitol to carry it through the branch which sits at the other end, and which thus far has not developed a parliamentary dictator.

The carpet-manufacturers, through Mr. Chas. F. Fairbanks, chairman of a committee appointed for the purpose, have addressed a brief statement to the Senate Finance Committee on the subject of the duties on carpet-wool in the McKinley bill. They point out some "fine work" in the wool schedule that had escaped the attention of the public, and was probably not known to a dozen members of the House when the bill was passed. One clause of the bill provided that wool that has been "sorted" shall pay double rates. Carpet-wools are generally sorted before shipment. If this practice continues in the foreign countries where they are grown, the duty on the lower grades, costing less than 13 cents per pound, will be 64 per cent. ad valorem, instead of 32 per cent., as the bill apparently makes them. By another intricate device the washing of wool is punishable by a fine of 18 per cent. If the wool is worth in the foreign market 13 cents or less per pound, it is taxed 32 per cent.; if over 13 cents, 50 per cent. But the mere washing of the inferior grade makes it worth over 13 cents, and thus throws it into the 50 per cent. schedule. The quality of the wool has not been changed, but the elimination of dirt and grease has raised its dutiable character from 32 per cent. to 50 per cent. The wool-growers are a cunning lot. It was supposed that when they consented to the 32 and 50 per cent. schedule, they had abandoned their extreme pretensions, but it appears now that

they did so in appearance only. What they set out for was a duty sufficiently high to make the growing of carpet-wool in this country profitable—a perfectly Quixotic undertaking, as everybody, except Uncle Jerry Rusk and Statistician Dodge, knows.

The "original-package" question takes on a new phase with the discovery that Pittsburgh commission merchants are utilizing the recent decision of the Supreme Court to evade the Oleomargarine Law, by selling the stuff in the original packages in which it is imported from other States. Of course, the commission merchant is as perfectly protected in such traffic by the decision as is the liquor-dealer in selling his wares, and, equally of course, the bill recently passed by the Senate to meet the difficulty about liquor does not touch the matter of oleomargarine. It is safe to say that the Farmers' Alliances and other such organizations will be heard from without delay, and that they will insist upon the immediate passage of a law regarding oleomargarine.

It is hard work to keep up with the pace of the Farmers'-Alliance movement out West. A meeting of the branches of the organization in Cloud and Ottawa Counties, Kansas, was held recently, which adopted sundry resolutions incorporating their demands in the way of legislation, and followed them up with the following extraordinary declaration: "Resolved, That after the first day of December, 1890, we will pay no more taxes, coupon, interest, or mortgaged indebtedness, unless the Government aid us in procuring the money as above mentioned, or in any other manner equally favorable." Of course resolutions of this sort are often rushed through a convention without any proper appreciation of their meaning, but it is unfortunate that such deliverances should ever be made.

The Springfield *Republican* makes a very thorough exposure of the defence set up by some prominent Republican newspapers that, as Quay made good the amounts he took from the State Treasury, he did no wrong in taking them. That this doctrine should be put forward in sober earnest by the members of what was once a moral and religious party, must surely be set down as one of the astonishing occurrences of the past half century. Still another defence, nearly as extraordinary, has come from the same quarter—that Quay is not blameworthy in robbing the State of Pennsylvania because Calvin S. Brice owes the State of Ohio $200,000 in taxes. The Ohio courts have just destroyed this defence by deciding that Brice does not owe the State of Ohio any taxes. But think of the state of mind of the men who set it up—the mental and moral obtuseness it displays. Should we marvel over it when we remember that the President of the United States Senate, a United States Senator of eighteen years' standing, in the one hundred and fourteenth year of the American Republic, and in the year of our Lord one thousand eight hundred and ninety, deliberately and thoughtfully promulgated the following code of morality as the proper one for the government of Americans in the transaction of their domestic government affairs?

"The purification of politics is an iridescent dream. Government is force. Politics is a battle for supremacy. Parties are the armies. The Decalogue and the Golden Rule have no place in a political campaign. The object is success. To defeat the antagonist and expel the party in power is the purpose. The Republicans and Democrats are as irreconcilably opposed to each other as were Grant and Lee in the Wilderness. They use ballots instead of guns, but the struggle is as unrelenting and desperate and the result sought for the same. In war it is lawful to deceive the adversary, to hire Hessians, to purchase mercenaries, to mutilate, to kill, to destroy. The commander who lost a battle through the activity of his moral nature would be the derision and jest of history. This modern cant about the corruption of politics is fatiguing in the extreme. It proceeds from the tea-custard and syllabub dilettanteism, the frivolous and desultory sentimentalism of epicenes."

The following is a specimen of the new morality which the Republican press is producing under the influence of the Quay and Wanamaker thefts. It comes from the Milwaukee *Evening Wisconsin*. The attempt, it says,

"to create sympathy for the English publishers of the Britannica, who have invested a million dollars in their work, is absurd. They are manufacturers of certain articles, and no one disputes that they are entitled to the proceeds of the sale of all those articles which they manufacture, but their claim to the proceeds, or any part of the proceeds, of similar articles manufactured by Mr. Wanamaker is, to say the least, very shadowy. The probability is that when the Messrs. Black, the publishers of the Britannica, went into the enterprise, they calculated all its chances, and that they have already made a profit out of it, and perhaps as much or more than they expected. At any rate, they made a purely commercial venture, and if they miscalculated their profits, that is their affair."

See how the editor works in here the dexterous falsehood that Wanamaker, in selling the Blacks' Encyclopædia, is selling something of his own "manufacture." See, also, how he gets in the Bedouin argument, that a man who ventures among thieves with his property has no right to complain if his anticipation that he may be robbed is fully realized. He knew the kind of place the Desert was, and if he did not like being robbed, why did he travel in it? Besides, why should a man who has made money by the sale of a portion of his property feel sore if somebody steals the rest? Other people want to make money out of it as well as he. Owners must not be hoggish with thieves.

The undisputed renomination for Governor of the incumbent, who is now serving his first term, leaves the platform as the only interesting feature of Thursday's Republican Convention in Maine. This platform is most significant for its omissions. One of them was the following resolution, which the Committee was asked to insert, but refused to do so:

"Resolved, That we favor the honest enforcement of the Civil-Service Laws."

Another proposed resolution, which the same committee refused to admit, reads as follows:

"Resolved, That we favor a sound currency, with gold and silver made equal."

But by far the most important omission of all was that of the following resolution, which was presented by the editor of the Portland *Advertiser*, a Republican newspaper, in behalf of the Young Men's Republican Club of his city:

"Resolved, That the purity of the ballot is the safeguard of the State and nation; to surround it with every possible protection is a part of good government, and to this end the Republicans of Maine endorse the secret system of voting with official ballots. It is no longer an experiment in American States, but an established success. It reduces the expense of elections to a minimum, and is the simplest and most effective preventive of bribery, intimidation, and other forms of corruption at the polls yet instituted."

The explanation of these omissions is the fact that the Convention was run by the Republican "boss," Postmaster "Joe" Manley of Augusta, and other Federal office-holders, who "have no use for" civil-service reform, sound currency, and, least of all, a secret-ballot law which would stop the present system of bulldozing and bribing men to vote the Republican ticket. A fine flavor of hypocrisy was lent the proceedings by an indefinite declaration in favor of "an elective system free from corruption and fraud," after the Committee had rejected by an overwhelming majority a plank in favor of a specific system; and by a further declaration in favor of "a free ballot and a fair count" in the South, after the Committee had refused to approve a system of proved efficiency for those purposes in Maine. What a hearty contempt for such performances would William Pitt Fessenden entertain if that vigorous-minded Maine Republican of the old school were still alive!

The Buffalo *Express* has begun to print biographies of officials of that city, a process which would probably do good in all the large cities, as there is nothing, except the penitentiary, which the class by which many American cities are ruled so much dreads as having their past lives explored for the information of the public. There are very few of them indeed who get into conspicuous offices by means which they would like to have described. The public, when one of them makes his way into a responsible municipal office, is apt to suppose, by a very natural association of ideas derived from the experience of private business, that he is a person who has had some sort of preparation for the duties of his place. It therefore listens with a certain respect to what in Tammany circles would be called his "guff" about the way in which cities should be governed, streets should be paved, or cleaned, or lighted, or policed; the fact being, in ninety-nine cases out of a hundred, that these are things on which he has never bestowed any attention whatever, and about which he is unfitted by his mental and moral condition to form any ideas worth expressing. The art of getting into office in large cities is the only one which he cultivates. About the art of administering cities he knows little more than any other ignorant and vicious man. There is, perhaps, no better way of bringing this important fact home to the voter than the publication of such particulars

of their careers as can be got at. The whole story can hardly ever be told, because a large part of the lives of municipal politicians is what may be called subterranean, and is known only to their "pals" or "cronies," who will not "split" or "squeal" on them, except in case of a quarrel; and quarrels in their world are seldom serious.

The meeting which has been called at the Windsor Hotel on the evening of June 24, "to organize a citizens' movement for the purification of municipal politics by non-partisan nominations," is an encouraging sign. Bishop Potter, the Rev. Dr. Newton, Messrs. Seligman and Claflin, and their associate signers to the petition, set a good example to their fellow-citizens in thus coming to the front to give form and direction to respectable public sentiment in the city. We hope their example will be so inspiring that, when the meeting shall assemble, it will be found to be in the fullest sense representative of the intelligence and character of New York. We observe that already the partisans of both political parties look askance at the movement. Mr. Steinway, speaking in behalf of Tammany Hall, says citizens' movements of all kinds are unnecessary, since Mayor Grant's conduct of the Mayor's office has been so thoroughly commendable that he deserves a reëlection. Mr. Strong, speaking in behalf of the Republican organization, says that he is in favor of no movement which does not have in view the nomination of a "straight Republican ticket." Here we have the old familiar situation, the inevitable outcome of which would be the reelection of Mayor Grant or some other Tammany figurehead.

Between these two extremes the course of the citizens' movement must be directed. It should be borne in mind by its promoters that, this being a heavily Democratic city, with two Democratic voters for every Republican voter, the right of the majority to rule makes it imperative that a citizens' candidate who is to be elected should be a Democrat. He need not be, and ought not to be, a partisan Democrat, but, unless he is going to be run simply for form's sake, he must be a member of the Democratic party. To ask Democrats, in a city in which they number two-thirds of the voters, to elect as Mayor a Republican, is to ask them to confess that their own party has no man who is fit to fill the office. They never will consent to make that confession, and this fact must be admitted at the outset, and must be taken into account in selecting a citizens' candidate, or the movement will end in failure. The question is simply whether a Tammany man or an upright and able Democrat shall be elected. Mr. Steinway says that Mayor Grant is perfectly satisfactory to the Tammany Democrats, and he is undoubtedly right; but if the citizens' movement were to result in putting into the field a Democratic candidate of unimpeachable character, we venture to predict that Mayor Grant would not be renominated. On the other hand, if that movement were to result in the nomination of the most eminent and respectable Republican in the city, Mayor Grant's renomination would inevitably follow; and his reelection would follow also, whether there were a rival Democratic candidate in the field or not, simply because the Democrats, with their enormous majority, will not consent to be ruled by a Republican minority.

A modern legislator's portrait of himself has been drawn by State Senator Fassett of Massachusetts. He was charged with having offered to sell his own vote and the votes of several colleagues to a corporation, and appears to have cleared himself of the charge. But his own account of his conduct, as summarized by the Worcester *Spy*, shows this: "He was on such terms with the lobby that he ran at their summons by telephone to confer with the representative of an elevated-railroad scheme. He waited this great man's convenience in his office; received from him, apparently without surprise, though without approval, a suggestion that he should undertake to carry the measure by bribery, and afterwards wrote a friendly letter informing the man who had offered him this grievous insult that he had decided to support a rival enterprise, and therefore did not think it worth while to have another interview." The *Spy* is inclined to condemn this sort of thing, but it is hardly consistent for Republican organs which have nothing to say against a Quay to protest against a Fassett.

The English Ministry is in a condition of serious perplexity. The session is drawing near its close—there are only about two months of it left—and there are three measures of great importance to be passed—the Irish Land-Purchase Bill, the Welsh Tithes Bill, and the section of the Inland Revenue Bill which provides for an additional tax on beer and spirits to make a fund to enable County Councils to buy out liquor-dealers. To every one of these there is bitter opposition in the Liberal ranks, but it might be got over as regards the two first if it were not for the last, which divides even the Tories themselves, and rouses the moral and religious sentiment of the country as it has not been roused for many a day. Apparently all three cannot be passed in the teeth of the obstruction which is certain to be offered, and the question under discussion in the Tory ranks is which shall be abandoned. To abandon any of them is a confession of weakness which it is very dangerous to make so near a general election. To try to pass them all is to court defeat along the whole line. Lord Salisbury's proposal to revise the rules so as to enable one or more of them to be carried over to the next session as unfinished business, appears revolutionary. According to the immemorial usage of Parliament, a bill is killed by the close of the session. To sit on into the summer and fight, is to alienate all the sporting men—a powerful contingent in the Tory ranks—and incur increasing difficulty in maintaining majorities on minor divisions. To have an autumn session is probably even more distasteful to the same class. So the situation is one of extraordinary difficulty and peril, and may lead to a dissolution before the session closes.

The poison of the licensing bill lies in the fact that everybody believes it to be a Tory bid for the support of the liquor interest. Mr. Ritchie tried to tack on the principle of compensation for the publicans to his bill establishing the County Councils, in the teeth of a long line of judicial decisions that a license to sell liquor was not property, and, therefore, not a vested interest. He abandoned it before the storm of opposition it then excited. Its reproduction now by Mr. Goschen as a rider to the internal-revenue bill seems a revival of the old and much condemned project, with the same motive—that is, to win over the liquor-dealers for the general election—and increases the exasperation of the temperance people, and of tens of thousands of others who are not temperance people, but who are opposed to the conversion into property of the privilege of selling alcoholic drinks. Cardinal Manning has a strongly denunciatory article on the scheme in the last *Nineteenth Century*.

That Mr. Stanley has very nearly taken the Government of Great Britain out of the hands of Lord Salisbury, as regards the African question and the negotiations with Germany, seems to be the apprehension of the *Economist*, which makes an urgent appeal in behalf of diplomacy and against the town-meeting method of disposing of territories larger than the whole of Europe.

> "If the public," it says, "are to come crashing in prematurely with their general ignorance, and rough, broad views, and profound dislike of giving up anything, the diplomatists will cease to be free, and arrangement will speedily become impossible. . . . The public need not fear the possessions will not be large enough. The German Emperor will find before he has done that for a non-maritime Power colonies are costly possessions, while, as to ourselves, our only apprehension is, that we shall find ourselves with a sort of new world on our hands, demanding a new supply alike of energy and troops."

The statement of the *Economist* that the public need not fear that the possessions will not be large enough is eminently true, and ought to be the keynote of British policy. The danger is that the possessions will be too large for a country that is already charged with the task of governing a sixth part of the earth's surface. Mr. Stanley and Lord Salisbury are both right from their different standpoints. Englishmen discovered Central Africa. Under the rules which prevail, and always have prevailed, touching the possession of barbarous lands, England's right to the countries which Germany claims is as good as her right to the country of the Niger or the Shiré district. If the ideas which prevailed in the eighteenth century were still dominant in European councils, she would hold all these vast territories, or fight for them to the last extremity. Yet it may be money in her pocket to let Germany have what she wants in that quarter. She may be a stronger Power by not enlarging her responsibilities.

THE PENSION SETTLEMENT.

THE two branches of Congress, after some weeks of dispute over their rival pension schemes, have at last come to an agreement. The compromise was ratified by the House on June 11, and there is no doubt of the Senate's concurrence. The original measure of the Senate was a Dependent Pension Bill of the same character as the one vetoed by President Cleveland three years ago; while the feature upon which the House long insisted was the introduction of the service-pension policy, by granting a pension of $8 a month to every soldier who is now sixty years old or hereafter reaches this age. The Senate was so determined in its hostility to this idea that it has forced the House to drop it, but in turn it has been obliged to make its own measure more sweeping than it was at first.

Like all important extensions of the pension system made during recent years, this bill is passed without any clear idea as to what will be its practical effect. The chief feature is that which provides that all soldiers who served as long as three months and were honorably discharged, "and who are now or who may hereafter be suffering from a mental or physical disability of a permanent character, not the result of their own vicious habits, which incapacitates them from the performance of manual labor in such a degree as to render them unable to earn a support," may receive a pension of from six to twelve dollars a month, "proportioned to their inability to earn a support." Another section provides that the widow of any soldier, whatever the cause of his death, who is "without other means of support than her daily labor," may receive a pension of eight dollars per month during her widowhood; and if there be any minor children, two dollars per month for each such child until it reaches the age of sixteen, or indefinitely if it be insane, idiotic, or otherwise permanently helpless. Another section renders it easier in future for dependent parents to secure pensions by providing that, when the fact of the soldier's death by reason of any cause which, under existing laws, would have entitled him to an invalid pension, and the fact that he left no widow or minor children, have been shown, it shall be necessary only to show that such parent or parents are without other present means of support than their own manual labor or the contributions of others not legally bound for their support.

Mr. Morrill, who presented the compromise in the House, estimated that it would increase the pension account by only $35,000,000 a year, but this is obviously an under-estimate, since it virtually adopts the figures upon which the Senate bill was based, whereas the compromise is much broader in its scope. The Senate bill allowed disabled soldiers to draw pensions only when they "are dependent upon their daily bread, or on the contributions of others not legally bound thereto, for their support." This clause was stricken out by the Conference Committee, so that it is necessary only to show that the old soldier is now "unable to earn a support by manual labor," and he may receive the pension, no matter if he has a competence. The practical result will be to encourage the old soldier to claim that he is not able to earn his living by the use of his hands, and that consequently he is entitled to a pension. Human nature being as weak as it is, we may expect to see a great rush for pensions under this provision from men whose neighbors never saw any reason to suppose that they needed any help in supporting themselves. The Senate Committee estimated that under their stricter rule fully 100,000 new pensioners would be added to the roll by this provision. Under the easier system which has been substituted, Mr. Morrill admits that probably 200,000 will come in, and Mr. Cannon estimated the addition as high as a quarter of a million. Reasoning from all the precedents in such matters, it will be very strange if the number does not soon approximate half a million. It is safe to say, too, that three-fourths, if not nine-tenths, of this vast army will be allowed the highest rate—$12 a month—which means nearly $15,000,000 a year for every hundred thousand names. Moreover, a great number of pensioners now drawing small sums—50,000, Mr. Cannon estimates—will have their allowances marked up to from $6 to $12 a month, and usually, of course, to the highest possible figure. It has been estimated that the widow clause of the bill will add 100,000 names at $8 a month, and a good many children will also come in, with a considerable number of dependent parents.

It is plain enough, therefore, that $35,000,000 a year will prove a ridiculously small estimate of the amount which will be called for by this bill. It is much more likely that the requirements will soon be double that sum. If no more than $50,000,000 a year should be called for, the pension appropriations would be swollen to the immense total of $150,000,000 a year. Vast as is the sum which Congress thus votes away, it falls far short of the "*demands*" of the Grand Army machine, and will serve only to strengthen its call for the breaking down of all restrictions and the granting of a pension to everybody who was ever in the army. The politicians who suppose that they have satisfied this machine will soon learn their mistake. It will grudgingly accept what they now grant, but it will only make it the basis for fresh "*demands*," enforced by fresh threats.

OUR "SWEATING SYSTEM."

THERE has been a great deal of talk in London during the past two years over what is called the "sweating system"—that is, the employment by small contractors of wretchedly paid labor of men, women, and children in the tailoring and other sewing trades, done in small rooms in tenement-houses, under revolting conditions as regards ventilation and cleanliness, and during hours which apparently have no limit but the physical endurance of the people employed. When the revelations of this misery first began to be made, it was supposed that it existed mainly among immigrants, principally Jews, from the Continent, and especially from Germany and Russia, and that something might be done to abate it by putting restrictions on immigration. Accordingly a committee of the House of Lords, containing several of the leading members of that body, was appointed to inquire into the matter. It sat for many months, and examined hundreds of witnesses, and has made an able report, but one which suggests no remedy. It can find no trace of anything new in the "sweating system," and indeed finds nothing which can be called a system, and has not discovered that the Jews suffer more from it than other races.

The source of the evil is a very old one. The public wants things cheap, and especially wants cheap clothing, and the very existence of each house engaged in the various branches of the clothing trade depends on its selling as cheaply as any other, and its success depends on its selling a little cheaper than some others. It consequently gets all its work done at as low rates as possible, or gives it out to small contractors, who sublet to poor wretches to whom some work at any pay is the only means of avoiding starvation or the workhouse. So they carry the materials with them to the dens in which they live in the back alleys, and toil fifteen or eighteen hours out of the twenty-four in a foul air, or in the midst of filth, for a bare subsistence, young and old, male and female. How is this to be prevented? Can the law step in and say to these unfortunates, "You shall not work at these rates of pay," or say to the employer, "You must pay higher wages"? One or other of these things apparently must be said, in order to work an effectual cure, and the Lords' Committee naturally shrink from saying either of them.

Miss Beatrice Potter, a lady well known in England for her labors among the poor, as well as for the power with which she treats social questions with her pen, has taken the matter up in the last *Nineteenth Century*, and her remedy is the extension to all premises in which any sort of manufacture is carried on of the provisions of the Factory Inspection Acts which are now in force in England. These acts, known as the Workshop and Factory Act of 1878, and the Public Health Act of 1875, cover by a system of inspection all textile factories and non-textile factories and workshops of certain specified trades, in which women, young persons, and children are employed. They regulate the hours of labor, the education of the children, the amount of space they occupy in the workshop, and the provisions made for sanitation and general cleanliness. The powers of the inspectors are very great. They can enter any factory or workshop covered by the acts at any hour of the day or night, and any breach of the regulations on the part of the employer is punishable summarily by a police magistrate by fine or imprisonment, or both. But the "sweaters," working in their little dens, escape them.

We have in this city, probably in all our large cities—but all evils of this kind are usually worse in New York than elsewhere—exactly the kind of abuse which the Eng-

lish Factory Act was intended to correct—that is, a large class of women, young persons, and children, who are left at the mercy of employers intent on making their profits as large as possible, and using their own discretion in dealing with the health and comfort of a body of rather helpless labor. One field of this abuse, and only one, has been recently explored by a committee of ladies—the condition of the women and children employed in the large retail stores. A report on the subject was read at a meeting held under the direction of the Working Women's Society in Chickering Hall a month ago, which now lies before us in print, and deserves the serious attention of every intelligent man and woman in New York. Its statements ought to be officially examined by the Legislature, and dealt with next winter in a thorough manner. Over and above the particulars there set forth with regard to the sanitary conditions in which work is done in these establishments, the report further charges that the wages, always low, are reduced by fines, which go into the pockets of those who inflict them—a monstrous abuse; that the time allowed to children for their midday meal is inhumanly short; that the law which requires seats to be furnished to saleswomen is persistently ignored; and that their hours of labor depend wholly on the caprice or necessity of the employer.

It also says a good deal about the moral evils resulting in the case of women from the low wages paid them, but we do not see what the law can do to remedy this as long as ten women stand ready to fill every vacant place on any terms offered them. But the law can see that employers are made to respect the health and comfort of this helpless class of employees and provide for them decent and wholesome conditions of service. The beginning of summer is a bad moment to urge a reform on the attention of the more fortunate classes of the community; but we trust no one will go to the seaside or the mountains without remembering the helpless tens of thousands who are left to swelter in the city in these stores and workshops, for a precarious livelihood, without determining that something shall be done next winter to relieve our civilization of this disgrace.

THE SHORTENING OF THE UNIVERSITY COURSE.

The controversy over President Eliot's proposal to cut down the academic course at Harvard College has called forth only two objections of any weight. One is that it is a departure from the long-established custom of American colleges, and the other is that it diminishes by one-fourth the process of absorbing intellectual influence through which even those undergraduates who neglect their studies are said to pass.

As regards the first, it is to be said that the four years' term was fixed at a period when the entering age was very low. During two centuries of Harvard's existence it played the part of a high school as well as of a university. Boys entered it as young as twelve, and fourteen or fifteen was not an unfrequent age. As long as this state of things lasted, four years was not an unreasonably long period to spend in working for a degree. The college was giving the boy what the primary school ought to have given him in the way of instruction and moral discipline. He was not only taught Latin and Greek, but he was taught how to behave. He was sometimes even whipped when he went wrong. In fact, five years would not have been too long a term, for the boy who entered at fifteen or sixteen was hardly ready for a professional or business career any sooner, particularly in those days when youth was considered so much more of a disqualification than it is now.

There is nothing mystic in the term of four years any more than in the term of three or seven; nor is there anything in the nature of American boys which indicates clearly that four years is the length of time they should pass in getting a degree. A degree was originally intended, and is now intended, to show simply that a man had, in the opinion of a competent tribunal, attained a certain proficiency in certain branches of human knowledge. It shows also, but only incidentally, that he has passed a certain number of years in a seat of learning. Its value, however, lies in what it indicates as to the graduate's acquisitions at college, and not at all, or very slightly, in what it indicates as to his length of residence in college. The notion that a mere residence in a university has a separate value of its own, without regard to the way in which the undergraduate has passed the time, is of later date. It was very much the product of the gradual association of a degree with social position; that is, in process of time a degree increased in value by proving that a youth's parents could afford to keep him at a university for four years, and that he had during that period lived in what was considered good society.

Universities have never been rightly or truly regarded as mere examining boards. They have always, and very properly, sought to be an influence on the student's life as well as on his power of acquisition, and we trust will always remain so. That the change proposed by President Eliot would destroy or greatly weaken this influence would be a strong argument against it. Its opponents, however, assume that if the term be shortened one-fourth, the influence will be diminished in the same ratio, which is an extravagant if not absurd view. Nobody who has seen much of college life can have helped observing that the influence of the college atmosphere on the undergraduate declines as the expiration of his term approaches.

In the present Senior year there is no doubt that the shadow of active life falls on all the men to whom a college education is of most use. They have by that time got out of the college all that it can give them in the matter of influence on manners or ways of thinking about the problems of life. It is the work of the world and the ways of the world which now weigh heavily on their souls. The doings and sayings and ambitions of the classes below them begin to look a little childish. To pass this year in a professional school, or in preparation for business, would not injure, in any sense, ninety-nine graduates out of a hundred, and it may be maintained with safety that if the experience of American universities teaches anything with certainty, it is that if they are to keep their hold on the national imagination and respect, they must quicken the popular sense of their usefulness as a preparation for active life. It is the growing doubt of the masses on this point which has, as we all know, greatly diminished the proportion of college graduates to be found in political and professional life. Something needs to be done to revive the sense of the practical value of a university education, to which our chief colleges originally owed their existence, for neither Harvard nor Yale was established originally in the interest of general culture. They were both established to supply a godly and learned ministry. That this revival can be accomplished by a three years' course, without in any way changing the character of the instruction, there can be little doubt. It can be done by going back to the original collegiate idea, that the function of the university is above all things to teach youths who want to learn, and to give them their degree as soon as they have the knowledge required for a degree. The notion that able and diligent men should be kept in college after they are ready to graduate, in order that the lazy, or idle, or incompetent may have longer exposure to University "influence," is of comparatively recent growth, and has all the air of an abuse.

VASSAR COLLEGE.

It is a remarkable event in the long history of the widening of women's field of action when Vassar College celebrates its twenty-fifth anniversary. Twenty-five years ago it was honestly supposed, no doubt, by most people that the feminine cortex was of so soft and flabby a texture as to be quite incapable of following solid trains of thought; and that the few exceptions to this rule which had been noted were of an absolutely abnormal nature—as if a tree which was loaded with sickish-sweet mulberries should occasionally bear a fruit of a rich and pungent flavor.

Matthew Vassar was a man wiser than his generation. Following the suggestion of his niece, Lydia Booth, the principal of a Poughkeepsie school—a woman whose name should always be mentioned when Matthew Vassar is praised—he devoted his wealth, with which he had intended to found a hospital, to the great experiment of offering to women a college education. Undeterred by the fear of spoiling the work which the Lord had done, and convinced that women had not got brains made of a totally different stuff from those of men, he determined to let them try if the rank and file were not capable of gaining nourishment from a stronger diet than that which the boarding-school is wont to offer. In his first communication to the Board of Trustees of Vassar College he made use of these memorable words: "It occurred to

me that woman, having received from her creator the same intellectual gifts as man, has the same right as man to intellectual culture and development."

The bold experiment of Matthew Vassar proved successful from the very beginning. In May, 1870, in a long article—the result of a careful study of the College—the *Nation* said:

"The answering, translating, and demonstrating which we witnessed were done in a style which we have never seen surpassed by young men of the same standing; and in the treatment of some subjects, in readiness, and clean-cutness, and dexterity of expression, the superiority to young men was perceptible. Moreover, we thought we saw evidence of women's superior conscientiousness in the absence of all attempts to fumble with questions or to take random shots at them, when an avowal of complete ignorance was clearly the only way of meeting them. . . . We believe we never before met so many really simple, unconscious, unaffected young ladies as we saw there. They had acquired what we may be forgiven for calling the sober masculine air of people who have business to do and are quite equal to it, and are too much occupied with it to have time or attention for anything else. . . . There was nothing to make one fear that any of the graces of life were going to suffer from the experiment; there were plenty of signs that it was likely to give homes what they have perhaps wanted most of all—the dignity of strength—the repose that comes of knowing exactly where one stands and what one can achieve."

The two days which Vassar College has just given to celebrating her twenty-five years of existence were days which were well calculated to stir deep feelings in the minds of those in attendance. The presentation of the gymnasium, just erected by the alumnæ at a cost of $26,000, to the Board of Trustees, the warm response of the gentle and venerable President of that Board, Dr. Lathrop, the reminiscences of college life by half-a-dozen graduates of different periods, the touching historical address, describing the early struggles of the Founder and the inception of the College, by Benson J. Lossing, the oration of Mr. Curtis, and the after-dinner speeches by alumnæ and by the representatives of other colleges—all were full of significance. Mr. Curtis's speech, delivered in a large tent erected on the grounds, was one of those efforts of the orator by which his hearers are swayed hither and thither—moved now to laughter and now to tears—filled now with indignation at the meannesses from which women have suffered in the past, and now roused to enthusiasm at the picture of the possibilities which open before them in the future. The high-water mark of the address was reached in the glowing sketch which the speaker drew of Margaret Fuller:

"A scholar, a critic, a thinker, a teacher, a queen of conversation, above all, a person of delicate insight and sympathy, the wisest of friends, of the utmost feminine refinement of feeling, and of dauntless spiritual courage—such is the woman, I doubt not, whom Matthew Vassar vaguely foresaw when his generous heart inspired him to his noble task; such is the woman that, as a lofty ideal, presides over the studious hours and quiet meditations of these halls."

Not only in Mr. Curtis's speech, but in all the others as well, mixed with thankfulness for present gain, there was sounded the constant note of eagerness for one concession still to be won. The education of the college is a conquered standpoint; what remains is to make the post-collegiate education equally easy of access to women. To duplicate the great laboratories and the great professorships of the two or three colleges which give adequate post-graduate instruction would be foolish in the extreme. It is little less than silly to suppose that men and women who are so seriously minded as to give three years to study after completing the college course could not brave the association of the lecture-room without danger of impropriety. What possible reason can Columbia College, or Clark University, or the Johns Hopkins urge for not throwing open their post-graduate courses to women? What more graceful act could be imagined with which to mark this memorable year, when Vassar College celebrates her first quarter of a century, and when Philippa Fawcett is 300 marks ahead of the senior wrangler, than for those universities, without further wheedling or coaxing or bribing, to open to women the opportunities for hard work which women covet, and which the sense of justice of men, tardy though it be, will not permit them much longer to refuse?

THE CENTENNIAL OF MONTPELLIER.

MONTPELLIER, May, 1890.

THE University of Montpellier has just celebrated with great spirit the completion of its sixth century. The President of the Republic, the Minister of Public Instruction, M. Bourgeois, the vice-rector of the University of France, M. Gréard, members of the Institute of France, including MM. Gaston Boissier and Bréal, delegates from the chief seats of French learning, and the representatives of foreign universities, at the head of whom was the illustrious Helmholtz of Berlin, took part in the ceremonies. The weather was superb, the arrangements admirable, the success complete. The occasion was a worthy sequence to the academic festivities which have been observed at Bologna, Heidelberg, Edinburgh, and Harvard, and a good example for Dublin, which is expected to celebrate its 400th anniversary next year.

Four days were devoted to the fêtes, which began with religious services in the Cathedral on Thursday, May 22, and ended with a ball at the house of the rector of the University upon the following Sunday. The chief attractions were those of Friday, when M. Carnot was received by the assembled throngs, and when the principal addresses were made at the Convocation. There were, besides, processions, fire-works, illuminations, and a great banquet. The entire city seemed to participate in the jubilee, and extra trains brought innumerable crowds from the neighboring towns. I was told that the ordinary population of the city, say 50,000 persons, was doubled on this festive Friday, and it was easy to believe that this was so. The streets were certainly thronged.

I will not endeavor to describe all the varied entertainments which were provided for visitors during the fête. There was a light and joyous tone to the celebration which contrasted very strongly with the seriousness, not to say the solemnities, of our college commencements. There were few speeches, many pageants. It was a holiday time, not a period for obituaries, nor learned discourses, nor appeals for money, nor for the bestowal of honorary degrees. The addresses that were made were brief, well written, and read word for word by the speakers. Two of the principal addresses were distributed through the audience, in type, just before the speakers came forward. This was fatal to spontaneity, but it was favorable to clearness and finish of style. What was lost as "eloquence" was gained as literature; what was lost in adaptation to the moment was gained in permanent excellence.

Among the incidents of the celebration it was pleasant to observe the zest with which the students entered into all the festivities. Their courtesy and good order were as remarkable as their enthusiasm. They wore caps of varied colors, badges, and sashes, but generally not gowns, and they carried banners to indicate the colleges and universities from which they came. As the processions were formed on an alphabetical and international basis, the Americans headed the column, and half-a-dozen of our young countrymen who are studying in Montpellier bore the national flag in advance of all other banners, and everybody seemed pleased by this unexpected leadership. It was the more noteworthy as the American colleges sent but two delegates; Baltimore and Ithaca being the only places represented.

Montpellier deserves to be better known than it is to the Americans. It is not upon the beaten track of travel, and tourists who include Avignon, Nismes, and Arles on their route to Marseilles or the Riviera are likely to pass by the seat of this ancient University. In years gone by, it was a sanitary resort much frequented by the English, but an unfavorable sentence in a well-known guide-book exerted a damaging influence upon the town which was not justified by the facts, and from which it has not recovered. Students who desire to avoid the distractions of Paris, and yet wish to follow the guidance of French professors and to be surrounded by French influences, may well resort to Montpellier. One of the most distinguished savants of the Sorbonne called my attention particularly to the attractions which are offered to foreigners in this southern seat of learning. Here are schools of letters, science, law, medicine, and pharmacy, with laboratories, libraries, museums, and a botanical garden. There are exceptional advantages for the study of viticulture, which one young man from the University of California is now enjoying. This part of France has suffered extremely during the last few years from the phylloxera, and the intelligent and persistent efforts which the scientific and practical men have made to restore the vineyards to their former productiveness have been so successful as to call forth from M. Carnot words of strong commendation. The practical men and the scientific men of the region are, of course, thoroughly well acquainted with all that pertains to the culture of the grape.

Let me now recur to the celebration, of which, as I have said, the principal day was Friday. About two o'clock in the afternoon, all the delegates from a distance were received by the resident faculties in the buildings recently appropriated to the University, and were presently escorted to the Prefecture, where M. Carnot was expected. As the procession moved slowly through a narrow street, up a gentle acclivity, the faculties escorted by the students, the houses decorated with flags, and the streets hung with lanterns, it was easy to imagine that we were looking at a scene of the middle ages. Almost every one in the cortège wore an academic cap and gown, and the colors were as various as those of a flower garden. The scene was even more brilliant, two hours later, when the company were seated under a red and white marquee, in the midst of the beautiful city garden which bears the name of Peyron. The President of the Republic, surrounded by the official representatives of public instruction in

France, sat in chairs arranged upon one side of a hollow square. On the right were the French professors and on the left the foreign guests. In front were ladies and students. After an introductory address by the Rector, came the historical discourse by Prof. Croiset of Montpellier, which was well written and well read, and which had the additional merit of brevity, as it occupied but half an hour. He dwelt upon the fact that the University is much older than 600 years. The date selected for commemoration is that of the bull of Nicolas IV. (October 26, 1289), when the faculties already in existence were united by Papal authority as one corporation. Perhaps the schools existed as early as the eighth century. Certainly in the twelfth century Montpellier was renowned for its instruction in medicine, and this credit was chiefly due to Jewish physicians, followers of Avicenna and Averroës, who brought with them Arabic learning imbued with Greek tradition. About the same period the study of jurisprudence was promoted by Placentinus, who came from Bologna. Petrarch is doubtless the most renowned of all who have been enrolled as students in Montpellier, and the words in which he refers to his four years' course of studies in law were quoted by Prof. Croiset with excellent effect. Rabelais is the name of another illustrious writer who owes his education to this *studium generale*. The discourse did not refer merely to the names of distinguished scholars. It exhibited the growth of the university in different epochs, and afforded a good illustration of the doctrine which was expressed near the end of the oration: "Pour qu'une université soit autre chose qu'un groupement artificiel, *il faut qu'elle ait une âme.*"

Among the addresses which followed M. Croiset's was that of the Minister of Public Instruction, which was regarded as very significant, because in it he committed himself and the Government to a new policy in university administration. He promised to favor the restoration of the local universities, which have been obscured during most of the present century, or rather have been absorbed in the one organization, the University of France.

M. Carnot was not called out at this ceremony, but each of the deputations from abroad saluted him as well as the Rector of the University as they presented their ceremonious addresses. The President made his speech at the banquet which was given in the evening.

It is worth while to add, for the information of American institutions which may be invited to other fêtes like that of Montpellier, that the Continental universities are careful on these occasions to send their written salutations, usually engrossed on parchment, which is either handsomely bound or encased in a beautiful roll. D. C. G.

A NOBLEMAN OF THE OLD RÉGIME.

PARIS, May 10, 1890.

THE memoirs of the Duc des Cars, just published by his nephew, the present Duke, were not written for publication. They give, in all sincerity, the impressions of a man who was born and lived in a society which was very different from ours, and this perfect sincerity is one of their charms. Jean François, son of the Comte des Cars and of Emily Fitz-James, daughter of Marshal Berwick, was first known under the name of the Chevalier des Cars, for he had been admitted a Knight of Malta. He was born at the Château des Cars, in Limousin. He was first destined for the Church, but he felt no vocation. His mother, who saw no alternative for a younger son but the Church or the navy, got him appointed *garde de la marine*, and at the same time he was admitted Knight of Malta. He was sent to Brest, and embarked on a ship which was sent to the coast of Morocco. The squadron sent to Morocco was composed of the *Union*, the *Sincère*, the *Lunette*. The *Union* had on board an Ambassador Extraordinary. The incidents of the mission to Morocco are amusingly told. Des Cars met among the Moors a peasant of Limousin, whom he had known as a child, and who had been a soldier in Portugal and in Spain; also, an ex-Jesuit of Portugal, who had been expelled from Lisbon at the time of a plot against the life of the King (in 1759), had afterwards been a privateer, and had been appointed Grand-Admiral by the Emperor of Morocco. The Portuguese Jesuit wore the turban and looked very magnificent on his horse. Des Cars was presented to the Emperor in these terms: "The lad is one of the Knights of Malta—devils in war, good fellows in peace." The Ambassador also presented M. de Suffren (who afterwards became famous in India, and *bailli* in the order of Malta), and La Bourdonnaye. The Emperor was fond of astronomy, and had a reputation for great mildness in comparison with his father, Ishmael. One day, however, the paternal instincts were too strong, and Mohammed himself transfixed, one after the other, sixty Berber prisoners with a lance, taking care to change the lance each time.

Des Cars, on his return to Brest, fell in with La Peyrouse (the famous navigator who died in a journey round the world), who offered to take him with him on the *Adour*. He went with him to Bayonne. He afterwards journeyed to Cadiz and Marseilles; he returned from the last place to the Château des Cars, where he found his uncle and spent pleasantly five months. "During these five months I often wrote to my mother, who never answered me." His mother was dangerously ill in Paris; he went there to see her, but she was very angry with him for coming to Paris, and sent him back to Brest. Soon afterwards, she sent for him, however, feeling that she was going to die; he arrived too late. "I had wept much," he says, "over my father, whom I adored, and who had always shown me the greatest tenderness; I wept equally for my mother when I knew that she had shown a desire to see me again."

Des Cars was now free to choose his own career, and though he was prepared for his nomination as *enseigne*, he left the navy and entered the army. He had an income of about 8,000 livres; he could live at his sister's house in Paris and at his brother's house in Versailles. The King, as soon as he was presented, admitted him to all his suppers on the hunting days and to all the little journeys to Choisy, to Marly, to Bellevue. His brother was first maître d'hôtel to the King and lived at the castle. His military service in a regiment of carbineers took up only four months in the year.

When the household of the Comte d'Artois was formed, Des Cars was made one of his gentlemen in waiting, and on the same day Colonel. This last appointment gave him more pleasure than the first. "The Court was, for me, as for the greater part of the French nobility, less an end than the means of obtaining promotion in the military career." This happy day was to close with another royal favor. On retiring, the King, for a certain familiar purpose, called Des Cars out of the throng of marshals of France and other dignitaries. "I thought I was not seen. I heard my name, and the first valet had some difficulty in finding me." Such incidents show better than anything the state of the French Court before the Revolution: a word of the King, a menial service rendered in his presence, seemed matters of supreme importance. Only the men of *quality*, those who were *born*, to use their own language, were admitted to the curious Olympus where Jupiter did not even try for a moment to conceal from Juno his infidelities.

The Comte d'Artois lived entirely with the Prince d'Hennin (Charles d'Alsace de Chimay d'Hennin, Prince of the Roman Empire, who died on the guillotine in 1794), the Chevalier de Crussol, captain of his guards, the Marquis de Polignac, and Des Cars, who became one of his favorites. He accompanied the Comte d'Artois on his journeys. The account of a visit made to the Marquis Voyer d'Argenson is curious. D'Argenson was a free-thinker, and was very *English* in his political views. "One day we had gone to Maisons to see some stables of the Comte d'Artois. His agent, Sainte-Foix, kept us to dinner. During the repast we talked on the subject of the French finances. Voyer gave all his views, but said that our Ministers were too stupid to adopt them. 'I see,' said he, 'that there is but one way left; it is to *debourbonize* France.' . . . No man ever was as dangerous as M. de Voyer. He had had the care of the education of the Ducs de Chartres, the Conflans, the Lauzuns, and their imitators; he had undertaken to destroy all religious principle in the heart of the Comte d'Artois." Des Cars also joined the Comte d'Artois in visits to Marshal d'Harcourt at Harcourt and to the Choiseuls at Chanteloup.

Des Cars was in luck: one fine day, in 1780, he had the good fortune to be advised the first of the existence of an abbey the revenues of which were in the gift of the French Crown; he claimed them as Knight of Malta, though he was now a colonel of dragoons, and he obtained thus a great accession of revenue. "I became really rich," he says. "I had more than 48,000 livres of rente; I was lodged, fed, warmed, lighted at my sister's in Paris, at my brother's in Versailles; all my horses were kept in Paris by the Comte d'Artois" (there is still in Paris a street called Rue des Écuries d'Artois). Des Cars is very ingenuous in the expression of his pleasure in receiving all these good things; he evidently felt that they were his due, and that humanity was divided into two parts, those who are born to enjoy and those who are born to endure life. The King was the fountain of all favors, and the fountain was to be carefully guarded against all intruders. He could have said with the Prince de Ligne: "Why do people declaim against abuses? I have personified them all, and I always felt the better for it"; only what the Prince de Ligne said half ironically Des Cars would have said with the simplicity and the conviction of a child. This belief in the divine right of a privileged class was the great cause of the French Revolution—much more than the belief in the divine right of kings. To do justice to Des Cars, he was a good soldier, he kept his regiment in an admirable state, he preferred his military service to everything. He had in him the old feudal spirit; he knew that he owed to his lord the "servitium militare." He offered to go to America with Rochambeau; he was always ready to join an expedition. His brother, who was a sailor, had acquired much reputation, and fell gloriously in a naval battle fought against the English.

Soon afterwards, Des Cars offered to fight as a volunteer at the siege of Gibraltar, with the Comte d'Artois. The Prince left France with

him, D'Hennin, Crussol, and the Comte de Vaudreuil. The journey through Spain was rapid. The Comte d'Artois was well received by King Charles III., his great-uncle. The King always dined alone, and consequently did not ask the Count to his table; but he desired that he should receive all the honors of an Infanta. The incidents of the siege of Gibraltar are well known. The Comte d'Artois was there merely as a volunteer; the French troops were under the command of the Duc de Crillon, known for his eccentricities and his debts, who had been made Duke of Mahon after he had taken that place. Crillon, after vain attempts, was obliged to raise the siege. Such was the end of an enterprise which had been prepared by Spain and France for a whole year and announced with emphasis to the world. The English remained as firm on their rock as in 1763, when a treaty of peace gave them possession of it.

On his return to Paris, Des Cars married one of the great heiresses of France, Mlle. Pauline de la Borde, the daughter of the financier (well known to all bibliophiles by the 'Chansons de la Borde,' so admirably illustrated by Moreau le Jeune and others). Mlle. de la Borde belonged to the world of finance, of the rich *fermiers-généraux* who had become so important at the end of the eighteenth century. Des Cars did not know her, and the marriage was arranged by his sister with a rapidity which seems extraordinary even for that time. The Queen knew La Borde and took an interest in his daughter.

"A moment after, the Queen came in, with a billiard cue in her hand. I thought I saw Diana with an arrow; she had her majestic and light step:

'Vera incessu patuit Dea.'

'The Comte d'Artois,' said she, 'has charmed me, Chevalier. I shall be delighted if La Borde gives you his daughter. I will charge the Abbé de Vermond to tell La Borde to-morrow morning that I approve this marriage, that he cannot do any better, and that the King will be as much pleased as I am myself.' . . . Thus it was that, between the 27th of March, at six o'clock at night, and the 29th, at the same hour, my marriage was proposed and concluded—a marriage which many rich and even titled people would have desired."

On the occasion of his marriage, he was appointed first maître d'hôtel to the King *en survivance*—that is to say, he obtained the promise of this place if he survived his brother, who had it, and obtained at once all the privileges attached to it, such as entrance into the King's cabinet. This charge was very valuable: the brother of Des Cars had paid 1,500,000 livres for it. The first maître d'hôtel lived with the King, and received every day at dinner all the great officers of the King and his guests, as the King always dined alone with his family, except on certain solemn occasions.

The day before his marriage, Des Cars abandoned the cross of Malta and received the cross of St. Louis. The society of M. de la Borde, his father-in-law, was very literary. He lived much at the castle of La Ferté-Vidame, near Dreux; there Des Cars made the acquaintance of the Philosophical Society and of the society of the *fermiers-généraux* La Borde afterwards sold La Ferté to the Duc de Penthièvre, and bought a place near Étampes, called Mérinville, which he embellished; he was arrested there in 1793, and taken before the Revolutionary tribunal. Des Cars asked permission, soon after his marriage, to go to Germany, in order to study the battle-fields of the Seven Years War and the organization of the Prussian Army. He saw Crefeld, Clostercamp, Wesel, Willingshausen, Wilhelmsthal, etc. He had a great passion for military matters. At Berlin, he could admire the work of Frederick II.; he saw Frederick himself, and witnessed some reviews and manœuvres. His observations on the subject of the Prussian regiments and Frederick's lieutenants have an historical interest.

HAWTHORNE'S VILLA AT FLORENCE.

FLORENCE, 1890.

IN some letter-books of Hiram Powers, shown me by his son Nicholas Longworth Powers, I have found interesting traces of the Hawthornes in Florence, as well as in the recollections of the widow Powers, and others. On May 16, 1858, Hawthorne wrote to Powers, on an introduction of Mr. Akers, asking his help in obtaining a residence there, for a few months, and adding, "I cannot conclude this note without thanking you for the kindness which allows me to put you to this trouble, nor without expressing the pleasure I anticipate in meeting personally one whose works have given me so much delight." Powers's studio was then in the Via dei Seragli, and he found rooms for the Hawthornes in a house nearly opposite (No. 124), called the Casa del Bello—so called, says tradition, because of the good looks of its first owner. The first and most expensive floor (it was $50 per month) was selected because of a vine-covered veranda on one side of the court, passing from Hawthorne's study to a charming arbor, from which steps descend into the courtyard, with its flowers, and one or two orange trees. Florence was too fascinating, however, to allow Hawthorne to dream away his hours in this summer-house. He had not yet a romance in hand, and entered keenly into the life of the place. He enjoyed the society of the Brownings, the Trollopes, and the pleasant Florentines who attended the *salon* of Miss Blagden; that is, at such times as he was not overpowered by his shy mood. Dr. T. Villari remembers an evening at Miss Blagden's when Hawthorne took refuge in a corner, devoting himself to photographs.

The great charm for Hawthorne was the studio of Powers; there he was surrounded by admirable busts and statues of nearly all eminent Americans, and he was in contact with a thinker as well as an artist—a man, too, of wide and wonderful experiences. Hiram Powers now trained him in the principles of sculpture, now delighted him with anecdotes of early Cincinnatians—of Longworth, Peyton Semmes, Corwin, and the rest—of the waxwork "Inferno" he constructed in Cincinnati; and was equally capable of enchaining his attention with strange supernatural stories in which he (Powers) devoutly believed. The two used to sit, in the June nights, on the roof of Powers's house, catching snatches of song or declamation from the Goldoni Theatre near by, and imagining that the air might be peopled with beings too aerial for human senses to perceive. It is amusing, by the way, to find Hawthorne, on his return from the Sunday horse-races, manifesting distress at the Sunday theatres. On June 18, 1858, Powers wrote to his friend W. N. Kinney:

"Mr. Hawthorne is a very mild and quiet man, seems diffident, and changes color while speaking. It seems impossible that he should endorse Gen. Pierce, but perhaps he did this before the latter had manifested his *splendid* policy. I shall have a talk with him about Kanzas, to hear what he will say. Segato took his secret of petrifying dead bodies to purgatory (he died a Catholic, I suppose), and I trust that old [illegible] has carried his golden secret to heaven direct."

In 1836, when Hawthorne was editing the Bewick Company's magazine, he wrote therein a characteristic article on Segato's discovery, imagining Webster and other statesmen turned, after death, into statues, or pillars of state in the Senate.

In his journal, under date of June 4, 1858, Hawthorne speaks of sitting in his summer-house and dreaming of a story. The dreams were of 'The Marble Faun,' and they were put on paper in Montauto villa, to which the family removed at the end of July. After this Florence, though only a mile distant, saw little of him.

"'The House of the Seven Gables,'" writes Powers to a friend (July 18), "is very domestic, does not seem inclined to visit his neighbors much, and, when he does, his stay is short. He seems a cautious, prudent man. My last talk with him was about Mr. Van Buren and Gen. Jackson, and I said what I thought of them. He expressed no opinion, but asked if I did not think Gen. Jackson honest. I told him that I had no doubt that Gen. Jackson thought himself so, and I had known worse men than he who never appeared to suspect their own integrity. For men can persuade themselves of almost anything. The young governess [Miss Ada Shepherd], who understands Latin and Greek, and seems a very modest and well disposed girl, spoke out pretty decidedly against the political career of Gen. Pierce, at my studio, and in the presence of the eldest daughter of the Seven Gables. Perhaps the padlock of gratitude holds the door of that house fast shut. Some locks are easy to pick, but I rather think this would prove one of Hobbs's. The mistress of the House of Seven Gables has no visible padlock—her tongue is free enough, but not for any evil."

A Florentine gentleman told me a strange episode in the history of Casa del Bello. Thomas Buchanan Read resided there for a time, before Hawthorne, and his wife was the first victim of the cholera, which in that year became epidemic. The poor lady was confined also, the child being born dead. My Florentine friend had known Read, and had run about to find physicians and bring medicines for the lady. After her death he went there towards midnight. The two dead bodies were in the house (the child sealed in a leaden tube), and Read was relieving his distraction by reading his own poems to Powers. The Italian also listened, and remembers—for it was Carnival night—the maskers' revels and their lights flaring under the windows of the room where this weird scene was taking place. After midnight the bodies were buried in that same garden of flowers on which Hawthorne looked while he dreamed of his 'Marble Faun.' Some years later Read came to Florence with his second wife and removed the body of the first to America. Here was a romance haunting his garden of which Hawthorne does not appear to have heard. Indeed, he does not appear to have been much interested in the actual or historic associations of the neighborhood. He visited old Mr. Seymour Kirkup, who, with his little Imogen, appears in 'The Dolliver Romance,' but does not seem to know that the house was once the palace of the Vespucci family, a member of which gave America his name. With all his sentiment about Boccaccio, he does not visit the villa where the ladies and gentlemen listened to his tales. Of his larger villa, Montauto, he wrote to James T. Fields: "At one end of the house there is a moss-grown tower, haunted by owls, and by the ghost of a monk who was confined there in the thirteenth century, previous to being burned at the stake in the principal square of Florence." It is droll that he doesn't mention that this monk was Savonarola!

'The Marble Faun' is first mentioned in his journal as having been begun July 27, a day or two before leaving Casa del Bello; it was, therefore, begun in that summer-house, but it was developed and sketched out at Montauto

villa between the 29th of July and the 29th of September. By the kindness of Lady Hobart, I was enabled to go over the villa, and found it very interesting to do this with Hawthorne's journal of his residence there, and his 'Romance of Monte Beni' (his name for the castle) in my hand. Una's picturesque room in the lower part of the tower, so carefully described in Hawthorne's journal, is now a dining-room; and the oratory adjoining it has become a place for dumb-waiters. But I recognized in the vestry and chapel nearly all the pictures and consecrated objects mentioned by Hawthorne, among them the "undraped little boy in wax" which he came near mistaking for Cupid. That his notions of sacred and pagan things were sometimes a little confused is proved by his description of the ceiling of his own study as "ornamented with angels and cherubs," these frescoes being nymphs and Cupids much more liberal with their charms than angels. In this luxurious room 'The Marble Faun' was written, amid golden damask and mural decorations. The windows are also doors, and open on an ornamental garden with paths embowered with box so high that one can hardly be seen while walking up and down them. On one side of the garden is a stone wall on which one may lean and overlook the Umbrian valley. This garden was no doubt the real "study" of Hawthorne. Here he might summon from neighboring villas, commanded by this height, such fountains or statues as his romance required. And the descriptions of the terraces, the nook where Donatello summoned the wild creatures, the marble nymph and fountain, given in the romance, do not correspond with the realities of Montauto. Nor is there, within, the legendary fresco so realistically described.

On the other hand, the house is described with strictness as to detail (chap. xxiv). The well in a recess in the side of the house was shown me when I asked for it, and other peculiar things. The tower is described with literal fidelity. Missing the shrub which Kenyon remarked on the top, I asked the old gardener if anything grew there. He said that an old myrtle had long been there, but had died the year before and was cleared away. This gardener had been a lad on the estate when Hawthorne dwelt there. He could barely remember the family, he said, for he had nothing to do at the villa, but only on the farm. He remembered more particularly a boy named Christopher, whom they brought out there with them. There is a tradition that when Hawthorne climbed to the top of the tower for meditation—which he often did—he was accustomed to pull the last ladder up after him.

The northward view is superb. In the great valley are bright villas, silvery streams, and innumerable groves of cypress, olive, and orange; there are the domes and towers of Florence—Galileo's Tower, Giotto's Campanile; beyond all, the delectable hills rising to majestic summits—Pama della Croce (6,100 feet), Tre Potense (6,300), La Nuda (5,930), Coma al Scale (6,400), Mt. Cimone (7,000). Their graceful, snowy tops seem to look graciously, like winged guardians, on the villages that nestle on all the more accessible summits, each with its old church or convent. I could see below Fiesole the trees about Palmieri (Boccaccio's romantic villa), and the Valley of the Ladies stretching near Landor's villa. Had not Landor been a dying man when Hawthorne was near, he might have left us an "imaginary conversation" between the two sweetest story-tellers, surpassing all the rest; or he might even have imagined a communion across the centuries between Savonarola, whose sad eyes looked on this grand scene where his ashes were strewn, and the New England romancer who made his ghost into a bit of pigment for this tower.

In 'The Marble Faun,' Hawthorne has transferred the lowest room of the tower, with its oratory and pictures, to the top. "This is my own abode," said Donatello, "my owl's nest." The tower corresponds in his imagination with that of the Via Portoghese, in Rome, where he pictures Hilda with her white doves. His love of these solitary heights has a significance for those who recognize that Hawthorne was almost as much a prisoner of his individuality as Savonarola in his tower. He was unable to share the spirit and aim of his own country, of England, or of Italy. He was one of the loneliest men that ever lived. When from the Old World he returned to Concord, his first task was to add a tower to his house, "Wayside." There he sat above the tumult of civil war, writing of the old Revolution; and there, while telling a tale of the elixir of life, the cup of death was pressed to his lips.

Correspondence.

THE BULLEN FUND.

To the Editor of The Nation:

Sir: Will you kindly grant me space for the following statement?

It is proposed that a testimonial of esteem and respect should be presented to Dr. George Bullen on his retirement from the office of Keeper of Printed Books in the British Museum for so many years excellently administered by him. To this end a Committee has been formed of which Earl Spencer is Chairman.

The British Museum is opened as liberally to Americans as to Englishmen, and I happen to know that many of our countrymen, while enjoying this privilege, have been indebted to Dr. Bullen for numerous acts of kindness and courtesy beyond the limits of his official duties.

I feel sure that these and perhaps others on this side of the water would gladly join in this tribute to acknowledged merit. To the illuminated memorial on parchment to be presented to Dr. Bullen the names of all contributors will be appended, but without specification of the sums individually subscribed.

I have consented to receive and transmit subscriptions, but the better way would be to remit these directly to Mr. B. F. Stevens, U. S. Despatch-Agent, the honorary treasurer, No 4 Trafalgar Square, London.—I remain, sir, your obedient servant,

J. R. Lowell.

Elmwood, Cambridge, Mass., June 9, 1890.

THE VENAL PRESS.

To the Editor of The Nation:

Sir: The Nebraskan sensation is, after all, but a repetition of what the *Voice* showed was the condition of things in Pennsylvania last year when the constitutional amendment was submitted in that State. From the character of the sell-out at that time among journals of recognized standing in Philadelphia and elsewhere, the fact was forced to the front that Brother Carson of Gibbon, Neb., is not the only editor who "is not going to do much unless there is something in it."

The truth seems to be that, so far as editorial utterances are concerned, the press is losing its hold. The public have not failed to note that what should be a *judicial* profession is fast deteriorating to that of the advocate. It is no longer good politics to protest against party measures; it *is* good politics to defend or excuse them.

I believe that the modern growth of the review is a recognition by the public of the untrustworthy character of the average editorial opinion. The growth has been in answer to a demand, and the demand has come from a desire to have the honest thought of honest men. Certainly the tendency is in that direction, and it is a propitious state of affairs. It opens a way for the scholar in politics, and may lead to that happiest of political conditions, where the philosopher, thinking, leads, and the people, reflecting, follow and execute.

Chas. E. Wheeler.

Cleveland, O., June 14, 1890.

WILLIAM EATON AND OTHERS.

To the Editor of The Nation:

Sir: Your reference to the notice of John Glover in Appletons' new 'Cyclopædia of American Biography,' as contradicting the very book it cites for authority, moves me to set down one of the most monstrous and slovenly blunders of exactly the same sort, out of a work swarming with errors of gross carelessness. The article on William Eaton, the hero of Derne, states that he was "in 1791 chosen clerk of the House of Delegates, where he remained until 1797." In the first place, House of Delegates of what? He was born in Connecticut, graduated at Dartmouth College in New Hampshire, and died in Massachusetts; was it one of these three? Not at all—it was Vermont. But, more than this, he was in fact clerk of that House only for *one season*, 1791-2; and for the next five years was in the regular army, part of the time with Wayne in Ohio, the last year or two on the St. Mary's in Florida, where he was involved in a savage quarrel with his commandant over land claims of the latter, was in confinement for several weeks, defended himself in an acrimonious correspondence which was transmitted to the Secretary of War, and had his future career determined by the political acquaintance and advertising thus made. And all this occupies a whole chapter in the one popular source of information concerning Eaton—Felton's Life in Sparks's collection. I confess I admire the real genius that can blunder like this.

A few more items just as they come to memory; I have kept no memoranda.

In the notice of Blennerhassett, his wife's name is given as Adeline. Now, she signed her own letters Margaret, and her husband always speaks of her as "Maggie." The writer of the notice, I am pretty sure, caught the name Adeline from a hasty glimpse of a quotation from "Don Juan" given in Safford's 'Blennerhassett Papers,' where, moreover, it refers not to Mrs. B., but to the Marchioness of Wellesley.

The scrap of a notice of Lord Howe, of only twenty-five lines, contrives to give two different dates for his death (July 5 and 8), and *both wrong!* *Vide* Rogers's diary, where the events are set down in minute succession.

In the article on Gen. Wilkinson, at top of page 512, it is said that "He was made Governor of Louisiana in 1805, and in the autumn of *that year*" disclosed Burr's conspiracy. It should be "of the *next year*," 1806.

Edmund Fanning, the notorious adventurer who was responsible more than any other one man for the revolt of the North Carolina Regulators, is put down as Governor Tryon's son-in-law. This follows Sabine, but Wheeler ('Historical Collections of North Carolina') says, on

the authority of Fanning's family, that it is not true.

Christine Chaplin Brush, the author of 'The Colonel's Opera-Cloak,' a real classic, recent as it is, and one of the most entertaining of American stories, is set down as an artist and writer of juvenile verse, but no hint is given that she ever wrote a word of prose in her life.

In the notice of Oliver Holden, Isaiah Thomas is turned into *Isaac*.

I could quadruple this list by a little effort, for the amount of slapdash, unverified hackwork in the volumes is something monumental. In spite of the impossibility of taking any of its statements on faith, the Cyclopædia is of very great value and service; but it might have been much more so but for its discreditable execution. F. M.

HARTFORD, CONN., June 12, 1890.

Notes.

ESTES & LAURIAT have in press 'The Pine-Tree Coast,' illustrations of the Maine seaboard, by Samuel Adams Drake.

Houghton, Mifflin & Co. will publish next autumn a new story, 'Ascutney Street,' by Mrs. A. D. T. Whitney.

New library editions of the Waverley Novels, of the works of Dickens, and of Thackeray are announced by T. Y. Crowell & Co.

A portion of Dr. Julius Weisbach's 'Mechanics of Engineering' has been translated by Prof. T. F. Klein of Lehigh University, and will be brought out under the title 'Mechanics of the Machinery of Transmission,' by John Wiley & Sons.

The Harris Publishing Co., 10 Warren St., publish directly 'The Salmon Fisher,' by Charles Hallock, a work both practical and anecdotic.

Prof. Addison Ballard's three addresses on the true aim in teaching and study make a little volume with the fanciful title of 'Arrows' (A. S. Barnes & Co.). The mould of the discourse is clerical, but not narrow, and noticeable in a doctor of divinity is the perfect acceptance of woman's right to the highest education and its consequences. Strange language forty years (and less) ago, from such a source, would have been this: "I have myself the conviction that women can be trusted as safely as men to decide for themselves what spheres they can fill and what vocations it is suitable to follow."

An authorized translation of Prof. Paul Frédéricq's paper on 'The Study of History in Germany and France,' by Henrietta Leonard, has just been added to the Johns Hopkins University Studies, as No. v-vi of the eighth series. Miss Leonard is a graduate of Smith College, and has also translated Prof. Frédéricq for the fifth series. We have already spoken of the paper before us, which is not a piece of dry statistics, but a report of methods of instruction in history as learned from personal class-room visits.

Mrs. Burnett's 'Sara Crewe' has just been published in Paris in French, following an adaptation in that language, 'Le Petit Lord.' Two other American stories now to be had in French are Mr. Bellamy's 'La Sœur de Miss Ludington' and Miss Jewett's 'Le Roman de la Femme Médecin.'

'Les Américains chez eux,' by the Marquis San Carlos de Pedrosso, is announced in Paris for immediate publication. If we may judge from the four instalments printed in the latest numbers of the *Nouvelle Revue*, the book will not attain even to the value of Max O'Rell's little volume. Republication of these articles has been begun in the *Revue Française* for June (New York: W. R. Jenkins).

No doubt the most rigidly classical of French critics, M. Ferdinand Brunetière, has his admirers in America, and there is no need now to say much more about the latest collection of his essays from the *Revue des Deux Mondes*, 'Nouvelles Questions de Critique' (Paris: Calmann Lévy; New York: F. W. Christern), than to note its appearance and the fact that it contains an admirable and solidly thought-out paper on 'Le Mouvement Littéraire du XIXe Siècle.' Perhaps it may be of interest to record, also, that M. Brunetière refers to Sainte-Beuve's criticism of Chateaubriand and of Mme. de Staël as "spiteful" (*rancunière*).

In the 'Dernières Pages' of George Sand there is a pleasant account of the marionnettes of Nohant, and of the many little plays which she and her son prepared for the puppets. Some of these little pieces have now been published in 'Le Théâtre des Marionnettes de Maurice Sand' (Paris: Calmann Lévy; New York: Christern). From the number of characters introduced at one time, the plays are apparently intended for puppets worked by wires above, and not animated by the human thumb and fingers, as are the *pupazzi* of M. Lemercier de Neuville.

Any one who cares to consider the methods of the professional dancer may be recommended to read 'La Danse au Théâtre,' by Mademoiselle Berthe Bernay, formerly of the Paris Opéra (Paris: Dentu; New York: Christern). The positions and movements which are the elements of the terpsichorean art are here described, and are illustrated by neat little "process" cuts. Among the other illustrations are portraits of the leading ballet-dancers of the Opéra.

The first number of the organ of the American Academy of Political and Social Science, the *Annals*, will shortly be issued in Philadelphia. Politics in Canada and the United States, the Decay of Local Government in America, and Cheaper Railroad Fares are the subjects of noticeable articles.

The monthly *American Etcher* (New York: Geo. F. Kelly & Co.) makes its appearance as promised, "with an etching on Japanese paper in a mat." This etching is not such as to make the price of the magazine seem abnormally cheap; there is no reference to it in the text, and the artist's name is indicated only by initials. The letter-press is partly taken up with an elementary but not superfluous description of what etchings are and how they are made, by Mr. Frederick Keppel; and partly consists of "General Art Notes."

The June number of the *American Amateur Photographer* (Brunswick, Me.) will commence publication of an "Index Review Photographic"—strange English for "a complete review of photographic processes, methods, and substances, arranged in alphabetical order." The author is Dr. John H. Janeway. In a report of a recent meeting of the Society of Amateur Photographers of this city, we read the useful suggestion of the Secretary, "that the Society undertake the photographing systematically of the prominent portions of the city, something in the nature of a photographic survey." A semi-annual record of the city's skyline from the Jersey shore would be another curious and valuable undertaking.

M. Angot gave last winter, in a communication to the French Academy of Sciences, some details of interest concerning the temperature observations made on the Eiffel Tower from July to November last. The observations were made 988 feet above the ground, or 1,102 above sea-level, and the temperatures were obtained with a Richard thermograph. These were compared with similar records made at the Park of St. Maur, about ten miles southeast of Paris, and 164 feet above the sea. The difference was found to be much greater in summer and during the day, and smaller in winter and at night. On calm and clear nights the temperature at the summit was often nine or ten degrees higher than at the ground. During any alteration in the weather the change was frequently apparent at 980 feet elevation many hours, and often several days, before it was manifested at the base. These observations, in connection with those of wind velocity, previously discussed, prove, in a rather surprising manner, how greatly the meteorological conditions may vary at an altitude of less than 1,000 feet from those observed on the ground.

Dr. R. Assmann of Berlin has discussed in *Das Wetter* the influence of climate upon the recent epidemic of influenza. He considers that while we are yet in the infancy of bacteriological investigation, it is still admitted that harmful germs do exist in the air as well as in water. Certain meteorological changes, therefore, which take place in the atmosphere must affect the quantity and growth of these micro-organisms; and every precipitation of moisture necessarily removes from the air immense quantities of dust and germs. Tissandier found that four times as much dust existed after dry weather as after rain, while snow was found to carry away an amount yet larger. Although no definite quantitative investigations have been made, it is undoubtedly true that the micro-organisms have an active part in atmospheric dust. The first authentic reports of the epidemic were from Siberia and Russia in November, 1889. From the daily weather reports and charts of the German Naval Observatory, Dr. Assmann finds that that there was an unusually long drought in November throughout eastern and central Europe, which continued, especially in the East, partly through December. In these regions November has usually 40–60 mm. of moisture through precipitation, but the figures for November, 1889, frequently remained under 10 mm. Everywhere there were dry periods of from fourteen to sixteen days. The accumulation of dust in the air at this unusual season must have been very great, especially as there was no lasting covering of snow, even thinly spread. Low-lying clouds also prevented the carrying away into larger space of the atmospheric germs.

The Deerfield (Mass.) Summer School of History and Romance opens its fifth season on July 3, with three sessions per week till the end of the month. The President is Mr. L. J. B. Lincoln, who may be addressed at Deerfield.

From the third annual report of the Harvard Law School Association, it appears that nearly half the membership is of New England, and more than two-fifths of Massachusetts, but the entire Union is more or less represented, and nearly one-half of the School's alumni are enrolled. In three years the membership has more than doubled. The Society offers an annual prize for legal essays by the School's undergraduates, and has been instrumental in establishing a course in Massachusetts law for five years—a precedent for other States. The success of the *Harvard Law Review* has prompted a gift of the free distribution of it to non-subscribing members of the Association for 1890-91.

Prof. J. Lawrence Laughlin, late of Harvard University, has been elected Professor of Political Economy in Cornell University, and has

accepted the position. Mr. Laughlin is well known to scholars as the author of 'The History of Bimetallism in the United States,' and also of an annotated edition of Mill's 'Political Economy,' and of an original work on the same science.

— The late John A. Lewis of Boston, whose death was a loss to the readers of the *Nation*, left behind him a very valuable library, of which a part was sold a few months ago. This was itself a large and notable collection, and the Trustees of the Boston Public Library could hardly have been prepared for the gift last month, by Mr. Lewis's widow, of the reserved portion, consisting of the rarer books illustrating American history. These are so numerous and so important as to be worthy of being specially set apart, and the Trustees have gladly accepted Mrs. Lewis's condition, that they be so kept and be called the John A. Lewis Library; and the donor has received the express thanks of the City Council. We abridge an official account of the new acquisition: The writings of the Mathers are numerously represented. Of Cotton Mather there are nearly a hundred publications; of Increase Mather, seventy; of Samuel Mather, twenty-three; of Richard Mather, four; and of Nathaniel Mather, one. There are twenty-six works by Thomas Prince; nineteen by John Cotton; several by William Penn, one of which bears the initials of his autograph; and a copy of the 'Rudiments of Latin Prosody,' and 'Dissertation on Letters,' by the patriot, James Otis. The copy of Hubbard's Narrative of the troubles with the Indians in New England, published at Boston in 1677, has the extremely rare map of New England, known as the "White Hills Map," as distinguished from the impression in which the New Hampshire mountains are called "Wine Hills." This map is said to be the first one cut in this country. Hubbard's Narrative was printed by John Foster, the first printer of Boston, of whose publications there are several specimens in the Lewis collection. Of books printed in the seventeenth century there are John Robinson's 'People's Plea,' 1618; Whitbourne's 'Discourse and Discovery of Newfoundland,' 1622; Hooker's 'Survey of the Summe of Church-discipline,' 1648; and 'The Soule's Preparation for Christ,' 1632; Underhill's 'Newes from America,' 1638; Wood's 'New-England's Prospect,' third edition, 1639; Hooke's 'New Englands Teares,' 1641; Welde's 'Answer to W. R.,' 1644; Ward's 'Simple Cobler of Aggawam,' 1647 and 1713; Mitchel's 'Nehemiah on the Wall in Troublesom Times,' published in 1671, and other Massachusetts election sermons; the Artillery election sermon, by Urian Oakes, published in 1674, and that of Samuel Nowell in 1678. Finally, there are several of the issues from Benjamin Franklin's press, including copies of the 'Poor Richard Improved Almanack.'

—The fifteenth and last volume of the Public Records of the Colony of Connecticut, edited by Dr. Charles J. Hoadly, State Librarian, has just been issued from the press of the Case, Lockwood & Brainard Co., Hartford. The series has been in course of publication for forty years, the first three volumes having been edited by Dr. J. Hammond Trumbull, the remaining twelve by Dr. Hoadly. The present volume contains all the records of the Colony of Connecticut, from May, 1775, and the record of the Council of Safety from their first sitting, June 7, 1775, to October 2, 1776, which was their last meeting, Dr. Hoadly informs us, before the session of the first General Assembly of the State of Connecticut, held on the second Thursday of that month. The records of the State covering the period of the Revolutionary War are yet to be printed. The curious student, as well as the historian and genealogist, will find these volumes valuable and interesting. Witchcraft trials, watch and ward in the French and Indian wars, the Connecticut militia system (at the outbreak of the Revolution the most perfect of any in the colonies, and a model for the Continental service), its officering, arming, and munitioning, the men and stores furnished by Connecticut in the various colonial wars, the disputes with New York and Massachusetts about boundaries—are some of the appetizing topics of these bulky volumes. The most interesting fact brought out in the latest is that the Declaration of Independence was never proclaimed in Connecticut. It came before the Governor and Council at Hartford on July 12, 1776, and was considered and "largely discoursed, and many things given out relative to the matter, etc., etc., and concluded to lay it by for the present." It was taken up again on the 18th, and again "largely discoursed," and it was finally thought best to let the matter remain for the determination of the General Assembly at their next stated session. But when the General Assembly convened in October, the immortal instrument had become so generally known that publication of it would have been a work of supererogation. The reason why the Governor and Council did not at once publish it is found further back in this same volume. On June 18 of the same summer, Gov. Trumbull, by the advice of his Council, and at the desire of the members of the General Assembly, issued a proclamation which contained many of the sentiments later embodied in the Declaration. This proclamation had been read in all the churches and printed on broadsides, and had become so well known to the people that publication of the Philadelphia paper was deemed unnecessary.

—Another interesting fact, showing the jealousy existing between the colonies at this period, is revealed by Dr. Hoadly in a foot-note on p. 83. At the May session, 1775, the House appointed Nathaniel Wales, Thaddeus Burr, and Pierrepont Edwards a committee to wait on the Provincial Congress of New York and the Provincial Congress of New Jersey, "to procure intelligence of the measures that might be adopted by them respecting the common cause of the British Colonies; to communicate a true state of the measures taken by the Colony of Connecticut; and to cultivate the friendship and harmony subsisting between those Provinces and this Colony." This was the ostensible object of the Commission; its real purpose was, however, to soothe the ruffled feelings of New York at the bold action of Connecticut in capturing Ticonderoga a short time previous. The three Commissioners appeared before the New York Congress on May 24. Messrs. Wales and Burr set out for home on the 26th, and Mr. Edwards proceeded to Trenton, and appeared before the Provincial Congress of New Jersey on the 29th. An appendix of more than 150 pages contains portions of Council Journals from 1663 to 1710, all (except the first) discovered in private hands, and secured since the publication of previous volumes.

—A reader of the *Nation*, himself editor of a denominational journal, writes that we did injustice to the Cincinnati *Herald and Presbyter* in our recent comments on its "brief free reading notices" in connection with school advertisements. This use of a technical (and now disreputable) term in its circular to advertisers was what, to our regret, misled us. Our correspondent says:

"The notices to which you refer are made of schools which do not advertise as well as of those which do. In their paper they publicly solicit catalogues, circulars, and descriptive matter from schools in order to notice as large a number as possible. These notices are descriptive, are placed in a column by themselves, and usually next advertisements—always away from editorial matter. In sending out advertising circulars they, of course, call attention to this feature, and request that notices be sent; but they also make the request through the paper, and make up a good many notices from other sources. Taking into account the position of these notices and the abuse of the notice business generally, it is not likely that any person who would patronize schools would consider them as of more weight than advertisements. They would be looked on more as the free 'ads.' in a free 'want column.' The *Herald and Presbyter* happens to be one of the cleanest papers in respect to advertising in the United States. I frequently make comparisons of religious papers, and find that the *Herald and Presbyter* continually rejects advertisements which appear in nearly all, if not all, the religious papers in New York. I think there is no New York paper which has as little that is objectionable."

—The winning of the Senior Wranglership by a woman is a memorable event in the history of education, and must be set down, moreover, as a weighty element in the determination of the relative mental abilities of the sexes. It is safe to say that no other contest for academic honors, anywhere in the world, equals in intensity, in difficulty, in the exhaustive inclusion of the strongest young minds of a great nation, the famous English mathematical ordeal at Cambridge. The winning of even the lowest wranglership implies a very high degree of ability and knowledge; but the problems proposed are of such extreme difficulty that it is not an uncommon thing for the senior wrangler to obtain *thirty* times as many marks as the man standing lowest on the list of honors; while below this man, who is about the hundredth in his class, stand the undistinguished crowd of 300 "poll men" who take no honors at all. That Miss Philippa Fawcett, a young woman of twenty-two, should have attained this extraordinary distinction in competition with the flower of English youths, ought for long to silence the confident assertion that women are inferior in mathematical ability to men. Not that one instance is sufficient to settle the matter, but that the assertion itself never had the smallest basis in observed fact, and that a single triumph in so crucial a test necessarily puts the burden of proof on the anti-woman side, for many years at least. Considering the very small numbers of the women as compared with the men, and remembering that only a few years ago—the first year, we believe, that women were admitted to the contest—Miss Scott took the high rank of eighth wrangler, the women of Cambridge may justly be very proud of their record. No one, however, can fully appreciate the greatness of the achievement unless he has seen the terrifying array of questions set to the contestants; questions the formidableness of which is realized vastly more fully by a professional mathematician than by one to whom all things belonging to the higher mathematics stand on a common level of inaccessibility. It remains to be seen whether Miss Fawcett will distinguish herself in independent work, as Madame Kowalewski, who was bred in the more generous and natural atmosphere of German universities, has done; but in the meanwhile, the high-pressure system of Cambridge, with its race-horse competition as be-all and end-all, has enabled Miss

Fawcett to write a record of victory which he who runs may read.

—In *Nord und Süd* for June, Karl Theodor Gädertz publishes a number of posthumous poems and letters of Fritz Reuter, which, if they do not add materially to our knowledge of the literary character of the great humorist, bring at least once more to mind the inexhaustible joyousness and good nature of the man. In one of the letters, written a few years before his death, and directed to an old schoolmate of Jewish descent, Reuter announces his intention to make a bequest to the hospital of his native town, in the following words:

"The good God has abundantly blessed my literary pursuits, so that, as far as men can judge, I may look without care into the future. And now yesterday a nice little goldfish ran into my net which, I think, may be of benefit to your hospital. The German people, in other words, have done me the great honor to award to me, through the Committee of the Tiedge Fund at Dresden, a prize of 100 ducats. Of this sum I give to my dear native town the enclosed 250 thalers for the purpose mentioned, and the remainder shall be used in a similar manner. For I deem it wrong to employ such an honorable gift for meat and bread, and coats and trousers, unless one is in great distress. And because for long, long years I have known your faithful and honorable service in your calling, and your love and friendship for me, I send this gift to you. To you, the Jew, who in hours of need and persecution faithfully has stood by my side, I owe much more than to many a Christian puffed up by what he calls his belief."

MARTINEAU'S SEAT OF AUTHORITY IN RELIGION.

The Seat of Authority in Religion. By James Martineau. Longmans, Green & Co. 1890.

DR. MARTINEAU has been bearing "fruit in old age" in a remarkable manner. Since the completion of his four-score years he has published three important works in five large octavo volumes. But the 'Types of Ethical Theory' and the 'Study of Religion' were books in which, "fault of novel germs," he "matured the unfallen fruit." They contained the substance of his lectures in Manchester New College carefully revised. His latest work, in one volume of 664 pages, published in his eighty-sixth year, is really a fresher creation than the two preceding. The First Book, pp. 1–126, was written for an American magazine, *Old and New*, some seventeen years ago. So, too, was the first and a part of the second chapter of Book II. The remainder, constituting much the larger portion of the book, has been written very recently, and its results have been worked out in the broad light of the most recent German studies of the things in hand. In several instances of first-rate importance they differ widely from the results of Dr. Martineau's earlier studies—results which have done much to shape Unitarian opinion during the last half century. In these chapters there is not a sign of waning power. They have the splendid vigor of a complete maturity.

The book, as a whole, has, of course, much in common with its immediate predecessors and Dr. Martineau's earlier writings. There is something of the joy of battle upon almost every page. Dr. Martineau's talent is nothing if not polemical. Here, as elsewhere, he is a master of dialectic, and there are passages in which he seems almost indifferent to the goal, so happy is he in the course of subtile discrimination and elimination which he steadily pursues. There are those who have great admiration for his style, while some have called it meretricious. It is exceedingly rhetorical, but, evidently, is so without effort. There are no similes, but of metaphors there is no end, and their complete interfusion of the sign with the thing signified is frequently bewildering.

The 'Ethics' and 'Religion,' anticipating the First Book of the present volume, almost convinced the orthodox that Martineau had become as one of them. The other books of this volume will disabuse them with what may seem to them a certain rudeness. Yet it will be no surprise to those who know the course of Dr. Martineau's thought for nearly sixty years. Philosophically conservative since his conversion to intuitionalism some forty years ago, or since intuitionalism became conservative as opposed to the new experiential system, he has always been theologically and critically radical, and the theological and critical elements of his present work will be painful and appalling, not only to many of his orthodox admirers, but to many of the more conservative Unitarians, who have foolishly imagined that Dr. Martineau could be counted on their side. It is certain that from no Unitarian scholar have we ever had a mass of criticism of the New Testament and of ordinary conceptions of Jesus and his work so thoroughgoing in its destructive radicalism as that which we have here, while the amount of comfort the conventionally orthodox are likely to derive from Dr. Martineau's valedictory can easily be gathered from such sentences as these:

"Christianity, as defined or understood in all the churches which formulate it, has been mainly evolved from what is transient and perishable in its sources; from what is unhistorical in its traditions, mythological in its preconceptions, and misapprehended in the oracles of its prophets. From the fable of Eden to the imagination of the last trumpet, the whole story of the divine order of the world is dislocated and deformed."

"To consecrate and diffuse, under the name of 'Christianity,' a theory of the world's economy thus made up of illusions from obsolete stages of civilization, immense resources, material and moral, are expended, with effect no less deplorable in the province of religion than would be, in that of science, hierarchies and missions for propagating the Ptolemaic astronomy and inculcating the rules of necromancy and exorcism" (p. 650).

The subject of Book II. is "Authority Artificially Misplaced," and its first chapter treats of "The Catholics and the Church." The notes of catholicity, sanctity, and apostolicity, claimed by the Roman Church as proofs of its authority, are subjected to a searching examination which will invite ingenious evasion rather than a frank reply, if any children of the venerable mother choose to heed the challenge, as very likely they will not. The "Protestants and the Scriptures" is the second topic of this Part. The treatment of the Pauline Epistles is extremely scanty and lacks clearness. We are left in doubt what epistles are accepted as genuine. In this connection there is a passage, of surprising interest, illustrating the possibility of grave mistakes in the attribution of authorship to celebrated persons. 'The Character of a Christian set forth in Paradoxes and Seeming Contradictions' was published as Bacon's in 1648, and is still widely quoted as his, his modern editors inclining to doubt, but being unable to disprove, its authenticity. In 1865 it was shown by Dr. Grosart to be the work of Herbert Palmer, Master of Queens College, Cambridge, a Westminster divine, and to have been published as his both before and after its inclusion with Bacon's writings. The Paradoxes illustrate as well as ever the intellectual temper of the time, but Dr. Grosart's discovery relieves Bacon's character from much unjust imputation, and makes absurd a little mountain of apology and abuse to which the Paradoxes have given rise.

The treatment of the Synoptic Gospels argues their indebtedness to a common source. Breaking them up into one hundred and seventy-four sections, Dr. Martineau finds that fifty-eight belong to all three. Of the unshared elements thirty-one are found in Luke, seven in Matthew, and only three in Mark. Another interesting estimate is of the days of Jesus's ministry. Of four hundred and fifty implied by the Synoptics, only thirty-five are accounted for; while once of three months, and again of two, there is a total silence. The conclusion is, from various lines of argument, that the Synoptics are "composed of mixed materials, aggregating themselves through three or four generations; they report no authorship in any case, and no date, except of their unhistorical accretions." For the birth and infancy of Jesus, thirty years behind his ministry, with their "false chronology, irreconcilable contradictions, historical prodigies, and fabulous mode of prediction," they offer us no points of contact whatever. The interest increases with the entrance of the Fourth Gospel on the scene of the discussion. Dr. Martineau's conclusions here, with those of Dr. Tayler, saintliest of English Unitarians, have long been a grievance to the Unitarian conservative. His conclusion that the Gospel made its appearance midway of the second century is more significant because of his confession of "the strongest drawing of sympathy towards the characteristics of this Gospel." Reviewing the external testimony, the results he attains are that it was "probably not known to Justin (about 155), possibly to the author of the Clementines (about 170), . . . cited by Apollinaris (about 175), for the first time *named* by Theophilus of Antioch (about 180); the Fourth Gospel would seem to have become known in the sixth or seventh decade of the second century, and to have ceased to be anonymous in the eighth." Any earlier date than the fifth decade of the second century is found too early for its appearance. The battle has raged hottest around Justin's quotations. But allowing them to be from the Fourth Gospel, Dr. Martineau's conclusion is the same.

A consideration of the internal character of the Gospel reaches the same result. Its relation to the Apocalypse furnishes Dr. Martineau with his most interesting critical theme. Those who have denied the Johannine authorship of the Gospel have generally accepted that of the Apocalypse. Not so Dr. Martineau. The unity of its composition was first questioned in 1882 by Dr. Voelter of Tübingen, whose doubts have since been confirmed to Dr. Martineau's satisfaction, but with a difference. Dr. Martineau, following Harnack, who follows here his pupil Eberhard Vischer, finds in the Apocalypse of John a Jewish Apocalypse with Christian interpolations, including the three introductory chapters and an Epilogue, ch. xxii. 6-21. The Jewish part was a product of the period immediately preceding the fall of Jerusalem in 70 A. D. The final recension was probably not before 136 A. D. The relation of the fourth Gospel to the Paschal Controversy has always been with Dr. Martineau one of the most conclusive arguments against the Johannine authorship, and that is here worked out with great carefulness. In his elaborate treatment of the Acts of the Apostles, Dr. Martineau keeps the general course of the Tübingen school, but is less "vigorous and rigorous" than Hilgenfeld.

We must pass over Book III, in which revealed religion is distinguished from natural

religion as intuitional belief—a very doubtful business. The first chapter of Book IV is a severely earnest treatment of apocalyptic religion as the travesty of revealed. Chapters follow on "Theories of the Person of Jesus," "Theories of the Work of Jesus," and "Theories of Union with God." Never before has there proceeded from any Unitarian writer, with any such elaboration, such a frank confession of the divergence of Unitarian opinion from the New Testament standards. Indeed, Dr. Martineau finds in the New Testament much more confirmation of traditional orthodoxy than does the new orthodoxy of the present time. He does not, therefore, propose to desert the Unitarian camp, for his Christianity is the personal religion of Jesus, and this he finds miserably overlaid and disfigured by those elements which are most favorable to a traditional orthodoxy.

The most significant feature of these chapters is the insistence that Jesus did not regard himself as the Messiah in any sense, even the most spiritual. This insistence is strongly at variance with the average tendency of critical opinion, but Dr. Martineau's reasoning is closely knit and cannot easily be broken through. The resurrection fares as the Messiahship, and just as we are thinking that the sifted sediment of the residuum must be very small indeed, we are told (p. 602), "The portions of the Synoptic texts which remain on hand, after severing what the foregoing rules exclude, can by no means be accepted *en masse* as all equally trustworthy. They are relieved simply of the impossible, and contain only what *might be* true." And then begins another process of exclusion, in which we sometimes seem to catch a note of personal preference, as if Dr. Martineau were constructing a man after his own heart. We often wish that he would give us chapter and verse for some of the features of that personality which he evokes from the wide ruin he has made. Certainly no reverent disciple of Jesus has ever stripped away so much of the traditional raiment of Jesus. Does not even Strauss, in his new 'Leben Jesu,' leave us more of history and fact? But in his closing chapters Dr. Martineau, on a mere film of biography, strings, like a row of opalescent beads, his views of the purely human personality of Jesus. In the response of the human soul to this personality, as to all spiritual excellence higher than its own, Dr. Martineau finds the Seat of Authority in Religion.

The Dean's Daughter. By Sophie F. F. Veitch. D. Appleton & Co.

Warp and Woof; or, New Frames for Old Pictures. By Frances Hartson Wood and Eva Paine Kitchel. Boonton, N. J.: F. H. Wood.

If Stepniak's 'Russia Under the Tsars' is, as it has every appearance of being, an unexaggerated statement of facts, there is very little fiction in his 'Career of a Nihilist.' The novelist's hand is shown only in the construction of a consecutive narrative and in the limitation and concentration of action. Every reader of newspapers is familiar with the incidents of the novel, and has already a fairly distinct impression of the character of Audrey and his fellow-conspirators. What the character lacks in variety it makes up in terribly centralized force—force is indeed a weak word to describe the fury that possesses the Nihilist, and whirls him madly along a road that leads to an ignominious death or more horrible death in life. No revolutionary movement has ever presented such a spectacle of self-immolation, and no self-immolation has ever appeared so futile and unfruitful of results. Ever since the imperial ukase of Alexander II. recalled to Russia those young subjects who, spread about civilized Europe, were imbibing, along with general and harmless knowledge, particular and dangerous notions of political freedom, every Nihilist and group of Nihilists has fought the autocracy with similar heroism, similar ineffectiveness, and the issue of the struggle is ever—like the judgments of the Czar's tribunals—inevitably decided beforehand.

Stepniak's characters are as typical of the Nihilists of twenty-five years ago as of the Nihilists of to-day. The movement began by a peaceful propaganda of subversive socialistic literature; when the propagandists were oppressed, they retaliated with violence and made the murder of the Czar their chief aim and object. Except that the Terrorist party may now be in the minority and the propagandists, or Peasantists, in the majority, a quarter of a century has wrought no change or progress. The autocracy has become more cruel, despotic, and altogether abominable, but its enemies have never, so far as the world knows, formed a plan, or even conceived an idea, which, if executed, would probably destroy it. In Stepniak's novel nothing strikes the foreigner so forcibly as the limited vision of the conspirators. If half the ingenuity shown in eluding the ubiquitous police and making useless attempts to rescue imprisoned comrades were devoted to formulating a wider revolutionary scheme, the cause would be more hopeful, the actors more likely to attract universal sympathy. Their lack of political sagacity and of power to combine, to work silently, and to wait, may perhaps be attributed to their youth. If every Nihilist is to be shot or exiled before he is thirty years old, a Czar and his minions and myrmidons are likely to reign for ever in the way that suits themselves.

The chief hope for the remaining one hundred millions of Russians lies, as Stepniak points out, in the intervention of other nations on the ground of a common humanity. One of the contentions of adherents of the "religion of humanity" is, that it has a greater active force for good than Christianity, trammelled with dogma, ever had. If any of its high priests were to begin to preach a crusade against the Czar, as Peter the Hermit preached against the infidel defiling Christianity's Holy of Holies, it would be interesting to see how many avowed Humanitarians would flock from their shops and offices and higher places to do military service, to right such horrible wrongs with fire and sword. No better practical test of the active force of an abstract, impersonal religion could possibly be imagined.

Mr. Blackmore's novels are always different from other people's, and the difference is generally in his favor. He is more strongly and seriously dramatic than some, more thoughtful and truth-loving than many; he goes immeasurably more slowly than most. 'Kit and Kitty' widens the gulf of separation, and may possibly be another proof of the author's superiority to his average brother. The title is one of those which compel inferences. It forecasts a novel perhaps drowsy and sensuous, perhaps sprightly and mischievous, certainly light in touch, with hints of frivolity. No one could ever expect it to be more than drowsy, more than dull—one of the most solemnly stupid novels that have ever been written in any tongue.

The story is told by Kit, a rarely bucolic specimen to be domiciled near London in the year 1860. Kit is a market gardener who falls in love with Kitty, a maiden of comparatively high degree. Before their marriage Kitty's story is the same as Cinderella's, unenlivened by such delightful surprises as the pumpkin coach and gorgeous ball dress. Her stepmother is a person worth dwelling upon because she is as vicious as Cinderella's and all the other stepmothers that have ever lived, put together. In her youth she was famed for beauty and ferocity of temper. On the eve of her sister's marriage with the Hon. Thomas Bulwray, she took a notion to marry the gentleman herself, so she locked up the sister in a barn and forced the fiancé to elope with her. By the time she had had a son and two daughters, all quite as wicked as she, the Honorable Thomas withdrew from the family circle, and sought the joys of peace and a quiet life in South America, where, at that period, a lively struggle for existence was going on among the cut-throat populations of divers States. He speedily found rest, and when news of his death came, Mrs. Bulwray took to her bosom another victim with a daughter Kitty. All the Bulwrays let loose their frolicsome spirits on Kitty. They beat her and starved her and prohibited her wearing anything but rags. Even when Kit has married her, and installed her in a vine-clad cot, the wanton villains still pursue her, and succeed in separating man and wife for two miserable years. The Bulwray star is supremely ascendant when Nemesis comes on the scene and completely satisfies the demands of poetic and fairy-tale justice. Nemesis takes a most awful shape and most unexpected, that of the Honorable Thomas, not dead at all, but made horrible by leprosy, come home to have it out with madam before the grave shall close over him. His vengeance is thorough—culminating in a Bulwray family fight in which father and son are slain, and which madam survives only to become a raving maniac.

This slight sketch of the plot shows that its materials are thrilling and of an honorable antiquity. Nothing short of a transcription of the book could prove that the accusation of stupidity is not an aspersion recklessly flung upon Mr. Blackmore. It is through the elaborate torpor of Kit's style, with its pompous affectation of naïveté, that he achieves a stupidity quite beyond the range, and, we hope, the aspiration, of any contemporary.

Mr. Black's singing hero, Prince Fortunatus, like Kit, loves above his station, only to have his affection blighted by a "No," sweeter, however, than another's "Yes." After a proper season of alternate self-abnegation and desperate follies, winding up in brain fever, he consoles himself with the faithful adoration of a young Italian person no better than himself socially, and rather worse artistically. No genius is needed to extend these simple sorrows into a very dull romance; the wonder here is, that, interwoven with equally simple joys, they make a very readable story, which gently stimulates curiosity to the end, and then modestly effaces itself from memory.

Prince Fortunatus is a well-known ingredient of modern society; he seems to have become an essential one. Women cry for him. He has routed the parrot and the canary, and in drawing-rooms where he deigns frequently to loll, a diminution of worship for small, long-haired dogs is noticeable. Sometimes he sings, sometimes paints, sometimes reads Browning with original notes, sometimes only looks. Occasionally he "draws" by extravagant affectation. In this phase Mr. Gilbert satirized him. Male relations generally consider him harmless and scrupulously avoid him. Once in a great while he has some manly qualities, and would be a very good fellow if it weren't for the women. Prince Fortunatus is of the occasional lot, and probably would never have discredited his sex if he hadn't been "taken up" by Lady Adela. Lady Adela is the "tall and elegant young English matron" made familiar to the vulgar by Mr. DuMaurier. She and her tall and elegant sisters are badly afflicted with the modern craze for notoriety, and in their pursuit of it are far more reprehensible than are short and scrubby female nobodies, who have at least the excuse of pressing pecuniary necessity. The satire on these elegant ladies is not keen enough to provoke the displeasure of their prototypes, nor to move them to reform.

Mr. Black reserves his scorn for Quirk, the literary hack whom Lady Adela coddles unscrupulously in order to secure favorable notices of her trashy novel. Quirks are offensive creatures, but, for all their power to make or unmake literary reputations, quite unworthy of so much wrath. Besides, this one is not nearly so amusing to read about as are Lady Adela and her sisters; not half so mirth-provoking as the stately Miss Honnor Cunyngham, the object of Mr. Black's homage, as she was the adored of Prince Fortunatus even after she had refused him. Mr. Black's enthusiasm for a woman who can cast a fly increases with every novel. Here is one who, for several successive weeks, does nothing but fish, barely desisting long enough during the daylight to snatch a scanty meal. In the evenings she sits about silently smiling at the artistic diversions of her feather-brained sisters-in-law. Mr. Black wishes to represent her as immensely superior, yet benignantly tolerant, whereas every one knows that, after her day's labor, the mental effort of keeping herself awake is all she is equal to. Her ultimate marriage with the somnolent Lord Rockminster is a very good proof of her intellectual calibre. The skill to land a salmon may be a picturesque accomplishment for an otherwise charming girl, but it doesn't seem to be a sufficient reason for apotheosis.

In 'The Story of Tonty,' Mrs. Catherwood continues her efforts to popularize the history of French exploration in America. A history made by men of striking personality and frequently brilliant antecedents presents to the writer of romance an embarrassment of choice, and Mrs. Catherwood has twice chosen well. She perceives an opportunity, but fails to make the best of it. She is hampered by the old-fashioned notion that romance is inseparable from love, and rejects much truth that is both romantic and dramatic, to make room for melodramatic fiction. A man does not need to be a Dollard, a La Salle, or a Tonty to love, fortunately or unfortunately, and a story which leaves in the reader's mind the impression that these heroic figures were, before all things, lovers, is defective and derogatory to their real historic dignity. The author is so occupied in working up fictitious passion of La Salle for the ascetic Jeanne Le Ber, and of Tonty for Mlle. Cavelier, that their passion for exploration of unknown lands—the passion which won them enduring fame—seems secondary and insignificant. No prominence is given by illustrative incident to the great qualities of the two men, the irrepressibly initiative spirit of the one, and the resourceful loyalty of the other. Mrs. Catherwood even slights her avowed motive, to pay honor to the memory of Henri de Tonty, whom she, somewhat enthusiastically, calls La Salle's "greater friend." She has used very little of the material furnished by Tonty's authenticated narrative, which is full of instances of his patience and courage in carrying out the designs of his leader, and which offers the best and also the most romantic testimony to the capacity for friendship possessed by the man with the iron hand. It is very hard to see why, for the sake of a trivial theatrical situation, she should have rejected the facts concerning Tonty's long ignorance of La Salle's death. It is almost wicked to throw away such a chance for fine characterization of a chosen hero as that presented by Tonty's few short sentences referring to the months of weary, anxious waiting for news, and his description of the fruitless quest to the Gulf of Mexico undertaken long after La Salle's body had been left to the buzzards by the banks of Trinity River.

No fault can be found with the author's prejudice in favor of one of her heroes when she refers to the continual quarrels between La Salle and his enemies. Many of his enemies were, indeed, his creditors; but on the whole he was unfairly treated in life and maligned after death, and is worthy of unstinted admiration. We are glad that Mrs. Catherwood refrained from printing in foot-notes facsimiles of La Salle's unpaid bills. Her propensity for dispensing foot-note information is fatiguing. People who don't know where the romancer differs from the historian don't care, and people who do know don't need to be told.

Mr. Haggard's volume entitled 'Allan's Wife' includes the literary remains of Hunter Quatermain, or, at least, a portion of them. We can never be sure that we are reading positively the last yarn of that bold yet lachrymose adventurer. The title story tells how he courted and married that wife to whom sentimental and obscure references may be found in many of his published works. The course of his true love was frequently ruffled by the insane jealousy, not of a rival suitor, but of a Babyan-frau—that is, a creature born a woman and bred a baboon. When the baboon-woman realizes that the Hunter has hopelessly distanced her in her mistress's affections, she goes away and meditates vengeance. She is reasonably sure of accomplishing that, because she has hosts of baboons at her beck and call, and can manage them admirably, thanks to her perfect familiarity with their language. In due season she swoops upon the Hunter's paradise, destroys it, and drives him forth sorrowing into a lonely world. The baboon episode is the only one in the book which does not appear to be a réchauffé of those episodes on the narration of which the Hunter's diffidence always makes it painful for him to enter, and out of which he never comes second-best.

It seems a long time now since Bret Harte has given us anything except réchauffés. The materials which make up 'A Waif of the Plains' are worn to death. The first incident, the loss of two children from an emigrant train crossing the great central plains, is pathetic, and the boy's self-sacrificing care of the little girl promises an interesting development. The promise is not fulfilled. The subsequent adventures of Clarence Brant are sensational, commonplace, and common: the people he meets with are feeble and faint images, pale ghosts of the motley throng of vagabonds, terribly alive, who conquered the reading world when Bret Harte sent them trooping forth to make known the West unto the East and beyond. There is a generally accepted belief or supposition that when a story-teller loses the fire and vigor of youth, the compensation for the loss is increased literary grace, a smoother, more polished, more effective literary style. Such compensation, poor as it is, is denied us by Bret Harte. His early stories had a spontaneous perfection of form. They seemed to be born, not made. The saddest evidence of falling off in 'A Waif of the Plains' is its aimless incompleteness. With Bret Harte, distinctively American fiction (fiction that could never have been written in any country except America) sprang into being. He was the creator, and now he is among the destroyers. It is always sad to see a man not only falling short of his best, but belittling it; it is especially so in literature. In some countries there is a custom of giving pensions to literary men who have arrived at the stage of incapable senility; America might improve on that custom by pensioning writers when the first signs of decadence are noted, on condition that they shall never more put pen to paper.

The whole action of 'The Dean's Daughter' turns upon an exaggerated idea of self-sacrifice. The fact is continually insisted upon that Vera Dormer is a "Bohemian," from her earliest introduction at nine years old, when already her independence and fine horsemanship are her strong points. At eighteen she performs the extraordinary feat of catching a runaway horse — herself upon horseback — whose rider is her chief rival and enemy, thus saving the girl's life at what seemed the certain loss of her own. Later, when this same Edith Cranley is married, but is known to be forming a dangerous intimacy with a dissipated army officer, Vera voluntarily places herself in an exceedingly anomalous position to save the reputation of this weak-minded woman, who, of course, allows the deception to be spread abroad as truth. As a further irony, her husband sees fit, on account of these reports, to break off Edith's acquaintance with Vera, whose heroism is called actively into play to prevent her telling him the actual facts. And to crown this singular young woman's actions, she accuses herself in open court of having forged the signature to a will, in order to protect the man who, from the purely unselfish purpose of saving an estate to its rightful heir, and thwarting a villain, did commit the forgery. It is a strange story, well and even strongly written, but in no sense either comfortable or satisfactory.

Many are called to write a great book, but few are chosen. It is evident that prohibition and woman suffrage have not found their prophets in the authors of 'Warp and Woof.' It is plentifully sprinkled with italics, abbreviations, and quotation marks; its characters write "postals" and attend "socials," and much is called "real nice." It is one of a large class of stories written with the best intentions, but with too evident lack of power and cultivation to produce much effect, in a way either moral or literary.

RIBOT'S PSYCHOLOGY OF ATTENTION.

The Psychology of Attention. By Th. Ribot. Authorized translation. Chicago: The Open Court Publishing Company. 1890. 8vo, pp. 121.

EVERY educated man wants to know something of the new psychology. Those who have

still to make acquaintance with it may well begin with Ribot's little book on 'Attention,' which all who have made progress in the new science will certainly wish to read. It is the *chef d'œuvre* of one of the best of those students who have at length erected psychology into a science.

Ribot regards the doctrine of attention as "the counterpart, the necessary complement, of the theory of association." He means that attention is related to suggestion as inhibition to muscular contraction. Physiologists, however, would scarcely rank *inhibitibility* with contractility as an elementary property of protoplasm. Besides, though suggestion by association may be likened to muscular action, how can the analogy be extended to the process of association itself, or the welding together of feelings? This welding seems to be the only law of mental action; and upon it suggestion and inhibition of suggestion alike depend. Attention is said by Ribot to modify reverie's train of thought by inhibiting certain suggestions, and thereby diverting their energy to suggestions not inhibited. This makes the positive element of attention quite secondary. At the same time, we are told that the sole incitement to attention is interest. That is to say, a preconceived desire prepares us to seize promptly any occasion for satisfying it. A child's cry, drowned in clatter of talk for others' ears, attracts the mother's attention because she is in some state of preparation for it. Ribot, however, does not remark that to say the mind acts in a prepared way is simply to say it acts from a formed association, such action not being inhibitory. If interest be the sole incitement to attention, it is that the energy spent upon the interesting suggestion leaves none for others, rather than that a positive inhibition of the latter throws waste energy into the former. This only happens when attention is controlled for a conscious purpose. If, in the beginning of his inquiry, Ribot had discarded the unscientific word "attention," and with it his feeble antithesis of association and attention, the truth would have shone out that the main phenomenon is emotional association, aided in certain cases by acts of inhibition.

The most interesting and valuable parts of the book are those devoted to corporeal concomitants of attention. Evidence is that in this act parts of the brain receive increase of blood. This must be due to stimulation of the vaso-motor nerves, belonging to the sympathetic system, under the influence of the desire in the interest of which attention is excited. Moreover, in intense attention the breath is held, and in every case respiration is slackened. There are, besides, certain muscular actions: in external attention, the eyebrows and the skin of the forehead over them are drawn up, the eyes opened wide and directed to the object, the jaw more or less dropped, and the whole body held immobile in an attitude as if approaching the object. In internal attention, the brow is contracted, the eyebrow lowered, the lid at least partially closed, the jaw clenched, the lips pursed up, the body usually immobile, preferentially in a sitting posture with the whole arms close to the trunk. There are, however, often motions, as walking up and down. These muscular states are indispensable conditions of attention. "It is impossible to reflect while running at full speed or climbing a steep ascent." "A child, seven years old," not able to breathe through its nose, owing to a tumor, "had succeeded in learning, during a whole year, only the first three letters of the alphabet. Having been operated upon for its adenoid tumor, the same child in a single week learned the entire alphabet."

According to Ribot, these muscular actions are not *aids* to attention, but constitute attention. The notion that we think with our muscles is very attractive to the whole new school. Ask why, and you are told, because "every act of volition, whether impulsive or prohibitory, acts only upon muscles and through muscles; any other conception is vague, incomprehensible, and chimerical." This little burst of emphasis signifies defective evidence. When positive evidence is at hand, it is calmly put in; when prejudices have to be addressed, warmth is in order. The truth is, all these physiological psychologists are "monists." For theory of connection of soul and body, they have struck a happy compromise between materialism and spiritualism, in bolding that mind and matter are simply two aspects of the same thing. If the balance were really preserved between the opposing tendencies, the result would be a doctrine in harmony with philosophic pessimism, but not easily reconciled with observed facts. But is the balance held even by the psychophysicists? They say, for example, that unorganized matter feels, if at all, very little. But when we expect them to balance this by cases in which mind is barely, if at all, connected with matter, they insist, on the contrary, that the attributes of matter do not admit of augmentation and remission, and that soul only exists as an aspect of that which otherwise appears as corporeal. What is this but making mind to be a special determination of that universal substance which is generally known to us as matter? And to make mind a specialization of matter would seem, metaphysical phrases apart, to be materialism. In our day, the charge of being materialist will scare nobody; and all the facts of life show dependence of soul upon body. Yet common sense will never admit that feeling can result from any mechanical contrivance; and sound logic refuses to accept the makeshift hypothesis that consciousness is an "ultimate" property of matter in general or of any chemical substance.

No philosophy will endure which does not freely allow to every reason, every fact, its full force. But this school is for ever exaggerating the resemblances of psychical and physical phenomena, for ever extenuating their differences. Ribot, for example, often speaks of the "mechanism of association," and even attempts to apply to it the physical distinction of potential and kinetic energy. But looking at the matter without prepossession, or with that of a student of mechanics, the analogy between the process of association and any mechanical motion does not appear to be very close. Both are operations governed by law, it is true. But the law of mechanics is absolute, prescribing (after two positions are given) the precise point of space where each particle shall be at each instant of time; while the force of association is essentially a gentle one (two ideas that have occurred together having a gentle tendency to suggest one another), and if it were made absolute, ideas would at once be rigidly bound together, and the whole phenomena of learning, or generalization, which is the essence of association, would be put to death.

Again, alike in the physical and the psychical world, we find trains of causation. In the latter, it is the past alone which directly and involuntarily influences the present by association; the future we only divine; and all our efforts are to make our present actions conform to our idea of that future. In the physical world, on the contrary, regard being had to the law of the conservation of energy, which denies any primordial force dependent on velocity, the past and the future are in relations to the present precisely similar to one another—a fact which appears from the circumstance that, in the equations of motion, the sign of the flow of time may be reversed, provided the signs of the velocities are reversed, the forces being unchanged, and still the formulæ will remain intact. We will not say that these distinctions between mental and mechanical actions are facts large enough to blot out their slight resemblances, for these latter should neither be overlooked nor disregarded; but the distinctions will certainly be prominent in a well-proportioned view of the subjects. Undoubtedly, there are physical phenomena in which gentle forces seem to act, and others which seem to violate the principle of energy; but these appearances are due to a principle different from a law of motion, namely, to the action of probability. The type of such phenomena is the viscosity of a gas; and the regularity of this, closely approximate but not strictly exact, is due to the countless trillions of molecules which are flying about in all directions with almost every rate of speed. That there is analogy between spreading of motion through a gas by viscosity and association of ideas need not be denied.

In regard to the doctrine that volition consists in, or is an aspect of, muscular contraction or inhibition, it is to be considered that considerable time elapses during the passage of the motor impulse down the nerve. During this interval we seem to be aware of a striving, like that of nightmare. At any rate, something has taken place in which the muscle had no part. The muscle might even be amputated before the impulse reached it. But if a motor impulse can thus be communicated to a nerve fibre to be transmitted over it, how can we be sure that this latter may not abut against a nerve cell instead of against a muscle cell?

Ribot's terminology sometimes seems open to criticism. Of the two forms of attention, that which is governed by the course of outward perceptions and that which is controlled from within by definite purposes, he terms the former *spontaneous*, the latter *voluntary*. Now, suppose a man in a sudden fit of anger blackguards another, can it be said that his speech was *involuntary* simply because it was not controlled? And if he wished to excuse himself on the ground of sudden provocation, would he say that his language was purely *spontaneous*? It would seem better to call every action which is subject to inward control *voluntary*, whether actually controlled or not, and to apply the term *spontaneous* only to those acts which are *not* reflexes from external stimuli.

The translation is sufficiently good, and the *Open Court* is doing useful work in publishing such books.

DANA'S LATEST PUBLICATIONS.

Characteristics of Volcanoes. With contributions of facts and principles from the Hawaiian Islands. By James D. Dana. Dodd, Mead & Co. 1890.

Corals and Coral Islands. Third edition. By James D. Dana, LL. D., Professor of Geology, etc. Dodd, Mead & Co. 1890.

It is now half a century since the author of the above-named works, then in his twenty-seventh year, made his first visit to the active and dormant volcanoes of the Sandwich Islands.

In spite of his youth, he already possessed a thorough scientific training, and, what is more difficult to obtain, a wide geological field experience. In 1834 he had visited the volcanic region of the Mediterranean, and made an examination of Vesuvius, of whose varied and destructive eruptions we possess an almost continuous record since the commencement of the Christian era, and of Stromboli, also classical in the records of vulcanism as being the only known volcano that has been in a constant state of activity during the past 3,000 years. In 1838 he had been appointed geologist of the Wilkes Exploring Expedition, and, before reaching the Sandwich Islands, had already visited the most important scenes of volcanic energy in the Atlantic and Pacific Oceans. In 1841 the good ship *Peacock*, on which he was voyaging, was wrecked on the bar at the mouth of the Columbia River in Oregon, but the young geologist with his shipmates succeeded in reaching the shore of his native land at Cape Disappointment. After some investigations among the extinct volcanoes of the Pacific Coast, he returned to his professional duties at Yale College.

In 1860 Prof. Dana made another visit to Vesuvius, and in 1887, for a second time, he journeyed to the Sandwich Islands, and made further personal examinations of the Hawaiian volcanoes. Some of the scientific observations made during this last trip were published in the *American Journal of Science*, and to them, in a recent paper upon the Tertiary volcanoes of Scotland, read before the Geological Society of London, Prof. J. W. Judd, President of the Society, made the following striking allusion:

"Geologists all over the world may well hesitate as to which calls for the greater admiration—the vigor and enthusiasm which prompted our esteemed foreign member to undertake a journey of ten thousand miles in order to clear up difficulties left in his original studies of the district in 1840, or the new and valuable results obtained by the investigations of one who, after nearly a half-century of thought and inquiry, has returned to the field of his early observations."

Every student of geology is familiar with Dana's various text-books of geology and mineralogy which have long held the highest position in their respective branches, in Europe as well as in America. Every investigator and working geologist appreciates the great value of his theoretical views upon the larger problems in regard to the structure of our globe, which have been arrived at with great caution and after an immense accumulation of facts of personal observation, and hence have long stood the test of practical application to the phenomena of nature, where more brilliant and startling, but less well-founded, hypotheses have gradually been set aside. Moreover, in spite of his great modesty and entire absence of self assertion, it has fallen to the lot of few scientific men to find during their life-time such universal recognition of their great merits, as much among foreigners as by their own countrymen. He was one of the original founders of the National Academy of Science and of the Geological Society of America, and is honorary member of the foremost scientific societies of all the nations of Europe.

It will be with more than usual interest, therefore, that the first systematic enunciation of his views upon the most mysterious and interesting of all geological phenomena, the outward and visible manifestations of volcanic energy, will be greeted by the scientific world. No problem in nature has been more fruitful of speculative hypotheses than the cause and origin of the various phenomena of volcanic activity. Its solution involves the determination of the condition of our globe at the time of its first consolidation, of that of its interior at the present moment, and indirectly of the whole question of mountain building and the manner of formation of the earth's surface-reliefs. That it still remains so largely a purely speculative question is due in great measure to the fact that, at the critical periods of the manifestations of volcanic energy — that is, during active eruptions—close and accurate observations of volcanic phenomena are in most cases not only dangerous to human life, but physically impossible.

Dana early recognized that in the eruptions of the Hawaiian volcanoes, which are of the non-explosive type—that is, consisting of quiet outflows of molten lava unaccompanied by the destructive showers of rock fragments, scoria, and volcanic ash, which, in the explosive eruptions of volcanoes of the Vesuvius type, have caused the principal losses of human life—the most favorable opportunities were presented for an accurate scientific study of the phenomena of an active eruption. The main difference between these two types of eruptions lies in the characters of the respective lavas, those of the Hawaiian volcanoes being of a basic basaltic rock, which is extremely fusible, flowing with great freedom, and less readily choking its vents, while the explosive eruptions occur mainly with lavas of a more acid, and hence more viscous, nature; the hidden sources of energy and the forces which produce the eruption, however, being essentially the same in either case. The great drawback to such a study has been the distance of the Sandwich Islands from great scientific centres. Since his first visit to the Islands, however, Prof. Dana has kept up an active correspondence with intelligent residents, directing and advising the conduct of their observations, and the many scientific and semi-scientific visitors to these volcanoes in the last fifty years have, with a single exception, borne testimony to the correctness of his early observations and the aid which they have received from his advice. His book bears evidence of the zeal with which this work has been carried on, in the surprisingly complete record which it furnishes of the various eruptions, during this period, of the two great Hawaiian volcanoes, Kilauea and Mauna Loa (Mount Loa).

Searchers after first causes, and those who expect to find in every scientific work a complete and ready-made explanation of the phenomena of which it treats, will doubtless be disappointed in reading among his preliminary remarks the following frank statement of Prof. Dana: "The *origin of volcanic heat*, the *source of lava-columns* beneath the volcano, the *cause of the ascensive force* in the lava-column, are subjects on which science has various opinions and no positive knowledge." The position he thus takes is characteristic, and in marked contrast to that of another recent writer upon these volcanoes, who, though not having had a tithe of Dana's field experience, and having made only a single brief examination of the volcanoes, boldly attacks the most abstruse theoretical speculations which suggest themselves, and devotes an entire chapter to the discussion of the subjects which Dana dismisses with the above brief but pungent remark.

Although Dana devotes the principal part of his work to well-ascertained facts of observation, and, as above explicitly stated, does not enter into the discussion of theoretical questions which admit of no definite solution, he by no means avoids drawing general conclusions; but he frankly states their limits, and points out the direction in which future investigation may add to their confirmation or elaboration.

It is difficult to express in a few words the conclusions of so cautious and many-sided an observer as Dana, but it may be stated that he does not ascribe to the action of vapor of water so great a part in the production of volcanic energy as do Judd and others, although he regards it as a possible factor in increasing the action of the ascensive force in the lava column. This unknown ascensive force he regards not only as the means of supplying lava and heat, but also as an actual mechanical agent. Thus the ordinary work of such volcanoes as Kilauea and Loa is the gradual rise, in virtue of this ascensive force, of the lava in the interior conduit of the volcano, lifting up with it the floor of the crater, which in this case is partly covered with a thin lava crust, and in part is formed by lakes of molten, seething lava of varying size and form. At the time of the eruption, whether this eruption be an actual flow over the lip of the crater, or an escape of the lava through fissures opened in the flanks of the mountain (as has usually been the case in the later history of these volcanoes), the interior reservoir of molten lava is partly drained and the floor of the crater subsides, leaving portions of the hardened crust clinging to its sides. During the ordinary work of the volcano (in the time between the eruptions) the crater reservoir gradually fills again, and the floor of the crater rises. The elastic force of rising, expanding, and escaping vapors during this time produces jets and fountains of lava within the crater, and vesiculation, with consequent increase of bulk, of the lava.

With regard to the active eruption, he says: "In the preparation for a discharge the mountain has reached a critical state because of the elongation upwards of the fire-column; it is then only that the fracturing agency does its work; earthquakes are only a possible incident." But exactly what he considers this fracturing agency may have been does not clearly appear. Not the sudden access of water to the lava column, which he admits as the possible cause of ejective action, because fracturing is a necessary precedent of such access, and in some cases the lavas flow off quietly through the fissures thus produced, without any disturbing or ejective effect in the crater, showing that the access of water is not a necessary result of the fracturing.

To the question of fissure or massive eruptions, as such, Dana does not directly refer, although he shows that the volcanic vents on the several islands of the Sandwich group are evidently situated on two great and nearly parallel fissures, while the main lava flows of the present day emanate from minor fissures in the flanks of the existing volcanoes. It seems likely, and probably this is the view of Dana, that as the field of observation of those who are actively contesting this question widens, they will find, as in so many other vexed questions in geology, a part of the truth is involved in the view of either side and that both sides are partly right.

A considerable proportion of the illustrations are taken from Dana's original report on the Geology of the Wilkes Expedition, which, as he says, has been practically inaccessible to the reading public, since only one hundred copies of it were published by Government—an extremely niggardly number, as compared with those issued nowadays. His son, Prof. E. S. Dana, contributes a very valuable chapter on the petrography of the Hawaiian Islands, which is, however, of rather technical interest.

Dana's 'Corals and Coral Islands' has long been familiar to all who are interested in this subject. As is well known, his explorations in the Pacific Ocean followed in part the track of Darwin's voyage of a few years before. On his arrival in Sydney, Australia, he first saw in the papers a brief statement of Darwin's theory of the origin of atolls and barrier reefs, and, as he says in his preface, with the generous enthusiasm of the true scientist: "The paragraph threw a flood of light over the subject, and called forth feelings of peculiar satisfaction, and of gratefulness to Mr. Darwin, which still come up afresh whenever the subject of coral islands is mentioned." Dana's own observations not only confirmed Darwin's theory, but led him to consider it as more positively established than did its author, and his conclusions on other points, though arrived at independently, were for the most part the same as those of Darwin. In the present edition of Dana's book, which appropriately follows close upon the heels of the last edition of Darwin's 'Coral Reefs,' recently noticed in these columns, considerable new material in text, maps, and illustrations has been added to the last edition to bring it up to date. No little space, naturally, is devoted to a discussion of the objections which have recently been advanced against the theory of subsidence as a necessary corollary of coral-reef growth. Our author's conclusions may best be expressed in his own words:

"With the theory of abrasion and solution to make lagoon-basins and the deep channels inside of barriers incompetent, and also that of current-drift, all the hypotheses of objectors to Darwin's theory are alike weak; for they have made these processes their reliance, whether appealing to a calcareous, or volcanic, or pelagic-growth, or mountain-peak basement of the structure. The subsidence which the Darwinian theory requires has not been opposed by the mention of any fact at variance with it, nor by setting aside the argument in its favor; and it has found new support in the facts from the *Challenger's* soundings off Tahiti that had been put in array against it, and strong corroboration in the evidence of subsidence from the West Indies."

"Darwin's theory, therefore, still remains as the theory that accounts for the origin of atolls and barrier islands, which is not true of any other that has been proposed. Fringing reefs and isolated coral-reef banks may form in shallow water within the growing-depth of reef-making corals, and on any kind of bottom. But atolls, barrier-reefs, and coral formations of great thickness require, as a rule, the aid of slow subsidence, as has been true of nearly all the thick rock formations over the continents."

The only direct reference to the theory of the permanence of continental and oceanic areas which Dana has done so much to establish and build up, and which has found so much additional confirmation in the later investigations of deep-sea conditions, and of the distribution of fauna and flora, especially on islands, occurs in the first of the above-mentioned volumes, where a chapter is devoted to "Volcanoes and Deep-Sea Topography." Dana does not agree with Darwin in considering that the regions of volcanic islands in the Pacific are areas of elevation, and in this chapter he shows that facts do not uphold the theory that volcanic action has been predominant in determining the position of deep-sea troughs, although, by undermining the crust, it may have caused some local depressions within a score of miles of the scene of activity. Erosion, and the loading of the crust by accumulation of sediment, he shows to be even less available as causes for producing the great oceanic depressions. The reader is, however, left to draw his own inference, that the relative distribution of the greater depressions and elevations of the earth's surface, as represented by its continents and great oceanic areas, was determined very early in its history, probably during the early movements of the first consolidated crust, and that while there have been relative elevations and depressions, in its subsequent history, of different portions of its respective areas, the broader features of the two have held a permanent relative relation.

The chief arguments brought forward at the present day in favor of the permanence of the ocean basins are: First, the higher specific gravity of the earth's crust beneath those basins, as inferred from pendulum observations, and the further inference that the greater density has obtained since the original consolidation of the earth. Second, the fact that almost all islands in the ocean tracts are formed of volcanic material, and not of the sedimentary rocks resulting from the abrasion of neighboring land-masses, which constitute the bulk of our continents. Third, the absence of rocks of deep-sea origin in continental areas. Finally, the distribution of plant and animal life, both recent and fossil, agrees in the main with the present distribution of land areas.

Leaves of a Life. Being the Reminiscences of Montagu Williams, Q.C. 2 vols. Boston: Houghton, Mifflin & Co. 1890.

THE administration of justice under the common law has always excited the amazement of the laity. The arguments by which men are ordinarily convinced of the truth of propositions are to a great extent withdrawn from the consideration of juries, and the evidence that the law allows to be presented to them must be presented in accordance with rules that are, to say the least, highly complicated and technical. However wise these provisions of the law may be, their application practically causes the trial of an offender to become a game of skill—not that it is not also frequently a game of chance—in which the attainment of justice is only remotely considered. If the evidence is at all doubtful, and the prisoner's counsel is the more skilful, the odds in his favor are very heavy, unless the judge, either from a professional desire to see the game played "for all it is worth," or, occasionally, from a disposition to protect the interests of the public, chooses to take a hand, when the prestige of his position is apt to control the verdict.

No better illustration of the results of the judge's interposition—which is undeniably an impairment of the rigor of the game—can be cited than Mr. Williams's story of the trial of a pawnbroker for receiving stolen goods. His counsel, having secured a disagreement, gave himself little concern about the retrial, in spite of Mr. Williams's friendly warning, and relied mainly upon an alibi. The judge summed up, however, in the following deadly manner. After repudiating, in traditional forensic style, the suggestion that there was a prejudice against the prisoner on account of his being a Jew, he proceeded:

"It is said he could not have received watches 'A,' because the day on which they were said to have been purchased at his shop was his Sabbath day. It was a Saturday, which, as you know, is the Sabbath of that most ancient people; and it is said that this good man could not have received the watches upon that day because, at the time when they were alleged to have been purchased, he was at his synagogue praying. It is also urged in his defence that the day on which the watches 'B' were disposed of at his shop was a day of fasting and humiliation among the Jews; that he was very strict in his religious observances; and that it is the custom for Jews to pass that day in their synagogue in prayer. Witnesses have been called to prove this, those witnesses being his daughter and his son. Well, gentlemen, far be it from me to insinuate that it is so, but it is an observation that I must make that there is the natural inclination of the child to protect its parent. I don't for one moment say that they came here to state that which is untrue—that is a matter entirely for you. Then his foreman gave evidence. Well, gentlemen, there again, you know—he is a servant in the house, and is dependent upon his master for his daily bread—but that, again, is a matter entirely for you. One thing has struck me in the progress of this case, and I'm sure it must also have struck you. It is a piece of evidence that did not come to light on the previous trial, of which, by the by, you never ought to have heard. Certain documents were found in the prisoner's possession relating to dealings, of the nature of usury, which he has had with people of his native town. Now, while the learned counsel was addressing you, I was adding up the amount of interest which this extremely religious man was in the habit of exacting from his clients, and I find it amounts to the somewhat exorbitant sum of from 180 to 200 per cent. Now it has occurred to me—I don't know whether the same idea has occurred to you—that this is just the sort of man who, either going to or returning from his synagogue, might call in at his shop just to see how matters were going on; but that also is entirely a question for you."

It is unnecessary to say that the jury did not have to leave their seats to find a verdict, and there is nothing in the story to occasion discontent with the result. But in another case, where the judge insisted upon a verdict in opposition to an alibi testified to by the members of the prisoner's family, it was subsequently proved beyond question that the verdict was erroneous. The unfortunate victim was eventually pardoned, but, as his family had no support but his labor, they had in the meantime been sent to the almshouse, and his wife had died, while the man himself had become insane. Instances of this character justify the maxim that it is better that ten guilty men should escape rather than that one innocent man should be condemned.

On the other hand, Mr. Williams's feelings were not to be envied when he succeeded in procuring the acquittal of a man charged with committing a peculiarly atrocious murder, only to have him get drunk and go about the town boasting that he had done the deed. Many lawyers refuse to defend, in murder cases, where they are personally satisfied of the guilt of the accused; but it does not appear that Mr. Williams adopted this principle, or that it prevails at the English bar. Casuists may dispute about this, but it is clear that when one has undertaken the office of counsel, it is his duty to take every advantage that the rules of the game allow to his client. Any other rule would give rise to intolerable abuses; but it cannot be denied that the desire for success frequently leads counsel to take advantages that are not covered by the principle.

Under the English system of division of labor in the legal profession, the inducements to undertake criminal cases in court are much greater than in this country. The barrister is not required to come into personal communication with the accused, and he can try his case as a purely technical affair. The practice of going on circuit also unquestionably promotes an *esprit de corps* that is lacking here, and conduces, moreover, to the formation of intimate professional acquaintanceships. Of his intimacy with Douglas Straight, Mr. Williams says:

"On one occasion we had been fighting a case against one another before an Alderman at Guildhall, and, on leaving the building, we linked our arms and proceeded together in the direction of 'The Garrick,' where we proposed to have lunch. I shall never forget the remark that fell from one of the by-standers as we passed up the street: 'Lor', Bill,' we heard him say, 'ain't we bin sold! Why, we thought

they was quarrellin' together inside, like cat and dog. It's all a put-up-job, Bill. Just look at 'em now, arm-in-arm, and roarin' with laughter like two old pals.'"

Mr. Williams had a varied training. After leaving Eton, of which he has some good stories to tell, he became a master in the Ipswich Grammar School, and then obtained a commission in the army. Tiring of this, he tried the stage, and married an actress, but soon determined to take up the profession which he followed with distinguished success until he was obliged to choose between certain death and the bare possibility of life afforded by the operation for the extirpation of the larynx. The result was fortunate, and, as he was unable to resume his practice, his friends secured his appointment as Metropolitan Magistrate as well as Queen's Counsel. Considering the nature of his training, it is rather surprising that he should have lost his head in trying his first case, which was a prosecution for horse-stealing. Upon hearing the verdict of acquittal, he says: "In my agony, thinking that a great miscarriage of justice had taken place on account of my stupidity, I jumped up, and, heaven knows why, exclaimed: 'My lord, what's to become of the horse?' Looking at me somewhat severely, the Judge said: 'What is that to do with you, sir? Don't you think you've done enough?'"

Of course, Mr. Williams went home and told his wife that he should never go into court again; but it was not long before he overcame the difficulties of the start, and he states that he has defended more prisoners than any other living man. It may be added that he had the satisfaction of prosecuting successfully a money-lender who had fleeced him when he was in the army, and a professional dog-stealer who had once made him pay £20 for the recovery of a favorite animal. In the latter case he drew two indictments, one for stealing a dog, which is only a misdemeanor, the other for the felony of stealing the collar, and by this device succeeded in giving the prisoner thirty months at hard labor.

As we have intimated, it is necessary to administer a sedative to the moral sense before the lay reader feels himself in harmony with the spirit of these anecdotes; but, this preliminary attended to, nothing but enjoyment awaits him. There is not a dull page in the book. The specimens of Mr. Williams's addresses to juries in the appendix do not give one a very exalted idea of his ability, and as to the frontispiece, we are at a loss to know whether it is intended as a portrait of the author or of one of the interesting persons that owe their liberty to his services.

Sewerage and Land-Drainage. By George E. Waring, jr. D. Van Nostrand Co. 1889. 2d ed. 4to, pp. 400, 29 plates and 75 illustrations.

THE underworld of drains and sewers is almost as important in the life of town-dwellers as the more manifest factors that are upon and above the surface; and that they are out of sight should not make them out of mind to the ordinary citizen, any more than they can be to the sanitarian. Sanitarians, perhaps only sanitary engineers, are those specially interested in working out the various problems of drains and drainage, sewers and sewerage; but we are all concerned in their being successfully solved. To architects we must intrust the building of our dwellings, but the average householder should know something about sites, walls, and ventilation, although never able nor required to draw up a working plan. So with sewers. Prosaic as the theme is, it is of daily and increasing importance for old towns and for new, and every resident on city ground should understand the principles if not the details.

This volume, which might have been a dry and technical discussion, fit only for engineers, is a clear and interesting account of its title-subject. Col. Waring's facility of expression has presented a popular view without losing sight of the serious facts. In part it is an appeal to the laity, but not at the sacrifice of honesty. One motive is to proclaim that the separate system of sewerage of which he is the conspicuous advocate, and which he does not hesitate to call Waring's system, is the best; but the treatment is not sensational or exaggerated, nor does it fail to credit other engineers with their work in these fields, and it discusses other than the small-pipe methods. The book is a distinct contribution to popular knowledge, and must be treated with respect by experts.

A considerable part of it is taken up with these engineering problems in various parts of the country, and herein lies its practical value to city boards and to individuals. Side by side with the theoretical explanation of what should be, is the narration of what has been accomplished and how it was done. Among these reports are descriptions of the great work that saved Memphis from abandonment, and of the costly trunk sewer that has relieved Buffalo. One of the most interesting solutions is that of the problem presented by San Luis Obispo. Across the water a system of sewerage in Havre has been arranged on this plan, and in Paris an experimental section was built. In addition to the question of sewers are the discussion of sewage-disposal, a practical chapter on house drainage, a fascinating one upon drainage in Holland, a most useful one upon land-drainage, and one upon malaria. Nor do these exhaust the contents. In relation to malaria we may not quite agree with all that is said, but the conclusion is unimpeachable that drainage is desirable. The references to bacteria, and especially the eulogy of *bacterium termo* and the bacteria of nitrification are abreast of late sanitary knowledge, whose circulation in this manner is very acceptable.

Many engineering problems and very much that belongs to sanitary science are yet debatable, and the author expresses himself on doubtful points, and may be said in some cases to create doubts, with the same freedom and force that have led to his advocacy of the small-pipe sewers. For example, he would generally lay drain-pipe from above downward, he would have no running trap in house-drains, he does not approve of trap-venting, and so forth. While not endorsing as unimpeachable every proposition advanced, we do frankly advise that this may be taken as general authority over the wide range it covers, and as such be admitted to an honorable place in every public library, and as a reference book for sanitary engineers, for officers of health, and for intelligent citizens.

History of the Girtys, etc., with a recital of the principal events in the West during these wars (1774–1795), drawn from authentic sources, etc. By C. W. Butterfield. Cincinnati: Robert Clarke & Co. 1890. 8vo, pp. 425.

THE centennial of the first settlement of Ohio called forth a number of books; the 'Old Northwest' was the first, and the volume before us is one of the many narratives of the pioneer days in the West which have followed it in less than twelve months. To most Eastern readers Simon Girty's name is hardly more than a well-remembered sound; even the Kentucky or Ohio boy, in his more copious draughts from the literature of tomahawk and scalping-knife, is not apt to learn much of Thomas, James, and George Girty, or their half brother, John Turner, who, along with the more notorious Simon, adorn our author's title-page, and have their deeds and their troubles faithfully chronicled in the following pages.

Simon Girty, the renegade, was an illiterate and a frequently drunken fellow, who, as a boy, was captured by the Indians, and thus learned their customs and the use of the Seneca language. After serving for a short time under the United States flag, at one time as an interpreter, at another as a lieutenant of militia, he deserted his friends and his country to sell himself to Gov. Hamilton, the British commander at Detroit, who nominally employed him as Indian interpreter, but really as an agent to stir up savage warfare against the Americans. Girty was thus the cause of great suffering, and naturally the object of the most intense hatred, throughout the Western settlements, in Pennsylvania, and in Virginia, which then comprised Kentucky. The commander at Detroit, very probably under instructions from his home Government, kept up the war in the Northwest, through his red-skinned allies, until the British garrisons were removed in 1795 under Jay's treaty; consequently Girty plied his infamous trade for twelve years after the conclusion of peace between Great Britain and the United States. He died, blind and decrepit, in February, 1818, near Malden, Canada, at the age of seventy-seven. Long before his death his wife (a white woman) left him on account of his brutal treatment and beastly drunkenness.

The one romantic incident in Girty's career is his saving the life of Simon Kenton, the noted Kentucky pioneer and Indian-fighter, when he found him a prisoner among the Shawanese. Everything else that is told of him, either by our author or by other historians whom he contradicts or criticises, is mean, dull, and sad. But highly realistic are the blood-curdling accounts of those unspeakable tortures with which prisoners among Girty's savage companions were put to death in his presence and with his full concurrence. The greater part of the volume before us is made up of extracts from previous writers and the comments of the author showing their want of accuracy. He first takes up a short sensational account of his hero, which appeared in 1814 in the *Missouri Gazette*, from which it was copied into various magazines and local histories. This account bestows upon poor Girty a heroic death at the battle of the Thames, which was fought in 1812, though in fact he was then alive, and survived his obituary for four years. Mr. Butterfield picks flaws no less glaring in a number of other "lives" and historic sketches, coming down to Theodore Roosevelt's 'Winning of the West,' which he quotes no less than thirty-four times, almost in every instance by way of contradiction.

The main object of our biographer in these controversies is to expose and correct the mistaken notion that Girty had in mind, habit, and tastes become an Indian, and that, in their fights against the whites of the borderland, he sided with them from a deep-felt sympathy with them. According to Mr. Butterfield, he simply turned "Tory," being seduced from his former loyalty to his native State and country by Capt. McKee, a much abler man than he; and his instigation of Indian raids and Indian cruelties against his white countrymen was simply the outcome of his Toryism. Simon

Girty has been called an "anomaly in Western history," and perhaps he was an anomaly in human nature; but it will be hard for the ordinary reader to interest himself in researches into the motives of such a low specimen of human nature as Simon Girty, the renegade. Yet the book, with all its notes, footnotes, copies of ancient documents, etc., is entertaining, and calculated to convey a lively conception of the baptism of blood and fire through which the Northwestern pioneers passed in Indian days.

Among the Selkirk Glaciers, being the account of a rough survey in the Rocky Mountain region of British Columbia. By W. S. Green. Macmillan & Co. 1890. 8vo, xvi, 251 pp. Illustrated.

In this book the Rev. W. S. Green gives an account of six weeks' mountaineering in the Selkirk Range, with a companion, the Rev. Henry Swanzy, during the summer of 1888. The object of these gentlemen was not merely to enjoy an outing in a little-known Alpine region, for which they were well fitted by previous experience, but to add their mite to geographical knowledge by mapping the area explored. The book is an agreeable, straightforward narrative, and offers an excellent epitome of the way in which even a brief holiday may be made profitable as well as pleasant to those who enjoy outdoor life, mountain scenery, and brisk exercise.

The Selkirk region abounds with fine glaciers which, though they lack the marine element that gives such charm to the coast glaciers of Alaska, are much nearer to the comforts and conveniences of civilization. There is perhaps no congeries of large glaciers in North America as accessible as that of the Selkirks, and no other, certainly, which possesses the advantage of being but a few hours from an excellent hotel. The account of our travellers' walks and climbs is happily destitute of any catastrophe, though having the usual proportion of minor misadventures. On the whole, however, the work of the summer was remarkably successful. Mr. Green's narrative is fresh and breezy, without gush or egotism, and may well stimulate others to follow his example.

A word of caution is appropriate here for those who may have had no Alpine experience. Were it not for their previous forays on the New Zealand and other Alps, the success that, in this book, seems to follow their efforts so naturally, would probably have been wanting, or marred by some serious accident. Mountaineering has its science as well as its (often tiresome) slang, and beginners, especially in glacier work, should beware of rashness.

BOOKS OF THE WEEK.

A Born Coquette. F. F. Lovell & Co. 50 cents.
Allen, R. Miss Eaton's Romance. Dodd, Mead & Co. $1.
American Digest (Annual, 1889). St. Paul, Minn.: West Publishing Co. $8.
April's Lady: A Tale. John W. Lovell Co. 50 cents.
Arbuthnot, F. F. Arabic Authors: A Manual of Arabian History and Literature. London: William Heinemann.
Boldrewood, R. The Miner's Right: A Tale of the Australian Goldfields. Macmillan & Co. $1.25.
Brooks, Mrs. Sarah W. English Poetry and Poets. Boston: Estes & Lauriat. $2.
Calm, Marie. Bella's Blue-Book. Worthington Co.
Dallas, Mary K. The Devil's Anvil. Belford Co. 50 cents.
Dickson, R., and Edmond, P. E. Annals of Scottish Printing. Macmillan & Co. $13.
Dillon, J. F. Commentaries on the Law of Municipal Corporations. 4th ed. 2 vols. Boston: Little, Brown & Co. $12.
Dorsey, Anna V. Betty. F. F. Lovell & Co. 50 cents.
Ford, W. C. The Writings of George Washington. Vol. VI. G. P. Putnam's Sons. $5.
Fox, H. F., and Bromley, Rev. T. M. Models and Exercises in Unseen Translation. Oxford: Clarendon Press; New York: Macmillan. $1.40.
Gerhard, W. P. The Disposal of Household Wastes. D. Van Nostrand Co. 50 cents.
Gautier, T. Juancho, the Bull-Fighter. Cassell Publishing Co.
Greswell, Rev. W. P. History of the Dominion of Canada. Oxford: Clarendon Press; New York: Macmillan. $2.
Imbert de Saint-Amand. The Happy Days of the Empress Marie-Louise. Charles Scribner's Sons. $1.25.
Jevons, Prof. W. S. Pure Logic, and Other Minor Works. Macmillan & Co. $2.50.
Lytton, Earl. The King of Amasis. Macmillan & Co. $1.25.
Maartens, M. Joost Avelingh. D. Appleton & Co. 50 cents.
Mario, Jessie White. Scritti e Discorsi di Agostino Bertani. Florence: G. Barbèra.
Marryatt, Florence. Blindfold. John W. Lovell Co. 50 cents.
McCarthy, L. P. The Annual Statistician and Economist. 1890. New York: F. E. Grant, 7 W. 42d St. $4.
Monteflore, A. Henry M. Stanley, the African Explorer. New York: Fleming H. Revell. 75 cents.
More, Sir T. Giovanni Pico della Mirandola. London: David Nutt.
Morgan, A. The Society and the "Fad." New York: N. D. C. Hodges.
Morris, Lewis. Works. Longmans, Green & Co.
Patten, Prof. S. N. The Economic Basis of Protection. Philadelphia: J. B. Lippincott Co. $1.
Pavements and Roads, their Construction and Maintenance. New York: *The Engineering and Building Record*.

Stuart, E. Kestell of Greystone. F. F. Lovell & Co. 50 cents.

SUMMER READING.

Mr. Harold Frederic has given us in 'The Lawton Girl' a graphic and remarkably realistic picture of a prosperous manufacturing town in Central New York. The story is of an unfortunate girl, Jessica Lawton, who returns to the scene of her disgrace with the determination to live it down. It is an unusually strong and interesting narrative, dealing with real people and events in a simple, natural way. The characters are clearly and distinctly drawn, and the development of the story is very skilfully managed. It is one of the most noteworthy novels of the season, and will largely advance the reputation of the author, whose earlier work, 'Seth's Brother's Wife,' met with such general favor. (Charles Scribner's Sons. 12mo, cloth, $1.25; paper, 50 cents.)

'Expiation,' by Octave Thanet, is a story of Arkansas life at the close of the war when the country was infested with "gray-backs." The book is full of dramatic situations, fine characterization, weird pictures, and touches of pathos and humor; while the pictures of Southern life are carefully and faithfully drawn. Intensely exciting and absorbing, it retains the reader's interest throughout, while it is valuable as picturing a part of the country to which many in the North are strangers. The illustrations, by A. B. Frost, are spirited and excellent. (Charles Scribner's Sons. 12mo. Illustrated, cloth, $1.00; paper, 50 cents.)

Under the curious and interesting title of "Day and Night Stories" have been gathered a collection of tales by Mr. T. R. Sullivan, which will be found most delightful reading for summer leisure. There is a sweetness and purity of sentiment and a refinement of expression, in these romances that is very attractive while the fanciful, weird, and fantastic nature of the plots fairly fascinates the reader. (Charles Scribner's Sons. 12mo. Cloth, $1.00; paper, 50 cents.)

No more agreeable companions for the idle summer hours could be desired than the popular issues of the delightful "Yellow Paper Novel Series" published by Charles Scribner's Sons. No collection of books put out in popular form and at a low price has so much to commend it to the public as this series. It includes some of the best-known works of Robert Louis Stevenson, Frank R. Stockton, Frances Hodgson Burnett, G. W. Cable, Joel Chandler Harris, and other popular authors. (Circulars sent to any address by the publishers.)

Readers interested in New England types of character will find much to attract them in 'The Broughton House,' by Bliss Perry. Out of natural and ordinary incidents the author has evolved a striking life drama of extraordinary power, full of shrewd, sympathetic, and observant character studies. It is a genuine and vivid picture of summer life in a New England town. (Charles Scribner's Sons. 12mo, $1.25.)

'Bright Skies and Dark Shadows,' by Dr. Henry M. Field, is a charming narrative of a trip through the Southern States to Florida. It is one of those very entertaining records of travel which give so much pleasure to those stay-at-homes who must take their journeyings in books. It is full of just such entertainment as readers desire in the coming months of piazza and hammock life. (Charles Scribner's Sons, 8vo, $1.50.)

Lovers of biography and memoirs will be charmed with the delightful volumes of M. Imbert de Saint-Amand now being translated by Mr. T. S. Perry. Each volume treats of some portion of the life of one of the famous women of the French Court, and the series forms most agreeable reading both by reason of the interest attaching to the subjects, and the bright, interesting manner in which they are treated. The first two volumes, entitled 'The Wife of the First Consul' and 'The Happy Days of the Empress Marie Louise,' have already been published. 'Marie Antoinette and the End of the Old Régime' will be issued shortly, while other volumes are in preparation. (Charles Scribner's Sons. Each volume 12mo, $1.25.)—*Advt.*

A delightful book.—*John Boyle O'Reilly.*

"One of the books without which a proper study of the silver question would be almost impossible."—*Memphis Commercial, May 16, 1890.*

"Mr. Horton is the recognized leader in the movement for international remonetization of silver."—*Public Opinion, N. Y., May 24, 1890.*

MACMILLAN & Co., Publishers,

112 Fourth Avenue, New York.

HOSSFELD'S METHODS FOR THE Study of Modern Languages: A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN. For the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations, with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 360 pages, $1.25). Especially adapted to the needs of those contemplating European Travel. KEYS and TASKS for self correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH-GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," No. 65 Duane St., New York.

THE NATION.—A BOUND SET, also an unbound set; various vols., both bound and unbound; 25,000 odd numbers. Will buy, sell, or exchange. A. S. CLARK, 34 Park Row, N. Y. City.

Scouting for Stanley in East Africa.

By THOMAS STEVENS, Author of 'A Tour Around the World on a Bicycle,' etc. 1 vol., large 12mo. Extra cloth, gilt top, with portrait and numerous illustrations. Price, $2.00.

Mr. Stevens was sent into Africa by the New York *World* to find Stanley, and he accomplished his mission. In this volume, giving an account of his adventures, the reader will find all the charm of the journalist's style. It is a simple, unaffected style—just as one would expect in a brave, manly man—and the adventures recorded are as thrilling as any that ever fell to the lot of the explorer.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay are now first offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

"Mr. Curtin is the first to give to the public a volume of Irish popular tales, which may justly be ranked with the best recent collections of popular tales in Germany, France, and Italy. . . . A delightful book, alike for the scholar and general reader."—The Nation.

"I have now read the whole of your 'Irish Myths,' with perhaps one exception, and I compliment you most heartily upon the book. It is wonderfully fresh and suggestive, and, in the mere capacity of a lot of fairy stories, it ought to have a big circulation. Fin McCool and the Fenians of Erin were great fellows, anyway."—Charles A. Dana.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

PUBLISH THIS WEEK;

The Writings and Correspondence of John Jay, First Chief Justice of the United States. Volume I. Edited by Henry P. Johnston, Professor of American History in the College of the City of New York, with the coöperation of John Jay. The set is to be complete in four volumes octavo, uniform in size and style to the editions already issued of the writings of "Hamilton," "Franklin," and "Washington." The edition will, like these, be printed from type, and will be limited to 750 copies. The remaining volumes will follow at intervals of about two months. Price, per volume, $5.00.

This set is distinctive in one respect from the sets previously issued of the writings of the "Fathers of the Republic." The editors have found it desirable to include in it, in addition to the letters, journals, and decisions of Jay himself, a selection of the more important of the letters from his correspondents, and the work makes therefore a very interesting presentation of the noteworthy events and of the questions under discussion during the revolutionary period and during the first years of the Republic. A large portion of the material included in it is also now for the first time published, and the set will therefore form a contribution of first importance for the history of the country, and for that of the city and State of New York.

Boston Unitarianism, 1820-1850. A Study of the Life and Work of Nathaniel Langdon Frothingham. By Octavius Brooks Frothingham, author of 'Transcendentalism in New England.' $1.75.

The Othello of Tommaso Salvini. A Study. By E. F. Mason. With Portrait by Robert F. Blum. Cloth, square octavo, $1.00.

RECENTLY PUBLISHED:

The English Novel in the Time of Shakespeare. By J. J. Jusserand, author of 'English Wayfaring Life.' Translated from the French by Elizabeth Lee. Revised and enlarged by the author. 8vo, $6.00.

The work is illustrated by six heliogravures by Dujardin of Paris, and twenty-one full-page and many other smaller illustrations in the text, executed in facsimile.

The book is divided into seven chapters: I. Before Shakespeare. II. Tudor Times—The Fashions and the Novel. III. Lyly and his "Euphues." IV. Lyly's Legatees. V. Sir Philip Sidney and Pastoral Romance. VI. Thomas Nash; the Picturesque and Realistic Novel. VII. After Shakespeare.

Nelson and the Naval Supremacy of England. By W. Clark Russell, author of 'The Wreck of the Grosvenor,' 'The Life of William Dampier,' etc., with the collaboration of Wm. H. Jaques, late U. S. N. (Volume I. of the Heroes of the Nation Series.) 12mo, fully illustrated. Cloth, extra, $1.50; half morocco, uncut edges, gilt top, $175; large paper (only 250 numbered copies printed), with extra illustrations, $3.50.

"No romance could possess a deeper interest, and certainly none could reveal a more thorough mastery of material or an imagination more entirely coöperating with the purpose and knowledge of the writer. The story is told with a spirit and an impulse which carry the reader along from page to page, without pause or break to the very end."—*Christian Union.*

*** List of Midsummer Publications, prospectuses of the Heroes Series, "Knickerbocker Nuggets," sent on application.

A PURE SOULED LIAR!

An Anonymous Novel. Original. American. Copyrighted. 191 pages. Mailed for 30 cents.

"In many respects a remarkable book. Its title is a puzzle, its mechanical make-up is unique, and the plot of the story is altogether novel."—*Saturday Evening Herald.*

"There is nothing unworthy here, either in morals or art."—*American.*

"One of the strongest and most fascinating books of the season."—*Northern Budget.*

PUBLISHED MONTHLY WITH ILLUSTRATIONS

CHARLES SCRIBNER'S SONS NEW YORK

For July. Now Ready.

Price, 25c. $3 a year.

Our Patented Process of Reproducing Books by Photography

Has revolutionized the publishing business of the world. By putting a few chemicals in ordinary cooking gelatine, we have enabled American publishers to sell a full set of the "Encyclopædia Britannica" for $38.50, while the English edition costs $190 per set. The same is true of the Oxford Bible and hundreds of other works. We furnish the printer with electrotype plates, the same as electrotypes from type.

Scribner & Welford's

NEW BOOKS.

The Authoritative Work on the Aryans

Prehistoric Antiquities of the Aryan Peoples.

A Manual of Comparative Philology and the Earliest Culture.

Being the "Sprachvergleichung und Urgeschichte" of DR. O. SCHRADER. Translated from the Second German Edition by F. B. Jevons, M.A., Author of a 'History of Greek Literature.'

Large 8vo, cloth, $6.75.

"Every one who, for any reason whatsoever, is interested in the beginnings of European civilization and Indo-European antiquity will be obliged to place Dr. Schrader's book on his library shelves."—*G. Meyer, in the Philolog. Wochenschr.*

Egyptian Sketches.

By Jeremiah Lynch, formerly President of the San Francisco Geographical Society, and Member of the California State Senate. With 16 full-page Illustrations. One vol., demy 8vo, cloth, $1.75.

Mr. Lynch is an American who resided many months at Cairo, from which he only recently returned. These sketches contain the substance of what he saw and what he heard while a resident in the Egyptian capital. The book contains descriptions of Old Cairo, of Cairo, and the Cairenes, of Sakkara and Memphis, of the Pyramids, and of a voyage up the Nile, including visits to Luxor and to Thebes. It is a volume that describes Egypt as it is, rather than Egypt as it was, and as such it has a special value for all who would keep abreast of the time in the knowledge of the world.—*Phila. Times.*

GLANCES AT GREAT AND LITTLE MEN. By Paladin. 12mo, cloth, $1.75. Contents: Wilberforce—Trollope—Wagner—Napoleon III.—William I.—Paris in 1870—Munich, etc., etc.

LYRICS from ELIZABETHAN ROMANCES, with Chosen Poems of Nicholas Breton. Uniform with the 'Lyrics from the Dramatists of the Elizabethan Age.' Edited by A. H. Bullen. Post 8vo, handmade paper, cloth, gilt top, each numbered, price $3.75.

LYRICS FROM THE SONG-BOOKS of the ELIZABETHAN AGE. In fcap, 8vo, cloth, gilt top, $1.50.

Saturday Review—"Beautifully printed, this dainty volume comprises the choicest examples of the poetry of the lutonists. It is a treasury of delight for every lover of English song."

*** *The above books sent upon receipt of advertised price.*

The Nation.

NEW YORK, THURSDAY, JUNE 26, 1890.

The Week.

THE plain, simple record of proceedings in the House of Representatives at Washington on Thursday, is remarkable reading. When the journal of the previous day had been read, Mr. Mills objected to its approval, on the ground that it had not been read in full. The Speaker observed that the clerk had only omitted to read such parts as it was customary not to read, but that he would have him read it in full. The clerk proceeded to read the omitted portions, which disclosed the fact that the Silver Bill, which had come back from the Senate on the previous day, had been referred to the Committee on Coinage, in accordance with what the Speaker was pleased to call the "automatic working of the rules." During the reading which made this disclosure, Mr. Mills had remained standing in order to retain the floor. Mr. McKinley had arisen during the reading and was also standing at its close. Both endeavored to "catch the Speaker's eye" at the same time, but the Speaker could only see Mr. McKinley, who moved that the journal be approved and demanded the previous question. Mr. Mills protested in vain that he was entitled to recognition, since he had questioned the reading of the journal and wished to move to correct it. Mr. Springer raised the point of order that the journal contained the record of something which had never happened, and which could not, therefore, be in it.

Throughout these proceedings common sense and justice were on the side of Messrs. Mills and Springer, and nothing but arbitrary and dictatorial power was on the side of the Speaker and Mr. McKinley. The former was clearly exposed before the House as having been guilty of a misleading statement when he said that only those parts of the journal had been omitted which it was customary not to read, for he knew very well that no such record of "automatic reference" as he had caused to be placed there had ever appeared on the record until he became Speaker. It was not surprising that even the Republican majority were incapable of sustaining Mr. McKinley in his effort to have all discussion of such a proceeding shut off by the previous question, and that enough of them united with the Democrats to defeat that motion, and subsequently to remove from the journal the record of the "automatic reference." The incident is of great value as revealing the fact that there is a limit of partisan abuse of power beyond which even this Republican Congress cannot be driven, and as indicating also that the Speaker's autocratic course is creating dissensions in his own party which are certain to increase rather than diminish as time goes on. There are signs, also, that the people are watching with constantly increasing interest the reckless career of the party in power, and are preparing for the day of reckoning which is to come in November.

On Saturday thirteen Democrats in the House decided that a technical triumph over Speaker Reed might be bought at too high a price. They accordingly cast their votes so as to refer the Silver Bill to the Committee on Coinage, as Mr. Reed himself had referred it under what he held to be the rule of the House. Whether Mr. Reed was technically right or not in assuming such authority—and upon this point able arguments were made *pro* and *con* by Mr. Cannon, Mr. Mills, Mr. Springer, and others—it was for the public interest decidedly that the bill should go to that Committee. The thirteen Democrats who helped to send it there acted wisely and patriotically, and they have done their party no harm. There may be too much "skirmishing for position" on the top of a powder magazine. It should be borne in mind, also, that the Democrats have an issue in the tariff question on which they have staked their fortunes in the approaching campaign and also in the campaign of 1892. They cannot shift the issue from the tariff to silver, even if they desired to do so, but it is quite possible to give so much prominence to silver as to lose the advantages they have gained by the debate on the McKinley bill. It would be most unwise, in a party point of view, to substitute anything else in place of the issue which has been carefully and studiously prepared, upon which the party is united East, West, North, and South, and for which the leaders have been training themselves for years. We presume that it was some such consideration as this which led Mr. Carlisle to abstain from voting on the final passage of the Free-Coinage Bill in the Senate. Probably he perceived the danger that exists of changing front in the midst of an undecided battle. This danger is all the greater if, as seems likely, the result of passing the bill should be to make the Democratic party a tail to the kite of the fifteen Republican Senators who have thus far attracted the larger share of public attention, and who would surely carry off most of the honors to be gained by the joint victory.

Senator Wolcott's attack on the Administration for its attitude on the silver question, for which he received such abundant applause in the galleries and on the floor of the Senate, is not very brilliant in print. It amounts merely to this, that in the campaign of 1888 Wolcott and others understood that the Republican national platform meant free coinage of silver, and so told the people in their stump-speeches; that the people were so fully impressed with this notion that they gave large majorities for Harrison, and that if they had not so understood the matter, Harrison would not have carried Colorado and some other Western States, and would perhaps not have been elected. But since a lot of other people did not understand the platform that way, and since the platform was in fact ambiguous and was intended to be read both ways, Mr. Wolcott's syllogism is good for nothing. It is a jingle of words which may serve to tickle the ears of the listeners while the speaker is on his feet, but it has no lasting properties. *Stat magni nominis umbra* is a phrase that will never be applied to Mr. Wolcott unless he says something better than this.

While the young Senator from Colorado is not yet a full-fledged statesman, he at least shows signs of growth, and that is always encouraging. We accord him this much praise after contrasting the speech which he delivered at the New England dinner in this city on December 22, 1887, with his speech on silver in the Senate this week. In the course of his remarks to the New Englanders he said, speaking of the Coloradans: "We are a plain people and live far away. We find all the excitement we need in the two great political parties, and we rather look upon the talk of anybody in either party being better than his party as a sort of cant. The hypercritical faculty has not reached us yet, and we leave to you of the East the exclusive occupancy of the raised dais upon which it seems necessary for the independent voter to stand while he is counted." This is the same party slave who electrified the Senate last week by saying:

> "If the Windom recommendation, approved by the President, could have been announced before the election, it is my humble opinion that not a single State west of the Missouri River would have given a Republican majority. Not because the large majority of the citizens of those States were not and are not and will not always be true and stanch and earnest Republicans, loving the traditions of the party, and true to its principles, but because they would overwhelmingly rebuke a party that selected as its standard-bearer one unmindful of the interests of the country and disregardful of the wishes of the majority of its members."

Behold the change! The vasty West which, two years and a half ago, would have flocked to the side-tent of a circus that had an independent voter among its curiosities, would have swarmed with "kickers" in the following autumn if its Republican voters had not thought that the financial policy of their party was to be handed over to them for moulding.

The Senate has only done what was expected in concurring with the House in the passage of the Dependent Pension Bill as it was agreed upon by the Conference Committee. The most striking feature of the discussion was a characteristic display of demagogism by Mr. Ingalls. Senator Gorman had presented a careful estimate of the great expense involved in the bill, which he prophesied would make the outgoes of the Government exceed its income. Mr. In-

galls sneered at "frugal patriots," expressed his regret that the bill did not put every surviving soldier on the pension roll, declared that he was in favor of this policy, "whether it cost one hundred millions or a thousand millions," and advocated the removal of the limitation in the act of granting arrears of pensions—a most gigantic job—insisting again that he did not care whether this would cost one hundred millions or a thousand millions. This blatant demagogue, it must be remembered, is the man whom the Republican majority of the Senate have honored by conferring upon him the office of President *pro tem.* of that body.

The danger of a deficit in the national Treasury at an early day becomes more and more clear. Senator Plumb of Kansas objected on Saturday to the passage of a bill to apply the proceeds from the public lands and the receipts from certain land-grant railroad companies to the further endowment of agricultural colleges, on the ground that "in eighteen months from now whoever proposes the addition of a million of dollars to the annual budget will have to provide with it the means of raising the revenue to pay it," and that consequently none of the revenues ought to be segregated so that they cannot be applied to the running expenses of the Government. "It seems to me," he went on, "that this is an unwise time to enter upon an indefinite expense of this character, and that if there ever was a time when we ought to determine carefully and prudently what we shall do with the public funds, it is now. We may need, as we clearly shall within a very brief period of time, much of the Pacific Railroad fund to piece out the expenses of the Government, which are going to overrun the revenues, and we shall need similarly to take from the funds derived from the sales of public lands. And yet, sir, we are going ahead with expenditures, and with propositions for additional burdens upon the people, just as though we were in the heyday of that surplus about which we have heard so much in the last few years, but which has been vanishing like a snow-bank under the rays of the summer sun, until now it practically has no longer any existence." The public has grown so accustomed to reckless talk and extravagant appropriations that it comes with the shock of a surprise to find a public man suggesting that economy is, after all, a good thing.

It is not yet entirely clear whether the Senate Finance Committee's tariff bill is better on the whole than the McKinley bill or worse. It is better in some parts and worse in others, and probably there is not much to choose between them. It reduces the duty on steel rails to $11.40 per ton, and makes a slight reduction in the earthenware and glass schedule, but not more than sufficient to counterbalance the duties levied on crates and coverings in the Administrative Bill. It reduces the duty on barley in the McKinley bill by five cents per bushel, but still leaves it at twenty-five cents as against the present duty of ten cents. It increases, as has been previously stated, the duty on refined sugar, and puts back works of art in the dutiable list at 30 per cent. ad valorem, the McKinley bill having put them on the free list. This is utterly disgusting. If ratified by the Senate, it will sink that body in the estimation of the educated classes almost as much as its vote for the bedlamite Silver Bill. The only change of importance in the wool and woollen schedule is the insertion of amendments, which the House rejected on a yea-and-nay vote, increasing the duties on yarns and cloths costing not more than 30 cents per pound. The duty on tin plate seems to be left as in the McKinley bill.

The National Wool-Growers' Association met at Galveston, Texas, on the 12th inst. A letter was received from the Hon. Columbus Delano, President of the Association, saying that "the exigency of the case" demanded his presence in Washington, as he had been instructed by the Ohio wool-growers to formulate and present some important and very necessary amendments to the McKinley Tariff Bill. As he could not be present, he desired to be instructed by his constituents, and in order to spare them any trouble in this matter, he enclosed a set of resolutions which he desired them to adopt and telegraph back to him at Washington. This was done. One of the resolutions demands that all samples of wool now in the custom-houses of the United States for purposes of classification be removed and new ones substituted, so that any cross of merino or English blood in carpet-wools shall subject the whole lot to duty as clothing or combing-wools. The Texas wool-growers, who happened to be holding a meeting at the same time and place, passed resolutions affirming that "the existence of wolves, coyotes, and other wild animals is at present the principal reason why we cannot produce wool as low in this country as in others," and that "the removal of these destructive agents would result in a saving of about eight cents per pound, which is the present estimated cost of having shepherds to guard sheep." Evidently these resolutions did not come from Mr. Delano, for we all know that he holds that the reason why we cannot produce wool as cheaply as other countries is the insufficiency of the tariff. Moreover, he would be the last man to talk about dispensing with the labor of shepherds when the very object of the wool tariff is to furnish employment to that worthy class.

The taking of the census has been the cause of much heart-burning in the West. Chicago has been determined to overrun the one-million line, but fears are openly expressed that the census-takers have been remiss. If the number returned should be less than a million, the evidence of remissness would be conclusive. St. Louis made a much lower mark, putting her ambition at 450,000, but the enumerators have not come up to this modest demand. It is considered that they have overlooked about 20,000 people, and steps are to be taken to have a new and correct census made by private enterprise. Of course, nobody can object to this, but the difficulty of getting the private census put into the national records will be so serious that, when the subscription paper to provide for the expenses is handed around, it will perhaps be deemed cheaper and equally effective to simply pass a resolution that the population of St. Louis is 450,000, and save the money.

The working of the new ballot law in Rhode Island, which applied to all except municipal elections, has been so satisfactory to everybody that the Legislature, in special session, has extended its operation to municipal elections. There is no longer any opposition to it which is worth considering, since everybody, save the political workers who made their living by "handling" the corruption funds for both parties, is convinced of its wisdom. The Republicans have been obliged every year to increase a little more the size of their campaign fund in order to buy a majority, and they were convinced by their experience at the last election that the use of money to buy votes under the Australian system of balloting is a shameful waste of moral power, since there is no visible return for the money. As Elder Shepard said of the $150,000 of good Republican money which was paid for the support of "three movements" in this city in 1888, the Rhode Island Republicans discovered by the returns that they had "been buying experience and not votes," and they will not make further investments in that line.

The interesting fact has been brought out, in the Massachusetts legislative investigation, that Mr. Joseph O. Burdett, Chairman of the Republican State Committee, has been employed as a lobbyist in behalf of the West End Railroad Company. The discovery prompts these remarks by the Worcester *Spy*, a Republican journal: "It seems clear that the occupation of a lobbyist and the position of Chairman of the Republican State Committee are incompatible, and that the usefulness of Mr. Burdett in the latter capacity is at an end since the publication of this testimony, and we trust that he will see the propriety of resigning his place on the Committee. If he should not, the other members of the Committee will probably not lose much time before suggesting to him that they would prefer another Chairman." But why should the Republicans of Massachusetts object to the retention of a lobbyist as Chairman of their State Committee when the Republicans of the United States consent to the retention of a thief as Chairman of their National Committee?

Further light was thrown by last week's testimony upon the methods employed by corporations to secure legislation in their interest. The counsel of the West End Company testified that Theodore C. Bates, a

prominent Republican politician of Worcester County, was retained last summer and promised that, if he did all that was expected of him, he should receive $10,000. The examination then proceeded as follows:

Q. Was anything done by Mr. Bates to influence votes or the election of members of the Legislature from Worcester County?
A. I received a note from Mr. Bates saying that the Ames-Shepard people were acting there to secure the election of members, and asking for $500 to be used to secure nominations of men in favor of the West End and opposed to the Ames-Shepard.
Q. Did you send it?
A. I did, and I know nothing more about it except that I believe the money was to be used in paying for carriages and other expenses connected with the caucuses.

Corporations thus begin work by employing the chief managers of the dominant party to "set up" caucuses in their favor, and complete it by employing other lobbyists to "capture" after their election those members of the Legislature whom they do not already own.

If the passion for stealing foreign books which has recently shown itself among the ministers continues to spread, we shall have to stop ridiculing the poor blacks at the South for the separation which they are said to maintain between religion and morals. Mr. Mansfield, Presiding Elder of the New England Methodist Conference, is trying to get the ministers of his denomination to join him in stealing a book on Egypt, belonging to an English publisher, and the only excuse he has to offer is that the book has interested him, but is too dear, when honestly purchased from its owner, for the convenience of the Elder and his brethren. It also contains much matter of moment to religious people, and he thinks that, on the whole, it would be a good thing to steal it and sell it cheap in this country. Another theft, almost more odious than that of the 'Encyclopædia Britannica,' was advertised by the religious firm, Hunt & Eaton, who have charge of the Methodist Book Concern in this city, and printed a very amusing, because very brazen, advertisement in the *Christian Advocate*, containing their account of what they propose to steal, and also an advertisement for Sunday-school teachers to take orders for the booty and "make money." What gives the offence a certain air of drollery is that the property they covet and mean to seize is the Oxford Bible. Of course the Bible *per se* is not private property; but, as will be seen by their circular, this edition of the Bible contains about 56,000 references, indexes, maps, a glossary and dictionary, and a large number of learned illustrative articles, which have cost the owner a large amount of money. Of all this Hunt & Eaton deliberately announced their intention to plunder him, and to have it peddled through the country as their own, by Sunday-school teachers who want to make money! Fancy the diffusion of religious ideas through the medium of stolen Bibles, sold by religious teachers! How like it is to that story of the negro revival meeting in one end of a barn, while water was boiling in the other end to scald a stolen hog.

One cause of the extreme irritation between the French and the Newfoundlanders has just been somewhat modified. So exasperated were the latter at the bounties given by the French Government to their fishermen on the Newfoundland coast that the St. Johns Government attempted to retaliate by requiring all foreign vessels wanting bait to take out a license. This license laid a tax of one dollar per ton and was limited to twenty-one days. As bait cost about a dollar a barrel, a vessel of 100 or 200 tons burden requiring 25 or 50 barrels of bait incurred an expense practically prohibitive. It was hoped, however, that a revenue of $100,000 would be derived, and this sum it was proposed to give to the Newfoundland fishermen to enable them to compete with the bounty-nourished Frenchmen. But this scheme has unexpectedly met with two or three serious obstacles. One is the smuggling of bait to foreigners, carried on by the Newfoundlanders themselves. Another is the refusal to buy bait on the part of the French, who have sought to supply themselves elsewhere, and it was while engaged in this business that the trouble reported on Saturday from St. George Bay occurred. The third is the protest of the Canadian and United States Governments against the license. In consequence, the St. Johns Government has decided to modify the license. Now it is only required that a tax of one dollar be paid per barrel of bait, the amount of bait to be limited to forty barrels at each baiting, which is a far different thing from the original license.

By the Anglo-German settlement over Africa, Great Britain has got full control of the Zanzibar coast-line which seemed at one time in danger. There has been much other give-and-take in matters which, as long as they were African, the British public were not likely to understand or take much hold of; but it would seem as if Lord Salisbury had seriously weighted the agreement by the cession of Heligoland, which is under the British nose, so to speak, and, though a little insignificant place, somewhat like Block Island, has long been dear to Englishmen of a Jingo turn as a place on which the Union Jack appeared to wave on foreign soil. It is really German territory in a geographical sense, and it therefore tickled British pride to have the flag there, as it tickles it to have it in Gibraltar and the Channel Islands. It would not be surprising if the settlement broke down on this point by the refusal of Parliament to assent to the cession. Seeing the indignation it excites when made by Salisbury, we may guess what the indignation would have been if made by Gladstone.

In the Bohemian Diet of 1886, the Czechs refused to take into consideration the demands of the German minority, to the effect that "the language regulations be abolished; that a distinction be drawn between the German and Czech portions of the Province; that the High Court of Justice and Councils of Education and Public Worship be divided into two; and, finally, that German should be spoken in the Diet instead of Czech." The rejection of these demands caused the withdrawal of the Germans from the Diet at that time, and since then the question has been fought with increasing bitterness, proving a curse to both races, and often checking the activity not only of the "Prager Landtag," but even spreading its influence as far as the Imperial Austrian Assembly. In the conferences held under the leadership of the Government, which closed at the beginning of this year, the same attempt was made towards equalization as in the Diet of 1886. To this the Old Czech or Ultramontane party, who are more inclined to a reasonable consideration of the matter than the immoderate Young Czech majority, gave their consent, seeing a possible means to reinstate themselves in their former position, from which they had been pushed by the younger parties. But the Government and Old Czech party, overrating their own power to effect an equalization, excluded the Young Czech Nationalists from these conferences. Taking advantage of the suspicion with which the equalization project is regarded by the masses of the Czechish people, the Young Czechs seized this opportunity to enroll very largely the popular feeling on their side.

In the last session of the Landtag, which closed, after many long and profitless debates, on June 3, only one of the four equalization proposals mentioned above was accepted. The proposition to divide the Council of Education into two national sections was adopted at the third reading by the Diet, according to which in the German section only German and in the Czechish only Czech are to be spoken, while in the combined session each member may speak his mother-tongue. Hitherto it has been usual to speak German out of consideration for the German members, few of whom understand Czech. The Czechs insisted, moreover, that the representatives of the religious confessions belonging to both sections (namely, two Catholic priests, one Evangelical minister, and a Jewish divine) must understand both languages, which practically excludes the German clergy from the council. In addition to this a very significant resolution was put forward by Dr. Starda, with a strong support, to the effect that the Government announce to the Landtag its exact position with regard to the Czechish language in the proposed new organization of the courts. The Czechs have always been desirous to establish their language as the official medium in their own districts, and we may foresee in the near future a struggle on their part with this end in view. As the carrying of the proposition concerning the division of the Educational Council, which is the least offensive of all to the Czechish side, took fourteen days of uninterrupted discussion, it seems quite probable, considering the limited time allowed to the Landtag, owing to the long annual session of the Reichstag, that several years must elapse before the entire question will be settled.

LEGAL TENDER IN THE SENATE.

THE debate in the Senate on June 17, when the Silver Bill was passed, was under the five-minute rule, which had been adopted for the particular purpose of disposing of the measure that day. Under the operation of this rule, two amendments were proposed and adopted of momentous importance. One was offered by Senator Teller, making the silver certificates legal tender for all debts, public and private. This was amended and reamended until it was made to include all silver and gold certificates heretofore issued or hereafter to be issued, and in this shape it was finally adopted by 34 yeas to 22 nays. The other was offered by Senator Plumb, and was adopted without a division and without a word of comment. It provided that the certificates should be issued on the bullion deposited and before the corresponding coins were produced. The Senate of the United States has thus, under the five-minute rule, leaped a tremendous chasm. It has engrafted on the policy of the country, so far as that body is concerned, the principle that Congress may make not merely tickets of deposited coin, but also tickets of the material of which coin is produced, legal tender. It makes one's head swim to see the only deliberative body in the nation taking such a leap. The House has ceased to be a deliberative body, and has become a mere Gatling gun, to be loaded and discharged by the Speaker, with or without a quorum. Yet it has done nothing so reckless and indefensible as the short work that the Senate performed with the legal-tender question.

Senator Gray of Delaware tried to draw the attention of his fellow-Senators to the gravity of the step they were taking. He quoted the last legal-tender decision of the Supreme Court, and showed that it did not include the kind of paper that it was now proposed to make, and that the ground upon which that decision rests—the power of the United States to borrow money—is quite a different thing from the ground upon which the bill proceeds. The United States does not borrow money when it issues a silver certificate. It becomes a custodian of other people's property—a bailee in law—and gives a receipt for the property taken on storage. This receipt, the Senate says, shall be legal tender in every part of the country for all debts, public or private, whether the property on storage be coin or bullion. No exception is made of contracts specifically payable in gold, or even of the Government's own contract to redeem its gold certificates in gold. These paper things are to be taken under compulsion of law for every pecuniary claim of every kind.

Perhaps the courts would construe this Legal-Tender Law as not applying to contracts payable in a particular kind of money. Leaving that feature out of view, some people may contend that no practical harm is done by making the certificate equally available with the coin itself, since all that the holder of it needs to do is to draw the coin and tender it to his creditor. But it does make a vast difference to both public and private finances, whether all the silver in the world that can be hurried to the United States Mint shall become at once legal tender by means of paper certificates, or whether it shall be first coined. In the one case the standard of value is lowered immediately by the full amount of the difference between silver and gold, whatever that may be. In the other the lowering will take place gradually, as it took place at the beginning of the war, when specie payments were suspended.

But is it of little consequence how and in what manner the Senate of the United States deals with the question of legal tender? Have we not gone to the verge, and even beyond it, when the rule is established that the Government may make its own promissory notes legal tender between individuals, for past as well as future contracts, in peace as well as in war? Shall we go on adding to the legal-tender powers of a transient majority in Congress, and doing this under the five-minute rule? A new legal-tender law redistributes the property of all the people. It takes from A, and it gives to B. That is what it intends, and that is what it does. It is a socialistic contrivance of gigantic proportions, and its effect always is to take from the poor and ignorant and to endow the rich and cunning. It throws property into hotch-potch, to be grabbed by the various social classes, according to their several capacities. The wage-workers, the farmers, the widows, the non-capitalists always come off second best. It was so during the war, when the Legal-Tender Act was first put in operation. The capitalists and the smart fellows saw what was coming. They feathered their nests, and the feathers came from the laboring classes, including the soldiers in the field. The power to make legal tender is the next thing to omnipotence. True, it cannot create anything; it cannot create one blade of grass or the value thereof, but it can change the values of all debts throughout the length and breadth of the land. And can anybody set bounds to the extension of legal-tender laws when once the precedent is established that not merely coin, not merely the United States notes, but anything that Congress considers valuable shall be accepted in payment of debts, both as to the past and as to the future? If certificates of deposited bullion are to be legal tender, why not certificates of deposited grain, or certificates of mortgaged land? Both these are even now at the door of Congress demanding their "rights," just like silver bullion; and if silver gets hers, they will get theirs in due time.

MR. BLAINE'S TRIANGULAR VOYAGES.

PRESIDENT HARRISON has transmitted to the Senate a long letter from his Secretary of State, the Hon. James G. Blaine, proposing such changes in the pending Tariff Bill as shall enable the President to admit wool and all other products from any country in the American hemisphere free of duty in case those countries, or any of them, shall admit our products free of duty. As a preliminary step to the carrying out of this plan, he urges that raw sugar, now on the free list in the McKinley bill, be put back on the dutiable list, in order to have something to trade on when we come to negotiate with these countries. Cuba is included in the proposed scheme of reciprocity, and as Canada and the British West Indies are not excluded, it is to be presumed that whatever arrangement is open to other countries will be open to them also.

Here is a very comprehensive system of free trade. It embraces several of the things about which there have been heated controversies in Congress and in the press, and which are still going on; viz, wool, silver-lead ores, iron ore, sugar, fish, coal, lumber, and copper. It embraces so much that, if the plan were once adopted, it would, according to the testimony of many of the protectionist organs, bring general free trade upon the country with a rush. The organ of the Manufacturers' Club in Philadelphia has repeatedly said that wool is the corner-stone of the tariff, and that if it is admitted free, woollens and everything else will be admitted free very soon after. The country of the La Plata is the greatest wool-producing region of the world, unless Australia may be its rival. If we admit the wool of the Argentine Republic and Chili free, there will be no reason for putting duties on any other wool. If we admit the iron ore of Cuba free, there will be no reason for excluding that of the Mediterranean countries; and it is not to be supposed that the latter would be excluded for many months after the former was put on the free list. If we admit the copper ores of Chili free, there will be hardly any copper ores left that it will be worth while to exclude If we admit the argentiferous lead ores of Mexico free, there will be nothing left to fight about on that score. And what will become of the poor Gloucester fishermen, whose right to a tax of one cent per pound we have been fighting for so gallantly ever since the Washington Treaty was thrown over at their instance? Will life be worth living after Canada is taken in under the ægis of reciprocity? We had almost forgotten the orange-growers of Florida and California, who made such a valiant push last winter and got their duties raised 50 per cent. in the McKinley bill. Are there any countries so well situated to inundate us with oranges as the West India islands and Central America? Give them a few years to get their orchards in bearing condition for a market like ours, and oranges will be as cheap as tomatoes in every Atlantic port.

We endorse Mr. Blaine's plan, and recommend it to the favorable consideration of Congress, not because reciprocity is ideally the right thing, but because it promotes international trade and thereby increases wealth, removes ignorant prejudices, and leads inevitably to the breaking down of trade barriers erected by selfish interests for private greed. But we cannot adopt all of Mr. Blaine's arguments. Indeed, some of his arguments are calculated to weaken his position materially. He says, for example, that the "chief obstacle" to an increase of our South American trade has been a lack of shipping facilities

for reaching those markets. We quote this part of his communication:

"The lack of means for reaching their markets has been the chief obstacle in the way of increasing exports. The carrying trade has been controlled by European merchants *who have forbidden an exchange of commodities.* The merchandise we sell in South America is carried there in American ships, or foreign ships chartered by American commission houses. The merchandise we buy in South America is brought to us in European vessels that never take return cargoes, but sail for Liverpool, Havre, Bremen, or Hamburg with wheat, cotton, and corn. There they load again with manufactured goods for the South American markets, and continue their *triangular voyages*, paying for the food they are compelled to buy of us with the proceeds of the sale of their manufactures in markets that we could and would supply if we controlled the carrying trade."

If it is not the tariff, but a mere lack of shipping facilities, why does Mr. Blaine send this appeal to Congress to enable the President to abolish the tariff on wool, oranges, etc., produced in this hemisphere? If the European merchants have given orders to all the ship-owners in the world to make "triangular voyages," and not on any account to run on direct lines between ports of the American continent, why may not the wool-growers say in reply that the remedy is not to be found by admitting Argentine wool free, since that would not change the minds of the European merchants or their injunctions to the ship-owners, but would probably lead them to repeat the injunctions in more positive language? Triangular voyages would still be the order of the day. The kind of triangle that we see most plainly in Mr. Blaine's letter is one of which the three corners are occupied, the first by the Administration, the second by the McKinley high-tariffites, and the third by the tariff-reformers of all grades. They will make their first triangular voyage in the coming autumn elections.

EXIT THE "PRACTICAL MAN."

An attempt is being made in some quarters to dissuade or frighten men of the class of Bishop Potter and Dr. Heber Newton, who have initiated the New York citizens' movement, from active participation in municipal politics, by representing them as wanting in political experience, and therefore sure to be in some manner hoodwinked or brought to naught by another class known as "the practical men." But one of the first things which every one who desires to improve the government of our great cities should do is, to clear his head of the old canting dread of the "practical man." If the new ballot act has any value or efficacy whatever, it has put an end to him and his business, and has at the same time put an end to the state of things which made a minister, or any other quiet and respectable citizen following an honest calling, somewhat ridiculous when he tried to make his influence felt, either in making the nominations or in voting for his candidate at the polls.

There is no more curious or discreditable chapter in our political history than the seizure of the nominating machinery of our political parties in the great cities by the class of professional politicians—largely men who had failed in respectable callings—and their success for nearly half a century in persuading decent people that the seizure was a legitimate operation, and that there was no remedy for it except the attendance of the intelligent and respectable classes at the primary meetings. The way in which people's mouths were stopped with this advice by the newspapers, as well as by the practical politicians, at last became a joke, and has for the past twenty years been one of the best practical jokes extant. If the minister or lawyer, or decent and industrious man of any calling, went to the primary under a mistaken sense of his duty to the public, he found that the proceedings had been all carefully arranged beforehand by the members of the local machine, and that any interference on his part, any suggestion of change or amendment, naturally excited the merriment of those who had prepared the programme or were in the secret. The more he sought to make himself felt, the more ridiculous he became to the managers, and if he was at all persistent, he ran some risk of insult, if not of personal violence.

It was very natural that under these circumstances the "fixing of primaries" should have become a regular trade followed by trained men, and that attendance on them should have been almost wholly abandoned by the great bulk of the voters, and that everybody who did not follow the trade should, in the field of politics, have incurred the contempt which regulars feel for militia, or experts in any calling for amateurs. This contempt was deepened by what subsequently occurred at the polls after the nomination was made. There, even more than in the caucus, the outsiders made what politicians considered a telling display of their incapacity. Supposing they succeeded at the caucus in getting their man nominated, they had still to employ the practical men to look after the details of the election, and were often induced to pay large sums of money for this purpose.

The most important of these details was the distribution of the ballots. In the earlier days, before there was any registration, and before our present system of counting the votes, the Practical Man could foil the virtuous either by employing large bodies of repeaters or personators, or by stuffing the ballot-boxes with bogus tickets. When these facilities were taken away from him, he still retained the distribution of the ballots, and out of this he made his calling a very lucrative one, and was able to extract a good deal of excuse for the fun he made of the amateurs. There were two ways in which he could cheat them. He could either fail to provide their ballots at the polls at all, or in sufficient quantities, or he might "run out" the ballots of the other side in their place. When all was over, and the good men's candidate was defeated, he could use it as a fresh illustration of the silliness of amateurs in meddling in things they did not understand. It was in his skill in these criminal and semi-criminal devices that the superiority of the Practical Man as a politician over the rest of the community consisted. It was not in knowledge of the city's needs, or of the work of administration, or of municipal law, or in the art of persuading people to take this or that view of public questions. It was not, in short, in anything which civilized men are in the habit of considering either useful or respectable.

Now, the whole art of the Practical Man, as we have described it above, has, in our belief, been swept away by the Ballot Act. The primary, which we used to feel so uneasy in our consciences for not attending as our chief "political duty," is gone. The business of cheating at the polls is gone. Respectable men who think they have something useful to suggest to their fellow-citizens can have a primary of their own. They do not need, after they have made their nominations, to hire a Johnny O'Brien or a Mike Cregan to look after their interests at the polls. The State supplies the ballots and sees that they are properly distributed, free of expense. The normal working of free democratic government in this city is restored. Every honest man who has something to say about the city government which he thinks will be useful, has a chance to submit it to his fellow-citizens. Every such man is now a practical man. Bishop Potter is a practical man. So is Dr. Newton. So is every clergyman in the city who is willing to come forward and make his voice heard, and take a man's part in putting an end to the régime which has now for forty years made New York the shame and scandal of free government. There is hardly a decent citizen, who knows how to read and write, who is not fitter to be listened to about municipal affairs than the wretched creatures who now fill so many of our offices, and to whose "guff" about municipal government we have hearkened so long with complacency, as if it really was the voice of experience, or knowledge, or public spirit, or common honesty.

MISS FAWCETT'S TRIUMPH.

The remarkable feat of Miss Fawcett, the Newnham College girl, in beating the Senior Wrangler at Cambridge, continues to be the sensation of the day in England, and will probably make a deeper and deeper impression as time runs on. The Senior Wrangler is, to the great honor of English society, one of the personages of each year, and goes down to London in the middle of the season with a halo round his head such as is given by no other academical distinction. Moreover, the distinction launches him in professional life with more or less éclat, and if he attains any eminence, no account of his career fails to put it forward as the beginning of his greatness. One of Macaulay's feats of memory was the repetition of the names of the Senior Wranglers through a long period, and there was not one of which he was more proud. Of the great severity of the examination by which this honor is won, we have before now spoken. It is one of the severest tests to which the youthful mind is ever subjected in our day. It carries the competitors into that empyreal region of mathematics which the young seldom enter at

all, and which is but very scantily peopled even by the veterans of science. Moreover, it is the field of all fields in which the opinion of civilized men from the very earliest times has pronounced women least fitted to excel. Women's difficulties with elementary arithmetic have furnished some of the oldest jokes against the sex, and their appearance as bookkeepers and cashiers in French shops and cafés was, during the earlier part of this century, one of the surprises of foreign travel for most Englishmen and Americans.

That the first really successful assault on the intellectual supremacy of men should have been made on the mathematical side of the male fortress is certainly one of the most surprising events of the century, and is producing an effect in England, of course far inferior in degree, but of somewhat the same kind as the appearance of Darwin's great hypothesis. It is true that this is not the first victory of young Englishwomen in the collegiate arena over male competitors. Nor is Miss Fawcett the first distinguished female mathematician, for Mrs. Somerville reached the highest heights. Miss Prideaux won the Gold Medal for Anatomy some years ago, and Miss Ramsay more recently took a First Class in Classics at Oxford, and nine years ago another lady, Miss Scott, was bracketed with the Eighth Wrangler at Cambridge. These, however, were mere skirmishes which produced comparatively little impression. The eighth wranglership startled people a little, but the classical and medical triumphs were won in part by qualities of mind, such as memory and quickness of perception, which have never been denied to women.

What has been denied them most emphatically has been the power of abstract and continuous ratiocination, which Miss Faw cett has displayed in so high a degree, and its revelation by her has had somewhat the effect of the revelation of the existence of a new power in civilized society. The great power, the motive power, of civilized society is, after all, brain power, and this has hitherto been supplied by but a very small number of the members of one sex. It is with great difficulty that society brings it into play. All the immense and costly educational machinery of each country is devoted to what may be called a search through the population for cases of exceptional mental capacity. Both the State and the schools may be said to be engaged in a perpetual effort to find out who among its youths can give the community the service of the most potent intellectual apparatus. Hitherto this search has been carried on only among one-half of the human species, and in the honest belief that it would be useless to carry it on among the other. Of late years this belief has been shaken by a variety of exertions on the part of women, in a number of comparatively small ways, to assert their intellectual equality with men, but none of them before Miss Fawcett has challenged and beaten the masculine mind in a trial of strength in the field in which it felt surest of superiority, and in which the human mind is called on for the display of some of its highest powers. So that social philosophers are now asking themselves whether the denial of equal opportunities of intellectual training and social activity to both sexes has not resulted in diminishing the intellectual resources of the race by about one-half.

This question, however, cannot as yet be answered in the affirmative. It is still generally acknowledged that the qualities of mind which make great mathematicians are not those which make men fit to save or rule the state, or to weave successfully the great web of human affairs. The most important gift, after all, of a citizen in such professions as politics, or law, or medicine, or teaching, or war, is the ability in the selection of the premises from which the solution of the various problems of life is to be extracted. In fact, soundness of judgment and clearness of perception in collecting and arranging these premises is a large part, and by far the most important part, of each man or woman's work in the world. On this judgment and perception great mathematical achievements make no demand whatever. The mathematician's data are all provided for him with the utmost precision, and he is forbidden to add thereto or take away therefrom one jot or tittle. Consequently it is possible to be a very great mathematician indeed and be at the same time a very ordinary person in most other fields of mental activity, and especially in what may be called—using the term in its largest sense—the transaction of human business.

That this argument should be used freeely to minimize the effect of Miss Fawcett's triumph and to break the force of Mr. Gladstone's complaint that these displays of feminine capacity should not bring women a share in the material advantages offered by the great universities, is what was to be expected. But it will be impossible hereafter to satisfy the world that the revelation of the mathematical power on the part of some, or even two women, does not indicate the near presence of various other kinds of capacity in the whole sex. The probabilities are all against the theory that Miss Fawcett is a *lusus naturæ*, and that more careful and prolonged search, and wider opportunities of display, will not reveal among her sisters most of the other qualities of mind which we now describe by the epithet "masculine."

PUBLIC INSTRUCTION AND STARVATION IN ITALY.

ITALY, June, 1890.

ACCORDING to the latest reliable statistics, not yet published,* it appears that the population of Italy, which, according to the census of 1881, stood at 28,459,628, numbered on December 31st, 1889, 30,947,306, showing an increase of nearly one million and a half in nine years. These figures take no account of emigration or immigration. The birth-rate exceeds the death-rate by 11 per thousand in 1887, by 9.81 per thousand in 1888, whereas in France, for a series of years, births have never exceeded deaths by 3 in a thousand. The number of illegitimate children is greatly on the increase: 49 per thousand in 1863, they reached 73 per thousand in 1889. The maintenance of these now falls almost exclusively on the communes and the provinces; and now that the system of the *ruote* (the placing new-born infants in the turnstile of the foundling hospitals) is abolished in two-thirds of the communes where it formerly existed, the waifs abandoned by the "authors of their being," duly registered by the *sage femme* as born of unknown parent or parents, in cases where neither father nor mother chooses to acknowledge them, fall on the taxpayers of the communes and provinces. Owing to the enormous mortality in foundling hospitals — in former times attaining to 90 and 95 per cent. in some of the largest—the system of boarding out has been largely adopted, and in cases where the mother chooses to own her illegitimate child, the province allows her so much per month for suckling it. Hence a large reduction in the mortality of infants under one year of age. Marriages among the very poorest classes are also more numerous than heretofore. Sanitary provisions, though far from being perfect, have helped to lessen the death-rate. Pellagra and typhus make fewer ravages; even smallpox, the greatest permanent scourge, is being successfully grappled with. All these are excellent things in their way, but the result is an increased pauper population, and, as the years go by, numerous additions to the ranks of "unskilled" workingmen and workingwomen.

The progress in instruction is creditable if we merely compare the Italy of twenty years since with the Italy of to-day. The most promising feature is the infant school, because in these "asylums" the very poorest children are received, housed in healthy edifices, kept clean, taught to exercise their faculties and limbs, and, in most of these schools, a good meal—soup of rice or maccaroni—is provided in part at the expense of the communes, but chiefly by private subscription. The children enter at three years, and must produce the certificate of vaccination. At the age of six they pass to the elementary schools, where instruction is compulsory and gratuitous for all classes of the population. To such children as produce a certificate of their parents' "poverty," books and writing material are furnished, but no clothing and no food. The numbers of children instructed have increased from 1,722,947 in 1872 to nearly two millions and a half in 1889.

From the elementary schools the children, who go through the course in four or five years, may receive gratuitous instruction in the technical schools when their parents can afford to clothe and feed them without receiving any profits from their labor. But, with the exception of skilled operatives, very few parents in the towns and cities where these schools exist can afford to do so; in the agricultural districts next to none. The State spends for elementary instruction about $10,000,000; its expenses for technical schools, for gymnasiums, lyceums, universities, and special schools and colleges, are great, but these benefit only the upper classes, commencing with the skilled workmen and small tradesmen, and ending with the wealthiest and the gentry, whose sons and daughters can complete their university career with a very small outlay on the part of their families for their maintenance, and the payment of the insignificant taxes for admission, examination, degrees, etc. It is true that all the educational establishments are open to all classes, but the largest and poorest class cannot avail themselves, because as soon as a boy

*I quote from the proof-sheets kindly furnished by Director-General Bodio of his forthcoming volume of statistics for 1890.

or girl is ten or eleven years old he or she must work or starve. Nearly twenty years ago, when the discovery of the "seventeen millions of unlettered Italians" produced one of those spasmodic agitations which from time to time aroused the dullest and laziest, and the system of compulsory and gratuitous instruction was initiated, Prof. Villari, in an article entitled "The School and the Social Question in Italy," to those who vaunted the number of elementary, technical, and drawing schools opened, made answer:

"This is the veriest irony. What is the alphabet to those who have neither air nor light, who live in filth and stench, whose wives and children have but the street for their homes? You will just effect nothing. And if you succeed in teaching the multitudes to read and write, leaving them in their present condition, you will have prepared one of the most tremendous of social revolutions. It is impossible that the masses, when they comprehend their situation, shall remain tranquil."

These words were written after the unity of Italy, with Rome for capital, was an accomplished fact. The starving masses, or a large portion of them, have been instructed, have sat for four or five consecutive years on the same school benches with the well-fed, well-dressed sons and daughters of merchants, manufacturers, landed proprietors, and capitalists; they have learned to read and write, to cast up accounts, a smattering of history, geography, and physical science; have been taught that all are equal, that all have equal rights and equal duties. Many a ragged urchin has carried off the prize or the "honorable mention" from the rich dullards; the family, generally the mother, has slaved a little harder to buy boots and breeches, dimly hoping that all this learning will enable the children to make their way in the world. But when the last examination is passed, and the common-school door closes on these lads or lassies, they find their children in the same condition as their parents before them, with, however, an extremely different estimate of what their condition is and of what it ought to be. In a country where "charity" of the rich to the poor is traditional, it is really inexplicable that only in a few isolated cases are there any provisions for teaching children trades, for helping them to find work when learnt; yet there are very numerous societies for helping "culprits who have finished their term of imprisonment" to find employment.

Who fill the prisons? Chiefly the unoccupied and now discontented masses, who, unable in a legitimate manner to satisfy what they have been taught to consider their "legitimate aspirations," either help themselves to other people's property, or commit deeds of violence for which the penalty must be paid. If the "prison population" has diminished since 1880 (when it stood at 80,000) to less than 70,000, this is due less to the actual decrease of crime than to the greater celerity of trials and to bail being more frequently granted. Had there been in each centre an industrial school such as that established and carried to perfection by Alfonso Casenova of Naples, the numbers might have been reduced to at least half. And at one time there was a very settled determination to establish generally such schools. But, as the Prussians used to say to the poor French peasants when they requisitioned cows, geese, ducks, and turkeys, "Plébiscite, plébiscite!" so in Italy every sin of omission and commission must be laid at the door of armed peace and African policy.

I have said that Italy spends $10,000,000 on elementary instruction and stops there, as far as the "masses" are concerned; but what does she expend on the whole is the question, and how is the chief part spent? In 1871, the first year that the whole country was united in Rome, the revenue derived from all sources amounted to $193,000,000, her expenditures to $202,000,000; showing a deficit of $19,000,000. Only in the year of grace 1884–5 do we find income and expenses evenly balanced. Then set in Italy's so-called necessity for armaments on a grand scale and her mania for foreign colonists. Here is her balance-sheet for 1888–9: Revenue $300,000,000, expenditure $347,000,000; deficit $47,000,000. For this enormous expenditure she can show an enormous standing army and a magnificent fleet, her African colony, and the Triple Alliance, which consume more than 27 per cent. of the entire revenue. All the money comes out of the pockets of the taxpayers, in one form or another, the land is overburdened, commercial and industrial enterprise stagnates, while the tax on consumption levied by the State, the province, and the commune raises the price of every article of food. The manufacturers cannot increase the number of hands nor raise wages, the landlords and farmers cannot improve their lands nor give more than starvation wages. Hence, especially during the last two months, the general agitation, the strikes, the dismal processions of the unoccupied.

I should be the first to admit that the discontent of the masses which does exist is fomented and rendered permanent by professional agitators, who go about among the people preaching to them of their misery, urging them to strike; by political wire-pullers who, in public and through the press, assure the people that "it is all the fault of the Government if they are not well fed, well clothed, well housed." The world-wide demonstrations of the 1st of May found their echo in Italy, but scarcely any disorders occurred, and the Government took proper precautions to prevent them.* But strikes since then have been the order of the day. There was actually a strike in the Orlando establishment at Leghorn, where the skilled and unskilled workmen receive better wages and are better treated in every respect than in any other large dockyard in Italy. The masters yielded to all the reasonable and to some of the unreasonable demands rather than close their workshops or summon men from other parts of Italy. In another large foundry the men have struck because the owners, who have large stock unsold, *refused to allow their men to work more than eight hours.* The sulphur-miners in the Romagna struck because the sulphur-work wage in Sicily, owing to the rise in the price of sulphur, is higher than theirs, though they well knew that, rather than close the mines during the winter, the owners had worked at a loss, and at last year's prices had pledged all this year's output. At Ravenna the bakers struck for a rise of two dollars per month; this granted, they struck for four dollars. These strikes we place among the unreasonable. But the clamor for work or bread of thousands of unoccupied men and women in several provinces cannot be attributed to any other cause than the fact that the promised works have not been commenced in time, and that bread is literally wanting. The sad catastrophe of Conselice is a case in point. This little town, thirty-seven kilometres from Ferrara and thirty from Ravenna, was the birthplace of Felice Foresti, whose name is not yet forgotten in New York, where, when released with Silvio Pellico from the Spielberg, he spent many years of exile. Returning as American Consul to Italy, he there died and was buried,

"Wrapped in the flag which now illumes the West."

Conselice is one of the seven communes of Lugo, in the province of Ravenna, throughout which the beneficial system of *mezzadria* has almost disappeared; hence the enormous increase of the *braccianti* (day laborers). When the men get full work for all the working days in the year, it was shown by the Marquis Tanara, the Commissioner for the provinces of Forlì, Ravenna, Ferrara, Modena, Reggio, Emilia, and Parma, that their earnings rarely exceed 350 francs ($70). Of this, one-third is earned in the harvesting months, whereas in January and February five cents per day is the utmost they can hope for. The women earn less than half that sum. On working days some "small wine" is distributed; their house-rent (for huts and hovels "which form a sad contrast to the magnificent stables of the cattle") costs $10 per annum. The land, especially about Conselice, is low and marshy; the chief produce fodder and rice. This year there has been next to no work. The proprietors of the soil, who own from thousands to ten or less acres, have not gone in for any new works, the exportation of cattle being nil; the cultivation of rice, owing to the enormous importations of inferior quality, has not been extended. The Romagnole as a whole do not take kindly to emigration. They go out in bands to other provinces where work is to be had, but this year none was to be heard of anywhere, and the mayors of the entire province had repeatedly warned the Prefect that the people would not long consent to "starve quietly."

About the middle of May things came to a climax. Unoccupied men sent deputations to the mayors asking for work. On the 19th the Royal Commissary of Conselice (where the Town Council has been dissolved) distributed a thousand francs' worth of maize flour to families who were literally without a meal. Meanwhile the rice-weeding season commenced. This is women's work, and very unhealthy and toilsome. From 5 A. M. to 7 P. M., with three hours' rest, the women, many of whom live at two, three, or even five kilometres' distance, work ankle deep in fetid water under the burning sun, eating what they bring with them, drinking such small wine as the "master" sees fit to furnish. Many of the proprietors this year have paid 1 franc per day; the Duke Massari's agent offered but 65 centimes. The women and girls, on whose earnings the disoccupied men have this year to live, demanded a franc, and were refused. They struck, and sent a deputation to the Royal Commissary at Conselice, where the disoccupied men were clamoring for work. The Commissary telegraphed to the agents of the Duke to get permission for the rise; it appeared that this was granted, but when the women, at 5 A. M. on the morning of the 21st, went to work, they were offered only 80 centimes. They all struck, and marched in a body to Conselice, where the disoccupied men again were assembled.

The delegate of police, fearing disorders, had summoned carbineers from Lugo, a company of the line from Ravenna, and these were drawn up in the market place. The Royal Commissary received a deputation of the women, and assured them that the Duke's agent had misunderstood the telegram; that the franc would be accorded. Then the male deputation made for the staircase of the town hall. The lieutenant of the carbineers refused access; the men insisting, he ordered arrests and himself sprang down the steps to lay hold on a ringleader. A stone flung from the crowd stunned him and he fell; one of his men fired and killed a young woman whose back was

* The Constitution admits the right of public meetings, but the Government has the power to forbid them when public tranquillity may seem in danger.

turned in flight; then, without any order from their captain, the soldiers of the line fired into the crowd; result: three killed, seventeen wounded. The lieutenant of the carbineers broke his shoulderblade in his fall; others were contused with stones. On the morrow the Duke Massari granted the franc, and has been lavish of money and food to the wounded and the families of the dead. The Government licensed a number of public works without waiting for all the red-tape formalities to be performed, and work there is now ample and sufficient for the unoccupied until the reaping season begins.

These are the "facts of Conselice" out of which the Radicals, anarchists, and rowdies in general hoped to make sufficient capital to overthrow the Government. On the other hand, the Conservatives clamored for a return to their policy, affirming that, but for Crispi's radicalism and the presence of Fortis in the Government, no disorders would have occurred, forgetting that the facts of Conselice are but a faint reproduction of the grist-tax riots in 1874. Fortis insisted on being thrown overboard, and resigned. A speech from Crispi which took all the ultras by surprise, was followed by a vote of confidence in the Government of 328 to 61. Bonghi, who had caressed the hope that by his means Crispi was to be led into the Conservative fold, after listening to the "yeas" of many pillars of the Conservative church, poured out his lamentations in an article entitled "Finis Dextrae," but the opinion of the country ratifies the vote, and once more Crispi has the power for good or evil in his hands. There is peace in Europe, and, with the ripening crops, there is work for the unoccupied, bread for the hungry. But with the fall again the terrible question will arise—the question stated for England by Carlyle in his 'Past and Present':

"Behold us here so many thousands—millions—and increasing at the rate of fifty every hour. We are right willing and able to work, and on the planet earth is plenty of work and wages for a million times as many. We ask you if you mean to lead us towards work? Try to lead us by ways new, never yet heard of till this new unheard-of time; or, if you declare you cannot lead us, and expect that we are to remain quietly unled, and in a composed manner die of starvation, what is it you mean to do with us? This question, I say, has been put in the hearing of all Britain, and will be again put, and ever again, till some answer be given." J. W. M.

THE SALON AT THE CHAMP DE MARS.

PARIS, May, 1890.

THE opening of the new Salon in the Champ de Mars has been the event of the year in the art world of Paris. That it should far surpass in interest and distinction the old Salon in the Champs-Élysées is a surprise to no one; its artistic success was assured by the names of the men who, with M. Meissonier as their leader, deserted their old headquarters to form for themselves a Société Nationale des Beaux-Arts. But that it should prove, as it has, one of the most brilliant and masterly exhibitions held for some years, even in France, is to many an unexpected, and therefore delightful, revelation of the strong vitality of the modern art, not merely of France, but of the world—for many leading Scandinavians, Americans, Germans, and Englishmen, as well as Frenchmen, are represented.

At the old Salon, though to any one fresh from the London exhibitions the general average seems very high, the most striking fact is the small number of pictures of note. As at the Royal Academy, few stand out with prominence. The leading artists who remained stanch in their allegiance to it have, one might think, been almost paralyzed by the unfortunate schism. Bonnat is strangely wooden and stiff in his portrait of President Carnot. Benjamin Constant comes very near a failure in his big monochrome, one might call it, of Beethoven playing his Moonlight Sonata to his friends; Henner adds little to his reputation by his "Melancholy" and a portrait, though in each is the same richness of color which distinguishes all his work; Laurens somehow fails to be interesting in his elaborate portrait of a lady in a richly decorated room; Jules Lefebvre is academically correct, but artistically insipid, in a vast stretch of canvas representing Lady Godiva riding naked through the streets of Coventry. Munkácsy is exhibiting here for the first time in twelve years, but his chief exhibit is a large ceiling for the Museum at Vienna, which, as it hangs on the wall, instead of being seen, as it is intended to be, above one's head, can only startle one by the rapid perspective of its architecture and the curious foreshortening of its figures. Really, if one mentions a charge of an artillery regiment of the Second Empire by Detaille, in which he shows less consciousness than usual of the requirements of the reproductive process to which his paintings are eventually submitted, and therefore greater breadth of treatment; a spirited Roman chariot-race by Checa; a strong study of sunshine, nominally the entry of President Carnot into Agen, by Henri Martin; one of Jules Breton's stately peasant women in a quiet landscape; a very bright, rich study of a white cow by Jules Dupré—one has almost exhausted the list of important contributions. I do not mean that there is not much good work besides these few things to be found in the innumerable galleries of the Palais de l'Industrie. But there is little else that compels notice for originality in conception or execution, or challenges criticism by marked individuality in style, technique, or color. The collection shows admirably how very high is the standard of art that prevails in France; it reveals little, however, of the genius or talent of any one man.

On the other hand, at the Champ de Mars there is scarcely an exhibitor who does not command special attention. The brilliancy of the exhibition as a whole is not more marked than the strong and individual character of the work of almost every artist represented. Here each man seems to have painted the pictures he sends, not merely because he had mastered the technique of his art, but because he had something to say to which he could only give expression in paint. Either he wished to record some fact in nature hitherto unrecorded, or else his own particular impression of some effect of light or color or some phase of human character. This collection is a proof not merely that there are good masters and intelligent students in French *ateliers*, but that among modern artists are men of undoubted genius and innovators of daring originality. This result of their exhibition will justify the seceders from the old society in at least one of the reasons for their secession. For it is certain that much more can be learned of the methods and qualities of a painter when half-a-dozen or more examples of his work can be studied, than when only two are to be seen, as at the old Salon. One may complain when Academicians and Associates monopolize the line at the Royal Academy in London; but no one objects when a Carolus-Duran, a Besnard, or a Lhermitte claims the same privilege. And, moreover, in the Palais des Beaux-Arts but limited space is found for incompetence or mediocrity. There are, of course, canvases that might have been dispensed with, but these are in a very large minority. The quality of their work, and not election into a royal institution, gives the exhibitors their right to as much space on the walls as they demand. Not only is the number of pictures hung (there are but 910) very small in proportion to the thousands accepted at the old Salon, but the proportion of contributors is still smaller. Consequently the new Salon really represents a picked body of artists, and these not of any one school or clique, but of methods and styles as opposed as those of Besnard and Ribot, of Meissonier and Boldini, of Montenard and Billotte.

It is also worth noting that the arrangements for exhibiting this unusually fine collection are unusually good. They prove how much the general effect of a picture exhibition depends upon artistic thought and care in the hanging. There is no senseless piling of frames above frames; often there is but the one painting on the line; except in the black-and-white and water-color rooms, works contributed are never hung more than two deep. As a rule, all the examples of one man are grouped together. A fine ceiling by Besnard for the Hôtel de Ville is shown, not senselessly on the walls, as is the case with Munkácsy's at the old Salon, but where one can really look at it with pleasure—on the ceiling of a gallery set apart for a "Conversation Room." Galland's decorations for the same building are also in their proper places, and the large decorative design by Puvis de Chavannes, destined for the Museum at Rouen, is set up on the wall at exactly the same height at which it will eventually be seen, and in a framework very similar to that which is later to enclose it.

This work is one of the most important in the show. It is called "Inter Artes et Naturam," and is very charming in color and fine in decorative feeling. A row of apple-trees, laden with fruit, interlace their branches to make an effective frieze-like arrangement in the foreground. Under their shade, and on soft turf, over which are scattered here and there pale-blue and pink blossoms, are the figures of men and women and the ruins of Gothic and classic buildings which explain the allegory; while in the distance is that marvellous view of Rouen, its cathedral towering above its clustered house-roofs, the Seine winding its way through the green valley towards it, which one sees from the hills just outside the town, and which Flaubert has described for once and all in 'Madame Bovary.' The old Tuscans and Venetians themselves did not make better use in their frescoes of the landscapes they knew and loved than the modern French artist has done of the lovely country that lies round that city, one of the principal buildings of which it is his privilege to decorate. What specially strikes one is the beauty of the quiet color, so eminently adapted to the purposes of decoration. With the faint mist that shrouds foreground and distance alike, softening the greens of the foliage, the red of the ripe fruit, and the violets and pinks of the draperies of the female figures, the whole composition is very restful and pleasant to the eye.

M. Puvis de Chavannes is not the only modern Frenchman who understands the value of soft cool tones in large decorative designs. M. Binet also makes good use of them in an enormous panel for one of the rooms in the Hôtel de Ville, which has for subject an attack of artillerymen upon the ramparts of a town. And gray is the prevailing color in M. H. Lerolle's two designs for the Church of St. Martin in Paris, one representing the saint

sharing his cloak with a beggar, the other his vision of Christ and his angels.

M. Meissonier, though he is President of the new Society, has contented himself with contributing only one example of his careful work, "October, 1806." It is somewhat larger than his usual canvases, and shows Napoleon descending towards the battle-field, in the very heat of the conflict. It is distinguished by the well-known beauty of finish and accurate rendering of detail, so characteristic of his painting. But it must be confessed that, compared to the vivid and intensely true impressions of men of a more modern school, it seems lacking somewhat in life and genuineness.

The exhibition is very strong in portraits, in which the London shows are so weak. M. Carolus-Duran has perhaps never been seen to greater advantage, except last year at the General Exposition. He has no less than four full-length portraits, as well as three small ones, and a masterly study of the nude. Nothing could be more charming than a girl in gray, with pink sash and fichu, who stands, her gloved hands clasped a little below her waist, as simply and as gracefully as Holbein's Christina of Milan, against a curtain of a darker gray. The face is admirably painted, the pose delightful, and the color scheme a fine harmony. In striking contrast, by the same master, is a lady in red velvet, just throwing back a fur cloak, as rich and voluptuous in color and suggestion as the other is quiet and restrained. His study of the nude makes one wish he would oftener give us proofs of his skill in flesh-painting: the girl, with auburn hair drawn up in a mass on top of her head, sits, with her back turned towards you, on red cushions in front of a red curtain, just pulled aside to give a glimpse of a green landscape beyond, the brilliant reds bringing out in strong relief her beautiful white body, which is drawn with consummate knowledge and treated with great refinement. M. Roll has a very attractive subject in Mme. Jane Hading, whom he shows in a black evening dress, her head, with its golden hair, resting against a fur robe thrown over the back of the large chair in which she is sitting, and, as if to bring out still more forcibly her grace and elegance and the luxury of her surroundings, he has hung close by a study of a grim, hard-featured peasant woman, who has never known the meaning of the word rest, and whose life has been one of coarse manual work. He is happy, too, in his Coquelin Cadet in the very act of reciting, with that familiar gesture of the hands which suggests his greater brother, and that irresistible expression of simple folly that makes his *Pierrot* so delightful. Very strong is M. Lhermitte's portrait of Ste.-Claire-Deville in his laboratory, surrounded by his assistants and pupils; each vigorously modelled head is a portrait in itself, and all the details, the table, with its jars of chemicals, its glass dishes and phials, its apparatus for experiment, are worked out with the utmost care, and yet always well subordinated to the figures upon which interest centres. This is good, honest, straightforward work. Another portrait group which is attracting attention is Gervex's of the staff of *La République Française*, but it has not quite the strength or power of Lhermitte's work of the same kind.

Mr. Sargent has sent his wonderful portrait of Miss Ellen Terry as *Lady Macbeth*, exhibited last year in the New Gallery, and another of a lady in white evening gown; and Mr. Dannat covers a corner of one of the galleries with portraits, of which the smallest are the best. I do not think I have ever seen a child more satisfactorily painted than in a portrait by M. Edelfelt, the Scandinavian painter, of a little boy in his nursery; he has just turned from the table where he has been playing with tin soldiers, and is looking up with that half-ashamed, half-pleased expression of children suddenly interrupted in their play. The painting is filled with the right feeling of childhood, and not with the sentimental prettiness which Sir John Millais has made popular in England.

Another strong feature of the collection is the number of successful studies of sunlight and open-air and atmospheric effects. Figure subjects are studied out of doors, or, if represented in an interior, they are seen in the strong light of a lamp or fire, or of the sun shining through open doors and windows. Nothing could be truer than M. Besnard's impressions of these effects, startling as they at first seem. He has a picture of his own family assembled in a bright sunny room, in which the values are marvellously given, while the color is at once brilliant and refined; and his "Vision de Femme," a semi-nude female figure in a sunlit garden of pink and white oleanders against a mass of golden green foliage, is simply dazzling. Still more blinding is the light in M. Dinet's "Snake-Charmer," performing to a group of Orientals in the full glare of the Eastern sun. But it is really impossible here, in the small space at my disposal, to enumerate all the strikingly fine examples. I can just mention, among the most conspicuous, Montenard's beautiful renderings of Provençal effects; Dubufe's series of sketches in Capri, in which he gives most admirably the staring white roads and villages of Italy; Thaulow's studies of snow, in which he does for Norway what Segantini does for the Italian Alps; Courtens's woods in autumn, delightfully rich, with all the golden trees reflected in a quiet stream, where a man in his boat rests on his oars; Sisley's Monet-inspired French landscapes. The broad feeling which has influenced the Hanging Committee in its work is nowhere better emphasized than in the contrast between these brilliant impressions and the gray, shadowy work of Carrière and Billotte.

I have said nothing of the very strong showing made by M. Alfred Stevens, of the portraits by Boldini, so startlingly realistic that they seem indeed to overstep the boundaries of realism in art, of the landscapes by Mr. Alexander Harrison, lovelier in color than almost anything this artist has yet painted. I have not even referred to the fine pastels by M. Carrier-Belleuse; to the drawings by M. Renouard, to whom there is question among his Parisian friends of giving the cross of the Legion of Honor; to the powerful and awful "Death" by the sculptor Desbois. I have not as much as mentioned the names of Jean Béraud, Uhde, Liebermann, Louis Deschamps, Cazin, Dagnan-Bouveret (the latter, however, has nothing of great importance). But the truth is, that whereas in most exhibitions it is always easier to point out the few good things, at the Champ de Mars the simplest task would be to give the list of the bad work. Much as one regrets that there should be any discord among French artists, one cannot but realize that, from the evil, good, in the form of this exceptionally interesting exhibition, has come.

A NOBLEMAN OF THE OLD RÉGIME.—II.

PARIS, June 12, 1890.

WE left Baron des Cars in Prussia, witnessing reviews on the staff of Frederic II. and visiting battle-fields. He became acquainted with Prince Henry, the brother of the King, who was a great lover and admirer of France and French manners. On his return to France he found the country in the first commotions of the French Revolution. He took sides with the most ardent Royalists against M. Necker, against the *Tiers* of the States-General. He speaks of "the horrible, infamous, and for ever execrable day of the *Jeu de paume*, which must be considered the forerunner of the infernal tribunal which, some years later, assassinated the most just of Kings." He was in harmony with the ideas of the Comte d'Artois, considered Necker as a traitor and the States-General as rebels. The Duke of Orleans had had himself appointed a deputy of the *Tiers*, as the bailiff of one of his estates. Des Cars asked him what advantage he, a prince of the blood, could find in appearing in the States-General as a village bailiff. "Oh," said the Duke, "I have been exiled; when I wished to go to England, I have several times been forbidden to go. I don't care what the States-General may do; but I wanted to be in it, so as to secure individual liberty, and to give my vote for a law which will allow me to sleep at Raincy if I have a fancy to do so, and not to sleep at Villers-Cotterets when I don't want to go there. I don't care a bit for all the rest."

Necker was dismissed for a few days, and then recalled under the growing pressure of public opinion. The Comte d'Artois was already gone. He wrote to Louis XVI.: "You ought to send me Baron des Cars; he knows foreign countries well, and is known in them; I think he will be more useful abroad than at home." Neither the Comte d'Artois nor Louis XVI. knew exactly at that time what sort of help they wanted. The King bade Des Cars "go and join my brother," and Des Cars left for Spa, where the Comte d'Artois then resided. He had been appointed Minister to Berlin a little before; he hardly knew himself what his mission was to be in Germany. Everything in France was in a state of complete confusion. Des Cars had so far only studied Germany from the military point of view; he had now to study it from a political standpoint—not an easy task, for the Treaty of Westphalia had left Germany in a very confused and complicated state. He remained some time in Cologne, in Mayence at the court of the Elector, with the Princes of Würtemberg and of Bavaria at Stuttgart and at Munich, with the Prince Cardinal Bishop of Passau. He gives graphic accounts of these little courts.

At Vienna he saw the Emperor Joseph, who recalled to him all the suppers they had had together in Paris, and spoke of the famous representation of Gluck's "Iphigénie" at the Opera, when the singer had to repeat twice the beautiful air: "Chantons, célébrons notre reine." Alas, the times were changed; the Queen was now very unpopular. The Emperor thought that Louis XVI. had made a great mistake in allowing the departure of the Comte d'Artois and the Princes of Condé. "It would have been better to send them to the provinces, and to form camps in order to preserve the troops from being corrupted and to keep them faithful. Your Constituent Assembly commits many follies, but it is right in attacking the clergy. I myself set the first example of it." News of the troubled days of the 5th and 6th of October arrived in Vienna. The Emperor Joseph was sorry to see the King and the Queen prisoners of the Parisian mob, but he found great fault with the King's behavoir, and his sentiments with regard to Marie Antoinette were very cold. His health was broken. He was more busied with the affairs of Belgium and Turkey than with those of France. Joseph expired on the 20th of Feb-

ruary, 1790, and his brother Leopold became Emperor.

Kaunitz is admirably described. In order to gain his notice and affection, it was necessary to go and see him ride in his riding-school. His servants prepared his horses for him, and he finished them off before a great looking-glass. He held in the evening a real court, and rendered despotic judgments on literature and the fine arts. He always kept the Papal Nuncio on his right, an ambassador on his left, and he named every evening the four or five persons who were to complete his circle. Des Cars often had that honor, and sat down while many marshals, generals, and knights of the Golden Fleece were standing behind him.

Des Cars was in constant unofficial communication with the new Emperor. He describes him in these words:

"Leopold, under a bourgeois and bonhomme exterior, had contracted in Tuscany an Italian dissimulation. His policy would, I believe, have been more adroit if it had been more frank. He pitied Louis XVI., but reproached him for his weakness of character. He would have preferred modes of seducing and corrupting the Constituent Assembly to the warlike remedies which were often proposed to him. But when, adopting his ideas, I offered to substitute for the cost of a campaign the sacrifice of a few millions, which his ambassador, who was still in Paris, might have distributed in the Assembly, he hesitated between the two systems."

He often said that he would not decide on war as long as he was not sure of Prussia; and finally he determined Prussia, a year after, to make common cause with Austria. He used to show to Des Cars the infrequent letters which he received from his sister, Marie Antoinette. Sometimes she seemed full of confidence in the Comte d'Artois and in Monsieur, sometimes she seemed afraid of their action. Leopold was very anxious that Louis XVI. should escape from Paris and go, for instance, to Valenciennes. "Once there, the Assembly will treat with him and become reasonable."

The French emigrants were much divided: Calonne was in favor of an armed and extensive emigration; Des Cars saw the dangers of this policy: "Being a soldier, and knowing the French officers, I was opposed to the idea of raising out of France an army composed merely of officers and of gentlemen." Such an army, even if the emigration were universal, could not but be small; the National Assembly would arm the whole of France. M. de Calonne offered to reconstitute outside of France the regiments of the King's household. "You are very sure of the King, or very bold," said Des Cars to him, "if you propose to the Comte d'Artois to reform, on this side of the Rhine, regiments which the King himself has destroyed." At the end of this conversation, which took place at Arras, the Bishop of Arras said, with a stentorian voice: "I thought that M. des Cars was a Royalist; he is only a *monarchien*."

The news of the flight to Varennes, and of the arrest of the royal family, caused great consternation in the camps of the emigrants. For a moment they had hoped to see Louis XVI. at Lille, or Valenciennes, summoning near his person all his faithful subjects; now he was a prisoner, and, for a King, the distance is not great from the prison to the scaffold. Among the sovereigns, the most ardent in the defence of Louis XVI. was Gustavus III., King of Sweden. He was of a romantic disposition, very eager, but unfortunately very unpopular with the Swedish nobility. Des Cars was sent to him; the Comte d'Artois had assured him at Dresden that he would find in Sweden a squadron all ready to transport an army to the Norman or Breton coast; that the King of Spain was to grant a subsidy of four millions on the day the expedition left the Swedish port; that Russia also offered a subsidy. Des Cars found things in a very different state: no army, no navy, no money. The Estates were very much indisposed to give Gustavus the means for a new war; the King and two or three favorites of his were the only people who thought of playing a part in the restoration of the French monarchy. The King looked upon France as being the oldest and most faithful ally of Sweden, but his country had been exhausted by the enormous expenses of the Finland war, and he could ask no more from his subjects. Des Cars was a witness of all the events which preceded the assassination of the King at a masked ball at the Opera; he saw the King before his death, who gave him a last message for Louis XVI. and Marie Antoinette. One of the assassins, Ankerström, was executed; the four others were also condemned to capital punishment, but, to the surprise of all, the Regent commuted the penalty to perpetual banishment. Ribbing came to France, where the Jacobins lionized him. Des Cars says that he saw him afterwards with horror in Paris, where he was called "le beau régicide." Des Cars was no friend of the French Jacobins; still he writes:

"I will make bold to exculpate the French Jacobins from an imputation, which I have often heard, of having contributed to the assassination of the King of Sweden. During a long sojourn in that country, I was able to understand well the spirit of the court, of the city, and of the nation, and I repeat that the Swedish nobility needed no auxiliaries; that after the promulgation of the 'Act of Union and Surety' and the arrest and imprisonment of eighty noblemen, there had hardly been a day when Gustavus's life was not in danger. The Jacobins of France applauded this crime, but I say that it belongs completely to Sweden alone, and to the order of its nobility."

Des Cars did not believe in the sincerity of Catherine of Russia's offers of service to the King of Sweden, in the French cause; he considered her as only seriously preoccupied, under cover of this cause, in bringing about the consummation of her ambitious views with regard to Poland. Des Cars left Sweden, not without pleasure, and resolved to plant himself somewhere in Germany, with the small resources which he still had (his father-in-law paid him very exactly 50 louis a month, wherever he was, and he had about 50,000 francs' worth of diamonds). His wife had died of consumption at the Mont d'Or, during his absence, and he met at Berlin Mme. de Nadaillac (born Rosalie de la Ferrière), whom he married in 1798. Here his memoirs end. He lived in Berlin for a while and came back to France under the Empire; he resided at the Château de la Ferrière, which belonged to his wife. Mme. des Cars spoke too freely on the subject of Napoleon; she was arrested and conducted to the Island of Ste. Marguerite, where the Iron Mask had been imprisoned. She was, after thirty-three days of detention, allowed to go to Nice, and afterwards to Lorraine.

On the return of the Bourbons, Des Cars was appointed Lieutenant-General, and he entered on his functions of first maître d'hôtel to Louis XVIII. He presided, in that capacity, at the table of the King's guests. His brother, to whom he was always much devoted, died in 1815, and he succeeded to his title of Comte des Cars. During the Hundred Days, he went to England; an attack of gout had hindered him from going to Belgium while the road was still practicable. On his return to France Louis XVIII. made him a Duke. He died on the 9th of September, 1822, leaving no issue, and his cousin, the Count François, became the head of the family. He had a twin sister, married in 1767 to M. Paris de Montmartel, a rich financier, who became afterwards the Marquis de Brunoy. The union was not happy, and by mutual consent a separation took place. Mme. de Brunoy had a salon and was a person of great culture. She died in 1823, the same year as her cousin, the Comte François des Cars, who had been gentleman-in-waiting to the Comte d'Artois, and had lived with him during the emigration.

Correspondence.

FORT TICONDEROGA.

To the Editor of The Nation:

Sir: I am at a loss to account for the information you received regarding the disfigurement of the walls of Fort Ticonderoga.

On visiting the Fort last week, I found the west wall still covered with the staring white letters of an advertisement as described by Mr. W. Morton Fullerton in the May *Fortnightly*.

Very truly yours, H. S. H.

Boston, June 18, 1890.

AN INQUIRY.

To the Editor of The Nation:

Sir: It is charged by people who ought to know, that Congressmen are in the habit of turning over to their private secretaries the public documents falling to their lot, and that the latter, instead of holding these documents for distribution to the public, sell them to book-dealers in Washington for their personal profit. While this, if true, is not the most crying abuse of the hour, it is worth calling attention to. I wish we might know if it is true, and, if true, stop it.—Very truly,

R. L. E.

Crete, Neb., June 19, 1890.

PENSIONS AS LIFE INSURANCE.

To the Editor of The Nation:

Sir: Your correspondent has recently had his attention called to a humorous feature of the pension business which will perhaps be as new to your readers as it was to him. It is the frequency of the marriages between the old soldiers and the young women of this neighborhood. An enterprising girl from the poorer classes of Appomattox or one of the adjoining counties sends her photograph to the Soldiers' Home at Hampton, Va., a veteran responds, and the knot is tied. No less than twenty such marriages are reported within a radius of five miles of this place. There would be an element of romance in this surrender of the old soldiers to the charms of beauty, on the spot where Lee's army capitulated, if it were not for the purely business nature of the transaction. A soldier with a pension is a gold mine, and his death, which must take place soon in the course of nature, leaves the young widow in the enjoyment of his pension for the remaining years of her life. A. J. McKelway.

Pamplin City, Va., June 21, 1890.

WORDS NOT IN THE DICTIONARY.

To the Editor of The Nation:

Sir: The letter from Dr. J. A. H. Murray, in your issue of June 12, on the subject of the word *colin*, impels me to express the hope that he will have the word—similar in lettering and in sound, though wholly unlike etymologically—*colen*, in the next volume of his Dictionary. It would naturally be supposed that it would be there, as a matter of course, for it occurs no

less than three times in Joseph Rodman Drake's 'Culprit Fay,' each time as the first half of a compound word, appearing thus in the third line of the tenth stanza :

"Then plucked a crimson *colen*-bell,"

the word being repeated in the nineteenth stanza, and used with this slight variation in the twentieth :

"And held his *colen*-goblet up."

The reason for fearing that Dr. Murray may not get hold of the word lies in the fact that the voluminous 'Century Dictionary,' published on lines parallel with those of Murray's, does not contain it, and, what is more, neither the Century nor Murray's, both of which have got past that word, makes any mention of *bootle*. And yet that word, also, occurs in the 'Culprit Fay,' in the eighteenth stanza, as follows:

"An oar he shaped of the *bootle*-blade,"

and again in the nineteenth:

"The heavy strokes of his *bootle*-blade."

It seems to me that for two dictionaries which make the boast of containing every word ever used by any reputable author, these two omissions are very discreditable. Even if it be claimed and admitted that the words in question have no real meaning outside of the mind of the person using them, the fact that they appear in a poem of the exalted character and permanent reputation of the 'Culprit Fay' should entitle them to admission, if only for the purpose of classifying them as imaginary. It is obvious that the poet means by the word *colen* to indicate some flowering plant; can any of your readers give a hint as to the possible signification of *bootle* ?

Yours respectfully, WM. F. PECK.

ROCHESTER, N. Y., June 20, 1890.

Notes.

SIMULTANEOUSLY with the appearance in Europe of Mr. Stanley's 'In Darkest Africa,' Charles Scribner's Sons will issue the book in this country on June 28.

The Shakspere Society of New York will resume their Publications in a second series, consisting of unexpurgated reprints of the Old English Miracle Plays, Mysteries, and Moralities, as illustrating the growth of the drama up to Shakspere's time, together with the least-known and edited English plays contemporary with Shakspere's own work. These will be issued in the style of the Bankside Shakspere, from the Riverside Press, to the number of 250, printed from type and not from plates. Mr. L. L. Lawrence, No. 21 Park Row, will receive subscriptions to this series.

The Historical Printing Club, 97 Clark Street, Brooklyn, N. Y., announce that they have in press, edited by Worthington Chauncey Ford, a Revolutionary Orderly Book of General William Heath; and 'The Harrisburg Convention of 1788: A Study in Popular Government,' by Paul Leicester Ford. They also have begun a series, entitled "Winnowings in American History," to consist of original publications from MSS., reprints of rare tracts, and selections from old newspapers. Four numbers are in press, being 'An Account of a Plan for Civilizing the North American Indians, Proposed in the Eighteenth Century by John Daniel Hammerer,' printed from the only known copy; 'Report on the Management of Estates Sequestered in South Carolina, 1780–82, by John Cruden'; 'A Short History and Description of Fort Niagara, Written by an English Prisoner, 1758,' and 'Proceedings of a Council of War Held at Burke Jail, Georgia, 1779, with a Narrative of the Subsequent Proceedings and the Proclamation issued by Col. John Ingram.' Only 250 copies of each are printed.

Mr. W. H. Goodyear, 145 East Forty-ninth Street, New York, sends us a prospectus of his 'Grammar of the Lotus; being a New History of Classic Ornament as a Development of Sun Worship.' There will be 1,200 illustrations in 500 plates, and 200 pages of text, small atlas size. The work will be issued to subscribers.

J. B. Lippincott Co. have in press 'European Days and Ways,' by Alfred E. Lee; 'In and Out of Book and Journal,' by Dr. A. Sydney Roberts, illustrated by Van Schaick; 'Classical Picture Gallery,' 144 plates of choice European examples, edited by Prof. von Reber and Dr. Bayersdorfer; 'Historic Note-Book,' by the Rev. E. Cobham-Brewer; and 'Gleanings for the Curious from the Harvest-Fields of Literature,' by Dr. C. C. Bombaugh.

The new volume of the "Book-Lovers' Library" will be on 'Newspaper Reporting in Olden Time and To-day,' by John Pendleton, and will be published by A. C. Armstrong & Son.

A. Lovell & Co. announce as forthcoming additions, respectively, to the Camelot Series, 'Northern Studies,' by Edmund Gosse, with two essays on Ibsen's poems and dramas; to the Great Writers' Series, lives of Browning and Byron.

A 'Complete Lexicon to the Latinity of Cæsar's Gallic War,' by E. G. Sihler, will be issued during the summer by Ginn & Co., and will be greeted with satisfaction by the student youth looking collegewards, and not less by teachers.

The "Students' Series of English Classics" (Leach, Shewell & Sanborn) aims to furnish annotated editions of the authors required for admission to many colleges, and is prepared by teachers experienced in the work. Miss Katharine Lee Bates of Wellesley College edits the present issue, a 'Ballad Book,' a collection of fifty of the most famous Scotch and English ballads, arranged topically under the heads of Superstition, Tradition, and Romantic and Domestic Ballads. The text follows the best sources with great care, and each ballad is briefly annotated at the end of the volume. A painstaking introductory essay discusses the history and literature of the subject, and elaborates methods of study for pupils many of which, as it seems to us, would be a weariness to the flesh; but, apart from these overwrought suggestions, the volume is a convenience in bringing the best ballads easily before youthful minds.

The Earl of Lytton has brought out a revised edition of a youthful romance, 'The Ring of Amasis' (Macmillan), being led thereto by the popularity of the work in America, where, he is told, "cheap reprints" of it are still circulated. He thinks that "the United States contains the largest and least sophisticated reading public," and is vexed that so imperfect a work should have been so long wandering "about so important a portion of the human world," and therefore he has rewritten every page and made the story substantially new. He seems oblivious of the potent cause of these "cheap reprints," and confounds piracy with that approval of foreign nations which used to be fame. He says very frankly that the romance was a poor work, and has been entirely forgotten in England, and so it furnishes an excellent example of the way in which literature is fostered by our present system, which causes the survival of the worst, or at least of inferior, English books which do not have to be paid for. 'The Ring of Amasis' itself in its new form is a romance of an antiquated kind, not without strength in the story and some psychological interest, but entirely without reality. It is curious rather as an illustration of the Egyptian tale of a generation ago, in distinction from Rider Haggard, for example, than for any other reason; but we remark in it, as in the reprint of Moore's 'Epicurean,' a refined and masculine English style, a pure literary taste, which one looks for in vain in our contemporary romances of this nature.

The so-called 'Ruskin Library' issued by John Wiley & Sons comprises, in a neat box, the 'Crown of Wild Olive,' 'Ethics of the Dust,' 'Queen of the Air,' and 'Sesame and Lilies.' The volumes are of moderate size for the hand, and in print and binding seem to us much the best of the reprints of Ruskin associated with this firm.

The latest of the "Knickerbocker Nuggets" of the Messrs. Putnam is a collection, by Paul Leicester Ford, entitled 'The Prefaces, Proverbs, and Poems of Benjamin Franklin,' as originally printed in Poor Richard's Almanacs for 1733–1758. Mr. Ford supplies an agreeable introduction, with curious bibliographical details concerning the vogue in all lands and tongues of the preface to the Almanac for 1758; and the pretty volume is embellished with a portrait of Franklin, and with facsimiles of the title-pages of the issues for 1733 and 1748 ("Poor Richard Improved").

The 'Annual Register' for 1889 bears for the last time the imprint of the Messrs. Rivington at the head of the associated firms who publish this long-lived record of current events. Nearly a hundred years, and still more nearly a hundred volumes, ago, namely, in the 'Annual Register' for 1791, issued in 1795, F. & C. Rivington supplanted J. Dodsley as the publishers, "in consequence of Mr. Dodsley's advanced time of life (whose zeal and assiduity in effecting a regular publication of many preceding volumes will not, we trust, be forgotten by the public)." But while the cares of publication were transferred to No. 62 St. Paul's Church-yard, the 'Register' was "sold also by J. Dodsley, Pall Mall." Hereafter, we suppose, the Messrs. Longman will have at least the leading imprint. The present volume calls for no other special remark, unless it relate to the fulness and care bestowed on the section dealing with the United States. To the regular features of chronicle of events, obituary, and reviews of literature, science, and art, is added a valuable account of the Parnell Commission's proceedings and findings. Pigott's examination is partly reported verbatim.

It speaks well for patriotic memories that new books telling of the sacrifices for the Union continue to be prepared. The latest, 'The Honors of the Empire State' (A. Lovell & Co.), compiled under the conviction that "forgiveness and forgetfulness are widely different," is a fragmentary and not very well-arranged sketch of what New York did in the civil war, with lists of men and places. Its motive is the best, and, barring some inevitable inaccuracies, it presents in a new form the names of heroic men and brief accounts of heroic deeds. The author, Mr. Thos. S. Townsend, also tells of what New Yorkers did as civilians to help the national cause.

A stout volume worthy of general attention, considering the subject, 'Pavements and Roads, Their Construction and Maintenance,' has been compiled from the files of the *Engineering and Building Record* by E. G. Love, Ph.D., and is published from the office of that journal in this city. It is well classified and is

perhaps sufficiently indexed; and there are a few diagrams and other illustrations.

Two Salons, two official illustrated catalogues. That of the exhibition in the Champs-Elysées we have already noticed; that of the seceders, the 'Catalogue Officiel Illustré de la Société Nationale des Beaux-Arts,' in the Champ de Mars, comes next to hand (Paris: E. Bernard & Cie.). The later volume matches the earlier in size; the pictorial memoranda are more generally direct from the canvas. As the first record of the probably lasting schism in the ranks of French art, and of a magnanimous experiment in fraternization, this catalogue possesses an interest which makes it well worth preserving. The examples chosen for reproduction are in the main attractive and well calculated to stimulate desire to see the originals. The American reader will also derive a gentle amusement from the English rendering of the French titles, which practice will no doubt improve.

Prof. F. A. Leo of Berlin, the well-known Shakspere scholar, has privately printed a large-paper edition of fifty copies of his article on "The Autographs of Rosenkranz and Güldenstern," contributed to the *Jahrbuch der deutschen Shakespeare-Gesellschaft*. It is a short description of a "Stammbuch," or album, recently discovered in the royal library of Stuttgart, which, the librarian believes, may have belonged to Duke Frederick I. of Würtemberg, and which appears to be an emblem-book, every other page being left blank for autographs, published by Christopher Plantin at Antwerp in 1571. On the blank pages are a large number of autographs collected by the owner in his travels. The first is that of the Emperor Maximilian II. of Germany, immediately followed by that of Frederick II. of Denmark and the leading German rulers and princes. Among the many less distinguished names are to be found Borgia, Fugger, and the astronomer Tycho Brahe. The main interest of the book for Shaksperian students is on page 70, where are the names and mottoes of the immortal Danish courtiers: "1577. In utraque fortuna ipsius fortune esto memor. Jörgen Rosenkrantz.—1577. Ferendum et sperandum. P. Güldenstern." Prof. Leo conjectures that the English actors who made a tour in Germany and Denmark during the latter part of the sixteenth century became acquainted with the two inseparables, and it was from their "vivid description of the behavior of the two court-clowns that Shakespeare was able to mould those immortal characters." An excellent zincographic reproduction of this page is given. We may add that not only do we find these names together in Shakspere and in the album, but also on the list of the students at the University of Padua at the common epoch.

African travel and exploration is the subject of the three papers contained in the June Proceedings of the Royal Geographical Society. The place of honor is naturally given to Mr. Stanley's address before the Society on the geographical results of his expedition. This is followed by an interesting account, by Dr. Hans Meyer, of his repeated ascents of Kili ma-njaro in the fall of 1889. He, with a single European companion and a coast negro, spent sixteen days on a plateau at an altitude of 14,270 feet, but reached by a slope so gentle that one could drive a carriage up it. Here and for a thousand feet higher grew lichens and flowering plants, yellow and violet being the predominating colors. Upon these come to feed great numbers of elands from the northern plains. The birds were represented by stonechats and swallows, who feed upon beetles, wasps, and flies, as well as on a "small black spider which lives far away up in the volcanic cinders." The mountain itself is about 19,700 feet in height, being capped by a "coat of icy mail more than 6,000 feet in height, and about the same in breadth," and forming "a spectacle probably not to be met with elsewhere on the earth's surface in similar grandeur." The third paper is by the Rt. Rev. G. W. H. Knight Bruce, the Bishop of Bloemfontein, giving notes of a recent journey through Mashonaland to the Zambezi, in which he carefully refrains from treating the political question of its ownership or its "supposed mineral wealth."

Two parts of vol. ii. of the *National Geographic Magazine* have been put forth by the Society at Washington. In addition to the annual reports of officers, there are three papers of permanent value, viz., in No. 1, "On the Telegraphic Determinations of Longitude by the Bureau of Navigation," by Lieut. J. A. Norris, U. S. N.; and in No. 2, "The Rivers of Northern New Jersey," by Prof. Wm. Morris Davis, and a "Critical Review of Bering's First Expedition, 1725–30," with a translation of his original report upon it, by Dr. Wm. H. Dall. Prof. Davis's paper is capitally illustrated by his own hand; Dr. Dall's is accompanied by Bering's chart with the true coast-lines superimposed in red.

There come to our table at the same time a pamphlet entitled 'The New Era of Phonography: A Few Facts concerning the Gabelsberger Shorthand System,' published on the one-hundredth anniversary of the inventor's birth (New York: E. N. Miner, 70 Broadway), and a circular announcement that the venerable Isaac Pitman has opened an office at No. 3 East Fourteenth Street in this city for the sale of his shorthand publications. The admirers of the Bavarian stenographer declare his system superior to all others. Our readers must be left to inform themselves in this controversy.

From the account of the close of the first academic year of Clark University, which occurred last week, without public exercises of commencement, and from the annual register, which has just been published, it appears that during the year 28 lecturers have given 33 courses, and that the members of the University now represent 48 different colleges; that two journals are now published in connection with the University, the smaller printing about 600 pages a year; that the library now receives about 200 periodicals, and has more than 10,000 volumes on its shelves. The plans of the Chemical Laboratory (built throughout of brick, and finished in cherry and birch) are now published for the first time. They show a total of 68 rooms, while the main building contains 90. The foundations of another department building are laid. The policy of receiving advanced students only is strictly adhered to. Ten fellowships, yielding $600 a year, and ten yielding $400, with ten scholarships yielding $200, making in all thirty appointments, have been established by the founder. Among these positions a few vacancies still remain. It should be remembered that all these appointments cover only the group of five scientific departments so far established by the University, whose policy, just reaffirmed by the trustees, is to strengthen departments already established before proceeding to new ones. Moreover, "while ability in teaching shall be held of great importance, the leading consideration in all engagements, reappointments, and promotions shall be the quality and quantity of successful investigation."

—The eighth volume of Dr. Furness's Variorum edition of Shakspere, devoted to "As You Like It" (Lippincott), follows the same plan as its predecessors: the folio text, with variant readings and explanatory notes from all sources, makes the body of the work, and the appendix discusses the date and sources, reprints Lodge's 'Rosalynde' and the 'Tale of Gamelyn,' touches on the actors and costumes, and collects the more important literary criticism of the play. The editor expresses with frankness the great pleasure he takes in this drama, and especially in *Rosalind*, and the whole series of commentary is lighted up by occasional flashes of this enthusiasm. He regards it as a peculiarly English play, and remarks on the difficulty foreigners have in appreciating it, and he brings out with much satisfaction the different interpretations of *Jaques*. He inclines to the view that Shakspere did not write from Lodge's novel, but remodelled a play out of which, he thinks, survive in the text the Clown of the earlier scenes, whom he will not identify with *Touchstone*, and also some parts of the last scene and a few inconsistencies in minutiæ. The text, with its notes, does not offer anything that calls for examination at this time, except that the cautious and sound judgment of the editor ought always to be praised in those instances where he ventures an opinion upon the merits of the commentators' suggestions in disputed passages; and the literary criticism of the play is not of sufficient proportions to be itself reviewed at length. We observe that the preface contains no promise for the future, but we hope that this is not an unfavorable sign with regard to the continuance of the editor's invaluable work.

—A novelty in periodical literature has appeared in London under the name of *Subjects of the Day*, "a Quarterly Review of Current Topics," edited by James Samuelson, each number of which is to be entirely given up to a single topic, and to form a volume in itself. Number one, for May, consists of 176 octavo pages devoted to State Education for the People, and contains twelve articles besides a bibliography and an index. The articles vary in length from the editorial summary of eight pages to an essay of twenty-four pages by Sir William Wilson Hunter on Education in India. The second article in point of length is an interesting one of twenty-three pages on Education in the United States, by the Rev. E. F. M. Maccarthy, Head Master of King Edward's Grammar School, Birmingham, who also writes on Education in Canada and Australia, and who seems to have been more successful in gathering correct information than most of his countrymen who have written on the United States. He finds much to praise in our system, but points out that the head scholars of an American high school have had five or six years' less teaching in Latin and Greek than those of an English high school, and adds that "most of the classical work that would be shown up by the scholars of the first class of an American high school, aged seventeen or thereabouts, would only pass muster in an English public school for boys of fifteen." Another remark he makes is, that "Latin or Greek verse composition is unknown; the Professor of Classical Literature at John [*sic*] Hopkins University (Baltimore) told the writer that he thought he was the only man in America who could write Greek Iambics, and he was an Oxford man." Very justly he finds fault with our excessive slavery to text-books and with a deficiency of properly trained teachers.

—Mr. Maccarthy's picture is not wholly black:

"But there are two institutions which must

be excepted from most of the foregoing criticisms on American high schools—the Latin High School and the English High School, at Boston. That city is, as everybody is aware, the nursing mother of American national education. *Noblesse oblige*, and whatever Boston does in the matter of education is always worthy of its traditions and its enlightened educational faith. It has recently (1881) erected for the Boys' Latin and English High Schools, under one roof or series of roofs, what may be indeed called a school-palace, vying in the completeness of its equipment and architectural fitness with anything of which Vienna—that city of school-palaces—can boast. The late Bishop Fraser visited (in 1865) the English High School when it was in its old premises, and said of it even then, in his report to the Schools Inquiry Commission, that 'it ought to be put in a glass case and carried over to England,' as a specimen of what a school for the training of the English middle class for professional and business avocations should be. Would not his heart sink within him in despair at England ever rising to the same lofty conception of what is true wisdom in regard to the education of the middle classes, if he saw this school as it is now, in all the magnificent surroundings of its new home, with the most perfect class-room arrangements, with science lecture theatres, laboratories, and gymnasium, and with every newest device for securing the orderliness, health, and efficient instruction of its pupils?"

There is also a very lively article on the Education and Status of Women, by Mrs. Emily Crawford, who likewise has something to say about the United States; Sir Philip Magnus writes on Technical Instruction; there are separate articles on Education in England, in Scotland, in Ireland, on the Continent. One remarkable feature is, that all the writers disclose a general drift all over the world towards the American idea that all education should be offered by the State free of charge; and there seems to be a strong tendency in England to extend this principle to the higher education instead of limiting it to elementary schools. This is the more worthy of notice as being contrary to the conservative English theory.

—The *Scottish Geographical Magazine* for June opens with an interesting account of the disputed territory to the north of Lake Nyassa, by the Rev. D. Kerr Cross, a Scotch missionary. A part of the region, apparently not yet reached by the slave-hunters, is of almost idyllic beauty. "Landing on the sandy beach, you enter a grove of banana trees and walk along a perfectly level plain, as in a palm section of a botanical garden. All weeds, grasses, garbage, and things unsightly are swept away by little boys who spend their morning sweeping, while, hidden away among the trees, are the circular houses of the natives. Each house is built of bamboo, with clay worked by the women into little rounded bricks. The roof is of thatch, which greatly overlaps in mushroom form, while the door is so large that a man can walk in upright. The door-posts are often painted with designs in red, yellow, and other colors, and altogether there is an air of comfort and plenty. . . . Nor is this character of cleanliness visible in their villages confined to the outside. All their cooking-pots and drinking-cups are kept scrupulously clean and sweet, and the insides of their houses free from dirt—a rare quality in the native African. The people themselves in every respect accord with the scene. They are all stalwart, muscular, and well-developed." One may travel for days "through valleys terraced with well-tilled gardens, thickly planted with banana groves and well-watered, but generally treeless." The ear is constantly filled with the tinkle of the cow-bell and the rude music of the herd-boys' reed flute. A few miles, comparatively, to the westward, across a mountain chain, the country wears a bleak and desolate aspect. The few villages are stockaded and surrounded by a ditch, and "are simply abominable from filth of every kind." To this "unnatural existence" the natives are driven by the raiders. Yet some of these harried tribes are industrious and skilful. In one region "iron abounds, and is smelted and extensively wrought into spears, hoes, axes, etc. Wild cotton grows plentifully and is woven into pretty patterns of cloth. Every village boasts of two or three looms." The northern limit of the journey of Mr. Cross was Lake Rukwa, which had been seen by but one explorer previously. He believes it to be about eighty or ninety miles in length, and to have no outlet.

—Following this paper is the first part of a very valuable list of the "best maps at present available for every part of the world," compiled by Mr. John G. Bartholomew. Only those for Central Europe are here given, the character of each map being designated as belonging to one of three classes, viz., those from "detailed topographical surveys," "detailed maps," and "general maps." There is also given the scale, number of sheets, date, and price. Accompanying the list is a folded map of the world, so colored as to show at a glance to what extent the earth has been mapped. From this it appears that "of the whole land-surface only one-seventh has been exactly surveyed." The portion thus trigonometrically surveyed includes nearly the whole of Europe (Turkey, Spain, parts of Russia and Scandinavia being excepted), India, a small strip on the Atlantic in this country, and a large block in the West, northern Algeria, Egypt, and Palestine, and the island of Java. In South America, besides a narrow strip of the coast, the Argentine Republic alone has "topographical maps, the result of general, but not detailed survey." In this category, it may be added, is to be found the greater part of the United States.

TWO WORKS ON RUSSIA.

The Story of Russia. [The Story of the Nations.] By W. R. Morfill, M. A. New York: G. P. Putnam's Sons; London: T. Fisher Unwin. 1890.

Russia: Its People and Its Literature. By Emilia Pardo Bazán. Translated from the Spanish by Fanny Hale Gardiner. Chicago: A. C. McClurg & Co. 1890.

MR. MORFILL'S book is one of the most valuable of the series to which it belongs. His success is in some respects remarkable. Here are a thousand years and one-sixth of the habitable earth brought within the limits of a story-book; and yet the result is not a dry outline of names and dates, but a living picture. The following paragraph from page 23 is an apt description of the author's method: "It is these very interesting stories which constitute the difference between the work attributed to Nestor and our own Anglo-Saxon Chronicle. The latter is rigidly historical, and lacks the fresh, charming sagas which are found in the old Slavonic books." Not only the sagas (*bylíny*), but whatever of historical fact his intimate knowledge of the subject has offered him as fit to vivify the picture, Mr. Morfill has skilfully employed.

A distinguishing merit of the book is its impartiality, in fulfilment of the promise in the preface:

"While I have not intentionally concealed the darker shades of the picture, I have endeavored to avoid drawing my sketch from an English standpoint only. Still less have I felt inclined to indulge in any of the claptrap abuse with which some Western authors season their books on Russia. All nations have been aggressive in their way, and therefore it is idle to talk overmuch about Russian aggressions; all nations have some blood-stained pages in their annals, and therefore it is something like hypocrisy to be struck with especial horror at Russia's misdeeds."

In speaking (p. 318) of the writings of Koloshikhin, who, in 1664, left his country for his country's good (as so many in later times have done), Mr. Morfill says: "His work abounds with graphic details, but, perhaps like all renegades, he is too severe upon his native country."

So much for the spirit in which the book is written. We have no space for any analysis. In externals there is ground for criticism. It is quite evident that the final proofs were not read by the author; and it is due to our readers that we should note here some of the more important corrections needed. On p. 3, for "Cheskna" read Sheksna, for "Verkhoianskoi" Verkhoianski, and for "Yablonoi" Yáblonni (or Yáblonovi)—but this is another name for the Stanovói range just mentioned, not another range. On p. 4, for "Irtysk" read Irtysh, for "Obi" Ob (as on p. 87), and for "Tanakai" Tarakai; p. 5, for "Duchinski" Dukhinski; on the same page we have: "the western governments Minsk, Pinsk, and others," but Pinsk is a city and district of the government Minsk; p. 25, for "in 855" in 957; p. 44, "Mindog" Mindovg; p. 50, "Toktamish" Tokhtamish; p. 72, "Osep [Osip] Napea"—Karamzin says "Iosif Nepea"; p. 75, "Sovin" Savin; pp. 94 and and 122, "Wisniowiecki" Wiszniowiecki; p. 109, "Ismaelov" Izmaĭlov; p. 120, "Zapovozhski" Zaporozhski; p. 132, "*rozriadnie* [*rozriadnia*] *knigi*," p. 153, "Sozha" Sozh; p. 169, "Kotishikhin" Kotoshikhin; p. 190, "Bironovtschina" Bironovstchina; p. 224, "Maeiejowice" Maciejowice; p. 313, "Skurlatovich" Skuratov (see p. 71)—Mallŭta-Skuratov's patronymic was Lukĭanovitch, not Skuratovitch; p. 314, "*aprakos*" *apraksos;* p. 320, "*Zertsalo Bogoslovii* [*Bogoslovia*]." On p. 312 the compound letter *zh* (French *j*) is divided by a hyphen.

The rapidity of his narration has sometimes destroyed the perspective of the author's picture, as on p. 105: "About the end of September, 1609, the Poles . . . invaded the country, defeated Shuiski at Klushino [this took place June 24 (O. S.), 1610] . . . and sent him as prisoner to Poland." And on p. 35 is this passage from Vladimir's 'Po-uchenie': "I have made eighty-three campaigns and many expeditions"; in which "campaigns" is too large a word (taken in its usual sense). According to Pogodin's notes on this 'Po-uchenie,' the number of campaigns proper was twenty-three. But here are Vladimir's words more literally: "Of my [military] excursions there were in all 83, and others of little importance I do not remember."

On page 176 Mr. Morfill says: "The brief reign of Catherine is distinguished only by two events which added any glory to Russia. The Academy of Sciences was founded in 1726 . . ." Most of the credit thus given to Catharine belongs to Peter, as is shown by the following extracts from the Academy's publications (the dates remaining in old style): "In June, 1718, Peter the Great resolved to found an academy." "1721, J. N. Delisle was invited by Peter to St. Petersburg [from Paris] to the future academy." "In the beginning of 1724 L. Blumentrost formed a plan, by order of Peter, for the Academy of Sciences." "January 12, 1724, Peter approved the plan. . . ." "November 6, 1724, an *ukaz* of Peter relating to the Academy. . . ." "January 28, 1725,

Peter died." "February 23, 1725, an *ukaz* of Catharine I. to Prince Kurakin upon inviting academicians from abroad." "August 15, 1725, the first audience of Catharine, [and] December, 1725, speeches at the first public meeting of the Academy." In the table on p. 374 Mr. Morfill writes: "1724, the Academy of Arts founded." On p. 246 the Princess Dashkoff is said to have been "appointed President of the Academy of Arts"; but it was the "Imperial Russian Academy" over which she was placed, not the "Imperial Academy of Sciences." (The two were united in 1841.)

One more subject demands notice before Mr. Morfill's book is dismissed. At the end of his preface he says: "An attempt has been made throughout the work to spell the names accurately and on a fixed plan, and to put an end, as far as possible, to the chaos which still prevails among us in these matters." It was with pleasant anticipations that we read this; but we must confess to some disappointment—not so much in the plan adopted as in its application. In passing, let us say a few words of the plan. We very much miss the Polish *y* commonly used, as Mr. Morfill says in his Russian Grammar, to represent a certain vowel sound. For the English *y* we would in all cases use *i*, as do the Italians and French. Mr. Morfill thinks (see his Russian Grammar) that the *y* we advocate is confusing; but it cannot be more so than *i*, which he uses for two quite distinct sounds. (The best phonetists class the sound in question with the *u*-, not the *i*- sounds.) It should be said that in this book Mr. Morfill has used for this sound in three or four cases *î*, and a few times (inadvertently) *y* (*e. g.*, Irtysh, p. 4). Again, the compound letter *shtch* (*sh-tch*) is written *stch* by Mr. Morfill; whereas the two elements are written (when separate) *sh* and *ch*. It is true that a loose, imperfect articulation of *shtch* is common, which may be expressed by *s-tch*; but we should not reproduce it in transliterating.

The imperfect application of Mr. Morfill's plan is illustrated below by one example of each kind (the correct form, as we view it, standing first). In "Matveïev" and "Rileyev," the originals of the italic letters are identical in name and sound; so also in "*Ye*katerina" (Iekaterina) and "*Ev*dokia," "Koltovska*ia*" and "Russka*ya*" and "*Ja*rensk," "Pisemsk*i*" and "Vasil*ii*," "Apra*k*sin" and "Alexandrovsk," "Irt*y*sh" and "Pel*i*m" and "Volî*n*ski," "*G*edímin" and "Tur*g*ueniev" and "*Gh*ilyaks," "Razin" and "Beresina." There may be spice in the variety of form given to the same name, as "Amur" and "Amour," "Bulba" and "Boulba," "Chavchavadze" and "Tchavtchavadze," "Gedímin" and "Guedímin," "Sakhalin" and "Saghalin."

One of the difficult questions of transliteration is this: Shall the name of a Russianized foreign family retain its original form? Shall we write *Hertsen* or *Herzen?* Mr. Morfill writes of Gen. "Diebitsch"—that was his father's name. But if the General's name had been written with its honorary suffix, would it have been Diebitsch-Sabalkanski, or, as seems necessary, Dibitch-Zabalkanski?

Not much space is left for the Spanish work, which really deserves extended notice. Its four books are devoted to "The Evolution of Russia," "Russian Nihilism and Its Literature," "Rise of the Russian Novel," and "Modern Russian Realism." The first is the least satisfactory. Doña Bazán disclaims all direct acquaintance with Russia and with its language, but professes to have "read everything written upon Russia in every language with which [she] is acquainted." (At the end of her first chapter she promises to give us at the end of the book a list of these works; but her translator has omitted it.) Doña Bazán's views are in the main just and enlightened; on ecclesiastical matters, however, she writes as a Spanish Catholic, and some of her dicta are simply astonishing. Passages of this kind that we had marked for quotation must be omitted, but room must be found for a few words of hers upon the emancipation of the serfs—an "event the greatest, perhaps, that the present century has known" (p. 94): "To my mind the best praise to the Russian nobility is for having offered less hindrance to the emancipation of the serfs than the North American democracy to the liberation of the slaves" (p. 103). Her comparison would have been more effective if she had added numbers and dates: twenty-three millions of serfs set free two years before the four millions of slaves. Concerning the Emancipator, as his countrymen style him, she asks: "Where is there a person of nobler desires and projects than Alexander II.?"

Whatever may be the shortcomings of Doña Bazán's treatment of Russian politics and history, they are more than atoned for when she has told us of Russian literature. In her own country she stands in the first rank of novelists, and here she brings into play all her critical and descriptive power. She was the pioneer of the new Spanish naturalism, and we know of nothing of its kind more eloquent than her chapters upon "Modern Russian Realism" and its comparison with modern French realism.

The translator will receive (at least tacitly) the thanks of every intelligent reader. However, it is a pity that she could not have found a shorter cut to Russian names and titles than through the Spanish and French. Some of the transformations are wonderful: *vodka* becomes "*wodka*"; Iaroslav becomes "Yaroslaus"; Shtchedrin is both "Chtchédrine" and "Tchedrine"; Iliá of Murom is "Ilias de Moron"; Araktchéïeff is "Arakschef"; 'Ruslan and Liudmila' becomes "Russia and Ludmilla"; 'The Story of the Expedition of Igor' becomes "The Song of the Host [in another place 'the Tribe'] of Igor"; and "Puchkine" could not be pronounced *Pushkin* in accordance with the phonetics of any language to the writer known. Why should Slav and all its derivatives be made "Sclav," etc.? On p. 75 the types have played a trick that may happen to any of us, where "effeminacy" is said to characterize "the employées of government."

THE UNIFIERS OF ITALY.

Italian Characters in the Epoch of Unification. By the Countess Evelyn Martinengo Cesaresco. London: T. Fisher Unwin; New York: Scribner & Welford. 1890.

THERE are many interesting parallels between the recent condition of the United States and of Italy. Both countries within the past thirty years have come through a tremendous struggle, whereby in one case national union was preserved, and in the other case created. This patriotic conflict, whether in Italy or in the United States, demanded the fortitude and heroism not of a few conspicuous men only, but of multitudes; it required that the character of the whole people should be stirred and sublimed, to enable them to endure the long tests of courage and self-sacrifice. In both cases the people responded to the call of conscience, made the endeavor, fought the good fight, and conquered. So long as the object to be attained—national existence and liberty—was concrete, Italians and Americans were equally zealous, equally patriotic and admirable; but when war had been crowned with success, and peace came with the stern, unromantic duties of reuniting different sections, of regulating finance, of making wise laws, and of fostering prosperity, both nations fell below the high level to which enthusiasm for a great cause had lifted them. Both countries suffered an irreparable loss in the untimely death of the one man upon whom each could have relied to make peace not less glorious than war; our loss in Lincoln's assassination, Italy's in Cavour's almost tragic death, can never be overestimated.

With us, the conduct of the Government for more than twenty years fell into the hands of the party associated with the suppression of the Rebellion; the opposition was charged, however unjustly, with lack of patriotism; everywhere, both in the national and State Legislatures, soldiers were law-makers. And along with the financial disturbances which the war caused, there came inflation, speculation, and all sorts of wild and corrupt schemes—greenbackism, silverism, Crédit-Mobilierism. High taxes, levied of necessity in the thick of the contest, were retained, were even increased afterwards, for the enriching of a few at the expense of the many; until at the present time we seem to have reached a point where the Congressmen of the dominant party sit at the Capitol merely to pass laws for the benefit of special interests, and to keep themselves in power. We have come to the pass when patriotism is a by-word and reproach—a mere pretence for getting a pension. The degradation of the public conscience was never lower, if we gauge it by the character of men tolerated in high positions, and by the brutal frankness with which those men announce their partisan and nefarious purposes.

Italy has suffered likewise in her post-bellum period; it seems to be the law of the ebb-and-flow of national life that, after the high tide when great deeds are launched, the waters must recede, leaving bare slime, and ooze, and stagnant pools. In Italy, too, a "patriotic party" monopolized the Government offices, but with more reason, because the Opposition was composed only either of irreconcilable clericals and Bourbons, or of imprudent agitators. Indeed, groups rather than a party governed, and government by groups has never yet been satisfactory. Again, the Italians had had no experience in governing; from the condition of political serfs under a papal or an Austrian despot, they rose suddenly to be citizens of a constitutional State. So the legislators had themselves to teach, at the very time when they were called upon to settle the most difficult problems—how to restore an equilibrium in finance; how to spread education; how to fuse the various sections into a single, homogeneous nation; and, most difficult of all, how to deal with the papacy, an enemy more uscrupulous and subtle than any temporal enemy. It must be admitted that Italy has, on the whole, met her difficulties bravely, triumphing against great odds. She, too, has had to struggle against the incompetence or the bad judgment of military men in the Chamber and the Cabinet; above all, she has had to play the rôle of a first-class Power while having the resources of only a second-class Power. But she has not, so far as we are aware, been forced to blush, as honest Americans have been, at the general corruption of her public men. It is significant that a constitutional monarch like King Humbert, or his illustrious father, does not dare, like the American President, to offer the highest positions in his Cabinet to men of damaged reputations. Italy's standing army costs her less than our army of pensioners. Her taxes are high, but no Italian Secretary of Finance could hold office for a day should he propose to augment

them beyond the actual needs, or to take the burden off of such luxuries as tobacco and spirits, and add to that on the necessaries of life.

These parallels might be indefinitely multiplied, and they are most instructive, because they furnish material for that comparative study of history from which we draw our most accurate knowledge concerning the character and temperament of different races. Our own recent history and that of Italy prove that it is much easier for a nation to face and overcome the danger of war than to deal wisely with the abstract questions of finance and legislation—questions which the greed of interested parties on the one hand, and the ignorance of the public on the other, cloak and pervert. Another striking point of resemblance between these two countries is found in the immense mass of material—histories, documents, biographies, and reminiscences concerning the men and events of the national struggle—which have been showered from the press during the past four or five years. The great actors in our civil war and in the unification of Italy are almost all gone, and we collect and preserve whatever relates to them, as if conscious of the pettiness of the men who now stand in their places.

Of books concerning the men who made Italy free and united, that by Countess Martinengo Cesaresco is one of the most interesting we have seen. We take it that the author is an Englishwoman, married to an Italian nobleman who was a conspicuous worker in the Italian movement. She leaves to more formal biographers to tell the story of the leaders—Cavour, Victor Emanuel, Garibaldi, and Mazzini—although in the course of her sketches she gives us glimpses of these, too, and treats of the men who coöperated with these, and often were only less renowned because they worked in a smaller sphere. Her choice is judicious, and as it includes men of every province, she illustrates the different phases of the struggle and of the Italian character. As we read about Manin, we learn the conditions at Venice; the account of Ricasoli naturally introduces us to Tuscany, and that of the Poerios and Settembrini to Naples. There is hardly one of these sketches which has not the interest and charm of a romance; and there is added something better than romance—the sense that these strange vicissitudes and sufferings and this heroism were real; that only a little while ago, in a country roughly deemed civilized, brave men had to endure tortures, both of mind and body, and to overcome difficulties belonging to a barbaric age.

The station in life and the temperament of the men here portrayed differed widely; but we are struck by the fact that many of them sprang from the aristocracy, and that nearly all of them were men of superior intelligence. As Garibaldi was never tired of lamenting, the Italian plebs furnished few leaders to the patriotic cause. The desire for independence and the conviction that it was their unescapable duty to liberate their country, came first to the patrician and educated class. It is remarkable also how many of these were truly religious men, who devoutly believed the cardinal teachings of the Catholic Church, but were just as earnest in casting aside the superstitions and arrogant pretensions which the Papacy, for its mundane purposes, had long foisted upon it. Ricasoli, the Tuscan dictator, had the stern integrity and piety of a Covenanter; Ugo Bassi, the priest-patriot, had the enthusiasm, the unworldly idealism of a mystic; Manin, the glorious but unfortunate defender of Venice, was of that almost sombre religious cast which, in an earlier age, inspired St. Bernard. Settembrini, doomed by King Bomba to perpetual confinement in a loathsome prison, writes in his journal on the third anniversary of his captivity: "Oh, my God, Father of the unfortunate, consoler of those who suffer, oh save my soul from this filth, and if Thou hast written that I must here end my sorrowful life, oh! let that end come soon! Thou knowest grief does not frighten nor subdue me: I bear my cross; even on my knees I drag it after me; but I fear to become vile, I fear my soul growing perverted; even now I recognize it no more. How can I come before Thee thus?" From such spiritual deeps welled up that patriotism which, in the middle decades of this century, converted Italians into heroes and martyrs.

Scattered through Countess Cesaresco's book are many descriptions of the life and customs of the people, many incidents which usually pass unrecorded, and all help a foreigner to the better understanding of the condition amid which Italy was regenerated. Her style is easy, almost talkative, like that of one who recounts events which he has witnessed, or which he has heard about from those who took part in them; and while this method tends to diffuseness, it contributes to the variety and vivacity of the narrative. Sometimes, indeed, she is both concise and happy in her phrase, as when she says of Alessandro Poerio: "He was considered eccentric by the world, because, for one thing, his principles had none of the graceful curves of popular morality"; or of Ugo Bassi: "If he was not a child, he was a man of an age when the world was less old"; or when she describes Pius IX. as "the Jeremiah not of the downfall but of the resurrection of his country." In her sketches of Constance d'Azeglio, of Signora Poerio and Signora Cairoli we meet with types of the Italian women whose patriotism was no whit inferior to that of their husbands and sons who fought on the battle-field or languished in prisons. We regret that in so valuable a work as this no references are given to the authorities from which the information has been drawn; such an omission is inexcusable at this time, when our conscience in regard to historical writing can be satisfied only by the citation of the *pièces justificatives*. As is common in English books, the foreign names are sometimes misspelled, as Hapsburgh for Hapsburg, Gottingen for Göttingen, Piazzi for Piazza, and Hamburgh for Hamburg. On p. 92 Louis IX. should be Louis XII. In conclusion, we can recommend this book to Americans as the best accessible to those who do not read Italian. Not only will they find it interesting because of the charm of the careers depicted, but also because it furnishes means for comparing the character of the leaders of the Italian movement with our own leaders prior to and during the civil war.

BOOKS ABOUT THE STAGE.

William Charles Macready. By William Archer. [Eminent Actors Series.] Longmans, Green & Co.

Mademoiselle Clairon, d'après ses correspondances et les rapports de police du temps. Par Edmond de Goncourt. [Les Actrices du XVIIIe Siècle.] Paris: Charpentier; New York: F. W. Christern.

Dramatic Opinions. By Mrs. Kendal. Boston: Little, Brown & Co.

Au bord de la Scène. Par Frédéric Febvre. Paris: Ollendorff; New York: Christern.

It is not often that a conscientious critic of literature has occasion to compare two pieces of literary work, one done in France and the other in England, to the advantage of the book of British authorship; but we doubt if any one capable of judging cautiously would hesitate to declare that, of the two theatrical biographies mentioned above, Mr. Archer's is very much better than M. de Goncourt's. Both books have been written out of the fulness of knowledge, and both writers are absolute masters of the subject, having spared no pains to get at the exact facts. Both writers impress the reader as knowing all that there is to be known about the careers of their heroes from the cradle to the grave. But Mr. Archer's biography is dignified and scholarly, and M. de Goncourt's is affected and perverse. A comparison of the simple and direct construction of the Life of Macready with the nerveless and fragmentary manner of the Life of Clairon is not at all to the credit of the French author.

Mr. Archer's 'Macready' is one of the best theatrical biographies in existence. It is worthy to be set beside Prof. Lounsbury's memoir of James Fenimore Cooper—the model of the brief biography at its best. The material is ample: there is the interesting autobiographic fragment edited by the late Sir Frederick Pollock, with its accompanying diary; Lady Pollock's more personal 'Macready As I Knew Him'; the acute paper of George Henry Lewes; and really no end of criticisms and recollections scattered here and there in books and magazines and newspapers. All these Mr. Archer has mastered, and he has availed himself of them in due measure; no biographer has ever been more conscientious in his preliminary preparation. In the writing of the book, however, there is no parade of this investigation, and no vexatious bickering with preceding critics. Mr. Archer gives us the full story of Macready's life, setting forth the growth of his powers as an actor, describing his honorable ventures as a manager, and verifying every detail and every date. Not only is there the full list of parts played, which is an indispensable adjunct of every histrionic biography—for it is only by knowing what characters an actor assumed that we can judge his powers—but this list is divided chronologically, one instalment being given at the end of each chapter, so that we may trace the steady increase of the actor's reputation. More than this, Mr. Archer has searched the advertisements in the daily papers, and he has compared the play-bills preserved in the British Museum, and is thus enabled to add to these lists of parts the exact number of times each part was acted by Macready. So far as we know, this is a labor as yet unattempted for any other tragedian or comedian. It is characteristic of Mr. Archer's unhesitating thoroughness.

For the rest, the book is entertaining; the character of Macready is sympathetically depicted; we meet with an abundance of enlivening and pertinent anecdote, together with frequent quotation of contemporary criticism; nor is there any attempt to conceal Macready's obvious defects as a man or his deficiencies as an actor. The account of the Astor Place riot is impartial and final, and is, moreover, the first founded on a complete investigation of all the facts. From Mr. Archer's pages it is evident that the late John Forster was as dangerous a friend to Macready as he was to Dickens.

The chief authority for Clairon's life has hitherto been her long autobiography, which M. de Goncourt shows to be as incomplete and insincere as autobiographies are wont to be. He has supplemented and corrected her own

story by the information derived from those of her letters which have been preserved and from the police reports of her time. The police spies took a very different view of "Frétillon" from that which Clairon gave of herself; and M. de Goncourt, with his passion for documents, believes rather the spies than the lady herself. His biography is much what might be expected from the author of 'La Faustin': it is hard, emphatically unsympathetic in its tone, brutal in its frankness and lacking in imaginative insight, while not free from purely fanciful suppositions.

Nowhere does it contain a portrait of Clairon. There are plenty of little niggling touches, but there is no full-length picture, such as the reader has a right to demand from a biographer. Not only is there no summing up, but the little touches leave vague and almost contradictory impressions. M. de Goncourt's style is more offensive than ever and less effective, and his manner is even more offensive than his style. His tone towards Clairon is condescending where it is not contemptuous. His attitude indicates apparent delight whenever he succeeds in proving that his heroine was no better than she should be and much worse than she said she was. A good biography must needs be a labor of love; M. de Goncourt's is a labor of hate, and therefore it is not good.

Mrs. Kendal's little book of 'Dramatic Opinions' seems to have been dictated to a stenographer, like the late Lester Wallack's 'Memories,' and, like that empty volume, it is scrappy and conceited. A reported interview revised by the interviewee may have its place in a periodical, but it is quite unworthy of the dignity of a book by itself. "Autobiography is what biography ought to be," said Longfellow, and Mrs. Kendal's autobiography would be interesting if it were faithfully and carefully prepared; but the stray bits of her biography here set down are but little more than mere gossip. Mrs. Kendal is an estimable woman and an accomplished artist, but she takes herself a little too seriously. She errs in saying (page 44) that Mme. Favart appeared in "Les Danicheff," in the part really played by Mme. Pasca. So she refers (page 45) to the long monologue in "Don César de Bazan," where she obviously intends the long monologue of *Don César de Bazan* (in the fourth act of "Ruy Blas"). The little book is pleasant and easy reading, and not without charm.

The volume of theatrical sketches with the punning title of 'Au Bord de la Scène' is introduced by a prefatory letter by M. Jules Claretie, now the manager of the Comédie-Française, of which noble company of comedians the author, M. Frédéric Febvre, has been a prominent member for now nearly a quarter of a century. These sketches have more substance than Mrs. Kendal's and more variety. Two or three are short stories; as many are papers of reminiscence; as many more, essays on special topics. Perhaps the best is "Chez Thalie: étude à propos de la mise en scène"—a sketch of baffled art and thwarted ambition; and the most valuable is an essay on "Le Costume au Théâtre." Of M. Febvre's volume we can say, as we said of Mrs. Kendal's, that it is pleasant reading, and we can say it more heartily.

MISS WILLARD.

Glimpses of Fifty Years; the Autobiography of an American Woman. By Frances E. Willard. Woman's Temperance Publication Association. Pp. 704.

So many people have been moved by Miss Willard's oratory, and so many people have admired and loved her on account of her whole-souled devotion to various unpopular reforms, that a Life written by her own hand, even though it is exceedingly voluminous, will doubtless be widely and quickly read. This autobiography is very far from being put together with any skill or with any feeling for literary effect. There are repetitions without number, the narrative wanders backward and forward with very little regard for order, and the style is "undress" to the last degree. The book was written and revised and the proofs corrected in three months, and the original twelve hundred pages had to be cut down to seven hundred. The consequence is that it can only be read for the intrinsic interest of the story, and not for any æsthetic pleasures to be got by the way.

But the intrinsic interest of the story is very great. There are so few women who are not content with a very monotonous existence, and a very narrow field of activity, that when a marked exception presents itself, one is very curious to know how it has come about. Miss Willard spent most of her childhood on a farm in Wisconsin, and she had the rare good fortune to have a mother who knew how to respect her children's idiosyncrasies, and who did not think that every human being should be cast in a common mould. There was another daughter, a very lovely girl—the subject of 'Nineteen Beautiful Years'—whose tastes were more after the ordinary feminine pattern, but Frances led throughout her youth the life of an active boy. Instead of being forced into housework and sewing, which she hated, she took part in all her brother's sports, and thus she laid the foundation for that inexhaustible store of energy that has stood her in good stead in later life. When at last her mother judged it necessary to make her do up her hair and put on a long dress, she felt such aversion to these restraints that she formed a plan for running away. Her discontent was aggravated by the fact that at the same time her brother, who had reached the age of twenty-one, dressed up in his best Sunday clothes one day and drove away, in the big wagon, with their father and the hired men, to vote for John C. Frémont:

"My sister and I stood at the window and looked out after them. . . . I said: 'Wouldn't you like to vote as well as Oliver? Don't you and I love the country just as well as he, and doesn't the country need our ballots?'"

The sister admitted this, but begged her not to speak in that way, for fear of being called strong minded. The plan of running away was not carried out, and it was soon afterwards confessed to the mother, who said: "You must go to school, my child. Your mind is active; you are fond of books and thoughts as well as of outdoors; we must provide them for you, to make up for your girlish good times." And so, without any scolding, this wise mother turned her daughter's superabundant energies into fresh channels. At the same time Frances found herself ready, to a certain extent, to assert her own independence. On the evening of the day when she was eighteen years old she took her seat at the table and began to read Scott's 'Ivanhoe':

"Father was opposed to story-books, and on coming in, he scanned this book while his brow grew cloudy. 'I thought I told you not to read novels, Frances,' he said. 'So you did, father, . . . but you forget what day it is.' 'What day, indeed! I should like to know if the day has anything to do with the deed!' 'Indeed it has—I am eighteen—I am of age—I am now to do what I think right; and to read this fine historical story is, in my opinion, a right thing for me to do.' My father could hardly believe his ears. At first he was inclined to take the book away, but that would do harm, he thought, instead of good, so he concluded to see this action from the funny side, and laughed heartily over the situation, Oliver doing the same, and both saying in one breath, 'A chip of the old block!'"

We have not space to follow Miss Willard through her later changes of circumstance. She spent several years in travel in Europe and in Egypt, and the utter emptiness and absolute slavery of the Italian women's lives did more than anything else to induce her to devote herself to the perfect freedom of women as one of the most urgent reforms of the day.

"'You say, signorina, that the women are so crazy as to set up for doctors in your country? It is a folly and a crime. I wonder that the priests don't interfere. Whatever will become of the buttons and the general housework?' Thus spoke an elderly Italian dame, the thinning ranks of whose own buttons I was even then contemplating with a somewhat startled glance."

She met one woman only who had been doing a little thinking for herself. This one said:

"Women are nothing in Italy, you know. Think of it! My brother is eighteen and I am twenty-nine; but on my father's death this boy became my guardian, and I take from his hand whatever he chooses to give me for my support. For him there is independence, for him there is brave work to do; for me there is—to twirl my thumbs and wait to see if the next life can possibly atone for this."

Miss Willard's devotion to her convictions, at any cost even of immediate influence, appears on more than one occasion. She gave up a professorship of twenty-four hundred dollars a year in the Northwestern University on account of a difference of opinion as to the best method of government for the women students, at a time when such professorships for women were almost unique, if they are not so now. Later, as President of the Woman's Christian Temperance Union, she carried her constituency over to the Prohibition party—a very shocking thing to do in the mind of many simple-minded Westerners, in whose eyes the Republican party is still the party of religion and of high ideals, is still the party from which self-sacrificing reforms may be looked for, and the party to injure which is still regarded as a sacrilege and a crime.

Miss Willard has delighted countless audiences in all the large Southern as well as the Northern cities, but there are still to be found people who look without sympathy upon her mode of life. When the Presbyterian General Assembly met at Madison, Wisconsin, some time ago, Dr. John Hall, among others of its members, accepted an invitation of the Temperance Union to attend a meeting, at which Miss Willard spoke. At the close of the meeting he asked to have an interview with her the next day. The interview took place, and lasted for more than an hour, and Dr. Hall said in substance:

"That he had been convinced I had a mission as a public speaker; that he wished to tell me this, and to beg me to confine my speeches wholly to the members of my own sex. He said the Bible plainly taught this, and he believed it to be his duty kindly to urge this truth upon my attention."

Miss Willard does not say that the incident reminded her of the Italian woman's desire that the priests in this country should arouse themselves to their duty towards too ardent women, but the reader cannot help calling it to mind.

There is an admirable portrait—the portrait of a very refined face, full of sweetness and strength.

History of the Seventh Regiment of New York, 1806–1889. By Col. Emmons Clark. New York: D. Appleton & Co. 1890. 2 vols., 8vo, pp. 498, 543. With many illustrations.

Boston, Newport, Philadelphia, and Savannah have military organizations of greater age, but New York excels all through the size, vigor, and celebrity of its Seventh Regiment. The First City Troop (Philadelphia), with its Revolutionary record, alone leads it in campaigns, but it in turn is surpassed by the greater numerical weight and the consequent effective force of this famous infantry.

The history of the Seventh runs side by side with that of New York for the last eighty years, and it has excursions and episodes that are at one with important passages in the nation's course. Military men generally consider the enrolled militia to be chiefly valuable as so much very raw material; but those same judges, while looking upon some of the uniformed National Guard as an uncertain quantity, give to certain States and to particular regiments a very high place. It is the function of these citizen soldiers to foster military feeling, generally under adverse surroundings, and to hold at the command of the State an armed body for the enforcement of the laws and the suppression of tumults that the civil officers fail to quell. They are also nurseries for officers who may organize active forces. Derision of State troops is usually confined to those who are their daily associates as civilians, and who either fail to appreciate the public spirit that leads them to expend time, the equivalent of money, and money itself, or to those who see their necessary weakness in the field, and forget the sacrifices by which they cultivate the military art and transform it from theory into practice. We certainly speak within bounds in saying that the regular officers are those who look most leniently upon the foibles of the uniformed militia, and most sincerely admire the men who give time, and study, and money to their self-assumed duties. Doubtless formerly much that the militia did was farcical, but of late years the brigades of instructed men that can be concentrated without delay at any reasonable point are the best evidence of this latent power. One of the lessons of Gen. Grant's funeral was that the seaboard States at least had thousands of trained armed men ready to suppress anarchy or municipal violence. The dangerous classes saw in those columns that their millennium of riot was still far enough away. The concentration of the State militia in this city at the Washington centennial was a similar object-lesson taught yet more plainly.

By general admission the Seventh New York has always led, and, however closely zealous rivals may follow, it still furnishes the highest type of rank and file and the best illustration of instruction and discipline. The city has good reason to honor the regiment that contains so many of her best sons, who have loyally responded to every call of duty. Col. Clark, himself one of the most conspicuous examples of the evolution of the citizen soldier, who wore the Seventh's gray for thirty years, has crowned his military career by this comprehensive history of the regiment, and has laid New York under new obligations by the fulness with which he has told its story. But no printed page can show the care or the labor that he and his comrades have expended that the organization may stand where it does to-day.

The first four companies were organized in 1806 as artillery, and in fact, for more than forty years, the regiment was technically of that arm, although always carrying muskets. At the beginning the battalion was part of the Third Artillery, in 1812 it was known as the Eleventh, in 1824, increased to six companies with the distinctive title of National Guards, it became first a part of the Second and afterwards an independent battalion, and in 1826, having grown to eight companies, it was recognized as the Twenty-seventh Artillery. It remained the Twenty-seventh Artillery, with its special title of "National Guard," until 1847, when it was transformed into the Seventh New York State Militia as infantry, and in 1862 lost its descriptive name of National Guard, which then was extended to the militia throughout the State. In 1838 it acquired a troop of cavalry that became the Ninth Company ("I"), and in 1849 an engineer corps was organized that became the Tenth Company ("K"), both in 1860, and soon afterwards these were armed and drilled as the others.

We could not give space for these details were not the Seventh more than a mere city regiment. It is of New York, but it belongs to the country. Originating in patriotic resistance to England's alleged right of search, in 1807, the four companies promptly volunteered under President Jefferson's call for 100,000 men. In 1812 the regiment again volunteered, and for three months was on active duty in the harbor forts. Naturally the Mexican War made no draft upon it, but in 1861 the action of the Seventh was an important physical as well as moral element in the set of the Union tide. Those days are now so long past that men not yet forty-five must appeal to such records thoroughly to understand what then was done; and the patriotic story cannot too often be told. Its response to Sumter led New York, and it went to the front again in 1862 and 1863.

The Seventh's usefulness as a regiment in the field is, however, far surpassed by the service it renders as a perpetual school of devotion to the public interest, in the cultivation of military knowledge, and on occasion in the fearless discharge of disagreeable and dangerous duties in preserving the peace. Its riot service runs back to 1834, and has always been efficient, and in its larger sphere McDowell was quite justified by the event when, on its muster-in in 1861, he characterized it as a regiment of officers. The Seventh contributed more than 600 commissioned officers, whose names are here given, to the army and navy during the Rebellion.

Admirable in drill and *esprit*, with an influential and wealthy constituency behind it, this regiment may fairly be taken as a model to be followed. But, critically examined, it is after all astonishing how far even so excellent a body as this differs from a regiment whose whole, not exceptional, duty is war. In omitting the rules therefor, Col. Clark presupposes a greater knowledge than the ordinary reader possesses as to how enlistments and discharges are effected and discipline is preserved in the National Guard. Recruits seem to be elected into companies, which thus partake of the nature of clubs, and we sometimes find such associations melting away as if at their own will. In the Seventh there appears to have been no physical examination of new members prior to 1886, and it was not until 1866 that the introduction of muster-rolls terminated the practice of exempt members swelling the inspection parades. What has been applied in sarcasm elsewhere seems true here—"It is to be managed, not commanded." Moral suasion is an important element in its administration, but it is only fair to add that this regiment has never lacked that higher discipline that has always made it prompt to meet and steady to oppose danger.

The author has added, under the name of maxims, a number of principles as to the place of the National Guard and for its development, to only one of which are we inclined to take exception. That is, that for war with a foreign nation, which is "almost impossible, there would be time for preparation." That is a delusion. There may be foreign war any year, and there will be no time for preparation. Those legislators and others who look to the National Guard for prolonged active service should take to heart that other opinion of this expert authority when, with more reason, he limits the Guard's efficiency to "the defence of law and order and the protection of life and property" from local violence. In precision in the manual of arms, in steadiness on parade marches and ceremonies, in *esprit*, and in the intelligence and social standing of its rank and file, the Seventh doubtless is unsurpassed by any regiment on the continent. But the immaturity of many of its men, its dependence upon caterers, its necessary unfamiliarity with the ways and means of bivouac, and its comparative helplessness if deprived of the resources of its regimental treasury, would be fatal to arduous field work. Its proper function, as Colonel Clark evidently appreciates, is the suppression of city mobs, and the moral effect of its existence for just such a purpose is yearly worth more to the city than all the public funds that have been allowed it. Its ranks are now overflowing, and we can only hope that the general Government will soon see its way clear to adapt its own organization and drill to three battalion regiments, and abandon the obsolete ten-company formation, that the militia may follow.

These volumes are so full as to be of interest to every one who has associations with the regiment, and the account is a particularly acceptable contribution to the history of the city. The general style is modest and clear, although if Col. Clark had not so often protested that one officer after another was "a thorough gentleman," the doubt necessarily implied would not so often arise. An introductory chapter upon the militia from the earliest Dutch times increases the value of the work. Another hand has added a well-written sketch of its author, who deserves much honor at the hands of the State. The appendix contains copious registers and rolls of the deserving, and the work is well indexed. No printer's name appears, but the book has issued from a press of the first order. The only typographical error we have observed is Bromford for Bomford (i., p. 71).

La Poésie Castillane Contemporaine (Espagne et Amérique). Par Boris de Tannenberg. Paris: Libraire Académique Didier.

The author of this book, as we learn from *España Moderna*, is a Russian who has made his home in France for many years, and who has of late been giving much time to the study of contemporary Spanish literature. His intellectual competence for the task is vouched for by the highest critical authority of Spain, and, indeed, is amply evidenced in this volume which gives the first-fruits of his studies. With M. Leo Quesnel (said to be a woman), whose articles in the *Nouvelle Revue* have conveyed much of the modern literary movement in Spain, the writer proposes to unite himself in the work of making known a literature which "is almost completely unheard of in France." He gives a pretty wide extension to

his adjective "contemporary," starting off with Quintana, who died thirty years ago, and including both Espronceda and the Duke de Rivas; but this is doubtless in the aim to give a certain poetical completeness to his study, since the names mentioned stand for eminence in branches of poetry in which no later rivals of their glory have arisen. Becquer also is included, though his death in 1870 was such a cutting off in the early flush of promise that he seems rightfully to belong to the present generation. Of the living, M. de Tannenberg names Zorrilla, Campoamor, Nuñez de Arce, Palacio, Valera, Pelayo, and (in a short appendix) Tassara, Aguilera, Selgas, and Campillo.

Over against these poets of Spain are placed the names of six Spanish-American cultivators of the muse—Olmedo, Andres Bello (undoubtedly the most distinguished writer yet produced in South America), Gutiérrez González, Batres, Heredia, and Andrade, representing respectively the countries of Ecuador, Chili, Colombia, Guatemala, Cuba, and the Argentine Republic. All of these writers are dead, some of them years ago, so that at least something like a definitive judgment may now be passed upon their works. Here again the author's choice has been guided by his sense of proportion, and the names are distributed in a poetical classification. Most just seem to us his observations on the rather surprising deficiencies of the Spanish-American poets in their nature-poetry:

"If the contemporary poets of America have been able to find an original note, it would seem that it ought to be in their descriptive poetry. Yet I must say that in general their descriptions are tiresome and monotonous; they do not seem to draw a single idea directly from the nature which is before their eyes; they are brilliant, if you will, with their sonorous epithets and lyric outbursts, but they sin in vagueness and generalities. Will it be believed that what they lack above all is local color? The picturesque finds little variety in them; certain names of exotic trees, always the same, several kinds of birds, and, finally, as a supreme poetic resort, the cordillera of the Andes, and the condor. Oh, the condor and the cordillera, how much they have been abused!"

All the more suggestive, in the light of this general remark, is M. de Tannenberg's praise of the pastoral poetry of González, whose poem on "The Culture of Corn in the Province of Antioquía" ought, he says, "without the slightest hesitation, to be set down as one of the masterpieces of Spanish poetry in this century." Very gratifying, at all events, is the advice which we find González's editor, Rafael Pombo, giving to "our gifted young men":

"Behold, I would say to them, what should serve you as a model for the production of original works. Flee, as from the worst enemy of your poetical fame, from the Byronic poetry which, in America, with our faith and our simple manners, our empires of uncultivated lands, our democratic societies, will always sound false. Have eyes to see what we see here, as our lamented González saw it; pray God to teach you how, like him, to transmute into the music of the soul the daily prose that surrounds us—and it seems to me that you will be on the best road to secure lasting renown, in Colombia or anywhere."

Without entering into any detailed account of the author's estimates of contemporary Spanish poets, we may say that he seems to us to have noted their chief characteristics with great accuracy and intelligence; certainly he is in accord with the best contemporary criticism in Spain itself. He has displayed rare good sense in steering his course among what he justly describes as "the throng of minor poets who crowd the Spanish Parnassus." It has been truly said that it is fatally easy to write Spanish verse, and that a fatally large number of people in Spain have leisure to devote to that pursuit. Those who take M. de Tannenberg for a guide may be sure, however, that they will be introduced only to poets of the first rank—unless fair warning to the contrary is distinctly given.

Annals of Scottish Printing, from the introduction of the art in 1507 to the beginning of the seventeenth century. By Robert Dickson, L.R.C.S.E., and John Philip Edmond. Macmillan & Co. 1890. 4to, pp. xv, 530.

WITH much curious information concerning early printing in Scotland, this beautiful book furnishes, in its documents, pertinent illustrations of one of the good things that printing has done in its reformation of spelling. How much this reform was needed may be gathered from the words of the patent of King James IV., dated 1507, in which he licenses the first printers of that country, Walter Chepman and Andro Myllar, "burgessis of our burgh of Edinburgh":

"James &c. to al and sindrij our officiaris liegis and subdittis quham it efferis, quhais knawlage thir our lettres salcum greting . . . to furnis and bring hame ane prent with al stuff belangand thereto and expert men to use the samyne, for imprenting . . . of the bukis of our Lawis, actis of parliament, croniclis, mess bukis, and portuus . . . with legendis of Scottis sanctis."

The prime mover in the matter seems to have been Elphinstone, Bishop of Aberdeen, who was seeking to give to Scottish people a breviary of his own, and to exclude the liturgical books of England. In pursuance of this plan, the print-letters and the expert men to use the same came not from England, but from France. Some time was spent in experimental work. The first productions of the printers were eleven petty pamphlets, containing from three to twenty-three leaves, of romance stories like "Golagros and Gawane," the "Gest of Robyn Hode"—all in French types, but unmistakably Scotch in their typographic uncouthness.

The 'Breviarum Aberdonense,' for which the art was introduced, did not appear until 1509, or 1510 by modern reckoning. It was a creditable bit of work—two thick cap-octavo volumes of 1,554 pages, in small black letter, with engraved initials and profusely rubricated. The printing was unequal—some pages beautifully sharp and clear, others most disagreeably blurred. Before the book was published, the King prohibited the entry or sale, under penalty of confiscation, of all liturgical books "of Salusberry." This seems to have been the first attempt in Great Britain to enforce a law of copyright, or rather a literary monopoly. The Breviary was not a successful venture, either as a book of sale or as a book of devotion. Chepman abandoned printing soon after its publication, and Myllar's subsequent work was insignificant. Scotch book-buyers did not want, and would not buy, any liturgical works of the Roman Catholic Church, whether stamped of Salisbury or of Aberdeen.

The record of books and printers before 1560 is scant. Thomas Davidson published about 1542 one notable book, 'The Hystory and Croniklis of Scotland,' which was in all points a good piece of typography. John Scot printed in 1552 the catechism of Archbishop Hamilton, and at later dates other books in the interest of the Roman Catholic Church, and occasionally one for the Protestants; but the number of religious books printed before 1560 is surprisingly small, considering the ferment of the people on questions of religion. The Catholic party controlled the Government, and printers feared its power. The Scotch Parliament of 1551-'2 had "devisit, statue and ordanit . . . that na Prentar presume attempt or tak upone hand to prent ony bukis, ballatis, sangis, blasphemationnis, rymes or Tragedeis, outhir in latin or Inglis toung in ony tymes to cum, unto the tyme the samin be sene vewit and examinet be sum wyse and discreit personis depute thairto." This censorship did not last long. The flood-tide of the Reformation was coming in with resistless force. In 1561 Scot printed 'The Confessionn of faith Profesit And Belevit Be the Protestantes vvithin the Realme of Scotland. Published be thaim in Parliament. And be the Estaits thereof.' After this ratification of Protestantism there was no lack of Protestant pamphlets. Indeed, the printers made little else.

The quality of early Scotch printing is distinctly inferior to that of contemporaneous work on the Continent. The facsimiles shown, which seem to be very careful copies of the originals, can be deciphered with difficulty. Worse printing was never done by Arnold ter Hoorne of Cologne, who has had for years, almost undisputed, this unenviable distinction. Scotch authors and booksellers who could do so had their books printed in France (for the prejudice against England was still strong), much to the disgust of the Scotch printers. John Scot makes this complaint against a rival edition of Sir David Lyndsay's 'Monarchy, which had been printed in France:

"Gentyll redaris, I wyll aduertets yow that thare is of thir Bukis, Imprentit in France. The quhilkis ar verray fals. Ant wantes the tane half, and all wrang spelit, and left out heir ane lyne, and thar twa wordis. To Conclude they ar all fals and wantis mekle that this buke hes as may be sene, quha lyste tyll luke thame baith over, they sall fynd my sayingis verray trew and wors no I do say preuve and se, than ye wyll geue me credence. they ar nocht worthe ane plake."

The practice of good printing in Scotland began with Thomas Vautrollier, a learned Protestant Frenchman who, after a sojourn and practice in London, began to print at Edinburgh in 1585. His books compare favorably with the best works of Continental printers. Yet he had little influence on his successors. Thrifty Scotsmen seem to have been entirely content with the rude work of Scotch presses for more than a hundred years after Vautrollier's death. Then a change came. Beginning with the Ruddimans, father and son, and followed by the brothers Foulis, there has been ever since an uninterrupted succession of able printers, of whom Clarke, Blackie, and Blackwood are fair present examples of the men who have made Scotch books irreproachable specimens of typography. The contrast between the facsimiles in these Annals and the work of Scotch printers of this day is an object-lesson worthy of study.

The first twenty chapters are written by Dr. Dickson; the concluding eighteen by Mr. Edmond. Mr. William Blades contributes a careful review and collation of one of the early books. It is a grief to read of his recent death, and to think that we shall have nothing more from the pen of this exact and acute bibliographer.

The Criminal. By Havelock Ellis. [Contemporary Science Series.] Scribner & Welford. 1890.

WHAT is confidently spoken of in this book as the science of criminal anthropology does not seem to admit of very exact definition. It is not easy to describe criminals otherwise than as persons convicted of breaking penal laws,

but from a moral and even from a social point of view this description is not satisfactory. The law presumes that all men know the penal code, and that all men are responsible beings. The latter presumption may be overthrown, and with it the former, and the law has never seen its way clearly to the proper disposition of irresponsible offenders. It cannot very well recognize partial responsibility, yet every degree of responsibility exists. Deeds of violence are often committed under the influence of passion so uncontrollable as to render the agent temporarily mad, but the law cannot admit that this *brevis furor* is insanity. It cannot undertake to measure moral turpitude, or even to punish it. To seduce and desert a simple girl is about as atrocious an act as can be imagined, while for a girl so deserted to steal a loaf of bread that will never be missed to save her child from starving, is not easily proved to be even an immorality; yet the latter act is punished by the law and the former is not.

Men quite as bad as any convict never get arrested, and seem to be peculiarly successful in finding their way to positions of honor. The kings and emperors of ancient and mediæval days would perhaps not average much higher in morality than the inmates of a modern jail, and some of the representatives chosen by our own good people are not eminent in virtue. Offenders against the majesty of government are base traitors or noble patriots, according to circumstances. Some kind souls thought it wicked to punish the Anarchists for slaughtering people in Chicago. Emerson said that he had never read of a crime that he might not have committed himself, and most well-behaved persons will admit that some of their virtue is due to immunity from temptation. Crime is only the indulgence of appetite, and people with money can generally procure sufficient indulgence without encountering the law. In the sphere of morals not only acts but also thoughts must be regarded, and the New Testament definition of adultery is fearfully broad. There is some unexhausted philosophy in the celebrated exclamation over the felon led to the gallows: "But for the grace of God, there goes John Bunyan!"

It is obvious from these considerations that criminals, in the sense of convicts, do not constitute a physiological class, and that in the sense of moral offenders they constitute a class as broad as humanity. The author of this book seems to be entirely unqualified to deal with the difficulties of constructing a science under these circumstances. The statistics that he has collected have a certain value so far as they relate to offenders that are distinctly defective in their physical, mental, and moral endowment, but this value is very slight. The figures may very well be submitted to specialists—who have not received them with much favor—but they are altogether unsuitable for presentation to the public under the name of science. Mr. Ellis makes some judicious observations, but is rather prone to utterances that must arouse in some of the physiologists whom he quotes the desire to examine the convolutions of his brain. Speaking of the classification of insectivorous plants as criminals, he soberly declares, "I doubt whether by any tenable definition of the criminal such a classification can be upheld." Criminality, he charitably observes, "cannot be attributed indiscriminately even to the lowest of races." His looseness of thought is manifest in the loose construction of such a sentence as this: "This act took from the courts the power of definitely fixing the period of confinement in prisons until, in the opinion of the managers of the Reformatory, they may be let out on parole for a probationary period of six months." Whether the courts or the managers are to be paroled, we do not undertake to decide.

Mr. Ellis complains that in England "no book, scarcely a solitary magazine article dealing with this matter," has appeared, and states that he was compelled to undertake this task because he found no one in England who was competent. If he had discovered the writings of an Englishman well known in this country, the late Barwick Baker, he would have learned more wisdom than is to be derived from the literature out of which he has made this book. His ignorance does not excuse his incompetence. The most valuable part of his work consists of an account of the methods in use at the Elmira Reformatory in New York; and the citizen of that State, who has so many things of which to be ashamed, may reflect with satisfaction that it possesses one institution which is not surpassed in the civilized world.

Two Summers in Greenland: An Artist's Adventures among Ice and Islands, in Fjords and Mountains. By A. Riis Carstensen. London: Chapman & Hall. 1890. 8vo, xxxii, 185 pp. Illustrated.

THIS book comprises a series of full-page reproductions of the artist's sketches, with many smaller illustrations, to which the narrative serves chiefly as a succession of connecting links. The pictures vary in merit as well as in their suitability for "process" work, but, as a whole, the collection forms an interesting album of characteristic Greenland views, inhabitants, and animals. Most books about this region are written from the standpoint of the explorer, the anthropologist, or the missionary. This one has a certain freshness in being the work of one in no sense scientific, but alive to the picturesque element of Greenlandic scenery, and who regards the social conditions there from the ordinary level of good people of the middle class in northern Europe.

The author succeeds very well in conveying a clear idea of Greenland life, and incidentally points out, with much justice, the unfortunate effect of the policy which, with the best intentions, has guided the intercourse of missionaries and officials with the Greenlanders, almost from the beginning. While the influence of their missionaries for nearly two centuries has indirectly tended to undermine the individual independence and personal energy which were the chief stay of the old social order among the Greenlanders, and were then regarded as the highest civic virtues, this influence has not been successful in conquering the improvidence and communal interdependence which constitute the great element of weakness in such social organisms. Where the lazy, the thriftless, and the incapable rely on the energetic for all that makes existence possible, experience shows that the essential prop of this kind of socialism is the high and universal appreciation of courage and energy. This popular feeling is manifested and the popular ideal sustained for successive generations not by personal gratitude for benefits received (a feeling lost as the benefits become a matter of custom), but chiefly by songs, legends, and ceremonies, of which the ideal individual becomes the hero, and tribal festivities the occasion of his eulogy. The dismissal of the songs and myths as pagan fancies, the suppression of the annual feasts as heathen customs, deprives the community of a stimulus for which the singing of hymns affords no equivalent. That this, for a community which must remain dependent upon the hunter for its prosperity, and will not renounce its rights in the fruit of his exertions, is a very real loss, has been conclusively shown in the history of the Greenland people.

Another curious fact brought out clearly by the author is the prepotency, as we may call it, of the tendencies towards barbarism over the settler's grasp on the civilization he has left. The blood is much mixed, especially in South Greenland, but the half-bloods are more Eskimo than Danish. Even the Danish settlers yield to some extent, and we are told of the blonde daughter "of a Dane from Godthaab" "not to be persuaded to pronounce a word in her father's tongue, and dressed throughout in native costume," who was the wife of an educated native pastor. In young Eskimo babies "the child is almost white, with the exception" of a peculiar spot of a bluish-black color "situated below the small of the back" and somewhat lozenge-shaped, "from which a yellowish shade seems to spread to all parts of the body, until it finally disappears when the child is a couple of years old. A child with a distinct regular mark was supposed to be healthy. The half-castes are often born with it, though in their case it is not so regularly shaped as in that of pure Eskimos" (pp. 116-117).

The author's conclusions in regard to the future of the Greenlander are summed up in the following paragraph:

"He is kept under a trade monopoly which, it must be admitted, is a necessary evil in his present state of culture, but to say that he feels content with it would not be correct. Be the trade monopoly ever so fatherly—which it is said to be in this case—those who have to pay for it will naturally think it selfish. During the time that Denmark has possessed Greenland, the population has by frequent intermarriages become so crossed that Scandinavian are as frequently met with as Eskimo faces, and if young Danish mechanics continue to settle there for another hundred and fifty years, there will probably be no traces of Eskimo origin left. Then the world may witness that Denmark, out of humanity, and admiration for something strange and scientifically interesting, has sunk a population of Scandinavians to the average level of Eskimos and Indians" (p. 179).

The publishers have done their part admirably, but the book would have been improved by the presence of an index.

France and the Republic. By William Henry Hurlbert. Longmans, Green & Co. 1890. 8vo, pp. cxiii, 515.

MR. HURLBERT was for several years a New York editor, and it is perhaps not surprising that his book has a curious family resemblance in bulk, in tone, and in literary value to the ordinary run of Sunday newspapers. It purports, on its title-page, to be "a record of things seen and learned in the French provinces during the 'centennial' year, 1889"; but what it really is, is only a violent diatribe against the French Republic and its anti-clerical tendencies. Not content with venting his indignation against the present Government of France, Mr. Hurlbert indulges in much strident denunciation of the first French Revolution, all of which has a rather belated effect. But even the Revolution is not remote enough to satisfy Mr. Hurlbert's historical ambition: he fills his pages with a great deal of ancient lore of the approved guide-book pattern, and peppers them thickly with learned references to Macaulay, Carlyle, Ruskin, Condorcet, and many other worthies whose names, printed in small capitals, make a brave enough show on an editorial page, but, in a book big enough to stand alone, convey an impression that the author's literary digestion is outstripped by his

appetite. However, Mr. Hurlbert will not have written in vain if his book serve as a practical demonstration of the emptiness of the complaints frequently indulged in by newspaper writers when they lament the transitory career of their productions, and flatter themselves that if they wrote books instead of articles, they might earn not only money, but fame to boot.

There is still another good use to which Mr. Hurlbert's book may be put. It offers a telling refutation of Henry George's theory that wages are not drawn from capital, but are produced by labor. It is perfectly evident that the compositors, the pressmen, and the binders who combined to manufacture Mr. Hurlbert's book were not engaged in producing merchandise of any commercial or literary value; so far were they from doing that, that they actually spoiled a large number of reams of fair white paper; the wages which they received for their worse than futile labor were not and could not be drawn from the value of their product, for that is a negative quantity; they were nothing but an impairment and diminution of capital—whether of Messrs. Longmans' capital or of Mr. Hurlbert's is immaterial to the argument. It is quite certain that whoever furnished the money will never get it back again, and has simply expended it in maintaining a number of workmen who might just as well have been pouring water into a sieve.

BOOKS OF THE WEEK.

Badt, Lieut. F. B., and Carhart, Prof. H. S. Derivation of Practical Electrical Units. Chicago: Electrician Publishing Co.
Bainton, G. The Art of Authorship. D. Appleton & Co. $1.25.

JOHNS HOPKINS UNIVERSITY,

BALTIMORE.

Announcements for the next academic year are now ready, and will be sent on application.

NEW HEIMBURG NOVEL:

LUCIE'S MISTAKE.

By W. HEIMBURG. Translated by Mrs. J. W. DAVIS Illustrated. 1 vol. 12mo, half bound, $1.25; or in illuminated paper covers, 75 cents.

This story is only another—where "true love does *not* run smooth," but this time the heroine is at fault, in short, "*Lucie's Mistake*" whence arises all the troubles—which, however, end happily at last in the good old-fashioned way.

WORTHINGTON CO., 747 B'way, N. Y.

THIS MEANS BUSINESS.

INVESTORS, ATTENTION! I can furnish an investment of unequalled worth as a safe and profitable one. A large percentage on your money can be positively assured to you. If you have idle money it will pay you to investigate this. Address

JOHN BROWN, 224 South Clark Street, CHICAGO, ILL.

F. W. CHRISTERN,

254 Fifth Ave., between 28th and 29th Sts., New York.
